The Ontario Line will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lower Don Bridge and Don Yard Early Works

The Lower Don Bridge and Don Yard early works are planned for where the Ontario Line will run alongside GO train operations. These early works will set the groundwork for other major construction on the Ontario Line project and include:

- building a new bridge north of the existing rail bridge over the Lower Don River that will carry the Ontario Line tracks;
- shifting GO tracks in the Don Yard and nearby rail corridor to accommodate Ontario Line infrastructure;
- modifying the existing rail bridge to accommodate GO track shifts and Ontario Line infrastructure; and
- relocating and protecting utilities and signal infrastructure in the area.

10 Bay Street
Toronto, ON M5J 2N8

The location of the Lower Don Bridge and Don Yard early works project footprint and study area can be viewed in **Figure 1** below.

Figure 1: Map of Lower Don Bridge and Don Yard Early Works

Marine Archaeological Overview Assessment

On behalf of Metrolinx, Stantec has undertaken a Marine Archaeological Overview Assessment for the proposed Lower Don Bridge. The purpose of the Marine Archaeological Overview Assessment is to determine the marine archaeological potential of the study area for the bridge shown in **Figure 2** below.

The proposed bridge will cross over the Don River on the north side of the existing GO Transit Lakeshore East rail bridge. As a result, a large portion of the study area overlaps with the Don River. While the bridge will have no permanent in-water components, Metrolinx anticipates that in-water construction activities may impact potential submerged cultural resources. The marine archaeological potential of the study area is being considered as part of the Marine Archeological Overview Assessment.

The assessment determined that despite the study area for the Lower Don Valley Arch Bridge Superstructure having indicators of marine archaeological potential, there has been extensive river-bed disturbance to date. The riverbed has been previously disturbed by engineered

channeling, modern dredging, and modern construction. The assessment determined that the study area retains low to no potential for the identification and documentation of in situ Indigenous and Euro-Canadian marine archaeological resources. As a result no further marine archaeological work is required for the study area.

A copy of the marine Archeological Overview Assessment has been included in the Dropbox link for your review. Please provide any comments you may have by **November 19, 2021**.

Invitation for Input

We are committed to an open, respectful, and transparent engagement with Curve Lake First Nation. Metrolinx values any input that Curve Lake First Nation is willing to provide on the Marine Archaeological Overview Assessment report.

We are happy to meet with your Curve Lake First Nation to go over the project and development of the Marine Archaeological Overview Assessment report and answer any questions Curve Lake First Nation may have on the report or the project as a whole.

If you require additional information or materials, or if you wish to discuss this project in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please submit your feedback in writing by **November 19, 2021**.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Subject: Ontario Line Stage 2 AA - Invitation to Participate

Dear Julie and Team,

Please find attached a letter inviting participation in upcoming Stage 2 Fieldwork for the Ontario Line project. The fieldwork is anticipated to take place starting October 25, 2021.

We appreciate that you have informed us this project lies outside of your territory, but still have an interest in being informed. To that end, please let me know if you have interest in

participating as soon as possible, and we will work with you, the project team to coordinate. If you have any questions or concerns, please feel free to contact the Indigenous Relations Office at anytime.

Thank you,

Jaimi O'Hara

Delivered by email

Dear Dr. Kapyrka,

**RE: Ontario Line Project - Stage 2 Archaeological Assessment - Moss Park and Ordnance Park
Invitation to Participate in Archaeological Fieldwork**

Metrolinx and its consultant, Stantec continue to progress the archaeological studies for the Ontario Line project and wanted to invite Curve Lake First Nation to participate in Stage 2 Archaeological Assessments planned to occur at Moss Park and Ordinance Park in the upcoming weeks. The locations of Moss Park and Ordinance Park study areas can be viewed in **Figure 1 and 2** below.

Moss Park and Ordnance Park have been previously assessed in a desktop study, the *Ontario Line Stage 1 Archaeological Assessment Report – South* which was shared with Curve Lake First Nation in March 2020 and was subject to an Addendum shared with Curve Lake First Nation in February 2021. The Stage 1 report recommended that a Stage 2 archaeological assessment is required for Moss Park and Ordnance Park parcels.

The Stage 2 archaeological field work will be conducted by test pit survey, in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' (MHSTCI) 2011 *Standards and Guidelines for Consultant Archaeologists*. The Stage 2 test pit survey method consists of hand excavating test pits by shovel at a five-metre interval on the park lands. The test pits are at least 30 centimetres in diameter and dug through the topsoil (which has a variable depth generally between 15 and 25 centimetres, but may be deeper or shallower) and at least five centimetres into subsoil. Once complete, test pits will be backfilled. Areas disturbed by utility infrastructure or recent construction will not be surveyed but will be photo documented. Based upon the Stage 2 field work, subsequent archaeological investigations may be recommended depending on what is found during the Stage 2 test pit survey.

Please see the fieldwork details below:

MOSS PARK:

Start Date: Tentatively October 25, 2021. If the start date changes, we will reach out to you.

Duration: Approximately two to three days

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Stage 2 Archaeological Assessment

Meeting Location Address: 150 Sherbourne St

Size of Field Crew: 2 (1 Field director, 1 field tech)

Parking location: Above-ground parking lot at the southwest corner of Jarvis Street and Queen Street East; approximate three minute walk

ORDNANCE PARK

Start Date: Work on Ordinance Park will begin after the Moss Park work is completed

Duration: Approximately two weeks

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Stage 2 Archaeological Assessment

Size of Field Crew: 4 (1 Field director, 3 field techs)

Required PPE:

Item	Specifications
Clothing and Attire	Loose clothing, long hair, dangling accessories, jewelry, or other similar items that are likely to be a hazard will not be worn unless they are tied, covered, or otherwise secured so they prevent the hazard.
Foot Protection	Canadian Standards Association (CSA) approved work boots (Steel-toed boots, minimum 6" from top of sole, grade 1 with sole protection [CSA Standard Z195-09]).
Hand Protection	Cut, puncture, and abrasion-resistant gloves shall be worn when conducting archaeological hand digging and screening activities.
Eye and Face Protection	CSA approved safety glasses with rigid side shields. Regular prescription glasses are not permitted unless they are designed as CSA safety glasses complete with rigid shields. An ASTM level 1 (or higher) face covering is mandatory.
Head Protection	CSA approved Type II, Class E (side impact) hard hat. Hard hats shall be worn with the brim pointed forward.
Hearing Protection	Not needed.
High Visibility Safety Apparel	Mandatory class 2, level 2 High Visibility Safety Apparel (HVSA). Full length sleeves and pants with reflective stripes on both arms and legs are required.
*Although not considered PPE, face coverings for COVID-19 shall be worn when applicable	

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Curve Lake First Nation may have in participating in the archaeological monitoring fieldwork. Upon receipt of Curve Lake First Nation's interest in participating, Metrolinx will work to coordinate Curve Lake First Nation's involvement.

Engagement

Regardless of whether or not Curve Lake First Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your community in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If Curve Lake First Nation wishes to participate in the fieldwork, or if you'd prefer to receive fieldnotes and/or a summary of the borehole and geotechnical data, please let us know at your earliest convenience. If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact, Indigenous Relations at Metrolinx. We can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

Subject: Ontario Line - Corktown/First Parliament Archaeological Site- Delays to Archaeology Schedule
Date: Monday, October 18, 2021 4:09:40 PM

Dear Julie and Team,

We wanted to share with you an update regarding the archaeological fieldwork at the First Parliament site as part of the Ontario Line project.

The archaeological program is now underway with Indigenous monitors on site. While we are aware that we Curve Lake First Nation is not currently sending CHLs to this project, but we wanted to make you aware that some inclement weather events at the onset of this work has resulted in some delays to our schedule. To compensate for this, Metrolinx is looking to extend archaeology work to Saturdays from 8am-3pm for the remainder of this field season (approximately late November). This would commence on October 23rd.

Should this schedule affect Curve Lake First Nation's ability to participate, Metrolinx would welcome any CHLs from your Nation on these Saturdays moving forward. Please feel free to reach out to us should this be the case.

If you have any questions or concerns, please let me know at your earliest convenience.

Thank you
Jaimi

Chief Emily Whetung
c/o Julie Kapyrka
Curve Lake First Nation
23 Winookeedaa Road
Curve Lake ON K0L1R1
Delivered by email

Dear Dr. Kapyrka,

**RE: Ontario Line Project - Species at Risk 17(2)(d) Permit Amendment Under the
*Endangered Species Act***

Metrolinx wishes to build a strong, constructive, cooperative and mutually respectful and beneficial relationship with Curve Lake First Nation. Metrolinx appreciates and respects Curve Lake First Nation's desire to be appropriately informed and aware of projects. To that end, Metrolinx is sharing with Curve Lake First Nation information regarding the Species at Risk (SAR) 17 (2) (d) Permit under *the Endangered Species Act* (ESA, 2007) obtained in support of the Ontario Line Project, and the proposed amendment to this permit.

Project Description

Metrolinx, a regional transportation agency, is helping transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line Project which will bring 15.6 kilometres of subway service to Toronto.

Ontario Line Permit #CR-D-002-19

Metrolinx, as part of the Ontario Line Project, previously received approval for a 17(2)(d) permit (Permit #CR-D-002-19) under the *Endangered Species Act* (ESA, 2007) issued by the Ministry of the Environment, Conservation, and Parks (MECP) on August 10, 2020. The permit provides approval for those project activities that may have adverse impacts on identified Species at Risk (SAR) and/or their habitat. The permit allows for those activities to take place and provides direction to Metrolinx regarding mitigation measures and compensation requirements that would be necessary to support those impacted species to support no net loss.

To inform this permit, Metrolinx completed SAR screening through the Ontario Line Environmental Conditions Report and Natural Environment Report using various information sources. While the results of this screening were shared within the initial draft of the Environmental Conditions Report circulated to Curve Lake First Nation on June 15 2020, Draft Environmental Conditions Report circulated on September 17 2020 and Final Environmental Conditions Report circulated on November 30 2020, we regret that we did not engage with Curve Lake First Nation directly on the screening process or the findings.

Potentially Impacted Species and Summary of Permit Conditions and Requirements

Based on the SAR screening completed to date, some activities required to support the Ontario Line Project may result in the following species at risk being impacted:

- Bank Swallow - Threatened
- Barn Swallow - Threatened
- Blanding's Turtle - Threatened
- Butternut - Endangered
- Chimney Swift - Threatened
- Little Brown Myotis - Endangered
- Northern Myotis - Endangered
- Small-footed Myotis - Endangered
- Tri-colored Bat - Endangered

Activities that may result in impacts to species listed above are associated with project construction and include activities such as removal or alteration of SAR habitat features (e.g., structures that may support SAR bird nesting, and trees).

Prior to commencing any activities that may impact SAR and/or SAR habitat, Metrolinx will complete species-specific screening for areas where project activities are planned to take place, and, if necessary (if screening determines that SAR/SAR habitat is likely to be present), surveys to detect SAR and SAR habitat presence and conduct an impact assessment if presence is confirmed, to characterize species-specific impacts (e.g., amount of habitat removed).

Metrolinx will meet the ESA permit conditions such as implementing species-specific mitigation measures, monitoring their effectiveness, and taking corrective action as required. Species-specific mitigation measures include scheduling activities to take place outside of species-specific timing windows (e.g., outside of active season or breeding window), implementing exclusion measures to prevent individuals of certain species from being impacted by project activities, and others.

If project activities result in SAR habitat removal, Metrolinx will implement species-specific compensation measures such as creating habitat (e.g., nesting habitat features replacing habitat features removed). Compensation habitat will be regularly monitored, and appropriate corrective actions will be taken as required to ensure habitat functions as intended.

Proposed Permit Amendment

Metrolinx is proposing an amendment to the previously approved SAR 17(2)(d) Permit (Permit #CR-D-002-19) under the *Endangered Species Act* (ESA, 2007), approved on August 10, 2020. The purpose of this permit amendment is to seek approval for additional study area not included in the current Permit #CR-D-002-19, as shown in **Appendix 1**. There are no changes to the permit conditions, including species-specific mitigation measures and compensation requirements, and no additional species are being added at this time. The SAR screening developed in support of the current permit has been updated to provide occurrence probability of SAR that may be present in the areas Metrolinx is seeking to include in the permit as part of the proposed amendment, and is included as **Appendix 2**.

Permit Amendment Process - Next Steps

The Proposal for the 17(2)(d) Permit Amendment is anticipated to be available on the Environmental Registry of Ontario (ERO) for a 30-day public review period this Fall 2021, and Metrolinx will notify Curve Lake First Nation when the ERO posting is available. While not specifically required under the Environmental Bill of Rights, the Ministry of the Environment, Conservation and Parks (MECP) voluntarily posts all ESA permit proposals for public review to ensure transparency and inclusion.

Metrolinx is seeking Curve Lake First Nation's comments, questions, or requests for additional information upon review of the material presented in this letter at any time in advance of the public ERO posting. Questions or comments can also be submitted directly to MECP through the ERO posting during the 30-day public review period.

Following the 30-day public review period, the proposed permit amendment will be submitted to the Minister for review and consideration. The amendment may only be issued if the Minister is of the opinion that the legal requirements set out in clause 17(2)(d) of the *Endangered Species Act* (ESA, 2007) have been satisfied. Should the amendment be issued, Metrolinx will be obligated to adhere to the requirements and standards as stipulated under the permit.

Curve Lake First Nation will be kept apprised should any new SAR be identified within the project area as project planning progresses. In such cases we will endeavor to engage Curve Lake First Nation prior to seeking any necessary permit amendments.

Metrolinx is committed to building a long-term relationship with Curve Lake First Nation, and we recognize that this requires transparency. We appreciate that we have much work to do in this regard and we hope to move forward in a positive way. The original SAR permit was obtained as part of the normal course of Metrolinx business, which had yet to be identified by the Indigenous Relations Office as necessitating engagement and information sharing with Indigenous Nations.

The Indigenous Relations Office has begun guiding the organization and identifying opportunities to flag such actions in advance, so that we can more meaningfully engage with Indigenous Nations as we move forward. We appreciate your patience as Metrolinx continues to learn more about Indigenous Nations and with the help of the Indigenous Relations Office, becomes aware of additional opportunities for engagement with Indigenous Nations.

We appreciate that previous engagement activities may not have met the needs of Curve Lake First Nation, and the volume of materials may have resulted in Curve Lake First Nation not having been made adequately aware of the possible identified impacts to several Species at Risk under this permit. Metrolinx remains committed to meaningful engagement; we are committed to identifying and prioritizing the sharing of the most relevant and appropriate information with Curve Lake First Nation.

If Curve Lake First Nation requires additional information or materials, or you wish to discuss this project in more detail, please reach out to Jaimi O'Hara in the Indigenous Relations Office at Metrolinx and she would be pleased to facilitate a meeting. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Delivered by email

Dear Dr. Kapyrka,

**RE: Ontario Line Project - Stage 2 Archaeological Assessment - Thorncliffe Segment
Invitation to Participate in Archaeological Fieldwork**

Metrolinx and its consultant, Stantec continue to progress the archaeological studies for the Ontario Line project and wanted to invite Curve Lake First Nation to participate in Stage 2 Archaeological Assessments planned to occur in the Thorncliffe Segment in the upcoming weeks. The locations of the Thorncliffe Segment study areas can be viewed in **Figure 1** below.

Stage 2 archaeological test pit survey at five metre intervals is planned in areas of archaeological potential on the illustrated PINs (please see Figure 1). This includes the archaeological crew of four (one field supervisor and three field technicians) digging by hand each test pit, each of which is at least 30 centimetres in diameter. The pit is dug to subsoil (approximately 20 to 30 centimetres in depth depending on soil conditions, plus another five centimetres into the subsoil) at five metre intervals across the areas of archaeological potential. The topsoil would be screened through six-inch mesh to recover artifacts. We also have three additional days of Stage 1 field work within the Don Valley area, where a field supervisor would photograph the landscape in detail to document areas of steep slope, permanently wet areas, and areas of archaeological potential.

Please see the fieldwork details below:

THORNCLIFFE SEGMENT:

Start Date: Tentatively December 2, 2021. If the start date changes, we will reach out to you.

Duration: Approximately two weeks

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Stage 2 Archaeological Assessment

Size of Field Crew: 4 (1 field supervisor and 3 field technicians)

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Curve Lake First Nation may have in participating in the archaeological monitoring fieldwork. Upon receipt of Curve Lake First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If your Nation wishes to participate in the fieldwork, or if you'd prefer to receive fieldnotes and/or a summary of the borehole and geotechnical data, please let us know at your earliest convenience. If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact, Jaimi O'Hara, Acting Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Should you wish to provide input to the above questions, please submit your feedback in writing. Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time and consideration.

Yours Truly,

Subject: Ontario Line - Species at Risk 17(2)(d) Permit Under Endangered Species Act
Date: Friday, December 10, 2021 10:05:32 AM
Attachments: [image002.png](#)

Dear Julie and Team,

As a follow up to the letter sent on November 3, 2021 regarding the Ontario Line Project Species at Risk 17(2)(d) Permit Amendment Under the *Endangered Species Act*, the Proposal for the 17(2)(d) Permit Amendment was posted on the Environmental Registry of Ontario (ERO) on December 3rd, 2021 for a 30-day public review period, ending January 2nd, 2022.

The ERO posting can be found in the following link:
<https://ero.ontario.ca/notice/019-4601> Comments can be submitted directly to the Ministry of the Environment, Conservation and Parks.

If you have any questions or concerns, please feel free to reach out to me at any time. Additionally, we are happy to arrange a meeting to discuss the Permit, if that would be of interest.

Thank you for your time and assistance.

Hi Jordan,

It was a pleasure to meet you the other day in our meeting!

I wanted to circle back with you to the Corktown Demolitions – I know you had originally said that CLFN was interested but due to Covid and capacity, you would not have been able to attend at the originally proposed times. The project has been a bit delayed and the demolitions are now scheduled to begin on February 28/March 1. If you are able to attend, Jeff Muir from Stantec will be your point of contact for arranging the details. Should you confirm, he will be reaching out but please don't hesitate to connect with him if you need information before then. He can be reached at Jeff.Muir@stantec.com.

Let me know how your schedule is looking and if CLFN would like to attend.

Have a lovely long weekend!

Marilyn

Hey Jaimi,

If you could send emailed field notes as well as a copy to the dropbox that would ensure we have access should anything with our servers go awry (hoping that never happens again). I hope that is acceptable?

Thank you so much,

Good afternoon Marilyn,

At this time Curve Lake would like to decline sending any field representation until the current COVID-19 situation is better resolved. We are still interested in alternative monitoring arrangements at this time and hope you can understand the concerns regarding our liaisons and communities safety at this point.

Should the COVID-19 umbers or transmission slow to a more reasonable rate by the time this project begins, we may be able to re-evaluate sending a liaison but at this time it cannot be determined for certain and safety is our top priority,

Thank you,

Good morning Julie and Team,

I hope you are doing well!

I wanted to follow up with you regarding the upcoming fieldworks for the Ontario Line project, as outlined in the email below. At this time, does CLFN have the capacity to participate in either of these works? Let us know how you would like to proceed and we are happy to make arrangements.

Thank you!

Subject: Ontario Line: Invitation to Participate - Archaeological Monitoring for Corktown Station Demolition and Don Valley Area Borehole Drilling

Dear Julie and Team,

As the Ontario Line Project continues to progress into the new year, we wanted to provide an update and invitation for participation in upcoming fieldwork. Please find attached a letter outlining upcoming Archaeological monitoring activities for the Corktown Station/First Parliament site and Don Valley area. These works are set to begin mid-January through February 2022.

We appreciate Curve Lake First Nation has previously indicated this project is outside its treaty territory, but has interest in archaeological monitoring and receiving project materials on an informational basis.

If Curve Lake First Nation is interested in participating in either or both of these works, please let me know as soon as possible in the new year, and we will work

with you and the project team to coordinate. We can also provide fieldnotes and/or geotechnical data at your request.

If you have any questions or concerns, please feel free to reach out to me at any time.

Thank you for your time and assistance. Happy Holidays!

Delivered by email

Dear Dr. Kapyrka,

RE: Ontario Line Project - Stage 2 Archaeological Assessment - Corktown Station and Don Valley Area: Invitation to Participate in Archaeological Fieldwork

Metrolinx and its consultant, Stantec continue to progress the archaeological studies for the Ontario Line project and wanted to invite Curve Lake First Nation to participate in further archaeological monitoring for Corktown Station and Don Valley area.

CORKTOWN STATION

Archaeological monitoring for building demolitions is planned to occur at Corktown Station in the upcoming weeks. The locations of the Corktown Station study areas can be viewed in **Figure 1** below. Please note that this work is separate from the Stage 2 & Stage 4 archaeological investigations, which has ceased for the 2021 field season and will resume in Spring 2022. Metrolinx will ensure that Curve Lake First Nation is informed of when the Stage 2 & Stage 4 archaeological investigations resume.

The archaeological monitoring will occur for building demolition activities on the First Parliament site that may be capping archaeological deposits at Corktown Station (please see Figure 1). This includes an archaeological crew of two (one field supervisor and one field technician) monitoring the demolition of modern buildings in the areas of archaeological potential. Metrolinx would value any participation that Curve Lake First Nation may wish to have in this monitoring program.

Please see the fieldwork details below:

CORKTOWN STATION:

Start Date: Tentatively January 17-18, 2022. If the start date changes, we will reach out to you.

Duration: Approximately two to four months (demo work occurring intermittently during time period; schedule to be confirmed closer to start date)

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Archaeological monitoring during building demolition

Size of Field Crew: 2 (1 field supervisor and 1 field technician)

DON VALLEY AREA

As part of the Ontario Line, Hydro One Network Infrastructure (HONI) needs to relocate several hydro towers to accommodate subway maintenance facilities. Metrolinx is carrying out a borehole drilling program in the Don Valley to provide HONI with geotechnical data for proposed hydro tower relocations.

Archaeological monitoring will occur for borehole drilling in areas with archaeological potential (please see Figure 2). This approach will provide for the on-site identification and, if necessary, stop-work order of drilling by a licensed archaeologist in the event potential archaeological resources are encountered. A licensed archaeologist will be on-site during drilling to visually inspect spoil removed during borehole drilling as well as intermittent borehole samples to visually identify the presence of artifacts. Metrolinx would value any participation that Curve Lake First Nation may wish to have in this monitoring program.

Please see the fieldwork details below:

DON VALLEY AREA:

Start Date: Mid-February. Exact dates will be confirmed in January 2022

Duration: 1-2 weeks

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Archaeological monitoring for borehole drilling

Size of Field Crew: 2 (1 field supervisor and 1 field technician)

Invitation to Participate in Fieldwork

Metrolinx would value the involvement of Curve Lake First Nation in the upcoming archaeological monitoring fieldwork outlined above. Should your Nation wish to participate, please let us know at your earliest convenience. We welcome any requests for a meeting to discuss opportunities to participate or to explore this project in more detail with Curve Lake First Nation. Upon receipt of Curve Lake First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement. If Metrolinx is

also willing to share fieldnotes and/or a summary of the borehole and geotechnical data in addition to the open invitation to participate directly in the monitoring.

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your community in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact, Jaimi O'Hara, Manger of Indigenous Relations at Metrolinx. We can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

March 7, 2022

Ms. Jaimi O'Hara
Manager, Indigenous Relations
Metrolinx
10 Bay Street
Toronto, Ontario M5J 2R8
Delivered by Email

Dear Ms. O'Hara,

RE: CLFN's Review of Ontario Line Project Environmental Reports

On behalf of our Consultation Department at Curve Lake First Nation (CLFN), we are writing to provide the document reviews for Ontario Line Project Environmental Reports:

- Metrolinx- Notice of Project to Chief Emily Whetung and Curve Lake First Nation -Ontario Line Project. February 7th, 2022. 7 pages.
- Metrolinx- Notice of Publication of Draft Environmental Impacts and Virtual Open Houses. 2 pages.
- Natural Environment: Summary of Potential Impacts, Mitigation Measures and Monitoring. One Line. February 2022. 18 pages.
- **DRAFT**-Natural Environment Technical Report. Prepared by Stantec. Prepared for One Line Technical Advisory. February 2022. 253 pages
 - Appendix B1- Distribution List.
- Environmental Impact Assessment Report. Prepared for One Line Technical Advisor. February 2022. 493 pages.

Our Consultation Department has emphasized that environmental protection and sustainability is an integral component of the future of the Curve Lake First Nation. Working with Curve Lake to develop project concept, design, planning, assessment, potential and actual impacts, monitoring, etc. are necessary steps in our process. All plans and activities must be viewed through the lens of environmental protection and sustainability. These requirements ensure that Curve Lake First Nation's interests and rights are being protected within our territory; that we are able to protect the ability to exercise our rights as a people – physically, culturally, and spiritually; that we are able to foster sovereignty, cultural identity, and sustainable succession. This is central to all relationships being progressed with various regulators and proponents.

Curve Lake First Nation is the steward and caretaker of the lands and waters within our territory in perpetuity, as we have been for thousands of years, and we have an obligation to continue to steadfastly maintain this responsibility to ensure their health and integrity for generations to come. Protection, conservation, and sustainable collaborative management are priorities for Curve Lake First Nation.

Government Services Building
22 Winookeedaa Road
Curve Lake, Ontario K0L1R0

Phone: 705.657.8045
Fax: 705.657.8708
www.curvelakefirstnation.ca

Curve Lake's vision statement must be central to development in the territory: "Upon the foundation of community values and vision that promotes and preserves our relationship with mother earth, which has defined and will continue to define our identity and culture as Anishnaabe People, the Consultation Department will build and secure the framework for our First Nation lands by putting into place ways and laws that will provide both the protection and the freedom for each person, their family, and the whole community to fulfill their potential. Each way and law will be given the consideration to its importance for our next seven generations."

Our Consultation Department has accepted the review and recommendations provided by Gary Pritchard, Principal, Indigenous Conservation Ecologist, 4 Directions of Conservation Consulting Services for the review of the Environmental Project Report. Please refer to Appendix A for details on the review of the documents including recommendations.

We thank you, your team, and Metrolinx for working with us to understand and incorporate our comments on this Project. We thank you for working with us to create the review agreements and setting aside capacity funding, this has helped in our ability to conduct these reviews.

We do this work to uphold our responsibilities to care for the earth and waters, for our people, our nation, and for all our relations. Our foundational belief is balance; our values and principles are built upon the respect, care, and nurturing of all life as part of an interconnected whole and necessary for the balance and harmony required for Mino-Bimaadiziwin now and for future generations.

Sincerely,

Francis Chua on behalf of Curve Lake First Nation Consultation Department

RE: Metrolinx ~ Ontario Line

Dear Dr. Kapyrka and Ms. Hill,

4 Directions is pleased to present to you, our review and recommendations of the document provided to Curve Lake First Nation (CLFN) on behalf of the Metrolinx as part of their regulatory consultation obligations and permitting process for the Ontario Line Project.

The report received is entitled:

- Metrolinx- Notice of Project to Chief Emily Whetung and Curve Lake First Nation -Ontario Line Project. February 7th, 2022. 7 pages.
- Metrolinx- Notice of Publication of Draft Environmental Impacts and Virtual Open Houses. 2 pages.
- Natural Environment: Summary of Potential Impacts, Mitigation Measures and Monitoring. One Line. February 2022. 18 pages.
- **DRAFT**-Natural Environment Technical Report. Prepared by Stantec. Prepared for One Line Technical Advisory. February 2022. 253 pages
 - Appendix B1- Distribution List.
- Environmental Impact Assessment Report. Prepared for One Line Technical Advisor. February 2022. 493 pages.

The focused attention of this review and commenting, 4 Directions will be examining or asking questions on items or references with greatest potential to create impacts to Indigenous Rights and Title. Comments will be divided amongst 5 sections:

- I. General Questions or Comments to Issues Raised within the Context of Reporting,
- II. Indigenous Worldview and Cultural Representation,
- III. Technical Accuracy within the Approach,
- IV. Concerns From Site Visit and
- V. Outcomes and Recommendations.

1. General Questions or Issues Raised within the Context of Reporting

Overall, as seen in the other reports present by Metrolinx for other site development, there are several re-occurring issues with their process in all levels of reporting by their consultants. It is strongly recommended that CLFN, 4 Directions, and Metrolinx look at a new method to create and implement effective change over the next year which goes beyond the standard TPAP and Environmental Assessment Process.

- Metrolinx- Notice of Project to Chief Emily Whetung and Curve Lake First Nation -Ontario Line Project. February 7th, 2022. 7 pages.

Metrolinx needs to work with CLFN to create a diction and vocabulary lists that elevates Indigenous values and presence on the landscape. The term “traditional” is not acceptable because of its used in the “past tense” illustrating to the reader that the Michi Saagiig are no longer present on the landscape, and we once existed. It should be replaced to simply the “Treaty and Territory of CLFN.”

In the Engagement Section of the letter, it is confusing to the reader since it appears to state that Metrolinx is committed to fostering a meaningful relationship with CLFN but then makes a statement about the 30-day commenting period. This 30-day commenting period is null and void to a First Nation or Rights holder community once consultation has been initiated as seen by the CLFN and Metrolinx relationship framework. Further education is required on the part of Metrolinx to avoid this misstep which could ultimately damage their relationship framework.

Legally once a Nation has requested further engagement or consultation, it is then determined by that Nation to dictate the timeline to a proponent.

- Metrolinx- Notice of Publication of Draft Environmental Impacts and Virtual Open Houses. 2 pages. No comments.
- Natural Environment: Summary of Potential Impacts, Mitigation Measures and Monitoring. One Line. February 2022. 18 pages.

No comment, document is created to industry standards. In future conversations with Metrolinx and document reviews, the Metrolinx team needs to understand the priority of Rights Holders and advancing Michi Saagiig ecological knowledge systems, worldviews, and assertion of Treaty/Inherent Rights. All environmental assessments in Ontario need our voice, our values, and our constraints to be included in the regulatory process. When this is achieved then both parties work towards co-governance of the landscape.

- **DRAFT**-Natural Environment Technical Report. Prepared by Stantec. Prepared for One Line Technical Advisory. February 2022. 253 pages
 - **Appendix B1- Distribution List.**

This comment is directed at Appendix B1. It is interesting to see where the Indigenous community appears in this distribution list. They appear after Elected Officials.

Question: Why does the Indigenous community’s representation appear after the “Elected Officials?” Indigenous communities are recognized as equal or greater than the Federal governments since they are in fact a federal entity. This education and colonialist behavior of repression needs to be correct not only in the report but to all parties involved including the consultant team working on Metrolinx’s behalf. This is not the first occurrence of this nature and needs to be addressed. Future error will lead to this error being held as a grievance in the Environmental Assessment.

2. Indigenous Worldview and Cultural Representation

There were no Indigenous worldviews or knowledge systems in the creation of the environmental reports. However, this exclusion of Indigenous worldviews cannot be solely place on the responsibility of Metrolinx. They are working under and in a colonial governance system created by the Environmental Assessment process that allows for the insertion of Indigenous knowledge systems or worldviews at the wrong place in the consultation process. Indigenous consultation needs and should begin at the beginning of a project prior to the creation of the terms of reference, thus allowing for a magnitude of worldviews to be understood and examined. In this scenario, consultation would flow more seamless, holistic and achieve a faster project deliverable.

- **DRAFT**-Natural Environment Technical Report. Prepared by Stantec. Prepared for One Line Technical Advisory. February 2022. 253 pages

Question: If looking at meeting the requirements through a federal and provincial policy, guidelines, and regulations perspective; then why are not the Treaty and Indigenous Rights examined during the jurisdiction scanning process of compliance? Should not the signatories of the treaty be included in the preliminary conversation regarding the existing conditions or examination of local natural features of their lands?

- Environmental Impact Assessment Report. Prepared for One Line Technical Advisor. February 2022. 493 pages

Treaties and Settler Obligations

Many people think of treaty rights as “special” indigenous rights however, all people living in Canada are treaty people with their own set of rights and responsibilities.

Treaties are a foundational part of Canadian society. Every road, house, building or business that exists today in a treaty area was made possible because of a treaty.

Treaties are not a handshake or a handout. They are binding, reciprocal commitments. Neither party can unilaterally withdraw from the treaty or change its terms.

Treaty rights are recognized and affirmed by section 35 of Canada’s constitution.

All Canadians are beneficiaries of the treaties, whether on the Crown (settler) side, the Indigenous side, or both. Treaty relationships are about getting along together – Canada will be stronger when we have stronger treaty relationships, especially ones that are clear for all parties, and that are honored with respect.

Statement: Treaty Rights- The Michi Saagiig did not sign away the rights to certain “environmental features” within this area, thus Settlers will need to get consent to any of the proposed activities prior to regulator application or approval that involves the use, alteration, or the potential to cause harm to these features. Further conversations with Metrolinx and regulators are needed to ensure the Rights of the Michi Saagiig are understood when looking at creating environmental constraints and compliance measures.

- Environmental Impact Assessment Report. Prepared for One Line Technical Advisor. February 2022. 493 pages.

Statement: In the spirit of building transparent and open conversation with CLFN and Metrolinx, it should be noted that the 30-day comment period by Indigenous Nations is not correct. Under the duty to consult, once a Nation wishes to enter the duty to consult with a proponent then it is between the proponent and the Nation to determine the best reasonable schedule. This has been the topic at several expert Ministers table discussions

where 4 Directions leads this conversation on “How proponents need to create a meaningful relationship with the affected Nations”. It is in best interests of all parties that we begin the discussion of reasonable timelines. 4 Directions conversations as part of the Ministers experts will hopefully shed light on the needed amendments to a variety of environmental assessment challenges for individual Nations.

Environmental Damages and Contingency

There is no retribution or contingency programing for the potential contamination or harm to the Indigenous Territory and impact to harvesting rights.

Question: All Parties needs to meet with CLFN and other signatories of the Williams Treaty Settlement about environmental damages contingencies if their operation ever causes harm to the territory and/or harvest rights.

Grievances

The only grievance that CLFN brought forward during the review process was the inconsistency in the Indigenous community contact list that is provided to the proponents by the provincial government for project notification/engagement. Ministries are not upholding the *2018 Williams Treaties Settlement Agreement* which allows other Indigenous based communities to create a consultation process with proponents or governments within territories in which they have no legal jurisdiction – they are not signatories to a Treaty. This error creates unnecessary issues for the 7 Indigenous communities of the WTFN.

There are no Metis communities or Rights bearers to the WTFN Settlement Area. The Kawartha Nishnawbe do not have Rights to the WTFN Settlement area based on their community status under the Indian Act, their membership is comprised of CLFN and MSIFN.

Action Item: Metrolinx needs to work with individuals like Mr. Pritchard and other knowledge holders to address Rights or Interest based lists. Mr. Pritchard can also assist with proper mapping of treaty boundaries to allow for all parties an effective rights-based to land-based commenting program.

3. Technical Accuracy with the Approach

- Environmental Impact Assessment Report. Prepared for One Line Technical Advisor. February 2022. 493 pages.

Compliance under Treaty obligations is a new concept in Western ideology. CLFN and 4 Directions wishes to work alongside Metrolinx, educate their consultants on how they can all be better Treaties peoples and create a space of co-governance.

The Don River is a very sacred and important location for all Michi Saagiig People. Through Settler occupation, the Michi Saagiig have witnessed it contamination and alteration. American eel, Atlantic salmon, and brook trout once swam in great numbers throughout its tributaries and mainstem of the waterway have been displaced or removed. It was disappointing to see environmental consultants writing off habitat features of the site, stating simply if the animals are present then they are lost or not supposed to be there. **This will need to be discussed further.**

Statement: When looking at the results of the Natural Heritage Features and Areas Background Review, this is only through a colonial and settler lens, this does not extent itself to an Indigenous worldview or to the aspects captured within the Treaty. Further conversations and raw data sets are required by CLFN from Metrolinx to identify and maintain cultural keystone species within the project area. This information will help feed into site restorations. It is important for Western practitioners to know, *“even though the probability of occurrence is low for a species further examination should be completed to rule out its occurrence or use of the site. By this western logic, all animals or living beings only occupy high quality, optimal habitats. Then why is this not observed in human populations? If this was the case, there would be no homeless and we would all live in large upscale homes.”* (Gary Pritchard- lecture: *Indigenous ways of Knowing.*) By using a justification of probability, it allows Western science

the ability to justify environmental degradation and destruction. Thus, furthering a colonization and destruction of the landscape.

Stop and Think: Even though a species population is stable elsewhere in Ontario, there is cultural and community protocols that all Indigenous peoples have followed for countless generations and adhere to prior to harvesting outside their territory or jurisdiction. Thus, it is imperative to ensure there is no to minimal impacts to the local ecology in their territory. It should be communicated to Metrolinx that Indigenous peoples do not harvest so freely outside of their territory with permission of the Rights Holders of that area with the possibility of denial from a community, this is a practice commonly not observed in the Settler community and hard to understand.

Action Item: Create a comprehensive monitoring plan for pre and post construction conditions with Indigenous participation.

Metrolinx and CLFN must develop an Environmental Monitoring Plan that suits the needs of CLFN to ensure cultural longevity during and post construction of this project. Some of the items lacking from this environmental report should be included such as but not limited to:

- Indigenous Areas of Use (Harvesting Windows if applicable to the project),
- Critical season use of all species,
- Critical habitat of all species,
- Emphasis on Cultural Keystone Species,
- Best Management Practices and Monitoring Practices,
- and a Projects Cumulative Impact to an Area (sub-watershed level)
 - Such as provisions in a watershed report card.

4. Concerns from Site Visit

To date, there has not been any site visits by any members of CLFN or those who work on their behalf. It is strongly recommended that a site tour is arranged by Metrolinx at the appropriate time.

5. Outcomes and Recommendations

It should be noted that the Michi Saagiig believe all species have a value and right to exist, not only the species at risk. Ticks, mosquitos and even poison ivy have a right to co-exist with their human relatives. Eurocentric or Western Science approaches and methods of species and environmental management has proven to lead to a decline of biodiversity and further degrade the natural environment. The natural environment needs to be looked at from an ecosystem level or sub watershed level with the exclusion of targeted species and all species carrying equal weight. If the land is healthy then those who live in and with it are too.

The following recommendations are made to ensure the protection of Indigenous Rights and to have good faith in the process moving forward:

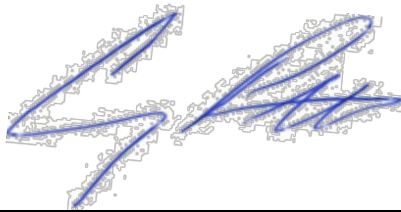

- 1) All sections of this report need to be addressed in good faith between Metrolinx and CLFN to address their (CLFN) level of environmental concern. Metrolinx not only needs to communicate this to CLFN but also in a subsequential document outlining a formal response to questions, recommendations or action items arising from this peer review.
- 2) Since culturally sensitive features are protected in the Treaty's signed by the Michi Saagiig then appropriate environmental buffers should be negotiated with the Rights holders and the ones who grant harm or destruction to the Rights under Section 35 of the Canadian Constitution. This may extend beyond the industry standard.
 - a. Collectively we need to formulate sharing circles and knowledge transfers that are outside the typical board room approach.

- 3) **Value-oriented Criteria:** CLFN, the regulator and the proponents need to create a framework at the landscape level that considers Indigenous cross-cultural compatibility. Under current industry practices these criteria and indicator frameworks are a great method at assessing site development impact but does not translate well or incorporates Indigenous values or Rights.
- 4) Site restoration design inputs with CLFN using Indigenous Knowledge Systems.
- 5) CLFN has the right to add to this list of requirements at any time but should approach the proponent in the spirit of reconciliation.

Closing

I trust that this review and summary of the environmental documents will help you and Metrolinx work collaboratively together through the next steps and the regulatory review process. If you have any questions, please do not hesitate to contact me at (705) 220-1952.

Miigwetch,

Gary Pritchard, BSc., EP., CERP.

Subject: Ontario Line: Notice of Publication of Draft EIAR
Date: Monday, February 7, 2022 3:58:23 PM
Attachments: [image003.png](#)
[Appendix 2 - EIAR Arc and Natural Env Impacts and Mitigation.pdf](#)
[Attachment 1 - Notice of Publication of Draft EIAR.pdf](#)
[Notice of Draft EIAR CLFN.pdf](#)

Dear Julie and Team,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. We wish to share with you that the Draft Environmental Impact and Assessment Report (EIAR) has now been published. Attached you will find a letter outlining the Draft Environmental Impact Assessment Report (EIAR) prepared for the Ontario Line Project, as well as the Notice of Publication for the report.

The full report can be found in our shared Dropbox using the following link:

The Notice of Publication commences a 30-day public review period which will continue from February 7, 2022 until March 9, 2022. As such, we ask that your Nation provide any comments in writing no later than March 9, 2022. We appreciate the size of these documents and would be happy to arrange a meeting to review the report and project with you.

In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations for Natural Environment and Archaeological Resources, as we know this may be of specific interest to you.

Thank you for your time and assistance. If you have any questions or concerns, please do not hesitate to contact me.

Delivered by email

Dear Dr. Kapyrka,

RE: Ontario Line Project - Notice of Publication of Draft Environmental Impact Assessment Report (EIAR)

Metrolinx remains committed to meaningful consultation and engagement, especially where our projects have impacts to the Treaty and traditional lands of Curve Lake First Nation. Metrolinx values its relationship with Curve Lake First Nation and it is our wish to continue to work with your Nation as we move forward. In November of 2021, Metrolinx shared with Curve Lake First Nation the preliminary Draft Environmental Impact Assessment Report (EIAR) for comment and review. The purpose of this letter is to share with your Nation the that the Notice of Publication for the Draft EIAR has now been posted, and to continue to invite any comment or feedback you may wish to share on this report.

Project Description

Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Figure 1 - Ontario Line

Ontario Line Environmental Assessment & Project Timeline

Environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Table 1 below provides a summary of the Ontario Line Reports that have been shared, or will be shared with Curve Lake First Nation:

Table 1: Ontario Line Reporting Timeline

Report	Date Shared/to be Shared with Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour Station)	June 5, 2020
Draft Environmental Conditions Report	September 17, 2020
Final Environmental Conditions Report and Draft Exhibition Station Early Works Report	November 30, 2020
Final Exhibition Station Early Works Report	February 1, 2021
Initial draft of Corktown Station Early Works Report	March 22, 2021
Draft Corktown Station Early Works Report	May 12, 2021
Final Corktown Station Early Works Report	July 15, 2021
Draft Lower Don Bridge and Don Yard Early Works Report	June 22, 2021
Final Lower Don Bridge and Don Yard Early Works Report	August 25, 2021
Initial draft of Lakeshore East Joint Corridor Noise and Vibration Operations Report	July 28, 2021
Draft Lakeshore East Joint Corridor Early Works Report	September 23, 2021
Final Lakeshore East Joint Corridor Early Works Report	November 17, 2021
Draft East Harbour Station Early Works Report	September 23, 2021
Final East Harbour Station Early Works Report	November 17, 2021
Initial draft of Environmental Impact Assessment Report Stage 1 Archaeological Assessment Report and Natural Environment Report	August 18, 2021
Initial draft of Environmental Impact Assessment Report	November 18, 2021
Draft Environmental Impact Assessment Report	February 7, 2022 (shared with this letter)
Final Environmental Impact Assessment Report	April 19, 2022*

*Date is subject to change.

Draft Environmental Impact Assessment Report (EIAR)

The Draft EIAR summarizes the local environmental conditions in the discipline-specific study areas developed for the Project. The local environmental conditions were characterized through a combination of desktop review and field studies by practitioners using industry standard techniques and provincial standards, protocols, and guidelines, where appropriate. The resulting Draft Stage 1 AA and Natural Environment Report was shared with Curve Lake First Nation for review in August 2021.

The Draft EIAR also provides an assessment and evaluation of the impacts that the Project might have on the environment. Based on the potential impacts, a description of mitigation measures and monitoring activities is outlined. A list of municipal, provincial, federal, or other permits and approvals that may be required for the Project is also provided.

Discipline-specific assessment and evaluation of impacts were undertaken for the following disciplines:

- Natural Environment
- Soil and Groundwater
- Cultural Heritage
- Archaeological Resources
- Socio-Economic and Land Use
- Air Quality
- Noise and Vibration
- Traffic and Transportation

Effective February 7, 2022, the Draft Environmental Impact Assessment Report will be available for a 30-day public review period. The report is posted on the Ontario Line project webpage, which can be accessed using the following link:

<https://www.metrolinxengage.com/en/content/full-report-draft-environmental-impact-assessment-report>

The Notice of Publication of Draft EIAR can be found in **Attachment 1**.

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2** provide a summary of natural environment

and archaeology potential impacts and mitigation measures identified as part of the Draft EIAR that may be of interest to Curve Lake First Nation. If your Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Engagement

Metrolinx welcomes any comments or feedback on the EIAR during the 30-day public review period, from February 7 to **March 9, 2022**. Metrolinx is committed to an open and respectful relationship with Curve Lake First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Curve Lake First Nation. We are happy to assist in the review of these documents by meeting with your Nation.

Metrolinx is willing to address any questions that Curve Lake First Nation may have about the Ontario Line Project. If you require additional information or materials or if you wish to discuss the Project in more detail or set up a meeting, please contact Jaimi O'Hara, Manager of Indigenous Relations Office at Metrolinx. She can be reached at

IndigenousRelations@metrolinx.com.

With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the Freedom of Information and Protection of Privacy Act, except where information is provided to Metrolinx in confidence, pursuant to section 15.1, which protects the confidentiality of Indigenous knowledges.

Thank you for your time in reviewing this letter. Yours

Truly,

A handwritten signature in black ink, appearing to read 'J. Pakkala'.

Notice of Publication of Draft Environmental Impact Assessment Report and Virtual Open Houses Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Environmental Impact Assessment Report

Environmental impacts of the Ontario Line are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 15 of O. Reg. 341/20, Metrolinx has prepared the Draft Environmental Impact Assessment Report that is now available for review.

The Draft Environmental Impact Assessment Report describes existing environmental conditions in the Project study area, environmental impacts, mitigation and monitoring measures, consultation, and required permits and approvals for the Ontario Line.

The Draft Environmental Impact Assessment Report Review and Consultation Process

Effective **February 7, 2022**, the Draft Environmental Impact Assessment Report will be available for review on the Ontario Line project webpage (www.metrolinx.com/ontarioline). You can view and comment on the report from **February 7 to March 9, 2022** via the online form provided.

You can also participate in virtual open houses, where you can hear from project experts and ask questions about the report in real time, at MetrolinxEngage.com/OntarioLine/live on:

- **February 22, 2022 and February 24, 2022** from 6:30 to 8:00 p.m., with a focus on the portion of the project from Science Centre Station to Gerrard Station
- **March 1, 2022 and March 3, 2022** from 6:30 to 8:00 p.m., with a focus on the portion of the project from Gerrard Station to Exhibition Station

Those who wish to provide comments on the Draft Environmental Impact Assessment Report must do so by **March 9, 2022** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 17 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Environmental Impact Assessment Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the Ontario Line implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Environmental Impact Assessment Report on the Ontario Line project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final Environmental Impact Assessment Report.

To obtain a copy of the Draft Environmental Impact Assessment Report, please contact the Ontario Line project email listed above.

Mark Clancy (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

This may include planting or seeding native flowering plants in temporarily disturbed areas. Opportunities to plant milkweed or forage vegetation outside of and in the rail RoW will be undertaken, where possible, and in accordance with the Metrolinx Vegetation Guideline (2020b). If vegetation clearing proceeds when monarch larvae may be present (April 1 to September 30), milkweed plants should be inspected for monarch larvae prior to their removal. If larvae are present, they may be moved to a location that is suitable and safe, under the direction of a qualified biologist. Monarch caterpillars may be moved to other milkweed plants; for other larval stages (i.e., eggs and chrysalis). Entire milkweed plants will be transplanted. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to significant wildlife habitat for monarch during operations, no mitigation measures are recommended. 	<p>Construction</p> <ul style="list-style-type: none"> Regular monitoring will be undertaken during construction to prevent unauthorized impacts to habitats used by Monarchs. This will include regular inspection to confirm that protection fencing around the habitat remains intact, and that there is no encroachment into the habitat. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to significant wildlife habitat for monarch during operations, no monitoring activities are recommended.
Wildlife and wildlife habitat – significant wildlife habitat – common nighthawk (Species of Conservation Concern)	<p>Construction</p> <ul style="list-style-type: none"> Removal of candidate nesting habitat for common nighthawk <p>Operations</p> <ul style="list-style-type: none"> Potential impacts are not anticipated during operations 	<p>Construction</p> <ul style="list-style-type: none"> Refer to mitigation measures described for migratory breeding birds and nests. Demolition of buildings should be scheduled outside the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for common nighthawk. If gravel is present, a search for eggs and nesting activity for common nighthawk on the roof will be conducted. If nests or nesting activity of common nighthawk are confirmed, the building cannot be demolished until it is confirmed by a qualified biologist that young have fully fledged and left the nest. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to significant wildlife habitat for common nighthawk during operations, no mitigation measures are recommended. 	<p>Construction</p> <ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to significant wildlife habitat for common nighthawk during operations, no monitoring activities are recommended.

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Wildlife and wildlife habitat – migratory breeding birds and nests, including Species of Conservation Concern (birds).	Construction <ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests, including candidate significant wildlife habitat for the following Species of Conservation Concern birds: <u>OLW and OLS Study Areas</u> Common Nighthawk, Eastern Wood-pewee, Peregrine Falcon, Red-headed Woodpecker, and Wood Thrush Note: In the OLS Study Area, impacts to Peregrine Falcon habitat are not anticipated to the Sheraton Centre since the Ontario Line Subway tracks are tunneled underground adjacent to the building and there are no proposed above ground construction activities within approximately 100 metres from the building. <u>OLN Study Area</u> Black-crowned Night Heron, Common Nighthawk, Great Egret, Peregrine Falcon, Red-headed Woodpecker, and Wood Thrush Operations <ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests during operational vegetation maintenance activities, if applicable 	Construction <ul style="list-style-type: none"> All works must comply with the MBCA, including timing windows for the nesting period (April 1 to August 31). If activities are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside this nesting period, (including a ground nest) it still receives protection. Bird SAR are also protected by the ESA and migratory bird SAR are protected by the federal <i>Species at Risk Act</i>. Mitigation measures for bird SAR are discussed under the Species at Risk heading. Operations <ul style="list-style-type: none"> All works must comply with the MBCA, including timing windows for the nesting period (April 1 to August 31). If operation vegetation maintenance activities are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest), it still receives protection 	Construction <ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites. Operations <ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife and wildlife habitat – significant wildlife habitat – Turtles and Turtle Habitat, including Species of Conservation Concern – in the OLS and OLN Study Areas	Construction <ul style="list-style-type: none"> Potential for impacts to turtles and/or turtle habitat including confirmed habitat for Northern Map Turtle and candidate habitat for Snapping Turtle near the Lower Don River Operations <ul style="list-style-type: none"> Potential for impacts to turtles and/or turtle habitat during operational vegetation maintenance activities, if applicable 	Construction <ul style="list-style-type: none"> Work in turtle habitat will be planned in consideration of turtle overwintering period which occurs from October 1 to April 30 in any given year. It is also possible that turtle surveys would need to be conducted prior to the work. If required, reptile exclusion fencing will be installed according to the Reptile and Amphibian Exclusion Fencing Best Practices (MNR 2013) and fencing should be inspected daily to ensure it is tight and no species are entangled. Post-construction habitat restoration will be implemented as required. Operations <ul style="list-style-type: none"> Work in turtle habitat will be planned in consideration of turtle overwintering period which occurs from October 1 to April 30 in any given year. It is also possible that turtle surveys would need to be conducted prior to the work. 	Construction <ul style="list-style-type: none"> Onsite inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Operations <ul style="list-style-type: none"> Onsite inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Aquatic Habitat			
Aquatic Environment – Wetlands and Waterbodies	<p>Construction</p> <p><u>OLS Study Area</u></p> <ul style="list-style-type: none"> Impacts to riparian vegetation, erosion and sedimentation to waterbodies from construction; risk of contamination to waterbodies as a result of spills. <p><u>OLN Study Area</u></p> <ul style="list-style-type: none"> Removal or impacts to wetland; aquatic and riparian vegetation; degradation of wetlands as result of dewatering and discharge activities; erosion and sedimentation to wetlands/waterbodies from construction; and risk of contamination to wetlands/waterbodies as a result of spills. <p>Operations</p> <ul style="list-style-type: none"> Potential impacts are not anticipated during operations 	<p>Construction</p> <ul style="list-style-type: none"> Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to wetlands and waterbodies. Shorelines or banks disturbed by construction activities will be immediately stabilized by any activity associated with the project to prevent erosion and/or sedimentation, preferably through re-vegetation with native species suitable for the site. An Erosion and Sediment Control Plan, in accordance with the Greater Golden Horseshoe's Erosion and Sediment Control Guideline for Urban Construction (2006) and the Erosion and Sediment Control Guide for Urban Construction (TRCA 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation. A Spill Prevention and Response Plan will be developed before work commences so that procedures and policies are in place to reduce impacts to wetlands and watercourses during construction. In wetland areas where vernal pooling occurs, prior to dewatering isolated work areas, wildlife will be captured and relocated to suitable habitat outside of the work area. Vegetation removals will also consider and mitigate potential impacts to wetland communities. Until such a time, that an Ontario Wetland Evaluation System evaluation is completed and evaluated by NDMNRF, unevaluated wetlands will be considered as significant for the purposes of assessing impacts. Wetland communities potentially affected by the Project will be clearly staked out on site. If dewatering is proposed, then it is recommended to be undertaken during the winter when the potential impacts of changes in water levels are less significant in wetland communities. During detailed design, the need for a dewatering zone of influence assessment and dewatering monitoring plan should be evaluated. The dewatering monitoring plan, if required, will monitor for potential negative impacts on nearby wetlands and adjacent vegetation communities to confirm if they would be affected due to dewatering activities. An adaptive management plan will be prepared if negative impacts are observed. Prior to dewatering isolated work areas, fish will be captured and relocated to suitable habitat outside of the work area under a Licence to Collect Fish for Scientific Purposes from the NDMNRF. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to wetlands and waterbodies during operations, no mitigation measures are recommended. 	<p>Construction</p> <ul style="list-style-type: none"> Onsite inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to wetlands and waterbodies during operations, no monitoring activities are recommended.
Aquatic Environment – Fish and Fish Habitat	<p>Construction</p> <p><u>OLS Study Area</u></p> <ul style="list-style-type: none"> No in-water works, no direct impacts to fish and fish habitat Indirect - Dewatering activities and water discharge resulting in changes in water velocity or temperature, soil 	<p>Construction</p> <ul style="list-style-type: none"> All requirements of the <i>Fisheries Act</i> will be met. In the event that in-water and/or near water construction works are required appropriate mitigation measures will be followed, as identified in Applicable Law and through consultation with the relevant authorities including Fisheries 	<p>Construction</p> <ul style="list-style-type: none"> Onsite inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective

Dear Julie and Team,

Please find attached a letter inviting participation in the archaeological monitoring of borehole drilling planned to occur in the Lower Don Bridge area as part of the Ontario Line Project.

The date of this fieldwork is tentatively set for March 7, 2022. If you are interested in participating, please let me know as soon as possible and we will work with you and the project team to coordinate.

If you have any questions or concerns, please feel free to reach out to me at any time.

Thank you for your time and assistance.

Jaimi

Curve Lake ON K0L1R1
Delivered by email

Dear Dr. Kapyrka,

RE: Ontario Line Project - Invitation to Participate in Archaeological Monitoring for Borehole Drilling - Lower Don Bridge Area

Metrolinx continues to progress the Archaeological studies for the Ontario Line project and wanted to invite Curve Lake First Nation to participate in further Archaeological monitoring for borehole drilling planned for the Lower Don Bridge area.

A Stage 1 Archaeological Assessment (AA) was completed as part of the Ontario Line Environmental Impact Assessment Report (EIAR). This report identified the area for the proposed boreholes as having archaeological potential. Both the Stage 1AA report and the EIAR were shared with Nations, in both August and November 2021.

Metrolinx is completing an Environmental Site Assessment in the Lower Don area (please see **Figure 1**). Given the identified archaeological potential of the area, archaeological monitoring will take place for the planned borehole drilling. This approach will provide for the on-site identification of archaeological resources and, if necessary, stop-work order of drilling by a licensed archaeologist in the event potential archaeological resources are encountered. A licensed archaeologist will be on-site during drilling to visually inspect spoil removed during borehole drilling as well as intermittent borehole samples to visually identify the presence of artifacts. Metrolinx would value any participation that Curve Lake First Nation may wish to have in this monitoring program.

Please see the fieldwork details below:

Start Date: March 7, 2022 (potentially March 8 as well depending on drilling)

Duration: 1 day

Start Time: 8:30am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298

Assessment: Archaeological monitoring for borehole drilling

Size of Field Crew: 1 field supervisor

Parking and meeting location: See Figure 2. Meet and park at yellow star - along Bayview Ave and Mill St

Required PPE:

- Class 2 PPE (hi-viz vest)
- CSA Type 2 Hard Hat with foam insert (bump caps)
- CSA approved eye protection
- CSA approved 6" laced safety shoes
- CSA Hearing protection, in ear or over ear
- Appropriate clothing for weather conditions

Invitation to Participate in Fieldwork

Metrolinx would value the involvement of Curve Lake First Nation in the upcoming archaeological monitoring fieldwork outlined above. Should your Nation wish to participate, please let us know at your earliest convenience. We welcome any requests for a meeting to discuss opportunities to participate or to explore this project in more detail with Curve Lake First Nation. Upon receipt of Curve Lake First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement. Metrolinx is also willing to share fieldnotes and/or a summary of the borehole and geotechnical data in addition to the open invitation to participate directly in the monitoring.

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If you require additional information or materials, or if you wish to discuss this project in more detail, please contact, Jaimi O'Hara, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

Hi Julie and Team,

I hope all is well on your end! I just wanted to send a quick follow up to ask whether you had any initial comments or questions on the response provided by Metrolinx below on March 25, 2022.

The comments and responses will be included in Appendix B of the final EIAR. We look forward to continued engagement with you as the project advances.

Happy to discuss further if you would like.

Best,
Marilyn

Hi Marilyn.

I also wanted to acknowledge receiving this email and the file attached. In the future, kindly address such correspondences to Chief Whetung as Metrolinx normally does. Metrolinx can indicate c/o Julie Kapyrka as in other examples.

Thanks.

~ Francis

Hi Francis,

Happy Friday! Was nice to see you at our meeting this week. David let me know that he had spoken to you about sharing this response to Curve Lake's comments on the Ontario Line. Please find attached a letter and response table. Please let us know if you have any questions or concerns.

Thank you! Have a great weekend.

Marilyn

Delivered by email

Dear Francis Chua,

RE: Ontario Line (OL) Environmental Impact Assessment Report (EIAR)

Thank you for your letter to Metrolinx, dated March 7, 2022, relating to Curve Lake First Nation review of the Ontario Line Project (OL) environmental reports.

Metrolinx is committed to building a long-term relationship with Curve Lake First Nation, and we recognize that this requires transparency and meaningful engagement. We remain committed to meaningful consultation and engagement, especially where our projects have impacts on the Treaty and Territory of Nations. . The Indigenous Relations Office has begun guiding the organization and identifying ways in which we can more meaningfully engage with Indigenous Nations as well as helping us learn and understand how we can do better.

Metrolinx values its relationship with the Curve Lake First Nation and has learned much about your Nation and its expectations over the past several months. It is our wish to continue to work with your Nation as we move forward.

Project Description

Metrolinx is overseeing the Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Please see **Figure 1** below for the proposed Ontario Line .

For more information about this project, please visit: www.metrolinxengage.com/ontario-line

Environmental Impact Assessment Report Comments

We want to thank you again for taking the time to provide recommendations and comments on the Ontario Line Draft Environmental Impact Assessment Report (EIAR). We hope the information provided in this letter addresses your comments and concerns and that we can continue to work together as the Ontario Line Project advances.

We appreciate the information that you have shared with us about treaty rights, Indigenous worldview, cultural perspective and concerns about the natural environment. We continue to learn from you as stewards and caretaker of the land.

We have made modifications to Appendix B1 of the EIAR based on the comments that were provided in your letter. Metrolinx also appreciates the insight and knowledge your Nation has provided to help strengthen our relationship moving forward and hope that this will continue to evolve through our Framework Agreement process. Metrolinx will also continue to engage with CLFN on the Ontario Line project, as well as inviting CLFN to future fieldwork, such as archaeological assessments and tree removals.

Attachment 1 outlines the comments received from Curve Lake First Nation on March 7, 2022, the OL Project Team response, and specific report edits made. The Final version of the EIAR will be provided to Curve Lake First Nation via email and be made available on the Metrolinx website in April 2022.

We believe that as we continue to work together our approaches will continue to evolve and better align with the expectations of Curve Lake First Nation with respect to the natural environment aspects of our projects.

Metrolinx remains committed to building meaningful relationships with Indigenous Nations, and we are working with the Indigenous Relations Office to better understand how we can change as an organization to understand and meet the expectation of Curve Lake First Nation.

Thank you for your time in reviewing this letter.

Yours Truly,

Encl. Attachment 1: CLFN OL EIAR Comment Response Table

ID	Report	Comment/Question – Ontario Line	Metrolinx Response
1	N/A	<p>1. General Questions or Issues Raised within the Context of Reporting</p> <p>Overall, as seen in the other reports present by Metrolinx for other site development, there are several reoccurring issues with their process in all levels of reporting by their consultants. It is strongly recommended that CLFN, 4 Directions, and Metrolinx look at a new method to create and implement effective change over the next year which goes beyond the standard TPAP and Environmental Assessment Process.</p>	Metrolinx welcomes any advice or suggestions by CLFN on how we better approach our current process to be more reflective of your concerns. We look further to moving this discussion further and learning more from CLFN. We appreciate any insight your Nation has to help facilitate our relationship moving forward and hope that this will continue to grow and evolve, including through our Framework Agreement discussions.
2	Notice of Project	Metrolinx needs to work with CLFN to create a diction and vocabulary lists that elevates Indigenous values and presence on the landscape. The term “traditional” is not acceptable because of its used in the “past tense” illustrating to the reader that the Michi Saagiig are no longer present on the landscape, and we once existed. It should be replaced to simply the “Treaty and Territory of CLFN.”	Thank you for your comment, Metrolinx will work with CLFN to create a diction and vocabulary lists. We have reviewed and confirmed that the EIAR does not use the term traditional and we will work to not use this term in future correspondences with CLFN. We recognize that CLFN continues to have presence on the landscape and we thank you for pointing out the importance, use and context of language in documents and teaching that has come along with this.
3	Notice of Ontario Line Project	In the Engagement Section of the letter, it is confusing to the reader since it appears to state that Metrolinx is committed to fostering a meaningful relationship with CLFN but then makes a statement about the 30-day commenting period. This 30-day commenting period is null and void to a First Nation or Rights holder community once consultation has been initiated as seen by the CLFN and Metrolinx relationship framework. Further education is required on the part of Metrolinx to avoid this misstep which could ultimately damage their relationship framework. Legally once a Nation has requested further engagement or consultation, it is then determined by that Nation to dictate the timeline to a proponent.	<p>We understand and acknowledge that 30 days may not be sufficient time to review the EIAR. In an attempt to try to minimize any deadline pressures associated with the various document reviews, Metrolinx provided initial drafts of the EIAR and technical reports to CLFN in August and November 2021 so that CLFN would have time to review the technical reports that are part of the EIAR. That said, we look forward to continuing our conversations with CLFN about the challenges we are facing as we are working within colonial processes that have legislated timelines that are challenging. We hope to continue these discussions as part of our Framework Agreement conversations.</p> <p>For your reference, the Ontario Line Project is being assessed in accordance with Ontario Regulation 341/20, under the Environmental Assessment Act. In Section 18, O.Reg 341/20 defines that within 65 days of publishing the notice of publication of the draft environmental impact assessment report, Metrolinx shall publish the final environmental impact assessment report on its website. To meet the timeline defined by the regulation a 30-day commenting period was necessary, and as noted above we will continue to work with CLFN to find ways to improve our collaboration as we refine our approaches.</p> <p>As this comment goes beyond the Metrolinx mandate, Metrolinx has shared the comment with Ministry of the Environment, Conservation and Parks (MECP). Metrolinx continues in its commitment to develop meaningful relationships with Indigenous Peoples, Nations and organizations and to evolve its processes to integrate Indigenous perspectives into the delivery of its business.</p>
4	Notice of Publication and Natural Environment Impacts, Mitigation Measures and Monitoring	No comment, document is created to industry standards. In future conversations with Metrolinx and document reviews, the Metrolinx team needs to understand the priority of Rights Holders and advancing Michi Saagiig ecological knowledge systems, worldviews, and assertion of Treaty/Inherent Rights. All environmental assessments in Ontario need our voice, our values, and our constraints to be included in the regulatory process. When this is achieved then both parties work towards co-governance of the landscape.	Thank you for the comment. Metrolinx is currently learning and continues to learn about Michi Saaging's as Rights Holders and your unique relationship to the territory we understand this process will take some time and will be informed by CLFN as we walk this journey together.
5	Project Distribution List Appendix B1	<p>This comment is directed at Appendix B1. It is interesting to see where the Indigenous community appears in this distribution list. They appear after Elected Officials.</p> <p>Question: Why does the Indigenous community's representation appear after the “Elected Officials?” Indigenous communities are recognized as equal or greater than the Federal governments since they are in fact a federal entity. This education and colonialist behavior of repression needs to be correct not only in the report but to all parties involved including the consultant team working on Metrolinx's behalf. This is not the first occurrence of this nature and needs to be addressed. Future error will lead to this error being held as a grievance in the Environmental Assessment.</p>	<p>Thank you for your comment. Appendix B1 will be revised for the final EIAR so that the Indigenous Nations appear first in the Distribution list to recognize the importance of this comment.</p> <p>Once again, we thank-you for bringing context these issues and helping to educate our teams and will share this with other project teams for inclusion in future reports.</p>
6	N/A	<p>2. Indigenous Worldview and Cultural Representation</p> <p>There were no Indigenous worldviews or knowledge systems in the creation of the environmental reports. However, this exclusion of Indigenous worldviews cannot be solely place on the responsibility of Metrolinx. They are working under and in a colonial governance system created by the Environmental Assessment process that allows for the insertion of Indigenous knowledge systems or worldviews at the wrong place in the consultation process. Indigenous consultation needs and should begin at the beginning of a project prior to the creation of the terms of reference, thus allowing for a magnitude of worldviews to be understood and examined. In this scenario, consultation would flow more seamless, holistic and achieve a faster project deliverable.</p>	<p>The IRO is working to identify best practices for engagement with each Indigenous Nation that has Treaty \ and/or aboriginal rights (s.35) where Metrolinx operates. This will form part of our on-going Framework agreement conversations, and also likely requires additional time to discuss these important items. This will include discussions around earlier involvement in our project lifecycle process, including when we are doing baseline/existing conditions data collection.</p> <p>As this comment goes beyond the Metrolinx mandate, Metrolinx has shared the comment with MECP. Metrolinx continues in its commitment to develop meaningful relationships with Indigenous Peoples, Nations and organizations and to evolve its processes to integrate Indigenous perspectives into the delivery of its business</p>

		Question: If looking at meeting the requirements through a federal and provincial policy, guidelines, and regulations perspective; then why are not the Treaty and Indigenous Rights examined during the jurisdiction scanning process of compliance? Should not the signatories of the treaty be included in the preliminary conversation regarding the existing conditions or examination of local natural features of their lands?	
7	N/A	<p><u>Treaties and Settler Obligations</u></p> <p>Many people think of treaty rights as “special” indigenous rights however, all people living in Canada are treaty people with their own set of rights and responsibilities. Treaties are a foundational part of Canadian society. Every road, house, building or business that exists today in a treaty area was made possible because of a treaty. Treaties are not a handshake or a handout. They are binding, reciprocal commitments. Neither party can unilaterally withdraw from the treaty or change its terms. Treaty rights are recognized and affirmed by section 35 of Canada’s constitution.</p> <p>All Canadians are beneficiaries of the treaties, whether on the Crown (settler) side, the Indigenous side, or both. Treaty relationships are about getting along together – Canada will be stronger when we have stronger treaty relationships, especially ones that are clear for all parties, and that are honored with respect.</p>	Thank-you for this important teaching and reminder by Michi-Saagiig. We here at Metrolinx appreciate any opportunities Michi-Saagiig has to share with our teams to support our education on the treaty rights of your Nation. Metrolinx is open to further discussions on how we can better inform or provide context for our teams. We are also exploring within Metrolinx how to provide additional training and information to our staff. We are all treaty people.
8	N/A	Statement: Treaty Rights- The Michi Saagiig did not sign away the rights to certain “environmental features” within this area, thus Settlers will need to get consent to any of the proposed activities prior to regulator application or approval that involves the use, alteration, or the potential to cause harm to these features. Further conversations with Metrolinx and regulators are needed to ensure the Rights of the Michi Saagiig are understood when looking at creating environmental constraints and compliance measures.	We thank you for raising this concern on behalf of Michi Saagiig and are open to having conversations on this specific concern. We here at Metrolinx continue to learn about treaty rights and Nishnaabeg perspective on the environment as the Michi Saagiig bring them forward.
9	N/A	Statement: In the spirit of building transparent and open conversation with CLFN and Metrolinx, it should be noted that the 30-day comment period by Indigenous Nations is not correct. Under the duty to consult, once a Nation wishes to enter the duty to consult with a proponent then it is between the proponent and the Nation to determine the best reasonable schedule. This has been the topic at several expert Ministers table discussions where 4 Directions leads this conversation on “How proponents need to create a meaningful relationship with the affected Nations”. It is in best interests of all parties that we begin the discussion of reasonable timelines. 4 Directions conversations as part of the Ministers experts will hopefully shed light on the needed amendments to a variety of environmental assessment challenges for individual Nations.	Please see response to comment 4. We look forward to continuing this dialogue and want to explore ways that we can move this conversation forward in a way that is respectful of CLFN’s and other Nations needs, while we are working within the restrictions of some of the colonial approval frameworks we are under.
10	EIAR	<p><u>Environmental Damages and Contingency</u></p> <p>There is no retribution or contingency programing for the potential contamination or harm to the Indigenous Territory and impact to harvesting rights</p> <p>Question: All Parties needs to meet with CLFN and other signatories of the Williams Treaty Settlement about environmental damages contingencies if their operation ever causes harm to the territory and/or harvest rights.</p>	Metrolinx recognizes the importance with working with CLFN and other signatories of the Williams Treaty Settlement and is open to meet to discuss the Ontario Line Project and contingency plans for environmental damages, should they occur.
11	N/A	<p><u>Grievances</u></p> <p>The only grievance that CLFN brought forward during the review process was the inconsistency in the Indigenous community contact list that is provided to the proponents by the provincial government for project notification/engagement. Ministries are not upholding the <i>2018 Williams Treaties Settlement Agreement</i> which allows other Indigenous based communities to create a consultation process with proponents or governments within territories in which they have no legal jurisdiction – they are not signatories to a Treaty. This error creates unnecessary issues for the 7 Indigenous communities of the WTFN.</p> <p>There are no Metis communities or Rights bearers to the WTFN Settlement Area. The Kawartha Nishnawbe do not have Rights to the WTFN Settlement area based on their community status under the Indian Act, their membership is comprised of CLFN and MSIFN.</p> <p><u>Action Item:</u> Metrolinx needs to work with individuals like Mr. Pritchard and other knowledge holders to address Rights or Interest based lists. Mr. Pritchard can also assist with proper mapping of treaty boundaries to allow for all parties an effective rights-based to land-based commenting program.</p>	<p>Thank-you for highlighting this concern CLFN has regarding on behalf of the Williams Treaty signatories. We are aware of this highly contentious and complex issue and have heard CLFN’s concerns. The list of Indigenous Nations identified as being potentially interested in the Ontario Line project was provided by the Ministry of Environment, Conservation and Parks (MECP) as required under O.Reg. 341/20.</p> <p>We acknowledge the importance of working with individual knowledge holders from your Nation and would like to keep this discussion moving forward so Metrolinx can learn more about this process from CLFN’s perspective. This can also be discussed as part of our on-going Framework Agreement discussions.</p>
12	EIAR	<p>3. Technical Accuracy with the Approach</p> <p>Compliance under Treaty obligations is a new concept in Western ideology. CLFN and 4 Directions wishes to work alongside Metrolinx, educate their consultants on how they can all be better Treaties peoples and create a space of co-governance.</p> <p>The Don River is a very sacred and important location for all Michi Saagiig People. Through Settler occupation, the Michi Saagiig have witnessed it contamination and alteration. American eel, Atlantic salmon, and brook trout once swam in great numbers throughout its tributaries and mainstem of the waterway have been displaced or removed.</p> <p>It was disappointing to see environmental consultants writing off habitat features of the site, stating simply if the animals are present then they are lost or not supposed to be there. <i>This will need to be discussed further.</i></p>	<p>Moving forward Metrolinx looks forward to exploring opportunities for Indigenous Nations to lead or guide some training with consultants, such as cultural awareness training.</p> <p>More information is requested to collaboratively aid in the selection of appropriate training options and can be discussed as part of our on-going Framework Agreement conversations.</p> <p>In addition, we will discuss the language and approach used in reports with respect to habitat features to reflect not just western knowledge but also knowledge from CLFN and other Nations.</p>
13	EIAR	Statement: When looking at the results of the Natural Heritage Features and Areas Background Review, this is only through a colonial and settler lens, this does not extent itself to an Indigenous worldview or to the aspects captured within the Treaty. Further conversations and raw data sets are required by CLFN from Metrolinx to identify and maintain cultural keystone species within the project area. This information will help feed into site restorations. It is important for Western practitioners to know, “ <i>even though the probability of occurrence is low for a species further examination should be completed to rule out its occurrence or use of</i>	<p>Metrolinx welcomes Curve Lake First Nation participation in on-site compliance monitoring during any future field investigations and construction for Ontario Line.</p> <p>Metrolinx will work with CLFN to understand the scope and type of construction-related monitoring CLFN is interested in participating in and supporting preparation of monitoring plans.</p>

		<p><i>the site. By this western logic, all animals or living beings only occupy high quality, optimal habitats. Then why is this not observed in human populations? If this was the case, there would be no homeless and we would all live in large upscale homes. "(Gary Pritchard- lecture: Indigenous ways of Knowing.)</i> By using a justification of probability, it allows Western science the ability to justify environmental degradation and destruction. Thus, furthering a colonization and destruction of the landscape.</p> <p>Stop and Think: Even though a species population is stable elsewhere in Ontario, there is cultural and community protocols that all Indigenous peoples have followed for countless generations and adhere to prior to harvesting outside their territory or jurisdiction. Thus, it is imperative to ensure there is no to minimal impacts to the local ecology in their territory. It should be communicated to Metrolinx that Indigenous peoples do not harvest so freely outside of their territory with permission of the Rights Holders of that area with the possibility of denial from a community, this is a practice commonly not observed in the Settler community and hard to understand.</p> <p>Action Item: Create a comprehensive monitoring plan for pre and post construction conditions with Indigenous participation.</p>	<p>The expected level of effort and timelines will be determined by Metrolinx and Curve Lake First Nation. Thank-you for providing Metrolinx with this invaluable cultural perspective on environmental colonization. As noted in comment 14 above, we look forward to continuing these discussions with CLFN.</p>
14	EIAR	<p>Metrolinx and CLFN must develop an Environmental Monitoring Plan that suits the needs of CLFN to ensure cultural longevity during and post construction of this project. Some of the items lacking from this environmental report should be included such as but not limited to:</p> <ul style="list-style-type: none"> • Indigenous Areas of Use (Harvesting Windows if applicable to the project), • Critical season use of all species, • Critical habitat of all species, • Emphasis on Cultural Keystone Species, • Best Management Practices and Monitoring Practices, • and a Projects Cumulative Impact to an Area (sub-watershed level) o Such as provisions in a watershed report card. 	<p>Environmental Management Plans will be developed prior to construction. These plans will detail the environmental mitigation and monitoring measures that will be implemented during construction. For example, a Tree Preservation Plan will be completed to minimize impacts to trees and document tree protection and mitigation measures.</p> <p>We look forward to continuing the conversation about environmental monitoring and learning more about the items noted in this comment and appreciate you sharing these areas of specific focus for us.</p>
15	N/A	<p>Concerns from Site Visit To date, there has not been any site visits by any members of CLFN or those who work on their behalf. It is strongly recommended that a site tour is arranged by Metrolinx at the appropriate time.</p>	<p>Thank you for raising this, Metrolinx will organize a site tour with Curve Lake First Nation to any location within the Ontario Line Project footprint that CLFN is interested in visiting.</p> <p>In the past Metrolinx has invited CLFN to participate in the Stage 2 Archaeological Assessments and tree removals that have occurred in the past year for the Ontario Line Project. We will continue to invite CLFN to future Ontario Line Archaeological and tree removal fieldwork.</p>
16	EIAR	<p>Outcomes and Recommendations It should be noted that the Michi Saagiig believe all species have a value and right to exist, not only the species at risk. Ticks, mosquitos and even poison ivy have a right to co exist with their human relatives. Eurocentric or Western Science approaches and methods of species and environmental management has proven to lead to a decline of biodiversity and further degrade the natural environment. The natural environment needs to be looked at from an ecosystem level or sub watershed level with the exclusion of targeted species and all species carrying equal weight. If the land is healthy then those who live in and with it are too.</p>	<p>Thank you for sharing this important teaching. You are correct to assume Metrolinx does not yet understand the worldview of the Nishnaabeg and we look forward to learning more about your perspective as we work together.</p>
17	EIAR	<p>The following recommendations are made to ensure the protection of Indigenous Rights and to have good faith in the process moving forward:</p> <ol style="list-style-type: none"> 1) All sections of this report need to be addressed in good faith between Metrolinx and CLFN to address their (CLFN) level of environmental concern. Metrolinx not only needs to communicate this to CLFN but also in a subsequential document outlining a formal response to questions, recommendations or action items arising from this peer review. 2) Since culturally sensitive features are protected in the Treaty's signed by the Michi Saagiig then appropriate environmental buffers should be negotiated with the Rights holders and the ones who grant harm or destruction to the Rights under Section 35 of the Canadian Constitution. This may extend beyond the industry standard. <ol style="list-style-type: none"> a. Collectively we need to formulate sharing circles and knowledge transfers that are outside the typical board room approach. 3) Value-oriented Criteria: CLFN, the regulator and the proponents need to create a framework at the landscape level that considers Indigenous cross-cultural compatibility. Under current industry practices these criteria and indicator frameworks are a great method at assessing site development impact but does not translate well or incorporates Indigenous values or Rights. 4) Site restoration design inputs with CLFN using Indigenous Knowledge Systems. 5) CLFN has the right to add to this list of requirements at any time but should approached the proponent in the spirit of reconciliation. 	<p>Thank you for reviewing the EIAR and providing comments. Metrolinx has updated the EIAR based on the feedback provided by CLFN and the Final version of the report will be made public in April 2022. All the recommendations, questions and formal responses to the comments provided by CLFN will be included in Appendix B of the Final EIAR.</p> <p>Metrolinx looks forward to continuing our conversations with CLFN and advancing the discussions regarding the Framework Agreement. If CLFN has any additional requirements, please reach out to Metrolinx and we will do our best to fulfil the requests.</p>

Subject: Ontario Line - Archaeological monitoring for Borehole Drilling
Date: Tuesday, January 19, 2021 3:26:44 PM
Attachments: [OL Archaeological Monitoring Invitation for Participation in monitoring for Boreholes_HFN.pdf](#)

Dear Chief Carr,

Please find attached a letter inviting participation in upcoming archaeological monitoring for borehole drilling that is taking place at various locations to support environmental assessment and geotechnical studies related to the Ontario Line Subway project. The boreholes are being drilled in locations that have known archaeological potential and as such Metrolinx is ensuring that a consultant archaeologist is on-site to monitor. We'd like to extend this invite to your Nation as well. We appreciate that during these uncertain times of COVID-19 this may not be possible or safe for your Nation. We are happy to provide any fieldnotes taken by the consultant archaeologist and/or provide a summary of the data collected if this is at all helpful to you. Please let us know if there is any other way we can support your Nation during this time.

The boreholes are anticipated to be completed over the next several weeks beginning this Friday on **January 22, 2021**. Please let me know if you have interest in participating as soon as possible, and we will work with you and the project team to coordinate.

Miigwetch,

Fallon

Dear Chief Carr,

RE: Ontario Line Project - Corktown Archaeological Monitoring for Borehole Drilling

Metrolinx and its consultants, Wood and Stantec, will be undertaking geotechnical and environmental site assessment investigations in Corktown. As part of this work boreholes will be drilled at 271 Front St East, 44 Parliament St and 25 Berkeley St. These boreholes will be located on/near potential archaeological sites and an archaeologist will be on site to monitor the drilling activities (see attached figures for location). We are writing to invite Hiawatha First Nation to participate in the archaeological monitoring associated with this work. Metrolinx appreciates the impacts of COVID-19 on Indigenous Nations and acknowledges that this may impact Hiawatha First Nation's ability to participate due to safety concerns. If preferable, Metrolinx is happy to share any fieldnotes taken by the consultant archaeologist as well as a summary of the borehole and geotechnical study data for review.

The fieldwork is anticipated to be conducted between January 22nd and February 12th, 2021, as detailed below:

Activity	Anticipated Timeline	Location		
		271 Front St E	44 Parliament St	25 Berkeley St
Drilling – Geotechnical Locations	Jan 22 – Feb 12, 2021		x	
Drilling – Environmental Locations	Feb 2 - 4, 2021	x		
	Feb 5 and 8, 2021		x	
	Feb 9 - 10, 2021			x

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the archaeological monitoring fieldwork. The attached maps illustrate the location of the boreholes that will be drilled. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

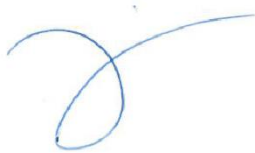

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your community in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If your Nation wishes to participate in the fieldwork, or if you'd prefer to receive fieldnotes and/or a summary of the borehole and geotechnical data, please let us know at your earliest convenience. If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact Fallon Melander, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*. Thank you for your time in reviewing these assessments.

Dear Chief Carr,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter providing an update on the project. The purpose of this letter is to:

- Provide an update on the scope of the project work
- share the initial draft of the Early Works Report for the proposed Corktown Station
- Invite your Nation to participate in upcoming archaeological fieldwork

In an effort to streamline your review, we draw your attention to the attachment which provides an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

Metrolinx is also preparing a letter specific to works being planned within the Don Valley as we recognize the significance of this waterway to many Nations. We hope to share that letter soon. We are happy to meet with your Nation to discuss the Ontario Line and address any questions or concerns that your Nation may have.

We ask that any comments on the draft Corktown Station Early Works Report be provided no later than **April 15, 2021**. Please note that the Noise and Vibration Report, which will be part of the Early Works Report is still being prepared and we will share with your Nation by March 19, 2021.

The draft Corktown Station Early Works Report is available at the following link:

Please let us know as soon as possible if your Nation has interest in participating in future archaeological fieldwork.

We appreciate the volume of documents that Metrolinx has shared with your Nation.

If you have any questions or concerns, please do not hesitate to contact me.

Miigwetch,

Fallon

Subject: Ontario Line Project - Invitation to Meet & provide input on First Parliament Site
Date: Monday, April 12, 2021 3:54:20 PM
Attachments: [First Parliament_HFN.pdf](#)

Dear Chief Carr,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. We recently communicated with your Nation about the proposed Corktown Station which is along the planned alignment of the Ontario Line. This location includes parcels of land which were once the site of Upper Canada's First Parliament buildings. Metrolinx and its partners are exploring opportunities to commemorate the history of this site, and have been engaging with various parties including the City of Toronto and the Mississaugas of the Credit First Nation, on whose treaty territory this project is occurring.

Given the significant chance of recovering Indigenous and European artifacts during the Corktown Station Early Works, a detailed archaeological workplan is being developed. Metrolinx recognizes the importance and value of Indigenous monitors for any archaeology related to the Ontario Line Project. In our previous communication, an invitation was included for your Nation to participate in any archaeological fieldwork and monitoring during the Corktown Station Early Works, including demolition of modern buildings currently on the First Parliament site.

This work is anticipated to commence in Fall 2021, and if you have not yet expressed interest in participating, please feel free to do so at your earliest convenience. As a reminder any comments on the draft Corktown Station Early Works Report should be provided no later than **April 15, 2021**.

Metrolinx recognizes that the history of this location extends beyond European use, and as such, wants to take the opportunity to understand any significance it may have to Indigenous Nations. Metrolinx would like to meet with your Nation to discuss the First Parliament site, its commemoration, as well as review the broader Ontario Line project if you wish. We recognize that traditional knowledge of this area may be sacred and/or not appropriate to be shared, but would appreciate any information that may be appropriate for Metrolinx to consider.

This letter is not intended to replace engagement but to provide a high level summary for your information. We would very much appreciate meeting with your Nation to discuss in more detail. Please let me know if you have any questions or concerns. We appreciate the volume of documents that Metrolinx has shared with your Nation. If you have any questions or concerns, please do not hesitate to contact me.

Chief Laurie Carr
Hiawatha First Nation
123 Paudash Street
RR #2
Hiawatha, ON K9J 0E6
Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - First Parliament Site and Lime Kiln Site

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is continuing the pre-construction planning of the Ontario Line which will bring nearly 16 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong, constructive, cooperative and mutually respectful and beneficial relationship with the Hiawatha First Nation. Metrolinx appreciates and respects Hiawatha First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Hiawatha First Nation information regarding Corktown Station early works and additional information regarding upcoming field visits and investigations at the Corktown Station early works site, which includes two registered archaeological sites, the First Parliament site and the Lime Kiln site.

Project Description

The proposed Ontario Line is a new 16-kilometer subway line, which will occupy an exclusive right-of-way system encompassing a combination of below-grade, above-grade, and at-grade alignment. The route (Figure 1) will run from Ontario Place/Exhibition through downtown Toronto to the Ontario Science Centre in the City of Toronto, with six (6) potential interchange stations and 17 new connections to GO Transit, existing subways and streetcars. More information on the Project can be found on our website: www.metrolinx.com/ontarioline

Corktown Station Early Works

As communicated in the letter sent to Hiawatha First Nation on March 11, 2021, the Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location of the Corktown Station. The First Parliament and Lime Kiln Sites, located within the Corktown Station area, are known archaeological sites which require additional archaeological study ahead of any ground disturbance activities. To prepare the Corktown Station site, demolition of existing buildings and structures, followed by completion of necessary archaeological studies, is required. Completion of this preparatory work on an expedited basis is essential to allow for the timely delivery of the overall Project and is anticipated to begin in the Fall 2021, subject to the completion of the Corktown Station early works process in accordance with Ontario Regulation 341/20: Ontario Line Project.

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. These activities will occur on properties within the Corktown Station early works project footprint, as shown in **Figure 1**.

Figure 1: Map of Corktown Station Early Works

Environmental impacts of Corktown Station early works are being assessed in accordance with O. Reg. 341/20. Metrolinx shared the draft Corktown Station Early Works Report and associated discipline reports with Hiawatha First Nation on March 11, 2021 and had requested any comments to be provided by April 9, 2021.

Archaeological Work at the First Parliament Site and Lime Kiln Site

Metrolinx appreciates the significance of archaeology to Hiawatha First Nation. The properties at 265 Front Street East, 271 Front Street East, and 25 Berkeley Street, in the St. Lawrence neighbourhood of the City of Toronto, are collectively host to the First Parliament Site. It is located on the southwest corner of Parliament Street and King Street, between Parliament Street and Berkeley Street. The First Parliament Site is a registered archaeological site (AjGu-41) which may include resources associated with the First and Second Parliament Buildings, the Home District Gaol, and Consumers' Gas company buildings. The surface of the property is currently occupied by automotive businesses, including a car dealership, car wash, and surface parking lot. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and remnants of early Toronto industry may be found at this site.

North of the First Parliament Site is another registered archaeological site (AjGu-64), the Lime Kiln Site, which includes remains from the Toronto Lime Works Company. A variety of structural features, in various states of preservation, have been documented on this site. The location of the Lime Kiln Site and the First Parliament Site are shown in **Figure 2**.

Figure 2: Location of First Parliament Site and Lime Kiln Site Areas

The First Parliament Site and Lime Kiln Site require additional archaeological studies ahead of any ground disturbance activities. To prepare the Corktown Station site, demolition of existing buildings and structures is necessary. Completion of this preparatory work is essential to allow for the timely delivery of the Ontario Line.

Archaeological fieldwork to remove or protect archaeological resources is anticipated to commence in early Fall 2021, and a workplan for these archaeological investigations is under development. As mentioned in the letter sent on March 11, 2021, Hiawatha First Nation is invited to participate in all archaeological fieldwork, and to review and provide comments on forthcoming reports.

Feedback on Commemoration of First Parliament Site

Metrolinx appreciates that the history of the First Parliament site is not one simply of Canadian origin, but rather holds longer history and tradition. Metrolinx also appreciates that the site of the First Parliament of Upper Canada is linked to a history of colonization and harmful practices towards Indigenous Peoples. Given the significance of this site, Metrolinx is engaging with Indigenous Nations, City of Toronto and the broader community to identify opportunities for commemoration. Metrolinx is committed to ensuring that any feedback from Hiawatha First Nation regarding the significance of this site is considered as part of this commemoration. Metrolinx appreciates that traditional or cultural knowledge about this site may be sacred and/or not be appropriate to be shared but welcomes any comments or ideas from Hiawatha First Nation that may be appropriate to commemorate Indigenous Peoples.

Engagement

Metrolinx is committed to an open, respectful, and transparent relationship with Hiawatha First Nation. We would like to meet with Hiawatha First Nation to better understand any significance the First Parliament site may have to your Nation. We are also happy to assist in reviewing the Corktown Station Early Works Report or reviewing the proposed archaeological workplan for this site. If Hiawatha First Nation requires additional information or materials, or you wish to discuss this project in more detail or set up a meeting, please contact Fallon Melander, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*. Thank you for your time in reviewing these assessments.

Thank you for your time in reviewing this letter.

Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - Don River Crossings & Stage 2 Archaeological Assessment Update

Metrolinx wishes to build a strong, constructive, cooperative and mutually respectful and beneficial relationship with the Hiawatha First Nation. Metrolinx appreciates and respects Hiawatha First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to provide more information to Hiawatha First Nation about the Ontario Line crossings of the Don River and its tributaries. Metrolinx appreciates the significance of the waters and wishes to better understand how the potential impacts of construction around the Don River may be of interest to Hiawatha First Nation.

Background

The Project is a new subway line with connections to Line 1 (Yonge-University) subway service at Osgoode and Queen Stations, Line 2 (Bloor-Danforth) subway service at Pape Station, and Line 5 (Eglinton Crosstown) service at the future Science Centre Station. Fifteen stations are proposed, with additional connections to three GO Transit lines (Lakeshore East, Lakeshore West and Stouffville), and the Queen, King, Bathurst, Spadina, Harbourfront and Gerrard/Carlton streetcar routes. The Project will reduce crowding on Line 1 and provide connections to new high-order rapid transit neighbourhoods. More information on the Project can be found on our website: <http://www.metrolinx.com/ontarioline>.

Work in the Don River System

As part of the Ontario Line Project, the following four crossings within the Don River system are proposed:

10 Bay Street metrolinx.com
Toronto, ON M5J 2N8

- Location 1: Lower Don River Crossing (Lower Don Bridge);
- Location 2: Millwood Road Crossing;
- Location 3: Walmsley Brook Crossing; and
- Location 4: West Don River Crossing north of Overlea Boulevard.

Locations 1-4 are shown in **Figure 1** and described in further detail below.

Figure 1: Ontario Line Project - Proposed Don River System Crossings

The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. Construction of the Lower Don Crossing (Location 1) will be assessed in the Lower Don Bridges and Don Yard Early Works Report, that is anticipated to be shared with Hiawatha First Nation in summer 2021. Construction of the other three crossings (Locations 2-4) will be assessed in the Environmental Impact Assessment Report, that is planned to be shared with Hiawatha First Nation in early 2022.

Location 1: Lower Don River Crossing (Lower Don Bridge)

A new bridge is planned to be built on the north side of the existing Lakeshore East rail bridge at the Lower Don River, with space for Ontario Line tracks going in both directions. We are also planning pedestrian and cycling connections across the Lower Don River.

Location 2: Millwood Road Crossing

The underground section of the Ontario Line running under Pape Avenue will emerge from the southern embankment of the Don Valley on an elevated guideway crossing the Don River, west of the Leaside Bridge (Millwood Road). The elevated guideway will connect to Thorncliffe Park in the north.

Location 3: Walmsley Brook Crossing

An elevated guideway will cross the Walmsley Brook tributary of the West Don River north of Pat Moore Drive. The guideway will then continue east across Beth Neilson Drive.

Location 4: West Don River Crossing (north of Overlea Boulevard)

The elevated guideway will cross the West Don River, north of Overlea Boulevard. This section of the route will connect to Don Mills Road and the future Flemingdon Park Station.

Field Surveys and Studies

As project planning is still in progress, environmental field surveys and studies as well as the timing of this work are being determined. Environmental field surveys and studies that may occur within or near the Don River include Stage 2 archaeological assessment and natural environment surveys (e.g., Species at Risk and tree surveys). Studies, surveys and their timing will be confirmed as project planning progresses. Further details are anticipated to be available in mid-Summer 2021.

Update on Archaeology

Metrolinx is currently planning to undertake Stage 2 Archaeological Assessments (AA) near the Don River starting in Fall 2021. The Stage 2 AA investigations will assess areas of identified archaeological potential within the Ontario Line study area which may be affected by the construction of the Project. Stage 2 AA fieldwork consists of test pit surveys at 5 m intervals within areas of previously identified archaeological potential.

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the Stage 2 AA fieldwork. Some of the Stage 2 AA may occur on lands

within the Toronto and Region Conservation Authority's (TRCA) property boundaries and regulated area. Metrolinx will coordinate with TRCA to ensure that Indigenous Nations are provided the opportunity to participate in Stage 2 AA investigations. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

As Metrolinx continues to undertake environmental due diligence for this project, additional archaeological assessment reports are anticipated to be completed. Metrolinx will ensure that Hiawatha First Nation will be made aware of and engaged regarding any future archaeological assessments, and especially the discovery and preservation of Indigenous artifacts. Metrolinx will also ensure that future archaeological assessments are provided to Hiawatha First Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries

Invitation for Input

We are committed to an open, respectful, and transparent engagement with Hiawatha First Nation. We recognize the potential significance of this project to Hiawatha First Nation and wanted to keep you apprised of this project. We welcome meeting in the near future to discuss this project and its possible impacts and ways to appropriately engage with Hiawatha First Nation.

We are happy to address any questions that Hiawatha First Nation may have about the work proposed in the Don River system or the Ontario Line Project as a whole. If you require additional information or materials, or if you wish to discuss this Project in more detail or set up an in-person meeting, please contact Fallon Melander, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Metrolinx thanks you for the time in reviewing this letter. Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Subject: RE: Ontario Line Project – Archaeological Monitoring for Borehole Drilling - 265 Front St East - HFN

Hi Sean,

The boreholes that are being drilled at 265 Front St East are required to support environmental and

geotechnical assessments. Because these boreholes will be located on/near potential archaeological sites a licensed archaeologist will be on site to inspect the soil samples collected and screen for any for artifacts.

The archaeological monitoring work will be carried out by Wood (Matthew Muttart) and Stantec (Paul Ritchie and Heather Kerr), that are cc'd in this email. If you can participate, before the fieldwork starts next week and PPE (safety boots, high visibility safety vest, hard-hat etc.) would be required on site.

Please reach out if are available to participate or if you have any questions.

Thank you,

Aaniin Christine.

Thank you for the conversation this morning. As mentioned, our liaison is working on another project next week and would not be available. I'm wondering what would be required if I were available to come down to monitor. I've only been out a couple times on different sites and none had to do with borehole drilling.

Subject: RE: Ontario Line Project – Archaeological Monitoring for Borehole Drilling - 265 Front St East - HFN

Dear Chief Carr,

Please find attached a letter inviting participation in upcoming archaeological monitoring for borehole drilling that is taking place next week at 256 Front Street in Toronto to support environmental assessment and geotechnical studies related to the Ontario Line Subway project. The boreholes are being drilled in locations that have known archaeological potential and as such Metrolinx is ensuring that a consultant archaeologist is on-site to monitor. If you are not able to attend, we are happy to provide any fieldnotes taken by the consultant archaeologist and/or provide a summary of the data collected if this is at all helpful to you.

The boreholes are anticipated to be completed between July 12 and July 16, 2021. Please let me

know as soon as possible if you have interest in participating, and we will work with you and the project team to coordinate. And just a final note for your information, both Fallon Melander and Jaimi O'Hara, who are usually Metrolinx's main point of contact with your Nation, are away from the office this week. Hence you are receiving this communication from me.

Miigwetch,

Make today great,

Christine Parris (she, her, hers)

Community Relations Specialist, Indigenous Relations Office

Dear Chief Carr,

Metrolinx is working with its consultant HDR to provide opportunities for participation in upcoming Archaeological Assessment and Natural Environment fieldwork associated with the Ontario Line. Please find attached a letter inviting your Nation to participate.

The fieldwork is anticipated to late August - early September 2021. Please let me know if you have interest in participating as soon as possible, and we will work with you, the project team and HDR to coordinate.

If you have any questions or concerns, please feel free to contact the Indigenous Relations Office at anytime.

Thank you,

Jaimi O'Hara

Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - Update on Archaeological Assessments and Natural Environment Surveys

Metrolinx and its consultant, Stantec and HDR, will be undertaking Archaeological Assessment and Natural Environment fieldwork associated with the Ontario Line Project. We appreciate Hiawatha First Nation's interest in participating in these studies. The following letter provides details about the anticipated surveys to support the planning and coordination of involvement by your Nation.

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the archaeological fieldwork. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

Update on Archaeology

Metrolinx is planning to undertake various Archaeological Assessments for the Ontario Line Project. This archaeological investigation will assess areas of identified archaeological potential, which may be potentially affected by the construction of the Project. The archaeological works are planned to begin in **September 2021**. Fieldwork dates may change based on field progress and weather.

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the archaeological fieldwork. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

As Metrolinx continues to undertake environmental studies for this project, additional archaeological assessment reports are anticipated to be completed. Metrolinx acknowledges that Hiawatha First Nation will be made aware of and engaged regarding any future archaeological assessments, and especially the discovery and preservation of Indigenous artifacts and sacred burial grounds.

10 Bay Street
Toronto, ON M5J 2N8

416.202.4967
metrolinx.com

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to Hiawatha First Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

Natural Environment Field Surveys

Metrolinx is conducting natural environmental studies to review and document existing conditions within the Study Area and to carry out impact assessment reporting. Most of the natural environment fieldwork for Ontario Line is planned to occur in 2022.

However, the surveys detailed in the table below are planned for this year and include butternut survey, tree inventory and bat habitat assessment (leaf-off). Please note that these are approximate dates and may be subject to change pending appropriate weather conditions and field survey requirements. Metrolinx will endeavour to keep Hiawatha First Nation apprised as the work unfolds.

Survey	Date(s)
Butternut Survey (Areas detailed in Figures 1 and 2)	• August/September 2021
Tree Inventory (Areas detailed in Figures 1 and 2)	• September 2021
Bat habitat assessment - Leaf-off (Don and West Don ravine areas)	• September 2021

Engagement

If your Nation requires additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact Jaimi O'Hara, Acting Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Yours Truly,

Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - Lower Don Bridge Marine Archaeological Overview Assessment for Review

Metrolinx wishes to build a strong and respectful relationship with Hiawatha First Nation. Metrolinx appreciates and respects Hiawatha First Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share with you the development of the Marine Archaeological Overview Assessment (MAOA) report for the proposed construction of the Lower Don Valley Bridge over the Don River. This proposed bridge is a component of the Ontario Line Project as part of the Lower Don Bridge and Don Yard Early Works. We invite Hiawatha First Nation's feedback on the marine Archeological Overview Assessment prepared for the Ontario Line Project.

Project Description

The Ontario Line will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lower Don Bridge and Don Yard Early Works

The Lower Don Bridge and Don Yard early works are planned for where the Ontario Line will run alongside GO train operations. These early works will set the groundwork for other major construction on the Ontario Line project and include:

- building a new bridge north of the existing rail bridge over the Lower Don River that will carry the Ontario Line tracks;
- shifting GO tracks in the Don Yard and nearby rail corridor to accommodate Ontario Line infrastructure;
- modifying the existing rail bridge to accommodate GO track shifts and Ontario Line infrastructure; and

- relocating and protecting utilities and signal infrastructure in the area.

The location of the Lower Don Bridge and Don Yard early works project footprint and study area can be viewed in **Figure 1** below.

Figure 1: Map of Lower Don Bridge and Don Yard Early Works

Marine Archaeological Overview Assessment

On behalf of Metrolinx, Stantec has undertaken a Marine Archaeological Overview Assessment for the proposed Lower Don Bridge. The purpose of the Marine Archaeological Overview Assessment is to determine the marine archaeological potential of the study area for the bridge shown in **Figure 2** below.

The proposed bridge will cross over the Don River on the north side of the existing GO Transit Lakeshore East rail bridge. As a result, a large portion of the study area overlaps with the Don River. While the bridge will have no permanent in-water components, Metrolinx anticipates that in-water construction activities may impact potential submerged cultural resources. The marine archaeological potential of the study area is being considered as part of the Marine Archeological Overview Assessment.

The assessment determined that despite the study area for the Lower Don Valley Arch Bridge Superstructure having indicators of marine archaeological potential, there has been extensive river-bed disturbance to date. The riverbed has been previously disturbed by engineered channeling, modern dredging, and modern construction. The assessment determined that the study area retains low to no potential for the identification and documentation of in situ Indigenous and Euro-Canadian marine archaeological resources. As a result no further marine archaeological work is required for the study area.

A copy of the marine Archeological Overview Assessment has been included in the Dropbox link for your review. Please provide any comments you may have by **November 19, 2021**.

Invitation for Input

We are committed to an open, respectful, and transparent engagement with Hiawatha First Nation. Metrolinx values any input that Hiawatha First Nation is willing to provide on the Marine Archaeological Overview Assessment report.

We are happy to meet with your Hiawatha First Nation to go over the project and development of the Marine Archaeological Overview Assessment report and answer any questions Hiawatha First Nation may have on the report or the project as a whole.

If you require additional information or materials, or if you wish to discuss this project in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please submit your feedback in writing by **November 19, 2021**.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Dear Chief Carr,

**RE: Ontario Line Project - Stage 2 Archaeological Assessment - Moss Park and Ordnance Park
Invitation to Participate in Archaeological Fieldwork**

Metrolinx and its consultant, Stantec continue to progress the archaeological studies for the Ontario Line project and wanted to invite Hiawatha First Nation to participate in Stage 2 Archaeological Assessments planned to occur at Moss Park and Ordinance Park in the upcoming weeks. The locations of Moss Park and Ordinance Park study areas can be viewed in **Figure 1 and 2** below.

Moss Park and Ordnance Park have been previously assessed in a desktop study, the *Ontario Line Stage 1 Archaeological Assessment Report - South* which was shared with Hiawatha First Nation in March 2020 and was subject to an Addendum shared with Hiawatha First Nation in February 2021. The Stage 1 report recommended that a Stage 2 archaeological assessment is required for Moss Park and Ordnance Park parcels.

The Stage 2 archaeological field work will be conducted by test pit survey, in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' (MHSTCI) 2011 *Standards and Guidelines for Consultant Archaeologists*. The Stage 2 test pit survey method consists of hand excavating test pits by shovel at a five-metre interval on the park lands. The test pits are at least 30 centimetres in diameter and dug through the topsoil (which has a variable depth generally between 15 and 25 centimetres, but may be deeper or shallower) and at least five centimetres into subsoil. Once complete, test pits will be backfilled. Areas disturbed by utility infrastructure or recent construction will not be surveyed but will be photo documented. Based upon the Stage 2 field work, subsequent archaeological investigations may be recommended depending on what is found during the Stage 2 test pit survey.

Please see the fieldwork details below:

MOSS PARK:

Start Date: Tentatively October 25, 2021. If the start date changes, we will reach out to you.

Duration: Approximately two to three days

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Stage 2 Archaeological Assessment

Meeting Location Address: 150 Sherbourne St

Size of Field Crew: 2 (1 Field director, 1 field tech)

Parking location: Above-ground parking lot at the southwest corner of Jarvis Street and Queen Street East; approximate three minute walk

ORDNANCE PARK

Start Date: Work on Ordinance Park will begin after the Moss Park work is completed

Duration: Approximately two weeks

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Stage 2 Archaeological Assessment

Size of Field Crew: 4 (1 Field director, 3 field techs)

Required PPE:

Item	Specifications
Clothing and Attire	Loose clothing, long hair, dangling accessories, jewelry, or other similar items that are likely to be a hazard will not be worn unless they are tied, covered, or otherwise secured so they prevent the hazard.
Foot Protection	Canadian Standards Association (CSA) approved work boots (Steel-toed boots, minimum 6" from top of sole, grade 1 with sole protection [CSA Standard Z195-09]).
Hand Protection	Cut, puncture, and abrasion-resistant gloves shall be worn when conducting archaeological hand digging and screening activities.
Eye and Face Protection	CSA approved safety glasses with rigid side shields. Regular prescription glasses are not permitted unless they are designed as CSA safety glasses complete with rigid shields. An ASTM level 1 (or higher) face covering is mandatory.
Head Protection	CSA approved Type II, Class E (side impact) hard hat. Hard hats shall be worn with the brim pointed forward.
Hearing Protection	Not needed.
High Visibility Safety Apparel	Mandatory class 2, level 2 High Visibility Safety Apparel (HVSA). Full length sleeves and pants with reflective stripes on both arms and legs are required.
*Although not considered PPE, face coverings for COVID-19 shall be worn when applicable	

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the archaeological monitoring fieldwork. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate Hiawatha First Nation's involvement.

Engagement

Regardless of whether or not Hiawatha First Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your community in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If Hiawatha First Nation wishes to participate in the fieldwork, or if you'd prefer to receive fieldnotes and/or a summary of the borehole and geotechnical data, please let us know at your earliest convenience. If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact, Indigenous Relations at Metrolinx. We can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

Chief Laurie Carr
Hiawatha First Nation
123 Paudash Street
RR #2
Hiawatha, ON K9J 0E6
Delivered by email

Dear Chief Carr,

**RE: Ontario Line Project - Species at Risk 17(2)(d) Permit Amendment Under the
*Endangered Species Act***

Metrolinx wishes to build a strong, constructive, cooperative and mutually respectful and beneficial relationship with Hiawatha First Nation. Metrolinx appreciates and respects Hiawatha First Nation's desire to be appropriately informed and aware of projects. To that end, Metrolinx is sharing with Hiawatha First Nation information regarding the Species at Risk (SAR) 17 (2) (d) Permit under *the Endangered Species Act* (ESA, 2007) obtained in support of the Ontario Line Project, and the proposed amendment to this permit.

Project Description

Metrolinx, a regional transportation agency, is helping transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line Project which will bring 15.6 kilometres of subway service to Toronto.

Ontario Line Permit #CR-D-002-19

Metrolinx, as part of the Ontario Line Project, previously received approval for a 17(2)(d) permit (Permit #CR-D-002-19) under the *Endangered Species Act* (ESA, 2007) issued by the Ministry of the Environment, Conservation, and Parks (MECP) on August 10, 2020. The permit provides approval for those project activities that may have adverse impacts on identified Species at Risk (SAR) and/or their habitat. The permit allows for those activities to take place and provides direction to Metrolinx regarding mitigation measures and compensation requirements that would be necessary to support those impacted species to support no net loss.

To inform this permit, Metrolinx completed SAR screening through the Ontario Line Environmental Conditions Report and Natural Environment Report using various information sources. While the results of this screening were shared within the initial draft of the Environmental Conditions Report circulated to Hiawatha First Nation on June 15 2020, Draft Environmental Conditions Report circulated on September 17 2020 and Final Environmental Conditions Report circulated on November 30 2020, we regret that we did not engage with Hiawatha First Nation directly on the screening process or the findings.

Potentially Impacted Species and Summary of Permit Conditions and Requirements

Based on the SAR screening completed to date, some activities required to support the Ontario Line Project may result in the following species at risk being impacted:

- Bank Swallow - Threatened
- Barn Swallow - Threatened
- Blanding's Turtle - Threatened
- Butternut - Endangered
- Chimney Swift - Threatened
- Little Brown Myotis - Endangered
- Northern Myotis - Endangered
- Small-footed Myotis - Endangered
- Tri-colored Bat - Endangered

Activities that may result in impacts to species listed above are associated with project construction and include activities such as removal or alteration of SAR habitat features (e.g., structures that may support SAR bird nesting, and trees).

Prior to commencing any activities that may impact SAR and/or SAR habitat, Metrolinx will complete species-specific screening for areas where project activities are planned to take place, and, if necessary (if screening determines that SAR/SAR habitat is likely to be present), surveys to detect SAR and SAR habitat presence and conduct an impact assessment if presence is confirmed, to characterize species-specific impacts (e.g., amount of habitat removed).

Metrolinx will meet the ESA permit conditions such as implementing species-specific mitigation measures, monitoring their effectiveness, and taking corrective action as required. Species-specific mitigation measures include scheduling activities to take place outside of species-specific timing windows (e.g., outside of active season or breeding window), implementing exclusion measures to prevent individuals of certain species from being impacted by project activities, and others.

If project activities result in SAR habitat removal, Metrolinx will implement species-specific compensation measures such as creating habitat (e.g., nesting habitat features replacing habitat features removed). Compensation habitat will be regularly monitored, and appropriate corrective actions will be taken as required to ensure habitat functions as intended.

Proposed Permit Amendment

Metrolinx is proposing an amendment to the previously approved SAR 17(2)(d) Permit (Permit #CR-D-002-19) under the *Endangered Species Act* (ESA, 2007), approved on August 10, 2020. The purpose of this permit amendment is to seek approval for additional study area not included in the current Permit #CR-D-002-19, as shown in **Appendix 1**. There are no changes to the permit conditions, including species-specific mitigation measures and compensation requirements, and no additional species are being added at this time. The SAR screening developed in support of the current permit has been updated to provide occurrence probability of SAR that may be present in the areas Metrolinx is seeking to include in the permit as part of the proposed amendment, and is included as **Appendix 2**.

Permit Amendment Process - Next Steps

The Proposal for the 17(2)(d) Permit Amendment is anticipated to be available on the Environmental Registry of Ontario (ERO) for a 30-day public review period this Fall 2021, and Metrolinx will notify Hiawatha First Nation when the ERO posting is available. While not specifically required under the Environmental Bill of Rights, the Ministry of the Environment, Conservation and Parks (MECP) voluntarily posts all ESA permit proposals for public review to ensure transparency and inclusion.

Metrolinx is seeking Hiawatha First Nation's comments, questions, or requests for additional information upon review of the material presented in this letter at any time in advance of the public ERO posting. Questions or comments can also be submitted directly to MECP through the ERO posting during the 30-day public review period.

Following the 30-day public review period, the proposed permit amendment will be submitted to the Minister for review and consideration. The amendment may only be issued if the Minister is of the opinion that the legal requirements set out in clause 17(2)(d) of the *Endangered Species Act* (ESA, 2007) have been satisfied. Should the amendment be issued, Metrolinx will be obligated to adhere to the requirements and standards as stipulated under the permit.

Hiawatha First Nation will be kept apprised should any new SAR be identified within the project area as project planning progresses. In such cases we will endeavor to engage Hiawatha First Nation prior to seeking any necessary permit amendments.

Metrolinx is committed to building a long-term relationship with Hiawatha First Nation, and we recognize that this requires transparency. We appreciate that we have much work to do in this regard and we hope to move forward in a positive way. The original SAR permit was obtained as part of the normal course of Metrolinx business, which had yet to be identified by the Indigenous Relations Office as necessitating engagement and information sharing with Indigenous Nations.

The Indigenous Relations Office has begun guiding the organization and identifying opportunities to flag such actions in advance, so that we can more meaningfully engage with Indigenous Nations as we move forward. We appreciate your patience as Metrolinx continues to learn more about Indigenous Nations and with the help of the Indigenous Relations Office, becomes aware of additional opportunities for engagement with Indigenous Nations.

We appreciate that previous engagement activities may not have met the needs of Hiawatha First Nation, and the volume of materials may have resulted in Hiawatha First Nation not having been made adequately aware of the possible identified impacts to several Species at Risk under this permit. Metrolinx remains committed to meaningful engagement; we are committed to identifying and prioritizing the sharing of the most relevant and appropriate information with Hiawatha First Nation.

If Hiawatha First Nation requires additional information or materials, or you wish to discuss this project in more detail, please reach out to Jaimi O'Hara in the Indigenous Relations Office at Metrolinx and she would be pleased to facilitate a meeting. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Date: Friday, November 19, 2021 9:26:06 AM
Attachments: [image002.png](#)
[image006.png](#)

Hello Chief Carr,

We noticed that the Noise and Vibration Operations Report, was not outlined in the previous letter which provided an overview of the Draft Environmental Impact and Assessment Report for the Ontario Line Project. We apologize for this omission and note that the report has now been added to the Dropbox shared below. We apologize that this report was overlooked earlier, and is not referenced directly in the letter. If you have any questions, please don't hesitate to reach out.

Best,

Marilyn Stoye *(she/her)*

Subject: Ontario Line - Draft Environmental Impact and Assessment Report for Review

Dear Chief Carr,

Please find attached, a letter outlining the Draft Environmental Impact and Assessment Report (EIAR) for the Ontario Line. The report is available for review at the following link:

Any comments you may have regarding this report received by **December 6, 2021**, will be incorporated in the Draft EIAR planned to be released in January 2022. Feedback received after December 6, will be reflected in the Final EIAR, planned for release in March 2022.

If you have any questions or concerns, please feel free to reach out to me at any

time.

Thank you for your time and assistance.

Subject: Ontario Line - Species at Risk 17(2)(d) Permit Under Endangered Species Act
Date: Friday, December 10, 2021 10:05:58 AM
Attachments: [image003.png](#)

Dear Chief Carr,

As a follow up to the letter sent on November 3, 2021 regarding the Ontario Line Project Species at Risk 17(2)(d) Permit Amendment Under the *Endangered Species Act*, the Proposal for the 17(2)(d) Permit Amendment was posted on the Environmental Registry of Ontario (ERO) on December 3rd, 2021 for a 30-day public review period, ending January 2nd, 2022.

The ERO posting can be found in the following link:

<https://ero.ontario.ca/notice/019-4601> Comments can be submitted directly to the Ministry of the Environment, Conservation and Parks.

If you have any questions or concerns, please feel free to reach out to me at any time. Additionally, we are happy to arrange a meeting to discuss the Permit, if that would be of interest.

Thank you for your time and assistance.

Subject: Ontario Line - Archaeological monitoring for Borehole Drilling
Date: Tuesday, January 19, 2021 3:26:44 PM
Attachments: [OL Archaeological Monitoring Invitation for Participation in monitoring for Boreholes_HFN.pdf](#)

Dear Chief Carr,

Please find attached a letter inviting participation in upcoming archaeological monitoring for borehole drilling that is taking place at various locations to support environmental assessment and geotechnical studies related to the Ontario Line Subway project. The boreholes are being drilled in locations that have known archaeological potential and as such Metrolinx is ensuring that a consultant archaeologist is on-site to monitor. We'd like to extend this invite to your Nation as well. We appreciate that during these uncertain times of COVID-19 this may not be possible or safe for your Nation. We are happy to provide any fieldnotes taken by the consultant archaeologist and/or provide a summary of the data collected if this is at all helpful to you. Please let us know if there is any other way we can support your Nation during this time.

The boreholes are anticipated to be completed over the next several weeks beginning this Friday on **January 22, 2021**. Please let me know if you have interest in participating as soon as possible, and we will work with you and the project team to coordinate.

Miigwetch,

Fallon

Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - Corktown Archaeological Monitoring for Borehole Drilling

Metrolinx and its consultants, Wood and Stantec, will be undertaking geotechnical and environmental site assessment investigations in Corktown. As part of this work boreholes will be drilled at 271 Front St East, 44 Parliament St and 25 Berkeley St. These boreholes will be located on/near potential archaeological sites and an archaeologist will be on site to monitor the drilling activities (see attached figures for location). We are writing to invite Hiawatha First Nation to participate in the archaeological monitoring associated with this work. Metrolinx appreciates the impacts of COVID-19 on Indigenous Nations and acknowledges that this may impact Hiawatha First Nation's ability to participate due to safety concerns. If preferable, Metrolinx is happy to share any fieldnotes taken by the consultant archaeologist as well as a summary of the borehole and geotechnical study data for review.

The fieldwork is anticipated to be conducted between January 22nd and February 12th, 2021, as detailed below:

Activity	Anticipated Timeline	Location		
		271 Front St E	44 Parliament St	25 Berkeley St
Drilling – Geotechnical Locations	Jan 22 – Feb 12, 2021		x	
Drilling – Environmental Locations	Feb 2 - 4, 2021	x		
	Feb 5 and 8, 2021		x	
	Feb 9 - 10, 2021			x

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the archaeological monitoring fieldwork. The attached maps illustrate the location of the boreholes that will be drilled. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your community in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If your Nation wishes to participate in the fieldwork, or if you'd prefer to receive fieldnotes and/or a summary of the borehole and geotechnical data, please let us know at your earliest convenience. If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact Fallon Melander, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*. Thank you for your time in reviewing these assessments.

Dear Chief Carr,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter providing an update on the project. The purpose of this letter is to:

- Provide an update on the scope of the project work
- share the initial draft of the Early Works Report for the proposed Corktown Station
- Invite your Nation to participate in upcoming archaeological fieldwork

In an effort to streamline your review, we draw your attention to the attachment which provides an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

Metrolinx is also preparing a letter specific to works being planned within the Don Valley as we recognize the significance of this waterway to many Nations. We hope to share that letter soon. We are happy to meet with your Nation to discuss the Ontario Line and address any questions or concerns that your Nation may have.

We ask that any comments on the draft Corktown Station Early Works Report be provided no later than **April 15, 2021**. Please note that the Noise and Vibration Report, which will be part of the Early Works Report is still being prepared and we will share with your Nation by March 19, 2021.

The draft Corktown Station Early Works Report is available at the following link:

Please let us know as soon as possible if your Nation has interest in participating in future archaeological fieldwork.

We appreciate the volume of documents that Metrolinx has shared with your Nation.

If you have any questions or concerns, please do not hesitate to contact me.

Miigwetch,

Fallon

Subject: Ontario Line Project - Invitation to Meet & provide input on First Parliament Site
Date: Monday, April 12, 2021 3:54:20 PM
Attachments: [First Parliament_HFN.pdf](#)

Dear Chief Carr,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. We recently communicated with your Nation about the proposed Corktown Station which is along the planned alignment of the Ontario Line. This location includes parcels of land which were once the site of Upper Canada's First Parliament buildings. Metrolinx and its partners are exploring opportunities to commemorate the history of this site, and have been engaging with various parties including the City of Toronto and the Mississaugas of the Credit First Nation, on whose treaty territory this project is occurring.

Given the significant chance of recovering Indigenous and European artifacts during the Corktown Station Early Works, a detailed archaeological workplan is being developed. Metrolinx recognizes the importance and value of Indigenous monitors for any archaeology related to the Ontario Line Project. In our previous communication, an invitation was included for your Nation to participate in any archaeological fieldwork and monitoring during the Corktown Station Early Works, including demolition of modern buildings currently on the First Parliament site.

This work is anticipated to commence in Fall 2021, and if you have not yet expressed interest in participating, please feel free to do so at your earliest convenience. As a reminder any comments on the draft Corktown Station Early Works Report should be provided no later than **April 15, 2021**.

Metrolinx recognizes that the history of this location extends beyond European use, and as such, wants to take the opportunity to understand any significance it may have to Indigenous Nations. Metrolinx would like to meet with your Nation to discuss the First Parliament site, its commemoration, as well as review the broader Ontario Line project if you wish. We recognize that traditional knowledge of this area may be sacred and/or not appropriate to be shared, but would appreciate any information that may be appropriate for Metrolinx to consider.

This letter is not intended to replace engagement but to provide a high level summary for your information. We would very much appreciate meeting with your Nation to discuss in more detail. Please let me know if you have any questions or concerns. We appreciate the volume of documents that Metrolinx has shared with your Nation. If you have any questions or concerns, please do not hesitate to contact me.

April 12, 2021

Chief Laurie Carr
Hiawatha First Nation
123 Paudash Street
RR #2
Hiawatha, ON K9J 0E6
Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - First Parliament Site and Lime Kiln Site

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is continuing the pre-construction planning of the Ontario Line which will bring nearly 16 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong, constructive, cooperative and mutually respectful and beneficial relationship with the Hiawatha First Nation. Metrolinx appreciates and respects Hiawatha First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Hiawatha First Nation information regarding Corktown Station early works and additional information regarding upcoming field visits and investigations at the Corktown Station early works site, which includes two registered archaeological sites, the First Parliament site and the Lime Kiln site.

Project Description

The proposed Ontario Line is a new 16-kilometer subway line, which will occupy an exclusive right-of-way system encompassing a combination of below-grade, above-grade, and at-grade alignment. The route (Figure 1) will run from Ontario Place/Exhibition through downtown Toronto to the Ontario Science Centre in the City of Toronto, with six (6) potential interchange stations and 17 new connections to GO Transit, existing subways and streetcars. More information on the Project can be found on our website: www.metrolinx.com/ontarioline

Corktown Station Early Works

As communicated in the letter sent to Hiawatha First Nation on March 11, 2021, the Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location of the Corktown Station. The First Parliament and Lime Kiln Sites, located within the Corktown Station area, are known archaeological sites which require additional archaeological study ahead of any ground disturbance activities. To prepare the Corktown Station site, demolition of existing buildings and structures, followed by completion of necessary archaeological studies, is required. Completion of this preparatory work on an expedited basis is essential to allow for the timely delivery of the overall Project and is anticipated to begin in the Fall 2021, subject to the completion of the Corktown Station early works process in accordance with Ontario Regulation 341/20: Ontario Line Project.

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. These activities will occur on properties within the Corktown Station early works project footprint, as shown in **Figure 1**.

Figure 1: Map of Corktown Station Early Works

Environmental impacts of Corktown Station early works are being assessed in accordance with O. Reg. 341/20. Metrolinx shared the draft Corktown Station Early Works Report and associated discipline reports with Hiawatha First Nation on March 11, 2021 and had requested any comments to be provided by April 9, 2021.

Archaeological Work at the First Parliament Site and Lime Kiln Site

Metrolinx appreciates the significance of archaeology to Hiawatha First Nation. The properties at 265 Front Street East, 271 Front Street East, and 25 Berkeley Street, in the St. Lawrence neighbourhood of the City of Toronto, are collectively host to the First Parliament Site. It is located on the southwest corner of Parliament Street and King Street, between Parliament Street and Berkeley Street. The First Parliament Site is a registered archaeological site (AjGu-41) which may include resources associated with the First and Second Parliament Buildings, the Home District Gaol, and Consumers' Gas company buildings. The surface of the property is currently occupied by automotive businesses, including a car dealership, car wash, and surface parking lot. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and remnants of early Toronto industry may be found at this site.

North of the First Parliament Site is another registered archaeological site (AjGu-64), the Lime Kiln Site, which includes remains from the Toronto Lime Works Company. A variety of structural features, in various states of preservation, have been documented on this site. The location of the Lime Kiln Site and the First Parliament Site are shown in **Figure 2**.

Figure 2: Location of First Parliament Site and Lime Kiln Site Areas

The First Parliament Site and Lime Kiln Site require additional archaeological studies ahead of any ground disturbance activities. To prepare the Corktown Station site, demolition of existing buildings and structures is necessary. Completion of this preparatory work is essential to allow for the timely delivery of the Ontario Line.

Archaeological fieldwork to remove or protect archaeological resources is anticipated to commence in early Fall 2021, and a workplan for these archaeological investigations is under development. As mentioned in the letter sent on March 11, 2021, Hiawatha First Nation is invited to participate in all archaeological fieldwork, and to review and provide comments on forthcoming reports.

Feedback on Commemoration of First Parliament Site

Metrolinx appreciates that the history of the First Parliament site is not one simply of Canadian origin, but rather holds longer history and tradition. Metrolinx also appreciates that the site of the First Parliament of Upper Canada is linked to a history of colonization and harmful practices towards Indigenous Peoples. Given the significance of this site, Metrolinx is engaging with Indigenous Nations, City of Toronto and the broader community to identify opportunities for commemoration. Metrolinx is committed to ensuring that any feedback from Hiawatha First Nation regarding the significance of this site is considered as part of this commemoration. Metrolinx appreciates that traditional or cultural knowledge about this site may be sacred and/or not be appropriate to be shared but welcomes any comments or ideas from Hiawatha First Nation that may be appropriate to commemorate Indigenous Peoples.

Engagement

Metrolinx is committed to an open, respectful, and transparent relationship with Hiawatha First Nation. We would like to meet with Hiawatha First Nation to better understand any significance the First Parliament site may have to your Nation. We are also happy to assist in reviewing the Corktown Station Early Works Report or reviewing the proposed archaeological workplan for this site. If Hiawatha First Nation requires additional information or materials, or you wish to discuss this project in more detail or set up a meeting, please contact Fallon Melander, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*. Thank you for your time in reviewing these assessments.

Thank you for your time in reviewing this letter.

Hiawatha, ON K9J 0E6
Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - Don River Crossings & Stage 2 Archaeological Assessment Update

Metrolinx wishes to build a strong, constructive, cooperative and mutually respectful and beneficial relationship with the Hiawatha First Nation. Metrolinx appreciates and respects Hiawatha First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to provide more information to Hiawatha First Nation about the Ontario Line crossings of the Don River and its tributaries. Metrolinx appreciates the significance of the waters and wishes to better understand how the potential impacts of construction around the Don River may be of interest to Hiawatha First Nation.

Background

The Project is a new subway line with connections to Line 1 (Yonge-University) subway service at Osgoode and Queen Stations, Line 2 (Bloor-Danforth) subway service at Pape Station, and Line 5 (Eglinton Crosstown) service at the future Science Centre Station. Fifteen stations are proposed, with additional connections to three GO Transit lines (Lakeshore East, Lakeshore West and Stouffville), and the Queen, King, Bathurst, Spadina, Harbourfront and Gerrard/Carlton streetcar routes. The Project will reduce crowding on Line 1 and provide connections to new high-order rapid transit neighbourhoods. More information on the Project can be found on our website: <http://www.metrolinx.com/ontarioline>.

Work in the Don River System

As part of the Ontario Line Project, the following four crossings within the Don River system are proposed:

10 Bay Street
Toronto, ON M5J 2N8

- Location 1: Lower Don River Crossing (Lower Don Bridge);
- Location 2: Millwood Road Crossing;
- Location 3: Walmsley Brook Crossing; and
- Location 4: West Don River Crossing north of Overlea Boulevard.

Locations 1-4 are shown in **Figure 1** and described in further detail below.

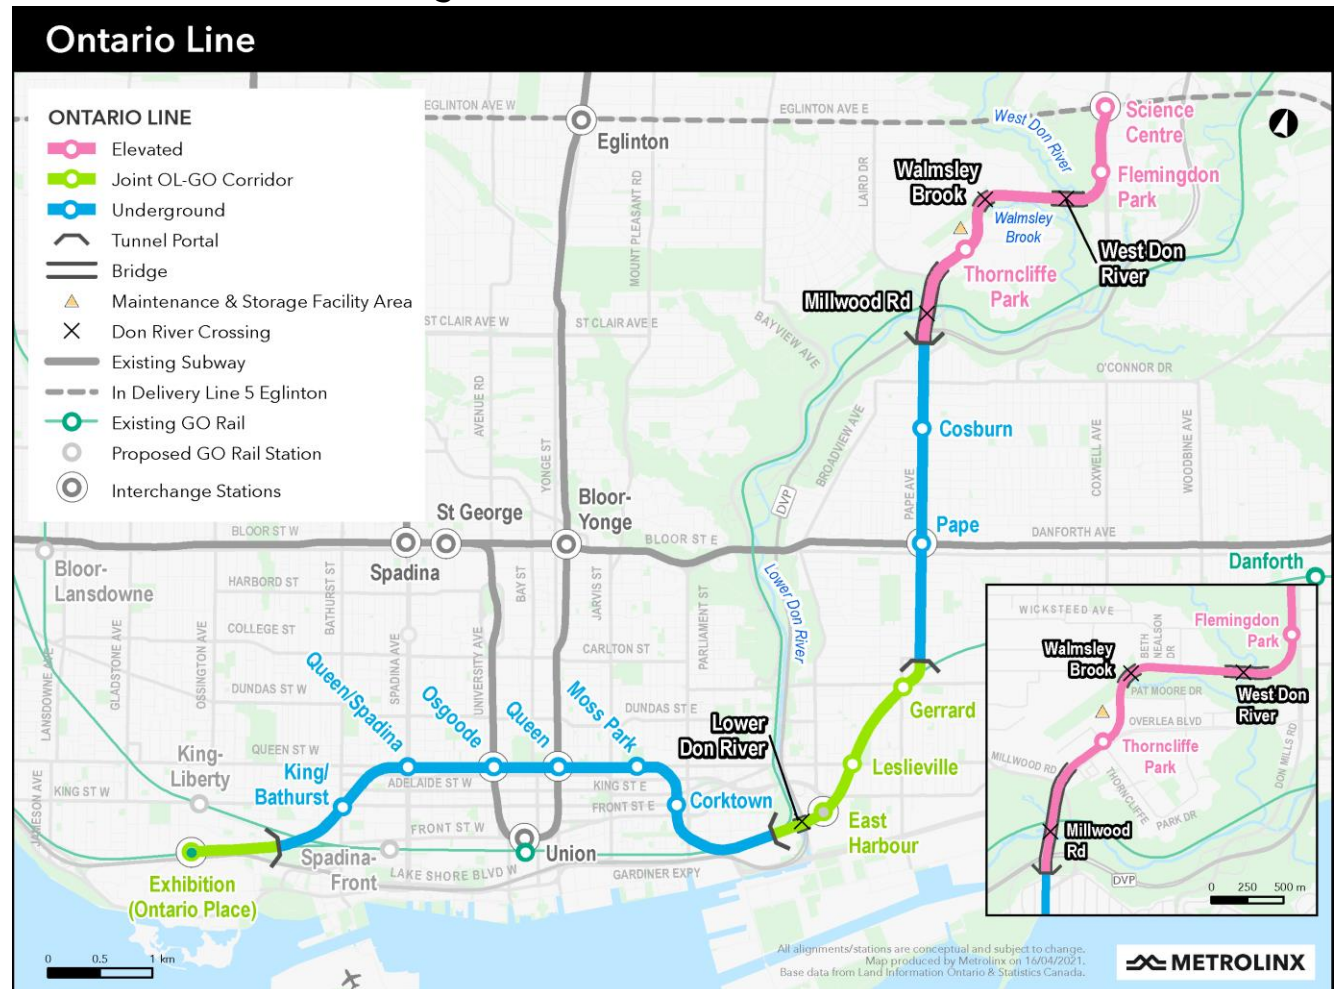

Figure 1: Ontario Line Project - Proposed Don River System Crossings

The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. Construction of the Lower Don Crossing (Location 1) will be assessed in the Lower Don Bridges and Don Yard Early Works Report, that is anticipated to be shared with Hiawatha First Nation in summer 2021. Construction of the other three crossings (Locations 2-4) will be assessed in the Environmental Impact Assessment Report, that is planned to be shared with Hiawatha First Nation in early 2022.

Location 1: Lower Don River Crossing (Lower Don Bridge)

A new bridge is planned to be built on the north side of the existing Lakeshore East rail bridge at the Lower Don River, with space for Ontario Line tracks going in both directions. We are also planning pedestrian and cycling connections across the Lower Don River.

Location 2: Millwood Road Crossing

The underground section of the Ontario Line running under Pape Avenue will emerge from the southern embankment of the Don Valley on an elevated guideway crossing the Don River, west of the Leaside Bridge (Millwood Road). The elevated guideway will connect to Thorncliffe Park in the north.

Location 3: Walmsley Brook Crossing

An elevated guideway will cross the Walmsley Brook tributary of the West Don River north of Pat Moore Drive. The guideway will then continue east across Beth Neilson Drive.

Location 4: West Don River Crossing (north of Overlea Boulevard)

The elevated guideway will cross the West Don River, north of Overlea Boulevard. This section of the route will connect to Don Mills Road and the future Flemingdon Park Station.

Field Surveys and Studies

As project planning is still in progress, environmental field surveys and studies as well as the timing of this work are being determined. Environmental field surveys and studies that may occur within or near the Don River include Stage 2 archaeological assessment and natural environment surveys (e.g., Species at Risk and tree surveys). Studies, surveys and their timing will be confirmed as project planning progresses. Further details are anticipated to be available in mid-Summer 2021.

Update on Archaeology

Metrolinx is currently planning to undertake Stage 2 Archaeological Assessments (AA) near the Don River starting in Fall 2021. The Stage 2 AA investigations will assess areas of identified archaeological potential within the Ontario Line study area which may be affected by the construction of the Project. Stage 2 AA fieldwork consists of test pit surveys at 5 m intervals within areas of previously identified archaeological potential.

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the Stage 2 AA fieldwork. Some of the Stage 2 AA may occur on lands

within the Toronto and Region Conservation Authority's (TRCA) property boundaries and regulated area. Metrolinx will coordinate with TRCA to ensure that Indigenous Nations are provided the opportunity to participate in Stage 2 AA investigations. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

As Metrolinx continues to undertake environmental due diligence for this project, additional archaeological assessment reports are anticipated to be completed. Metrolinx will ensure that Hiawatha First Nation will be made aware of and engaged regarding any future archaeological assessments, and especially the discovery and preservation of Indigenous artifacts. Metrolinx will also ensure that future archaeological assessments are provided to Hiawatha First Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries

Invitation for Input

We are committed to an open, respectful, and transparent engagement with Hiawatha First Nation. We recognize the potential significance of this project to Hiawatha First Nation and wanted to keep you apprised of this project. We welcome meeting in the near future to discuss this project and its possible impacts and ways to appropriately engage with Hiawatha First Nation.

We are happy to address any questions that Hiawatha First Nation may have about the work proposed in the Don River system or the Ontario Line Project as a whole. If you require additional information or materials, or if you wish to discuss this Project in more detail or set up an in-person meeting, please contact Fallon Melander, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Metrolinx thanks you for the time in reviewing this letter. Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Yours Truly,

A handwritten signature in blue ink, appearing to be "James Francis", written over a light blue horizontal line.

Subject: RE: Ontario Line Project – Archaeological Monitoring for Borehole Drilling - 265 Front St East - HFN

Hi Sean,

The boreholes that are being drilled at 265 Front St East are required to support environmental and

geotechnical assessments. Because these boreholes will be located on/near potential archaeological sites a licensed archaeologist will be on site to inspect the soil samples collected and screen for any for artifacts.

The archaeological monitoring work will be carried out by Wood (Matthew Muttart) and Stantec (Paul Ritchie and Heather Kerr), that are cc'd in this email. If you can participate, before the fieldwork starts next week and PPE (safety boots, high visibility safety vest, hard-hat etc.) would be required on site.

Please reach out if are available to participate or if you have any questions.

Thank you,

FLAVIA SANTIAGO

Aaniin Christine.

Thank you for the conversation this morning. As mentioned, our liaison is working on another project next week and would not be available. I'm wondering what would be required if I were available to come down to monitor. I've only been out a couple times on different sites and none had to do with borehole drilling.

Dear Chief Carr,

Please find attached a letter inviting participation in upcoming archaeological monitoring for borehole drilling that is taking place next week at 256 Front Street in Toronto to support environmental assessment and geotechnical studies related to the Ontario Line Subway project. The boreholes are being drilled in locations that have known archaeological potential and as such Metrolinx is ensuring that a consultant archaeologist is on-site to monitor. If you are not able to attend, we are happy to provide any fieldnotes taken by the consultant archaeologist and/or provide a summary of the data collected if this is at all helpful to you.

The boreholes are anticipated to be completed between July 12 and July 16, 2021. Please let me

know as soon as possible if you have interest in participating, and we will work with you and the project team to coordinate. And just a final note for your information, both Fallon Melander and Jaimi O'Hara, who are usually Metrolinx's main point of contact with your Nation, are away from the office this week. Hence you are receiving this communication from me.

Miigwetch,

Make today great,

Christine Parris (she, her, hers)

Chief Laurie Carr
Hiawatha First Nation
123 Paudash Street
RR #2
Hiawatha, ON K9J 0E6
Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - Update on Archaeological Assessments and Natural Environment Surveys

Metrolinx and its consultant, Stantec and HDR, will be undertaking Archaeological Assessment and Natural Environment fieldwork associated with the Ontario Line Project. We appreciate Hiawatha First Nation's interest in participating in these studies. The following letter provides details about the anticipated surveys to support the planning and coordination of involvement by your Nation.

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the archaeological fieldwork. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

Update on Archaeology

Metrolinx is planning to undertake various Archaeological Assessments for the Ontario Line Project. This archaeological investigation will assess areas of identified archaeological potential, which may be potentially affected by the construction of the Project. The archaeological works are planned to begin in **September 2021**. Fieldwork dates may change based on field progress and weather.

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the archaeological fieldwork. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

As Metrolinx continues to undertake environmental studies for this project, additional archaeological assessment reports are anticipated to be completed. Metrolinx acknowledges that Hiawatha First Nation will be made aware of and engaged regarding any future archaeological assessments, and especially the discovery and preservation of Indigenous artifacts and sacred burial grounds.

10 Bay Street
Toronto, ON M5J 2N8

416.202.4967
metrolinx.com

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to Hiawatha First Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

Natural Environment Field Surveys

Metrolinx is conducting natural environmental studies to review and document existing conditions within the Study Area and to carry out impact assessment reporting. Most of the natural environment fieldwork for Ontario Line is planned to occur in 2022.

However, the surveys detailed in the table below are planned for this year and include butternut survey, tree inventory and bat habitat assessment (leaf-off). Please note that these are approximate dates and may be subject to change pending appropriate weather conditions and field survey requirements. Metrolinx will endeavour to keep Hiawatha First Nation apprised as the work unfolds.

Survey	Date(s)
Butternut Survey (Areas detailed in Figures 1 and 2)	• August/September 2021
Tree Inventory (Areas detailed in Figures 1 and 2)	• September 2021
Bat habitat assessment - Leaf-off (Don and West Don ravine areas)	• September 2021

Engagement

If your Nation requires additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact Jaimi O'Hara, Acting Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

RR #2
Hiawatha, ON K9J 0E6
Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - Lower Don Bridge Marine Archaeological Overview Assessment for Review

Metrolinx wishes to build a strong and respectful relationship with Hiawatha First Nation. Metrolinx appreciates and respects Hiawatha First Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share with you the development of the Marine Archaeological Overview Assessment (MAOA) report for the proposed construction of the Lower Don Valley Bridge over the Don River. This proposed bridge is a component of the Ontario Line Project as part of the Lower Don Bridge and Don Yard Early Works. We invite Hiawatha First Nation's feedback on the marine Archeological Overview Assessment prepared for the Ontario Line Project.

Project Description

The Ontario Line will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lower Don Bridge and Don Yard Early Works

The Lower Don Bridge and Don Yard early works are planned for where the Ontario Line will run alongside GO train operations. These early works will set the groundwork for other major construction on the Ontario Line project and include:

- building a new bridge north of the existing rail bridge over the Lower Don River that will carry the Ontario Line tracks;
- shifting GO tracks in the Don Yard and nearby rail corridor to accommodate Ontario Line infrastructure;
- modifying the existing rail bridge to accommodate GO track shifts and Ontario Line infrastructure; and

- relocating and protecting utilities and signal infrastructure in the area.

The location of the Lower Don Bridge and Don Yard early works project footprint and study area can be viewed in **Figure 1** below.

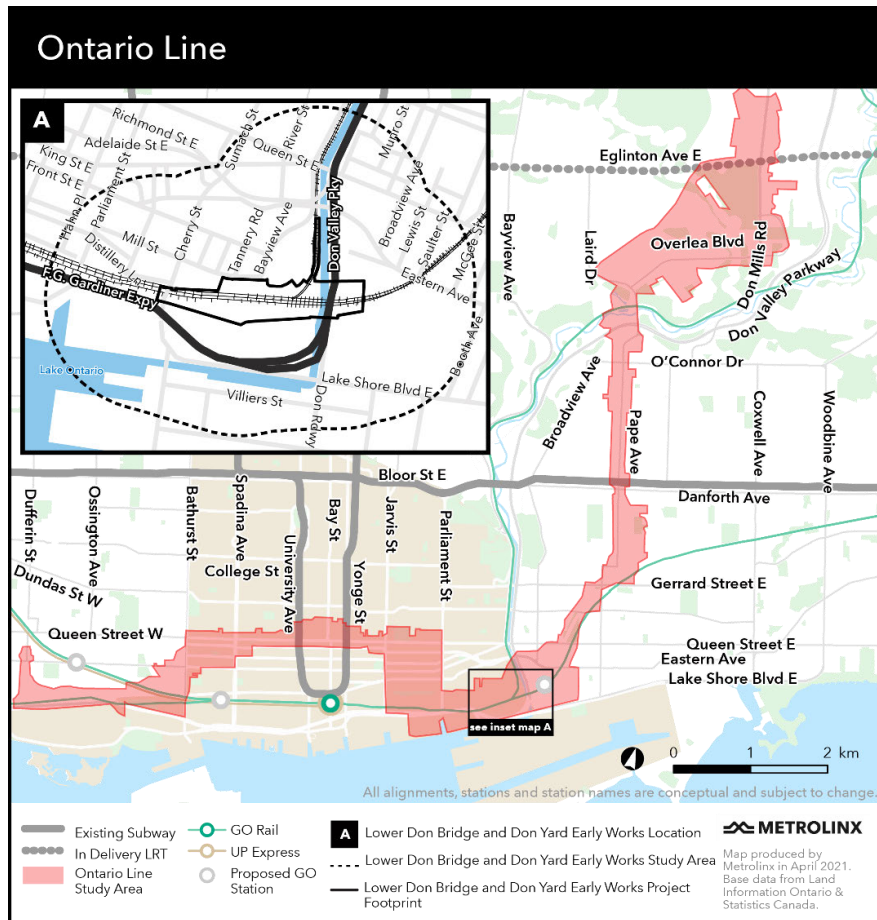

Figure 1: Map of Lower Don Bridge and Don Yard Early Works

Marine Archaeological Overview Assessment

On behalf of Metrolinx, Stantec has undertaken a Marine Archaeological Overview Assessment for the proposed Lower Don Bridge. The purpose of the Marine Archaeological Overview Assessment is to determine the marine archaeological potential of the study area for the bridge shown in **Figure 2** below.

The proposed bridge will cross over the Don River on the north side of the existing GO Transit Lakeshore East rail bridge. As a result, a large portion of the study area overlaps with the Don River. While the bridge will have no permanent in-water components, Metrolinx anticipates that in-water construction activities may impact potential submerged cultural resources. The marine archaeological potential of the study area is being considered as part of the Marine Archeological Overview Assessment.

The assessment determined that despite the study area for the Lower Don Valley Arch Bridge Superstructure having indicators of marine archaeological potential, there has been extensive river-bed disturbance to date. The riverbed has been previously disturbed by engineered channeling, modern dredging, and modern construction. The assessment determined that the study area retains low to no potential for the identification and documentation of in situ Indigenous and Euro-Canadian marine archaeological resources. As a result no further marine archaeological work is required for the study area.

A copy of the marine Archeological Overview Assessment has been included in the Dropbox link for your review. Please provide any comments you may have by **November 19, 2021**.

Invitation for Input

We are committed to an open, respectful, and transparent engagement with Hiawatha First Nation. Metrolinx values any input that Hiawatha First Nation is willing to provide on the Marine Archaeological Overview Assessment report.

We are happy to meet with your Hiawatha First Nation to go over the project and development of the Marine Archaeological Overview Assessment report and answer any questions Hiawatha First Nation may have on the report or the project as a whole.

If you require additional information or materials, or if you wish to discuss this project in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please submit your feedback in writing by **November 19, 2021**.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Chief Laurie Carr
Hiawatha First Nation
123 Paudash Street
RR #2
Hiawatha, ON K9J 0E6
Delivered by email

Dear Chief Carr,

**RE: Ontario Line Project - Stage 2 Archaeological Assessment - Moss Park and Ordnance Park
Invitation to Participate in Archaeological Fieldwork**

Metrolinx and its consultant, Stantec continue to progress the archaeological studies for the Ontario Line project and wanted to invite Hiawatha First Nation to participate in Stage 2 Archaeological Assessments planned to occur at Moss Park and Ordinance Park in the upcoming weeks. The locations of Moss Park and Ordinance Park study areas can be viewed in **Figure 1 and 2** below.

Moss Park and Ordnance Park have been previously assessed in a desktop study, the *Ontario Line Stage 1 Archaeological Assessment Report - South* which was shared with Hiawatha First Nation in March 2020 and was subject to an Addendum shared with Hiawatha First Nation in February 2021. The Stage 1 report recommended that a Stage 2 archaeological assessment is required for Moss Park and Ordnance Park parcels.

The Stage 2 archaeological field work will be conducted by test pit survey, in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' (MHSTCI) 2011 *Standards and Guidelines for Consultant Archaeologists*. The Stage 2 test pit survey method consists of hand excavating test pits by shovel at a five-metre interval on the park lands. The test pits are at least 30 centimetres in diameter and dug through the topsoil (which has a variable depth generally between 15 and 25 centimetres, but may be deeper or shallower) and at least five centimetres into subsoil. Once complete, test pits will be backfilled. Areas disturbed by utility infrastructure or recent construction will not be surveyed but will be photo documented. Based upon the Stage 2 field work, subsequent archaeological investigations may be recommended depending on what is found during the Stage 2 test pit survey.

Please see the fieldwork details below:

MOSS PARK:

Start Date: Tentatively October 25, 2021. If the start date changes, we will reach out to you.

Duration: Approximately two to three days

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

10 Bay Street
Toronto, ON M5J 2N8

Assessment: Stage 2 Archaeological Assessment

Meeting Location Address: 150 Sherbourne St

Size of Field Crew: 2 (1 Field director, 1 field tech)

Parking location: Above-ground parking lot at the southwest corner of Jarvis Street and Queen Street East; approximate three minute walk

ORDNANCE PARK

Start Date: Work on Ordnance Park will begin after the Moss Park work is completed

Duration: Approximately two weeks

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Stage 2 Archaeological Assessment

Size of Field Crew: 4 (1 Field director, 3 field techs)

Required PPE:

Item	Specifications
Clothing and Attire	Loose clothing, long hair, dangling accessories, jewelry, or other similar items that are likely to be a hazard will not be worn unless they are tied, covered, or otherwise secured so they prevent the hazard.
Foot Protection	Canadian Standards Association (CSA) approved work boots (Steel-toed boots, minimum 6" from top of sole, grade 1 with sole protection [CSA Standard Z195-09]).
Hand Protection	Cut, puncture, and abrasion-resistant gloves shall be worn when conducting archaeological hand digging and screening activities.
Eye and Face Protection	CSA approved safety glasses with rigid side shields. Regular prescription glasses are not permitted unless they are designed as CSA safety glasses complete with rigid shields. An ASTM level 1 (or higher) face covering is mandatory.
Head Protection	CSA approved Type II, Class E (side impact) hard hat. Hard hats shall be worn with the brim pointed forward.
Hearing Protection	Not needed.
High Visibility Safety Apparel	Mandatory class 2, level 2 High Visibility Safety Apparel (HVSA). Full length sleeves and pants with reflective stripes on both arms and legs are required.
*Although not considered PPE, face coverings for COVID-19 shall be worn when applicable	

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the archaeological monitoring fieldwork. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate Hiawatha First Nation's involvement.

Engagement

Regardless of whether or not Hiawatha First Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your community in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If Hiawatha First Nation wishes to participate in the fieldwork, or if you'd prefer to receive fieldnotes and/or a summary of the borehole and geotechnical data, please let us know at your earliest convenience. If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact, Indigenous Relations at Metrolinx. We can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

Metrolinx wishes to build a strong, constructive, cooperative and mutually respectful and beneficial relationship with Hiawatha First Nation. Metrolinx appreciates and respects Hiawatha First Nation's desire to be appropriately informed and aware of projects. To that end, Metrolinx is sharing with Hiawatha First Nation information regarding the Species at Risk (SAR) 17 (2) (d) Permit under *the Endangered Species Act* (ESA, 2007) obtained in support of the Ontario Line Project, and the proposed amendment to this permit.

Project Description

Metrolinx, a regional transportation agency, is helping transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line Project which will bring 15.6 kilometres of subway service to Toronto.

Ontario Line Permit #CR-D-002-19

Metrolinx, as part of the Ontario Line Project, previously received approval for a 17(2)(d) permit (Permit #CR-D-002-19) under the *Endangered Species Act* (ESA, 2007) issued by the Ministry of the Environment, Conservation, and Parks (MECP) on August 10, 2020. The permit provides approval for those project activities that may have adverse impacts on identified Species at Risk (SAR) and/or their habitat. The permit allows for those activities to take place and provides direction to Metrolinx regarding mitigation measures and compensation requirements that would be necessary to support those impacted species to support no net loss.

To inform this permit, Metrolinx completed SAR screening through the Ontario Line Environmental Conditions Report and Natural Environment Report using various information sources. While the results of this screening were shared within the initial draft of the Environmental Conditions Report circulated to Hiawatha First Nation on June 15 2020, Draft Environmental Conditions Report circulated on September 17 2020 and Final Environmental Conditions Report circulated on November 30 2020, we regret that we did not engage with Hiawatha First Nation directly on the screening process or the findings.

Potentially Impacted Species and Summary of Permit Conditions and Requirements

Based on the SAR screening completed to date, some activities required to support the Ontario Line Project may result in the following species at risk being impacted:

- Bank Swallow - Threatened
- Barn Swallow - Threatened
- Blanding's Turtle - Threatened
- Butternut - Endangered
- Chimney Swift - Threatened
- Little Brown Myotis - Endangered
- Northern Myotis - Endangered
- Small-footed Myotis - Endangered
- Tri-colored Bat - Endangered

Activities that may result in impacts to species listed above are associated with project construction and include activities such as removal or alteration of SAR habitat features (e.g., structures that may support SAR bird nesting, and trees).

Prior to commencing any activities that may impact SAR and/or SAR habitat, Metrolinx will complete species-specific screening for areas where project activities are planned to take place, and, if necessary (if screening determines that SAR/SAR habitat is likely to be present), surveys to detect SAR and SAR habitat presence and conduct an impact assessment if presence is confirmed, to characterize species-specific impacts (e.g., amount of habitat removed).

Metrolinx will meet the ESA permit conditions such as implementing species-specific mitigation measures, monitoring their effectiveness, and taking corrective action as required. Species-specific mitigation measures include scheduling activities to take place outside of species-specific timing windows (e.g., outside of active season or breeding window), implementing exclusion measures to prevent individuals of certain species from being impacted by project activities, and others.

If project activities result in SAR habitat removal, Metrolinx will implement species-specific compensation measures such as creating habitat (e.g., nesting habitat features replacing habitat features removed). Compensation habitat will be regularly monitored, and appropriate corrective actions will be taken as required to ensure habitat functions as intended.

Proposed Permit Amendment

Metrolinx is proposing an amendment to the previously approved SAR 17(2)(d) Permit (Permit #CR-D-002-19) under the *Endangered Species Act* (ESA, 2007), approved on August 10, 2020. The purpose of this permit amendment is to seek approval for additional study area not included in the current Permit #CR-D-002-19, as shown in **Appendix 1**. There are no changes to the permit conditions, including species-specific mitigation measures and compensation requirements, and no additional species are being added at this time. The SAR screening developed in support of the current permit has been updated to provide occurrence probability of SAR that may be present in the areas Metrolinx is seeking to include in the permit as part of the proposed amendment, and is included as **Appendix 2**.

Permit Amendment Process - Next Steps

The Proposal for the 17(2)(d) Permit Amendment is anticipated to be available on the Environmental Registry of Ontario (ERO) for a 30-day public review period this Fall 2021, and Metrolinx will notify Hiawatha First Nation when the ERO posting is available. While not specifically required under the Environmental Bill of Rights, the Ministry of the Environment, Conservation and Parks (MECP) voluntarily posts all ESA permit proposals for public review to ensure transparency and inclusion.

Metrolinx is seeking Hiawatha First Nation's comments, questions, or requests for additional information upon review of the material presented in this letter at any time in advance of the public ERO posting. Questions or comments can also be submitted directly to MECP through the ERO posting during the 30-day public review period.

Following the 30-day public review period, the proposed permit amendment will be submitted to the Minister for review and consideration. The amendment may only be issued if the Minister is of the opinion that the legal requirements set out in clause 17(2)(d) of the *Endangered Species Act* (ESA, 2007) have been satisfied. Should the amendment be issued, Metrolinx will be obligated to adhere to the requirements and standards as stipulated under the permit.

Hiawatha First Nation will be kept apprised should any new SAR be identified within the project area as project planning progresses. In such cases we will endeavor to engage Hiawatha First Nation prior to seeking any necessary permit amendments.

Metrolinx is committed to building a long-term relationship with Hiawatha First Nation, and we recognize that this requires transparency. We appreciate that we have much work to do in this regard and we hope to move forward in a positive way. The original SAR permit was obtained as part of the normal course of Metrolinx business, which had yet to be identified by the Indigenous Relations Office as necessitating engagement and information sharing with Indigenous Nations.

The Indigenous Relations Office has begun guiding the organization and identifying opportunities to flag such actions in advance, so that we can more meaningfully engage with Indigenous Nations as we move forward. We appreciate your patience as Metrolinx continues to learn more about Indigenous Nations and with the help of the Indigenous Relations Office, becomes aware of additional opportunities for engagement with Indigenous Nations.

We appreciate that previous engagement activities may not have met the needs of Hiawatha First Nation, and the volume of materials may have resulted in Hiawatha First Nation not having been made adequately aware of the possible identified impacts to several Species at Risk under this permit. Metrolinx remains committed to meaningful engagement; we are committed to identifying and prioritizing the sharing of the most relevant and appropriate information with Hiawatha First Nation.

If Hiawatha First Nation requires additional information or materials, or you wish to discuss this project in more detail, please reach out to Jaimi O'Hara in the Indigenous Relations Office at Metrolinx and she would be pleased to facilitate a meeting. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

Maria Zintchenko

Hello Chief Carr,

We noticed that the Noise and Vibration Operations Report, was not outlined in the previous letter which provided an overview of the Draft Environmental Impact and Assessment Report for the Ontario Line Project. We apologize for this omission and note that the report has now been added to the Dropbox shared below. We apologize that this report was overlooked earlier, and is not referenced directly in the letter. If you have any questions, please don't hesitate to reach out.

Best,

Marilyn Stoye *(she/her)*

Dear Chief Carr,

Please find attached, a letter outlining the Draft Environmental Impact and Assessment Report (EIAR) for the Ontario Line. The report is available for review at the following link:

Any comments you may have regarding this report received by **December 6, 2021**, will be incorporated in the Draft EIAR planned to be released in January 2022. Feedback received after December 6, will be reflected in the Final EIAR, planned for release in March 2022.

If you have any questions or concerns, please feel free to reach out to me at any

time.

Thank you for your time and assistance.

Dear Chief Carr,

Please find attached a letter inviting participation in Stage 2 Archaeological Assessments planned to occur in the upcoming weeks as part of the Ontario Line Project.

The date of this fieldwork is tentatively set for December 2, 2021. If you are interested in participating, please let me know as soon as possible and no later than next **Friday, November 26, 2021**, and we will work with you and the project team to coordinate.

If you have any questions or concerns, please feel free to reach out to me at any time.

Thank you for your time and assistance.

Delivered by email

Dear Chief Carr,

**RE: Ontario Line Project - Stage 2 Archaeological Assessment - Thorncliffe Segment
Invitation to Participate in Archaeological Fieldwork**

Metrolinx and its consultant, Stantec continue to progress the archaeological studies for the Ontario Line project and wanted to invite Hiawatha First Nation to participate in Stage 2 Archaeological Assessments planned to occur in the Thorncliffe Segment in the upcoming weeks. The locations of the Thorncliffe Segment study areas can be viewed in **Figure 1** below.

Stage 2 archaeological test pit survey at five metre intervals is planned in areas of archaeological potential on the illustrated PINs (please see Figure 1). This includes the archaeological crew of four (one field supervisor and three field technicians) digging by hand each test pit, each of which is at least 30 centimetres in diameter. The pit is dug to subsoil (approximately 20 to 30 centimetres in depth depending on soil conditions, plus another five centimetres into the subsoil) at five metre intervals across the areas of archaeological potential. The topsoil would be screened through six-inch mesh to recover artifacts. We also have three additional days of Stage 1 field work within the Don Valley area, where a field supervisor would photograph the landscape in detail to document areas of steep slope, permanently wet areas, and areas of archaeological potential.

Please see the fieldwork details below:

THORNCLIFFE SEGMENT:

Start Date: Tentatively December 2, 2021. If the start date changes, we will reach out to you.

Duration: Approximately two weeks

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Stage 2 Archaeological Assessment

Size of Field Crew: 4 (1 field supervisor and 3 field technicians)

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Hiawatha First Nation may have in participating in the archaeological monitoring fieldwork. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If your Nation wishes to participate in the fieldwork, or if you'd prefer to receive fieldnotes and/or a summary of the borehole and geotechnical data, please let us know at your earliest convenience. If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact, Jaimi O'Hara, Acting Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Should you wish to provide input to the above questions, please submit your feedback in writing. Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time and consideration.

Dear Chief Carr,

As the Ontario Line Project continues to progress into the new year, we wanted to provide an update and invitation for participation in upcoming fieldwork. Please find attached a letter outlining upcoming Archaeological monitoring activities for the Corktown Station/First Parliament site and Don Valley area. These works are set to begin mid-January through February 2022.

If Hiawatha First Nation is interested in participating in either or both of these works, please let me know as soon as possible in the new year, and we will work with you and the project team to coordinate. We can also provide fieldnotes and/or geotechnical data at your request.

If you have any questions or concerns, please feel free to reach out to me at any time.

Thank you for your time and assistance. Happy Holidays!

Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - Stage 2 Archaeological Assessment - Corktown Station and Don Valley Area: Invitation to Participate in Archaeological Fieldwork

Metrolinx and its consultant, Stantec continue to progress the archaeological studies for the Ontario Line project and wanted to invite Hiawatha First Nation to participate in further archaeological monitoring for Corktown Station and Don Valley area.

CORKTOWN STATION

Archaeological monitoring for building demolitions is planned to occur at Corktown Station in the upcoming weeks. The locations of the Corktown Station study areas can be viewed in **Figure 1** below. Please note that this work is separate from the Stage 2 & Stage 4 archaeological investigations, which has ceased for the 2021 field season and will resume in Spring 2022. Metrolinx will ensure that Hiawatha First Nation is informed of when the Stage 2 & Stage 4 archaeological investigations resume.

The archaeological monitoring will occur for building demolition activities on the First Parliament site that may be capping archaeological deposits at Corktown Station (please see Figure 1). This includes an archaeological crew of two (one field supervisor and one field technician) monitoring the demolition of modern buildings in the areas of archaeological potential. Metrolinx would value any participation that Hiawatha First Nation may wish to have in this monitoring program.

Please see the fieldwork details below:

CORKTOWN STATION:

Start Date: Tentatively January 17-18, 2022. If the start date changes, we will reach out to you.

Duration: Approximately two to four months (demo work occurring intermittently during time period; schedule to be confirmed closer to start date)

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Archaeological monitoring during building demolition

Size of Field Crew: 2 (1 field supervisor and 1 field technician)

DON VALLEY AREA

As part of the Ontario Line, Hydro One Network Infrastructure (HONI) needs to relocate several hydro towers to accommodate subway maintenance facilities. Metrolinx is carrying out a borehole drilling program in the Don Valley to provide HONI with geotechnical data for proposed hydro tower relocations.

Archaeological monitoring will occur for borehole drilling in areas with archaeological potential (please see Figure 2). This approach will provide for the on-site identification and, if necessary, stop-work order of drilling by a licensed archaeologist in the event potential archaeological resources are encountered. A licensed archaeologist will be on-site during drilling to visually inspect spoil removed during borehole drilling as well as intermittent borehole samples to visually identify the presence of artifacts. Metrolinx would value any participation that Hiawatha First Nation may wish to have in this monitoring program.

Please see the fieldwork details below:

DON VALLEY AREA:

Start Date: Mid-February. Exact dates will be confirmed in January 2022

Duration: 1-2 weeks

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Archaeological monitoring for borehole drilling

Size of Field Crew: 2 (1 field supervisor and 1 field technician)

Invitation to Participate in Fieldwork

Metrolinx would value the involvement of Hiawatha First Nation in the upcoming archaeological monitoring fieldwork outlined above. Should your Nation wish to participate, please let us know at your earliest convenience. We welcome any requests for a meeting to discuss opportunities to participate or to explore this project in more detail with Hiawatha First Nation. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement. If Metrolinx is

also willing to share fieldnotes and/or a summary of the borehole and geotechnical data in addition to the open invitation to participate directly in the monitoring.

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your community in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact, Jaimi O'Hara, Manager of Indigenous Relations at Metrolinx. We can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

Dear Chief Carr,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. We wish to share with you that the Draft Environmental Impact and Assessment Report (EIAR) has now been published. Attached you will find a letter outlining the Draft Environmental Impact Assessment Report (EIAR) prepared for the Ontario Line Project, as well as the Notice of Publication for the report.

The full report can be found using the following dropbox link:

The Notice of Publication commences a 30-day public review period which will continue from February 7, 2022 until March 9, 2022. As such, we ask that your Nation provide any comments in writing no later than March 9, 2022. We appreciate the size of these documents and would be happy to arrange a meeting to review the report and project with you.

In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations for Natural Environment and Archaeological Resources, as we know this may be of specific interest to you.

Thank you for your time and assistance. If you have any questions or concerns, please do not hesitate to contact me.

Dear Chief Carr,

RE: Ontario Line Project - Notice of Publication of Draft Environmental Impact Assessment Report (EIAR)

Metrolinx remains committed to meaningful consultation and engagement, especially where our projects have impacts to the Treaty and traditional lands of Hiawatha First Nation. In November of 2021, Metrolinx shared with Hiawatha First Nation the preliminary Draft Environmental Impact Assessment Report (EIAR) for comment and review. The purpose of this letter is to share with your Nation the that the Notice of Publication for the Draft EIAR has now been posted, and to continue to invite any comment or feedback you may wish to share on this report.

Project Description

Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

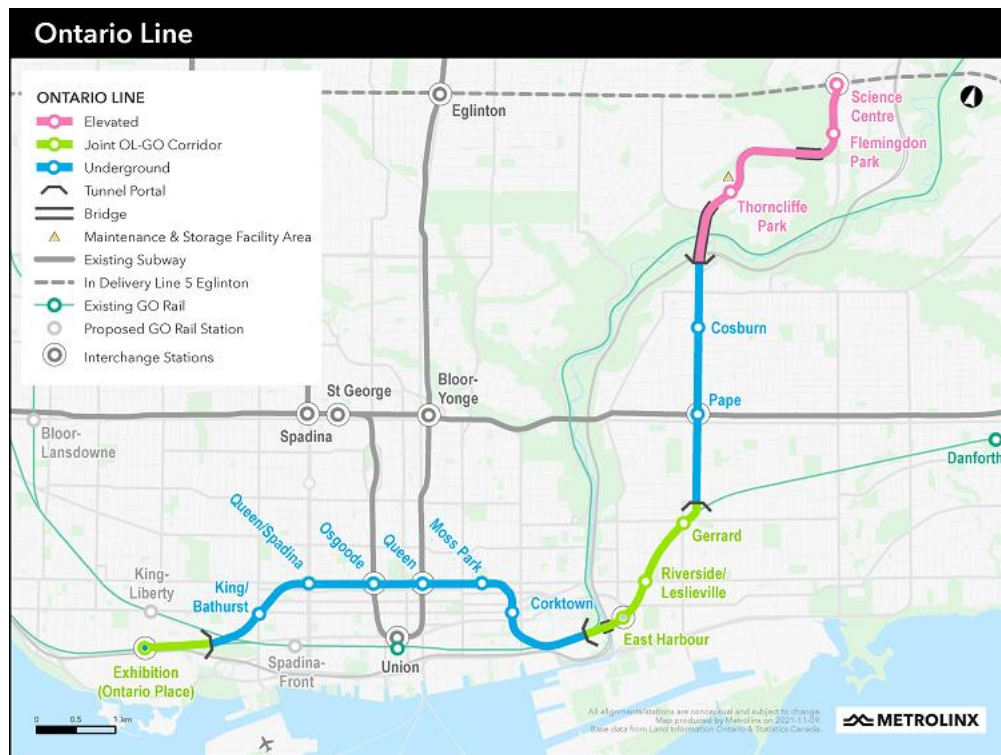

Figure 1 - Ontario Line

Ontario Line Environmental Assessment & Project Timeline

Environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Table 1 below provides a summary of the Ontario Line Reports that have been shared, or will be shared with Hiawatha First Nation:

Table 1: Ontario Line Reporting Timeline

Final Environmental Impact Assessment Report	April 19, 2022*

*Date is subject to change.

Draft Environmental Impact Assessment Report (EIAR)

The Draft EIAR summarizes the local environmental conditions in the discipline-specific study areas developed for the Project. The local environmental conditions were characterized through a combination of desktop review and field studies by practitioners using industry standard techniques and provincial standards, protocols, and guidelines, where appropriate. The resulting Draft Stage 1 AA and Natural Environment Report was shared with Hiawatha First Nation for review in August 2021.

The Draft EIAR also provides an assessment and evaluation of the impacts that the Project might have on the environment. Based on the potential impacts, a description of mitigation measures and monitoring activities is outlined. A list of municipal, provincial, federal, or other permits and approvals that may be required for the Project is also provided.

Discipline-specific assessment and evaluation of impacts were undertaken for the following disciplines:

- Natural Environment
- Soil and Groundwater
- Cultural Heritage
- Archaeological Resources
- Socio-Economic and Land Use
- Air Quality
- Noise and Vibration
- Traffic and Transportation

Effective February 7, 2022, the Draft Environmental Impact Assessment Report will be available for a 30-day public review period. The report is posted on the Ontario Line project webpage, which can be accessed using the following link:

<https://www.metrolinxengage.com/en/content/full-report-draft-environmental-impact-assessment-report>

The Notice of Publication of Draft EIAR can be found in **Attachment 1**.

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2** provide a summary of natural environment

and archaeology potential impacts and mitigation measures identified as part of the Draft EIAR that may be of interest to Hiawatha First Nation. If your Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Engagement

Metrolinx welcomes any comments or feedback on the EIAR during the 30-day public review period, from February 7 to **March 9, 2022**. Metrolinx is committed to an open and respectful relationship with Hiawatha First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Hiawatha First Nation. We are happy to assist in the review of these documents by meeting with your Nation.

Metrolinx is willing to address any questions that Hiawatha First Nation may have about the Ontario Line Project. If you require additional information or materials or if you wish to discuss the Project in more detail or set up a meeting, please contact Jaimi O'Hara, Manager of Indigenous Relations Office at Metrolinx. She can be reached at

IndigenousRelations@metrolinx.com.

With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the Freedom of Information and Protection of Privacy Act, except where information is provided to Metrolinx in confidence, pursuant to section 15.1, which protects the confidentiality of Indigenous knowledges.

Thank you for your time in reviewing this letter. Yours

Truly,

A handwritten signature in black ink, appearing to read 'J. Pakkala'.

Notice of Publication of Draft Environmental Impact Assessment Report and Virtual Open Houses Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Environmental Impact Assessment Report

Environmental impacts of the Ontario Line are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 15 of O. Reg. 341/20, Metrolinx has prepared the Draft Environmental Impact Assessment Report that is now available for review.

The Draft Environmental Impact Assessment Report describes existing environmental conditions in the Project study area, environmental impacts, mitigation and monitoring measures, consultation, and required permits and approvals for the Ontario Line.

The Draft Environmental Impact Assessment Report Review and Consultation Process

Effective **February 7, 2022**, the Draft Environmental Impact Assessment Report will be available for review on the Ontario Line project webpage (www.metrolinx.com/ontarioline). You can view and comment on the report from **February 7 to March 9, 2022** via the online form provided.

You can also participate in virtual open houses, where you can hear from project experts and ask questions about the report in real time, at MetrolinxEngage.com/OntarioLine/live on:

- **February 22, 2022 and February 24, 2022** from 6:30 to 8:00 p.m., with a focus on the portion of the project from Science Centre Station to Gerrard Station
- **March 1, 2022 and March 3, 2022** from 6:30 to 8:00 p.m., with a focus on the portion of the project from Gerrard Station to Exhibition Station

Those who wish to provide comments on the Draft Environmental Impact Assessment Report must do so by **March 9, 2022** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 17 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Environmental Impact Assessment Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the Ontario Line implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Environmental Impact Assessment Report on the Ontario Line project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final Environmental Impact Assessment Report.

To obtain a copy of the Draft Environmental Impact Assessment Report, please contact the Ontario Line project email listed above.

Mark Clancy (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Aquatic Environment – Wetlands and Waterbodies	<p>Construction</p> <p><u>OLS Study Area</u></p> <ul style="list-style-type: none"> Impacts to riparian vegetation, erosion and sedimentation to waterbodies from construction; risk of contamination to waterbodies as a result of spills. <p><u>OLN Study Area</u></p> <ul style="list-style-type: none"> Removal or impacts to wetland; aquatic and riparian vegetation; degradation of wetlands as result of dewatering and discharge activities; erosion and sedimentation to wetlands/waterbodies from construction; and risk of contamination to wetlands/waterbodies as a result of spills. <p>Operations</p> <ul style="list-style-type: none"> Potential impacts are not anticipated during operations 	<p>Construction</p> <ul style="list-style-type: none"> Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to wetlands and waterbodies. Shorelines or banks disturbed by construction activities will be immediately stabilized by any activity associated with the project to prevent erosion and/or sedimentation, preferably through re-vegetation with native species suitable for the site. An Erosion and Sediment Control Plan, in accordance with the Greater Golden Horseshoe's Erosion and Sediment Control Guideline for Urban Construction (2006) and the Erosion and Sediment Control Guide for Urban Construction (TRCA 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation. A Spill Prevention and Response Plan will be developed before work commences so that procedures and policies are in place to reduce impacts to wetlands and watercourses during construction. In wetland areas where vernal pooling occurs, prior to dewatering isolated work areas, wildlife will be captured and relocated to suitable habitat outside of the work area. Vegetation removals will also consider and mitigate potential impacts to wetland communities. Until such a time, that an Ontario Wetland Evaluation System evaluation is completed and evaluated by NDMNRF, unevaluated wetlands will be considered as significant for the purposes of assessing impacts. Wetland communities potentially affected by the Project will be clearly staked out on site. If dewatering is proposed, then it is recommended to be undertaken during the winter when the potential impacts of changes in water levels are less significant in wetland communities. During detailed design, the need for a dewatering zone of influence assessment and dewatering monitoring plan should be evaluated. The dewatering monitoring plan, if required, will monitor for potential negative impacts on nearby wetlands and adjacent vegetation communities to confirm if they would be affected due to dewatering activities. An adaptive management plan will be prepared if negative impacts are observed. Prior to dewatering isolated work areas, fish will be captured and relocated to suitable habitat outside of the work area under a Licence to Collect Fish for Scientific Purposes from the NDMNRF. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to wetlands and waterbodies during operations, no mitigation measures are recommended. 	<p>Construction</p> <ul style="list-style-type: none"> Onsite inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to wetlands and waterbodies during operations, no monitoring activities are recommended.
Aquatic Environment – Fish and Fish Habitat	<p>Construction</p> <p><u>OLS Study Area</u></p> <ul style="list-style-type: none"> No in-water works, no direct impacts to fish and fish habitat Indirect - Dewatering activities and water discharge resulting in changes in water velocity or temperature, soil 	<p>Construction</p> <ul style="list-style-type: none"> All requirements of the <i>Fisheries Act</i> will be met. In the event that in-water and/or near water construction works are required appropriate mitigation measures will be followed, as identified in Applicable Law and through consultation with the relevant authorities including Fisheries 	<p>Construction</p> <ul style="list-style-type: none"> Onsite inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
	<p>and erosion, release of contaminated and sediment-laden water, fish habitat structure and cover, food supply, nutrient concentration, access to habitat leading to the displacement or stranding of fish.</p> <p><u>OLN Study Area</u></p> <ul style="list-style-type: none"> Potential for direct, in-water impacts to fish and fish habitat related to temporary crossing structures for both Don and West Don River bridges Dewatering activities and water discharge resulting in changes in water velocity or temperature; changes in soil and erosion; release of contaminated and sediment-laden water; changes in fish habitat structure and cover; changes in food supply, changes in nutrient concentration; changes in access to habitat leading to the displacement or stranding of fish. <p>Operations</p> <ul style="list-style-type: none"> Potential impacts are not anticipated during operations 	<p>and Oceans Canada. In-water works will be planned to consider timing windows to protect fish, including their eggs, juveniles, spawning adults and/or the organisms upon which they feed.</p> <ul style="list-style-type: none"> Follow Ontario Provincial Standard Specifications PROV 182 General Specification for Environmental Protection for Construction in and Around Waterbodies and on Waterbody Banks (APR 2021). Design water management system and dewatering operations to prevent erosion and/or release of sediment-laden or contaminated water to the waterbody or adjacent wetlands. Follow Ontario Provincial Standard Specifications PROV 517 Construction Specification for Dewatering (NOV 2016). Prior to dewatering isolated work areas, fish will be captured and relocated to suitable habitat outside of the work area under a Licence to Collect Fish for Scientific Purposes from the NDMNRF. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to fish and fish habitat during operations, no mitigation measures are recommended. 	<p>actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> Monitoring for dewatering will be undertaken to confirm sediment-laden discharge, visible scour/erosion, and/or changes in temperature in any receiving watercourse. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to fish and fish habitat during operations, no monitoring activities are recommended.
Stormwater Management and Drainage			
Floodplain	<p>Construction</p> <ul style="list-style-type: none"> Potential to impact flooding conditions in the Don River Floodplain Potential for flooding impacts onsite during construction <p>Operations</p> <ul style="list-style-type: none"> Potential impacts are not anticipated during operations 	<p>Construction</p> <ul style="list-style-type: none"> Floodplain impact assessment will be conducted during detailed design following TRCA guidelines once details on the pier configuration and other detailed bridge design information are available. Design optimizations on abutment, pier, and valley way placement shall be considered to reduce hydraulic impacts. All temporary works including, but not limited to, the temporary bridges, should follow the Greater Golden Horseshoe's Erosion and Sediment Control Guideline for Urban Construction (2006) and the Erosion and Sediment Control Guide for Urban Construction (TRCA 2019), to reduce the chance of flooding during the construction. TRCA staff will be consulted during detailed design to avoid potential infrastructure conflicts and impacts to flood protection measures/initiatives in the Lower Don Bridge and Don Yard Hydrology and Surface Water Study Area with consideration of, but not limited to, the following: <ul style="list-style-type: none"> West Don Lands Flood Protection Landform (TRCA 2005); Broadview and Eastern Flood Protection Municipal Class Environmental Assessment (TRCA 2021); Flood protection measures and tie-in with the existing railway valley way at Don Roadway and Eastern Avenue underpass as identified in the Don Mouth Naturalization and Port Lands Flood Protection Project Environmental Assessment (TRCA 2014b); New Broadview underpass with expanded flood protection tie-ins and drainage with the railway valley way as identified in the Port Lands and South of Eastern Transportation and Servicing Master Plan Class Environmental Assessment (Waterfront Toronto and City of Toronto, 2016); and, Opening of bridge crossing on east side of Don River through railway valley way to accommodate Hybrid 3 as identified in the Gardiner 	<p>Construction</p> <ul style="list-style-type: none"> Develop and undertake a monitoring program of the West Don Flood Protection Landform, as required, in consultation with TRCA. Include a monitoring strategy in the Flood Contingency Plan to monitor surface water levels during construction activities. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated during operations, no monitoring activities are recommended.

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
		<p>Expressway and Lake Shore Boulevard East Reconfiguration Environmental Assessment (Waterfront Toronto and City of Toronto, 2017).</p> <ul style="list-style-type: none"> In addition, all necessary studies such as fluvial geomorphic process studies, meander belt and erosion studies, and geotechnical and slope stability assessments will be completed. Prior to construction, develop a Flood Contingency Plan with specific mitigation measures for any proposed works or temporary laydown and staging areas, as required. The Flood Contingency Plan may include risk mapping, and a monitoring strategy. Include construction site on TRCA flood warning system to prepare site in advance of possible flood events. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated during operations, no mitigation measures are recommended. 	
Surface Water / Stormwater and Drainage	<p>Construction</p> <ul style="list-style-type: none"> Change in stormwater quality and quantity, including: <ul style="list-style-type: none"> Erosion of exposed soil and increased sediment loading which may impact receiving waterbodies and/or municipal stormwater drainage system; and, Increased surface water/stormwater runoff <p>Operations</p> <ul style="list-style-type: none"> Potential impacts are not anticipated during operations 	<p>Construction</p> <ul style="list-style-type: none"> Prior to construction, a Stormwater Management Plan that will outline stormwater discharges management associated with construction activities, and an Erosion and Sediment Control plan will be developed. The overall stormwater quality and quantity control strategy will be developed in accordance with all relevant municipal, provincial, and federal requirements, as amended, and outlined in a Stormwater Management Report. Stormwater management design will consider guidance provided by the MECP, formerly the Ministry of the Environment and Climate Change Stormwater Management Planning and Design Manual (2003) and MTO Drainage Management Manual (2008), TRCA Stormwater Management Criteria (2012), and the Low Impact Development Stormwater Management Planning and Design Guide (TRCA/Credit Valley Conservation 2010), as required. The following stormwater management best management practices will be considered and implemented, as required: <ul style="list-style-type: none"> Reduce clearing and amount of exposed soil; Install key sediment control before grading/land alterations begin; Sequence construction activities so that the soil is not exposed for long periods of times; Protect storm drain inlets to filter out debris; and, Stabilize all exposed soil areas as soon as land alterations have been completed. The TRCAs Living City Policies will be followed during detailed design, including those policies related to outfall placement. Continue to consult with the TRCA to align the Lower Don Bridge and Don Yard early works to the Lower Don Special Policy Area requirements, including the approach to flood proofing and flood modelling. The TRCAs Stormwater Management Criteria will be followed, including those policies related to impervious areas. <p>Operations</p>	<p>Construction</p> <ul style="list-style-type: none"> Monitoring activities will be implemented as outlined in the Stormwater Management Plan and/or Erosion and Sediment Control Plan and may include regular inspections and reporting on the performance of implemented erosion and sediment control measures, best management practices, and other monitoring activities, as required. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated during operations, no monitoring activities are recommended.

[IN Arch Monitoring fieldwork_HFN.pdf](#)

Dear Chief Carr,

Please find attached a letter inviting participation in the archaeological monitoring of borehole drilling planned to occur in the Lower Don Bridge area as part of the Ontario Line Project.

The date of this fieldwork is tentatively set for March 7, 2022. If you are interested in participating, please let me know as soon as possible and we will work with you and the project team to coordinate.

If you have any questions or concerns, please feel free to reach out to me at any time.

Thank you for your time and assistance.

Jaimi

Jaimi O'Hara

Manager, Indigenous Relations

Hiawatha First Nation
123 Paudash Street
RR #2
Hiawatha, ON K9J 0E6
Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - Invitation to Participate in Archaeological Monitoring for Borehole Drilling - Lower Don Bridge Area

MetroLinx continues to progress the Archaeological studies for the Ontario Line project and wanted to invite Hiawatha First Nation to participate in further Archaeological monitoring for borehole drilling planned for the Lower Don Bridge area.

A Stage 1 Archaeological Assessment (AA) was completed as part of the Ontario Line Environmental Impact Assessment Report (EIAR). This report identified the area for the proposed boreholes as having archaeological potential. Both the Stage 1AA report and the EIAR were shared with Nations, in both August and November 2021.

MetroLinx is completing an Environmental Site Assessment in the Lower Don area (please see **Figure 1**). Given the identified archaeological potential of the area, archaeological monitoring will take place for the planned borehole drilling. This approach will provide for the on-site identification of archaeological resources and, if necessary, stop-work order of drilling by a licensed archaeologist in the event potential archaeological resources are encountered. A licensed archaeologist will be on-site during drilling to visually inspect spoil removed during borehole drilling as well as intermittent borehole samples to visually identify the presence of artifacts. MetroLinx would value any participation that Hiawatha First Nation may wish to have in this monitoring program.

Please see the fieldwork details below:

Start Date: March 7, 2022 (potentially March 8 as well depending on drilling)

Duration: 1 day

Start Time: 8:30am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298

Assessment: Archaeological monitoring for borehole drilling

Size of Field Crew: 1 field supervisor

Parking and meeting location: See Figure 2. Meet and park at yellow star - along Bayview Ave and Mill St

Required PPE:

- Class 2 PPE (hi-viz vest)
- CSA Type 2 Hard Hat with foam insert (bump caps)
- CSA approved eye protection
- CSA approved 6" laced safety shoes
- CSA Hearing protection, in ear or over ear
- Appropriate clothing for weather conditions

Invitation to Participate in Fieldwork

Metrolinx would value the involvement of Hiawatha First Nation in the upcoming archaeological monitoring fieldwork outlined above. Should your Nation wish to participate, please let us know at your earliest convenience. We welcome any requests for a meeting to discuss opportunities to participate or to explore this project in more detail with Hiawatha First Nation. Upon receipt of Hiawatha First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement. Metrolinx is also willing to share fieldnotes and/or a summary of the borehole and geotechnical data in addition to the open invitation to participate directly in the monitoring.

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If you require additional information or materials, or if you wish to discuss this project in more detail, please contact, Jaimi O'Hara, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

Subject: Ontario Line - Archaeological monitoring for Borehole Drilling
Attachments: OL Archaeological Monitoring Invitation for Participation in monitoring for Boreholes_MSIFN.pdf

Dear Chief La Rocca,

Please find attached a letter inviting participation in upcoming archaeological monitoring for borehole drilling that is taking place at various locations to support environmental assessment and geotechnical studies related to the Ontario Line Subway project. The boreholes are being drilled in locations that have known archaeological potential and as such Metrolinx is ensuring that a consultant archaeologist is on-site to monitor. We'd like to extend this invite to your Nation as well. We appreciate that during these uncertain times of COVID-19 this may not be possible or safe for your Nation. We are happy to provide any fieldnotes taken by the consultant archaeologist and/or provide a summary of the data collected if this is at all helpful to you. Please let us know if there is any other way we can support your Nation during this time.

The boreholes are anticipated to be completed over the next several weeks beginning this Friday on **January 22, 2021**. Please let me know if you have interest in participating as soon as possible, and we will work with you and the project team to coordinate.

Attachments: [Attachment 1.jpg](#)
[Attachment 2.pdf](#)
[Attachment 3.pdf](#)
[OL_CS_EWR Initial Draft Letter_MSIFN.pdf](#)

Dear Chief LaRocca,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter providing an update on the project. The purpose of this letter is to:

- Provide an update on the scope of the project work
- share the initial draft of the Early Works Report for the proposed Corktown Station
- Invite your Nation to participate in upcoming archaeological fieldwork

In an effort to streamline your review, we draw your attention to the attachment which provides an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

Metrolinx is also preparing a letter specific to works being planned within the Don Valley as we recognize the significance of this waterway to many Nations. We hope to share that letter soon. We are happy to meet with your Nation to discuss the Ontario Line and address any questions or concerns that your Nation may have.

We ask that any comments on the draft Corktown Station Early Works Report be provided no later than **April 15, 2021**. Please note that the Noise and Vibration Report, which will be part of the Early Works Report is still being prepared and we will share with your Nation by March 19, 2021.

The draft Corktown Station Early Works Report is available at the following link:

Please let us know as soon as possible if your Nation has interest in participating in future archaeological fieldwork.

We appreciate the volume of documents that Metrolinx has shared with your Nation.

If you have any questions or concerns, please do not hesitate to contact me.

Miigwetch,

Fallon

Subject: Ontario Line Project - Invitation to Meet & provide input on First Parliament Site
Date: Monday, April 12, 2021 4:04:28 PM
Attachments: [First Parliament_MSIFN.pdf](#)

Dear Chief LaRocca,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. We recently communicated with your Nation about the proposed Corktown Station which is along the planned alignment of the Ontario Line. This location includes parcels of land which were once the site of Upper Canada's First Parliament buildings. Metrolinx and its partners are exploring opportunities to commemorate the history of this site, and have been engaging with various parties including the City of Toronto and the Mississaugas of the Credit First Nation, on whose treaty territory this project is occurring.

Given the significant chance of recovering Indigenous and European artifacts during the Corktown Station Early Works, a detailed archaeological workplan is being developed. Metrolinx recognizes the importance and value of Indigenous monitors for any archaeology related to the Ontario Line Project. In our previous communication, an invitation was included for your Nation to participate in any archaeological fieldwork and monitoring during the Corktown Station Early Works, including demolition of modern buildings currently on the First Parliament site.

This work is anticipated to commence in Fall 2021, and if you have not yet expressed interest in participating, please feel free to do so at your earliest convenience. As a reminder any comments on the draft Corktown Station Early Works Report should be provided no later than **April 15, 2021**.

Metrolinx recognizes that the history of this location extends beyond European use, and as such, wants to take the opportunity to understand any significance it may have to Indigenous Nations. Metrolinx would like to meet with your Nation to discuss the First Parliament site, its commemoration, as well as review the broader Ontario Line project if you wish. We recognize that traditional knowledge of this area may be sacred and/or not appropriate to be shared, but would appreciate any information that may be appropriate for Metrolinx to consider.

This letter is not intended to replace engagement but to provide a high level summary for your information. We would very much appreciate meeting with your Nation to discuss in more detail. Please let me know if you have any questions or concerns. We appreciate the volume of documents that Metrolinx has shared with your Nation. If you have any questions or concerns, please do not hesitate to contact me.

Miigwetch,

Fallon

Chief Kelly LaRocca
Mississaugas of Scugog Island First Nation
22521 Island Road, RR#5
Port Perry, ON L9L 1B6
Delivered by Email

Dear Chief LaRocca,

RE: Ontario Line Project - First Parliament Site and Lime Kiln Site

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is continuing the pre-construction planning of the Ontario Line which will bring nearly 16 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong, constructive, cooperative and mutually respectful and beneficial relationship with the Mississaugas of Scugog Island First Nation. Metrolinx appreciates and respects Mississaugas of Scugog Island First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Mississaugas of Scugog Island First Nation information regarding Corktown Station early works and additional information regarding upcoming field visits and investigations at the Corktown Station early works site, which includes two registered archaeological sites, the First Parliament site and the Lime Kiln site.

Project Description

The proposed Ontario Line is a new 16-kilometer subway line, which will occupy an exclusive right-of-way system encompassing a combination of below-grade, above-grade, and at-grade alignment. The route (Figure 1) will run from Ontario Place/Exhibition through downtown Toronto to the Ontario Science Centre in the City of Toronto, with six (6) potential interchange stations and 17 new connections to GO Transit, existing subways and streetcars. More information on the Project can be found on our website: www.metrolinx.com/ontarioline

Corktown Station Early Works

As communicated in the letter sent to Mississaugas of Scugog Island First Nation on March 11, 2021, the Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location of the Corktown Station. The First Parliament and Lime Kiln Sites, located within the Corktown Station area, are known archaeological sites which require additional archaeological study ahead of any ground disturbance activities. To prepare the Corktown Station site, demolition of existing buildings and structures, followed by completion of necessary archaeological studies, is required. Completion of this preparatory work on an expedited basis is essential to allow for the timely delivery of the overall Project and is anticipated to begin in the Fall 2021, subject to the completion of the Corktown Station early works process in accordance with Ontario Regulation 341/20: Ontario Line Project.

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. These activities will occur on properties within the Corktown Station early works project footprint, as shown in **Figure 1**.

Figure 1: Map of Corktown Station Early Works

Environmental impacts of Corktown Station early works are being assessed in accordance with O. Reg. 341/20. Metrolinx shared the draft Corktown Station Early Works Report and associated discipline reports with Mississaugas of Scugog Island First Nation on March 11, 2021 and had requested any comments to be provided by April 9, 2021.

Archaeological Work at the First Parliament Site and Lime Kiln Site

Metrolinx appreciates the significance of archaeology to Mississaugas of Scugog Island First Nation. The properties at 265 Front Street East, 271 Front Street East, and 25 Berkeley Street, in the St. Lawrence neighbourhood of the City of Toronto, are collectively host to the First Parliament Site. It is located on the southwest corner of Parliament Street and King Street, between Parliament Street and Berkeley Street. The First Parliament Site is a registered archaeological site (AjGu-41) which may include resources associated with the First and Second Parliament Buildings, the Home District Gaol, and Consumers' Gas company buildings. The surface of the property is currently occupied by automotive businesses, including a car dealership, car wash, and surface parking lot. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and remnants of early Toronto industry may be found at this site.

North of the First Parliament Site is another registered archaeological site (AjGu-64), the Lime Kiln Site, which includes remains from the Toronto Lime Works Company. A variety of structural features, in various states of preservation, have been documented on this site. The location of the Lime Kiln Site and the First Parliament Site are shown in **Figure 2**.

Figure 2: Location of First Parliament Site and Lime Kiln Site Areas

The First Parliament Site and Lime Kiln Site require additional archaeological studies ahead of any ground disturbance activities. To prepare the Corktown Station site, demolition of existing buildings and structures is necessary. Completion of this preparatory work is essential to allow for the timely delivery of the Ontario Line.

Archaeological fieldwork to remove or protect archaeological resources is anticipated to commence in early Fall 2021, and a workplan for these archaeological investigations is under development. As mentioned in the letter sent on March 11, 2021, Mississaugas of Scugog Island First Nation is invited to participate in all archaeological fieldwork, and to review and provide comments on forthcoming reports.

Feedback on Commemoration of First Parliament Site

Metrolinx appreciates that the history of the First Parliament site is not one simply of Canadian origin, but rather holds longer history and tradition. Metrolinx also appreciates that the site of the First Parliament of Upper Canada is linked to a history of colonization and harmful practices towards Indigenous Peoples. Given the significance of this site, Metrolinx is engaging with Indigenous Nations, City of Toronto and the broader community to identify opportunities for commemoration. Metrolinx is committed to ensuring that any feedback from Mississaugas of Scugog Island First Nation regarding the significance of this site is considered as part of this commemoration. Metrolinx appreciates that traditional or cultural knowledge about this site may be sacred and/or not be appropriate to be shared but welcomes any comments or ideas from Mississaugas of Scugog Island First Nation that may be appropriate to commemorate Indigenous Peoples.

Engagement

Metrolinx is committed to an open, respectful, and transparent relationship with Mississaugas of Scugog Island First Nation. We would like to meet with Mississaugas of Scugog Island First Nation to better understand any significance the First Parliament site may have to your Nation. We are also happy to assist in reviewing the Corktown Station Early Works Report or reviewing the proposed archaeological workplan for this site. If Mississaugas of Scugog Island First Nation requires additional information or materials, or you wish to discuss this project in more detail or set up a meeting, please contact Fallon Melander, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*. Thank you for your time in reviewing these assessments.

Thank you for your time in reviewing this letter.

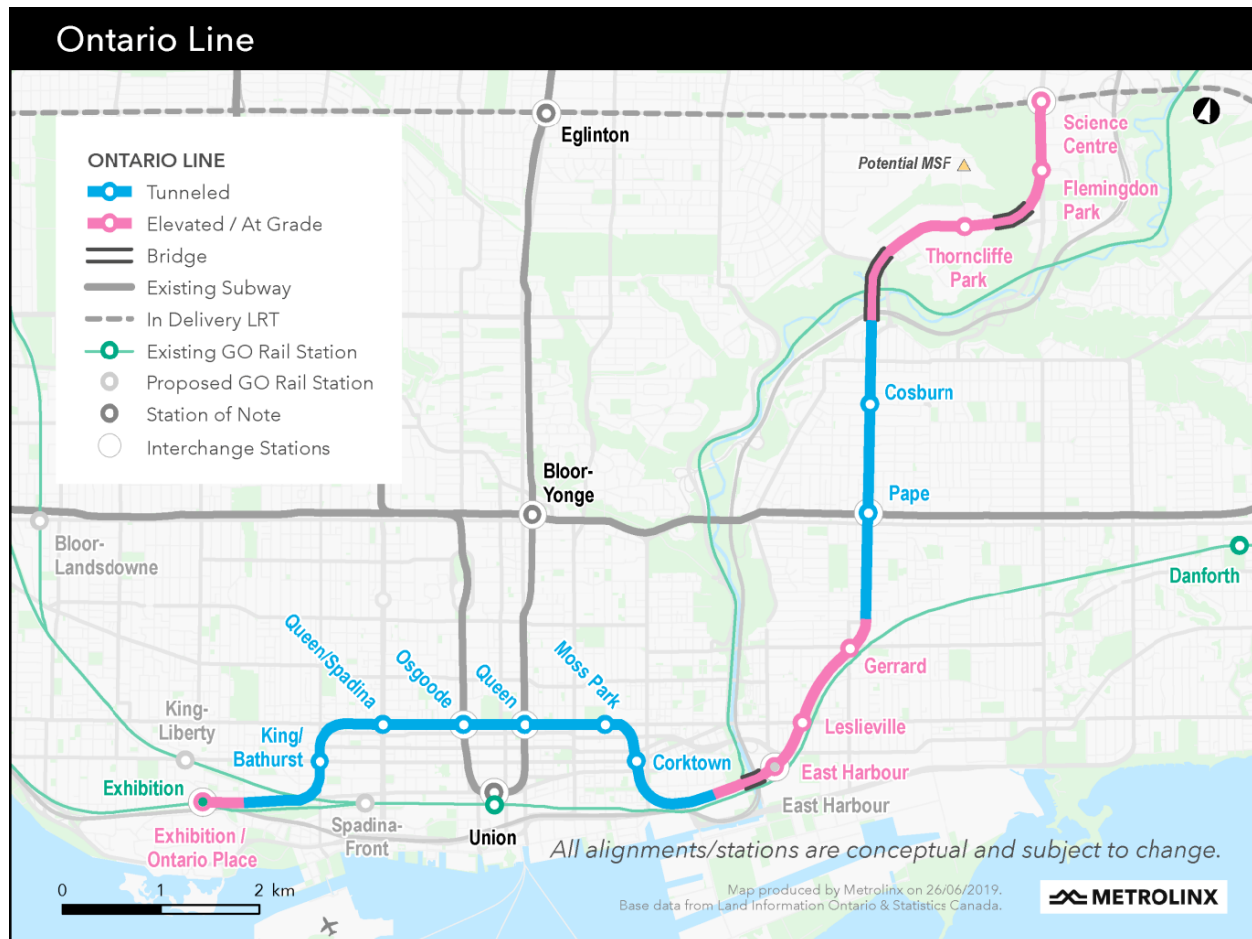

Yours Truly,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a large, sweeping flourish at the end.

Subject: Ontario Line - Project Update - Don Valley and River - Invitation for Participation in Stage 2 Archaeological Fieldwork
Date: Friday, April 30, 2021 1:29:21 PM
Attachments: [OL-Don River Letter 2021 MSIFN.pdf](#)

Dear Chief LaRocca,

Metrolinx continues to progress its environmental studies for the Ontario Line Project. We wanted to keep you aware that part of the project scope falls within the Don Valley and River System, and we recognize the importance of Valley and the waters within. Attached you will find a letter providing an update on the project and information regarding the planned work and environmental assessments that are anticipated to take place within the Don Valley. We also wanted to invite your Nation to participate in the planned Stage 2 Archaeological Assessments that are anticipated to occur as part of the upcoming field season.

This letter is not intended to replace engagement but to provide a high level summary for your information. We would very much appreciate meeting with your Nation to discuss in more detail. Please let me know if you have any questions or concerns.

Miigwetch,

Fallon

Dear Chief LaRocca,

RE: Ontario Line Project - Don River Crossings & Stage 2 Archaeological Assessment Update

Metrolinx wishes to build a strong, constructive, cooperative and mutually respectful and beneficial relationship with the Mississaugas of Scugog Island First Nation. Metrolinx appreciates and respects Mississaugas of Scugog Island First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to provide more information to Mississaugas of Scugog Island First Nation about the Ontario Line crossings of the Don River and its tributaries. Metrolinx appreciates the significance of the waters and wishes to better understand how the potential impacts of construction around the Don River may be of interest to Mississaugas of Scugog Island First Nation.

Background

The Project is a new subway line with connections to Line 1 (Yonge-University) subway service at Osgoode and Queen Stations, Line 2 (Bloor-Danforth) subway service at Pape Station, and Line 5 (Eglinton Crosstown) service at the future Science Centre Station. Fifteen stations are proposed, with additional connections to three GO Transit lines (Lakeshore East, Lakeshore West and Stouffville), and the Queen, King, Bathurst, Spadina, Harbourfront and Gerrard/Carlton streetcar routes. The Project will reduce crowding on Line 1 and provide connections to new high-order rapid transit neighbourhoods. More information on the Project can be found on our website: <http://www.metrolinx.com/ontarioline>.

Work in the Don River System

As part of the Ontario Line Project, the following four crossings within the Don River system are proposed:

- Location 1: Lower Don River Crossing (Lower Don Bridge);
- Location 2: Millwood Road Crossing;
- Location 3: Walmsley Brook Crossing; and
- Location 4: West Don River Crossing north of Overlea Boulevard.

Locations 1-4 are shown in **Figure 1** and described in further detail below.

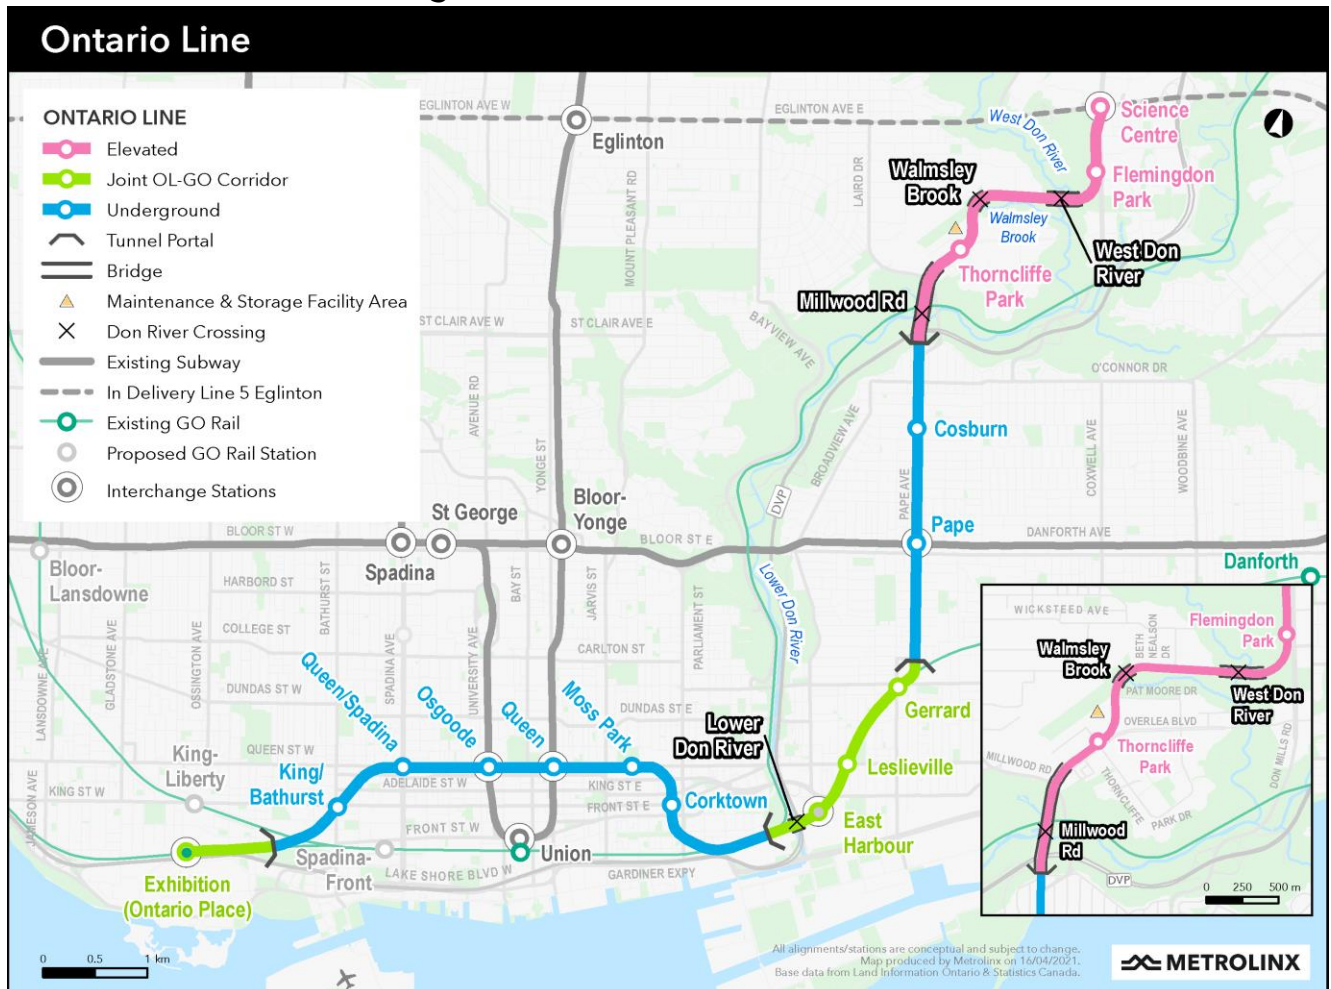

Figure 1: Ontario Line Project - Proposed Don River System Crossings

The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. Construction of the Lower Don Crossing (Location 1) will be assessed in the Lower Don Bridges and Don Yard Early Works Report, that is anticipated to be shared with Mississaugas of Scugog Island First Nation in summer 2021. Construction of the other three crossings (Locations 2-4) will be assessed in the Environmental Impact Assessment Report, that is planned to be shared with Mississaugas of Scugog Island First Nation in early 2022.

Location 1: Lower Don River Crossing (Lower Don Bridge)

A new bridge is planned to be built on the north side of the existing Lakeshore East rail bridge at the Lower Don River, with space for Ontario Line tracks going in both directions. We are also planning pedestrian and cycling connections across the Lower Don River.

Location 2: Millwood Road Crossing

The underground section of the Ontario Line running under Pape Avenue will emerge from the southern embankment of the Don Valley on an elevated guideway crossing the Don River, west of the Leaside Bridge (Millwood Road). The elevated guideway will connect to Thorncliffe Park in the north.

Location 3: Walmsley Brook Crossing

An elevated guideway will cross the Walmsley Brook tributary of the West Don River north of Pat Moore Drive. The guideway will then continue east across Beth Neilson Drive.

Location 4: West Don River Crossing (north of Overlea Boulevard)

The elevated guideway will cross the West Don River, north of Overlea Boulevard. This section of the route will connect to Don Mills Road and the future Flemingdon Park Station.

Field Surveys and Studies

As project planning is still in progress, environmental field surveys and studies as well as the timing of this work are being determined. Environmental field surveys and studies that may occur within or near the Don River include Stage 2 archaeological assessment and natural environment surveys (e.g., Species at Risk and tree surveys). Studies, surveys and their timing will be confirmed as project planning progresses. Further details are anticipated to be available in mid-Summer 2021.

Update on Archaeology

Metrolinx is currently planning to undertake Stage 2 Archaeological Assessments (AA) near the Don River starting in Fall 2021. The Stage 2 AA investigations will assess areas of identified archaeological potential within the Ontario Line study area which may be affected by the construction of the Project. Stage 2 AA fieldwork consists of test pit surveys at 5 m intervals within areas of previously identified archaeological potential.

Metrolinx would appreciate any interest Mississaugas of Scugog Island First Nation may have in participating in the Stage 2 AA fieldwork. Some of the Stage 2 AA may

occur on lands within the Toronto and Region Conservation Authority's (TRCA) property boundaries and regulated area. Metrolinx will coordinate with TRCA to ensure that Indigenous Nations are provided the opportunity to participate in Stage 2 AA investigations. Upon receipt of Mississaugas of Scugog Island First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement.

As Metrolinx continues to undertake environmental due diligence for this project, additional archaeological assessment reports are anticipated to be completed. Metrolinx will ensure that Mississaugas of Scugog Island First Nation will be made aware of and engaged regarding any future archaeological assessments, and especially the discovery and preservation of Indigenous artifacts. Metrolinx will also ensure that future archaeological assessments are provided to Mississaugas of Scugog Island First Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries

Invitation for Input

We are committed to an open, respectful, and transparent engagement with Mississaugas of Scugog Island First Nation. We recognize the potential significance of this project to Mississaugas of Scugog Island First Nation and wanted to keep you apprised of this project. We welcome meeting in the near future to discuss this project and its possible impacts and ways to appropriately engage with Mississaugas of Scugog Island First Nation.

We are happy to address any questions that Mississaugas of Scugog Island First Nation may have about the work proposed in the Don River system or the Ontario Line Project as a whole. If you require additional information or materials, or if you wish to discuss this Project in more detail or set up an in-person meeting, please contact Fallon Melander, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Metrolinx thanks you for the time in reviewing this letter. Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Yours Truly,

Subject: RE: Ontario Line Project – Archaeological Monitoring for Borehole Drilling - 265 Front St East - MSIFN
Date: Tuesday, July 6, 2021 6:57:46 PM
Attachments: [160560009_rem_ph2esa_fig01_siteplan_210920247_20210226.pdf](#)
[OL Archaeological Monitoring Invitation 265 front St. MSIFN.pdf](#)

Dear Chief LaRocca,

Please find attached a letter inviting participation in upcoming archaeological monitoring for borehole drilling that is taking place next week at 256 Front Street in Toronto to support environmental assessment and geotechnical studies related to the Ontario Line Subway project. The boreholes are being drilled in locations that have known archaeological potential and as such Metrolinx is ensuring that a consultant archaeologist is on-site to monitor. If you are not able to attend, we are happy to provide any fieldnotes taken by the consultant archaeologist and/or provide a summary of the data collected if this is at all helpful to you.

The boreholes are anticipated to be completed between July 12 and July 16, 2021. Please let me know as soon as possible if you have interest in participating, and we will work with you and the project team to coordinate. And just a final note for your information, both Fallon Melander and Jaimi O'Hara, who are usually Metrolinx's main point of contact with your Nation, are away from the office this week. Hence you are receiving this communication from me.

Miigwetch,

Make today great,

Christine Parris (she, her, hers)

Dear Chief LaRocca,

RE: Ontario Line Project - Archaeological Monitoring for Borehole Drilling - 265 Front St East

Metrolinx and its consultants, Stantec and Wood, will be undertaking geotechnical and environmental site assessment investigations at 265 Front St East. As part of this work boreholes will be drilled at the property. These boreholes will be located on/near potential archaeological sites and an archaeologist will be on site to monitor the drilling activities. We are writing to invite Mississaugas of Scugog Island First Nation to participate in the archaeological monitoring associated with this work. If preferable, Metrolinx is happy to share any fieldnotes taken by the consultant archaeologist as well as a summary of the borehole and geotechnical study data for review.

The fieldwork is anticipated to be conducted between July 12th and July 16th, 2021. Fieldwork dates may change based on field progress and weather.

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Mississaugas of Scugog Island First Nation may have in participating in the archaeological monitoring fieldwork. The attached maps illustrate the location of the boreholes that will be drilled. Upon receipt of Mississaugas of Scugog Island First Nation interest in participating, Metrolinx will work to coordinate your Nation's involvement.

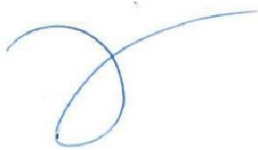

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your community in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If your Nation wishes to participate in the fieldwork, or if you'd prefer to receive fieldnotes and/or a summary of the borehole and geotechnical data, please let us know at your earliest convenience. If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact, Indigenous Relations at Metrolinx. We can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

Dear Chief LaRocca,

Metrolinx is working with its consultant HDR to provide opportunities for participation in upcoming Archaeological Assessment and Natural Environment fieldwork associated with the Ontario Line. Please find attached a letter inviting your Nation to participate.

The fieldwork is anticipated to late August - early September 2021. Please let me know if you have interest in participating as soon as possible, and we will work with you, the project team and HDR to coordinate.

If you have any questions or concerns, please feel free to contact the Indigenous Relations Office at anytime.

Thank you,

Delivered by Email

Dear Chief LaRocca,

RE: Ontario Line Project - Update on Archaeological Assessments and Natural Environment Surveys

Metrolinx and its consultant, Stantec and HDR, will be undertaking Archaeological Assessment and Natural Environment fieldwork associated with the Ontario Line Project. We appreciate Mississaugas of Scugog Island First Nation's interest in participating in these studies. The following letter provides details about the anticipated surveys to support the planning and coordination of involvement by your Nation.

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Mississaugas of Scugog Island First Nation may have in participating in the archaeological fieldwork. Upon receipt of Mississaugas of Scugog Island First Nation interest in participating, Metrolinx will work to coordinate your Nation's involvement.

Update on Archaeology

Metrolinx is planning to undertake various Archaeological Assessments for the Ontario Line Project. This archaeological investigation will assess areas of identified archaeological potential, which may be potentially affected by the construction of the Project. The archaeological works are planned to begin in **September 2021**. Fieldwork dates may change based on field progress and weather.

Metrolinx would appreciate any interest Mississaugas of Scugog Island First Nation may have in participating in the archaeological fieldwork. Upon receipt of Mississaugas of Scugog Island First Nation interest in participating, Metrolinx will work to coordinate your Nation's involvement.

As Metrolinx continues to undertake environmental studies for this project, additional archaeological assessment reports are anticipated to be completed. Metrolinx

acknowledges that Mississaugas of Scugog Island First Nation will be made aware of and engaged regarding any future archaeological assessments, and especially the discovery and preservation of Indigenous artifacts and sacred burial grounds.

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to Mississaugas of Scugog Island First Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

Natural Environment Field Surveys

Metrolinx is conducting natural environmental studies to review and document existing conditions within the Study Area and to carry out impact assessment reporting. Most of the natural environment fieldwork for Ontario Line is planned to occur in 2022.

However, the surveys detailed in the table below are planned for this year and include butternut survey, tree inventory and aquatic habitat assessment. Please note that these are approximate dates and may be subject to change pending appropriate weather conditions and field survey requirements. Metrolinx will endeavour to keep Mississaugas of Scugog Island First Nation apprised as the work unfolds.

Survey	Date(s)
Butternut Health Assessments (Areas detailed in Figures 1 and 2)	• August, September/2021
Tree Inventory (Areas detailed in Figures 1 and 2)	• September/2021
Aquatic Habitat assessment (Don and West Don ravine areas)	• September/2021

Engagement

If your Nation requires additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact Jaimi

O'Hara, Acting Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Delivered by Email

Dear Chief LaRocca,

RE: Ontario Line Project - Lower Don Bridge Marine Archaeological Overview Assessment for Review

Metrolinx wishes to build a strong and respectful relationship with Mississaugas of Scugog Island First Nation. Metrolinx appreciates and respects Mississaugas of Scugog Island First Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share with you the development of the Marine Archaeological Overview Assessment (MAOA) report for the proposed construction of the Lower Don Valley Bridge over the Don River. This proposed bridge is a component of the Ontario Line Project as part of the Lower Don Bridge and Don Yard Early Works. We invite Mississaugas of Scugog Island First Nation's feedback on the marine Archeological Overview Assessment prepared for the Ontario Line Project.

Project Description

The Ontario Line will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lower Don Bridge and Don Yard Early Works

The Lower Don Bridge and Don Yard early works are planned for where the Ontario Line will run alongside GO train operations. These early works will set the groundwork for other major construction on the Ontario Line project and include:

- building a new bridge north of the existing rail bridge over the Lower Don River that will carry the Ontario Line tracks;
- shifting GO tracks in the Don Yard and nearby rail corridor to accommodate Ontario Line infrastructure;
- modifying the existing rail bridge to accommodate GO track shifts and Ontario Line infrastructure; and
- relocating and protecting utilities and signal infrastructure in the area.

The location of the Lower Don Bridge and Don Yard early works project footprint and study area can be viewed in **Figure 1** below.

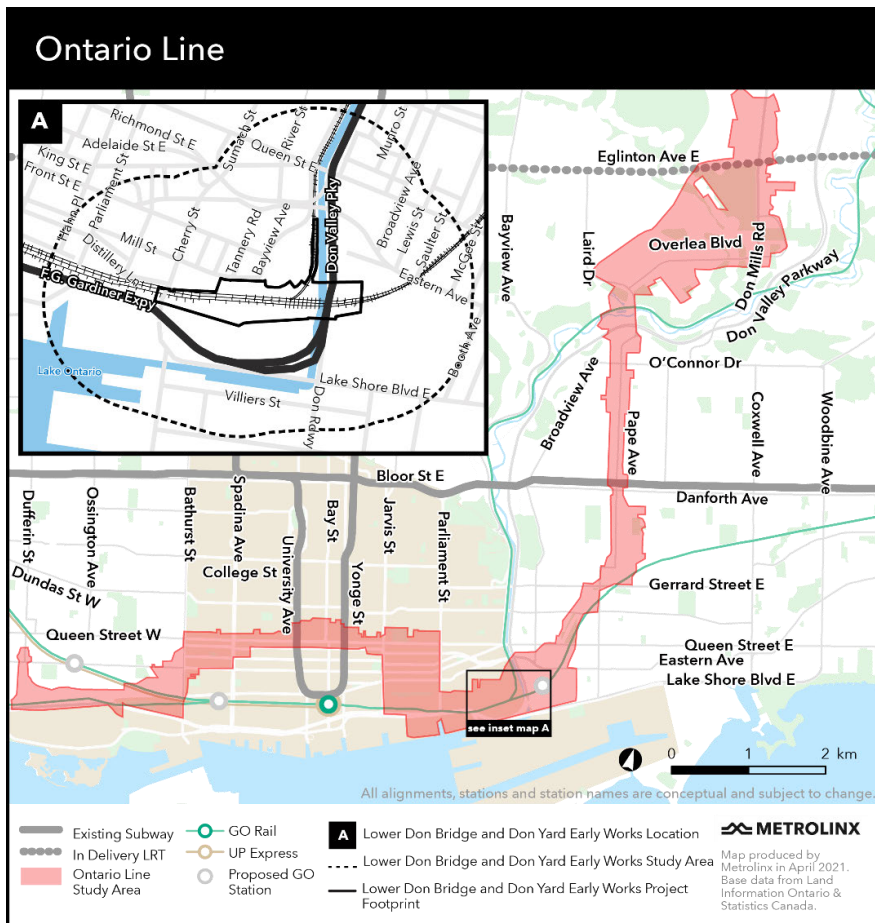

Figure 1: Map of Lower Don Bridge and Don Yard Early Works

Marine Archaeological Overview Assessment

On behalf of Metrolinx, Stantec has undertaken a Marine Archaeological Overview Assessment for the proposed Lower Don Bridge. The purpose of the Marine Archaeological Overview Assessment is to determine the marine archaeological potential of the study area for the bridge shown in **Figure 2** below.

The proposed bridge will cross over the Don River on the north side of the existing GO Transit Lakeshore East rail bridge. As a result, a large portion of the study area overlaps with the Don River. While the bridge will have no permanent in-water components, Metrolinx anticipates that in-water construction activities may impact potential submerged cultural resources. The marine archaeological potential of the study area is being considered as part of the Marine Archeological Overview Assessment.

The assessment determined that despite the study area for the Lower Don Valley Arch Bridge Superstructure having indicators of marine archaeological potential, there has been extensive river-bed disturbance to date. The riverbed has been previously disturbed by engineered

channeling, modern dredging, and modern construction. The assessment determined that the study area retains low to no potential for the identification and documentation of in situ Indigenous and Euro-Canadian marine archaeological resources. As a result no further marine archaeological work is required for the study area.

A copy of the marine Archeological Overview Assessment has been included in the Dropbox link for your review. Please provide any comments you may have by **November 19, 2021**.

Invitation for Input

We are committed to an open, respectful, and transparent engagement with Mississaugas of Scugog Island First Nation. Metrolinx values any input that Mississaugas of Scugog Island First Nation is willing to provide on the Marine Archaeological Overview Assessment report.

We are happy to meet with your Mississaugas of Scugog Island First Nation to go over the project and development of the Marine Archaeological Overview Assessment report and answer any questions Mississaugas of Scugog Island First Nation may have on the report or the project as a whole.

If you require additional information or materials, or if you wish to discuss this project in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Please submit your feedback in writing by **November 19, 2021**.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Dear Chief LaRocca,

**RE: Ontario Line Project - Stage 2 Archaeological Assessment - Moss Park and Ordnance Park
Invitation to Participate in Archaeological Fieldwork**

Metrolinx and its consultant, Stantec continue to progress the archaeological studies for the Ontario Line project and wanted to invite Mississaugas of Scugog Island First Nation to participate in Stage 2 Archaeological Assessments planned to occur at Moss Park and Ordinance Park in the upcoming weeks. The locations of Moss Park and Ordinance Park study areas can be viewed in **Figure 1 and 2** below.

Moss Park and Ordnance Park have been previously assessed in a desktop study, the *Ontario Line Stage 1 Archaeological Assessment Report - South* which was shared with Mississaugas of Scugog Island First Nation in March 2020 and was subject to an Addendum shared with Mississaugas of Scugog Island First Nation in February 2021. The Stage 1 report recommended that a Stage 2 archaeological assessment is required for Moss Park and Ordnance Park parcels.

The Stage 2 archaeological field work will be conducted by test pit survey, in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' (MHSTCI) 2011 *Standards and Guidelines for Consultant Archaeologists*. The Stage 2 test pit survey method consists of hand excavating test pits by shovel at a five-metre interval on the park lands. The test pits are at least 30 centimetres in diameter and dug through the topsoil (which has a variable depth generally between 15 and 25 centimetres, but may be deeper or shallower) and at least five centimetres into subsoil. Once complete, test pits will be backfilled. Areas disturbed by utility infrastructure or recent construction will not be surveyed but will be photo documented. Based upon the Stage 2 field work, subsequent archaeological investigations may be recommended depending on what is found during the Stage 2 test pit survey.

Please see the fieldwork details below:

MOSS PARK:

Start Date: Tentatively October 25, 2021. If the start date changes, we will reach out to you.

Duration: Approximately two to three days

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Stage 2 Archaeological Assessment

Meeting Location Address: 150 Sherbourne St

Size of Field Crew: 2 (1 Field director, 1 field tech)

Parking location: Above-ground parking lot at the southwest corner of Jarvis Street and Queen Street East; approximate three minute walk

ORDNANCE PARK

Start Date: Work on Ordnance Park will begin after the Moss Park work is completed

Duration: Approximately two weeks

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Stage 2 Archaeological Assessment

Size of Field Crew: 4 (1 Field director, 3 field techs)

Required PPE:

Item	Specifications
Clothing and Attire	Loose clothing, long hair, dangling accessories, jewelry, or other similar items that are likely to be a hazard will not be worn unless they are tied, covered, or otherwise secured so they prevent the hazard.
Foot Protection	Canadian Standards Association (CSA) approved work boots (Steel-toed boots, minimum 6" from top of sole, grade 1 with sole protection [CSA Standard Z195-09]).
Hand Protection	Cut, puncture, and abrasion-resistant gloves shall be worn when conducting archaeological hand digging and screening activities.
Eye and Face Protection	CSA approved safety glasses with rigid side shields. Regular prescription glasses are not permitted unless they are designed as CSA safety glasses complete with rigid shields. An ASTM level 1 (or higher) face covering is mandatory.
Head Protection	CSA approved Type II, Class E (side impact) hard hat. Hard hats shall be worn with the brim pointed forward.
Hearing Protection	Not needed.
High Visibility Safety Apparel	Mandatory class 2, level 2 High Visibility Safety Apparel (HVSA). Full length sleeves and pants with reflective stripes on both arms and legs are required.
*Although not considered PPE, face coverings for COVID-19 shall be worn when applicable	

Invitation to Participate in Fieldwork

Metrolinx would appreciate any interest Mississaugas of Scugog Island First Nation may have in participating in the archaeological monitoring fieldwork. Upon receipt of Mississaugas of Scugog Island First Nation's interest in participating, Metrolinx will work to coordinate Mississaugas of Scugog Island First Nation's involvement.

Engagement

Regardless of whether or not Mississaugas of Scugog Island First Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your community in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If Mississaugas of Scugog Island First Nation wishes to participate in the fieldwork, or if you'd prefer to receive fieldnotes and/or a summary of the borehole and geotechnical data, please let us know at your earliest convenience. If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact, Indigenous Relations at Metrolinx. We can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

Yours Truly,

Rodney Yee, Environmental Project Manager
Environmental Programs & Assessment
Metrolinx

Subject: Ontario Line - Corktown/First Parliament site - Delays to Archaeology Schedule

Dear Adrian and Marlene,

Thank you for your interest and participation in the archaeological fieldwork at the First Parliament site as part of the Ontario Line project.

As you're aware, the archaeological program is now underway with Indigenous monitors on site. Some inclement weather events at the onset of this work has resulted in some delays to our schedule. To compensate for this, Metrolinx is looking to extend archaeology work to Saturdays from 8am-3pm for the remainder of this field season (approximately late November). This would commence on October 23rd.

Metrolinx welcomes continued participation from MCFN on Saturdays. Please confirm that an FLR from your Nation will be present on these additional days.

If you have any questions or concerns, please let me know at your earliest convenience.

Thank you

Jaimi

Dear Chief La Rocca,

Please find enclosed, a letter providing an overview of the Metrolinx application for a permit under the Endangered Species Act to support the Ontario Line Project. We have also attached two appendices for your review.

We value building a relationship with your Nation which we recognize requires transparency and meaningful engagement. Please let me know if you have any further questions or would like to meet to discuss this permit, the Ontario Line Project or any other Metrolinx projects.

Thank you,

Jaimi O'Hara

November 3, 2021

Chief Kelly LaRocca
Mississaugas of Scugog Island First Nation
22521 Island Road, RR#5
Port Perry, ON L9L 1B6
Delivered by Email

Dear Chief LaRocca,

**RE: Ontario Line Project - Species at Risk 17(2)(d) Permit Amendment Under the
*Endangered Species Act***

Metrolinx wishes to build a strong, constructive, cooperative and mutually respectful and beneficial relationship with Mississaugas of Scugog Island First Nation. Metrolinx appreciates and respects Mississaugas of Scugog Island First Nation's desire to be appropriately informed and aware of projects. To that end, Metrolinx is sharing with Mississaugas of Scugog Island First Nation information regarding the Species at Risk (SAR) 17 (2) (d) Permit under *the Endangered Species Act* (ESA, 2007) obtained in support of the Ontario Line Project, and the proposed amendment to this permit.

Project Description

Metrolinx, a regional transportation agency, is helping transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line Project which will bring 15.6 kilometres of subway service to Toronto.

Ontario Line Permit #CR-D-002-19

Metrolinx, as part of the Ontario Line Project, previously received approval for a 17(2)(d) permit (Permit #CR-D-002-19) under the *Endangered Species Act* (ESA, 2007) issued by the Ministry of the Environment, Conservation, and Parks (MECP) on August 10, 2020. The permit provides approval for those project activities that may have adverse impacts on identified Species at Risk (SAR) and/or their habitat. The permit allows for those activities to take place and provides direction to Metrolinx regarding mitigation measures and compensation requirements that would be necessary to support those impacted species to support no net loss.

To inform this permit, Metrolinx completed SAR screening through the Ontario Line Environmental Conditions Report and Natural Environment Report using various information sources. While the results of this screening were shared within the initial draft of the Environmental Conditions Report circulated to Mississaugas of Scugog Island First Nation on June 15 2020, Draft Environmental Conditions Report circulated on September 17 2020 and Final Environmental Conditions Report circulated on November 30 2020, we regret that we did not engage with Mississaugas of Scugog Island First Nation directly on the screening process or the findings.

Potentially Impacted Species and Summary of Permit Conditions and Requirements

Based on the SAR screening completed to date, some activities required to support the Ontario Line Project may result in the following species at risk being impacted:

- Bank Swallow - Threatened
- Barn Swallow - Threatened
- Blanding's Turtle - Threatened
- Butternut - Endangered
- Chimney Swift - Threatened
- Little Brown Myotis - Endangered
- Northern Myotis - Endangered
- Small-footed Myotis - Endangered
- Tri-colored Bat - Endangered

Activities that may result in impacts to species listed above are associated with project construction and include activities such as removal or alteration of SAR habitat features (e.g., structures that may support SAR bird nesting, and trees).

Prior to commencing any activities that may impact SAR and/or SAR habitat, Metrolinx will complete species-specific screening for areas where project activities are planned to take place, and, if necessary (if screening determines that SAR/SAR habitat is likely to be present), surveys to detect SAR and SAR habitat presence and conduct an impact assessment if presence is confirmed, to characterize species-specific impacts (e.g., amount of habitat removed).

Metrolinx will meet the ESA permit conditions such as implementing species-specific mitigation measures, monitoring their effectiveness, and taking corrective action as required. Species-specific mitigation measures include scheduling activities to take place outside of species-specific timing windows (e.g., outside of active season or breeding window), implementing exclusion measures to prevent individuals of certain species from being impacted by project activities, and others.

If project activities result in SAR habitat removal, Metrolinx will implement species-specific compensation measures such as creating habitat (e.g., nesting habitat features replacing habitat features removed). Compensation habitat will be regularly monitored, and appropriate corrective actions will be taken as required to ensure habitat functions as intended.

Proposed Permit Amendment

Metrolinx is proposing an amendment to the previously approved SAR 17(2)(d) Permit (Permit #CR-D-002-19) under the *Endangered Species Act* (ESA, 2007), approved on August 10, 2020. The purpose of this permit amendment is to seek approval for additional study area not included in the current Permit #CR-D-002-19, as shown in **Appendix 1**. There are no changes to the permit conditions, including species-specific mitigation measures and compensation requirements, and no additional species are being added at this time. The SAR screening developed in support of the current permit has been updated to provide occurrence probability of SAR that may be present in the areas Metrolinx is seeking to include in the permit as part of the proposed amendment, and is included as **Appendix 2**.

Permit Amendment Process - Next Steps

The Proposal for the 17(2)(d) Permit Amendment is anticipated to be available on the Environmental Registry of Ontario (ERO) for a 30-day public review period this Fall 2021, and Metrolinx will notify Mississaugas of Scugog Island First Nation when the ERO posting is available. While not specifically required under the Environmental Bill of Rights, the Ministry of the Environment, Conservation and Parks (MECP) voluntarily posts all ESA permit proposals for public review to ensure transparency and inclusion.

Metrolinx is seeking Mississaugas of Scugog Island First Nation's comments, questions, or requests for additional information upon review of the material presented in this letter at any time in advance of the public ERO posting. Questions or comments can also be submitted directly to MECP through the ERO posting during the 30-day public review period.

Following the 30-day public review period, the proposed permit amendment will be submitted to the Minister for review and consideration. The amendment may only be issued if the Minister is of the opinion that the legal requirements set out in clause 17(2)(d) of the *Endangered Species Act* (ESA, 2007) have been satisfied. Should the amendment be issued, Metrolinx will be obligated to adhere to the requirements and standards as stipulated under the permit.

Mississaugas of Scugog Island First Nation will be kept apprised should any new SAR be identified within the project area as project planning progresses. In such cases we will endeavor to engage Mississaugas of Scugog Island First Nation prior to seeking any necessary permit amendments.

Metrolinx is committed to building a long-term relationship with Mississaugas of Scugog Island First Nation, and we recognize that this requires transparency. We appreciate that we have much work to do in this regard and we hope to move forward in a positive way. The original SAR permit was obtained as part of the normal course of Metrolinx business, which had yet to be identified by the Indigenous Relations Office as necessitating engagement and information sharing with Indigenous Nations.

The Indigenous Relations Office has begun guiding the organization and identifying opportunities to flag such actions in advance, so that we can more meaningfully engage with Indigenous Nations as we move forward. We appreciate your patience as Metrolinx continues to learn more about Indigenous Nations and with the help of the Indigenous Relations Office, becomes aware of additional opportunities for engagement with Indigenous Nations.

We appreciate that previous engagement activities may not have met the needs of Mississaugas of Scugog Island First Nation, and the volume of materials may have resulted in Mississaugas of Scugog Island First Nation not having been made adequately aware of the possible identified impacts to several Species at Risk under this permit. Metrolinx remains committed to meaningful engagement; we are committed to identifying and prioritizing the sharing of the most relevant and appropriate information with Mississaugas of Scugog Island First Nation.

If Mississaugas of Scugog Island First Nation requires additional information or materials, or you wish to discuss this project in more detail, please reach out to Jaimi O'Hara in the Indigenous Relations Office at Metrolinx and she would be pleased to facilitate a meeting. She can be contacted at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

Hello Chief LaRocca,

We noticed that the Noise and Vibration Operations Report, was not outlined in the previous letter which provided an overview of the Draft Environmental Impact and Assessment Report for the Ontario Line Project. We apologize for this omission and note that the report has now been added to the Dropbox shared below. We apologize that this report was overlooked earlier, and is not referenced directly in the letter. If you have any questions, please don't hesitate to reach out.

Best,

Marilyn Stoye *(she/her)*

Hi Marilyn,

Thank you for the invitation to participate in this archaeological field work. Unfortunately, MSIFN will not be able to participate at this time.

MSIFN is still working toward the capacity to allow participation in monitoring activities such as this, so please continue to keep us informed about future opportunities.

Thanks again!

Hi Sam,

I wanted to circle back with you to the Corktown Demolitions – I know you had originally said that you were interested but due to capacity, you would not have been able to attend at the originally proposed times. The project has been a bit delayed and the demolitions are now scheduled to begin on February 28/March 1. If you are able to attend, Jeff Muir from Stantec will be your point of contact for arranging the details. Should you confirm, he will be reaching out but please don't hesitate to connect with him if you need information before then. He can be reached at Jeff.Muir@stantec.com. Let me know how your schedule is looking and if you would like to attend.

Similarly, I wanted to follow up with you about the planned fieldwork set to take place in the Don Valley area,. There will be one day of archaeological monitoring to drill one borehole planned to occur between Feb 24 and Mar 4. The exact date will be confirmed once we receive the necessary permits, but we wanted to give you a head-up and ask you are interested in participating. Please see the exact location of the borehole and further details below.

Looking forward to connecting soon! Have a lovely long weekend!

Marilyn

Archaeological monitoring during borehole drilling

Start Date: one day of monitoring planned to occur between Feb 24- Mar 4 (permit pending). Additional work schedule to be provided soon for work in March to mid-April.

Duration: 3-5 day, Thurber requested 5 days to account for unforeseen delays including weather.

Start Time: 8am

Consultant Company: Stantec, Thurber

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Archaeological monitoring for borehole drilling

Size of Field Crew: 1 field supervisor

Meeting location: See below – 21 Redway Road wastewater treatment plant

Required PPE:

- Class 3 PPE
 - § High-visibility material jacket (which includes reflective arm bands) and pants (which includes reflective stripes/bands)
 - § Both pants and jacket have to be long sleeve
- CSA Type 2 Hard Hat with foam insert (bump caps)
- CSA approved eye protection
- CSA approved 6" laced safety shoes
- CSA Hearing protection, in ear or over ear
- Appropriate clothing for weather conditions

Hi Marilyn,

Thank you for reaching out.

I think notes about fieldwork would be best shared on a monthly basis, or all together at the end of the work period.

In general, MSIFN does not currently have the capacity to send field monitors for archaeological field work, but are still interested in hearing of opportunities to participate as they arise.

Thanks!

Good morning Sam,

I wanted to follow up with you to make sure we are keeping you apprised of the fieldwork in the way that works best for your team and MSIFN. Would you prefer daily field notes be sent to you, or perhaps all together at the end of the fieldwork? Let me know if there's a process that you would like us to follow for sharing this information.

Thanks!

Marilyn

Dear Chief LaRocca,

As the Ontario Line Project continues to progress into the new year, we wanted to provide an update and invitation for participation in upcoming fieldwork. Please find attached a letter outlining upcoming Archaeological monitoring activities for the Corktown Station/First Parliament site and Don Valley area. These works are set to begin mid-January through February 2022.

If Mississaugas of Scugog Island First Nation is interested in participating in either or both of these works, please let me know as soon as possible in the new year, and we will work with you and the project team to coordinate. We can also provide fieldnotes and/or geotechnical data at your request.

If you have any questions or concerns, please feel free to reach out to me at any time.

Thank you for your time and assistance. Happy Holidays!

Delivered by Email

Dear Chief LaRocca,

RE: Ontario Line Project - Stage 2 Archaeological Assessment - Corktown Station and Don Valley Area: Invitation to Participate in Archaeological Fieldwork

Metrolinx and its consultant, Stantec continue to progress the archaeological studies for the Ontario Line project and wanted to invite Mississaugas of Scugog Island First Nation to participate in further archaeological monitoring for Corktown Station and Don Valley area.

CORKTOWN STATION

Archaeological monitoring for building demolitions is planned to occur at Corktown Station in the upcoming weeks. The locations of the Corktown Station study areas can be viewed in **Figure 1** below. Please note that this work is separate from the Stage 2 & Stage 4 archaeological investigations, which has ceased for the 2021 field season and will resume in Spring 2022. Metrolinx will ensure that Mississaugas of Scugog Island First Nation is informed of when the Stage 2 & Stage 4 archaeological investigations resume.

The archaeological monitoring will occur for building demolition activities on the First Parliament site that may be capping archaeological deposits at Corktown Station (please see Figure 1). This includes an archaeological crew of two (one field supervisor and one field technician) monitoring the demolition of modern buildings in the areas of archaeological potential. Metrolinx would value any participation that Mississaugas of Scugog Island First Nation may wish to have in this monitoring program.

Please see the fieldwork details below:

CORKTOWN STATION:

Start Date: Tentatively January 17-18, 2022. If the start date changes, we will reach out to you.

Duration: Approximately two to four months (demo work occurring intermittently during time period; schedule to be confirmed closer to start date)

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Archaeological monitoring during building demolition

Size of Field Crew: 2 (1 field supervisor and 1 field technician)

DON VALLEY AREA

As part of the Ontario Line, Hydro One Network Infrastructure (HONI) needs to relocate several hydro towers to accommodate subway maintenance facilities. Metrolinx is carrying out a borehole drilling program in the Don Valley to provide HONI with geotechnical data for proposed hydro tower relocations.

Archaeological monitoring will occur for borehole drilling in areas with archaeological potential (please see Figure 2). This approach will provide for the on-site identification and, if necessary, stop-work order of drilling by a licensed archaeologist in the event potential archaeological resources are encountered. A licensed archaeologist will be on-site during drilling to visually inspect spoil removed during borehole drilling as well as intermittent borehole samples to visually identify the presence of artifacts. Metrolinx would value any participation that Mississaugas of Scugog Island First Nation may wish to have in this monitoring program.

Please see the fieldwork details below:

DON VALLEY AREA:

Start Date: Mid-February. Exact dates will be confirmed in January 2022

Duration: 1-2 weeks

Start Time: 8am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298; Heather Kerr - (416) 602-3271; Patrick Hoskins - (613) 716-4687

Assessment: Archaeological monitoring for borehole drilling

Size of Field Crew: 2 (1 field supervisor and 1 field technician)

Invitation to Participate in Fieldwork

Metrolinx would value the involvement of Mississaugas of Scugog Island First Nation in the upcoming archaeological monitoring fieldwork outlined above. Should your Nation wish to participate, please let us know at your earliest convenience. We welcome any requests for a meeting to discuss opportunities to participate or to explore this project in more detail with Mississaugas of Scugog Island First Nation. Upon receipt of Mississaugas of Scugog Island First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement. If Metrolinx is also willing to share fieldnotes

and/or a summary of the borehole and geotechnical data in addition to the open invitation to participate directly in the monitoring.

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your community in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If you require additional information or materials, or if you wish to discuss this project in more detail or set up an in-person meeting, please contact, Jaimi O'Hara, Manger of Indigenous Relations at Metrolinx. We can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

Yours Truly,

Subject: Ontario Line: Notice of Publication of Draft EIAR
Date: Monday, February 7, 2022 4:00:04 PM
Attachments: [image003.png](#)
[Notice of Draft EIAR MSIFN.pdf](#)
[Attachment 1 - Notice of Publication of Draft EIAR.pdf](#)
[Appendix 2 - EIAR Arc and Natural Env Impacts and Mitigation.pdf](#)

Dear Chief LaRocca,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. We wish to share with you that the Draft Environmental Impact and Assessment Report (EIAR) has now been published. Attached you will find a letter outlining the Draft Environmental Impact Assessment Report (EIAR) prepared for the Ontario Line Project, as well as the Notice of Publication for the report.

The full report can be found using the following dropbox link:

[REDACTED]

The Notice of Publication commences a 30-day public review period which will continue from February 7, 2022 until March 9, 2022. As such, we ask that your Nation provide any comments in writing no later than March 9, 2022. We appreciate the size of these documents and would be happy to arrange a meeting to review the report and project with you.

In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations for Natural Environment and Archaeological Resources, as we know this may be of specific interest to you.

Thank you for your time and assistance. If you have any questions or concerns, please do not hesitate to contact me.

Delivered by Email

Dear Chief LaRocca,

RE: Ontario Line Project - Notice of Publication of Draft Environmental Impact Assessment Report (EIAR)

Metrolinx remains committed to meaningful consultation and engagement, especially where our projects have impacts to the Treaty and traditional lands of Mississaugas of Scugog Island First Nation. Metrolinx values its relationship with Mississaugas of Scugog Island First Nation and it is our wish to continue to work with your Nation as we move forward. In November of 2021, Metrolinx shared with Mississaugas of Scugog Island First Nation the preliminary Draft Environmental Impact Assessment Report (EIAR) for comment and review. The purpose of this letter is to share with your Nation the that the Notice of Publication for the Draft EIAR has now been posted, and to continue to invite any comment or feedback you may wish to share on this report.

Project Description

Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

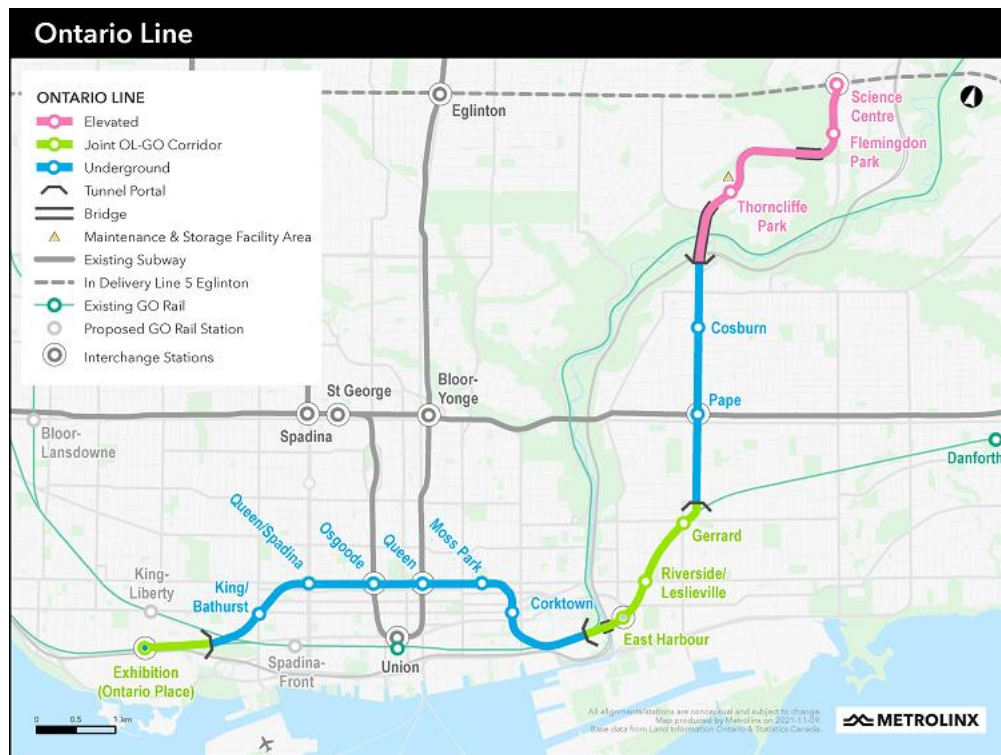

Figure 1 - Ontario Line

Ontario Line Environmental Assessment & Project Timeline

Environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Table 1 below provides a summary of the Ontario Line Reports that have been shared, or will be shared with Mississaugas of Scugog Island First Nation:

Table 1: Ontario Line Reporting Timeline

Report	Date Shared/to be Shared with Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour Station)	June 5, 2020
Draft Environmental Conditions Report	September 17, 2020
Final Environmental Conditions Report and Draft Exhibition Station Early Works Report	November 30, 2020
Final Exhibition Station Early Works Report	February 1, 2021
Initial draft of Corktown Station Early Works Report	March 22, 2021
Draft Corktown Station Early Works Report	May 12, 2021
Final Corktown Station Early Works Report	July 15, 2021
Draft Lower Don Bridge and Don Yard Early Works Report	June 22, 2021
Final Lower Don Bridge and Don Yard Early Works Report	August 25, 2021
Initial draft of Lakeshore East Joint Corridor Noise and Vibration Operations Report	July 28, 2021
Draft Lakeshore East Joint Corridor Early Works Report	September 23, 2021
Final Lakeshore East Joint Corridor Early Works Report	November 17, 2021
Draft East Harbour Station Early Works Report	September 23, 2021
Final East Harbour Station Early Works Report	November 17, 2021
Initial draft of Environmental Impact Assessment Report Stage 1 Archaeological Assessment Report and Natural Environment Report	August 18, 2021
Initial draft of Environmental Impact Assessment Report	November 18, 2021
Draft Environmental Impact Assessment Report	February 7, 2022 (shared with this letter)
Final Environmental Impact Assessment Report	April 19, 2022*

*Date is subject to change.

Draft Environmental Impact Assessment Report (EIAR)

The Draft EIAR summarizes the local environmental conditions in the discipline-specific study areas developed for the Project. The local environmental conditions were characterized through a combination of desktop review and field studies by practitioners using industry standard techniques and provincial standards, protocols, and guidelines, where appropriate. The resulting Draft Stage 1 AA and Natural Environment Report was shared with Mississaugas of Scugog Island First Nation for review in August 2021.

The Draft EIAR also provides an assessment and evaluation of the impacts that the Project might have on the environment. Based on the potential impacts, a description of mitigation measures and monitoring activities is outlined. A list of municipal, provincial, federal, or other permits and approvals that may be required for the Project is also provided.

Discipline-specific assessment and evaluation of impacts were undertaken for the following disciplines:

- Natural Environment
- Soil and Groundwater
- Cultural Heritage
- Archaeological Resources
- Socio-Economic and Land Use
- Air Quality
- Noise and Vibration
- Traffic and Transportation

Effective February 7, 2022, the Draft Environmental Impact Assessment Report will be available for a 30-day public review period. The report is posted on the Ontario Line project webpage, which can be accessed using the following link:

<https://www.metrolinxengage.com/en/content/full-report-draft-environmental-impact-assessment-report>

The Notice of Publication of Draft EIAR can be found in **Attachment 1**.

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2** provide a summary of natural environment

and archaeology potential impacts and mitigation measures identified as part of the Draft EIAR that may be of interest to Mississaugas of Scugog Island First Nation. If your Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Engagement

Metrolinx welcomes any comments or feedback on the EIAR during the 30-day public review period, from February 7 to **March 9, 2022**. Metrolinx is committed to an open and respectful relationship with Mississaugas of Scugog Island First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Mississaugas of Scugog Island First Nation. We are happy to assist in the review of these documents by meeting with your Nation.

Metrolinx is willing to address any questions that Mississaugas of Scugog Island First Nation may have about the Ontario Line Project. If you require additional information or materials or if you wish to discuss the Project in more detail or set up a meeting, please contact Jaimi O'Hara, Manager of Indigenous Relations Office at Metrolinx. She can be reached at

IndigenousRelations@metrolinx.com.

With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the Freedom of Information and Protection of Privacy Act, except where information is provided to Metrolinx in confidence, pursuant to section 15.1, which protects the confidentiality of Indigenous knowledges.

Thank you for your time in reviewing this letter. Yours

Truly,

A handwritten signature in black ink, appearing to read 'J. Pakkala'.

Notice of Publication of Draft Environmental Impact Assessment Report and Virtual Open Houses Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Environmental Impact Assessment Report

Environmental impacts of the Ontario Line are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 15 of O. Reg. 341/20, Metrolinx has prepared the Draft Environmental Impact Assessment Report that is now available for review.

The Draft Environmental Impact Assessment Report describes existing environmental conditions in the Project study area, environmental impacts, mitigation and monitoring measures, consultation, and required permits and approvals for the Ontario Line.

The Draft Environmental Impact Assessment Report Review and Consultation Process

Effective **February 7, 2022**, the Draft Environmental Impact Assessment Report will be available for review on the Ontario Line project webpage (www.metrolinx.com/ontarioline). You can view and comment on the report from **February 7 to March 9, 2022** via the online form provided.

You can also participate in virtual open houses, where you can hear from project experts and ask questions about the report in real time, at MetrolinxEngage.com/OntarioLine/live on:

- **February 22, 2022 and February 24, 2022** from 6:30 to 8:00 p.m., with a focus on the portion of the project from Science Centre Station to Gerrard Station
- **March 1, 2022 and March 3, 2022** from 6:30 to 8:00 p.m., with a focus on the portion of the project from Gerrard Station to Exhibition Station

Those who wish to provide comments on the Draft Environmental Impact Assessment Report must do so by **March 9, 2022** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 17 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Environmental Impact Assessment Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the Ontario Line implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Environmental Impact Assessment Report on the Ontario Line project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final Environmental Impact Assessment Report.

To obtain a copy of the Draft Environmental Impact Assessment Report, please contact the Ontario Line project email listed above.

Mark Clancy (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Table 5-5. Potential Impacts, Mitigation Measures, and Monitoring Activities – Archaeology

Environmental Components	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<p>Construction</p> <ul style="list-style-type: none"> Potential for the disturbance of unassessed or documented archaeological resources. <p>Operations</p> <ul style="list-style-type: none"> Potential impacts are not anticipated during operations. 	<p>Construction</p> <ul style="list-style-type: none"> Prior to construction, an Archaeological Risk Management Plan will be developed that will include, among other items: <ul style="list-style-type: none"> The recommendations from Archaeological Reports Processes for Indigenous monitors and engagement with Indigenous Nations Areas identified as retaining archaeological potential, as per the Stage 1 Archaeological Assessment Report (Appendix A3), must be subject to further archaeological assessment, as recommended and in advance of any ground disturbance. Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the MHSTCIs <i>Standards and Guidelines for Consultant Archaeologists</i> (Government of Ontario 2011) to identify any archaeological resources that may be present. Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged. If in-water work is required, a marine archaeological assessment will be completed. If detailed design moves the Project Footprint onto lands not previously assessed for archaeological potential, additional archaeological assessments may be required in order to conserve archaeological resources through documentation, protection, and/or avoidance from impacts. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to archaeological potential during operations, no mitigation measures are recommended. 	<p>Construction</p> <ul style="list-style-type: none"> Subject to findings of future Archaeological Assessments, to avoid impacts on archaeological resources during construction, monitoring may be required. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to archaeological potential during operations, no monitoring activities are recommended.

Environmental Components	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Resources	<p>Construction</p> <ul style="list-style-type: none"> Potential recovery of archaeological resources during construction. <p>Operations</p> <ul style="list-style-type: none"> Potential impacts are not anticipated during operations. 	<p>Construction</p> <ul style="list-style-type: none"> Prior to construction, an Archaeological Risk Management Plan will be developed that will include, among other items, protocols should previously undocumented archaeological resources be discovered Should previously undocumented archaeological resources be discovered, they may be a new archaeological site and therefore subject to Section 48(1) of the OHA. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed consultant archaeologist to carry out archaeological fieldwork. The <i>Funeral, Burial and Cremation Services Act</i>, 2002 requires that any person discovering human remains must notify the police or coroner and the Registrar of Cemeteries at the Ministry of Government and Consumer Services. Archaeological sites recommended for further archaeological fieldwork or protection remain subject to Section 48(1) of the OHA and may not be altered, or have artifacts removed from them, except by a person holding an archaeological license. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to archaeological potential during operations, no mitigation measures are recommended. 	<p>Construction</p> <ul style="list-style-type: none"> Subject to findings of future Archaeological Assessments, to avoid impacts on archaeological resources during construction, monitoring may be required. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to archaeological resources during operations, no monitoring activities are recommended.

Aquatic Habitat			
Aquatic Environment – Wetlands and Waterbodies	<p>Construction</p> <p><u>OLS Study Area</u></p> <ul style="list-style-type: none"> Impacts to riparian vegetation, erosion and sedimentation to waterbodies from construction; risk of contamination to waterbodies as a result of spills. <p><u>OLN Study Area</u></p> <ul style="list-style-type: none"> Removal or impacts to wetland; aquatic and riparian vegetation; degradation of wetlands as result of dewatering and discharge activities; erosion and sedimentation to wetlands/waterbodies from construction; and risk of contamination to wetlands/waterbodies as a result of spills. <p>Operations</p> <ul style="list-style-type: none"> Potential impacts are not anticipated during operations 	<p>Construction</p> <ul style="list-style-type: none"> Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to wetlands and waterbodies. Shorelines or banks disturbed by construction activities will be immediately stabilized by any activity associated with the project to prevent erosion and/or sedimentation, preferably through re-vegetation with native species suitable for the site. An Erosion and Sediment Control Plan, in accordance with the Greater Golden Horseshoe's Erosion and Sediment Control Guideline for Urban Construction (2006) and the Erosion and Sediment Control Guide for Urban Construction (TRCA 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation. A Spill Prevention and Response Plan will be developed before work commences so that procedures and policies are in place to reduce impacts to wetlands and watercourses during construction. In wetland areas where vernal pooling occurs, prior to dewatering isolated work areas, wildlife will be captured and relocated to suitable habitat outside of the work area. Vegetation removals will also consider and mitigate potential impacts to wetland communities. Until such a time, that an Ontario Wetland Evaluation System evaluation is completed and evaluated by NDMNRF, unevaluated wetlands will be considered as significant for the purposes of assessing impacts. Wetland communities potentially affected by the Project will be clearly staked out on site. If dewatering is proposed, then it is recommended to be undertaken during the winter when the potential impacts of changes in water levels are less significant in wetland communities. During detailed design, the need for a dewatering zone of influence assessment and dewatering monitoring plan should be evaluated. The dewatering monitoring plan, if required, will monitor for potential negative impacts on nearby wetlands and adjacent vegetation communities to confirm if they would be affected due to dewatering activities. An adaptive management plan will be prepared if negative impacts are observed. Prior to dewatering isolated work areas, fish will be captured and relocated to suitable habitat outside of the work area under a Licence to Collect Fish for Scientific Purposes from the NDMNRF. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to wetlands and waterbodies during operations, no mitigation measures are recommended. 	<p>Construction</p> <ul style="list-style-type: none"> Onsite inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. <p>Operations</p> <ul style="list-style-type: none"> As no impacts are anticipated to wetlands and waterbodies during operations, no monitoring activities are recommended.

Hi Jaimi,

Thank you for this invitation. We are making progress, but are still working on increasing capacity for archeological monitoring. We expect to be able to field monitors in the spring.

It seems that this drilling would also have an environmental monitoring aspect, is this correct? If so, we can discuss it internally and determine if we might be able to participate in that.

Kindly,
Waverley

Dear Chief LaRocca,

Please find attached a letter inviting participation in the archaeological monitoring of borehole drilling planned to occur in the Lower Don Bridge area as part of the Ontario Line Project.

The date of this fieldwork is tentatively set for March 7, 2022. If you are interested in participating, please let me know as soon as possible and we will work with you and the project team to coordinate.

If you have any questions or concerns, please feel free to reach out to me at any time.

Thank you for your time and assistance.

Jaimi

Chief Kelly LaRocca
Mississaugas of Scugog Island First Nation
22521 Island Road, RR#5
Port Perry, ON L9L 1B6
Delivered by Email

Dear Chief LaRocca,

RE: Ontario Line Project - Invitation to Participate in Archaeological Monitoring for Borehole Drilling - Lower Don Bridge Area

Metrolinx continues to progress the Archaeological studies for the Ontario Line project and wanted to invite Mississaugas of Scugog Island First Nation to participate in further Archaeological monitoring for borehole drilling planned for the Lower Don Bridge area.

A Stage 1 Archaeological Assessment (AA) was completed as part of the Ontario Line Environmental Impact Assessment Report (EIAR). This report identified the area for the proposed boreholes as having archaeological potential. Both the Stage 1AA report and the EIAR were shared with Nations, in both August and November 2021.

Metrolinx is completing an Environmental Site Assessment in the Lower Don area (please see **Figure 1**). Given the identified archaeological potential of the area, archaeological monitoring will take place for the planned borehole drilling. This approach will provide for the on-site identification of archaeological resources and, if necessary, stop-work order of drilling by a licensed archaeologist in the event potential archaeological resources are encountered. A licensed archaeologist will be on-site during drilling to visually inspect spoil removed during borehole drilling as well as intermittent borehole samples to visually identify the presence of artifacts. Metrolinx would value any participation that Mississaugas of Scugog Island First Nation may wish to have in this monitoring program.

Please see the fieldwork details below:

Start Date: March 7, 2022 (potentially March 8 as well depending on drilling)

Duration: 1 day

Start Time: 8:30am

Consultant Company: Stantec

Contact information: Jeffrey Muir - (289) 208-5298

Assessment: Archaeological monitoring for borehole drilling

Size of Field Crew: 1 field supervisor

Parking and meeting location: See Figure 2. Meet and park at yellow star - along Bayview Ave and Mill St

Required PPE:

- Class 2 PPE (hi-viz vest)
- CSA Type 2 Hard Hat with foam insert (bump caps)
- CSA approved eye protection
- CSA approved 6" laced safety shoes
- CSA Hearing protection, in ear or over ear
- Appropriate clothing for weather conditions

Invitation to Participate in Fieldwork

Metrolinx would value the involvement of Mississaugas of Scugog Island First Nation in the upcoming archaeological monitoring fieldwork outlined above. Should your Nation wish to participate, please let us know at your earliest convenience. We welcome any requests for a meeting to discuss opportunities to participate or to explore this project in more detail with Mississaugas of Scugog Island First Nation. Upon receipt of Mississaugas of Scugog Island First Nation's interest in participating, Metrolinx will work to coordinate your Nation's involvement. Metrolinx is also willing to share fieldnotes and/or a summary of the borehole and geotechnical data in addition to the open invitation to participate directly in the monitoring.

Engagement

Regardless of whether or not your Nation participates in the fieldwork, Metrolinx will inform you of discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will also ensure that future Archaeological Assessment reports are provided to your Nation in draft form, prior to submission to the Ministry of Heritage, Sport, Tourism and Culture Industries.

If you require additional information or materials, or if you wish to discuss this project in more detail, please contact, Jaimi O'Hara, Manager, Indigenous Relations at Metrolinx. She can be contacted at IndigenousRelations@metrolinx.com.

Thank you for your time and consideration.

Yours Truly,

Sarah Chowdhury, Environmental Project Manager
Environmental Programs & Assessment

Re: Ontario Line: Draft Environmental Impact and Assessment Report (EIAR)

Thank you for providing the opportunity to comment on the Draft Environmental Impact Assessment Report (EIAR) prepared for the Ontario Line Project. Comments on behalf of Mississaugas of Scugog Island First Nation (MSIFN) are summarized in the table below. Please note, these comments pertain to the environmental portions of the report and do not address any archaeological findings.

Section	Reference Text	Comment
General Comment		<ul style="list-style-type: none"> It would be helpful for a table of contents to be included at the beginning of the full report to aid in navigation during review.
4.3.4 Species at Risk	<i>"The following SAR have a high probability of occurring in the Ontario Line North Study Area:..."</i>	<ul style="list-style-type: none"> Natural Heritage Information Centre records indicate the presence of queensnake (<i>Regina septembittata</i> – Endangered) in square 17PJ3341, which is not mentioned in the EIAR. Can Metrolinx please indicate why this species record was not indicated in the report?
Table 5-2 Potential Impacts, Mitigation Measures and Monitoring Activities	<i>"OLS and OLN Study Areas Compensatory habitat in the Don Valley and mitigation measures including on-going invasive species management are under discussion with agency stakeholders (City of Toronto and TRCA)." and "OLS and OLN Study Areas Monitoring restoration areas and follow up management are under discussion with agency stakeholders (City of Toronto and TRCA)."</i>	<ul style="list-style-type: none"> Please ensure that MSIFN is provided with a briefing on the habitat compensation plans, including monitoring planning. MSIFN should be given an opportunity to participate in restoration monitoring for works east of the Don River.
	<i>"Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop, as needed. Vegetation removal will also consider and mitigate potential impacts to sensitive species (e.g., migratory</i>	<ul style="list-style-type: none"> Native plantings and seed mixes must be used for revegetation of natural areas in all cases, not only as a preferred method. As noted above, please ensure that MSIFN is given an opportunity to participate in revegetation planning and monitoring east of the Don River.

	<i>birds and SAR) and features (e.g., designated natural areas and significant wildlife habitat). Refer to mitigation measures described for Wildlife and Wildlife Habitat and Species at Risk"</i>	
	<i>"Vegetation communities tree removal and compensation plans"</i>	<ul style="list-style-type: none"> • It is unclear if the potential impacts of tree removal on bat maternity roosts will be adequately assessed prior to tree removals. Bat maternity roost (snag) surveys should be completed in the appropriate windows (e.g., leaf off conditions), and MSIFN should be provided with an opportunity to attend these field surveys. • Please provide Tree Protection Plans for areas east of the Don River to MSIFN for review.
	<i>"SAR - bats: As no impacts are anticipated to SAR bats during operations, no mitigation measures are recommended."</i>	<ul style="list-style-type: none"> • Without completing the above noted bat maternity roost surveys, it is not reasonable to conclude that there will be no impacts to SAR bats.
	<i>"Wildlife and wildlife habitat - significant wildlife habitat - common nighthawk (Species of Conservation Concern): Construction - Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites."</i>	<ul style="list-style-type: none"> • Please define the specific intervals and conditions that monitoring will be undertaken within, stating that monitoring will be "regular" is not specific enough.
	<i>"Wildlife and wildlife habitat significant wildlife habitat Turtles and Turtle Habitat, including Species of Conservation Concern in the OLS and OLN Study Areas: Work in turtle habitat will be planned in consideration of turtle overwintering period which occurs from October 1 to April 30 in any given year. It is also possible that turtle surveys would need to be conducted prior to the work."</i>	<ul style="list-style-type: none"> • Surveys for turtles should be completed if work is conducted within or proximal to turtle habitat. These should be carried out according to the applicable protocols, and MSIFN should be informed of and given the opportunity to participate in any turtle surveys.
	<i>"Wildlife and wildlife habitat wildlife habitat connectivity: Potential impacts are not anticipated during operations "</i>	<ul style="list-style-type: none"> • Given that portions of the subway line will be constructed at-grade, more explanation is needed on the rationale used to determine that there would be no impacts to wildlife habitat connectivity during construction. • Given that the proposed route near the Ontario Science Centre seems to be at-grade and traverses natural

		<p>areas, it is implausible that there will be no impacts on connectivity.</p> <ul style="list-style-type: none"> Please provide a more detailed wildlife habitat connectivity assessment.
	<i>"Prior to dewatering isolated work areas, fish will be captured and relocated to suitable habitat outside of the work area under a Licence to Collect Fish for Scientific Purposes from the NDMNRF."</i>	<ul style="list-style-type: none"> No monitoring is suggested to evaluate short- and long-term impacts to aquatic species that will be captured and relocated. Metrolinx should outline how they plan to monitor the displaced aquatic wildlife to ensure that impacts are mitigated, and provide MSIFN with details of such monitoring.
	<i>"Aquatic Environment: Wetlands and Waterbodies - Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to wetlands and waterbodies."</i>	<ul style="list-style-type: none"> Please ensure to include MSIFN in any buffer and general mitigation planning for wetlands east of the Don River. This should include the opportunity to attend wetland staking exercises.
<p>4.3.4 Ontario Line North</p> <p>Designated Features and Policy Areas</p>	<i>"According to the NDMNRF's GeoHub Mapping (2020a), there are no Provincially Significant Wetlands, Locally Significant Wetlands or provincially significant Areas of Natural and Scientific Interest in the OLN Study Area. However, there is a candidate Regionally Significant Life Science Areas of Natural and Scientific Interest in the E.T. Seton Park Area of Investigation, as well as unevaluated wetlands and wooded areas (shown on Figure 4-5, Figure 4-6 and Figure 4-7). The City of Toronto does not identify significant woodlands or significant valleylands in their Official Plan (2015)."</i>	<ul style="list-style-type: none"> We have concern that impacts are being assessed on unevaluated wetlands without these wetlands being evaluated. Does Metrolinx have plans to evaluate unevaluated wetlands within your project areas?
<p>Significant Wildlife Habitat:</p> <p>Specialized Habitat for Wildlife</p>	<i>"Confirmed Amphibian Wetland Breeding Habitat The ponds in E.T. Seton Park behind the Ontario Science Centre and associated marshes provide amphibian breeding habitat as confirmed through records received from Ontario Nature, including records of American toad, green frog (Rana clamitans) and American bullfrog (Lithobates catesbeianus). According to the Significant Wildlife Habitat Criteria Schedules for Ecoregion 7E (MNRF 2015), wetlands with breeding American bullfrogs are considered significant."</i>	<ul style="list-style-type: none"> Could Metrolinx please clarify how amphibian habitat will be assessed for the other unevaluated wetlands within the project area, specifically the pockets of wetland within the project corridor?

Wetlands
General
Comment

The following is from the Provincial NHIC Make a Map, with unevaluated wetlands on the proposed route shown in red. Can Metrolinx please clarify how impacts on these wetlands will be avoided or mitigated?

Sincerely,

MSIFN Consultation Office

Hello Chief LaRocca,

I hope all is well on your end! I just wanted to send a quick follow up to ask whether you had any initial comments or questions on the response provided by Metrolinx below on April 01, 2022.

The comments and responses will be included in the Appendix of the final reports. We look forward to continued engagement with you as the projects advances.

Happy to discuss further if you would like.

Thanks,
Christine

[REDACTED]

Hello Chief LaRocca,

We have been working with the team at IBA Braiding to address comments and feedback they have brought forward on the [REDACTED] as well as the Environmental Impact and Assessment Report (EIAR) for the Ontario Line Project. These comments have been discussed collaboratively with IBA Braiding at meetings on March 16 and 25, 2022.

Please find attached two letters outlining Metrolinx's responses to these comments and corresponding response tables.

If you have any questions or would like to arrange a meeting to discuss, please do not hesitate to reach out to me.

Warmly,
Marilyn

RE: Ontario Line (OL) - Environmental Impact Assessment Report (EIAR)

Dear Waverley Birch,

Thank you for your letter to Metrolinx, dated March 9, 2022, with comments pertaining to the Ontario Line Draft Environmental Impact Assessment Report (EIAR) on behalf of Mississaugas of Scugog Island First Nation (MSIFN).

Metrolinx is committed to building a long-term relationship with MSIFN, and we recognize that this requires transparency and meaningful engagement. We remain committed to meaningful consultation and engagement, especially where our projects have impacts on the Treaty and Territory of Nations. The Indigenous Relations Office has begun guiding the organization and identifying ways in which we can more meaningfully engage with Indigenous Nations as well as helping us learn and understand how we can do better.

Metrolinx values its relationship with the MSIFN and has learned much about your Nation and its expectations over the past several months. It is our wish to continue to work with your Nation as we move forward.

Project Description

Metrolinx is overseeing the Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the [REDACTED], and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Please see **Figure 1** below for the proposed Ontario Line .

For more information about this project, please visit: www.metrolinxengage.com/ontario-line

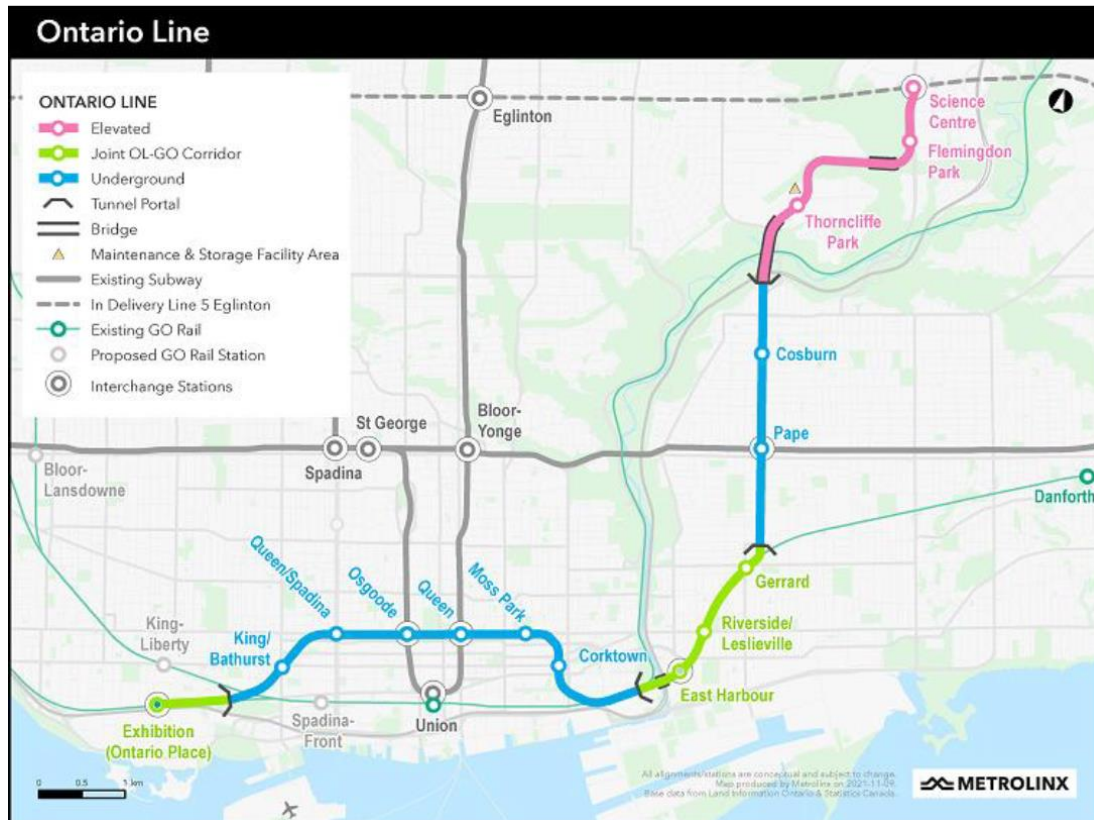

Figure 1: Ontario Line

Environmental Impact Assessment Report Comments

We want to thank you again for taking the time to provide comments on the Ontario Line Draft Environmental Impact Assessment Report (EIAR) and the impacts that the project has on the natural environment. We hope the information provided in this letter addresses your comments and concerns and that we can continue to work together as the Ontario Line Project advances.

We appreciate the cultural perspective on the natural environment that you have shared with us. Metrolinx will provide MSIFN with the Tree Protection Plans for areas east of the Don River once they are complete and we look forward in engaging with MSIFN on future fieldwork planned for the Ontario Line. Metrolinx also appreciates the insight and knowledge your Nation has provided to help strengthen our relationship moving forward and hope that this will continue to evolve through our Framework Agreement process. We continue to learn from you as stewards and caretaker of the land.

Attachment 1 outlines the comments received from MSIFN on March 9, 2022, and the OL

Project Team responses. The Final version of the EIAR will be provided to MSIFN via email and be made available on the Metrolinx website in April 2022.

We believe that as we continue to work together our approaches will continue to evolve and better align with the expectations of MSIFN with respect to the natural environment aspects of our projects.

Metrolinx remains committed to building meaningful relationships with Indigenous Nations, and we are working with the Indigenous Relations Office to better understand how we can change as an organization to understand and meet the expectation of MSIFN.

Thank you for your time in reviewing this letter.

Yours Truly,

Encl. Attachment 1: MSIFN OL EIAR Comment Response Table

ID	Report/Section	Comment/Question – Ontario Line	Project Team Response
1	General	It would be helpful for a table of contents to be included at the beginning of the full report to aid in navigation during review.	The executive summary has been positioned at the beginning of the report before the Table of Contents as a standard formatting practice for a report of this size. The format of the Natural Environment Technical Report (NETR) is consistent with other Ontario Line environmental assessment reports.
2	4.3.4 Species at Risk	<p><i>"The following SAR have a high probability of occurring in the Ontario Line North Study Area:..."</i></p> <p>Natural Heritage Information Centre records indicate the presence of queensnake (<i>Regina septembittata</i> – Endangered) in square 17PJ3341, which is not mentioned in the EIAR.</p> <p>Can Metrolinx please indicate why this species record was not indicated in the report?</p>	<p>Table 2 in Appendix C of the Natural Environment Technical Report identifies Queensnake as a historical record in the Study Area, with the most recent record of occurrence from 1858.</p> <p>We would be open and interested to learn more from MSIFN with respect to the importance of Queensnake to your Nation, and if you are aware of any additional data that should be considered as we advance project planning and design.</p> <p>Metrolinx has been working with the MECP with respect to Species at Risk (SAR) in the Study Area. The potential presence of SAR in the Study Area is provided and reviewed by the MECP, which holds the most current data for SAR in the GTA. Given it has been more than 100 years since the last occurrence of Queensnake, MECP considers this species as locally extirpated within the study area and it was not included in Section 4.3.4 of the EIAR. If Queensnake is identified during future fieldwork as planning and design progress Metrolinx will work closely with MECP to implement appropriate mitigation measures.</p>
3	Table 5-2 Potential Impacts, Mitigation Measures and Monitoring Activities	<p><i>"OLS and OLN Study Areas Compensatory habitat in the Don Valley and mitigation measures including on-going invasive species management are under discussion with agency stakeholders (City of Toronto and TRCA)." and "OLS and OLN Study Areas Monitoring restoration areas and follow up management are under discussion with agency stakeholders (City of Toronto and TRCA)."</i></p> <p>Please ensure that MSIFN is provided with a briefing on the habitat compensation plans, including monitoring planning. MSIFN should be given an opportunity to participate in restoration monitoring for works east of the Don River.</p>	Metrolinx will share information about habitat restoration plans (including monitoring) with MSIFN once they are drafted and will invite MSIFN to participate in restoration monitoring for works east of the Don River. This commitment has been included in Section 6.7 of the EIAR.
4	Table 5-2 Potential Impacts, Mitigation Measures and Monitoring Activities	<p><i>"Temporarily disturbed areas will be re- vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop, as needed. Vegetation removal will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds and SAR) and features (e.g., designated natural areas and significant wildlife habitat). Refer to mitigation measures described for Wildlife and Wildlife Habitat and Species at Risk"</i></p> <p>Native plantings and seed mixes must be used for revegetation of natural areas in all cases, not only as a preferred method. As noted above, please ensure that MSIFN is given an opportunity to participate in revegetation planning and monitoring east of the Don River.</p>	<p>Metrolinx will provide MSIFN with opportunity to participate in revegetation planning and monitoring east of the Don River. This commitment has been included in Section 6.7 of the EIAR.</p> <p>Following disturbance, there may be a need for fast-growing cover crops to stabilize areas that are subject to immediate erosion concerns and these may not consist of only native seed. Only cover crops that provide temporary stabilization and do not persist in the seed bank or clonally may be used. Cover crops will be planted with native plant species to support long term germination and establishment of a native, habitat-appropriate vegetation community. We would be happy to discuss this further with MSIFN.</p>
5	Table 5-2 Potential Impacts, Mitigation Measures and Monitoring Activities	<p><i>"Vegetation communities tree removal and compensation plans"</i></p> <p>It is unclear if the potential impacts of tree removal on bat maternity roosts will be adequately assessed prior to tree removals. Bat maternity roost (snag) surveys should be completed in the appropriate windows (e.g., leaf off conditions), and MSIFN should be provided with an opportunity to attend these field surveys.</p> <p>Please provide Tree Protection Plans for areas east of the Don River to MSIFN for review.</p>	<p>Species at Risk (SAR) Bat acoustic surveys were completed east of the Don River in the summer of 2021. Based on the bat acoustic survey results, mitigation and compensation requirements will be implemented in accordance with Permit #-CR-D-002-19 issued under the Endangered Species Act, 2007.</p> <p>Metrolinx received approval for a 17(2)(d) permit (Permit #CR-D-002-19) under the Endangered Species Act (ESA, 2007) issued by the Ministry of the Environment, Conservation, and Parks (MECP) on August 10, 2020. The permit provides approval Ontario Line project activities that may have adverse impacts on identified Species at Risk (SAR) and/or their habitat. The permit allows for those activities to take place and provides direction to Metrolinx regarding mitigation measures and compensation requirements that would be necessary to support those impacted species to support no net loss.</p> <p>Where SAR bat habitat or candidate habitat is identified, tree removals are avoided during the active season and prohibited during the maternity roosting period as defined by the MECP.</p> <p>Should exit/entry surveys or leaf-off surveys for bats be required, the opportunity for MSIFN monitors to attend these surveys will be discussed with the MSIFN.</p>

			Tree protection plans for the areas east of the Don River and will be provided to the MSIFN upon finalization. This commitment has been included in Section 6.7 of the EIAR.
6	Table 5-2 Potential Impacts, Mitigation Measures and Monitoring Activities	<p><i>"SAR - bats: As no impacts are anticipated to SAR bats during operations, no mitigation measures are recommended."</i></p> <p>Without completing the above noted bat maternity roost surveys, it is not reasonable to conclude that there will be no impacts to SAR bats.</p>	<p>SAR bat acoustic surveys have commenced in the OLN Study Area and will continue as design and planning progress in accordance with permits conditions. Any impacts to SAR bats during construction will be mitigated and compensated as per the above noted permit. Operation of the Ontario Line is not anticipated to result in any impacts to SAR bats.</p> <p>Bat acoustic surveys provide an accurate representation of the types of bats that are present in an area. The presence of SAR Bats was determined based on the acoustic results and tree removal in the associated vegetation communities will be appropriately compensated.</p>
7	Table 5-2 Potential Impacts, Mitigation Measures and Monitoring Activities	<p><i>"Wildlife and wildlife habitat - significant wildlife habitat - common nighthawk (Species of Conservation Concern): Construction - Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites."</i></p> <p>Please define the specific intervals and conditions that monitoring will be undertaken within, stating that monitoring will be "regular" is not specific enough.</p>	Monitoring is both species and activity specific, and in this context the term "regular" refers to the method of monitoring, rather than the specific timing of monitoring. Monitoring for these species is proposed on the timing of potential impacts such as prior to building removal. For example, some structures that may provide suitable Common Nighthawk nesting habitat could be removed in future years and a site-specific survey and monitoring would occur prior to the removal within appropriate timing windows. These details concerning the advancement of building removals is subject to detail design schedules that are in progress and forthcoming. As such, specific details on monitoring timing cannot be provided in all cases at this time, however we will provide updated information on this as it becomes available.
8	Table 5-2 Potential Impacts, Mitigation Measures and Monitoring Activities	<p><i>"Wildlife and wildlife habitat significant wildlife habitat Turtles and Turtle Habitat, including Species of Conservation Concern in the OLS and OLN Study Areas: Work in turtle habitat will be planned in consideration of turtle overwintering period which occurs from October 1 to April 30 in any given year. It is also possible that turtle surveys would need to be conducted prior to the work."</i></p> <p>Surveys for turtles should be completed if work is conducted within or proximal to turtle habitat. These should be carried out according to the applicable protocols, and MSIFN should be informed of and given the opportunity to participate in any turtle surveys.</p>	<p>Metrolinx is committed to undertaking turtle surveys in accordance with the applicable protocols should work be conducted in or adjacent to turtle habitat.</p> <p>Potential areas for turtle habitat, including SAR turtles, have been assessed and are subject to management principles including avoidance, mitigation and compensation depending on site conditions and the timing of construction activities.</p> <p>MSIFN will be notified through the engagement process of participation activities associated with turtle surveys and other wildlife surveys. This commitment has been included in Section 6.7 of the EIAR.</p>
9	Table 5-2 Potential Impacts, Mitigation Measures and Monitoring Activities	<p><i>"Wildlife and wildlife habitat wildlife habitat connectivity: Potential impacts are not anticipated during operations "</i></p> <p>Given that portions of the subway line will be constructed at-grade, more explanation is needed on the rationale used to determine that there would be no impacts to wildlife habitat connectivity during construction.</p> <p>Given that the proposed route near the Ontario Science Centre seems to be at-grade and traverses natural areas, it is implausible that there will be no impacts on connectivity.</p> <p>Please provide a more detailed wildlife habitat connectivity assessment.</p>	<p>Near the Ontario Science Centre, the Ontario Line will travel along an elevated guideway. The primary connectivity areas in the Study Area are associated with the wooded valleylands and other natural areas such as the Don River Valley and the Walmsley Brook Valley. The elevated guideway at these locations allows for the passage of wildlife under the alignment, maintaining the connectivity.</p> <p>We would be happy to discuss this further.</p>
10	Table 5-2 Potential Impacts, Mitigation Measures and Monitoring Activities	<p><i>"Prior to dewatering isolated work areas, fish will be captured and relocated to suitable habitat outside of the work area under a Licence to Collect Fish for Scientific Purposes from the NDMNRF."</i></p> <p>No monitoring is suggested to evaluate short- and long-term impacts to aquatic species that will be captured and relocated. Metrolinx should outline how they plan to monitor the displaced aquatic wildlife to ensure that impacts are mitigated and provide MSIFN with details of such monitoring.</p>	<p>Aquatic species will be relocated under a <i>Licence to Collect Fish for Scientific Purposes</i> issued by the Ministry of Northern Development, Mines, Natural Resources and Forestry. The intent of the procedure is to collect species in isolated areas and complete transfers as efficiently and quickly as possible to avoid the duration of potential harmful impacts. Using this procedure these impacts are noted to be short in duration, one time in frequency, of low magnitude of impact, and temporary in nature.</p> <p>To establish a relocated monitoring program, the species would require additional handling and tagging activities to track recovery efforts. Excluding mussels, which are less mobile, the fish species disperse throughout the watercourse and monitoring would require extensive fish capture throughout the reaches of the watercourses of the OL Study Area, namely the Don River. Post-relocations monitoring is not recommended as it is more impactful to the relocated species in duration, frequency and magnitude, and results in incidental capture of non-target species. As such, we believe that additional monitoring of this kind could negatively impact the fish.</p> <p>We would be happy to explore other suggestions that you may have for short term and long-term monitoring.</p>
11	Table 5-2 Potential Impacts, Mitigation Measures and	<i>"Aquatic Environment: Wetlands and Waterbodies - Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to wetlands and waterbodies."</i>	MSIFN will be invited to participate in wetland staking exercises, and general mitigation planning for wetlands east of the Don River. This commitment has been included in Section 6.7 of the EIAR.

	Monitoring Activities	Please ensure to include MSIFN in any buffer and general mitigation planning for wetlands east of the Don River. This should include the opportunity to attend wetland staking exercises.	
12	<p>4.3.4 Ontario Line North</p> <p>Designated Features and Policy Areas</p>	<p><i>“According to the NDMNRF’s GeoHub Mapping (2020a), there are no Provincially Significant Wetlands, Locally Significant Wetlands or provincially significant Areas of Natural and Scientific Interest in the OLN Study Area. However, there is a candidate Regionally Significant Life Science Areas of Natural and Significant Interest in the E.T. Seton Park Area of Investigation, as well as unevaluated wetlands and wooded areas (shown on Figure 4-5, Figure 4-6 and Figure 4- 7). The City of Toronto does not identify significant woodlands or significant valleylands in their Official Plan (2015).”</i></p> <p>We have concern that impacts are being assessed on unevaluated wetlands without these wetlands being evaluated.</p> <p>Does Metrolinx have plans to evaluate unevaluated wetlands within your project areas?</p>	<p>For this project, all unevaluated wetlands will be assumed to be provincially significant for the purposes of assessing impacts and implementing mitigation, which is a conservative approach. We would be happy to learn more from MSIFN if you have a different perspective on this approach.</p> <p>To date, the wetlands have been reviewed through site reconnaissance and categorized using the Ecological Land Classification (ELC) System which distinguishes wetland communities from upland communities. Small pockets of wetlands can occur within ELC communities that are not distinguished from the dominant upland community in which they occur due to their size. The site reconnaissance reviewed these small wetland features to assess their potential to have a critical function zone characteristic, which would include amphibian habitat. These small wetlands in the vicinity of the Ontario Science Centre were not noted to exhibit characteristics suitable for amphibian breeding (i.e., vernal pools). In addition, the mitigation measures offered in the NETR provide a mechanism to reduce undesirable impacts to the wetlands in relation to the technical design opportunities and constraints.</p> <p>While wetland delineation using the Ontario Wetland Evaluation System (OWES) can be different than ELC in some cases; based on site observations, the boundaries of the unevaluated wetlands in the Study Area are considered coincident using both wetland assessment methods.</p> <p>Understanding that wetlands are offered the protection approach noted above (i.e., considered significant and subject to various mitigation measures), evaluation of wetland form and function is not anticipated to be required. In addition, wetland communities potentially affected by the Project will be clearly staked on site prior to project activities and MSIFN will be invited to participate in this work along with stakeholders.</p>
13	<p>Significant Wildlife Habitat:</p> <p>Specialized Habitat for Wildlife</p>	<p><i>“Confirmed Amphibian Wetland Breeding Habitat The ponds in E.T. Seton Park behind the Ontario Science Centre and associated marshes provide amphibian breeding habitat as confirmed through records received from Ontario Nature, including records of American toad, green frog (Rana clamitans) and American bullfrog (Lithobates catesbeianus). According to the Significant Wildlife Habitat Criteria Schedules for Ecoregion 7E (MNRF 2015), wetlands with breeding American bullfrogs are considered significant.”</i></p> <p>Could Metrolinx please clarify how amphibian habitat will be assessed for the other unevaluated wetlands within the project area, specifically the pockets of wetland within the project corridor?</p>	<p>In addition to the above noted response, the site reconnaissance reviewed these small wetland features to assess their potential function. The small wetlands in the vicinity of the Ontario Science Centre were not noted to exhibit characteristics suitable for amphibian breeding (i.e., vernal pools, permanent standing water). And as noted above, the mitigation measures offered in the NETR provide a mechanism to reduce undesirable impacts to the wetlands in relation to the technical design opportunities and constraints.</p> <p>We would be happy to learn more from MSIFN if you have a different perspective on this approach.</p>
14	Wetlands General Comment	<p>The following is from the Provincial NHIC Make a Map, with unevaluated wetlands on the proposed route shown in red. Can Metrolinx please clarify how impacts on these wetlands will be avoided or mitigated?</p> 	<p>The wetlands on the Provincial NHIC Make a Map have been numbered for ease of discussion. The following provides a brief description of these 3 wetlands, followed by the proposed mitigation measures to reduce impacts where they could not be avoided.</p> <p>Wetland 1 is a small wetland inclusion (approximately 0.034ha as per the NDMNRF boundary) within a CUT1-1 thicket. This area is regularly disturbed for Hydro One corridor maintenance.</p> <p>Wetland 2 was identified and delineated by AECOM in the Environmental Conditions Report (ECR). It was identified as a MAM2-7 community (Horsetail Graminoid Meadow Marsh), and it is shown on the Natural Heritage Figures in the Natural Environment Technical Report (NETR) with approximately the same delineation as shown on NDMNRF mapping. The wetland is approximately 0.223 ha according to NDMNRF mapping.</p> <p>Wetland 3 was identified by Stantec in 2021 during the compilation of the NETR. It was identified as a MAM community (Meadow Marsh) and it is shown on the Natural Heritage Figures in the NETR. The wetland is approximately 0.143 ha according to NDMNRF mapping.</p> <p>As noted in the NETR, all unevaluated wetlands will be assumed to be provincially significant for the purposes of assessing impacts. While unevaluated wetlands will be assumed to be provincially significant, evaluation of wetland form and function is not anticipated to be required. The wetland communities potentially affected by the Project will be clearly staked on site prior to project activities in and MSIFN will be invited to participate in this work along with stakeholders.</p> <p>Mitigation measures to reduce impacts to wetlands in the Ontario Line North Study Area are outlined in Table 4.5 of the NETR of which, the following are pertinent to the conditions and location of the wetlands in question:</p> <ul style="list-style-type: none"> • Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to wetlands and waterbodies.

- An Erosion and Sediment Control Plan, in accordance with the Greater Golden Horseshoe's Erosion and Sediment Control Guideline for Urban Construction (2006) and the Erosion and Sediment Control Guide for Urban Construction (TRCA 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody.
- A Spill Prevention and Response Plan will be developed before work commences so that procedures and policies are in place during construction to reduce impacts to wetlands and watercourses.
- In wetland areas where vernal pooling occurs, prior to dewatering isolated work areas, wildlife will be captured and relocated to suitable habitat outside of the work area.
- Vegetation removals will also consider and mitigate potential impacts to wetland communities. Until such a time, that an Ontario Wetland Evaluation System evaluation is completed and evaluated by the NDMNRF, unevaluated wetlands will be considered as significant for the purposes of assessing impacts.
- Wetland communities potentially affected by the Project will be clearly staked out on site.
- If dewatering is proposed, then it is recommended to be undertaken during the winter when the potential impacts of changes in water levels are less significant in wetland communities.

Appendix B5. Public Correspondence

Public Engagement Record: Provide Your Feedback

Environmental Impact Assessment Report (EIAR) Comments:

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
Feb 7	Good result	Public transit routes.	How about extending the 505 DUNDAS streetcar eastward along Dundas Street East to Carlaw Avenue and northward along Carlaw Avenue to loop around the GERRARD STATION using Carlaw, Old Gerrard Street, and Gerrard Street? GERRARD STATION would be able to feed the 505 DUNDAS streetcar and relieve congestion at BROADVIEW STATION. While Dundas Street East maybe narrower than most streets served by streetcars in Toronto, trams in European cities serve even narrower streets.	Thank you for your comment. Extending the 505 Dundas streetcar route is outside the scope of the Ontario Line project. Metrolinx is working closely with TTC and the City of Toronto to provide connections between TTC streetcars and Ontario Line stations.
Feb 8	I appreciate the effort that has gone into producing this report and look forward to providing feedback on some of the results below.	Each study is important, with particular emphasis on Thorncliffe Park and nearby areas.	<p>Thank you for the opportunity to provide the following additional thoughts.</p> <p>Overlea Boulevard between Millwood Road to Thorncliffe Park Drive West:</p> <p>- 1) Construction Staging: Maintaining emergency vehicle response time (ambulance, fire, police) is critically important as first responders predominantly use Millwood Road and Leaside Bridge to enter Thorncliffe Park, in addition to some of the busiest TTC routes in the city. For these reasons, if at all possible, can reconstruction of Overlea Boulevard including setting the guideway piers be done separately from the southside Millwood Road work for the bridge pillars? Possibly, can Overlea can be an "Early Works" project?</p> <p>- 2) City of Toronto Transportation Services (TTS) is moving forward with a project to redesign Overlea Boulevard and Overlea Bridge between Thorncliffe Park Drive East and Don Mills Road. The TTS project will be completed in 2025. Can Metrolinx work closely with TTS to ensure that the western portion of Overlea when rebuilt matches the eastern portion rebuilt by the City? Overlea Boulevard is the Thorncliffe Park's main street and its grand entrance. There should be a level of design excellency and design consistency from end to end; Millwood to Don Mills. Its design should stand the test of time, and not be trendy / fashionable for only a moment.</p> <p>- 3) Can the TTC bus stops on the north side of Overlea (i.e. at Leaside Park Drive, at</p>	<p>Thank you for the detailed review of the Draft EIAR and providing the comments below. The required updates will be included in the Final EIAR.</p> <p>1. Closure durations will be minimized to the extent possible. TTC and emergency services providers will be notified in advance of any closures on Millwood Road and alternative routes will be provided. Modification of Millwood Road will largely be due to the realignment of the westbound traffic lanes on Overlea Blvd. Therefore construction on Millwood Road and Overlea Blvd will likely be concurrent. An Advanced Works package will be released to complete the Overlea Blvd realignment and associated work along Millwood Rd prior to the construction of the elevated guideway piers.</p> <p>2. Metrolinx is working closely with the City of Toronto for roadway work on Overlea Boulevard. Elevated guideways and stations will be designed with your community in mind, using modern design approaches that will be attractive additions to the neighbourhoods they serve.</p> <p>3. Bus stops along Overlea Blvd will often be restored at the same location following construction. Two stops on the north side of Overlea Blvd near Thorncliffe Park Station and Thorncliffe Bus Loop will be consolidated along Overlea Blvd due to the new transit connections at the Bus Loop and Station.</p> <p>4. The secondary monument in the existing median is being discussed extensively with the City of Toronto. Opportunities are being evaluated</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
			<p>Salvation Army) be retained with full-size bus shelters in the future design? The TTC's 88 South Leaside route will likely continue to connect Thorncliffe Park to Leaside post-Ontario Line opening. Also, there is a need to protect for future route possibilities that deviate from the Ontario Line's route, for example: direct service between Thorncliffe Park and Laird Drive, direct service between Thorncliffe Park and Michael Garron Hospital.</p> <p>- 4) Retention and protection of the Thorncliffe Park gateway monument on the southeast corner of Overlea and Millwood is appreciated. Thank you. There is a second structure in the Overlea median at Millwood Drive that has a light feature. If it cannot be retained at the west end of Overlea Boulevard due to Ontario Line construction, can it be relocated for the benefit of the community? There is a potential opportunity to reinstall it at the intersection of Pat Moore Drive and Thorncliffe Park Drive as a northern gateway sign. Google Street View link: https://www.google.ca/maps/@43.7020793,-79.3526242,3a,75y,351.62h,75.75t/data=!3m6!1e1!3m4!1sKrHSw501P-ryi793tcjISgl2e0!7i16384!8i8192</p> <p>- 5) Elevated Guideway Piers: My understanding is that two rows of guideway piers are required on Overlea because Thorncliffe Park Station is designed with an island platform. Although this will reduce capital and maintenance costs for escalators and elevators at the station, is the resulting impact to the Overlea Boulevard streetscape of a wider guideway footprint (i.e. ground level impact and shadows) the right decision for the Thorncliffe Park community? I encourage the team to take a second look at utilizing side platforms at Thorncliffe Park Station if this will reduce the visual presence of the elevated guideway. I also encourage Metrolinx and Infrastructure Ontario to actively partner with all of the property owners the north side of Overlea, from Millwood to Thorncliffe Park Drive West, to arrive at an exceptional solution in Thorncliffe Park.</p> <p>South Side Millwood Road - Weekend Closures for Bridge Pier Construction:</p> <p>- 6) Construction Staging: Revisiting the maintenance of emergency vehicle response time (ambulance, fire, police), would construction staging allow for the provision of a</p>	<p>and we anticipate collaborative workshop discussions to proceed in March to further explore preferred relocation options within the immediate area.</p> <p>5. Centre (or island) vs. side platforms have been thoroughly investigated and evaluated. Factors including impact to public realm, streetscape, station footprint, and impact to Overlea Boulevard have been assessed. Centre platforms were selected mainly due to the limited right-of-way and the desire to include new cycle tracks for Complete Streets design on Overlea Boulevard. At the same time, this would provide an attractive public realm underneath the guideway. Metrolinx will continue to work with stakeholders on landscape and public realm elements underneath the guideway.</p> <p>6. Lane reductions may be required at times for the different stages of construction on Overlea Blvd, but full closures are not anticipated. All modifications to Overlea Blvd and traffic control plans will be reviewed and approved by the City prior to implementation, to ensure emergency vehicles/access is maintained throughout construction.</p> <p>7. Thank you for the comment. Metrolinx will consider the connection to Crothers Woods during the design of bridge pier access.</p> <p>8. The bus loop will be located at 26 Overlea Boulevard for better connection to the Ontario Line.</p> <p>9. Metrolinx will continue to work with the public and property owners regarding greenspace opportunities.</p> <p>10. Metrolinx is working closely with the City of Toronto and TRCA to minimize the impact of the project on E.T. Seton Park. Metrolinx will work with the public and other stakeholders to discuss potential opportunities to animate areas underneath the structure.</p> <p>11. A relocation site for this bus stop during construction has not yet been selected as project planning is still ongoing. Options that may be considered include shifting the bus stop 135 metres north or 50 metres south along Don Mills Road.</p> <p>12. Ideally, bus stops along Don Mills would maintain their current locations. Metrolinx may need to shift the bus stop located at the NW corner of Don Mills road/Gateway intersection. Metrolinx is working closely with TTC to provide connections between TTC buses and Ontario Line stations.</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
			<p>temporary access road into Thorncliffe Park via Village Station Road, the hydro corridor, through to the former 2 Thorncliffe Park Drive site? Partial closures for the reconstruction Millwood Road between Village Station and Overlea a few years ago caused 401-like traffic jams at all times of the day for many months.</p> <p>- 7) Permanent Access to Crothers Woods: Can a recreational trail be incorporated into the lands that are required for bridge pier construction? Thorncliffe Park has no direct or convenient access to Crothers Woods even though it is located right beside our neighbourhood. If trees unfortunately need to be permanently cleared on the south side of Millwood at Overlea, installing a new path into the valley at this location would be a wonderful benefit.</p> <p>Thorncliffe Park Station:</p> <p>- Platform and Guideway Design: Please see above.</p> <p>- 8) Bus Terminal location: From my perspective, I anticipate that there will certainly be two bus routes existing here: 88 South Leaside and some combination of 81 Thorncliffe Park and 100 Flemingdon Park; I hope that at least two bus bays will be provided with some room to spare. 26 Overlea Boulevard (i.e. Wendy's / Tim Horton's) appears to be the most efficient location for transit customers to efficiently transfer between buses and the Ontario Line platform. If the 28 Overlea location on the northeast corner is used instead, customers are more likely to bunch on the eastern end of the platform, as opposed to using all doors of the train to board. 9) By contrast, 28 Overlea appears to be a good location to incorporate public greenspace into a new development.</p> <p>Bridge Crossing over E.T. Seton Park:</p> <p>10). There are a significant number of piers proposed to be installed in E.T. Seton Park to support the curvature of the bridge. How can Metrolinx partner with TRCA and Toronto Parks, Forestry, and Recreation to ensure that the bridge does not feel like it is splitting E.T. Seton Park in half? Are there partnership opportunities to animate area for all-season enjoyment?</p> <p>Flemingdon Park Station:</p> <p>- 11) During construction, where will the bus stop at the northwest corner of Don Mills</p>	

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
			<p>Road and Gateway Boulevard be relocated to?</p> <p>- 12) Opening Day: How will TTC buses access Flemingdon Park station? Southbound access on Don Mills Road seems straightforward, but what about northbound access from Don Mills Road or westbound access from Gateway Boulevard? I suggest mapping out and protecting for all bus routing possibilities at this stage of the project to ensure, as much as possible, that potential future TTC bus routes can feed into the station and serve all areas of Flemingdon Park as directly and efficiently as possible. Noting that, before 2030, Ferrand Drive is planned to be extended to St. Dennis Drive, and there will be a new public road between St. Dennis Drive and Grenoble Drive (City of Toronto Planning).</p> <p>Thank you again.</p>	
Feb 14	<p>Hi. I live at [REDACTED]. It appears to me it will get louder then it already is on that corner. The report also does not reflect how loud it already on the corner of Millwood and Overlea. Will there be any noise barrier walls from Millwood along Overlea Dr? I know it's on a elevated portion but that's what concerns me. It does not appear there is enough noise barrier protection.</p>	<p>The construction noise and impact as well as the final production impact on the corner of Millwood and Overlea. As a resident my concerns are of gridlock traffic as well as noise that carries along the Don Valley. My concerns are also on having so many trains go buy in a given day with not enough noise barriers. I don't want to see the train at all when it Millwood onto Overlea.</p>	<p>There is no indication how many trees will be removed along Millwood. As a noise buffer I hope that there will be plans to retain as many of them as possible.</p>	<p>[REDACTED] is represented by receptor RR_RESD_002 in the Noise and Vibration Impact Assessment Report. A noise barrier on the elevated guideway on Overlea Drive between Millwood to Thorncliffe Park is proposed and is shown in Figure P-2 of the report. This noise barrier will reduce noise impacts of the Ontario Line to residences located adjacent to the elevated guideway, including residents at 1 Leaside Park Drive.</p> <p>Metrolinx has also undertaken a sound demonstration exercise at Leaside Park Drive that compares existing noise levels with predicted noise levels (with and without noise barriers). The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p> <p>Construction noise associated with the construction of the elevated guideway and station is temporary in the Millwood/Overlea area. Construction noise limits will be developed for the project and appropriate construction noise mitigation measures will be applied to ensure that the noise limits are met.</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
				<p>The number of tree removals required along Millwood will be determined as planning progresses, but Metrolinx aims to minimize the number of tree removals to the extent possible. Metrolinx will provide compensation for tree removals in accordance with the Metrolinx Vegetation Guideline (2020).</p> <p>Trees are not the most effective noise barrier. Where required, noise barriers will be installed on the elevated guideway to reduce noise impacts to residences located adjacent to the elevated guideway.</p>
Feb 14	Many, many errors and typos. Doesn't inspire confidence on a 10 billion dollar project.	Noise and Vibration	NOTE: OLS-126 De Grassi Street from Queen Street East to Wardell Street "Potential indirect adverse impact: OLS-126 may be indirectly impacted by the Project. It is located adjacent to the new East Harbour Station and the alignment." This is area is NOT located adjacent to the new EAST HARBOUR STation and the alignment. Please check your maps.	Thank you for the detailed review of the Draft EIAR and providing your comment. OLS-126 is located adjacent to Leslieville Station and not East Harbour Station. The Final EIAR will be updated to reflect this, and other applicable comments received during the review period.
Feb 17	I believe the results of the Draft Environmental Impact Assessment environmental studies are inadequate. I give my reasons below.	I believe the Noise and Vibration Report, Appendix Q Noise and Vibration Operations Report Ontario Line – Lakeshore East Joint Corridor is most important. The project impinges health and liveability considerations for residents living in Lakeshore East. Transportation systems should not damage the health of citizens. Society understands excessive noise is unhealthy. The report itself, cites regulatory minimum limits of 55 dBA Leq,16h during	<p>1)The body of the Environmental Impact Assessment must clearly state the findings above ie Not one noise reading is in the MOEE/GO and MOEE/TTC minimum limits and mitigation measures do not reduce noise to acceptable levels. This impacts the health of the residents.</p> <p>2)Appendix Q is omitted undertaking ground elevation data. At one point it references that “Ground elevation data as previously modelled for the GO Rail Network Electrification Final Environmental Project Report Addendum in combination with provided design elevation data for the Ontario Line and GO tracks”. However the GO Rail Network Electrification Final Environmental Project Report Addenda states the following:</p> <p>From Appendix G1: USRC Impact Assessment Report</p> <p>https://www.metrolinxengage.com/sites/default/files/appendix_g1_-_go_rail...</p> <p>2.1 Study Area</p> <p>The USRC East Study Area encompasses the area from Union Station to the Don River.</p>	<p>The implemented noise barriers along the Lakeshore East Joint Corridor are predicted to effectively meet MOEE/GO and MOEE/TTC criteria at all sensitive receptors along the joint corridor between Eastern Avenue and Pape Avenue and achieve reductions below the predicted existing noise levels at most assessed receptors along the joint corridor. For more information, please see Appendix Q of the Noise and Vibration Impact Assessment Report. In addition to the report, Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels (with and without noise barriers). The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p> <p>1) The Lakeshore East Joint Corridor Noise and Vibration Operations Report is included in Appendix Q of the Noise and Vibration Impact Assessment Report, which is part of the Environmental Impact Assessment Report.</p> <p>2) Previous ground elevation data was only used from the GO Rail Network Electrification Final Environmental Project Report for receptor ground elevation data (which would not change due to the project), and existing tracks. For all new ground elevation data due to the future joint corridor</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
		<p>the daytime and 50 dBA Leq,8h during the night time.</p> <p>According to Chapter 3.3 Impact Assessment and Results, “existing day and night-time noise levels are shown to be greater than the MOEE/GO and MOEE/TTC minimum limits of 55 dBA Leq,16h during the daytime and 50 dBA Leq,8h during the night time” The lowest Leq day is 56.1 dBA and highest 70.2 dBA.</p> <p>The lowest Leq night is 51.8 dBA and highest 63.7 dBA .</p> <p>Not one reading is in the acceptable range.</p> <p>What is troubling is that mitigation measures do not reduce noise to acceptable levels.</p> <p>The Ontario Line project does not care about the health and liveability of the conditions for those in Lakeshore East.</p> <p>The question is why is Metrolinx choosing to damage the health of citizens, as shown in this Environment Assessment, when</p>	<p>However, the results of the noise modelling for rail operations are not presented in this report for the eastern section of the corridor from Cherry Street to Don River. The reason is that future noise impacts for this section of the Corridor will include those from Metrolinx operations as well as from operations of the Ontario Line subway, which will run above ground through this section. The combined noise impacts from Metrolinx and Ontario Line operations, and associated noise mitigation recommendations, are addressed in a separate report as part of the current Ontario Line EA.</p> <p>From Appendix G6: Lakeshore East Impact Assessment Report</p> <p>https://www.metrolinxengage.com/sites/default/files/appendix_g6_-_go_rail...</p> <p>2.1 Study Area</p> <p>The LSE Corridor Study Area begins just east of the Don River and ends at the Oshawa GO Station, approximately 50 kilometers in length. However, the results of the noise modelling are not presented in this report for the western section of the corridor from Don River to Carlaw Avenue. The reason is that future noise impacts for this section of the Corridor will include those from Metrolinx operations as well as from operations of the Ontario Line subway, which will run above ground through this section. The combined noise impacts from Metrolinx and Ontario Line operations, and associated noise mitigation recommendations, are addressed in a separate report as part of the current Ontario Line EA.</p> <p>There is a fatal flaw in omitting ground elevation data in the Noise and Vibration Report. This is because of the sometimes steep grade of elevation from west to east of the track in the Riverside area of Lakeshore East. The throttle position of the engines will generate greater noise attempting to go uphill versus downhill. In Riverside, the eastbound trains are going uphill and are noisier than the trains going downhill.</p> <p>Leq measures can be applied to flat terrain. The impact of the grade and the noise generated by eastbound trains results in much greater noise, especially where the grade is steep. The public has a right to question the professional standard of the study when such an important factor is omitted.</p>	<p>expansion, data was taken from project design drawings and incorporated within the future noise model.</p> <p>Representative future receptors were included within the LSE JC report between Cherry Street and the Don River, POR_1 and POR_17. Impacts at these receptors consider tracks both east of the Don River and between Cherry Street and the Don River.</p> <p>Ground elevation data has been included within all sections of the Lakeshore East Joint Corridor study area. In addition, both throttle and speed are accounted for within the noise model, which accounts for the differences in west to east and east to west movements.</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
		the previous underground solution was safe.	The noise resulting from ground elevation changes warrants detailed analysis which was neglected.	
Feb 18	<p>Osgoode hall trees affected have not been addressed.</p> <p>Alternatives considered to avoid impacting 449-457 Queen St W.</p> <p>Mitigation measures to minimize displacement in vulnerable socio-economic areas, and of businesses due to development.</p> <p>Broader impacts not sufficiently considered.</p> <p>Rationale for permanently removing NE osgoode stair not provided.</p> <p>Stronger requirements needed to ensure quality pedestrian experience on streets in temporary and permanent condition (i.e. removal of street furniture results in lower quality)</p>	<p>Socioeconomic and heritage.</p> <p>Affect experience of the city.</p>	<p>Osgoode hall trees affected have not been addressed.</p> <p>Alternatives considered to avoid impacting 449-457 Queen St W.</p> <p>Mitigation measures to minimize displacement in vulnerable socio-economic areas, and of businesses due to development. Broader impacts not sufficiently considered.</p> <p>Rationale for permanently removing NE osgoode stair not provided.</p> <p>Stronger requirements needed to ensure quality pedestrian experience on streets in temporary and permanent condition (i.e. removal of street furniture results in lower quality)</p>	<p>The project footprint illustrated in the EIAR shows that trees on the grounds of Osgoode Hall will be impacted. Tree inventories will be completed for all required areas within the project footprint as design advances and permission to enter are obtained from property owners. Metrolinx will complete detailed tree inventories that will identify trees to be removed and protected and the appropriate mitigation measures to prevent injury to trees during construction. Metrolinx has also committed to compensate vegetation removals above and beyond regulatory requirements, ensuring that many more trees are replaced than those removed. As part of the conditions associated with Minister's Consent for Osgoode Hall, the mature trees at this location must be addressed in a Landscape Management Plan. As noted in Section 7.2.2. of the HDDR, "The Plan should include a strategy for mature trees on the Osgoode Hall property, which may include retention of specimens for future propagation, salvage of material where feasible for incorporation into new landscape elements, and/or interpretative or commemorative displays (e.g., using wood to construct landscape elements such as benches) or other artistic features.</p> <p>For 449-457 Queen Street West: Alternate locations for the Queen-Spadina station were considered, but the current configuration was determined to be the preferred option due to the difficulty of crossing the intersection at grade and its beneficial relationship to the streetcar stops. In-situ retention of the building facades was also considered as an option for minimizing impacts to these properties but was deemed not feasible due to site constraints. These constraints include the required size of the station box structure below grade and the presence of the streetcar line along Queen Street West which limits the available construction staging space.</p> <p>Metrolinx is committed to continuing consultation with the City of Toronto regarding the restoration of public realm areas impacted by construction activities. There will also be ongoing coordination with the City of Toronto</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
				<p>regarding the integration of Moss Park Station, Riverside/Leslieville Station, and Gerrard Station with existing parkland and open spaces.</p> <p>The existing stairs will be replaced with stairs that will be housed inside the future OL / TTC entrance building. The new stair will be inside the paid zone of the TTC and OL. Pedestrians wishing to cross University Avenue and Queen Street West to get to the North east corner of the intersection can still do so at street level to avoid going through the paid zone of stations.</p> <p>Street furniture cannot be added on Queen Street due to pedestrian movement and congestion caused by people waiting for the street car at intersections.</p>
Feb 23	<p>It seems thorough and has addressed many of the critical issues</p> <p>I am a resident and homeowner in the area (Victor Ave between Broadview and Gerrard)</p>	<p>Noise impacts (especially in the above-ground section before Pape tunnel - I currently hear the Go Trains from my home)</p> <p>Traffic impacts during construction</p> <p>Cycling impacts - I cycle to work</p>		<p>The above-ground noise impacts from both GO and Ontario Line trains in the Lakeshore East Joint Corridor are assessed in Appendix Q of the Noise and Vibration Impact Assessment Report. Appendix Q provides information on the proposed noise barriers for the Lakeshore East Joint Corridor to reduce noise impacts from GO and Ontario Line trains. Results from the report show that the future noise levels will be lower than existing noise levels at a majority of the locations along the Lakeshore East Joint Corridor.</p> <p>Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels. The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p> <p>Several mitigation measures will be implemented during construction to reduce impacts to traffic and cyclists and are outlined in Table 5-9 of the EIAR.</p>
Feb 24	<p>Biased towards underprivileged community</p>	<p>Thornclyff Park</p>	<p>Yes.</p> <p>The Imposing/ dumping of MSF at Thornclyff Park is an environmental racism against the underprivileged/ over populated/ under employed community</p>	<p>We know it is very challenging to build transit infrastructure in established neighbourhoods. We also know that building more transit is a catalyst to help shape the future of community building, development and growth. With the new Ontario Line serving the communities of Thornclyffe Park and Flemingdon Park, along with the new connection to the Eglinton Crosstown, we anticipate additional benefits to these communities far beyond the benefits the new subway line will bring. Benefits that help the community thrive and grow for years to come.</p> <p>Metrolinx recognizes that there are unavoidable impacts that come with building much-needed transit in built-up urban communities, and we believe we have a responsibility to offset these impacts by investing back</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
				in the community through important projects like this. Our goal is to help Thorncliffe Park grow and thrive as we bring new transit to the community. We are currently engaged with each business and organization where we need to relocate them, to provide tailored solutions that meet their specific needs. Our plan is to relocate businesses to nearby locations within the community, as we know how important these services are to residents and the jobs these businesses and services provide. Additionally, the new Ontario Line maintenance and storage facility, will bring up to 300 new employment opportunities in addition to the expected construction related jobs.
Feb 24	<p>There is no clear explanation for what is to happen with 388 Carlaw. We know the following facts from the EIAR:</p> <p>1. 388 Carlaw has been bought by Metrolinx.</p> <p>2. On the project map, it shows the location as part of the Gerrard Station project area.</p> <p>3. On the project map, it does NOT show the 388 Carlaw property being needed for construction laydown or storage (that is delineated by hash marks, which are not present on the 388 Carlaw site).</p> <p>So what IS the plan? Metrolinx needs to be clear about this.</p> <p>What is the plan for the building DURING construction and AFTER construction? Is there to be an</p>	<p>As per above, I'm concerned about the vagaries of the plan for 388 Carlaw - a significant employment zoned building in the area that Metrolinx now owns.</p>		<p>The 388 Carlaw Ave site was purchased to support the Ontario Line project and Metrolinx intends to use a portion of the west parking lot (west side of Thackery Street) beginning in spring 2022 to support project work. The west parking lot will support construction staging activities (storage of construction equipment and materials) for the Ontario Line during the entire construction period over the next several years. There are currently no specific planned alterations to the exterior of the building at 388 Carlaw Ave during the construction of the Ontario Line project and long-term plans for the site and building will be determined as design progresses.</p>

	<p>alteration to the building? Is there to be a change in the use of the property (which is currently zoned employment area by the city)? Why is there not a clear answer to this?</p> <p>Metrolinx must have spent a lot of money to acquire a property and, as far as I know, Metrolinx does not seek to be a landlord. Please provide very clear answers to this.</p>			
Feb 24	<p>I have only reviewed for impacts on Osgoode Hall due to time constraints but I'm very angry that you would touch the historic property at Osgoode hall, please change your design so that it is no longer impacted. There is no need for a massive new station entrance on the property, please use the space you already have on University Avenue.</p>	Heritage		<p>Thank you for your feedback regarding the station location at Osgoode Hall. We understand this location is of local, provincial and national significance from a heritage perspective. However, construction requirements associated with the future Osgoode Station and required connection with the existing Line 1 infrastructure requires use of this property. We are working closely with the City of Toronto, Law Society of Ontario, and other key stakeholders to reduce impacts and mitigate those that are unavoidable through sensitive design and minimization of the staging area and construction footprint. As a provincially recognized heritage property, construction activities and mitigation at Osgoode Hall are also subject to stringent conditions set forth by the Ministry of Heritage, Sport, Tourism, and Culture Industries. These include requirements for a holistic approach, conditions placed on the station design, documentation and pre- and post-construction conditions assessment, a Landscape Management Plan, and removal and reinstallation to protect impacted sections of the cast iron fence. A list of the conditions set forth by the Ministry is included in Appendix A2 Heritage Detailed Design Report in Section 7.2.2 (Link to the report).</p>

Feb 27	Glad to see so many studies being conducted. However, noise/vibrations studies seem not to address concerns for basement dwellings.	Construction/Operation noise/vibration/impact as a new home owner who may not have chosen this location if information was available to the public earlier	<p>Hello Metrolinx team,</p> <p>I have reviewed the draft environmental impact assessment report in detail and have a number of questions and concerns that were not addressed.</p> <p>Below, the page numbers correspond to pages of PDF, not pages denoted in footer. I would be happy to discuss by phone or email etc., whichever option would be best for your team.</p> <p>Thank you,</p> <p>██████</p> <p>Air Quality</p> <p>Risk is noted to be high; I didn't see mitigation activities. Please provide.</p> <p>Cars/Traffic</p> <p>Please confirm if there will be no lane reductions or parking impacts on Pape Avenue (re: Page 80 – Automobiles, Pape Ave. not listed), however, is listed in the appendix. If so, what/where will alternative parking be?</p> <p>Biking</p> <p>Page 75 – Cyclists: Concerned that there are no construction or operations monitoring plans or intent to create a plan listed. Will Pape and Millwood still be accessible to cars and bikes? I bike to work at Sunnybrook Hospital almost daily in good weather along Pape/Millwood/Laird. Appendix also states that impact has not yet been confirmed which is contradictory to saying that there are no plans.</p> <p>Construction, Noise and Vibrations</p> <p>Referring to construction on Pape Avenue (north of Gerrard, south of Cosburn)</p> <p>1. Will construction on this area all be underground?</p> <p>2. How long will this tunnel take i.e., how long will the TBM be operational in this segment?</p> <p>3. When the TBM is under your house, will you hear or feel it? This is not addressed in the photos in the appendices where the vibrational radius from TBMs are indicated.</p> <p>4. What are noise impacts from TBMs?</p> <p>5. Most homes on Pape Ave. are over 100 years old. Will structures/foundation quality</p>	<p>Air Quality</p> <p>As per Section 6.1.1 in the Air Quality Impact Assessment Report, where the potential for adverse air quality impacts was assessed to be medium or high in Table 6-1, additional mitigation measures and monitoring requirements for potential impacts during the construction phase are suggested in Table 6 2. An Air Quality Management Plan will be developed as planning progresses and specific construction means and methods are confirmed.</p> <p>Biking</p> <p>No construction impacts are presently expected for Laird Drive.</p> <p>The impact assessment for traffic, transit, cyclists and pedestrians for Pape Ave and Millwood Rd is still in progress, as the Ontario Line design is still being developed. Further details regarding impacts will be reported when available.</p> <p>At present the following construction impacts for Pape Ave and Millwood Rd are expected.</p> <ul style="list-style-type: none">• Lane closures on Pape and Millwood adjacent to the construction sites will be implemented with at least one lane per direction maintained. Therefore the roadways are not expected to be closed to vehicular traffic or cyclists.• Weekend and/or nighttime full closures on Millwood may occur for erection of the bridge superstructure.• Short duration impacts at the intersection of Millwood Rd and Overlea Blvd may occur due to realignment of the Overlea intersection approach. However, no full closures of Millwood Rd are anticipated. <p>Construction monitoring plans will be developed and implemented by the constructors (as required). Operations monitoring is not expected to be required, as no significant permanent roadway modifications are proposed.</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
			<p>be measured in advance of construction? If damage is later found by residents, how will Metrolinx be held accountable?</p> <p>6. As indicated in the recent virtual meeting, the train will be “imperceptible” once operational when underground.</p> <p>a. What if once operational, sounds are heard i.e., what available compensation for soundproofing measures etc. will be provided to residents/home owners?</p> <p>b. Can Metrolinx add additional noise/vibration mitigation strategies after construction?</p> <p>c. Monitoring only for 5 years doesn’t seem sufficient – staff on the webinar indicated the sounds if heard would likely be due to poor maintenance i.e., wheel flat which I imagine is more likely to occur after the trains/tracks are requiring maintenance after 5 years.</p> <p>d. Are these vibration limits what are considered acceptable or what is considered imperceptible? Even with the mitigation strategies, vibrations will be above “highly sensitive building” limits and I would therefore imagine would be perceptible, particularly to residents in basement apartments or bedrooms which adequate testing has not been performed.</p> <p>e. Immersive sound demonstration/activities need to be conducted IN A BASEMENT, not on the first floor. As stated in the report the concern is about low-rise houses with basement apartments. Testing on the first floor does not address this concern as obviously basements are closer to where the trains will be running.</p> <p>f. Why wouldn’t the best mitigation strategies be utilized? i.e., floating slabs along the Pape corridor. Given that basement dwellings have not been tested and levels of vibration would be higher than on the first floor, all available measures need to be implemented to allow these areas to remain available for more affordable living options. Levels with only the light mass-spring system are still quite high i.e., 0.140, 0.1, 0.089 which I am guessing would also get worse over time when the system is no longer new.</p> <p>g. Will the tracks/trains actually be 5-10 m from building foundation and 15 m from OL</p>	<p>Cars/Traffic</p> <p>There will be lane closures for construction activities on Pape for construction activities such as the relocation of the Langley Avenue sewer, Cosburn Station, utility relocations and pedestrian tunnel under Pape Ave at Pape Station.</p> <p>In consequence, there will be parking impacts on Pape Avenue where the roadway will be reduced to one lane per direction, as there is generally on-street pay-and-display parking along Pape Avenue. Replacement of on-street parking spaces is currently not being considered, as the City of Toronto typically does not require mitigation of paid parking, other than reimbursing the Toronto Parking Authority (TPA) for lost revenue.</p> <p>Noise and Vibration:</p> <p>Construction of the tunnel will be underground. Station construction may require above-ground construction. Figure H-2 in the Noise and Vibration Impact Assessment Report shows the zone of influence areas for tunnel impacts. The zone of influence is where perceptible vibration and/or vibration generated noise could be experienced when a TBM passes by a building. However, these noise and vibration impacts from the TBM passby would be temporary (generally a few days to a week). The TBM generates vibration through the ground, which could generate a “structure-borne” noise inside the building. There is also tunneling noise at the construction staging areas (portal openings) for equipment required to support the tunneling (e.g. shaft exhaust fans). Structures identified within the construction vibration impact zone of influence will be monitoring, with supporting pre-construction surveys to assess the structural/foundation quality of the building.</p> <p>The project will be monitored for vibration in these areas to assess whether construction vibration limits have been exceeded. If so, the home would be reassessed for damage and Metrolinx would then implement their adaptive management plan to address confirmed damage to homes. Vibration mitigation has been provided within the tunnel structure to ensure vibration impacts are mitigated and are at or below limits to ensure train vibration is not noticeable. Should there be issues with this, Metrolinx will implement their adaptive management plan to address any issues, and consider all options (at the train, at the track, within the tunnel, at the</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
			<p>tracks in all areas as assumed/utilized for the demonstration? These tests do not provide conservative/”worst case scenarios” based on 7.2.2. I am concerned that not using all available mitigation strategies when the worst-case scenario wasn’t taken into account i.e., basement dwellings, 25m depth when soil-based tunnels will have more impact from vibrations.</p> <p>7. How do you know it is not a significant noise source?</p> <p>For your consideration:</p> <ul style="list-style-type: none">- Acronyms OLW, OLS, OLN are not defined until page 99- Please move the table of contents to the top of the document after the executive summary, a table of contents shouldn’t be 88 pages into a document. This meant that the summary tables and information provided prior to the table of contents didn’t have any context.- Report is not user friendly, very limited relevant information is available in the draft report, so the user must refer to the convoluted appendices for any meaningful information. It would be helpful if a guide i.e., if you live X, refer to Y for sections relevant to your immediate community. <p>Thank you in advance for your time and I look forward to hearing from you.</p> <div></div> <div></div>	<p>structure) to address the issue. Monitoring is recommended for a minimum of 5 years, but Metrolinx has committed to a longer period (10 years).</p> <p>Vibration standards show levels of 0.1 mm/s or less would not be perceptible. The Highly-sensitive building vibration limit is more stringent because of equipment (e.g. MRI) that could be impacted, even if people can’t feel the vibration. The “highly sensitive” criteria is not applicable to residence basement apartments or bedrooms – this would be the “residence” criteria of 0.1mm/s. The mitigation proposed are the expected strategies that, based on the operational vibration assessment, could be implemented. However, alternative strategies with the latest innovation/technology are available that the contractor could use. Irrespective of which strategy is adopted, Mx has identified that the rail isolation can be included in the tunnel design to meet the required limits of all adjacent buildings. For rail isolation systems (Floating Slab Track, Light Mass-Spring Systems) are robust and used throughout the GTA on existing subways systems for decades. If there are issues over time (e.g. flooding damage, rail track wear), these can be replaced and repaired as required. At the level of design provided for the environmental assessment, we have confirmed that tracks/trains are expected to be within these setbacks. More detailed alignments will be developed through the construction design process (as recommended), supported by additional vibration assessment, to confirm these or update to a worst-case impact.</p> <p>Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels. One of the sound demonstration locations represents a basement in an area adjacent to the subway tunnel. The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p> <p>The Acronyms OLW, OLS and OLN have been defined when they first appear. At this moment the Table of Content will not be moved as it follows the standard template for Metrolinx reports.</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
Feb 28	I am quite concerned about noise and vibration in the basement apartment in my house.	Noise in the basement impacts many homes that have separate units. With a housing shortage, the city cannot ignore the need for these units to be comfortable living spaces.	Assess basement noise levels and incorporate noise-canceling measures into the construction plan.	<p>Construction noise and vibration impacts are assessed in the Noise & Vibration Assessment Report.</p> <p>Noise and vibration impacts from construction are only likely in proximity to the tunnel construction, portal or staging areas. Impacts during construction are expected to be temporary and site-specific mitigations will be implemented to ensure that construction noise and vibration are with the limits established for the project.</p> <p>For operational vibration impacts (including associated ground-borne noise from vibration), inside homes, identified as separate living units, the report has assessed the need for upgraded rail vibration isolation systems to ensure that operational impacts from vibration (and ground-borne noise) are minimized and not disturbing to those residences.</p> <p>Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels. One of the sound demonstration locations represents a basement in an area adjacent to the subway tunnel. The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p>
March 3	The Joint Corridor section of the Ontario Line is going to ruin our neighbourhood. Your studies don't model the reality of diessel trains that will continue running through our neighbourhood for at least another 15 years along with the Ontario Line. You consider the GO expansion and OL projects separately but it is the combined effect that we will live with. This is a terrible plan. The 1.5 km section between the Don River and Gerrard should go	Noise and Vibration. The Joint Corridor section of the Ontario Line is going to ruin our neighbourhood. Your studies don't model the reality of diessel trains that will continue running through our neighbourhood for at least another 15 years along with the Ontario Line. You consider the GO expansion and OL projects separately but it is the combined effect that we will live with. This is a terrible plan. The 1.5 km section between the Don River and	You missed looking at the alternative of running the OL underground from East Harbour to Gerrard which would have been a much better solution long term. It is ridiculous that you only have to meet the protocols of existing noise levels rather than having to achieve 50 - 55 DB for night and day. The standards are too weak and you didn't rise up and do better, you stuck to the lowest level required. You missed thinking about designing a system that would still be appropriate 50 years from now, a system your grandchildren would be proud of. This EA is a sham and a waste of tax payers money.	<p>We considered whether it would be possible to bring the Ontario Line underground just east of the proposed surface station at East Harbour, where Ontario Line trains will connect seamlessly with above-ground GO trains. We looked at a number of options and planners have determined an underground alignment in this area would not be practical for a variety of reasons, most of which are related to the disruptions it would cause in the community and the benefits that would be lost with an above-ground alignment.</p> <p>Firstly, a portal would need to be built between Eastern Avenue and Queen Street to ensure Ontario Line trains remain above ground as planned at East Harbour. Creating a quick and easy interchange here is critical in tackling congestion at Union Station, where crowding could go down by as much as 14 per cent – or 14,000 fewer people – during the busiest hour. Moving the portal would also result in:</p>

	underground. This would eliminate the problem of the portal at Gerrard beside a school and the need for the corridor to be elevated through the parks in the neighbourhood. Shame.	Gerrard should go underground. This would eliminate the problem of the portal at Gerrard beside a school and the need for the corridor to be elevated through the parks in the neighbourhood. Shame.		<ul style="list-style-type: none">• Extended journey times If the Ontario Line were tunneled in this area, stations would need to be nearly 40 metres deep to go under the Don River, maintaining a similar depth up until Gerrard where large sewer mains would need to be avoided. That would be as deep as a nine-storey building is tall, requiring three separate escalators to get to the trains and adding 4.5 minutes to customers’ journeys. This would ultimately discourage people from transferring to and from GO trains at East Harbour and result in less crowding relief at Union Station.• Longer – and more – construction Building a portal in this area would prolong construction and cause significant and lengthy community disruption from soil excavation, utility relocation, concrete pouring and many other construction activities. For example, one dump truck going in and out every 20 minutes, 24 hours a day for an entire year plus daily deliveries of building materials like concrete and reinforcing steel would go on for years.• Additional property impacts Moving the portal would require the acquisition of numerous homes along McGee and Saulter Streets and have significant impacts on most of the parks in the area, and other small businesses and community organizations nearby.• Permanent street closures, loss of Queen Street station Trains need to safely move from above ground to below. The maximum track grade, or steepness, of a track that is diving underground is 4.5 per cent. At this grade, a portal would need to be built in the area of Eastern Avenue and extend as far as Queen Street. Significant excavation to lower the levels of land would be needed to build a portal and retaining walls for the shallow tunnel structure. This would result in a permanent closure of Eastern Avenue or Queen Street, disrupting existing traffic and transit services. Worse, there would not be enough room for a station at Queen and De Grassi. <p>To avoid that closure and still build a station, the streets and the existing bridges that run above them would need to be raised by at least two metres. Even then, there would not be sufficient space for a customer concourse in the station at Queen and De Grassi – only platforms.</p> <p>Eliminating the station would greatly reduce customer benefits – especially for people living in the immediate vicinity – and the much-needed relief for</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
				<p>the 501 streetcar will be lost. The additional costs of this approach will exceed \$800 million.</p> <p>To avoid raising the road and the rail bridge would require a track incline steeper than what most subway vehicles in the world can manage.</p> <p>While there are pros and cons to both underground and above-ground approaches, the analysis shows that an above-ground alignment through Riverside and Leslieville will result in far fewer community impacts and deliver significantly more benefits. Combined noise impacts of Ontario Line and GO operations were assessed in the Lakeshore East Joint Corridor Noise and Vibration Impact Assessment Report and the results showed that future levels will be lower than current levels at a majority of locations. Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels at several locations along the joint corridor. The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p>
March 3	The Ministry of Environment regulations define when noise harms the health of citizens. The noise limits are to protect the health of residents.. Failure to comply with the regulation damages the health of those residents. From Appendix Q Noise and Vibration Operations Report Ontario Line – Lakeshore East Joint Corridor page 471 of pdf, page 17 of the report, the EA report states “existing day and night-time	Noise. Excessive noise harms health.	See above	<p>Previous ground elevation data was only used from the GO Rail Network Electrification Final Environmental Project Report for receptor ground elevation data (which would not change due to the project), and existing tracks. For all new ground elevation data due to the future joint corridor expansion, data was taken from project design drawings and incorporated within the future noise model.</p> <p>Additional noise from throttle is accounted for within the noise model for trains travelling uphill, as is the ground elevation data for both the existing environment and future track construction. Noise barrier recommendations were made with these parameters taken into consideration.</p> <p>The proposed noise mitigation measures are predicted to be adequate in meeting MOEE limits and requirements, as MOEE limits are 5 dB above the greater of either 55 dBA Leq,16h day and 50 dBA Leq,8h nighttime periods, or the predicted existing levels for those time periods (which were used in the operational noise assessment for the joint corridor).</p> <p>In addition to meeting these requirements, Metrolinx is seeking to reduce Leq,16h day and Leq,8h nighttime levels to existing predicted levels where</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
	<p>noise levels are shown to be greater than the MOEE/GO and MOEE/TTC minimum limits of 55 dBA Leq,16h during the daytime and 50 dBA Leq,8h during the night time.”</p> <p>The report failed to supply the required ground elevation analysis. The OL EA references the Electrification report for “Ground elevation data as previously modelled for the GO Rail Network Electrification Final Environmental Project Report Addendum in combination with provided design elevation data for the Ontario Line and GO tracks”.</p> <p>From Appendix G6: Lakeshore East Impact Assessment Report</p> <p>2.1 Study Area</p> <p>The LSE Corridor Study Area begins just east of the Don River and ends at the Oshawa GO Station, approximately 50 kilometers in length. However, the results of the noise modelling are not presented in this report for the western</p>			<p>feasible, which is significantly more stringent than meeting the provincial guideline limit of 5dB above these levels.</p> <p>MECP guidelines have been adopted for the stationary noise impacts, including stations and the OMSF. The Noise and Vibration assessment shows that compliance to the MECP NPC-300 guideline will be achieved for these locations.</p> <p>The previous Relief Line South proposal put forward by the City of Toronto and the TTC looked at the option of tunneling in some areas, and we used their initial work to inform our decision making. By using a mix of surface track, elevated guideways and underground tunnels, we are able to bring more transit to more in-need communities sooner than previously planned.</p> <p>We have also looked at community proposals to alter the alignments in Riverside/Leslieville and Thorncliffe Park, but both came with more impacts and fewer benefits to local communities than the plans we’re moving forward with.</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
	<p>section of the corridor from Don River to Carlaw Avenue. The reason is that future noise impacts for this section of the Corridor will include those from Metrolinx operations as well as from operations of the Ontario Line subway, which will run above ground through this section. The combined noise impacts from Metrolinx and Ontario Line operations, and associated noise mitigation recommendations, are addressed in a separate report as part of the current Ontario Line EA.</p> <p>https://www.metrolinxengage.com/sites/default/files/appendix_g6 - go rai...</p> <p>It is my contention that such an analysis would identify that the grades for sections of the GO Lakeshore line are too steep. The trains have to run at full throttle. The proper mitigation is to re-grade the line to reduce the steepness. This is the</p>

	<p>depths. 28m at Queen and 41m at Gerrard – I would also add 3.5m or so to each if we are talking construction and including foundation excavation. The key to any change proposal would be to go over this sewer. You can’t go over, run parallel, and have stations, so that would mean returning to the original (2016) alignment – going 90° across (and above) it and then turning up Pape. Since there isn’t the headroom to tunnel, this portion (likely all the way from Eastern/Broadview to Pape/Millwood) would be build using cut-and-cover – which would lead to faster (and cheaper) construction. The portion backwards from East Harbour under the Don would be tunneled (TBM).</p> <p>The budget of \$11 billion for the Ontario Line is large. The benefits of proper noise mitigation by reducing the grade in the steep sections of the Lakeshore East corridor are</p>

	enormous and modest to the \$11 billion dollars. Metrolinx was insincere when it said it had considered alternatives to the proposed surface route. The public had proposed a viable alternative.			
March 4	I wanted to express my deep appreciation for the effort that was taken to provide section-by-section summaries for each of the assessments. It made it much more efficient and easier for me to go through the key considerations of the report and provide feedback without needing to review the full report in its entirety, which feeling like I could go deeper if needed. Thank you so much.	All of them were valuable to me. The most pertinent ones for me personally were sound/vibration, environmental habitat impact, and land use since those have the most lasting impact in my opinion. The air quality one matters to me, but moreso in the short term during construction.	Ways to show appreciation for the team that is working on this project. I'd love to be able to send my thanks to the people working on this project. :)	Thank you very much for your comment and the kind feedback! We are so glad to hear the information in the report was beneficial. Please do not hesitate to reach out to us at 416-202-5100 or OntarioLine@metrolinx.com in the future if you have any questions.
March 4	why have our original concerns with respect to this assessment not been addressed?	1, 6 & 7		Metrolinx is reviewing all comments received during the 30-day review period for the Draft EIAR and will be incorporating any applicable feedback into the Final EIAR.

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
Mar 4	Thorough. My additional thoughts below:	Ontario Line North noise and vibration.	<p>The elevated guideway on the west side of Don Mills Road should have a sound barrier, just like on Overlea Boulevard. In both instances, apartments and condos are in close proximity on the opposite side of the street. Likely, even more people live on the east side of Don Mills Road than on the south side of Overlea Boulevard.</p> <p>The noise impact to people living on the 15th floor of a building on Don Mills or on Overlea, for example, needs to be considered, not just the noise at ground level or from two or three stories up. The high-rises do not have modern double-paned windows, they have 1970s era windows that transmit sound readily and easily, and rattle strongly with minimal gusts of wind. Trains on the CP mainline, between 1 km and 2 km away from Thorncliffe Park and Flemingdon Park apartments can be loudly heard from the furthest away buildings. Yes, CP trains are diesel and heavy, and on bolted rail, but the larger significance is that the Don Valley amplifies all sounds up toward the high-rise buildings.</p> <p>If the Ontario Line is on an elevated guideway, if it is going over the Don River or a creek on a bridge, if it on a raised embankment, it needs soundproofing. And, even then, some buildings may require new triple pane windows. Not an inexpensive expenditure unfortunately, but not an irresponsible use of taxpayers' money either.</p>	<p>The noise impact assessment for the elevated guideway identified that noise barriers are not required to meet the noise criteria for the project. All residences located at the same height and adjacent to the elevated guideway have been considered in the operational noise impact</p> <p>However, Metrolinx has committed to providing a noise barrier along the alignment at Leaside Drive.</p> <p>Metrolinx acknowledges that buildings have different window constructions (e.g. double pane versus single pane) and will take this under consideration through the construction process.</p> <p>Transit noise impacts from the CP Rail to the Don Mills area was not assessed in the EIAR because as it is located outside of the EIAR study area.</p> <p>Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels. One of the sound demonstration locations is at the Ontario Science Centre along Don Mills Road. The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/. Building facades will also reduce noise levels to below what is shown in the Immersive Sound Demonstration.</p>
Mar 6	I can see that Metrolinx has been pretty thorough the studies it has undertaken and its mitigation measures appear to be robust in addressing potential impacts. Consultation with marginalized groups was sorely lacking however (which I expand on in the 3rd section of this form).	The Natural Environment Technical Report because protecting the city's natural resources and natural landcover and the ecosystems that exist within it is of the utmost importance in the face of environmental degradation fed by urbanization, climate change, and biodiversity loss across the Golden Horseshoe.	Is Metrolinx aware of and working under the recommendations of Toronto's Strategic Forest Management Plan in regards to maximizing protection of mature trees and forest canopy in the project area? I am particularly concerned about the removal of the cluster of mature trees at Osgoode Hall, as well similar impacts to forest cover in Moss Park (which is also an environmental justice issue to lose greenery in a low-income area) and the Don Valley. A specific number for how many trees will be removed at Osgoode Hall has not been specified in the report, which makes me concerned that because there isn't a strict number set that there is the possibility that the removal of more than is absolutely necessary will occur during construction (particularly to make room for construction activities that are only temporary until the station entrance is built). I think a strict limit on the number of trees needs to be identified, at the bare minimum. These trees are nearly 100 years old, as old as Osgoode Hall itself, and protecting mature trees	<p>Metrolinx endeavors to remove the minimum amount of trees necessary to facilitate the construction and the operation of the Ontario Line project. All options for station siting were explored at length, and these final locations for station headhouses were based on engineering, construction, and operational constraints. Metrolinx acknowledges that Osgoode Hall and Moss Park contain large mature trees that provide an ecological and social benefit to the downtown core. For this reason, Metrolinx is working closely with the City of Toronto to implement site-specific replanting solutions that go above and beyond regulatory requirements.</p> <p>Metrolinx engages with all Indigenous Nations that have Aboriginal and/or Treaty rights where Metrolinx operates. Metrolinx is committed to engaging with Indigenous Nations on its business throughout the life cycle of its project work, including on the Ontario Line. Metrolinx will continue to engage with Indigenous Nations on the Ontario Line as project planning progresses.</p>

			<p>with their maximum canopy cover is integral to the goals of Toronto's urban forest management, because of the ecosystem services of climate regulation, carbon sequestration, and urban heat mitigation they provide. While it may seem like a the removal of a few trees won't be all that big a deal, considering the age of these trees and the fact that it will take decades for any replacement planted trees to reach the same level of maximum canopy cover, it does not present a good image for the project, Metrolinx, and for Toronto to be allowing the partial destruction of one of the few mature stands of trees we have in the urban core. I fully understand the need for this project to support the growing population of Toronto through the provision of effective public transport, but I find it hard to believe that there are really no other viable options for the Osgoode entrance than to remove these trees, hard to believe that we are still at a point where resourceful entities Metrolinx cannot find solutions to urban development that don't come at further cost to our natural environment. I hope I won't be disappointed by the final report in this.</p> <p>On consultation: I was surprised and disappointed to see that within the Consultation Process Appendix B Project Distribution List the project was only distributed to Indigenous individuals who work/reside outside of the project area and even fully outside of the GTA! I saw little indication of engagement with the urban Indigenous populations of Toronto. Furthermore, based on the emails and correspondence within Appendix B from multiple concerned Indigenous persons pointing out that they have not been properly consulted or provided with a suitable time frame in which to review and comment on the project - and that by missing these deadlines, because they were not notified, it appears that Metrolinx is somehow fine with washing over their constitutional rights and Metrolinx's. This lack of providing meaningful participation structures for those of the Indigenous community residing within the project area (and Treaty 13 territory in which the project is located) who were not properly consulted is an unjust act of ignorance on your part that should be remedied.</p>	<p>The Ontario Line Project is being assessed in accordance with Ontario Regulation (O. Reg.) 341/20: Ontario Line Project under the Environmental Assessment Act and per the regulation, Metrolinx has been reaching out to Indigenous Nations since February 2020 to introduce the project; share notices and draft and final reports (Environmental Conditions Report, Early Works Reports and Environmental Impact Assessment Report), which include planned mitigation measures; and meet with Nations to discuss the project. Metrolinx has provided Ontario Line specific updates and online consultation on the project webpage, e-newsletters to the Project Distribution List, newspaper advertisements of publication of draft and final reports, outreach to Indigenous Nations and interested persons, summary of report findings on the project webpage upon publication of the draft reports, a 30-day review period for the draft reports, and virtual open houses.</p>

	just words on paper unless someone is tasked with ensuring that happens. Who will ensure that those Acts are enforced? The construction crews certainly will not.	ravines, including at least one Environmentally Significant Area.	glass or covered with bird-deterrent markers). Every year countless birds die after colliding with glass structures, including transit shelters.	performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented. Mitigation requirements will be included in the contract document as a contractual obligation for the contractor. Metrolinx provides oversight of this process to ensure that the contractor completes the required mitigation measures in accordance with any applicable regulations or guidelines.
March 8	As someone who lived beside a Metrolinx site and endured the destruction of the natural habitat and the related noise of the ongoing work, I would say that the assessment report, mitigation and inspection are just words. The work is done by contractors who care nothing of the report. They probably aren't even aware of the report. It's not like the person who wrote the report and recommendations is there when the destruction is happening. I've lived through this. The contractors will destroy the whole area, take any and all trees and care nothing for the neighbours concerns. Heck, they didn't even inform us before coming in with the tractors and dump trucks to flatten and compact the natural vegetation	Environmental, noise and sound. I have been personally impacted by all these when I lived next to a Metrolinx yard and along side the train tracks. It was a brutal experience that eventually forced us to move. The impact was ongoing, daily, weekends, overnight, with pretty much no regard for the residential neighbours. Mitigation efforts came years after the complaints and town hall meetings and did little to alleviate the concerns.	All transit shelters should be bird friendly, ie. you don't want birds colliding with the windows and dying.	Mitigation and monitoring requirements will be included in the contract document as a contractual obligation for the contractor. Metrolinx provides oversight of this process to ensure that the contractor completes the required mitigation measures in accordance with any applicable regulations or guidelines. Metrolinx will notify the public via community notice in advance of any construction works via the Ontario Line website, e-newsletter, email to community groups and physical canvassing for particularly disruptive work. Metrolinx will also be sharing information to the public via a Construction Liaison Committee, which we look forward to establishing prior to the start of construction. The EIAR documents mitigation measures that will be implemented to reduce noise and vibration impacts during construction and operations. In addition to the report, Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels. The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/ . Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly

	that had existed for several years.			performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 8	<p>My main thought is that I don't feel you have adequately addressed a major issue for many buildings on Pape Ave., because your sound and vibration mitigation strategy appears to have been based on measurements that were conducted on the first floor, as opposed to in basements (which are closer to the tunnel).</p> <p>There are hundreds of basement apartments along Pape Ave. which will be much closer to the TBM and the operating LRT. Regardless, you based your conclusions on the more optimistic first floor measurements, which you then used to justify not using the most impactful mitigation strategies in this area (eg. floating slabs). This strikes me as dishonest, and, in a city that has</p>	The most important study to me is the sound and vibration studies related to basement dwellings on Pape Ave. I personally know of many basement apartments in the area and feel that you have not taken adequate steps to accurately predict or address potential problems.	I am concerned that you have not provided any indication of what recourse residents will have after the tunnel is operational, if these measurements turn out to be wrong. Frankly, after years of missed deadlines by Metrolinx, Toronto residents have ample reason to doubt your ability to predict the future. So, if Metrolinx monitors for 5 years and finds it was wrong, what recourses are there for residents? What if the many 100+ year-old buildings on Pape suffer damage from the vibrations? What if the sounds and vibrations in basement apartments leads to lost rental income? Is Metrolinx able to retroactively refit portions of the tunnel with better sound and vibration mitigation infrastructure? These questions all need to be addressed.	<p>The tunnel depths to building foundations, including basement apartments, have been considered in the vibration impact analysis, and subsequent rail mitigation proposals and are described in Table 7-5 of the Noise and Vibration Impact Assessment Report.</p> <p>Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels, with one of the locations being a basement of a home located on Muriel Avenue, adjacent to the subway tunnel. The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p> <p>Metrolinx will continue to monitor operational noise and vibration of the Ontario Line for 10 years once in operation. During that time, if exceedances of noise and vibration are detected, appropriate mitigation measures will be implemented to ensure the project remains in compliance with the noise and vibration limits.</p> <p>Further, Metrolinx will have a complaint protocol for the project, that will be in place to review and investigate operational noise and vibration complaints submitted by the community. This protocol will help ensure that issues raised by the community are addressed.</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
	a major affordable housing problem, deeply irresponsible. You should, at a minimum, conduct your tests in basement apartments along Pape to give residents a truthful reflection of the vibrational impact it will have, or use the most impactful mitigation strategies along the Pape Corridor.			
March 9	I think you need to consider the project in the Joint Corridor a whole rather than two separate projects - Go Expansion and OL. Presenting reports for these separately doesn't present a true picture of the terrible impacts of running 1500 trains a day through a residential neighbourhood. Your reports assume electrification of the GO but that could be delayed and then the community would suffer even more from diessel.	Natural Environment	The EIAR included a list of all of the consultation by MX about the Ontario Line. It was very interesting to read the feedback you have received at the Open Houses and via email. People have told you about their concerns for protecting green space and the health of residents. They have asked you to reconsider the ill-conceived plan to put the OL above ground from Don River to Gerrard. Why don't you listen? What is the point of asking for feedback if you ignore it? The community of Leslieville/Riverside supports transit and the Ontario Line. The community does not support running the Ontario Line on the elevated rail corridor from the Don River to Gerrard Street.	<p>Decisions around the route and the elevation of the Ontario Line have been made with the whole network in mind, but they're also tailored to the specific communities the line will serve. That's why it will run in tunnels, along existing railways, and on elevated structures where it makes sense to do.</p> <p>When determining the Ontario Line's route and elevation, planners balanced considerations like</p> <ul style="list-style-type: none">• how many people could be served,• how much travel time could be saved• how many connections could be made to other major rapid transit lines• how quickly and effectively the line could be built,• how effectively any local impacts could be managed, and• how to ensure the best possible use of taxpayer dollars. <p>In the newer, northern part of the city where there are wide roadways and streets, the Ontario Line will run on modern, elevated structures because there's room for them, and construction will be faster and less impactful. In places where there are existing rail corridors, like Leslieville, Riverside and near Exhibition place, the line will fit into an existing rail corridor, giving surrounding communities the same benefits of faster and less impactful construction. These above-ground sections have the added</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
				<p>benefit providing faster and easier connections to and from surface transit, because the stations aren't deep underground.</p> <p>In other dense parts of the city with narrow roadways and no available rail corridors, tunneling is the only choice.</p> <p>Like everything, there are pros and cons no matter which option you choose – but we only choose options that we know will work extremely well for the communities they serve. For the sections that run on or above the ground, we know we can significantly cut down on property impacts, introduce effective, well tested noise and vibration solutions, and build best-in-class infrastructure that is safe, attractive and designed with communities in mind. That's something we are absolutely doing as we continue to engage with communities throughout the planning and design process.</p> <p>At the end of the day, this approach allows us to give the people of Toronto a modern, reliable 15.6-kilometre rapid transit line that will get them to one end of the city to the other in less than 30 minutes, connecting to more than 40 other transit lines along the way. That means 28,000 fewer cars on the road each day, resulting in a 7.2-million-litre drop in fuel consumption here in Toronto.</p> <p>And all those connections are going to help us drastically reduce congestion at the busiest spots on Line 1 and Line 2, much more than they would have under the previous Relief Line South proposal. At Bloor-Yonge Station, there will be as many as 14,000 fewer people passing through during the busiest hour. A simple above-ground connection between GO trains and Ontario Line trains at East Harbour will also contribute to major crowding relief at Union, which will also see up to 14,000 fewer people at peak travel times.</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
				<p>During rush hour, we expect 40 Ontario Lines in each direction by 2041. Service won't be that frequent when the line first opens, of course – they will ramp up with demand and as awareness about the service grows.</p> <p>We can assure you that we've built off transit planning work that has taken place in your community over many years, and we're confident this is the right path forward. At more than twice the length of the former Relief Line South proposal, we expect the Ontario Line to be built within a similar timeframe for a similar cost. This means we can bring congestion relief to transit-deprived communities sooner, putting a total of 255,000 more people within walking distance of rapid transit by 2041.</p> <p>We're eager to bring you more sustainable, environmentally friendly travel options, more congestion relief in your community and across the city, and a bigger, more integrated transit network. We look forward to working with you to address any concerns you have and get even more benefits out of the project as we finetune plans.</p>
March 9	The studies are great. Build the Ontario Line asap. We need better transit soon. The Corktown and East Harbour Stations are long over due.	I am reassured most by the socio-economic report. I am happy to see Metrolinx make such a strong effort	<p>The Leslieville portion should be built in the fastest manner possible, even if it means going above ground. Materials are getting more expensive every day, and delaying this project for to tunnel for a subway to cater to the needs of one community should not happen.</p> <p>This project is for the whole province. Don't cave to the groups in Leslieville who are holding this project hostage.</p>	<p>Thank you for your support – we're glad to hear you're excited about the Ontario Line!</p> <p>Preparatory construction work on the project has already begun in certain areas, including Exhibition and Corktown station sites. Additional preparatory work will take place in the downtown area, such as utility relocations, and the Lakeshore East Joint Corridor, such as bridgework, later this year. These activities are being done to prepare for the more major work, which will begin in 2023.</p>
March 9	They seem like formulaic, standard EIAs.	I live at [REDACTED] right at Pape and Danforth. The line between Science Centre and Gerrard will go right under my house. I was given an easement notice.	How long will construction take? What compensation will be offered to property owners affected by the construction who want to sell their properties before the construction is complete??	<p>Construction timelines vary depending on the area of the project. We have a high-level project timeline available here on our website.</p> <p>Construction on the portion of the line between Exhibition Station and the Don Yard will generally begin in 2023. Construction on the remaining portion of the line, east and north of the Don River, is on a later construction timeline, and will likely begin in 2024.</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
				<p>However, there are also packages of “early works” happening in certain areas across the project. Early works are preliminary construction activities that take place before major construction.</p> <p>We encourage you to contact our team at 416-202-5100 or OntarioLine@metrolinx.com if you have further questions about the construction timelines.</p> <p>Regarding subsurface easement notices, these were sent to property owners across the project where we identified that there will be or may be underground subway infrastructure and/or a protection area located within their property limits.</p> <p>A subsurface easement is a right of use for that area, not ownership of a portion of an owner’s property. Below grade easements are not excavated as part of tunnel construction. These may include, but are not limited to, easements around a tunnel or around an underground structure.</p> <p>When property easement acquisitions are unavoidable, Metrolinx will work with property owners to negotiate mutually beneficial agreements to acquire the required property easement. Whenever Metrolinx needs to acquire property easements, property owners can expect to be compensated at fair market value, as determined by a third-party appraiser.</p> <p>Metrolinx will enlist the services of a third-party appraisal expert to estimate the unbiased value of the property easement. Market factors at the time of the easement acquisition will inform the valuation and will be based on comparable sales of similar easements in similar locations and situations. If owners wish to complete their own independent appraisal to determine or confirm fair market value, please contact Metrolinx to discuss this further.</p>

Metrolinx is currently reviewing the noise and vibration impact reports provided by Hines on March 9th, 2022 with our subject matter and technical experts and will provide a technical response in April 2022 to Hines.</p> <p>The Environmental Impact Assessment Report conducted an impact assessment of noise impacts along the alignment and proposed mitigation measures and monitoring activities. These mitigation measures and monitoring activities will be implemented during construction, and will be refined as needed, to meet applicable noise limits.</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
	Benedetto, Brandon Gaffoor, Davve Jurich, Aaron Scott. Thanks, [REDACTED] [REDACTED]	Brandon Gaffoor, Davve Jurich, Aaron Scott. Thanks, [REDACTED] [REDACTED]		
March 9	<p>THESE COMMENTS WERE ALSO SUBMITTED TO CAITLIN DOCHERTY BY EMAIL.</p> <p>c/o Caitlin Docherty Community Relations & Issues Advisor – Ontario Line</p> <p>Caitlin.docherty@metrolinx.com / ontarioline@metrolinx.com</p> <p>March 9, 2022</p> <p>To whom it may concern:</p> <p>Re: Response of the Sir William Campbell Foundation to the Environmental Impact Assessment Report (“EIAR”) and EIAR Appendix 2, Draft Heritage Detailed Design Report (“HDDR”) for the Ontario Line</p> <p>The Sir William Campbell Foundation (“Foundation”) is the registered charity that governs Campbell House Museum, on</p>	<p>The heritage study because of the concentration of heritage resources at Osgoode Station.</p>		<p>Acknowledged. Please see responses to points from this introductory paragraph below where they are discussed in further detail. The application for Minister's consent for all properties directly impacted by the Ontario Line and determined to meet or potentially meet O. Reg. 10/06 was informed by available detailed design information and discussions with the Ministry of Heritage, Tourism, Sport and Culture Industries (MHSTCI). The application included an in-depth summary of the site-specific proposal for Osgoode Hall and University Avenue. The MHSTCI was satisfied with the level of detail provided in the application and the Minister gave their consent with conditions. These include conditions regarding the station house's design. A full and unedited list of the conditions is available in Section 7.2.2. of the Heritage Detailed Design Report (HDDR).</p> <p>Metrolinx in engaged in ongoing discussions with the Law Society of Ontario (LSO) and other key stakeholders regarding the need for LSO owned lands related to the proposed Osgoode Station. The HDDR is not intended to represent an optioneering analysis, but rather the identification of impacts and definition of appropriate mitigation strategies. We thank Campbell House for their interest in the Osgoode Lands and will continue to engage with identified stakeholders.</p> <p>Thank you for your feedback regarding the station location at Osgoode Hall. We understand this location is of both local, and provincial and national significance from a heritage perspective. However, construction requirements associated with the Osgoode Station and required connection with Line 1 infrastructure requires use of this land. We are working closely with the City, Law Society of Ontario, and other key stakeholders to lessen required impacts and mitigate those that are unavoidable through sensitive design and minimization of the staging area</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
	<p>the “Campbell House property” at the northwest corner of University & Queen, which forms a part of the landmark intersection that includes Osgoode Station.</p> <p>The Foundation’s comments here focus on the EIRA’s assessment of impacts on the landmark intersection of University & Queen.</p> <p>The EIAR (heritage impact assessment) flows from the Environmental Conditions Report (ECR) (evaluation and template approach to assessment) and the subsequent HDDR. Concerns that the Foundation raised in its October 1, 2020 comments for the ECR about the landmark intersection were not adequately addressed in the final ECR or HDDR, with the result that the problems of evaluation and impact assessment for the landmark intersection carried forward to the EIRA. For example, the Foundation noted that the ECR</p>			<p>and construction footprint. Conversations with stakeholders at Osgoode Hall remain ongoing.</p> <p>Thank you for offering your opinion regarding the University and Queen intersection and the University Avenue Streetscape. Decisions regarding redesigning beyond changes required for the construction of the Ontario Line fall within the City's jurisdiction.</p> <p>Please note that the Ontario Line Project is being assessed in accordance with Ontario Regulation 341/20, which outlines a Project-specific environmental assessment process. Section 1.2 of the HDDR provides an outline of this process and Table 1-1 in Section 1.3 sites the sections of the regulation applicable to heritage and the sections of the HDDR which fulfill those requirements. Information regarding how heritage resources on the streetscape are interconnected is briefly noted in the inventory forms in Appendix B of the HDDR. The HDDR and EIAR address heritage resources using the inventory, heritage attributes, and mitigation framework established by the Cultural Heritage Report (AECOM, 2020)</p> <p>Heritage attributes and viewsapes discussed are those established in the Ontario Line Cultural Heritage Report (AECOM, 2020). Due to the large size of the University Avenue Streetscape only the property parcel impacted by the Ontario Line project has been illustrated. Please see the Ontario Line Cultural Heritage Report (AECOM, 2020) for a more detailed evaluation and identification of potential heritage attributes.</p> <p>Action Items following the January 17, 2022 meeting included: ~Metrolinx to conduct a pre-construction survey, monitoring and post-construction survey of the CHM south fence (within the ZOI). ~Metrolinx to take back the request for surveys and monitoring of the CHM building (outside the ZOI) and follow up accordingly.</p> <p>Metrolinx is currently working with our vibration specialists to determine an appropriate mitigation strategy given concerns expressed at the January 17, 2022 meeting. Metrolinx will further discuss these requirements with Campbell House as part of the Community Liaison Committee currently in formation.</p> <p>The Community Liaison Committees (CLCs) not only provides a forum to discuss project planning and construction-related matters, but are tailored to the local community. Knowing how critical heritage conservation is to the Sir William Campbell House Foundation, community members and</p>

Date	1. What are your thoughts on the results of the Draft EIAR environmental studies?	2. Which Draft EIAR environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft EIAR	Comment Response
	<p>should address the Queen & University intersection and its several heritage properties, as one distinct cultural heritage landscape with unique attributes; and should identify those heritage properties and landscapes that are of such significance that their alteration or complete loss should not happen, such as the Campbell House and Osgoode Hall properties. No evidence has been presented that the necessary investigation and depth of heritage value analysis for this landmark intersection has been done. Similarly, the necessary focussed public engagement for Osgoode Station remains to be done.</p> <p>The following are the Foundation’s concerns regarding the draft EIAR:</p> <p>PREMATURE APPLICATION FOR MINISTER’S CONSENT</p> <p>On March 18, 2021, Metrolinx received Minister’s consent for permanent alterations to</p>			<p>other organizations in the area, we will ensure that there is dedicated time at the Osgoode CLC to hear from the community and discuss this landmark intersection and the cultural heritage landscape.</p>

	<p>At its January 17, 2022 meeting with Metrolinx, the Foundation raised the matter of negative impacts caused by the location of the Osgoode Station building within the Osgoode Hall garden and queried Metrolinx’s process for deciding the location.</p> <p>Metrolinx responded that it did not consider alternative approaches for the design and location of the new Osgoode Station entrances if they interfered with existing TTC infrastructure. The implication was that Metrolinx selected the simplest, cheapest option for Metrolinx – in the Osgoode Hall garden. The Foundation believes that Metrolinx should engage vigorously with the City, the TTC, and the community to consider other options, outside the Osgoode Hall garden, on University Avenue.</p> <p>The HDDR (p 34) notes that “discussions with the City remain active and ongoing” for Metrolinx’s use of University</p>

	<p>proposal for major engineering works at this landmark intersection, with a concentration of heritage resources, would require a consultant to produce a comprehensive and detailed document, with in-depth analysis and visualizations, all of which would go through public consultation focussed on the one project location. Instead, Metrolinx’s EIAR covers a total of 272 resources, in summary point form, in tables. The EIAR does not, in any meaningful way, discuss how each individual resource is integrated into the University Avenue Streetscape, nor how the permanent alterations to the Osgoode Hall property to accommodate the new station entrance will negatively impact the whole of the University Avenue Streetscape.</p> <p>The EIAR/HDDR treats the landmark intersection in a fragmented, piecemeal way. The</p>

	<p>Firstly, thank you (and all others who have been providing comments to the Province) for the sustained advocacy and leadership you have provided for the conservation of these significant landmarks and cultural landscapes. Community voices are so critical and the official consultation meetings for provincial projects are mammoth. We are glad to be copied on your correspondence so that your concerns can be noted in our staff team reviews.</p> <p>Secondly, I want to reassure everyone that, while the City does not have the final say on any provincial project, and there are many considerations that guide transportation planning at this scale, Heritage Planning has been actively working on the Ontario Line end-to-end and has provided a substantial amount of comment on heritage, design and other issues, especially at key locations. I have cc'd [REDACTED] [REDACTED] on this email as they</p>

Discipline Specific Comments:

Air Quality

Date	What are your thoughts on the Air Quality study key findings and identified potential impacts and mitigation measures?	Comment Response
Feb 12	Traffic congestion during construction, construction equipment, vehicles on site and equipment used for "on site mitigation" all generate greenhouse gasses. What is being done to offset these impacts. - [Nicki Ward: Provincial Candidate Toronto Centre]	<p>Greenhouse gases will be emitted during the construction phase of the Project; however, because the implementation of the Project is expected to reduce the use of private vehicles in or near the Project footprint – it is estimated the Project could reduce automobile vehicle kilometers traveled by 266,000 km per day - there is expected to be a substantial net overall decrease in greenhouse gas emissions as a result of the Project.</p> <p>Construction air quality emissions will be assessed on a site-specific basis prior to construction. Mitigation for the duration of construction will be implemented, as required. For example, Metrolinx is committed to implementing mitigation measures from Environment Canada’s Best Practices for the Reduction of Air Emissions from Construction and Demolition Activities (2005). Air quality will be monitored during construction to identify if any additional mitigation is required.</p>
Feb 18	I cannot imagine that the air quality will not be severely negatively impacted in the immediate area surrounding the new tracks. The houses, yards, parks that will see an expansion of tracks and trains to this degree will undoubtedly experience a serious decrease in air quality once the project is complete. I do not see that reflected here in the report. Aside from during construction, I am concerned with the air quality once the project is completed and 6 lines of trains are now travelling non stop through our neighborhood.	<p>Given that the Ontario Line is an electric subway, no train operation-related air quality impacts are anticipated and permanent improvements to local air quality are expected.</p> <p>Construction air quality emissions will be assessed on a site-specific basis prior to construction. Mitigation for the duration of construction will be implemented, as required. For example, Metrolinx is committed to implementing mitigation measures from Environment Canada’s Best Practices for the Reduction of Air Emissions from Construction and Demolition Activities (2005). Air quality will be monitored during construction to identify if any additional mitigation is required.</p>

Feb 23	<p>Concerns about air quality near low rise condo building at niagara and tecumseth, particularly young children live in the building.</p>	<p>During construction of the Ontario Line, activities that have potential to affect air quality will not be located near the Niagara/Tecumseth Street area. Construction of the Ontario Line between Exhibition Station and Bathurst-King Station will be done by a tunnel boring machine underground with no emissions to above ground. The construction staging area for the tunnel boring machine will be located at Exhibition Station which is over 600 m from the Niagara Street and Tecumseth Street intersection. There will be construction of a small emergency exit building at Ordnance Park (approximately 250 m from the Niagara Street / Tecumseth Street intersection) and Bathurst-King Station approximately 300 m from Niagara Street/ Tecumseth Street intersection). Emissions from construction activities at these locations will be controlled through the implementation of multiple mitigation methods proven to control emissions. Additionally, ambient monitoring to confirm the effectiveness of the mitigation measures and ensure ambient air quality remains below regulated levels will be conducted in the vicinity of a number of the construction sites. With the implementation of the construction mitigation measures (verified by actual measurements), and considering the distance from the construction locations, construction emissions are expected to have an insignificant impact to the air quality at the Niagara Street / Tecumseth Street area.</p> <p>Given that the Ontario Line is an electric subway, no train operation-related air quality impacts are anticipated and permanent improvements to local air quality are expected.</p>
March 3	<p>Where are the air exhaust/filtration points along the line? Will there be temporary ones during construction?</p> <p>How will the air exhaust after construction affect the neighborhoods?</p> <p>"Construction activities could expose contaminated soils/materials and/or result in the spreading of contaminated materials." is a major issue. I live in the area from King/Bathurst to Tecumseth/Niagara. This was once an industrial area including a smelting plant. The residents who live here have seen the surface soils removed and replaced in an order to decontaminate the ground. However below the surface is still contaminated soil. Disturbance of these soils is a major issue. Where are the points or exit for soil removal?</p>	<p>During operation, there will be ventilation shafts at the new stations to vent the air inside tunnels to the outside. All trains will be electric and therefore emissions will be negligible relative to those from diesel trains. The station vents will discharge the indoor station/tunnel vent air per regulatory air quality guidelines.</p> <p>During the construction of the tunnel, there are typically exhaust vents at the entry portal equipped with additional controls such as dust collectors or scrubbers attached to the ventilation system for emission control. Impacts to the local air quality can be controlled and reduced with the use of these emission control measures. There will be no other vents along the rest of the tunnel.</p> <p>Emissions from construction activities at the construction sites and construction staging areas will be controlled through the implementation of multiple mitigation methods proven to control emissions. Additionally, ambient monitoring to confirm the effectiveness of the mitigation measures and ensure ambient air quality remains below regulated levels will be conducted in the vicinity of a number of the construction sites. Construction of the underground sections for Ontario Line that are done by a tunnel boring machine underground will not produce emissions above ground except at the construction staging areas for the tunnel boring machine, and this too will be mitigated using proven mitigation measures.</p> <p>At the time of the assessment, detailed information regarding soil removal management is not available. Management of contaminated soils and soil removal will be determined as design progresses. As per Table ES-1 and Table 6-2 in the EIAR, a Soil and Excavated Materials Management Plan (SEMMP) for the handling, management and disposal of all excavated material will be developed in accordance with the guidelines from the Ministry of the Environment, Conservation and Parks' (MECP) Management of Excess Soils: A Guide for Best Management Practices.</p>

March 4	All looks good! Appreciate the thought being put towards planning and managing air quality during construction as a resident of a nearby site.	Thank you for reviewing the report and providing feedback! We appreciate your participation and feedback, as it is a critical part of our work. Please do not hesitate to reach out to our team at 416-202-5100, or at OntarioLine@metrolinx.com if you have any further questions or comments as the project moves forward.
---------	--	---

Archaeology

Date	What are your thoughts on the Archaeology study key findings and identified potential impacts and mitigation measures?	Comment Response
Feb 9	What steps will be taken to involve local stakeholders in archaeological research? For example, at the Corktown station site, artifacts from one of Toronto's 19th century narrow-gauge railways has been uncovered. Is the Toronto railway museum involved in helping identify and set aside historically important artifacts?	The involvement of stakeholders concerning the analysis and interpretation of artifacts and archaeological sites is dependent on archaeological finds recovered during archaeological field work, For example, during the excavation of the archaeological sites at Corktown Station, the archaeological team worked closely with the Ontario Heritage Trust, City of Toronto and Indigenous Nations.
March 4	Would be really wonderful if archaeological discoveries made during construction could be considered for public display within Ontario Line stations to commemorate the construction that took place to bring the Ontario Line online.	Metrolinx acknowledges the importance of commemorating archaeological resources and is committed to exploring various options for commemoration. Metrolinx is working on an interpretation and commemoration plan for Osgoode Station and the First Parliament site at Corktown Station in close collaboration with the Ontario Heritage Trust and City of Toronto. Metrolinx will consider commemoration options for archaeological artifacts in accordance with the standards set forth by the Ministry of Heritage, Sport, Tourism, Culture and Industries.
March 9	Reviewing the feedback from indigenous groups (456 of 493 of the PDF, p. 359 on the page number), I see a number of valid concerns being raised but no solutions being put forward. It looks like this is another example of meeting with groups so you can check the box that you have “consulted” but without meaningful engagement.	Metrolinx is committed to engaging with Indigenous Nations on its business throughout the life cycle of its project work, including on the Ontario Line. Metrolinx has been reaching out to Indigenous Nations since February 2020 to introduce the Ontario Line project and has engaged with Nations through meetings, phone calls and emails to address comments from Nations. Metrolinx will continue to engage with Indigenous Nations on the Ontario Line as project planning progresses.

Cultural Heritage

Date	What are your thoughts on the Cultural Heritage study key findings and identified potential impacts and mitigation measures?	Comment Response
Feb 24	Toronto needs to have Heritage Preservation Resources tripled. There are not enough people to mitigate the damage that is being done to Heritage in this City. This is just one more example of too little to late.	Thank you for the feedback. The Ontario Line Project is being assessed in accordance with <i>Ontario Regulation (O. Reg.) 341/20: Ontario Line Project under the Environmental Assessment Act</i> . Please see Table 5-1. Detailed Procedures of Mitigation Measures and Table 5-2. Detailed Procedures for Monitoring Activities in the Heritage Detailed Design Report for a list and description of mitigation measures that Metrolinx has committed to using to minimize impacts on heritage resources.
Feb 24	No. Just no. Too many historic and heritage buildings that would be destroyed or impacted. I'd be okay with this if the buildings were preserved and moved elsewhere in the City, that is if they are not occupied, but I don't see how this project as is can go ahead. There has to be something better or a new route. Does it have to be a subway? Can it not be above ground like the LRT so that buildings aren't as impacted? Other cities like Chicago and New York do this, why can't Toronto?	Thank you for the feedback. Further information regarding the route selection and decision making process for the Ontario Line Project can be found on the Ontario Line FAQ page here: https://www.metrolinx.com/en/greaterregion/projects/ontario-line-faq.aspx . In all cases, avoidance was the preferred option where direct impacts were identified for a built heritage resource or cultural heritage landscape. Where impacts could not be avoided, mitigation options were evaluated with preference to the least intrusive options. Using this approach, there are a wide range of proposed mitigation measures for impacts to built heritage resources or cultural heritage landscapes, including retention in situ, documentation and salvage. Please see Table 5-1. Detailed Procedures of Mitigation Measures and Table 5-2. Detailed Procedures for Monitoring Activities in the Heritage Detailed Design Report for a list and description of mitigation measures that Metrolinx has committed to using to minimize impacts on heritage resources.
March 3	Many of the residential homes between King/Bathurst and Tecumseth/Niagara are old homes. They may not be registered on a historical list but they part of the historical importance of this neighborhood. The entire area should be respected and treated with care not just the buildings that you have acknowledged	Thank you for sharing your thoughts with us about the Ontario Line. One of the purposes of cultural heritage assessments are to identify potential heritage resources that have not yet received formal recognition through listing or designation. The baseline study to identify known and potential heritage resources within the Ontario Line Study Area, including the area around Bathurst, King, Tecumseth and Niagara, was completed by AECOM in 2020 and was titled Ontario Line Project: Final Environmental Conditions Report – Cultural Heritage report: Existing Conditions and Preliminary Impact Assessment (available online here: https://www.metrolinxengage.com/sites/default/files/2020-11-30_ol_ecr_b5_chr_final_optimized_locked.pdf). The Heritage Detailed Design Report (HDDR) published as part of the Environmental Impact Assessment Report focused on properties and Heritage Conservation Districts located within the Zone of Influence, as defined in Section 2.5 of the HDDR. In all cases, avoidance was the preferred option where direct impacts were identified for a built heritage resource or cultural heritage landscape. Where impacts could not be avoided, mitigation options were evaluated with preference to the least intrusive options. The HDDR identifies mitigation measures to reduce impacts to heritage resources in Table 5-1 and Table 5-2 of the report.
March 4	For any heritage structures that are demolished or partially impacted/lost, preserving its history in the new stations would be my preference as a way to acknowledge the history and heritage of the sites impacted / forgone for the construction of the Ontario Line.	Thank you for the comment. As described in Table 5-1 in the Heritage Detailed design report, structures that will be subject to partial or complete demolition will have Documentation and Salvage Reports completed prior to demolition. These reports include a history of the property and photo documentation. Where applicable, demolished properties will also have Interpretation and Commemoration Frameworks developed to communicate the cultural heritage value of the demolished property to the public. Where possible, strategies have also been developed for partial retention of heritage structures. Even in cases of partial retention, Documentation and Salvage Reports will be prepared prior to any property alterations.

March 7	<p>My concern is to do with any transparent transit shelters/wind barriers.</p> <p>Please PLEASE make them bird-safe with the easy to apply, affordable external patterned markers. F.L.A.P. Canada can advise. Website resources here: https://flap.org/stop-birds-from-hitting-windows/#guidelines</p> <p>Regardless of how much greenery is surrounding the new Ontario Line, songbirds and migratory birds pass through the city and suburbs.</p> <p>Thank you.</p>	<p>Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.</p>
---------	--	---

March 8	<p>My comments have to do with the South Section of the Ontario Line between the Don River and Gerrard.</p> <p>The EIAR states:</p> <ul style="list-style-type: none">• Design the Project to align and be consistent with the District Guidelines set out in the Riverdale Heritage Conservation District Plan- Phase 1, in Section 9.• Alterations much be complimentary and subordinate to the cultural heritage value and heritage attributes of the HCD• Sensitive and compatible design <p>Queen and Degrassi is the location of the original train station and the building now used by Bonjour Brioche is a heritage building that must be preserved. Building an Ontario Line Station at this corner is inconsistent with adhering to the Heritage Conservation District Plan.</p> <p>I note the following quotations from the EIAR and do not see how you can adhere to these mitigation recommendations while building an OL station at this location.</p> <ul style="list-style-type: none">• “If demolition, removal or significant alteration to any buildings or structures in the HCD is necessary for the Project, this action should be limited to only those buildings that have been identified in the HCD Plan as “non-contributing”. Demolition of contributing properties is strenuously avoided. “• “Retain principal structures on contributing properties, including buildings along the east side of Tiverton Avenue - restore and conserve the heritage fabric.” <p>I hope that Design Working Groups will be established for each neighbourhood impacted by the Ontario Line, especially those where it runs above ground. I believe this will be necessary if you are to achieve the “Mitigation Measures” promised in the EIAR:</p> <ul style="list-style-type: none">• Reduce the visual effects of bridges, retaining walls and noise barriers by selecting appropriate building materials and architectural design.• New infrastructure will be constructed to a high visual standard that enhances the surrounding area.	<p>Thank you for sharing your thoughts with us about the Ontario Line. As shown on Figure 6-15 of the Heritage Detailed Design Report, the Bonjour Brioche building falls outside of the Zone of Influence (ZOI) of the project and will not be impacted by project works. The Bonjour Brioche building is also not located in the potential Cultural Heritage Landscape (CHL). The station will be built on the elevated rail line and will not be located at the street level corner of Queen Street East and DeGrassi Street. No demolition of adjacent built heritage resources will be required.</p> <p>However, as noted in Table 5-4 of the HDDR, De Grassi Street from Queen Street East to Wardell Street is identified as a potential CHL. The recommended mitigation measure for properties contained within this CHL is continued avoidance of the properties and vibration monitoring for properties which fall within the ZOI. Coordination with the City and community stakeholders to achieve the identified mitigation measures is ongoing.</p>
---------	---	--

	<ul style="list-style-type: none"> • Consult with the City of Toronto regarding restoration of public realm areas impacted by construction activities. • Ongoing coordination with the City of Toronto will be required to promote the integration of Moss Park Station, Riverside/Leslieville Station, and Gerrard Station with existing parkland and open spaces. <p>I end my comments by saying, again, that all of these problems could be avoided by putting this section of the Ontario Line underground.</p>	
March 9	<p>- I am surprised to discover this information on the last day of public consultation. Opportunity to comment is welcome--get the word out there! This project should be widely communicated to the general public in Toronto and surrounding regions.</p> <p>- I'm surprised to learn about the loss of park land currently within the gates of Osgoode Hall (and a small portion of the gates themselves) necessitated by this project. I feel really sad about the loss of green landscape and mature trees in this location. I would have thought encroachment onto this historic property was unthinkable. In my view it will come to be seen as a shameful failure to protect what matters.</p> <p>- The following stats stood out for me: 22 properties for which complete or partial demolition is anticipated; 7 properties where introduction of new elements is anticipated, incl. 5 where heritage attributes will be impacted; Over 160 built heritage resources and cultural heritage landscapes anticipated to experience direct or indirect impacts. Such impacts must not be taken lightly. I look forward to Metrolinx's documentation and communication to the public showing that every possible attempt at mitigation was made to avoid these impacts. Please do further consultation for the average person around what this will mean to Toronto.</p> <p>- The document is so long (500+ pgs!! --and this is just one part of the report) - you are baffling us with information overload. I wish more effort was made to provide publicly accessible project summaries.</p>	<p>Thank you for your feedback regarding the station location at Osgoode Hall. We understand this location is of local, provincial, and national significance. However, construction requirements associated with the Osgoode Station and required connection with Line 1 infrastructure requires use of this land. We are working closely with the City, Law Society of Ontario, and other key stakeholders to lessen required impacts and mitigate those that are unavoidable through sensitive design and minimization of the staging area and construction footprint.</p> <p>As a provincially recognized heritage property, construction activities and mitigation at Osgoode Hall are also subject to stringent conditions set forth by the Ministry of Heritage, Sport, Tourism, and Culture Industries (MHSTCI) following a request for Minister's Consent at this location. These include requirements for a holistic approach, conditions placed on the station design, documentation and pre- and post-construction conditions assessment, a Landscape Management Plan, and removal and reinstallation to protect impacted sections of the cast iron fence. An unedited list of the conditions set forth by the Ministry is included in the Heritage Detailed Design Report in Section 7.2.2.</p> <p>We understand that construction of a subway line through the core of the City will encounter a significant number of heritage properties. That is why we inventoried approximately 280 properties as part of the Ontario Line Project: Final Environmental Conditions Report – Cultural Heritage report: Existing Conditions and Preliminary Impact Assessment where the potential for interaction with the Ontario Line was noted. Even after footprint refinements, 272 properties are addressed within the HDDR. We do not take impacts to heritage properties lightly and have chosen to do so only where avoidance was not possible.</p> <p>We understand that the HDDR is a very long document. Due to the expansive scope of the Ontario Line project, the length of the proposed line, and the volume of heritage properties within this area, the document could not be abbreviated. An executive summary of the report's content is included to highlight key points as is the summary provided for the EIAR. A summary of the key findings from the EIAR is also available on the Project webpage: https://www.metrolinxengage.com/en/content/ontario-line-draft-environmental-impact-assessment-report. We would also encourage you to attend forthcoming Open Houses to learn more about how mitigation requirements will be executed. We appreciate your participation and feedback, as it is an important part of our work. We look forward to your continued involvement with the Project.</p>

Natural Environment

Date	What are your thoughts on the Natural Environment study key findings and identified potential impacts and mitigation measures?	Comment Response
Feb 12	<p>I like the idea that you will be watching out for the animals of the areas you will be working in.</p> <p>Regarding the Don River: I like the idea that you will be having Bridges going over it at the 2 key points (13-on the Map. South of the Thorncliffe station & 8-on the Map. Near the East Harbour station). Just as long as nothing falls between the materials you are going to make the bridges out of into the Don River.</p>	<p>Thank you for your comment. The work area will be delineated with tree protection fencing prior to the commencement of construction activities near the Don River to reduce encroachment of construction machinery into adjacent natural features. A Spill Prevention and Response Plan will be developed before work commences so that procedures and policies are in place to reduce impacts to wetlands and watercourses during construction. Additionally, an Erosion and Sediment Control Plan, in accordance with the Greater Golden Horseshoe's Erosion and Sediment Control Guideline for Urban Construction (2006) and the Erosion and Sediment Control Guide for Urban Construction (TRCA 2019), as amended from time to time, will be prepared prior to and implemented during construction adjacent to the Don River work area to reduce the risk of sediment from entering the Don River.</p>
Feb 22	<p>Your project will definitely disturb various significant wild habitats throughout this area. In Nature, you cannot disturb one thing without disturbing everything--leaving behind death and destruction. The purpose of all this destruction and expense appears to be the decision that we need to make it easier for people to get from one point to another in a shorter amount of time. I know that folks like myself who have spent our lives trying to keep our fellow humans from destroying the planet--and possibly causing our own species to go extinct--are not looked upon kindly. However, I just want to go on record and quote the following: "Rising global temperatures, increasing precipitation and human intrusion into wildlife habitats may, unintentionally, collude to tip the scale of Nature's balanced paradigm. The result--a greater risk of human illness such as further novel corona viruses or even more deadly viruses."</p>	<p>Thank you for sharing your thoughts with us about the Ontario Line. The Environmental Impact Assessment Report documents mitigation measures and monitoring activities to reduce impacts of the Ontario Line Project on the environment. Metrolinx continues to work with the City of Toronto and TRCA minimize impacts of the Ontario Line Project on the environment.</p> <p>We appreciate your participation and feedback, as it is an important part of our work. We look forward to your continued involvement with the Project.</p>

Feb 24	<p>There appear to be numerous requirements for mitigation plans. When will the plans be shared with community stakeholders and publicly tracked to plan (i.e. traceability matrix).</p>	<p>Mitigation requirements will be included in the contract documents as a contractual obligation for the contractor to implement. Environmental topic-specific management plans will be site specific and developed prior to the start of construction at each site. Metrolinx provides oversight of this process to ensure that the contractor completes the required mitigation measures in accordance with any applicable regulations or guidelines. Since these mitigation plans are part of the contract agreement, they are typically not publicly available documents. However, upon request during Construction Liaison Committee meetings, Metrolinx may provide site-specific mitigation details to community stakeholders once these plans have been developed and finalized.</p> <p>Prior to construction, Metrolinx will inform community residents on how they can provide comments or concerns during construction, the details required in order to properly action any complaints (e.g. address/time/date/description of issue), and the process to handle such complaints. Metrolinx will notify the public via community notice in advance of any construction works via the Ontario Line website, e-newsletter, email to community groups and physical canvassing for particularly disruptive work. Metrolinx will also be sharing information to the public via a Construction Liaison Committee, which we look forward to establishing prior to the start of construction.</p>
March 3	<p>What about the Garrison Creek? It was supposedly buried underground in culverts. Are they still there?</p> <p>There are a few willow trees in the neighborhood that are a reflection of the creek and the willows that lined its shores. An important part of the neighbourhoods history (King/Bathurst to Tecumseth/Niagara) We do not want to see those trees damaged in any way.</p>	<p>Garrison Creek has been influenced by the historic development of the City of Toronto. It has been piped below ground and is no longer visible as a surface feature.</p> <p>Based on the historical map location of Garrison Creek, the Project Footprint does not overlap with the majority of trees that are coincident with the historical alignment of the creek. The Lane W Niagara S Wellington is a relatively short lane that travels in a northwest to southeast direction and is considered to be relatively close to the alignment of historical Garrison Creek. There is a treed area west of this short lane that appears to overlap with the historic creek location. The Ontario Line Project Footprint is located south of this lane. The Project Footprint and potential trees that are aligned with the historic creek location do not overlap. There are a few individual trees present along the north side of the existing railway tracks that will be removed to accommodate the Project; however, these isolated trees are unlikely to be representative of the original alignment of Garrison Creek in this highly disturbed area.</p> <p>To assess and protect the trees along the Ontario Line, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures in accordance with the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and/or City of Toronto by-laws, best practices and standards and regulations on safety, environmental, and wildlife protections. Compensation for tree removals will be undertaken in accordance with the Metrolinx Vegetation Guideline (2020) and principles of the TRCA's Guideline for Determining Ecosystem Compensation (June 2018).</p>

March 4	I'm concerned that the potential effects are quite severe and may have enduring impact on our environmental habitat. I'm no expert in the mitigation strategies, but I want to advocate for prudent planning and funding allocated to mitigation strategies for environmental impacts, as it's clear from the assessment that there are numerous and potentially long-lasting risks.	Thank you for your comment. The Environmental Impact Assessment Report identifies mitigation measures to reduce impacts of the Ontario Line Project on the environment. These mitigation measures will continue to be refined as project planning progresses and Metrolinx will continue to work with key stakeholders including the City of Toronto and TRCA to reduce impacts of the project on the environment.
March 7	Hello. With respect to the above assessment report, there is no mention of any measures to mitigate bird collisions on transparent transit shelters either already constructed or to be constructed. There have been numerous documented cases of birds flying into clear transit shelters, including species at risk (https://birdmapper.org/app/). Collision deterrent methods such as bird of prey decals or uv coated decals that I have seen applied at a number of Metrolinx transit shelters (especially along the Milton corridor) are ineffective. Given that migratory birds use Ontario, and especially Toronto and surrounding areas, as migratory corridors, the potential to have birds collide at transparent transit shelters is huge. I am sure FLAP Canada (www.flap.org or email at flap@flap.org) would be more than happy to consult with Metrolinx in making sure any transit shelters erected are bird-friendly. Transparent glass can be just as lethal to birds as reflected glass, depending on what is viewed through the transparency. Thank you.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Please ensure that your shelters are indeed friendly to migratory birds. This is 2022. We know that we are only one part of the environment. Let's ensure we keep birds safe too! Thank you!	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	You need to do a much better job building beyond minimum requirements and ensuring all your transit shelters and any glass enclosures mitigate bird strikes.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.

March 7	You also need to make sure that all transit shelters are bird safe, with either nonreflective glass or something placed on the glass that will prevent bird strikes.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Please ensure ALL transit shelters are bird-friendly - meaning that their transparency doesn't cause bird collisions and cause deaths.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Please make sure windows are bird friendly to prevent bird strikes.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Please make sure all transparent glass surfaces will be fitted with bird anti-collision dots. Thank you!	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Please make sure that all of transit stations are bird-friendly. The Fatal Light Awareness group has found dead birds (American Tree Sparrows) who've crashed into the transparent station in Milton in January. Millions of migrating birds die because of strikes on windows that they perceive as through-ways in urbanized cities. Let's fix this please.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Make transit shelter windows bird-safe everywhere - please.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.

March 7	Please use bird-friendly glass!!!	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Make sure all structures have preventative measures/design against bird collisions. Also there might be birds coming to the grass areas that is right on tracks, like on Eglinton, if geese come and sit there they will be killed by coming trains, have you thought of that when putting grass there.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	The shoreline of Lake Ontario is an important flyway zone for migratory bird species, including other species at risk (e.g. wood thrush, cerulean warbler). As a result, thousands of birds collide with glass structures every year on their migration route (spring and fall), and never reach their destination. Please do your due diligence and ensure that any structures built (bus shelters, buildings with large windows) follow bird-safe protocols as outlined by FLAP. https://flap.org/useful-links-resources/	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Wildlife exclusion measures - inclusion of bird-friendly window markings should be included in all buildings and glass shelters to reduce the likelihood of avian mortality due to window collisions.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	My concern is to do with any transparent transit shelters/wind barriers. Please PLEASE make them bird-safe with the easy to apply, affordable external patterned markers. F.L.A.P. Canada can advise. Website resources here: https://flap.org/stop-birds-from-hitting-windows/#guidelines Regardless of how much greenery is surrounding the new Ontario Line, songbirds and migratory birds pass through the city and suburbs. Thank you.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.

March 7	As this facility will be in the nature, all buildings and facilities including ALL their transit shelters, should have bird window collisions deterrents. I see often bird collisions at TTC bus stops and subways, I request Metrolinx will treat all their windows to make sure no birds will die because of this project. Thank you	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	please make sure all transit shelters are bird friendly	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	I am concerned with bird collisions. Please make sure to put dots on the glass to prevent bird strikes	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	PLEASE make sure the shelters are bird friendly. Put film on them or the diy dots available thru flap. Canadian company. The city has thousands of dead birds due to Window strikes. Let's try to turn that around. So important	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	bird friendly structures!	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	The mitigations during the operations do not mention anything in terms of making the building bird friendly to minimize bird-window collisions. It is a very common issue in urban areas and should be considered when building infrastructures.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.

March 7	Please treat any glass surface with bird proof glass film. Migrating birds slam into glass, they can't tell it is there and see it as open air to fly through. The numbers of birds we lose each migration season is staggering and the solution is simple - make sure ALL of your transit shelters are bird-friendly. Otherwise, more birds will continue to collide.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Can you ensure that lighting is used that protects migrating and night-flying birds? I realize costs are always an issue but people seeing physical signs of Metrolinx providing protection to any species makes passengers feel they use & support transportation that works with the natural environment rather than “bulldoze” it out of existence. I work in one of the large bank towers and I know what happens with birds.	Metrolinx has a sustainable design standards which has Bird Friendly Design Requirements under Section 6.2 and can be found here: : http://www.gosite.ca/engineering_public/DesignStandards/DS-05%20Sustainable%20Design%20Standard_v1.0.pdf .. Metrolinx requires all its new facilities to be designed to minimize light pollution and implement bird-friendly design practices. The Ontario Line has stringent design requirements related to both light pollution and bird-friendly design. All Ontario Line glass facades (glazing) will comply with the City of Toronto’s Toronto Green Standard (TGS) Bird-friendly glazing requirements (TGS credit EC4.1) and the light pollution requirements (TGS credit 5.1). Furthermore, Ontario Line has adopted the Leadership in Energy and Environmental Design (or LEED) design requirements for light pollution reduction which will further aid in protecting against bird collisions.
March 7	Please ensure all your new stations and transit shelters have bird friendly glass installed to prevent bird collisions and death.	Thank you for your comment. Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Please ensure that bus shelters are bird friendly. The designs that could be made on the enclosures could be quite beautiful. At the very least please make sure there is bird deterrent markings on the glass even if it is just grid pattern. Thank you! :)	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Please make sure your shelters are bird friendly - stop collisions!	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Make sure the shelters are bird friendly - so see through glass without bird deterrent film.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.

March 7	I hope that any proposed designs of built structures include deterrents to prevent window strikes by birds. Up to 42,000,000 birds die each year in Canada due to window strikes. The easiest time to implement deterrents are during the design/construction phase.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	Please make the transit shelters bird friendly. No more bird strikes and deaths.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	There is no more time to ponder this. YOU MUST ensure all shelters have bird friendly glass to mitigate collisions and death. Be a leader, think like a bird and help them! Thanks!	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	I do not see any mitigation to prevent bird window collations. I am assuming the project will include window features that would require mitigation strategies such as Canadian Standards Association (CSA) A460:19 that includes the use of visual markers, and specifications for window glazing and glass railings.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 7	<p>Hello, Bird strikes is a big issue in the GTA and beyond, especially during migration. Many cities are trying to be more bird-friendly, insisting on treated glass in new buildings of a certain size. I imagine your stations will have many windows. What measures will you implement to prevent bird strikes? Please visit FLAP Canada's website for guidance: flap.org</p> <p>Thank-you,</p> <p>██████████</p> <p>████████████████████</p> <p>██████████</p>	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. March 8	Please ensure all glass has bird friendly treatment to stop fatal bird impacts with the glass.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 8	In addition to protecting birds during breeding season, the glass needs to be properly treated to ensure that birds can recognize the medium and don't collide with the structures. There are a lot of artistic and creative ways that this can be done, including painted artwork, or film on the glass that does not obstruct the view. Many of these options are very economical. There is nothing more depressing than finding a dead bird (or multiple!) while you're waiting for your train. Please ensure that ALL transit shelters are bird-friendly. Otherwise, more birds will continue to collide like the two American-tree sparrows that were found together at a transparent transit shelter in Milton in January. A simple version: https://www.collidescape.org/ , or more dramatic https://www.viracon.com/printing/ ; there are many many options. All of them are better than the alternative.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 8	Please please ensure bird safety because it's possible & no matter the cost, it's worth it. Please see: Fatal Light Awareness Program Canada Thanks - [REDACTED]	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
March 8	Please use bird friendly glass in your transit shelters. It is unacceptable that you break the law and allow birds to hit your glass when there are effective ways to prevent this.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.

March 8	<p>There has been some good thought put into this, but as an added measure please be sure that all your shelters are of bird-safe materials.</p> <p>Thank you.</p>	<p>Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.</p>
March 9	<p>The EIAR states: “An Integrated Vegetation Management Plan will be developed and implemented that is in adherence with the Metrolinx Vegetation Guideline (2020b) and the Integrated Vegetation Management Program. The Guideline’s selection criteria will be used to assess the vegetation present as compatible or incompatible, and manage it, if necessary, in a way which meets safety needs in a timely manner, is sensitive to environmental conditions, and maximizes cost-effectiveness. P 270</p> <p>I object to “cost-effectiveness” being a criteria when it comes to replacing the trees removed by MX. You have destroyed a vibrant natural ecosystem along the rail corridor and should be required to do more, do better.</p> <p>This was not done at all. Every bit of vegetation was removed from the Rail Corridor with no attempt made to provide for the wildlife displaced.</p> <p>The EIAR states:</p> <p>“Opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent possible.”</p> <p>Your children and grandchildren will judge how well you have lived up to this promise.</p>	<p>As roads and railroads often act as corridors that enable invasive plants to spread, Metrolinx is developing Integration Vegetation Management (IVM) Plans for transit projects to promote a shift in the plant community. This will benefit ecological functions and processes, while also providing a solution that doesn’t conflict with the infrastructure. Cost-effectiveness is also a goal, as a naturally sustaining plant community would require less maintenance in the future. IVM does not, however, speak to compensatory requirements of tree removals. The Metrolinx Vegetation Guideline (2020) provides a framework for tree compensation that goes above and beyond regulatory requirements and is supported by the Toronto and Region Conservation Authority (TRCA). Metrolinx has partnered with Conservation Authorities to implement planting initiatives, such as planting 12,000 trees and shrubs at Rouge National Urban Park. In addition to the compensatory fees associated with municipal tree removal bylaws, Metrolinx continues to work with the TRCA to identify restoration opportunities to compensate for tree removals associated with the Ontario Line Project.</p>

March 9	<p>There is no reference in the report, that I could find, that addresses the need for bird-friendly shelters. It is certainly important to ensure that mitigation strategies are in place to ensure that nesting grounds etc. are protected. However, is it not equally important to ensure that the shelters constructed are bird friendly so that birds do not unintentionally crash into the glass and die? If strategies are identified in the assessment report to ensure that nesting grounds are protected, surely there is also a need to protect the birds that use the nesting grounds from crashing into the shelters that are constructed? I would strongly urge Metrolinx to ensure the shelters are constructed to be bird friendly.</p>	<p>Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.</p>
March 9	<p>I am most concerned with making shelters bird-friendly. This is simple to do, does not affect the operation of the transit system, and saves many lives. Let's do it!</p>	<p>Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.</p>

Noise & Vibration

Date	What are your thoughts on the Noise & Vibration study key findings and identified potential impacts and mitigation measures?	Comment Response
Feb 11	I live on hopedale right at Minton what does the map in my area with construction, rail, station, emergency exit receptors and representative POR mean? How will the noise and vibrations effect my family.	<p>Figure E-1-16 in the Noise and Vibration Impact Assessment Report documents, a number of noise and vibration receptors, which are locations that could experience impacts from noise and vibration during construction or operations. A construction receptor (CR) is a location that could experience the most impact from noise or vibration from construction activities at Minton (from tunnelling or constructing the portal). A rail receptor (RR) is a location that could experience the most impact from noise or vibration when trains are operating (either from within the tunnel, or as trains move through the portal and out over the Don Valley Parkway). An emergency exit/service receptor (ER) is a location that could experience most impact from noise from emergency equipment from the portal (not related to train noise). Construction receptors (CR_RESD_171 to 174) show that construction noise limits will be met (Table 4-9) for most construction activities. For ongoing nighttime tunnelling activities, additional mitigation can be implemented to meet the construction noise limits. Vibration isolation will be provided on the track to address train vibration, and train noise at rail receptor (RR_RESD_001) are below the rail noise criteria of 55-60dBA. Emergency equipment will also be fitted with silencing equipment to meet noise levels at the emergency exit/service receptor. At the Minton Place location, all construction and operational noise and vibration impacts are expected to be within the applicable noise limits for residences in the area, including the residence on Hopedale Avenue.</p> <p>Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels. The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p>
Feb 15	Descriptions are a bit vague and leave room for misinterpretation. “site-specific mitigation will be determined prior to the start of operations based on selected means and methods” sounds like “we will figure it out as we go”. It appears that the underground portion of the rail line will be going directly under the condo and this doesn’t do a good job of explaining what I am to expect in terms of noise and vibration. Instead of saying it will meet Noise Pollution Control criteria, maybe explain what this criteria is.	<p>Mitigation is often specific to the environmental component and scope of work, which varies throughout the study area. Metrolinx will explore additional mitigation measures beyond those outlined in the EIAR and also refine the mitigation measures as project planning and design progresses, such that they are effective at reducing specific project impacts, as not all mitigation measures may apply to a certain project impact.</p> <p>The main potential impact from the underground rail line that will be traveling under the condo is potential vibration. This has been assessed in Section 7 of the Noise and Vibration Impact Assessment Report. Table 7-4 of the report documents areas of the alignment that will require mitigation to ensure that any vibration impacts are within the vibration criteria (see Table 7-2).</p>
Feb 22	What are the consequences for the property owners of the houses that are damaged in any way by the vibrational impacts or any other damages caused by this operation?	Appendix H of the Noise & Vibration Impact Assessment Report identifies the preliminary zone of influence from construction vibration that may impact houses. The preliminary zone of influence identified in the EIAR will be updated by the contractor once means and methods of construction are confirmed. Within the zone of influence Metrolinx requires the contractor to prepare a detailed construction management plan, identifying specific areas of impact and adopting construction vibration mitigation (e.g. lower vibration equipment, or alternative construction methods) to minimize impacts. Pre and post construction surveys will be conducted at properties within the zone of influence. Metrolinx will work with property owners regarding potential impacts, in the event that repairs are required as a result of construction activities. Further, buildings within the zone of influence will be monitored to ensure vibration levels are within the construction vibration limits. Where exceedances are noted, mitigation measures and the adaptive management plan will be implemented to address any building damages caused by vibration.

Feb 28	<p>This is nonsense. There is no way that a train passing by every 90 seconds will not have a health impact on people in the surrounding area, in particular when they are trying to sleep. A barrier will do nothing to stop the almost constant din.</p>	<p>As noted in the Noise and Vibration Impact Assessment Report, the noise mitigation proposed (e.g. barriers) will be effective at reducing noise levels to meet applicable noise limits.</p> <p>Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels. The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p>
Mar 1	<p>Why is "disturb sleep" only considered as a potential effect of construction and not operation? Many of the neighbors I spoke with along Pape have this as their number 1 concern as to how the ongoing operation of this new subway will have on health and wellness of people who will have to live with the noise and vibration. Assurances that noise and vibration will be below "perceptable" levels or below "current" conditions do nothing to alleviate this worry because once this is built, we will have to live with the consequences if our health suffers.</p>	<p>The Noise and Vibration Impact Assessment Report assessed operational noise impacts against nighttime criteria. With noise mitigation (e.g. barriers), noise levels are expected to meet nighttime criteria. Vibration impacts have also been assessed and it was determined that vibration levels during operation will be at levels below perceptible, and thus should not disturb sleep at adjacent residences.</p> <p>Further, the vibration-generated noise levels are required to be below 35dBA (as per Section 7.1.3 of the report), which are typical of quiet bedrooms. The operational vibration impacts of the project, with applicable mitigation (high-resilience fasteners, light mass-spring system and/or floating slab track), show that vibration-generated noise levels at residences are not expected to exceed 35dBA (as per Table 7-4 of the report), and thus should not disturb sleep at adjacent residences.</p> <p>Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels at various locations along the alignment. The Ontario Line Immersive Sound Demonstration can be assessed here: https://www.ontariolinesoundstudio.ca/.</p>
March 3	<p>"Vibration measurements will be assessed using mock-up construction activities prior to construction at certain receptor locations (i.e., St. Michael's Hospital, Bell Media Headquarters, Four Seasons Centre for the Performing Arts)." Will every neighborhood be given the same consideration as to the minimization of vibration and noise?</p> <p>"Consider equipment with low vibration levels." What does that mean?...consider does not mean use. What will determine the answer...money? Complaints?</p> <p>Low to non-existent noise is important to good health. We live in these areas. We have invested our time, money and energy into our homes. These are homes not just buildings. Noise & Vibration are two very critical points to all that live here!!</p>	<p>A construction vibration assessment has been completed for residential buildings against vibration limits that account for human perception and annoyance to construction.</p> <p>The proposal for additional construction mock-up measurements is to address potential vibration impacts at highly sensitive locations such as rooms with MRI equipment at hospitals and recording and performance spaces. These locations have much more stringent criteria (well below human perception), where vibration impacts could affect the operation of equipment (e.g. MRI) or usage of the space (e.g. Four Seasons Centre for the Performing Arts). Thus, there is additional consideration of construction vibration impacts for these locations.</p> <p>Typical construction equipment provides levels of vibration, where alternatives are available (e.g. Low vibration demolition hammer) they will be considered. This will be addressed through the contractor's construction vibration management plan, where alternative low-vibration equipment could be considered to meet construction vibration limits, amongst other applicable mitigation measures. If complaints regarding construction vibration are received, further mitigation measures such as using equipment with lower vibration levels will be considered against other available mitigation measures.</p>

March 4	Noise and vibration are of concern and interest to me as a resident who works from home and is near the proposed site for the King/Bathurst station. I appreciate the conservative approach of looking at the study through a worst case scenario lens. My request would be that the project considers adding generous allowances/buffers when calculating the necessary depth of underground tunnels to account for any surprises in calculations that may lead to more vibration and sound than expected. The King/Bathurst area is very densely populated with residential, commercial office, and public green spaces, and preserving the quietness and stability of the area is important to the quality of living and working in the area.	<p>The operational vibration assessment has been completed in accordance with the FTA general assessment, which provides a conservative assessment of vibration impacts. This approach was adopted with consideration of the dense population of residential and commercial office in areas such as King and Bathurst.</p> <p>The Noise and Vibration Impact Assessment Report provides expected vibration impacts at sensitive receptors, with mitigation, in Table 7-4, to meet the requirements for vibration (below perceptible vibration) and ground-borne noise (below 35dBA for residences).</p> <p>Recommendations are provided in the Noise and Vibration Impact Assessment Report for the contractor to complete further detailed analysis, including vibration propagation measurements once the tunnel is accessible and to the final depth, to refine mitigation requirements to ensure noise limits and stability of the area is maintained during Ontario Line operations.</p>

Socio-Economic

Date	What are your thoughts on the Socio-Ec study key findings and identified potential impacts and mitigation measures?	Comment Response
March 3	<p>"Permanent and temporary property acquisition within the Project footprint." You still cannot tell us what lands will be affected. Despite repetitive questioning. A lot of us still feel we are being kept in the dark.</p> <p>"Maintain access to businesses during working hours where feasible. Where regular access cannot be maintained, alternative access and signage will be provided." The businesses that will be hurt by this is astounding...after the strain of Covid now even more public supported businesses will fail. How about those of us who are now working from home. There will be no escape from the construction.</p>	<p>Property requirements are still being determined and more information regarding property acquisition will be shared with the community as project planning progresses.</p> <p>Metrolinx will help residents and businesses through construction by offering noise and traffic mitigation and local business supports like promotional signage, wayfinding, and construction hoarding.</p> <p>We know these have been challenging times for residents and businesses, and that is our top consideration as we advance this important project. As we cope with the impacts of COVID-19, the Ontario Line will help us create local jobs in the near term and more vibrant, healthy communities in the long-term.</p> <p>Metrolinx is committed to ensuring local businesses remain accessible and successful throughout this important project. We'll work with the business community to provide customized, tailored supports, from making sure store fronts are clear and easy to access, to working together on promotions and shop-local incentives, to helping them relocate to other nearby locations if their properties are needed to support construction.</p> <p>Metrolinx is also opening community offices along the route, with community engagement staff available during business hours to answer questions, provide updates and help support local businesses and organizations through construction. During construction, we will have a 24-hour hotline that will give the community direct access to someone who will listen to their concerns and help address any issues.</p> <p>This will be an ongoing process, and we are committed to keeping an open, two-way dialogue going so we can continuously strengthen and improve our supports for local businesses</p>
March 4	<p>One of my biggest concerns is impact on streetscape. I'm at King and Bathurst and the current sidewalks are quite narrow as they are, and in a previous consultation with the architects working on the stations, renderings didn't show plans to expand the depth of sidewalks, which I think are important to reprioritize land use for in order to provide adequate space for boarding/departing on/off streetcars along King Street, while allowing enough space for pedestrians to flow through the intersection. I think careful planning around land use and prioritization of space is needed to ensure a good balance between future volume of transit users (streetcar and subway), alongside pedestrians, cyclists, and drivers.</p>	<p>Thank you for your suggestion. Metrolinx is committed to consultation with the City of Toronto regarding restoration of public realm areas impacted by construction activities. Careful planning is essential and design details, such as sidewalk characteristics, will be discussed and determined as the project advances.</p>

Traffic & Transportation

Date	What are your thoughts on the Traffic and Transportation study key findings and identified potential impacts and mitigation measures?	Comment Response
March 3	<p>To have a major intersection or roadway closed for years is stressful to those who live in the area. Our side streets are going to be overloaded with traffic as drivers try to find their way out of the gridlock. On Wellington St there are plans to add a two direction bike lanes as well as it will be the one road that most drivers will take as a diversion from the mess of construction. What are the plans for our residential streets? What about also the parking issues on those same streets. Do you have plans for better traffic and parking enforcement that will help the residents. I am talking on a personal note about the King/Bathurst to Tecumseth/Niagara neighborhood and beyond.</p>	<p>A traffic management strategy will be developed to identify potential impacts to traffic and transportation and appropriate mitigation measures to reduce impacts during construction. Table 5-9 of the Environmental Impact Assessment Report also proposes several mitigation measures to reduce impacts to traffic and transportation during construction. Examples of mitigation measures may include modifications of traffic signal timing plans to suit construction and haul routes and installing advance notification signage for full closures of arterial roadways.</p> <p>Prior to construction, Metrolinx will inform community residents on how they can provide comments or concerns during construction, the details required in order to properly action any complaints (e.g., address/time/date/description of issue), and the process to handle such complaints. Metrolinx will notify the public via community notice in advance of any construction works through the Ontario Line website, e-newsletter, email to community groups and physical canvassing for particularly disruptive work. Metrolinx will also be sharing information to the public via a Construction Liaison Committee, which we look forward to establishing prior to the start of construction.</p> <p>It is not anticipated that Wellington Street will be a major detour route due to the closure of the westbound curb lane on King Street, as the lane closure is for the right-turn lane. Also note that the only closure of parking spaces in this this area will be 3 on-street parking spaces on Stewart Street.</p>
March 4	<p>I support the usual practices of advance notices being sent to residents to inform them proactively of any disruptions to traffic flow, clear signage, and safe detours for pedestrians and cyclists during construction. I think it's also important that the plan includes similar measures (notices, signage, etc.) to manage the transition from construction to re-opening/post-construction project completion.</p>	<p>Thank you for your feedback. Metrolinx will notify the public via community notice in advance of any construction works via the Ontario Line website, e-newsletter, email to community groups and physical canvassing for particularly disruptive work. Working with residents and businesses will be an ongoing process, and we are committed to keeping an open, two-way dialogue going so we can continuously strengthen and improve our supports for local communities</p>
March 7	<p>PLEASE ensure all transit shelters are marked so as to be bird-friendly to reduce/stop collisions</p>	<p>Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.</p>
March 7	<p>Please make all transit shelters bird friendly. Birds can not see glass and sadly, the usually due after colliding. Thank you, [REDACTED]</p>	<p>Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.</p>

March 7	Make sure that all transit stops and stations that have windows are adapted to be bird friendly.	Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.
---------	--	--

March 9	<p>The Ontario Line between the Don River and Gerrard Street will have many negative effects on traffic in the neighbourhood both during construction and after the line is operational.</p> <p>During construction:</p> <p>The EIAR states that during construction:</p> <p>“There will be temporary sidewalk closures for works at Leslieville and Gerrard Stations. “</p> <p>“In addition, to the above long-duration sidewalk closures there will be weekend and occasional nighttime full roadway closures at Leslieville Station which require closure of both sidewalks.”</p> <p>“Construction at Leslieville Station will impact streetcar routes 501, 503, and 301 on Queen Street East. • Lane closures are expected to cause additional delays due to reduced roadway capacity. Full roadway closures will result in temporary discontinuation of streetcar operation and bus detours around the closure area.”</p> <p>Having up to 600 construction vehicles accessing the Gerrard Portal site per day (for an unspecified duration) will have a negative environmental and economic effect in a large area of the city. If the OL went underground for this 1.5 km section this area would not be disrupted. Instead, the Tunnel Boring Machine would be in the East Harbour area – currently a disused industrial area where the impact would be minimal on traffic or residents.</p> <p>During operation:</p> <p>Even more worrying is the negative impact on our vibrant currently pedestrian and bike friendly neighbourhood as acknowledged on p. 75</p> <p>“The increased pedestrian demands generated in the vicinity of Ontario Line stations may coincide with increased delays and worsened pedestrian levels of service for existing pedestrian trips that are not taking the Ontario Line.” P. 75This will be very detrimental to the businesses in our neighbourhood because most of them rely on local walk-in customers rather than customers coming from far away.</p> <p>“Permanent impacts to Gerrard Station and Leslieville Station include</p>	<p>It is acknowledged that Ontario Line construction will impact this area due to construction vehicles, lane closures, etc. Metrolinx has analyzed alternative alignment options, specifically the Relief Line South, through the Initial Business Case, and decided that an underground alignment in this area would not be advantageous to the reference alignment that utilizes the existing rail corridor. In our business case analysis, running the Ontario Line in the existing rail corridor improves the customer experience, results in fewer community impacts and minimizes our property impacts on homes and businesses.</p> <p>The decision not to pursue a fully underground or partial underground alignment is based on the following main reasons:</p> <ol style="list-style-type: none">1) Improves customer experience - surface stations in this area will provide customers with a much better experience because customers will save significantly more time in their journeys than they would if these were deep underground stations. Building these stations above ground avoids long connection times while providing customers with a fully accessible experience that is shielded from the elements and encourages more transfers to the Ontario Line from GO services and the crowded streetcar network2) Results in fewer community impacts - running Ontario Line trains within the joint rail corridor will result in fewer impacts to the Riverside and Leslieville communities compared to tunnelling alternatives. Tunnelling and excavating are complex, time-consuming and disruptive, and come with a large construction footprint. Coordinating Ontario Line and GO expansion plans within the existing joint rail corridor that Metrolinx already owns streamlines construction work that would have otherwise been spread out into separate areas. We will also use this as an opportunity to shield this corridor from the local neighbourhoods by significantly reducing the sounds from and visibility of the railway, which already accommodates GO and VIA rail services. We will do this by adding well-designed and effective sound barriers, plantings, and new trees. Thanks to new noise walls and the use of quiet, electric-powered trains the Ontario Line will use, noise levels are expected to be lower in most areas along the rail corridor.3) Minimizes property impacts – by containing our work to the existing rail corridor, we are significantly reducing the amount of property we need to accommodate near-term construction and long-term operations, not to mention avoiding considerable impacts to local traffic, businesses, parks and community facilities. This is especially impactful when considering the major excavations and adjoining construction laydown areas needed to build stations as well as the emergency exit buildings that would have been needed between them. Since both Ontario Line and GO expansion upgrades will fit almost entirely within the property boundaries of the rail corridor, no neighbouring parks will be lost and important community destinations like the Jimmie Simpson Recreation Centre will stay in operation during construction and beyond. <p>Metrolinx is committed to ensuring local businesses remain accessible and successful throughout this important project. We’ll work with the business community to provide customized, tailored supports, from making sure store fronts are clear and easy to access, to working together on promotions and shop-local incentives, to helping them relocate to other nearby locations if their properties are needed to support construction.</p> <p>Metrolinx is also opening community offices along the route, with community engagement staff available during business hours to answer questions, provide updates and help support local businesses and organizations through construction. During construction, we will have a 24-hour hotline that will give the community direct access to someone who will listen to their concerns and help address any issues.</p>
---------	--	--

	<p>increased TTC ridership due to OL transfers. This could potentially lead to longer dwell times but will not impact the transit routes.</p> <p>“Temporary lane and full road closures will occur at Gerrard Station and Leslieville Station. Side roads at Leslieville Station, i.e., Strange Street and De Grassi Street, may be reduced in width or occasionally fully closed. “</p> <p>“Temporary and permanent loss of parking is expected on Strange Street and De Grassi Street in the vicinity of the station headhouses. There will be permanent loss of some on-street parking spaces on De Grassi Street near the Leslieville Station north building, and potentially on Strange Street as well near the south building.”</p> <p>It is not enough to promise “Public information strategies will be developed to mitigate full roadway closures on Queen Street, Carlaw Avenue and Gerrard Street.” The negative impact on local businesses cannot be minimized or ignored. If MX ran the OL underground from the Don River to Gerrard Street these important negative impacts would be avoided and mitigation wouldn’t be required. The local businesses wouldn’t suffer.</p>	<p>This will be an ongoing process, and we are committed to keeping an open, two-way dialogue going so we can continuously strengthen and improve our supports for local businesses.</p>

Soil & Groundwater

Date	What are your thoughts on the Soil and Groundwater study key findings and identified potential impacts and mitigation measures?	Comment Response
Feb 23	Concerns about settlement of building above, concerned about released contaminates, concern about contaminated water.	<p>To address potential soil settlement due to dewatering activities, several mitigation measures were proposed in the EIAR including the completion of pre-construction inspections of structures in the dewatering zone of influence, and using excavation support systems, as required. The release of contaminants will be mitigated by measures such as development of a Soil and Excavated Material Management Plan for the handling, management, and disposal of all excavated material, and conducting soil investigations prior to construction. To prevent the contamination of water, mitigation measures such as the development of a Spill Prevention and Response Plan, and conducting on-site treatment of dewatering effluent, if required, will be implemented.</p> <p>For more information on mitigation measures related to soil and groundwater impacts, please see Section 5.3 of the EIAR.</p>

March 4	I'd like to see prudent proactive planning around identifying existing groundwater infrastructure and well-executed sharing of that information with the workers on site.	During construction, dewatering may impact groundwater-dependent natural features as a result of decreases in groundwater discharge to these features, and may also impact private groundwater supply wells (if present). However, an inventory of local water wells within 500-metre buffer around the Project Footprint identified only one domestic/private water well. Nevertheless, several mitigation measures are proposed during construction and are identified in Section 5.3 of the EIAR. Examples of mitigation measures include completing a plan to manage groundwater and construction dewatering assessment, and conducting dewatering in accordance with applicable guidelines and regulations. Water taking quantities, quality, and resultant dewatering zone of influence will also be determined as project planning progresses.

Public Engagement Record: Environmental Discipline-specific feedback form submissions

Public Engagement Record: Ask A Question

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Metrolinx Response
8-Feb-22	N/A	Member of the Public	Ask A Question	Construction Noise	Member of the public thanked Metrolinx for keeping them informed about ongoing noise levels related to the Ontario Line. However, the member of the public also asked Metrolinx if anything is being done to reduce noise levels during construction, and what hours of the day construction will occur in the Gerrard Tunnel area (the area which they live close to).	11-Feb-22	Metrolinx thanked the member of the public for their question. Metrolinx informed the member of the public that not all construction noise can be eliminated but options including construction equipment silencers and muffling devices and other methods are being used to minimize vibrations. Metrolinx also provided a link to the member of the public for the draft EIAR which discusses about noise and vibration along the Ontario Line, and provided dates for the upcoming virtual open houses involving the Science Centre to Gerrard segment on February 22 and 24, 2022, and the Gerrard to Exhibition segment on March 1 and 3, 2022.
2-Mar-22	N/A	Member of the Public	Ask A Question	Signalling Design	Member of the public asked Metrolinx how they could apply for the local design team as a technical consultant on the signalling and conduit design.	17-Mar-22	Metrolinx thanked the member of the public for their question, and encouraged them to submit their application through Metrolinx's career portal on their website.
7-Mar-22	N/A	Member of the Public	Ask A Question	Property Impact	Member of the public asked Metrolinx how they can find information related to the Ontario Line's impact on their property which lines the Danforth just east of Pape.	17-Mar-22	Metrolinx informed the member of the public that property owners whose properties are affected by the Ontario Line should have already been contacted. Metrolinx also provided a link to the member of the public which displays an interactive map and identifies which properties will actually be impacted by the Ontario Line.

Public Engagement Record: October 17, 2020 to March 9, 2022

- Public Email Correspondence Records

Member of the Public Correspondence

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
17-Oct-20	N/A	Member of the Public	Metrolinx Engage	Leslieville-Riverside	Member of the public asked why the Riverside/Leslieville section of track is above ground.	20-Oct-20	Metrolinx (Mx) noted their plans have been updated based on what they heard from the community and will continue to work with the community. Mx provided reasoning as to why the land is above ground at that section.
17-Oct-20	N/A	Member of the Public	Email - Incoming	Any type of transit project	The landowner express concerns regarding the proposed alignment.	20-Oct-20	Mx noted further information will be provided as studies and procurement activities continue.
17-Oct-20	N/A	Member of the Public	Email - Incoming	Comments on the draft ECR	Landowner wrote to object to the proposed project based on the lack of information and evidence provided in supporting Mx's chosen path, and requested Mx reconsider their communication strategy in dealing with affected residents and businesses.	20-Oct-20	Mx apologized for the disturbance caused with the property impact letter. Mx confirmed they will know more about precise environmental and community impacts as the project moves through further design stages which will inform environmental studies.
17-Oct-20	N/A	Member of the Public	Metrolinx Engage	South of Corktown	Member of the public asked if it is possible to build below surface on Parliament as the area floods.	20-Oct-20	Mx replied that they are taking flood mitigation seriously and included information on their website.
18-Oct-20	N/A	Member of the Public	Metrolinx Engage	Save money, increase speed, and increase value	Member of the public provided suggestions to reduce the overall cost of the project and increase speed.	20-Oct-20	Mx thanked the landowner for their input and noted the initial design work is underway but not completed at this time.
18-Oct-20	N/A	Member of the Public	Email - Incoming	Ontario Line	Landowner expressed concerns with the noise and environmental pollution of the project.	20-Oct-20	Mx confirmed they will be setting up more engagement opportunities for the Thorncliffe Park community.
19-Oct-20	N/A	Member of the Public	Metrolinx Engage	Potential Expropriation or impact to market value	Member of the public wants to know if there is potential for expropriation of their property, if there will be a loss of market value or damage to their property and what is the width and depth of the subway crossing and if it will be under their home.	20-Oct-20	Mx replied that the initial design work has not been completed, final assessments of property needed will be identified through further design. Based on the current information, this property will not be directly impacted.
19-Oct-20	N/A	Member of the Public	Email - Incoming	Looking at Pape from Gerard to Danforth	The member of the public asked what Mx's plans are for Pape during construction.	20-Oct-20	Mx confirmed their plans are maintaining bus service along Pape Avenue throughout the duration of the project.
20-Oct-20	N/A	Member of the Public	Metrolinx Engage	Elevated Ontario Line at Overlea	Member of the public expressed concerns with the health of residents, traffic, property values and the environment and heritage sign.	22-Oct-20	Mx confirmed they are refining their plans and will continue to work closely with communities to address any concerns.
20-Oct-20	N/A	Member of the Public	Email - Incoming	Ontario Line at Overlea Blvd	Landowner is concerned with the location of the proposed project especially regarding health of residents,	26-Oct-20	Mx noted they have received the message also on Metrolinx Engaged and responded on October 22.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					traffic gridlock, property values and environment.		
20-Oct-20	N/A	Member of the Public	Email - Incoming	Draft ECR Feedback	Mx confirmed the line will cross the valley on a new bridge, however once the alignment is finalized Mx will provide additional details including impacted trees and vegetation.	N/A	N/A
21-Oct-20	N/A	Member of the Public	Email - Incoming	Rerouting!	The member of the public asked which streets could be used for rerouting of bus services.	22-Oct-20	Mx confirmed it is too early in the design and planning process to know.
21-Oct-20	N/A	Member of the Public	Email - Outgoing	Response to your letter of September 30, 2020	Mx replied to an email in early October that they are working to refine the plans and that final designs and property impacts have not be finalized, they did want to provide residents with knowledge that they are likely to be impacted. Mx noted the route has been selected to balance a direct path while minimizing property impacts. Future land needed is not currently determined and will not be needed until 2024, Mx will contact landowners closer to the end of 2021 or 2022 to commence discussions.	N/A	N/A
21-Oct-20	N/A	Member of the Public	Email - Outgoing	Comments on Ontario Line ECR	Mx noted that final design and property impacts have not been finalized, they will continue to update residents and businesses of plans. Mx will continue to provide updates to PACCT, MPP Tabuns and Councillor Fletcher and hold meetings to keep citizens informed.	N/A	N/A
21-Oct-20	N/A	Member of the Public	Email - Incoming	Comments on Ontario Line ECR	The landowner asked if Mx can provide the costs for twinning the existing Millwood Bridge. The landowner expressed concern about the soil stability in this area.	22-Oct-20	Mx will be working closely with companies to put in safety measures in place before, during and after construction.
21-Oct-20	N/A	Member of the Public	Email - Incoming	Avoid Overlea Blvd completely in the North Segment.	Member of the public expressed concerns with the health of residents, traffic, property values and the environment and heritage sign.	23-Oct-10	Mx confirmed they are refining their plans and will continue to work closely with communities to address any concerns.
24-Oct-20	N/A	Member of the Public	Email - Incoming	A letter from Josh Vanezande	Landowner thanked Mx for the letter informing them that their property will not be affected by the construction.	27-Oct-20	Mx thanked the landowner for their letter.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
24-Oct-20	N/A	Member of the Public	Email - Incoming	Leslieville Station and Tracks	The landowner expressed a desire for the tracks to be moved underground in the area.	25-Nov-20	Mx provided rational as to why the line will be above-ground to reduce community impacts, and long-needed improvements.
26-Oct-20	N/A	Member of the Public	Metrolinx Engage	Company to build trains	Member of the public asked who they can contact to sell products to train manufacturers.	27-Oct-20	Mx has not selected contractors or suppliers for the Project at this time.
26-Oct-20	N/A	Member of the Public	Metrolinx Engage	Tunnel under our home	Member of the public asked how the tunnel under their home will change noise, vibrations, etc. during tunneling and construction. They also asked how homeowners will be protected if there is damages to their home or property.	27-Oct-20	Mx is currently completing a noise and vibration impact assessment, which will be shared with the community, mitigation measures will be used to reduce the impacts during construction and operations. If impacts are anticipated to their property, Mx will contact the landowner directly.
26-Oct-20	N/A	Member of the Public	Email - Outgoing	Pape Station	Mx returned a message from a phone call, noting that the effects of the project on surrounding and adjacent properties are being further investigated and the final alignment details will be determined through a successful bidder's package.	N/A	N/A
28-Oct-20	N/A	Member of the Public	Metrolinx Engage	Gerrard Tunnel	Member of the public asked if two businesses will be impacted by the proposed tunnel.	30-Oct-20	Mx is currently identifying which properties are required and will only acquire properties that are absolutely necessary. Mx will be using the existing parking area to minimize the impacts of construction to commercial properties. Mx will contact impacted property owners.
29-Oct-20	N/A	Member of the Public	Metrolinx Engage	Consultation	Member of the public asked if there has been consultation with owners as the maps look like the tunnel will be going directly under their home yet they have not received any updates.	30-Oct-20	Mx is currently advancing the design and final assessments of property impacts is being confirmed. Mx will contact affected property owners. Mx is intending to shift the Corktown Station to reduce the impact to residents and traffic in the area.
31-Oct-20	N/A	Member of the Public	Metrolinx Engage	East Above Ground Portion	Member of the public asked if Mx reports any of the concerns or opposition they have received on the website and if so they could receive a link.	2-Nov-20	Mx provided links to where the public engagement process can be found.
31-Oct-20	N/A	Member of the Public	Email - Incoming	Subscription	Member of the public requested to be added to the newsletter.	2-Nov-20	Mx added the contact.
1-Nov-20	N/A	Member of the Public	Email - Incoming	Consultation	Member of the public asked when the noise and vibration report would be	2-Nov-20	Mx provided links to the noise and vibration impact studies where existing

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					made available and what Mx is doing for affected property owners. They asked what minimal noise means.		conditions have been completed. Mx noted forthcoming studies will consider anticipated impacts and will propose mitigation measures.
2-Nov-20	N/A	Member of the Public	Metrolinx Engage	Against above ground along Overlea Boulevard	Member of the public is against the above ground portion along Overlea Boulevard noting issues with traffic and safety risk.	2-Nov-20	Mx will continue to work closely with communities to address concerns and ensure the design is respectful to the communities.
3-Nov-20	N/A	Member of the Public	Email - Incoming	Potential Expropriation or impact to market value	Landowner noted they are experiencing vibration from a bulldozer nearby and expressed concerns with vibrations from subway machinery.	4-Nov-20	Mx confirmed they have mitigation measures to reduce and manage impacts to residents and communities during and after construction.
3-Nov-20	N/A	Member of the Public	Email - Incoming	North Segment	Landowner noted concerns with visual and noise impacts from the elevated system.	6-Nov-20	Mx has shared the questions about moving or burying the line with the project team for consideration and will continue to provide the community with updates as the project moves forward. Mx notes part of the concern with the underground tunnel is the geography would require building the deepest station in the network, causing long connections to buses at street level and longer construction timelines and more surface impacts.
3-Nov-20	N/A	Member of the Public	Email - Incoming	Leaside Park Terrace	Landowner provided a letter outlining their concerns and alternative solutions to the North segment.	6-Nov-20	Mx will continue to provide the community with updates, including more details about the steps they'll take to mitigate noise and vibration impacts as well as renderings and images for community feedback.
3-Nov-20	N/A	Member of the Public	Email - Incoming	Proposed Route Over Overlea Blvd.	Landowner expressed concern about the impact of the project being located outside of their home, including health of the residents, traffic, economic and property values, and environmental and heritage signs. They provided alternative routes to avoid the impacts.	6-Nov-20	Mx has shared the questions about moving or burying the line with the project team for consideration and will continue to provide the community with updates as the project moves forward. Mx notes part of the concern with the underground tunnel is the geography would require building the deepest station in the network, causing long connections to buses at street level and longer construction timelines and more surface impacts.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
3-Nov-20	N/A	Member of the Public	Email - Incoming	Property Expropriation - Queen Street West	Landowner requested confirmation which properties will be expropriated on Queen Street West.	5-Nov-20	Mx is currently identifying which properties are required and will only acquire properties that are absolutely necessary. Mx will be using the existing parking area to minimize the impacts of construction to commercial properties. Mx will contact impacted property owners.
3-Nov-20	N/A	Member of the Public	Email - Incoming	Ontario Line vs. GO Corridor Electrification	Member of the public asked for details on how Ontario Line would impact the GO Corridor electrification plan.	5-Nov-20	Mx confirmed they are able to streamline work with GO Expansion Plans where sections align to avoid multiple disruptions in the same neighbourhoods.
3-Nov-20	N/A	Member of the Public	Email - Incoming	Very Concerned Voter: Request Community Meeting.	Landowner expressed concern about the impact of the project being located outside of their home, including health of the residents, traffic, economic and property values, and environmental and heritage signs. They provided alternative routes to avoid the impacts.	6-Nov-20	Mx has shared the questions about moving or burying the line with the project team for consideration and will continue to provide the community with updates as the project moves forward. Mx notes part of the concern with the underground tunnel is the geography would require building the deepest station in the network, causing long connections to buses at street level and longer construction timelines and more surface impacts.
6-Nov-20	N/A	Member of the Public	Metrolinx Engage	Midtown GO Train Connection	Member of the public asked if there would be a Don Mills GO Station located near the Science Centre Stations for line 1 and the Ontario Line.	9-Nov-20	Mx will pass the suggestion along to their colleagues at GO Transit.
6-Nov-20	N/A	Member of the Public	Email - Incoming	Expropriations on Elevated Portion	Landowner noted that Mx's twitter account indicated expropriations of homes along the elevation portion and asked if their home is at risk of expropriation.	9-Nov-20	Mx noted the design work is still underway and assessments of whether property will be needed will be identified through further design. Based on the location of their home, Mx does not anticipate any impacts.
7-Nov-20	N/A	Member of the Public	Metrolinx Engage	Reconsider Thorncliffe Park to Flemingdon Park route	Member of the public asked Mx to reconsider routing the line between Thorncliffe Park to Flemingdon Park through green space and use the RoW on Overlea instead.	11-Nov-20	Mx noted they considered running the line over Overlea Boulevard but ultimately decided to adjust the route to avoid potential impacts to several important properties.
9-Nov-20	N/A	Member of the Public	Email - Incoming	Leslieville Station Name	Member of the public requested the name of the station not be Riverside due to the location.	11-Nov-20	Mx confirmed the names are working names and will be changed.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
10-Nov-20	N/A	Member of the Public	Email - Incoming	Property Expropriation - Queen Street West	Landowner noted they have received a letter a few years back that their property is one in plans for expropriation.	11-Nov-20	Mx confirmed that based on current information it appears that there will be minimal subsurface impacts to the address, once designs are finalized, Mx will contact them directly.
10-Nov-20	N/A	Member of the Public	Email - Incoming	Cost Comparisons	Member of the public asked Mx is able to share the cost comparisons for above ground versus below ground from Don River and Gerrard.	23-Nov-20	Mx provided rationale as to why the line will be above-ground to reduce community impacts, and long-needed improvements. They also confirmed the estimated cost for below ground construction would include \$1 billion.
10-Nov-20	N/A	Member of the Public	Email - Incoming	Expropriations on Elevated Portion	Landowner thanked Mx for the response and asked if their neighbours closer or abutting the corridor would be impacted.	11-Nov-20	Mx has begun outreach to property owners to ensure they are aware of the project and the implications it may have on their property. Mx will work directly with owners whose properties will be impacted and keep them updated as the project moves forward.
11-Nov-20	N/A	Member of the Public	Email - Incoming	Overlea Blvd/Thornccliffe Park	Landowner noted concerns and disappointment about the plans to be building the above ground portion right outside their condo. They express concerns with vibration, privacy issues, physical and visual intrusion, air quality and property values.	13-Nov-20	Mx has shared the questions about moving or burying the line with the project team for consideration and will continue to provide the community with updates as the project moves forward. Mx noted noise, vibration and visual impacts have been successful mitigated at global elevated transit lines and environmental studies and reports will have details to mitigate noise and vibration impacts.
12-Nov-20	N/A	Member of the Public	Metrolinx Engage	Construction Questions	Member of the public asked for information regarding the construction impacts of the above ground platform at Leslieville Station and a timeline.	17-Nov-20	Mx provided a link to their online newsletter to stay up to date on the project.
13-Nov-20	N/A	Member of the Public	Email - Incoming	Following up a call	Landowner is attempting to return a call, noting they just want to have a quick chat about the line's construction.	N/A	N/A
16-Nov-20	N/A	Member of the Public	Email - Outgoing	Community Notice - Surveying Work	Mx provided a notice regarding a survey crew visiting the laneway adjacent to the rail corridor, noting they may need access to the back of their property.	16-Nov-20	The landowner asked for clarification regarding 'access the back of your property'.
17-Nov-20	N/A	Member of the Public	Email - Outgoing	Community Notice - Surveying Work	Mx confirmed the field crew will first try to complete the survey from the laneway but may need to briefly access behind their property.	17-Nov-20	The landowner asked for confirmation if there is a request for access to their property.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
17-Nov-20	N/A	Member of the Public	Email - Outgoing	Community Notice - Surveying Work	Mx noted they will be working primarily in the laneway but will ring the doorbell if they are required to enter the property.	18-Nov-20	The landowner confirmed they would not like to have strangers on their property due to the pandemic.
17-Nov-20	N/A	Member of the Public	MPP Microsite	Property Concerns	Landowner submitted a question on MPP Microsite noting concerns about noise and intrusion on their home and property value.	25-Nov-20	Mx confirmed noise, vibration and visual impacts have been successfully mitigated for global projects, and provided a link to noise and vibration technologies. They also confirmed they are continuing environmental studies and reports and will have additional mitigation measures for noise and vibration impacts.
17-Nov-20	N/A	Member of the Public	Email - Incoming	Crossing of the Ontario Line after the Leaside Bridge.	Landowner provided a letter outlining their concerns and alternative solutions to the North segment.	17-Nov-20	Mx will continue to provide the community with updates, including more details about the steps they'll take to mitigate noise and vibration impacts as well as renderings and images for community feedback.
18-Nov-20	N/A	Member of the Public	Email - Outgoing	Community Notice - Surveying Work	Mx confirmed the team will not require entering their home and if they need to enter the backyard briefly they will maintain social distance and wear PPE at all times.	18-Nov-20	The landowner expressed their son plays in the backyard daily and having people on their property makes them uncomfortable.
19-Nov-20	N/A	Member of the Public	Email - Outgoing	Community Notice - Surveying Work	Mx will share the information with the team so they are aware.	19-Nov-20	The landowner thanked Mx.
22-Nov-20	N/A	Member of the Public	Metrolinx Engage	What about Distillery District	Member of the public asked why Mx did not plan a stop for Distillery District.	25-Nov-20	Mx replied the King and Berkeley station will service the Distillery District.
25-Nov-20	N/A	Member of the Public	Email - Incoming	Feedback Ontario Line	The landowner requested Mx keep the line underground.	27-Nov-20	Mx confirmed they are able to cut construction impacts by having the project in the Metrolinx-owned right of way and they will utilize mitigation measures to reduce operation impacts.
25-Nov-20	N/A	Member of the Public	Email - Incoming	Leslieville Station	The landowner asked where the Leslieville station will be built and requested details on the sound barriers.	26-Nov-20	Mx noted the station will be located at Queen Street East and it will fit almost exactly within the existing rail corridor footprint. The noise wall specifics have not yet been finalized.
26-Nov-20	N/A	Member of the Public	Email - Incoming	Leslieville Station	The landowner asked if the station will be built on McClary Park.	27-Nov-20	Mx is currently finalizing designs and will restore any parks as much as possible.
27-Nov-20	N/A	Member of the Public	Email - Outgoing	Noise and Vibration Report	Mx replied to comments received early October noting they are committed to minimizing and managing the effects of noise and vibration during construction and operations.	28-Nov-20	The member of the public thanked Mx.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
27-Nov-20	N/A	Member of the Public	Email - Incoming	Route	Member of the public asked for clarification on the routes.	1-Dec-20	Mx provided background information regarding the project and links to Metrolinx Engage.
29-Nov-20	N/A	Member of the Public	Email - Incoming	Ontario Line Feedback	Landowner noted they are supportive of the rail line going above ground as it is significantly cheaper and their only criticism is the change of alignment putting it slight out of reach to Regent Park.	N/A	N/A
29-Nov-20	N/A	Member of the Public	Email - Incoming	"Your Neighbourhood" Flyer	Member of the public noted they are support of the project and asked how they can provide support at upcoming events.	1-Dec-20	Mx thanked them for the support and noted community feedback is essential to their work. Mx also provided a link to the e-newsletter.
1-Dec-20	N/A	Member of the Public	Metrolinx Engage	Digging/Bridge	Member of the public asked if Pape Avenue will be completed by a tunnel boring machine or open pit as well as how will the project cross the Don Valley.	3-Dec-20	Mx confirmed the tunnelling below Pape Avenue will be completed by a tunnel boring machine and a bridge will be built at Minton Place to cross the Don Valley.
1-Dec-20	N/A	Member of the Public	Email - Incoming	Thank you for keeping our community at the heart of your planning	Landowner asked when construction will begin for the Leslieville Station and the attractive noise barriers will begin.	3-Dec-20	Mx estimates construction will begin mid-2023.
1-Dec-20	N/A	Member of the Public	Metrolinx Engage	Permanent pedestrian tunnel or bridge	Member of the public asked if there will be a permanent tunnel or bridge from eastern Liberty with access at Exhibition Place.	3-Dec-20	Mx confirmed they will be installing a temporary pedestrian bridge during construction. A permanent station concourse will improve connections for pedestrians.
1-Dec-20	N/A	Member of the Public	Email - Incoming	Your Ontario Line Newsletter	The member of the public expressed concern regarding the Entertainment District.	3-Dec-20	Mx provided links to project information.
1-Dec-20	N/A	Member of the Public	Metrolinx Engage	Anticipated actual start date	Member of the public asked when they can expect shovels in the ground.	3-Dec-20	Mx replied that Early Works is anticipated to begin in 2021 and major construction from Exhibition Station to the Don Yard to start mid-2023.
2-Dec-20	N/A	Member of the Public	Email - Incoming	Ontario Line	Landowner expressed concerns that Mx is going above ground in Riverside to save a little money at the expense of the local community. They also state issues with the surface subway being built close to residential development, specifically with the surface lanes increasing from 3 to 6.	3-Dec-20	Mx replied that the above ground alignment has unique and significant benefits to the community as it is the least disruptive option, reducing property impacts, improving customer services and provides much needed higher order transit access compared to tunneling.
3-Dec-20	N/A	Member of the Public	Email - Incoming	Ontario Line	Landowner thanked Mx for their prompt reply. The landowner expressed	11-Dec-20	Mx confirmed the tunneled line would have to be buried approximately 40

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					concerns with Mx comments on the rail footprint, depth of the tunnel and station and issues with underground stations.		metres from East Harbour to Gerrard and Carlaw to avoid major sewer mains. They also confirmed they will compensate trees in accordance to their guidelines and will add effective, well-designed sound barriers, landscaping and new trees and greenery to reduce sound and visibility of the corridor.
3-Dec-20	N/A	Member of the Public	Metrolinx Engage	Above Ground Trains	Member of the public is concerned with train noise above ground through the neighbourhood.	4-Dec-20	Mx provided rationale as to why the line will be above-ground to reduce community impacts, and long-needed improvements.
3-Dec-20	N/A	Member of the Public	Metrolinx Engage	Permanent pedestrian tunnel or bridge	Member of the public suggested a permanent eastern bridge/tunnel be considered between Atlantic and Strachan.	4-Dec-20	Mx will share the feedback with the team.
3-Dec-20	N/A	Member of the Public	Metrolinx Engage	Digging/Bridge	Member of the public noted that PACCT is dropping off sheets with information regarding the project.	4-Dec-20	Mx noted they are having regular dialogue with PACCT.
3-Dec-20	N/A	Member of the Public	Email - Incoming	GO Electrification / Coordination with Ontario Line	Landowner asked for Mx to clarify the work to electrify GO Line 4 in the Joint Corridor where the OL and GO will run side-by-side will be done at the same time.	4-Dec-20	Mx confirmed they will be coordinating the GO expansion plans with the Ontario Line construction to avoid multiple disruptions.
4-Dec-20	N/A	Member of the Public	Email - Incoming	GO Electrification / Coordination with Ontario Line	Landowner asked for clarification if GO Line 4 will be electric.	4-Dec-20	Mx confirmed that the GO expansion work will include electrification.
4-Dec-20	N/A	Member of the Public	Email - Incoming	GO Electrification / Coordination with Ontario Line	Landowner asked for clarification on when electric tracks will be built.	7-Dec-20	Mx confirmed it is anticipated to start in their area in summer 2021.
5-Dec-20	N/A	Member of the Public	Email - Incoming	No Subject	Landowner confirmed they would like just the report without appendices.	7-Dec-20	Mx confirmed they will send the report.
5-Dec-20	N/A	Member of the Public	Email - Incoming	Bruce Mackey Park	Landowner asked what the anticipated impact on Bruce Mackey Park.	8-Dec-20	Mx replied that they will work with contractors and the City to restore them as much as possible, including compensation for removed trees. They will provide updates about impacts to park spaces as soon as designs are finalized.
6-Dec-20	N/A	Member of the Public	Email - Incoming	RFPs	Member of the public asked if RFPs are still coming out this fall.	8-Dec-20	Mx confirmed they are expecting them to come out shortly.
7-Dec-20	N/A	Member of the Public	Email - Incoming	Solution to the Scarborough Transit Issue	Member of the public provided input on a potential subway line through Scarborough.	8-Dec-20	Mx has shared the feedback with the Scarborough Subway Extension team.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
9-Dec-20	N/A	Member of the Public	Email - Incoming	Pandemic Impact	The landowner asked if it was possible due to the pandemic decreasing demand to build the line underground.	10-Dec-20	Mx noted Ontario Line is twice the length of the Downtown Relief Line and they will utilize their right of way to cut down on construction impacts to communities. They will also add effective, well-designed sound barriers, landscaping and new trees and greenery to reduce the sound and visibility.
10-Dec-20	N/A	Member of the Public	Email - Incoming	Pandemic Impact	The landowner replied that the project exists for political reasons and the project will negatively impact the neighbourhoods permanently.	11-Dec-20	Mx thanked the landowner for their thoughts.
10-Dec-20	N/A	Member of the Public	Email - Outgoing	Your Property	Mx confirmed that the design has developed sufficiently and they are confident that the landowner's property will not be directly impacted by the construction of the project.	11-Dec-20	Landowner thanked Mx for the information.
14-Dec-20	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public asked why the line is not extended from Eglinton to meet Sheppard Line at Don Mills.	15-Dec-20	Mx confirmed they are laying extra track north of Science Centre Station to protect for any future expansion if they receive additional funding.
15-Dec-20	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public noted their question was not answered.	16-Dec-20	Mx replied that the option was not studied as part of the initial options and they are making the best use of available funding to increase access to transit.
15-Dec-20	N/A	Member of the Public	Email - Incoming	Construction and Rail Noise	Landowner expressed concern about construction noise and rail noise and would like to know the alignment of the train.	17-Dec-20	Mx confirmed where the line will be underground and reasoning behind this design decision. They provided a link to station-specific maps. Mx also noted they have a number of measures to reduce and manage impacts to residents during construction and operation.
15-Dec-20	N/A	Member of the Public	Email - Incoming	Final ECR	Landowner asked for a copy of the final ECR.	15-Dec-20	Mx provided a link to the full ECR.
15-Dec-20	N/A	Member of the Public	Email - Incoming	Final ECR	The landowner asked where the location of the line proceeds North of Pape Avenue and the impact on their immediate neighbourhood.	17-Dec-20	Mx confirmed the location of the route.
17-Dec-20	N/A	Member of the Public	Email - Incoming	Pape Ave	Landowner asked if their property will be affected now that the design has changed.	22-Dec-20	Mx will contact any property owners of any impacts, including those that will no longer be affected by the project.
17-Dec-20	N/A	Member of the Public	Email - Incoming	Renaming of a Station Name	The member of the public suggested a name for Cosburn station.	17-Dec-20	Mx replied that they appreciate their name suggestion.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
18-Dec-20	N/A	Member of the Public	Metrolinx Engage	How many trains?	Member of the public asked how many trains will travel per direction.	18-Dec-20	Mx confirmed that at peak service 34-40 trains will be able to run per hour, per direction.
18-Dec-20	N/A	Member of the Public	Email - Incoming	Ontario Line	Landowner asked Mx to justify the above-ground portion of the line south of Gerrard and if there will be a separate fee from the TTC. They also asked how much of Jimmie Simpson park will be impacted.	18-Dec-20	Mx replied that by running the line through the existing corridor they are able to cut construction impacts in half and minimize the construction footprint. Mx will continue to limit the footprint of their work and will restore the park to its original state or better. The line will also be integrated with TTC as part of the TTC network, accessed with TTC fare and PRESTO.
19-Dec-20	N/A	Member of the Public	Metrolinx Engage	Questions about the Project	Member of the public asked when station design renderings will be released.	22-Dec-20	Mx released the Preliminary Design Business Case and request for proposal for procurement packages which will move forward towards creating the designs.
21-Dec-20	N/A	Member of the Public	Email - Incoming	Ontario Line	The landowner noted no conversation with the neighbourhood has occurred and no one in the neighbourhood wants the impacts to save 4 minutes. They also suggested the line could come above ground to cross the Don River but can remain underground at Gerrard.	22-Dec-20	Mx replied that they are committed to listening to the residents of Riverside and Leslieville to provide them with the information they need about the benefits while helping to manage impacts.
21-Dec-20	N/A	Member of the Public	Email - Incoming	Ontario Line Project	Landowner asked what plans are being made to protect neighbourhood streets from construction vehicles, sound, and pollution.	22-Dec-20	Mx provided a link to the final ECR that includes anticipated impacts of construction and operation, noting they have a number of measures to reduce and manage impacts to residents and communities during and after construction.
22-Dec-20	N/A	Member of the Public	Email - Outgoing	Your Inquiry	Mx noted they do not anticipate impacts to the land owners property and they will contact them if there are any impacts.	22-Dec-20	The landowner asked for clarification if Mx will not be running under their property at any point.
22-Dec-20	N/A	Member of the Public	Email - Outgoing	Your Inquiry	Mx confirmed that at the current time the tunnel is not anticipated to be under their home, and they do not anticipate any other requirements of their property.	22-Dec-20	The landowner thanked Mx.
23-Dec-20	N/A	Member of the Public	Email - Incoming	Ontario Line Project	Landowner asked for specific plans regarding their street during construction.	29-Dec-20	Mx does not have the specific information regarding their street but would like to stay in touch to provide updates.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
24-Dec-20	N/A	Member of the Public	Metrolinx Engage	Possible extension from Science Centre to Toronto Zoo	Member of the public asked when construction will begin and if they are considering expanding the line from the Science Centre to Toronto Zoo.	29-Dec-20	Mx confirmed construction will begin in 2023 and the north segment is expected to begin in 2024. They have not concerned an extension to the zoo but they will lay tracks north of the station to protect for future expansion.
28-Dec-20	N/A	Member of the Public	Metrolinx Engage	Future Expansion	Member of the public asked what the plans are to expand the line west or north of Exhibition.	29-Dec-20	Mx confirmed the route ends at Exhibition Station but tail tracks will be laid west of the station to protect for future expansion.
29-Dec-20	N/A	Member of the Public	Metrolinx Engage	Future Expansion	Member of the public of the public asked if it will be extended west along the Lakeshore or north to Dundas West?	29-Dec-20	Mx replied they do not currently have plans to extend the line further west or north of Exhibition Station.
4-Jan-21	N/A	Member of the Public	Metrolinx Engage	Flemington Park Station	Member of the public asked why the Don Mills alignment and Flemington Park Station on the east side of Don Mills, why isn't it below street level similar to the Humber College station on Line 6?	N/A	N/A
4-Jan-21	N/A	Member of the Public	Metrolinx Engage	Moss Park Station	Member of the public requested confirmation regarding why Moss Park station isn't at Sherbourne and if the station isn't going to be at Sherbourne why is a connection to Sherbourne bus listed as a feature.	N/A	N/A
4-Jan-21	N/A	Member of the Public	Metrolinx Engage	Don Yard	Member of the public asked how much GO train and VIA costumers will be inconvenienced during construction at Richmond Hill GO. How much will GO and VIA operations need to change because of OL?	N/A	N/A
4-Jan-21	N/A	Member of the Public	Metrolinx Engage	Station Names	Member of the public noted issues with the station names as they are not simple or unique.	6-Jan-21	Mx noted the names are simply working names and will include a community engagement process to select the final names, they also will work with VIA service to ensure all service is maintained. Mx replied to an additional question regarding the alignment along Don Mills to Flemingdon Park and Moss Park Station.
5-Jan-21	N/A	Member of the Public	Email - Incoming	Metrolinx Adverts in Buildings Garbage	Member of the public noted that a large amount of Mx post cards were in his building's garbage.	6-Jan-21	Mx asked for the date and address the postcards were found.
6-Jan-21	N/A	Member of the Public	Email - Incoming	Metrolinx Adverts in Buildings Garbage	The member of public provided the date and address.	11-Jan-21	Mx replied that their contractor did not return the remaining postcards at the end

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							of their deliveries and will reinforce the importance of a zero-waste approach.
6-Jan-21	N/A	Member of the Public	Email - Incoming	Express Route	Landowner noticed the line will run on the existing GO track from Gerrard to Eastern Station and suggested providing an additional "Express Route" from Eastern Station to Union Station.	11-Jan-21	Mx confirmed the line will run on dedicated tracks next to the GO Trains but customers will be able to change between GO Train and Ontario Line trains at the future East Harbour station.
6-Jan-21	N/A	Member of the Public	Email - Incoming	Feedback/Input	Member of the public provided input on several of the stations.	11-Jan-21	Mx noted the current names are simply working names and there will be community engagement to select the final names. Mx also confirmed tail tracks will be laid west of Exhibition Station to protect future expansion.
7-Jan-21	N/A	Member of the Public	Email - Incoming	Ontario Line Inquiry	Landowner asked if their property will be impacted.	8-Jan-21	Mx replied that they are looking into this and will provide more information.
7-Jan-21	N/A	Member of the Public	Email - Incoming	Art Trackless Trains	The landowner provided an article from a website for Mx to consider.	7-Jan-21	Mx thanked the landowner for the photo.
11-Jan-21	N/A	Member of the Public	Email - Incoming	Metrolinx Adverts in Buildings Garbage	The member of public noted that nothing was delivered to their doors.	14-Jan-21	Mx confirmed their building was not part of the delivery route for this phase of outreach.
12-Jan-21	N/A	Member of the Public	Metrolinx Engage	Impact to Tiverton Ave	Member of the public asked how much the additional rail lines will encroach on Tiverton Avenue and if there are any expropriations as a result.	14-Jan-21	Mx expects much of the new infrastructure will fit within the existing rail corridor and will add n effective noise barriers. Mx will only acquire property where necessary and will contact any impacted property owners.
13-Jan-21	N/A	Member of the Public	Email - Incoming	Trackless Trams v Light Rail	Member of the public provided a link to an article discussing trackless trams and light rail.	13-Jan-21	Mx thanked them for sharing the article.
14-Jan-21	N/A	Member of the Public	Email - Incoming	Metrolinx Adverts in Buildings Garbage	The member of the public expressed concern about how this situation is being handled.	14-Jan-21	Mx confirmed they are looking into the matter with their contractor and would like to have a conversation to discuss how they are addressing the situation.
17-Jan-21	N/A	Member of the Public	Metrolinx Engage	Community Engagement Centre	Member of the public asked if Mx is hiring at the Queen Street community engagement centre.	19-Jan-21	Mx replied they have delayed the opening of the offices due to the pandemic and they are not currently hiring.
17-Jan-21	N/A	Member of the Public	Email - Incoming	Private and Public Money	Member of the public asked if OL can have public private support and if that would make the line longer with branches that attract private money.	9-Feb-21	Mx confirmed that if additional funding be available there are protections in place for possible expansion, and they are completing the project as a P3 model to allow them to access private financing.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
19-Jan-21	N/A	Member of the Public	Email - Incoming	OL Extension	The member of the public is opposed to the aboveground extension from East Harbour to Gerrard Carlaw.	20-Jan-21	Mx provided rational as to why the line will be above-ground to reduce community impacts, and long-needed improvements.
20-Jan-21	N/A	Member of the Public	Email - Incoming	Private Investment	Member of the public asked if it is too late to get private investment involved to make the project bigger.	22-Jan-21	Mx replied with the current available funding this alignment is the only one Mx is advancing but they will protect the line for possible future expansion. Mx is using a P3 procurement model to allow for access to private financing.
21-Jan-21	N/A	Member of the Public	Email - Incoming	Query	Member of the public asked where the line is crossing the Don River.	26-Jan-21	Mx confirmed the line will cross the Don River and Don Valley River Parkway near Eastern Avenue, southwest of Corktown Commons Park.
21-Jan-21	N/A	Member of the Public	Email - Incoming	First Parliament Site - Toronto	Landowner noted concerns regarding First Parliament in Toronto, noting the site is of provincial and national importance from the War of 1812.	5-Feb-21	Mx confirmed they are working with the City, MHSTCI and Ontario Heritage Trust to ensure an outcome for the site that everyone can be proud of. Mx will make every effort to minimize impacts on cultural and heritage sites. Mx provided links to where the landowner can learn more about how Ontario Line will protect and pay tribute to the legacy of the First Parliament Site.
22-Jan-21	N/A	Member of the Public	Email - Incoming	Cost Comparisons	The member of the public asked for clarification as to why Mx is delayed in provided the underground costing to the City.	29-Jan-21	Mx confirmed the detailed estimate has not been completed given the technical challenges of making this route infeasible.
25-Jan-21	N/A	Member of the Public	Email - Incoming	First Parliament Site	Landowner wants to reinforce the important of the First Parliament Site and the need to preserve it.	26-Jan-21	Mx confirmed they are working with the City, MHSTCI and Ontario Heritage Trust to ensure an outcome for the site that everyone can be proud of. Mx will make every effort to minimize impacts on cultural and heritage sites. Mx provided links to where the landowner can learn more about how Ontario Line will protect and pay tribute to the legacy of the First Parliament Site.
26-Jan-21	N/A	Member of the Public	Metrolinx Engage	Amazing	Member of the public noted they love the above ground line in their neighbourhood.	26-Jan-21	Mx thanked them for their feedback and provided a link to the online newsletter.
28-Jan-21	N/A	Member of the Public	Email - Incoming	Contact Information	Landowner thanked Mx for meeting with them and provided contact information to continue to receive information.	29-Jan-21	Mx provided the PowerPoint slides from their meeting and asked if they would like to be included in an upcoming meeting.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
29-Jan-21	N/A	Member of the Public	Email - Incoming	Ontario Line and its path of destruction	Member of the public expressed concerns with a reduction of green space and the appearance of sound walls.	17-Feb-21	Mx confirmed the line will remain largely in the existing rail corridor, reduce impacts on parks and leave more parkland when construction is complete. The sound barriers are currently in initial design but will be well-designed, include landscaping, trees, and greenery to reduce sound and provide a pleasant aesthetic.
29-Jan-21	N/A	Member of the Public	Email - Incoming	Work at Riverdale and Pape	Member of the public asked if notices of upcoming work will be delivered to households and noted there is ongoing construction at the northwest corner of Pape and Riverdale.	N/A	N/A
30-Jan-21	N/A	Member of the Public	Metrolinx Engage	Effect of project on Berkeley Street	Landowner asked if there is any impact to their property.	3-Feb-21	Mx replied based on their current plans the line will pass deep beneath the property and will contact them with any directly if there are any anticipated impacts.
3-Feb-21	N/A	Member of the Public	Email - Incoming	Pile Driving activity by the Don River	The landowner asked for confirmation regarding a pile driver at the Don River.	4-Feb-21	Mx confirmed the work is not related to Mx projects and is part of the CoT's work on the Coxwell Bypass Project.
4-Feb-21	N/A	Member of the Public	Metrolinx Engage	King/Bathurst	Member of the public asked where the subway station will be at King/Bathurst.	9-Feb-21	Mx replied that the station entrance locations is still being determined but it will be underground.
7-Feb-21	N/A	Member of the Public	Metrolinx Engage	Effect of project on Berkeley Street	The landowner expressed concern with vibration damage to their building and requested that Mx purchase the property from them at fair market value if the line continues under their home.	9-Feb-21	Mx confirmed further studies will be completed including a Heritage Detailed Design report which will include impacts and associated mitigation options Mx will deploy. Mx will contact any property owners once impacts are finalized.
7-Feb-21	N/A	Member of the Public	Email - Incoming	Cost Comparisons	The member of the public noted concern about the adequate consultation with the neighbourhoods affected or considering relevant factors other than the perceived cost-savings.	19-Feb-21	Mx is collecting additional information to respond to the most recent email.
9-Feb-21	N/A	Member of the Public	Email - Outgoing	Website	Mx provided a link to the Ontario Line website.	N/A	N/A
11-Feb-21	N/A	Member of the Public	Metrolinx Engage	North of science centre	Member of the public asked if there is any plan to extend the line north of the Science Centre.	12-Feb-21	Mx confirmed they do not have the funding but they will lay tail tracks north of the Science Centre station for future expansion.
12-Feb-21	N/A	Member of the Public	Email - Incoming	Metrolinx's gross hypocrisy	Landowner noted concern regarding the posts of Mx blogs that building the line	25-Feb-21	Mx replied and provided context and responses to the landowner concerns,

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					underground would be disruptive, construction timing, tree compensation and lack of consultation.		noting they are committed to a regular dialogue with the community, sharing updates and seeking feedback.
12-Feb-21	N/A	Member of the Public	Email - Incoming	Ontario Line	The member of the public expressed concerns with the tunnel location noting people in Leslieville will have their lives disrupted during construction and do not want their lives disrupted by the noise and danger of trains.	19-Feb-21	Mx provided rationale regarding why the design decisions are to put community interests first and will result in fewer property impacts, quicker construction, and a better customer experience. Mx noted the underground stations and tunnel would need to be approximately 38 metres below ground.
13-Feb-21	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public expressed concerns with the portal south of Queen, and requested plans for the lines within the existing GO Corridor, noise barrier walls.	19-Feb-21	Mx provided rationale as why the above ground route provides benefits and the poral locations. Mx is hoping to provide design details for the noise barriers in the upcoming months.
16-Feb-21	N/A	Member of the Public	Email - Incoming	Metrolinx and Infrastructure Ontario Partnership Agreement	The member of the public asked where they can obtain the partnership agreement for their university report.	17-Feb-21	Mx provided information regarding the public-private partnership or P3 projects.
17-Feb-21	N/A	Member of the Public	Metrolinx Engage	Don River Bridges	Member of the public asked about when and how the bridges over the Don River will be procured.	17-Feb-21	Mx confirmed the expansion of the existing rail bridge will be included in the Lower Don Bridges Early Works project.
18-Feb-21	N/A	Member of the Public	Metrolinx Engage	Don River Bridges	Member of the public asked for clarification on the procurement.	19-Feb-21	Mx replied that the project will have postings on the MERX portal when procurement begins.
18-Feb-21	N/A	Member of the Public	Metrolinx Engage	Jimmie Simpson Park	Member of the public asked if the project will result in the removal of Jimmie Simpson Park.	19-Feb-21	Mx confirmed the line will remain almost entirely in the existing rail corridor and reduce the impact on parks. Mx is currently finalizing design and will have additional impacts and mitigation measures in the future.
19-Feb-21	N/A	Member of the Public	Email - Incoming	Ontario Line	The member of the public noted property impacts may be worse when burying the line, but property impacts will be permanent with the current design. They also asked for clarification regarding how the Metrolinx Vegetation guidelines will be implemented.	23-Feb-21	Mx confirmed that going underground east of the Don River would be extremely disruptive to Leslieville and Riverside communities, including buying homes, impacting businesses and most parks. Mx is also still developing their initial designs for sound barrier and station designs and are avoiding impacting the Jimmie Simpson Recreation Centre.
22-Feb-21	N/A	Member of the Public	Email - Outgoing	East Section	Mx provided links to the maps and proposed station locations in the East Section.	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
23-Feb-21	N/A	Member of the Public	Email - Incoming	Running above ground to bring you more benefits	The landowner asked for information regarding increase fumes from rail traffic and if the train will run on hydro.	24-Feb-21	Mx confirmed the trains will be electric and they are planning on electrifying the GO corridor, therefore reducing fumes from trains.
24-Feb-21	N/A	Member of the Public	Email - Incoming	Running above ground to bring you more benefits	Member of the public is upset with the brochure content.	N/A	N/A
24-Feb-21	N/A	Member of the Public	Email - Outgoing	Following up: Questions about Hydrovac Work	Mx confirmed equipment will not be left on-site and will not require a laydown area.	24-Feb-21	The member of the public noted that it is challenging to operate large vehicles on their street but ask the crew be courteous to the neighbours and children. They asked if there is a contact is any issues arise.
24-Feb-21	N/A	Member of the Public	Email - Outgoing	Metrolinx, an Agency of the Government of Ontario	Mx confirmed the First Parliament site is needed for the future Corktown subway station and will meet a mutually beneficial agreement with the City.	24-Feb-21	The member of the public asked for clarification regarding the location of the future Corktown station as they are seeing different media reports.
25-Feb-21	N/A	Member of the Public	Email - Outgoing	Following up: Questions about Hydrovac Work	Mx provided the contact information for the Community Relations team.	5-Mar-21	The member of the public noted crew were parked incorrectly and asked for assistance.
26-Feb-21	N/A	Member of the Public	Email - Outgoing	Metrolinx, an Agency of the Government of Ontario	Mx replied that the station will be located on the east side of Berkely between King and Front, the First Parliament Site will be used to support construction.	N/A	N/A
26-Feb-21	N/A	Member of the Public	Email - Outgoing	Pape	Mx confirmed the upcoming EIAR will include noise and vibration impacts during both construction and operation, and mitigation measures. The tunnels will be 20 to 30 meters below ground and will reduce noise and vibration impacts in that area.	N/A	N/A
27-Feb-21	N/A	Member of the Public	Email - Incoming	Noise Misinformation	The member of the public noted trees do not reduce noise as you would need a large depth of trees to provide any reduction.	1-Mar-21	Mx confirmed they will be using plants to break the visual impact of the noise and retaining walls which will be used with other measures to reduce noise and vibration.
1-Mar-21	N/A	Member of the Public	Email - Outgoing	Historic Rail Station (Leslieville)	Mx found information as to why the historic rail station cannot be used as it has been demolished in 1974. Mx confirmed they will preserve any heritage elements.	N/A	N/A
1-Mar-21	N/A	Member of the Public	Email - Outgoing	Website	Mx provided a link to the website for the Landowner to review maps.	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
1-Mar-21	N/A	Member of the Public	Email - Outgoing	Website	Mx provided a link to the website for the Landowner to review the alignment and stations.	N/A	N/A
2-Mar-21	N/A	Member of the Public	Email - Incoming	Gerrard Station	Landowner is looking to purchase homes near Gerrard Station and would like to know which homes will be affected by the project.	2-Mar-21	Mx requested an address of the property they are looking at so they can look into it. Mx confirmed final assessments are still being completed.
2-Mar-21	N/A	Member of the Public	Email - Incoming	Ontario Line	Landowner requested when additional information will be provided.	4-Mar-21	Mx confirmed that some impacts as part of the Relief Line South proposal will change. Mx will contact impacted landowners directly once property impacts are confirmed.
2-Mar-21	N/A	Member of the Public	Email - Incoming	Hurontario and Dundas	The member of the public asked where they can get information.	3-Mar-21	Mx provided a link to the North Neighbourhood Update portion of their website.
3-Mar-21	N/A	Member of the Public	Email - Incoming	Ontario Line	The member of the public expressed concern with the above ground portion being due to the East Harbour development and asked for clarification regarding the grade the subway could climb.	9-Mar-21	Mx confirmed the Ontario Line project is fundamentally different than the Downtown Relief Line as it covers a larger geography and has more stations. Mx also noted surface impacts of constructing stations underground is significant and building and operating above-ground will reduce construction impacts on area residents and businesses.
5-Mar-21	N/A	Member of the Public	Email - Outgoing	Following up: Questions about Hydrovac Work	Mx will contact the contractor and will have a team member on site to monitor the work.	8-Mar-21	The member of the public noted the crew is blocking in vehicles and on private property.
5-Mar-21	N/A	Member of the Public	Email - Incoming	Maintenance facility on the north line	Member of the public asked if the area is being considered for the maintenance facility.	9-Mar-21	Mx replied that plans and designs are still being finalized and they will be working closely with property owners in the area to review any impacts to existing businesses.
5-Mar-21	N/A	Member of the Public	Email - Incoming	Metrolinx	Member of the public sent an email to the MECP noting concerns with the project.	23-Mar-21	Mx confirmed they have undertaken additional assessments that were not previously examined as part of the 2017 EPR and updated assessments of noise, vibration and air quality has been undertaken. Mx is focused on building a faster, more efficient, and sustainable regional transit network.
6-Mar-21	N/A	Member of the Public	Email - Incoming	Community Relations	Member of the public would be interested in assisting.	9-Mar-21	Mx provided a link to their job portal.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
8-Mar-21	N/A	Member of the Public	Email - Outgoing	Following up: Questions about Hydrovac Work	Mx apologized for the inconvenience, they have contacted their contractor again who confirmed the vehicles are now parked on the public roadway and work should be wrapping up in a few hours.	8-Mar-21	The member of the public noted the vehicles are still parked in driveways and blocking in other cars.
8-Mar-21	N/A	Member of the Public	Email - Incoming	Hopedale Ave and Minton PI survey	Landowner asked how the project will affect their property and if the upcoming survey will include their property.	N/A	N/A
8-Mar-21	N/A	Member of the Public	Email - Incoming	Hopedale Ave and Minton PI survey	Landowner asked why such a large area is being explored for the upcoming survey and asked for communication from Mx.	9-Mar-21	Mx confirmed the intent of their survey is to collect further data in the public right-of-way to avoid future construction impacts.
8-Mar-21	N/A	Member of the Public	Email - Incoming	good enough for Leaside but not Riverdale/Leslieville	The member of the public expressed concerns with the above ground portion of the line, noting it will impact their neighbourhoods.	9-Mar-21	Mx confirmed surface stations will save customers significantly more time as they would have to be almost 40m deep to avoid sewer mains and building and operating in the rail corridor Mx already owns will reduce construction and property impacts. Mx will also minimize their impacts to parks and return the land to the same condition or better once construction is complete.
9-Mar-21	N/A	Member of the Public	Email - Incoming	Maintenance facility on the north line	Member of the public asked for again if their site is being considered.	10-Mar-21	Mx confirmed that they are still identifying which properties are required and will contact property owners directly.
9-Mar-21	N/A	Member of the Public	Email - Incoming	good enough for Leaside but not Riverdale/Leslieville	The member of the public responded that any loss of park space is unacceptable and 240 seconds is not enough time to justify not burying the line.	N/A	N/A
9-Mar-21	N/A	Member of the Public	Email - Incoming	Noise Misinformation	The member of the public noted the material released to the community misrepresents the measures applied to manage noise.	11-Mar-21	Mx confirmed the text was a mistake and they are committed to work with their team on increased factual review in any future product development as they want to be accurate and clear when communicating with the public.
9-Mar-21	N/A	Member of the Public	Email - Incoming	Following up: Questions about Hydrovac Work	The member of the public provided a list of questions from the neighbourhood, including concerns with the community being ignored with respect on how work is being completed, how does Mx ensure contractors respond to direction, proof the direction was given and penalties to contractors that don't observe directions.	12-Mar-21	Mx confirmed they put contracts in place that outline specific rules and responsibilities of their contractors, they will have an additional representative on-site to ensure work is adhering to plans, permits and what is being communicated to residents. A member of the community relations team will be on site the morning

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							of the work start date. Mx also confirmed they had contacted the contractor and they are committed to make improvements in the area, noting that communication from the contractor and City was not provided to their team and the spotter did not complete the task of knocking on residential doors regarding temporary parking impacts.
10-Mar-21	N/A	Member of the Public	Email - Incoming	Intercepting Kitchener GO Line	Member of the public suggested having the project service GO riders using the Kitchener/Barrie/UPEXpress Line by extending it to Union Station.	11-Mar-21	Mx thanked the member of the public for their suggestion.
11-Mar-21	N/A	Member of the Public	Email - Incoming	Hopedale Ave and Minton PI survey	Landowner thanked Mx for the information and noted the miscommunication is not helpful.	N/A	N/A
12-Mar-21	N/A	Member of the Public	Email - Outgoing	Touching Base re: Ontario Line	Mx touched base to note they are still working and fine-tuning their plans and do not have an update on the landowner's property at this time.	N/A	N/A
12-Mar-21	N/A	Member of the Public	Email - Outgoing	Update	Mx provided an update on the project, including noting the timeline for the draft of the EIAR.	N/A	N/A
13-Mar-21	N/A	Member of the Public	Email - Incoming	Bury the Line!!!	Landowner noted that Leslieville is a well established and older neighbourhood and having the train run above ground would only cost the neighbourhood where it passes through.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.
13-Mar-21	N/A	Member of the Public	Email - Incoming	Needs to become the Relief Line Again	Member of the public requested the project becomes the Relief Line and go underground once more due to the health and safety of their community.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
13-Mar-21	N/A	Member of the Public	Email - Incoming	Questions	The member of the public asked if the subway will be running under their condo building and asked if there will be issues with flooding in the area.	17-Mar-21	Mx confirmed the line will run below that building however there are not anticipated impacts to the building. They are working with the TRCA to ensure the plans are coordinated with flood protection plans in the area.
14-Mar-21	N/A	Member of the Public	Email - Incoming	Save Jimmie Simpson	Member of the public expressed concerns with noise and vibration, distance to residential homes, reduction of parkland, potential construction prior to approval and lack of consultation.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.
14-Mar-21	N/A	Member of the Public	Email - Incoming	Please #BuryTheLine	Landowner requests consideration to putting the line underground to prevent impacts to the neighbourhood, parks, and communities.	N/A	N/A
14-Mar-21	N/A	Member of the Public	Email - Incoming	Don't ruin Riverdale	Member of the public wrote in to support the Riverdale community to protect the local environment.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.
15-Mar-21	N/A	Member of the Public	Metrolinx Engage	Ontario Line crates more problems than it solves	The member of the public expressed concerns with the underground portion of the line through downtown Toronto.	16-Mar-21	Mx has completed an analysis and shows going underground for the downtown core is possible and safe. Mx is also completing environmental studies and design to understand the impacts and associated mitigation measures.
15-Mar-21	N/A	Member of the Public	Metrolinx Engage	Noise	Member of the public is concerned about the added noise exposure and asked what noise levels are anticipated.	17-Mar-21	Mx is completing additional studies to provide the community with a full understanding of the impacts and associated mitigation measures.
15-Mar-21	N/A	Member of the Public	Email - Outgoing	Booking Confirmation - Phone Call	Mx confirmed they will be connecting with the landowner via phone.	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
15-Mar-21	N/A	Member of the Public	Email - Incoming	Dear Sir	Landowner expressed their concern regarding the above ground expansion of the line through Riverside and Leslieville.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.
15-Mar-21	N/A	Member of the Public	Email - Incoming	Ontario Line Concerns	Landowner noted they have an urgent concern as there will be loud trains running close to their house with the current proposal and noise walls will not be effective to reduce significant noise.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.
15-Mar-21	N/A	Member of the Public	Email - Incoming	Save Jimmie Simpson	Member of the public expressed concerns with noise and vibration, distance to residential homes, reduction of parkland, potential construction prior to approval and lack of consultation.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.
15-Mar-21	N/A	Member of the Public	Email - Incoming	Burying the Ontario Line	Landowner noted that building the line above ground would have serious health and safety implications in the short term, but would also impact the community forever.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.
16-Mar-21	N/A	Member of the Public	Email - Incoming	Ontario Line and its impacts to Leslieville	The landowner provided a letter expressing their concern for Jimmie Simpson Park and the neighbourhood.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational

							noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.
16-Mar-21	N/A	Member of the Public	Email - Incoming	Booth Avenue	Landowner asked which houses will be demolished for the development of the line.	17-Mar-21	Mx replied they do not anticipate any direct property impacts, however details will be confirmed during detailed design. Mx will contact any property owners directly if their property will be directly or partially impacted.
17-Mar-21	N/A	Member of the Public	Email - Incoming	Booth Avenue	The landowner asked for the timeframe of completion of the final assessment, noting they have concerns regarding dust, noise, and potential train derailment.	19-Mar-21	Mx confirmed they do not anticipate property impacts and as they move through the construction phase they have a variety of best practices to manage dirt and dust. They will also use solutions to monitor and mitigate noise and vibration impacts. They will continue to maintain a safe operation.
17-Mar-21	N/A	Member of the Public	Email - Outgoing	Video Meeting Details	Mx provided details on their upcoming video meeting.	N/A	N/A
18-Mar-21	N/A	Member of the Public	Metrolinx Engage	Lower Don Bridges	Member of the public asked to remain in the loop of the design of the bridges with the possibility of providing bending and fabrication on them.	19-Mar-21	Mx provided a link to the procurement that will begin this summer.
18-Mar-21	N/A	Member of the Public	Email - Incoming	Bury the Line	Landowner suggested running the line below grade or utilize the option of going under the river from Union Station.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.
18-Mar-21	N/A	Member of the Public	Email - Incoming	Bury the Line	The landowner values the green space and trees in front of the tracks, quiet between the infrequent trains and not having an unsightly sound barrier. They asked for Mx to leave the street attractive, green, bright, and quiet as possible.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							fit in the community and will protect as much greenery as possible.
18-Mar-21	N/A	Member of the Public	Email - Incoming	Ontario Line Build through the Leslieville Area	Landowner noted their concern with the potential impact to many green spaces especially Jimmie Simpson and Bruce Mackey Parks, as well as health impacts, safety, and construction timing.	14-Apr-21	Mx replied that building the line above ground they can avoid the disruption of major station excavations and dozens of utility disruptions. To mitigate operational noise, noise specialists are undertaking noise impact studies and proposing mitigation measures. Mx is committed to designing infrastructure that it is a good fit in the community and will protect as much greenery as possible.
18-Mar-21	N/A	Member of the Public	Email - Outgoing	Phone call confirmation	Mx confirmed the phone call with the member of the public.	N/A	N/A
18-Mar-21	N/A	Member of the Public	Metrolinx Engage	Absurdity	Member of the public expressed their opposition of the project.	19-Mar-21	Mx is using a mix of different route options to bring more high-order transit to communities sooner than anticipated. They will continue through initial design to respond to community concerns.
19-Mar-21	N/A	Member of the Public	Email - Incoming	Lower Don Bridges	Member of the public asked if they need to submit or fill out any supplier questionnaire information.	23-Mar-21	Mx provided a link for additional information.
19-Mar-21	N/A	Member of the Public	Email - Incoming	Booth Avenue	The landowner asked about what properties are anticipated to be impacted and confirmed they are concerned about noise and disturbances outside of construction phase.	22-Mar-21	Mx confirmed they will reach out to property owners individually to respect their privacy. Mx also provided solutions regarding noise and vibration during operation.
22-Mar-21	N/A	Member of the Public	Metrolinx Engage	Ruining Parks, Trees and the Go Line berm should not be extended	Member of the public said the Leslieville station needs to be underground to protect trees, parks, and berms.	23-Mar-21	Mx provided rationale as why the above ground route provides benefits and the poral locations. Mx is committed to designing infrastructure that fits the neighbourhood and will compensate removed trees.
22-Mar-21	N/A	Member of the Public	Email - Outgoing	Video Meeting Details	Mx provided meetings regarding a requested video chat.	N/A	N/A
22-Mar-21	N/A	Member of the Public	Email - Incoming	Ontario Line	The landowner expressed concern with the above ground portion of the line as it will impact trees, parkland and increase noise and pollution.	14-Apr-21	Mx replied that running the line above ground avoids disruption of major station excavation and dozens of utility disruptions elsewhere. They recognize how important green spaces are and are committed to designing infrastructure that will protect as much greenery as possible. They will mitigate operational

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							noise and are still developing their initial designs for noise barriers.
23-Mar-21	N/A	Member of the Public	Email - Outgoing	Phone call confirmation	Mx confirmed the phone call with the member of the public.	N/A	N/A
23-Mar-21	N/A	Member of the Public	Email - Incoming	Awakening to a meaningful life	The member of the public expressed concerns with the above ground portion of the line, noting it will impact homes, an elementary school, low income apartment building, six parks and a recreation centre. They also expressed concerns with mental health regarding the loss of park and exposure to noise.	14-Apr-21	Mx replied that running the line above ground avoids disruption of major station excavation and dozens of utility disruptions elsewhere. They recognize how important green spaces are and are committed to designing infrastructure that will protect as much greenery as possible. They will mitigate operational noise and are still developing their initial designs for noise barriers.
23-Mar-21	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public suggested for the health and safety of their community, the line must be built underground.	14-Apr-21	Mx confirmed that building the line in this area will avoid the disruption of major station excavations and dozens of utility disruptions, and will limit the properties they need and will protect community destinations. Noise specialists are currently undertaking noise impact studies and proposing mitigations and are developing the noise barriers to be aesthetically pleasing. Mx has partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railways systems.
23-Mar-21	N/A	Member of the Public	Email - Incoming	Put the Ontario Line Underground	A member of the public expressed concern regarding public consultation and adequate environmental, health and safety assessments.	14-Apr-21	Mx confirmed that building the line in this area will avoid the disruption of major station excavations and dozens of utility disruptions, and will limit the properties they need and will protect community destinations. Noise specialists are currently undertaking noise impact studies and proposing mitigations and are developing the noise barriers to be aesthetically pleasing. Mx has partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railways systems.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
24-Mar-21	N/A	Member of the Public	Letter - Incoming	N/A	The member of the public expressed concerns with history being lost at the First Parliament site due to the project.	30-Mar-21	Mx confirmed the history within First Parliament Site should be preserved and honoured and they are working with the City, MHSTCI and Ontario Heritage Trust to ensure the outcome.
24-Mar-21	N/A	Member of the Public	Email - Outgoing	Your Feedback Regarding Projects	Mx provided background information regarding the Project noting they recognize how important green space and local parks are and they are committed to designing infrastructure that is a good fit for the community.	N/A	N/A
26-Mar-21	N/A	Member of the Public	Email - Incoming	Ontario line re-alignment	The member of the public suggested putting the line underground.	31-Mar-21	Mx confirmed they have looked at every option but underground doesn't always mean less impact. They will make maximum use of the space in their existing corridor to protect parks and greenspace.
26-Mar-21	N/A	Member of the Public	Email - Incoming	Cost Comparisons	The member of the public asked for clarification on the decision to realign the portion of the line to place two tracks on the western portion of the corridor. They noted they are concerned with the impacts to the health and safety of their community and requested a meeting.	1-Apr-21	Mx confirmed they are looking at reconfiguring the corridor to have both tracks beside each other on the western side to fit the line mostly within the existing corridor. This allows them to minimize their construction footprint and provide a better experience for customers. They are planning an open house to provide an update and no construction will begin until a robust environmental assessment has been completed.
26-Mar-21	N/A	Member of the Public	Email - Incoming	Relief Line	Member of the public asked why Mx stopped the Relief Line Project.	5-Apr-21	Mx replied they are building off of the Relief Line South plans to cover a larger geography and provide more stations. By building and operating above-ground in Riverside and Leslieville they can reduce construction impacts in the area and work in shorter timeframes.
27-Mar-21	N/A	Member of the Public	Email - Incoming	Metrolinx Projects in Toronto East	The member of the public asked where and how the tracks will be built and what parts, homes and neighbourhoods will be disrupted, noting concerns regarding vibration from previous projects on their home.	31-Mar-21	Mx is using their existing corridor to protect parks and greenspace by having the tracks beside one another on the western side of the existing rail corridor. They will be able to minimize construction footprint.
27-Mar-21	N/A	Member of the Public	Email - Incoming	Moss Park Station	The member of the public asked if Moss Park will be open during construction and	30-Mar-21	Mx confirmed they are still in initial design stations and do not have detailed

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					who will be completing any restoration and redevelopment.		answers at this time. They will be working with the city to identify the preferred location of the station entrance and adjacent space of construction and laydown areas.
28-Mar-21	N/A	Member of the Public	Email - Incoming	Which segment of the Ontario Line am I In	Landowner asked for clarification on which area their home is so they know when they will be most affected by construction.	30-Mar-21	Mx confirmed they are in the "East" segment and some of the construction is expected to begin mid-2022.
28-Mar-21	N/A	Member of the Public	Email - Incoming	Above ground train Ontario line at Leslie like	Member of the public expressed concerns with the above ground section in Leslieville. They noted their home shakes when a train passes by and asked if Mx is planning to build a crash wall along the entire street.	14-Apr-21	Mx confirmed that building the line in this area will avoid the disruption of major station excavations and dozens of utility disruptions, and will limit the properties they need and will protect community designations. Noise specialists are currently undertaking noise impact studies and proposing mitigations and are developing the noise barriers to be aesthetically pleasing. Mx has partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railways systems.
28-Mar-21	N/A	Member of the Public	Email - Incoming	The Ontario Line and its impact on the Riverside and Leslieville Communities	A member of the public expressed their opposition to the project due to dangerous levels of noise, vibration and pollution, rail safety, and a lack of public consultation.	14-Apr-21	Mx confirmed that building the line in this area will avoid the disruption of major station excavations and dozens of utility disruptions, and will limit the properties they need and will protect community designations. Noise specialists are currently undertaking noise impact studies and proposing mitigations and are developing the noise barriers to be aesthetically pleasing. Mx has partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railways systems.
30-Mar-21	N/A	Member of the Public	Metrolinx Engage	Alternate Routes and Future Transit Demand	The member of the public asked if there was any consideration to increasing capacity by expanding the northward rail corridor. They also asked if a sensitivity analysis has been conducted that accounts for autonomous ride sharing.	1-Apr-21	Mx confirmed they are already planning to increase capacity for the Richmond Hill GO line and it would be challenging to accommodate Ontario Line in that corridor. Realigning Ontario Line would eliminate several key interchanges and

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							reduce the potential relief on the existing subway and surface transit.
30-Mar-21	N/A	Member of the Public	Email - Outgoing	Map of Toronto Transit Projects	Mx provided links to Ontario Line maps and the overall timeline.	30-Mar-21	The member of the public asked for a link to the April 8th meeting registration.
30-Mar-21	N/A	Member of the Public	Email - Outgoing	Map of Toronto Transit Projects	Mx noted the registration isn't available yet but they will provide it as soon as possible.	N/A	N/A
30-Mar-21	N/A	Member of the Public	Email - Outgoing	First Parliament Site	Mx agrees that the history within First Parliament Site should be preserved and honoured and they are working with multiple agencies to preserve the site. They will be making every effort to minimize impacts on cultural and heritage sites.	N/A	N/A
31-Mar-21	N/A	Member of the Public	Email - Outgoing	Queen Street East	Mx provided details regarding projects planned for the homeowners area, noting they do not anticipate property impacts and they will minimize disturbance during the construction planning work.	N/A	N/A
31-Mar-21	N/A	Member of the Public	Email - Incoming	Ontario Line alternative	Landowner asked if splitting the Yonge-Spadina line at Union was considered as an alternative to Ontario Line.	5-Apr-21	Mx replied that the benefits of Ontario Line is that it is expected to reduce crowding at Union by 14% by offering multiple major transfer points and will include two interchange stations.
31-Mar-21	N/A	Member of the Public	Email - Incoming	ET Seton Park	The member of the public asked what the plan for the archery range at ET Seton Park is during and post construction.	31-Mar-21	Mx confirmed it is too soon to confirm anticipated impacts to park spaces during construction and they are working with the City to restore parks and maintain safety during construction.
31-Mar-21	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public asked how many executives live in Toronto and what percentage live in areas affected by the project.	31-Mar-21	Mx cannot share where their colleagues live, but every neighbourhood is important to them and will be more connected by the project.
31-Mar-21	N/A	Member of the Public	Email - Outgoing	Meeting Request - Member of the public insights for the OL	Mx reached out to the member of the public to address concerns and misinformation in the east end with OL. Mx request to connect so the member of the public could provide some insight and Mx hopes to build trust in the area.	5-Apr-21	Member of the public confirmed meeting time.
1-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line - 31 Saulter Street	Member of the public requesting a call to update them with OL.	5-Apr-21	Mx provided a quick summary of the current situation, including Mx looking at reconfiguring the corridor and positioning the OL track beside one another on the western side of the existing rail corridor

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							instead of having one track on either side. Mx will share details about virtual open house when the date is confirmed.
1-Apr-21	N/A	Member of the Public	Email - Outgoing	Update	Mx provided an update on the project noting they are looking at reconfiguring the corridor and positioning the tracks beside one another on the western side of the existing rail corridor to minimize their construction footprint.	N/A	N/A
1-Apr-21	N/A	Member of the Public	Email - Incoming	Construction Impacts	Landowner provided reasons as to why the over ground plans are problematic, including it directly impacts homes and exposes residents to dangerous noise levels, vibration, and pollution, is unsafe with how close it is to home, and asked for the line to be moved underground and a proper health impact assessment be completed.	5-Apr-21	Mx confirmed they are reconfiguring the corridor and positioning the tracks beside one another on the western side to reduce the construction footprint and noted the homes on Wardell and De Grassi will not be blocked by this configuration. They are working to advance the initial designs to present to the community for discussion, as well as share noise and vibration mitigation.
1-Apr-21	N/A	Member of the Public	Email - Outgoing	Construction Impacts	Mx provided a link to updated drawings of the alignment in the area.	6-Apr-21	The landowner replied homes on De Grassi and Wardell will be impacted as the line is closer to the homes than the park. They also noted it is less than the recommended set back by Rail Canada and WHO.
2-Apr-21	N/A	Member of the Public	Email - Incoming	Expropriation Letter	Landowner was contacted in 2018 regarding the temporary need of their property during construction and asked for confirmation of the status of their property.	6-Apr-21	Mx replied that there are changes in property requirements from the Relief Line South proposal and current project. Once the designs are finalized they will contact them directly, likely mid-2022.
3-Apr-21	N/A	Member of the Public	Email - Incoming	Expropriations on Elevated Portion	Landowner asked for an update on the "do not anticipate impacts" as they don't feel continually informed.	6-Apr-21	Mx confirmed they are still working on refinements to their plans and developing public information material to provide better understanding to residents. They provided a link to released updated drawings of this change.
5-Apr-21	N/A	Member of the Public	Email - Incoming	Cost Comparisons	The member of the public asked for clarification on the definition of the existing corridor and how is "mostly" quantified.	4-Apr-21	Mx provided a link to updated information released that includes images to help explain how the six tracks will be configured within the corridor. They confirmed their right-of-way is delineated by the existing fence line, and are undertaking surveys to confirm the exact location in a few years. They will be able

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							to answer questions about impacts more precisely as design advances but expect that any property required beyond their property line would be within one to three metres and only in select places.
7-Apr-21	NA	Member of the Public	Email - Outgoing	Community Notice - Visual surveying along the rail corridor	Mx provided noticed about visual surveying work along the rail corridor starting April 8th with anticipation to be completed on the same day.	N/A	N/A
7-Apr-21	NA	Member of the Public	Email - Outgoing	Community Notice - Visual surveying along the rail corridor	Mx provided noticed about visual surveying work along the rail corridor starting April 8th with anticipation to be completed on the same day.	N/A	N/A
7-Apr-21	NA	Member of the Public	Email - Outgoing	Community Notice - Visual surveying along the rail corridor	Mx provided noticed about visual surveying work along the rail corridor starting April 8th with anticipation to be completed on the same day.	N/A	N/A
8-Apr-21	N/A	Member of the Public	Email - Outgoing	Construction Impacts	Mx replied that rearranging the corridor does not mean the tracks are closer to homes, the tracks will stay mostly within the existing rail corridor. Mx is working on how the design of the retaining walls protects the parks and provide a foundation to install noise walls that protect the community from the sounds from the corridor. They will provide future opportunities for feedback later this year.	N/A	N/A
8-Apr-21	N/A	Member of the Public	Email - Outgoing	Map of Toronto Transit Projects	Mx provided information and a link to register for the upcoming virtual open house.	N/A	N/A
8-Apr-21	N/A	Member of the Public	Email - Outgoing	Virtual Open House - April 15	Mx provided information and a link to register for the upcoming virtual open house.	N/A	N/A
8-Apr-21	N/A	Member of the Public	Email - Outgoing	Virtual Presentation Rescheduled to April 15	Mx provided details regarding the rescheduled presentation.	N/A	N/A
9-Apr-21	N/A	Member of the Public	Email - Outgoing	Virtual Open House - April 15	Mx provided information and a link to register for the upcoming virtual open house.	N/A	N/A
12-Apr-21	N/A	Member of the Public	Email - Outgoing	Follow-up to call	Mx confirmed they have asked the team about accessibility on the Line and will provide a response.	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
12-Apr-21	N/A	Member of the Public	Email - Outgoing	Follow-up to call	Mx confirmed they will provide details regarding the landowner's property once they have a finalized plan.	N/A	N/A
12-Apr-21	N/A	Member of the Public	Email - Outgoing	Ontario Line Links	Mx provided lines to the environmental assessment process and timelines and maps of the east segment.	N/A	N/A
12-Apr-21	N/A	Member of the Public	Email - Outgoing	Province of Ontario Announcement - Corktown Station	Mx shared the Province of Ontario announcement regarding working with CoT on preliminary plans to build a transit-oriented community at the future Corktown Station along the subway. Mx noted the province will engage with the community and Indigenous Peoples to gather feedback on the plans for the proposed site.	12-Apr-21	Member of the public replied they are against construction on a piece of the country's history.
12-Apr-21	N/A	Member of the Public	Email - Outgoing	Province of Ontario Announcement - Corktown Station	Mx shared the Province of Ontario announcement regarding working with CoT on preliminary plans to build a transit-oriented community at the future Corktown Station along the subway. Mx noted the province will engage with the community and Indigenous Peoples to gather feedback on the plans for the proposed site.	N/A	N/A
12-Apr-21	N/A	Member of the Public	Email - Outgoing	Province of Ontario Announcement - Corktown Station	Mx shared the Province of Ontario announcement regarding working with CoT on preliminary plans to build a transit-oriented community at the future Corktown Station along the subway. Mx noted the province will engage with the community and Indigenous Peoples to gather feedback on the plans for the proposed site.	12-Apr-21	The member of the public noted concern with construction occurring at First Parliament Site.
12-Apr-21	N/A	Member of the Public	Metrolinx Engage	New hubs at Corktown and East Harbour announced today	Member of the public noted their experience with working with Mx has not been very productive and they have not felt their concerns have been serious addressed. They asked if Mx is willing to change plans if significant archaeological finds are encountered and/or if there are serious objections from First Nations, CoT, or other stakeholders.	14-Apr-21	Mx confirmed they are working with experts before, during and after construction to ensure cultural and heritage spaces are treated with care and construction will only begin once robust archaeological assessments are completed. They are collaborating with CoT and Mississauga's of the Credit, Ontario Heritage Trust, IO, and archaeological experts.

12-Apr-21	N/A	Member of the Public	Email - Incoming	Distribution List	Member of the public asked to be added to the distribution list.	12-Apr-21	Mx agreed to add them to the list.
12-Apr-21	N/A	Member of the Public	Email - Incoming	Post Open House Feedback	Member of the public asked if the line will be able to handle the capacity of future ridership especially with the planned substantial growth in undeveloped areas.	13-Apr-21	Mx confirmed the subway line is two times the length of the original Relief Line and is expected to have 388,000 daily boardings. They anticipate trains running every 90 seconds during peak times will make this possible and the planning process considers future population growth and the associated increased demand for transit.
12-Apr-21	N/A	Member of the Public	Email - Outgoing	Ontario Line Links	Mx provided links to the Environmental assessment process and timeline and maps of the OL East Segment.	N/A	N/A
12-Apr-21	N/A	Member of the Public	Email - Outgoing	Ontario Line video meeting details	Mx provided meeting details. Mx indicated they passed along their question to gain more details about the construction on hydro lands. Mx will follow up with project team on more details but provided a broad explanation.	29-Apr-21	Member of the public requested documents that describes how Mx measures impact to community and how it weighs factors in.
13-Apr-21	N/A	Member of the Public	Email - Outgoing	Follow-up to call	Mx provided links to maps and the environmental assessment. Mx also provided a link to register for the upcoming virtual open house.	N/A	N/A
13-Apr-21	N/A	Member of the Public	Email - Incoming	Community Consultation for Corktown Station	Member of the public asked for a link for the Community Consultation for Corktown Station.	14-Apr-21	Mx provided links to the upcoming townhall and virtual open houses.
13-Apr-21	N/A	Member of the Public	Email - Outgoing	East Virtual Open House	Mx provided a link to register and submit questions for the upcoming virtual open house.	13-Apr-21	The member of the public asked why Mx is not keeping the project underground.
14-Apr-21	N/A	Member of the Public	Email - Outgoing	Province of Ontario Announcement - Corktown Station	Mx replied that while the First Parliament site will be used during construction, they will be minimizing impacts on cultural and heritage sites.	N/A	N/A
14-Apr-21	N/A	Member of the Public	Email - Outgoing	Province of Ontario Announcement - Corktown Station	Mx replied that while the First Parliament site will be used during construction, they will be minimizing impacts on cultural and heritage sites.	N/A	N/A
14-Apr-21	N/A	Member of the Public	Email - Outgoing	Upcoming Metrolinx Ontario Line work in your area	Notice of Mx conducting work in the area of business as early as April 20.	N/A	N/A
14-Apr-21	N/A	Member of the Public	Email - Incoming	Links Don't Work	Member of the public noted some links aren't working.	14-Apr-21	Mx provided working links.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
14-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line Concerns	The member of the public indicated they want the OL buried as they believe it will destroy the neighbourhood and comprise the quality of life with noise and vibrations. Wondering why the OL will be underground in Etobicoke but not through Riverside. Requesting to know how Mx will be protecting the community from noise and vibration.	16-Apr-21	Mx provided information about noise and vibration and indicated with the OL being fully electric is will have a significantly quieter noise profile compared to TTC or GO trains. Mx offered to discuss further and offered a link to select a time.
14-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line Disruption	Landowner asked for their home to be included in the vibration monitoring.	21-Apr-21	Mx noted they are monitoring locations where vibrations are a special concern and will extrapolate the data from those locations using modeling for homes. During construction they may feel vibrations from the tunnel boring machine but Mx will complete a survey of nearby homes before construction begins to document any foundation concerns in advance.
15-Apr-21	N/A	Member of the Public	Email - Outgoing	East Virtual Open House	Mx replied that underground does not mean less impact, they found that using the existing rail corridor will minimize impacts to the local community and connect more neighbourhoods.	N/A	N/A
15-Apr-21	N/A	Member of the Public	Email - Outgoing	Follow-Up	Mx confirmed they signed the member of the public for the virtual open house. They also provided an image of the refined route, links to noise mitigation and confirmed the location of the Gerrard Portal.	N/A	N/A
15-Apr-21	N/A	Member of the Public	Metrolinx Engage	Registering for today's meeting at 6:30 PM	Member of the public asked if they need to preregister to attend the meeting.	15-Apr-21	Mx confirmed they do not need to pre-register and provided the link to the meeting.
15-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line video meeting details	Member of the public asked why the site just north of the CP rail corridor was not considered for the MSF storage to allow for business to grow next to the train station.	15-Apr-21	Mx confirmed it was an alternative site studied and will be discussed during the open house today.
15-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line video meeting details	The member of the public asked why a hybrid of Site 1, 2 and 3 isn't being used for the MSF.	16-Apr-21	Mx replied that the MSF needs to be at ground level and if there is any grade changes there will need to be a long runway compared to crossing a river valley where it will all the same height and no change to the footprint of land

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							needed. Mx will work with every business and community organization to make sure Thorncliffe Park continues to thrive.
15-Apr-21	N/A	Member of the Public	Email - Incoming	Concerned Resident - Metrolinx's Proposed East York Site for the Ontario Line	Member of the public expressed concern for his neighbourhood area due to the future demolition of two buildings. Expressed safety and noise pollution concerns as well.	21-Apr-21	Mx provided contact information to reach out further. Expressed commitment to supporting impacted building and more information will be provided in the future.
15-Apr-21	N/A	Member of the Public	Metrolinx Engage	Exit at Nathan Phillips Square	Member of the public asked, would it make sense to build just one central station at Nathan Phillips Square that connects commuters to the two aforementioned parallel ones on Line 1? Stated an exit directly onto NP Square is long overdue.	16-Apr-21	Mx informed that they choose Osgoode and Queen as OL interchange stations to connect with the existing TTC Line 1 stations, providing much-needed congestion relief. Mx indicated that they appreciate the suggestion for a station location at NP Square but the OL and its 15 station locations is finalized.
15-Apr-21	N/A	Member of the Public	Email - Outgoing	Ontario Line- Follow up	Mx provided some resources that may be helpful to the member of the public including a link to a virtual open house. An image of the refined route in the rail corridor. Links to learn more about noise mitigation.	16-Apr-21	Mx followed up with another email stating once the requirements are confirmed for the Gerrard tunnel portal, Mx will reach out immediately to property owners to keep them informed.
16-Apr-21	N/A	Member of the Public	Email - Outgoing	Above ground train Ontario Line at Leslie like	Mx stated they understand the community's concerns and hope the community will work with Mx while they hold more open houses, release environmental reports, and explore mitigation measures. Mx encouraged to book a meeting with Mx to discuss more.	N/A	N/A
16-Apr-21	N/A	Member of the Public	Metrolinx Engage	Ontario Line MSF	Member of the public expressed concerns about the destruction of the Access Storage East York location and was wondering if there would be any compensation for people who own units in that facility. The member of the public also expressed concern about the open house on April 15 saying it was not an ideal time for the community cause it was Ramadan. Suggested notices should be presented in other languages just not English.	22-Apr-21	Mx stated that they are committed to providing relocation support and compensation for small business, however they are not in a position to support the individual customers of each impacted business. Mx apologized about the meeting and informed that they adjusted their virtual format for the next open house including additional languages.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
16-Apr-21	N/A	Member of the Public	Metrolinx Engage	Bus Service	Member of the public states that their area has a very good bus service and there is no need for OL.	16-Apr-21	Mx informed the member of the community that Mx and TTC are working together to ensure that the bus network serves the communities along the OL even better. OL will provide faster option for passengers who are travelling furth distances while reducing crowding.
16-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line virtual open house - Thursday, April 15	Member of the public express concerns for OL as their condo faces south over looking the parking lot. The member of the public as what the height of the elevated track will be that comes across Millwood bridge. Concerned for blocking views and the future of the condo.	21-Apr-21	Mx indicated the guideway will be 2-3 story's up but that will be confirmed in 2023. Mx provided explanation on location of the guideway and provided additional links with information.
17-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line video meeting details	The member of the public suggested cutting through the Costco parking lot to keep the train storage and power station away from Overlea but near existing businesses.	21-Apr-21	Mx confirmed the Costco site was not on the narrowed-down "longlist" of MSF locations as it would require a larger tract of land in total due to the shape and location of the land. It would of resulted in more impacts to the community and the valley.
17-Apr-21	N/A	Member of the Public	Metrolinx Engage	Open Houses	Member of the public indicated that the discussion box from the Thorncliffe Park/Flemington Park Open house had some rude messages and has hope for future open houses that this doesn't occur.	19-Apr-21	Mx informed the member of the public that attempts were made to remove comments that were inconsistent with the engagement policies, but didn't catch them all fast enough. Mx have added additional staff to help monitor this issue for future events.
19-Apr-21	N/A	Member of the Public	Metrolinx Engage	When will it be done?	Member of the public asked when the project will be done, they are looking forward to the new line.	21-Apr-21	Mx informed they are working towards a completion date of 2030.
19-Apr-21	N/A	Member of the Public	Metrolinx Engage	Query on Real Estate Acquisition	Member of the public is inquiring if Mx has acquired two real estate properties for the proposed OL project.	21-Apr-21	Mx confirms their commitment to support each impacted business and community organization to relocate. Mx provided a link for more information on how Mx will support businesses.
19-Apr-21	N/A	Member of the Public	Metrolinx Engage	N/A	Member of the public requested the line be buried to protect parks, trees, and greenspace.	23-Apr-21	Mx replied that they will be protecting parks in the neighbourhood by using their 100+ year old rail corridor and will provide ongoing access to the green space.
19-Apr-21	N/A	Member of the Public	Email - Incoming	OL - public meeting - south of Danforth	Member of the public requesting information on the next OL meeting that discusses the route south of Danforth.	20-Apr-21	Mx provided three virtual open houses that were coming up with details on which locations will be discuss.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
19-Apr-21	N/A	Member of the Public	Email - Outgoing	Ontario Line phone meeting details	Mx thanked the member of the public for their time to discuss OL and confirmed their next meeting time.	N/A	N/A
20-Apr-21	N/A	Member of the Public	Email - Incoming	Hopedale Ave	Member of the public inquired about the exact depth and width of the tunnels at the intersection of Hopedale Ave and Minton place and the number of homes impacted.	28-Apr-21	Mx does not have the specific answer to the question at the current time. However the anticipated property requirements have not changed and Mx have already reached out to property owners who will be impacted by OL.
20-Apr-21	N/A	Member of the Public	Email - Outgoing	Follow-up on phone call	Mx explained that Quang Pham, Manger of Property Acquisition will have more details and provided contact info for him.	N/A	N/A
20-Apr-21	N/A	Member of the Public	Email - Outgoing	Ontario Line phone meeting details	Mx expressed apologies for being late to call but stated a pleasure to speaking with them Provided contact information to the Manager of Property Acquisition. Provided an image of what Mx expects the Overlea guideway to look like.	N/A	N/A
20-Apr-21	N/A	Member of the Public	Email - Incoming	Question Re: Thorncliffe Park and Flemington Park	Member of the public asked once OL is operational, what bus lines will continue to service the Thorncliffe Park and Flemington Park.	21-Apr-21	Mx replied saying they are working the TCC to ensure the bus network serves the communities even better. At this time it's Mx understanding that all bus lines that are currently serving both communities will continue.
21-Apr-21	N/A	Member of the Public	Metrolinx Engage	Riverside Community Office	Member of the public inquiring if the Community Site Office on Queen Street East is open in order to find out about upcoming consultations.	22-Apr-21	Mx informed that they will open once COVID-19 regulations permit public gatherings. Mx team will continue holding virtual events.
21-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public expressed concern with safety, noise levels, home setbacks, cost, and maintenance.	23-Apr-21	Mx replied that the track will be evaluated by an Independent Safety Assessor to ensure safety. Mx shared the initial data from the noise studies, and the use of above ground trains in cold weather countries.
21-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line video meeting details	The member of the public expressed concern that saving businesses is more important than land space.	26-Apr-21	Mx confirmed they are committed to ensuring Iqbal's stays in the neighbourhood and will work with every impacted business and organization to support them with relocation.
22-Apr-21	N/A	Member of the Public	Email - Incoming	Meeting follow up question	Member of the public wondering if a straight line underneath Pape would be considered? Also wants more information regarding the tunneling under the current railway as a means to	29-Apr-21	Mx responded with understanding to their questions and concerns and provided links to business cases and articles for alternatives. Indicted that that the community wants more engagements

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					minimize disruption. In favour of a straight line under Pape.		so Mx has committed to monthly touchpoints to discuss mitigation.
22-Apr-21	N/A	Member of the Public	Email - Outgoing	Follow-up on call	Mx provided a link to more information about the maintenance and storage facility. Recommended to subscribing to Mx e-newsletter.	N/A	N/A
22-Apr-21	N/A	Member of the Public	Metrolinx Engage	Virtual Meeting	Member of the public requesting a link to attend the open house meeting.	22-Apr-21	Mx provided additional information and link to the open house.
22-Apr-21	N/A	Member of the Public	Metrolinx Engage	I need to leave	Member of the public asked how they could view the meeting later.	23-Apr-21	Mx provided a link to replay the open house and suggested signing up for the e-newsletter to stay updated with the project.
22-Apr-21	N/A	Member of the Public	Email - Incoming	Liberty Village / Exhibition / Ontario Line	Member of the public wondering how best to comment on any upcoming proposals, would like the opportunity to be able to offer input.	23-Apr-21	Mx offered a link to upcoming open houses that they could attend and provide input.
23-Apr-21	N/A	Member of the Public	Metrolinx Engage	Thurs, Apr 22.21 Zoom Meeting	Member of the public requested a copy of the meeting as they were unable to join.	23-Apr-21	Mx provided a link to the recording of the open house and also provided a link to sign up for the next open house for the Osgoode, Queen, Moss Park, Corktown.
23-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public reached out with some points of concerns including safety, crash walls. Noise levels and constant noise, cross section showing closest house and train. Also expressed concerns about it being above and below ground.	23-Apr-21	Mx provided resources and explanation to the member of the public's concerns and thoughts.
23-Apr-21	N/A	Member of the Public	Metrolinx Engage	Typo	Member of the public reached out to notify Mx that there was a formatting error under the Environment and Community Impact.	23-Apr-21	Mx thanked the member of the public for bring it to their attention and stated they would make the correction.
23-Apr-21	N/A	Member of the Public	Metrolinx Engage	Will rail bridges have sound barriers?	Member of the public asked if any of the following bridges would have any form of sound barrier: Gerrard, Logan, Queen, Eastern.	26-Apr-21	Mx informed they are looking at how best to deliver seamless noise walls along the existing rail corridor in Riverside and Leslieville which includes all bridges mentioned.
23-Apr-21	N/A	Member of the Public	Email - Outgoing	Ontario Line-Follow up	Mx confirmed if there is any impact to their property they will be reached directly. Mx provided additional information about property boundaries and informed more information will be provided in the future. Mx confirmed that OL will be electrified and have substantially lower noise profile.	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
23-Apr-21	N/A	Member of the Public	Email - Outgoing	Follow up on call	Mx provided links to the maps of OL north segment, Mx news, recording of recent virtual open house and Mx main website.	N/A	N/A
23-Apr-21	N/A	Member of the Public	Email - Outgoing	Follow up - Your question at the Ontario Line East Open House	Mx thanked the member of the public for coming and indicated the beloved community resource will be able to continue operations throughout construction and beyond. Mx informed the member of the public they are committed to protecting parks and minimizing impacts to private property.	N/A	N/A
23-Apr-21	N/A	Member of the Public	Metrolinx Engage	Ontario Line East Question	Member of the public is inquiring about construction timeline specifically for the East Section, including Leslieville Station.	23-Apr-21	Mx provided a graphic that describes the timeline better. Indicted three pieces of work are important to note: Lower Don Bridges Early Works, the Lakeshore East Joint Corridor Early Works and the Northern Civil, Stations and Tunnels package.
23-Apr-21	N/A	Member of the Public	Email - Outgoing	access to the greenspace behind your condo for environmental survey and recording	Mx provided information about AECOM capturing ambient sound and video and taking measurements along the rail corridor. Requested AECOM to setup in a place between the corridor and the member of public's homes.	29-Apr-21	Member of public informed Mx they met with AECOM and pointed out several points to take into consideration.
23-Apr-21	N/A	Member of the Public	Email - Outgoing	Link to cross-section	Mx provided a link to the member of public that was requested from a previous phone call. Mx informed the member of the public that a colleague will also call to discuss other questions they have about timelines, pre-surveying process and compensation process if any damage is done to their stone foundation from drilling.	NA	N/A
23-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line East Question	Member of the public asked for a rough idea of the construction timeline specifically for the East Section, including Leslieville Station.	23-Apr-21	Mx confirmed construction will begin in two separate sections. Lower Don Bridges Early is expected to start in 2022 and the Lakeshore East Joint Corridor Early Works is expected to begin mid-2022. Construction of the tunnel beginning at Gerrard is expected to begin in 2023 and the Line is expected to open by 2030.

				community hubs in Thorncliffe Park, residents worry			
29-Apr-21	N/A	Member of the Public	Metrolinx Engage	What will the fare schedule look like?	Member of the public asked what the fare schedule will look like and if Mx will be matching the TTC rate.	3-May-21	Mx confirmed they will be working within the existing TTC network and will be accessed with a TTC fare to achieve this.
29-Apr-21	N/A	Member of the Public	Email - Incoming	Thorncliffe Proposal	The member of the public asked if Mx is proposing to demolish a mosque to build a train yard.	30-Apr-21	Mx confirmed the Mosque has found a new location and its services will not be impacted by the maintenance and storage facility. They will be working closely with other businesses to find locations for them.
29-Apr-21	N/A	Member of the Public	Email - Incoming	GO/Ontario Line Transfer at Exhibition Station	The member of the public asked if there is an intention to run Ontario Line trains on the left-side so the westbound train would share a platform with GO Lake Shore westbound, and if there is consideration to having the OL tunnel cross-over between Bathurst and Exhibition.	5-May-21	Mx confirmed they have investigated several construction options but the operational complexity and associated costs of switching to a left-side configuration outweighed the potential benefits of having cross-platform transfers. The overhead concourse at Exhibition station will be easy an intuitive for access and reduce transfer times.
29-Apr-21	N/A	Member of the Public	Email - Incoming	Ontario Line video meeting details	Member of the public asked if there was a document that describes impacts to the community and expressed their disappointment in this choice.	6-May-21	Mx agreed that the local services are incredibly important to the community. Business relocation would not be possible if the MSF was located in the industrial area and would cause permanent job losses. Mx confirmed they have not held a full public consultation regarding the location as the decision was highly technical. Mx asked if the member of the public would have capacity to be part of a resident table that meets regularly.
29-Apr-21	N/A	Member of the Public	Email - Outgoing	your question re: Don Valley impacts	Mx reached out to apologize that Mx didn't get a chance to answer their question about consideration of overlapping project at the virtual open house. Mx followed up with the environmental team and passed along their response. Indicted that the EIAR is anticipate to be shared for public review and comments in early 2022.	N/A	N/A
30-Apr-21	N/A	Member of the Public	Email - Incoming	Dundas street bridge - Leslieville	Member of the public asked how much the Dundas Street bridge will need to be	4-May-21	Mx replied they are still in the process of identifying design requirements for the

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					widened and impacts on the car park during construction.		bridge. They will reduce impacts on area parks and private property as much as possible.
30-Apr-21	N/A	Member of the Public	Email - Incoming	New Station	The member of the public asked why there are no stations planned at Cherry Street.	4-May-21	Mx replied the Corktown Station will be a 6-minute walk from Distillery District and will serve that area. A station at Cherry Street would be very close to both Corktown and East Harbour Stations and would impact on overall time savings for travelers.
30-Apr-21	N/A	Member of the Public	Email - Outgoing	Ontario Line	Mx confirmed the GO Expansion project will add one additional track on Ontario Line will add two. The schedules overlap and they will be able to streamline construction in the area.	N/A	N/A
30-Apr-21	N/A	Member of the Public	Email - Outgoing	Ontario Line video meeting details	Mx confirmed they will follow up on items brought up during the call and they will contact them regarding the tunnel borer launching location.	N/A	N/A
3-May-21	N/A	Member of the Public	Email - Outgoing	Questions about Thorncliffe Park	Mx provided a link to information on the MSF site selection process, noting there are maps showing the location of the stations in Thorncliffe Park and Flemingdon Park.	N/A	N/A
3-May-21	N/A	Member of the Public	Email - Outgoing	Ontario Line and the Building Transit Faster Act	Mx provided details regarding the Building Transit Faster Act and updated timelines and impacts to the landowners neighbourhood.	N/A	N/A
3-May-21	N/A	Member of the Public	Metrolinx Engage	Overground through Riverside	Member of the public attended the virtual public meeting and noted their disappointment regarding the natural space on Wardell Street.	4-May-21	Mx replied they have been following a robust Environmental Assessment process and the Environmental Conditions report studies the natural environment along the entire route. Studies are looking at the impact of construction and operation on wildlife and they will propose solutions.
3-May-21	N/A	Member of the Public	Email - Incoming	Ontario Line East Question	The member of the public asked if Mx anticipates much of the work to be happening overnight.	4-May-21	Mx replied that they are still finalizing the design before determining the best construction method to use. Once construction has begun they will establish lines of communication to keep the community informed.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
3-May-21	N/A	Member of the Public	Metrolinx Engage	Queen Streetcar House Facility, between Greenwood and Woodfield	The member of the public asked for clarification regarding the Queen Car house.	4-May-21	Mx confirmed the project includes a new East Harbour station at Eastern Avenue and noted the streetcar yard belongs to the TTC.
3-May-21	N/A	Member of the Public	Email - Outgoing	Link to cross-section	Mx provided details regarding train specifications, noise wall design, bridges and property impact process and compensation.	3-May-21	The member of the public asked about the compensation process in case foundations are destabilized.
3-May-21	N/A	Member of the Public	Email - Outgoing	re: Maintenance and Storage Facility	Member of the public requested factual data of the analysis of the decision of selecting Leaside Park for the OL maintenance and storage facility.	5-May-21	Mx provided more information about the longlisted location list and provided a link for the member of the public to view further details. Mx suggested they sign up for the newsletter to stay up to date on the project.
4-May-21	N/A	Member of the Public	Email - Incoming	New Station	The member of the public asked if the Portland's redevelopment and ridership generated considered in the rationale between skipping the Cherry Street Station and how the Waterfront East LRT be integrated.	7-May-21	Mx confirmed they did consider future population growth and the increase demand for transit. They provided a link to the Preliminary Design Business Case that provides an overview of every Ontario Line station with a rationale and for the location and proposed transit connections.
4-May-21	N/A	Member of the Public	Metrolinx Engage	Queen Streetcar House Facility, between Greenwood and Woodfield	The member of the public asked if there are any plans for Leslie Barns or how the line might affect residents in the area.	5-May-21	Mx replied they will not impact or modify Leslie Barns and their neighbourhood will not be impacted by construction.
4-May-21	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public expressed concerns regarding the 100 year old Degrassi overpass due to the added trains.	6-May-21	Mx confirmed they are doing extensive refurbishment of the Queen Street rail overpass. They are looking into international rail best practices to determine all potential hazards and properly mitigating them as much as possible.
4-May-21	N/A	Member of the Public	Email - Incoming	Opportunity for ongoing dialogue with Metrolinx on ON Line	The member of the public provided three ideas to relocate train storage from Thorncliffe Park, either partially or wholly but retain the function of the MSF on the north side of the hydro corridor.	17-May-21	Mx thanked the member of the public for their input and will pass along their question about storing the trains at one location. They noted that the other suggestions would not work as they were previously assessed but would require larger land area due to the land grade.
5-May-21	N/A	Member of the Public	Email - Outgoing	Ontario Line and First Avenue	Mx confirmed they cannot provide details regarding impacts at the member of the	N/A	N/A

					public's address as the project design and plans have not be finalized but they will provide input as soon as possible.		
5-May-21	N/A	Member of the Public	Email - Outgoing	access to the greenspace behind your condo for environmental survey and recording	Mx confirmed AECOM's work will supplement the joint corridor noise impact study being completed. The noise model accounts for the typical trains and will account for the 4th track. Mx also stated vibration measurements are being completed.	N/A	N/A
5-May-21	N/A	Member of the Public	Email - Outgoing	Thank You	Mx thanked the member of the public for reaching out and confirmed they are working closely with the city to coordinate construction plans and mitigate impacts to the community.	N/A	N/A
5-May-21	N/A	Member of the Public	Email - Outgoing	Community Notice - Investigative drilling and environmental sampling work on Minton Place and Hopedale Avenue - starting as early as May 10	Mx provided notice about investigative drilling and environmental sampling work on Milton Place and Hopedale Avenue starting as early as May 10. It is anticipated to last up to three weeks at each location.	N/A	N/A
7-May-21	N/A	Member of the Public	Email - Incoming	New Station	The member of the public suggested that there should be Cherry Street stop as the Moss Park and Corktown stations are too close together.	N/A	N/A
7-May-21	N/A	Member of the Public	Email - Outgoing	Metrolinx response to letter received May 4, 2021	Mx provided a response letter to a member of the public.	N/A	N/A
7-May-21	N/A	Member of the Public	Email - Outgoing	Link to cross-section	Mx replied any damage caused by Ontario Line work will be handled as damage claim. The process is still being setup.	N/A	N/A
7-May-21	N/A	Member of the Public	Email - Incoming	Affordable Housing Project	Member of the public noted they are planning an affordable housing project but were told by the City they may not be able to due to the project.	11-May-21	Mx confirmed they are not building on that location, but the subway tunnel will run underneath it. Construction is planned to begin in 2024 and any construction taking place within 30 metres of a planned transit route needs to be reviewed.
7-May-21	N/A	Member of the Public	Email - Incoming	Following up: Questions about Hydrovac Work	Member of the public asked why surveyors were behind their home in the middle of the night.	7-May-21	Mx confirmed two separate crews were working on the corridor due to lack of daytime access for safety reasons A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							notice was posted for the first crew on Mx's website. The crew's have committed to carrying out the remaining work as quietly as possible and have been reminded to be respectful of all neighbouring residences.
7-May-21	N/A	Member of the Public	Email - Incoming	Ontario Line	The member of the public asked if adding 4 more tracks near Tiverton houses will cause noise impacts.	13-May-21	Mx confirmed they are completing a comprehensive noise and vibration study to look at the specific impacts along the corridor. They also have an array of proven solutions to mitigate these impacts.
7-May-21	N/A	Member of the Public	Email - Incoming	Questions	Member of the public asked if Eglinton Avenue will be repaved and how people will get to the Eglinton stations safely.	11-May-21	Mx provided contact information for the Eglinton Crosstown team as that is a separate project.
7-May-21	N/A	Member of the Public	Email - Incoming	Your Ontario Line Newsletter	Member of the public asked why the Scarborough lines are not completed.	11-May-21	Mx replied that Ontario Line will need to begin construction in 2023 and the Scarborough Subway Extension is a separate project.
8-May-21	N/A	Member of the Public	Email - Incoming	N/A	Member of the public asked if a small plaza that has been demolished on Pape at Cosburn is where the station will be located.	11-May-21	Mx confirmed that demolition is not connected to the project. They also said that any construction will include development of plans to try and limit traffic impacts but there may still be a need for lane reductions.
8-May-21	N/A	Member of the Public	Email - Incoming	OL MFS Site Selection	Member of the public asked Mx to elaborate which city staff Mx spoke to and to share the details of the site selection assessment and/or report.	13-May-21	Mx confirmed the MSF location was selected through an iterative process with the City's Economic Development & Culture division as well as other city departments including the Transit Expansion Office.
10-May-21	N/A	Member of the Public	Email - Incoming	Thornccliffe Park Maintenance and Storage Facility	The member of the public asked for clarification regarding when public consultation occurred and if there is a way to watch the open house after the fact.	13-May-21	Mx replied the virtual event was an open house and not consultation as they did not conduct formal public consultation to determine the location of the MSF due to the highly technical decision. They collaborated closely with the City of Toronto to understand which option would have fewest permanent job impacts. They also confirmed the recording from the open house is viewable.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
11-May-21	N/A	Member of the Public	Email - Incoming	Metrolinx drilling and sampling noise	The landowner asked for the street to be cleared after the drilling working.	12-May-21	Mx confirmed the field crew will complete a thorough pressure wash once the work is completed.
11-May-21	N/A	Member of the Public	Email - Incoming	Ontario Line Call Details	Landowner asked for details regarding timelines, scope of work and activity in the area.	12-May-21	Mx replied that construction is expected to begin in 2024 and do not know at this time whether traffic diversions or equipment storage will be needed. They will have more details once the constructor is chosen for this work.
11-May-21	N/A	Member of the Public	Email - Incoming	Thanks	Member of the public provided a BlogTO link.	13-May-21	Mx thanked them for the link.
11-May-21	N/A	Member of the Public	Email - Incoming	The Ontario government is pushing a transit project to start that has community impacts.	Member of the public expressed concern regarding the project, noting bus lines should be improved to not use hydrocarbons and use cleaner energy instead.	13-May-21	Mx replied that they are working closely with the TTC to ensure the surface transit network integrates with the Ontario Line Stations. Mx noted that car traffic is a greater problem than diesel buses for producing hydrocarbons.
11-May-21	N/A	Member of the Public	Email - Incoming	Your Ontario Line Newsletter	Member of the public noted they think Mx should start mobile payment tap.	13-May-21	Mx confirmed they expect fares to be pad through Presto which recently began a "tap-on" option.
12-May-21	N/A	Member of the Public	Email - Incoming	Riverside Station (Queen and Degrassi)	Member of the public asked how many local residents will take advantage of the proposed Riverside station and asked for the data Mx used to determine the need for the station.	13-May-21	Mx provided links to the Initial Business Case and Preliminary Design Business Case. Mx also confirmed they expect this station to provide a popular transfer opportunity between the streetcar network.
12-May-21	N/A	Member of the Public	Email - Incoming	Metrolinx drilling and sampling noise	The landowner thanked Mx for the information and noted the drilling crew has been very courteous.	13-May-21	Mx thanked the landowner and noted work will continue until May 31st but they will pressure wash the street on the 14th as they committed.
12-May-21	N/A	Member of the Public	Email - Incoming	Metrolinx vs Thorncliffe	The member of the public suggested Mx build the MSF at the property at the northwest corner of Don Mills and Eglinton.	13-May-21	Mx replied the site was chosen because it has the fewest permanent job impacts out of all the options. The Don Mills and Eglinton location is a more appropriate location for the plans already underway.
12-May-21	N/A	Member of the Public	Email - Incoming	Thorncliffe Park Section	Member of the public expressed concern about the line crossing over the DVP and Overlea Boulevard as well as the two stories of underground parking at their condo.	13-May-21	Mx replied they are continuing to refine their plans to address resident concerns and have met with the condo board to adjust their plans to keep their footprint as slim as possible.
13-May-21	N/A	Member of the Public	Email - Outgoing	Maintenance and Storage Facility	Mx confirmed the MSF will be located in the southeast portion of the Leaside Business Park and was chosen after extensive study. They also provided links	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					to information about how the location was chosen.		
13-May-21	N/A	Member of the Public	Email - Incoming	Ontario Line	The member of the public noted that continuous noise is what concerns them and asked for an example of a set back.	N/A	N/A
13-May-21	N/A	Member of the Public	Email - Incoming	Metrolinx vs Thorncliffe	The member of the public noted the Potter's Studio is an important place within the local neighbourhood.	14-May-21	Mx confirmed they are in discussion with the Potter's Studio and are committed to working together to find a solution that will allow the studio to continue to provide its services.
13-May-21	N/A	Member of the Public	Metrolinx Engage	Architectural Design Elements	Member of the public asked if the architectural design will match the heritage designated buildings in the immediate area.	17-May-21	Mx confirms they want to make sure any history hidden under the surface is interpreted and commemorated in the design. The Province will be engaging the local community to gather feedback on the proposed plans.
13-May-21	N/A	Member of the Public	Email - Incoming	Vancouver SkyTrain Expansion & BC Hydro Transmission Lines	The member of the public reached out to Translink Vancouver about a SkyTrain project as it seems similar to Ontario Line. They asked why the hydro corridor isn't being adjusted to move the train storage away from Thorncliffe Park.	17-May-21	Mx replied that they do have a relationship with Hydro One and Infrastructure Ontario and worked with them to arrive at the current proposed MSF location, as moving the hydro corridor would cause additional impacts.
13-May-21	N/A	Member of the Public	Email - Incoming	Ontario line Leslieville	Member of the public asked for an example where residential home have been 2m from train tracks with no crash wall and why no crash wall is required along Tiverton Avenue. They asked if a study is being conducted for noise and vibration.	25-May-21	Mx replied that the overall noise model uses typical continuous train traffic rather than the current or pandemic levels and they will take into account future GO service/trains. They will deploy proven solutions to address noise and visual impacts. Crash walls are required as proactive safety measures and will continue to operate the railway safely.
13-May-21	N/A	Member of the Public	Email - Incoming	Waste disposed in park from drilling on Hopedale	Member of the public found a 50 gallon barrel of waste under Norway Spruce and noted they assume it's from the drilling related to Ontario Line. They also did not receive any notice regarding the drilling work.	14-May-21	Mx replied that they have spoken to their field crew and can confirm the drum is not related to their drilling work on Hopedale Avenue. They are looking into other non-Mx projects and will follow up once they have additional information. They also noted they provided paper notices to residents nearby and posted the notices on their website and in their e-newsletter.
13-May-21	N/A	Member of the Public	Email - Incoming	The Ontario government is pushing a transit	The member of the public asked how many bus lines are being removed due to the project.	14-May-21	Mx replied that they are not aware of any bus lines being removed and are working

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
				project to start that has community impacts.			with TTC to ensure the surface transit network integrates well.
14-May-21	N/A	Member of the Public	Email - Incoming	The Ontario government is pushing a transit project to start that has community impacts.	The member of the public asked why the government is not investing in greener transit projects to get diesel-powered busses off the road.	14-May-21	Mx replied the project is intended to integrate with the existing transit network. TTC is working to become less reliant on diesel with support from the federal government, and to be 50% zero emissions by 2032 and 100% by 2040.
14-May-21	N/A	Member of the Public	Email - Incoming	Waste disposed in park from drilling on Hopedale	The member of the public suggested the field crew is being less than truthful regarding the waste left behind and asked how Mx is building trust with communities.	18-May-21	Mx agrees they have to respect neighbourhood spaces and made it clear with the crews they work with. They also recognize they need to earn the community's trust.
14-May-21	N/A	Member of the Public	Email - Incoming	Looking for work	Member of the public asked if there is any construction jobs available.	17-May-21	Mx provided a link to current job opportunities and noted construction will be carried out by separate constructor teams.
14-May-21	N/A	Member of the Public	Email - Outgoing	Community Notice - Surveying work on public roadways	Mx provided a notice regarding surveys resuming on May 18th to identify locates ahead of further investigative geotechnical drilling. Mx noted the work is non-intrusive and will be completed using handheld and tripod-mounted equipment.	14-May-21	Member of the public asked if they will be drilling.
14-May-21	N/A	Member of the Public	Email - Outgoing	Metrolinx drilling and sampling noise	Mx confirmed their team will be completing their work at the Hopedale Avenue worksite and will complete a pressure wash upon completion.	14-May-21	The member of the public thanked Mx for the update and noted the contractor has completed a thorough job cleaning the street.
14-May-21	N/A	Member of the Public	Email - Outgoing	Surveying work on public roadways along the rail corridor - Taking place on May 18th	Mx provided notice about continuing surveying work that will be taking place on public roadways along the rail corridor between Eastern Ave and Gerrard street East on May 18th. Surveying is anticipated to finish on the same day. Mx mentioned no drilling will take place.	14-May-21	Member of the public asked if there will be any drilling.
14-May-21	N/A	Member of the Public	Email - Outgoing	Community Notice - Surveying work on public roadways along the rail corridor - Taking place on May 18th	Mx provided notice about continuing surveying work that will be taking place on public roadways along the rail corridor between Eastern Ave and Gerrard street East on May 18th. Surveying is anticipated to finish on the same day.	N/A	N/A

14-May-21	N/A	Member of the Public	Email - Outgoing	Community Notice - Surveying work on public roadways along the rail corridor - Taking place on May 18th	Mx provided notice about continuing surveying work that will be taking place on public roadways along the rail corridor between Eastern Av and Gerrard street East on May 18th. Surveying is anticipated to finish on the same day.	N/A	N/A
14-May-21	N/A	Member of the Public	Email - Outgoing	Ontario Line Call Details	Mx provided a link to maps on their website and noted they will be updating maps shortly.	21-May-21	The member of the public thanked Mx for talking with them.
14-May-21	N/A	Member of the Public	Email - Incoming	Your Ontario Line Newsletter	Member of the public asked why the Dufferin TTC terminal expansion was not considered as the end point instead of Exhibition.	18-May-21	Mx replied that they have been working with the TTC to make sure the project best serves Toronto residents and provides relief to existing transit networks. They chose the station location as it provides the best connection to the GO network and to allow for the possibility of expanding the line.
18-May-21	N/A	Member of the Public	Metrolinx Engage	Queen Spadina station	Member of the public asked where the entrances to the station will be built and if there are any plans to expropriate buildings for the station.	19-May-21	Mx confirmed they have limited information at this time due to design work not being complete. They provided a link to information regarding the station. Mx confirmed they will contact any impacted property owners directly.
19-May-21	N/A	Member of the Public	Email - Incoming	Pape Ave Plan	Member of the public asked for information regarding the path underneath Pape Avenue, specifically related to noise and vibration impacts.	21-May-21	Mx provided links to the procurement package and overall timeline and environmental assessment process. Mx confirmed the tunnel will be approximately 30 m underground and most homes will not feel any vibration or sound due to the depth and mitigation measures planned.
20-May-21	N/A	Member of the Public	Email - Incoming	Cost Comparisons	Member of the public asked for a detailed breakdown of the cost comparisons of an above ground option through Riverside compared to an underground option.	25-May-21	Mx confirmed the initial cost assessment and the additional cost of underground approach would exceed \$800 million, average cost of the tunneled Relief Line South of \$0.8-1.0 billion per kilometre. However the initial analysis revealed tunneling would delay completion between 15 and 24 months and numerous homes and Saulters Street Brewery would be required. Mx provided a link to the robust business case process for their review.

21-May-21	N/A	Member of the Public	Email - Outgoing	Surveying work on public roadways between Logan Avenue to Pape Avenue - Starting as early as May 25	Mx provided a notice regarding continuing surveying work that will be taking place on public roadways between Logan Avenue to Pape Avenue beginning May 25th.	N/A	N/A
21-May-21	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public asked for information on the layout and number of stations.	25-May-21	Mx replied it will be 15.6 kilometers long and will include 15 stations with six interchange stations and 17 new connections to GO train lines and existing subway and streetcar lines.
21-May-21	N/A	Member of the Public	Email - Incoming	The Corktown Station Flyer	Member of the public noted Parliament street was misspelt.	25-May-21	Mx will make sure it's spelled correctly going forward.
25-May-21	N/A	Member of the Public	Email - Incoming	Metrolinx Maintenance & Storage Facility (Thornccliffe Park Dr.)	Member of the public asked what Mx's plans are for the relocation of other businesses in the area.	27-May-21	Mx confirmed they are working with each affected business or non-profit organization to find the best options for them and are aiming for the businesses to stay within walking distance.
25-May-21	N/A	Member of the Public	Email - Incoming	Where is Josh Vandezande?	N/A	25-May-21	Mx confirmed that Josh has moved from the team and Daryl is the new contact.
25-May-21	N/A	Member of the Public	Metrolinx Engage	Suggestion on West End Ontario Line	Member of the public suggested there should be a spur/line to Dundas West TTC/O/UPS, which will also serve Parkdale and Roncesvalles.	31-May-21	Mx thanked the member of the public and provided some more information of the future for expansion. Mx stated they will pass their suggestion on to the project team.
26-May-21	N/A	Member of the Public	Email - Incoming	A Very Busy GO Corridor	Member of the public asked for a call to discuss the noise, vibration and health mitigation of the daily trains planned.	N/A	N/A
26-May-21	N/A	Member of the Public	Email - Incoming	Corktown station construction question	Member of the public would like to know the planned scope of work for Corktown station construction that is across the road. Would like details on the location of the station and wondering if the Porsche dealership will be demolished. Wants to know timelines of projects.	3-Jun-21	Mx confirmed the Corktown Station will be constructed on the site where the Staples is located, just north of Front Street. Corktown Station Early works includes the demolition of the Porsha dealership as well. Mx indicated demolition for Corktown Station early works is planned to begin as early as September 2021 and will be followed by environmental due diligence activities including archaeological assessments. The main contract work is anticipated to start in 2023.
27-May-21	N/A	Member of the Public	Email - Outgoing	Chat with Rob-Metrolinx	Mx provided a link to information regarding how the MSF site was chosen.	N/A	N/A

27-May-21	N/A	Member of the Public	Email - Incoming	St. Clair LRT east to Thorncliffe Park Station?	Member of the public asked if there has been any discussion around extending the St. Clair LRT east to Thorncliffe Park Station.	27-May-21	Mx replied that they are working with TTC and while Mx is not aware of any plans to connect St. Clair LRT, the line does connect to Line 5 and Line 2 at other proposed stations.
28-May-21	N/A	Member of the Public	Metrolinx Engage	Extent and duration of disturbance in my vicinity	Member of the public would like more information on the duration and extent of the disturbance.	1-Jun-21	Mx indicated they are still finalizing the design along Pape Avenue and it's part of the North Civils package which is the last of the three Ontario Line packages and is expected to go out for bids in 2022. Mx provided links for more information regarding noise and vibration.
29-May-21	N/A	Member of the Public	Metrolinx Engage	Density	Member of the public indicated they would like to see a mixed use mid-high-rises incorporated into the new stations rather than wasteful one story standalone building. Member of the public gave the example of Danforth Near Pape that is underdeveloped.	31-May-21	Mx indicated Infrastructure Ontario is leading a transit-oriented communities program for the OL, which is focusing on incorporating these type of developments. Mx indicated there is plans for two stations at Corktown and East Harbour. Mx shared a link with more information and suggest they signed up for Mx newsletter to stay up to date.
30-May-21	N/A	Member of the Public	Email - Incoming	Metrolinx MSF in Thorncliffe Park	Member of the public express concerns about the impacts of the proposed Maintenance and Storage Facility. Member of the public is also concerned with the lack of consultation for the decision to place the train yard in the community of Thorncliffe.	3-Jun-21	Mx indicated the location was selected based on comprehensive process, taking into account a number of considerations which Mx outlined. Mx indicated they have been meeting regularly with the community since the last virtual open house. Mx reassures they are working with the community.
31-May-21	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public inquired if Mx has considered opportunities for the rail corridor to serve community functions through the provision of retail/community use below the tracks where the grade changes would support. Indicts this is common practice in Europe and would be a potential revenue opportunity.	31-May-21	Mx indicated they will pass along the suggestion to the project team. Mx suggested to sign up for their newsletter to stay updated on the OL.
1-Jun-21	N/A	Member of the Public	Email - Outgoing	Metrolinx Survey Expansion - Hopedale Avenue	Mx informed the member of the public that due to equipment issues, the contractor carrying out the investigative drilling work on Minton Place anticipates	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					to finish four days later than the anticipated end date.		
3-Jun-21	N/A	Member of the Public	Metrolinx Engage	Consultation Method	Member of the public expressed concerns and the lack of detailed information being made available before and during the consultation.	4-Jun-21	Mx indicated they want to work with the communities as they advance OL plans. Mx requested to connect with the member of the public to hear their concerns more and have a discussion and offered available times.
3-Jun-21	N/A	Member of the Public	Email - Incoming	Follow Up to Your Recent Phone Call	Member of the public expressed concerns about the number of trains that will be passing by their home and would like to confirm that the GO Train track nearest to their home will be pulled up and moved to the east/south side.	3-Jun-21	Mx suggested to connect via phone to discuss the current plans near First Avenue and Logan avenue, in addition to discuss about the bridges and measurements.
3-Jun-21	N/A	Member of the Public	Email - Incoming	Metrolinx Train Yard	Member of the public expresses their concerns about the train yard being built in their community of Thorncliffe. Believes it will damage the neighbourhood. Requested information about the steps that were taken for this decision.	4-Jun-21	Mx indicated the location was selected based on comprehensive process, taking into account a number of considerations which Mx outlined. Mx provided a link to registered for the next virtual open house.
4-Jun-21	N/A	Member of the Public	Email - Outgoing	Virtual Open House - June 24	Mx provided a link to register for the next virtual open house for East Harbour, Leslieville/Riverside, Gerrard.	N/A	N/A
4-Jun-21	N/A	Member of the Public	Email - Incoming	For consideration	Member of the public asked for information regarding certain areas as they have not seen a response from Mx.	9-Jun-21	Mx will provide details in an upcoming meeting and suggested the member of the public attend.
7-Jun-21	N/A	Member of the Public	Metrolinx Engage	Potential Redevelopment Idea for Area around St. Mary's Parish	Member of the public made a suggestion to redevelop the area around Portugal Square. Member of the public suggests the parking lot behind the church and the crescent that encircles St. Mary's Parish is an optimal site for the subway entrance.	7-Jun-21	Mx informed the member of the public that unfortunately the Portugal Square is too far north to construct station entrances. Mx provided a link with more information. Mx provided a link to register for an upcoming public virtual open house for the OL West Segment.
7-Jun-21	N/A	Member of the Public	Email - Outgoing	Following up- Ontario Line	Mx provided a link for more information about the OL station at Queen and Spadina. Mx provided a link to register for an upcoming open house for the West Segment.	N/A	N/A
7-Jun-21	N/A	Member of the Public	Email - Outgoing	Introduction - Ontario Line	Mx provided an introduction to the Community Relations team for the Ontario Line. Mx indicated they saw the member of the public's story on an east end community group page and wanted	N/A	N/A

7-Jun-21	N/A	Member of the Public	Email - Incoming	Building Transit Faster Act, 2020	Member of the public requested for more information the Building Transit Faster Act, 2020 that was highlighted in the letter that was received by them.	8-Jun-21	Mx responded with the link to the members property to see where it sits within the transit corridor lands, which are labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in blue. Mx confirmed that the letter sent does not necessarily mean that Mx will need to access or acquire any of the members property in the future – and they will receive separate letters if either situation applies to you. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete. Mx confirmed that Project Co will be selected in 2024 for the Northern Civil, Stations and Tunnel procurement contract. Mx also shared that Environmental Impact Assessment Report (EIAR) will highlight the anticipated impacts and mitigation measures for the construction and operation of the Ontario Line.
7-Jun-21	N/A	Member of the Public	Email - Incoming	Ontario Line and Transit Corridor Land Designation under the Building Transit Faster Act, 2020	Member of the public indicated they received a noticed saying they will have a noticed placed on their title that they are 30 meters from the OL development but are 150 meters from Pape. They asked for information to understand how their property is affected.	8-Jun-21	Mx provided a link to see where their property sits within the transit corridor lands. Mx indicated an additional 30 meters buffer area was added to account for future planning and construction decision without impacting more people. Mx indicated this means that if the member of the public were to build they may need to obtain a no cost permit from Mx. Mx provided a link for their newsletter and to register for the virtual open house.

10-Jun-21	N/A	Member of the Public	Email - Incoming	For consideration	Member of the public would like Mx to consider changing their police check process. Member of the public provided a news article on the systemic racism. They also noted they are not asking Mx to invent a process that is anti-racist,	10-Jun-21	Mx thanked the member of the public for their input and confirmed they will forward to staff and other senior leaders.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					they just want to confirm why the decision was made in Thorncliffe.		
10-Jun-21	N/A	Member of the Public	Email - Outgoing	Following up on call about the Ontario Line	Mx followed up stating it's highly unlikely their property will be impacted. If anything changes, Mx will reach out to them directly to notify them and begin discussions.	N/A	N/A
11-Jun-21	N/A	Member of the Public	Email - Incoming	King-Bathurst & Queen & Spadina	Member of the public is wondering what impacts OL will have on their company that is in the area. Enquiring how deep the tunnel will be.	14-Jun-21	Mx indicated the tunnel to be 30-40 metres deep. Mx provided more information regarding the project.
11-Jun-21	N/A	Member of the Public	Metrolinx Engage	Which public meeting relate to me	Member of the public is having troubles deciphering if they should attend the North meeting or the East meeting.	21-Jun-21	Mx explained if they live near Pape station the meeting most applicable to them would be the North meeting and provided a link to the virtual open house.
11-Jun-21	N/A	Member of the Public	Email - Incoming	Your letter about my property	Member of the public would like more information about where their property sits on the transit corridor and where the work will physically happen. Member of the public also wanted to know where the project is to begin and the timeline for its completion.	14-Jun-21	Mx provided a link to look up their property to see where it sits within the transit corridor lands. Mx also provided more information regarding details of the project and timelines. Mx indicated it's expected to begin in 2022 after the EA process and all reports are completed.
12-Jun-21	N/A	Member of the Public	Email - Incoming	Facts and Fiction - follow-up	Member of the public indicated they received Mx's Facts and Fiction handout and wanted some clarity on some of the statements. Mainly regarding noise and vibration. Member of the public is concerned that more trains going pass in a day is but less volume is worse then less trains.	20-Jun-21	Mx replied to all their questions and provided links to understand the noise walls better. Mx indicated and provided a link for the next virtual open house.
14-Jun-21	N/A	Member of the Public	Email - Incoming	Received notice of Transit Corridor Land Designation	Member of the public express concerns regarding the title being added to their property and would like more explanation.	28-Jun-21	Mx explained the size of the transit corridor lands vary along the OL corridor, and are not limited to 30 metres from the existing rail corridor. This means if land owners were planning to build, a non cost permit from Mx may be required in addition to any necessary municipal permits. Mx provided a link to an upcoming virtual open house.
14-Jun-21	N/A	Member of the Public	Email - Incoming	N/A	The landowner noted their property appears to be beyond the transit corridor lands and requested their title not be altered.	30-Jun-21	Mx replied that the boundary on the interactive map may not be entirely accurate due to technical limitations and letters were sent to addresses based on

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							the Property Identification Numbers, which is much more accurate.
14-Jun-21	N/A	Member of the Public	Email - Incoming	Transit corridor lands	Member of the public indicated they are selling their home and would like more information regarding the transit corridor lands 30m buffer zone.	28-Jun-21	Mx explained the size of the transit corridor lands vary along the OL corridor, and are not limited to 30 metres from the existing rail corridor. This means if land owners were planning to build, a non cost permit from Mx may be required in addition to any necessary municipal permits. Mx provided a link to an upcoming virtual open house.
15-Jun-21	N/A	Member of the Public	Email - Incoming	Registration against title (Letter attached)	Member of the public indicated they received a letter from Mx regarding the OL and Transit Land Designation under the Building Transit Faster Act 2020. The member of the public would like some more information as they believe their property is not within the 30 metre boundary.	N/A	N/A
15-Jun-21	N/A	Member of the Public	Email - Outgoing	Coxwell Avenue	Mx followed up after a phone call with the member of the public confirming their property is not on the transit corridor lands or within the 30m buffer.	N/A	N/A
15-Jun-21	N/A	Member of the Public	Email - Incoming	Exhibition Station - TTC Dufferin Loop Integration	Member of the public is enquiring if Mx is working with the TTC to carry out the work on Exhibition Station in tandem so disruption to the community will be minimal and happen at the same time.	22-Jun-21	Mx indicated they cannot comment on the status or timeline of these projects cause they fall under the TTC and City of Toronto. Mx is working closely with TTC and CoT to coordinate plans for the OL at Exhibition station with other proposed project in the area.
16-Jun-21	N/A	Member of the Public	Email - Incoming	Ontario Line Demand Projections (Follow up)	Member of the public wanted to seek clarification on the numbers (i.e.. daily trips, customers riding per day, on train demand levels) presented in recent articles and presentations by the Ontario Line team.	23-Jun-21	Mx acknowledged the member of the public's edits on some of the numbers in the presentations (i.e.. total ridership) and made some changes. It was also mentioned where overall ridership numbers can be located, and clarification was asked to the member of the public what they meant by on-train demand levels.
17-Jun-21	N/A	Member of the Public	Email - Outgoing	Province announced proposals for Exhibition, King-Bathurst and	Mx shared that the province of Ontario has announced its proposal to build transit-oriented communities (TOC) along the future OL at Exhibition, King-Bathurst and Queen-Spadina stations.	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
				Queen-Spadina stations	Mx provided a link with more information regarding the TOC program.		
17-Jun-21	N/A	Member of the Public	Metrolinx Engage	Letter received 10 days ago	Member of the public reached to ask for the letter as they had misplaced the earlier one received in mail.	28-Jun-21	Mx confirmed that the letter received was regarding transit corridor land, which vary in size and are not limited to the location of the Ontario Line track route. Mx shared a link to allow the member of the public to search for their property. Mx further clarified that letter that was sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. Mx invited the member to sign up for the Ontario Line Project newsletter to keep up-to-date with the project.
18-Jun-21	N/A	Member of the Public	Email - Outgoing	Community Notice - Investigative drilling work within the Metrolinx rail corridor from Queen Street East to Gerrard Street East - Starting as early as June 24	Mx provided notice about investigative drilling work that will be taking place within the Mx rail corridor from Queen Street East to Gerrard Street East, starting as early as June 24. Permission to enter has been secured with their property owner. Mx provided further details in an attachment.	N/A	N/A
18-Jun-21	N/A	Member of the Public	Email - Outgoing	Follow-up on call	Mx indicated they will inquire about the member of the public's question regarding how construction may impact the rat population around Pape. Mx provided a link to the results of our environmental assessment process.	N/A	N/A
18-Jun-21	N/A	Member of the Public	Metrolinx Engage	University Park and Osgoode station	Member of the public inquired whether the team has considered building the Osgoode entrance on the current University Avenue itself. Member of the public provided some suggestions such as by building in the current roadway, this could allow you to build a station entrance, very close to the proposed site without impacting Osgoode Hall (and the trees)	N/A	Mx confirmed that the goal is to always strive to reduce or avoid impacts to these kinds of properties wherever possible. Mx also noted that they appreciate the member of the public's suggestion for an alternative Ontario Line Osgoode station entrance location on University Avenue and will pass it on to the project teams. Lastly, Mx shared the link to the Ontario Line project newsletter to stay updated on the Ontario Line.
19-Jun-21	N/A	Member of the Public	Email - Incoming	Cost Comparisons	Member of the public asked Mx why they were not told about the proposed re-	20-Jun-21	Mx explained why the proposed re-grading wasn't discussed during the call

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					grading of the entire Lakeshore East corridor even though they talked to them last week. The member also asked if the re-grading was factored into the cost projections released in 2019, and to seek clarification on the number of trees that will be impacted by the above ground option in their area.		last week with the member. Mx elaborated and said that the proposed work is still within the original envelope which was approved by the federal government, and sent a diagram displaying how many trees will be impacted in the area from the above ground option close by.
20-Jun-21	N/A	Member of the Public	Metrolinx Engage	Neighbourhood Office	Member of the public asked when will the community office open and if it coincide with the next round of local virtual presentations here in June (June 24 and 30)	6-Jul-21	Mx responded with a confirmation that renovations to complete within the office as it is being repurposed from previously serving as a retail location are still underway and there isn't any definitive date yet. Upon completion, Mx will announce it publicly.
21-Jun-21	N/A	Member of the Public	Email - Incoming	Corridor Land Designation letter	Member of the public initially sent the inquiry to MPP Peter Tabuns, and upon receiving consent, MPP forwarded the inquiry to Metrolinx. The inquiry was regarding permissions required for the study area. Member of the public requested for more information on the project study area, scope of work and impacts on homes/buildings being expropriated.	6-Jul-21	Mx explained the size of the transit corridor lands vary along the OL corridor, and are not limited to 30 metres from the existing rail corridor. This means if land owners were planning to build, a non cost permit from Mx may be required in addition to any necessary municipal permits. Mx provided a link to an upcoming virtual open house.
21-Jun-21	N/A	Member of the Public	Email - Outgoing	Following Up - Ontario Line	Mx followed up to confirm that the current transit corridor lands designation does not extend to the member of the public's property. Mx provided more links for further information.	N/A	N/A
21-Jun-21	N/A	Member of the Public	Email - Outgoing	Following Up - Ontario Line	Mx provided links to maps and signing up for the upcoming virtual open house. Mx also provided details regarding the Transit Corridor Lands + 30-metre buffer area.	21-Jun-21	Member of the public thanked Mx for the information.
22-Jun-21	N/A	Member of the Public	Email - Outgoing	Following up on call about Ontario Line	Mx provided the OL virtual open house details and indicated that open house will focus on the project in the East Segment.	N/A	N/A
22-Jun-21	N/A	Member of the Public	Metrolinx Engage	Plan for the line south of Parliament site	Member of the public inquired if Mx will be going underneath existing buildings near St Laurent and Harmony B. Inquired if Mx will be taking over parts of the distillery.	21-Jul-21	Mx indicated OL will head south just east of Berkeley Street to stop at Corktown Station which will be located just north of Front Street. Mx indicated the OL will be travelling beneath portions of the Distillery District and they do not

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							anticipate impact from this to any of the existing properties.
23-Jun-21	N/A	Member of the Public	Email - Incoming	June 3, 2021 Transit Corridor Letter	Member of the public reached out after receiving a letter from Mx asking whether their property is within the area of the Ontario Line. Member of the public requested for further details on how the transit expansion will directly affect them and their property. Indicted from a business aspect of being a real estate agent in the area they need to know exactly what is happening with the titles of properties.	7-Jul-21	Mx provided a link to see where their house sits within the transit corridor land and indicts a small portion is within the zone. Mx indicated that the transit corridor land designation essentially means that if they were to build, a no cost permit from Mx may be required. Mx provided a link to their newsletter and a link to register for their upcoming virtual open house.
23-Jun-21	N/A	Member of the Public	Email - Incoming	Ontario Line Demand Projections (Follow up)	Member of the public wanted to seek further clarification on specific ridership and peak travelling numbers for the OL, and specific content about stations.	N/A	N/A
23-Jun-21	N/A	Member of the Public	Email - Incoming	Ontario Line Demand Projections (Follow up)	Member of the public has asked for a copy of info pertaining to peak hour and all day boardings for each station.	23-Jul-21	Mx answered the member of the public's questions pertaining to specific ridership and travelling numbers for the OL, and specific content about stations.
23-Jun-21	N/A	Member of the Public	Email - Incoming	Questions about disruptions	Member of the public had numerous questions regarding the OL project, including construction disruption, accessing survey drawings, noise and vibration studies and safety.	30-Jun-21	Mx provided answers to all their questions and provided additional links for them to view. Mx suggested to reach out if they had further questions.
23-Jun-21	N/A	Member of the Public	Email - Incoming	Blog "Bridging across Toronto's Don River for the Ontario Line"	Member of the public requested that Mx update the blog with a reference to the pedestrian and cycling infrastructure that will be included to connect East Harbour station/employment zone with the residents and amenities in eastern Canary/Corktown.	23-Jun-21	Mx thanked the member of the public and indicated they will make it more clear in the communications and online resources.
23-Jun-21	N/A	Member of the Public	Email - Incoming	Concerns	Member of the public reached out after receiving a letter from Mx asking whether their property is within the area of the Ontario Line. Member of the public requested for further details on how the transit expansion will directly affect them and their property.	7-Jul-21	Mx provided a link to see where their house sits within the transit corridor land and indicts a small portion is within the zone. Mx indicated that the transit corridor land designation essentially means that if they were to build, a no cost permit from Mx may be required. Mx provided a link to their newsletter and a link to register for their upcoming virtual open house.

23-Jun-21	N/A	Member of the Public	Email - Incoming	Transit Corridor	Member of the public would like more information on how this will impact their property. Also inquired if any damages done will be repaired to their satisfaction.	7-Jul-21	Mx provided a link to see where their house sits within the transit corridor land and indicts a small portion is within the zone. Mx indicated that the transit corridor land designation essentially means that if they were to build, a no cost permit from Mx may be required. Mx provided a link to their newsletter and a link to register for their upcoming virtual open house.
23-Jun-21	N/A	Member of the Public	Email - Incoming	Transit Corridor Letter / possible expropriation down the line	Member of the public is deeply concerned with the letter they received regarding the Transit Corridor and would like more details about what it means for their home.	25-Jun-21	Mx provided a link to see where their house sits within the transit corridor land and indicts a small portion is within the zone. Mx indicated that the transit corridor land designation essentially means that if they were to build, a no cost permit from Mx may be required. Mx provided a link to their newsletter and a link to register for their upcoming virtual open house.
24-Jun-21	N/A	Member of the Public	Email - Incoming	Impact on Property	Member of the public emailed Mx to see how their property would be impacted by the Ontario Line project.	25-Jun-21	Mx responded back to clarify the notice the member of the public received from Mx and that an appointment can be booked with them.
24-Jun-21	N/A	Member of the Public	Email - Outgoing	Call-in details for today	Mx reached out to a member of the public who was having difficulty logging on to the call via Teams. Mx re-enclosed the link for them.	N/A	N/A
24-Jun-21	N/A	Member of the Public	Email - Incoming	N/A	Member of the public reached out to Mx regarding the effects of construction of the new subway line on their property and requested an estimated start and finish of the work on Pape Avenue.	7-Jul-21	Mx confirmed that Project Co will be selected in 2024 for the Northern Civil, Stations and Tunnel procurement contract. Mx also shared that Environmental Impact Assessment Report (EIAR) will highlight the anticipated impacts and mitigation measures for the construction and operation of the Ontario Line.
24-Jun-21	N/A	Member of the Public	Email - Incoming	Transit Corridor	Member of the public is concerned about the Transit Corridor and what it means for their home. They requested a call back or email to have some clarification.	25-Jun-21	Mx explained the size of the transit corridor lands vary along the OL corridor, and are not limited to 30 metres from the existing rail corridor. This means if land owners were planning to build, a non cost permit from Mx may be required in addition to any necessary municipal

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							permits. Mx provided a link to an upcoming virtual open house.
25-Jun-21	N/A	Member of the Public	Metrolinx Engage	Osgoode Station: Preservation of Osgoode Hall heritage fence	Member of the public expressed concerns about the iron fence that was constructed in 1868 and provided a link with more details.	28-Jun-21	Mx indicated they have completed a comprehensive inventory of heritage properties and cultural heritage landscapes for the initial Environmental Condition Report and provided the link to the report.
25-Jun-21	N/A	Member of the Public	Email - Outgoing	Ontario Line transit corridor lands	Mx followed up with the members of the public after they had reached out to the MPP regarding the Ontario Line, requesting for additional details on the Ontario Line.	N/A	N/A
25-Jun-21	N/A	Member of the Public	Email - Outgoing	East Segment Virtual Open House	Mx followed up with the member of the public after the East Segment Virtual Open House. Mx suggested having a call to answer their previous questions.	N/A	N/A
25-Jun-21	N/A	Member of the Public	Metrolinx Engage	Osgoode Station: Preservation of Osgoode Hall heritage fence	Member of the public raised concerns over the Osgoode Hall wrought iron fence constructed in 1868. The member of the public inquired about how Mx plans to build the station by keeping the heritage designated fence intact.	30-Jun-21	Mx confirmed that mx plans to locate a station entrance building on the southwest corner of the Osgoode Hall property, as announced during our Ontario Line virtual open house on June 17 and detailed on the engage website. Mx confirmed that Mx commits to avoiding, to the greatest extent possible, impacts to the fence, striving to remove only the necessary portions. The aim is to continue engaging with Osgoode Hall's concerned stakeholders and will continue to do so as project plans and designs progress
25-Jun-21	N/A	Member of the Public	Email - Incoming	N/A	Member of the public asked how the line will impact their home and neighbourhood.	7-Jul-21	Mx confirmed the exact construction timelines and anticipated impacts will be finalized during detailed design and they do not have further details at this time. The EIAR will detail anticipated impacts and mitigation.
27-Jun-21	N/A	Member of the Public	Email - Incoming	Impact on Property	Member of the public asked some questions (traffic related, location of subway, accessibility) about the Ontario Line to Mx mainly in the Pape area.	5-Aug-21	Mx addressed the member of the public's questions (traffic related, location of subway, accessibility) about the Ontario Line to Mx in the Pape area.
27-Jun-21	N/A	Member of the Public	Email - Incoming	Your "more park space" article	Member of the public inquired if Saulter Street Parkette will be included in the more spart space.	28-Jun-21	Mx indicated the current plan is to ensure the public will continue to be able to access Saulter Street Parkette during

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							construction and beyond. Mx provided a link to the latest open house and to view the presentation.
28-Jun-21	N/A	Member of the Public	Email - Outgoing	Follow-up Ontario Line	Mx thanked the member of the public for the phone call and reiterated that construction access is currently being planned and they are completing environmental studies. Mx confirmed that the property letter is due to the transit lands representing areas where they may need to carry out activities to plan and build the project and accounts for an array of needs that might come up during the construction.	N/A	N/A
28-Jun-21	N/A	Member of the Public	Email - Outgoing	Ontario Line - Follow up	Mx followed up with the member of the public on the questions regarding the possible impacts to the member of public's property at Jarvis Street.	N/A	N/A
28-Jun-21	N/A	Member of the Public	Email - Incoming	Cost Comparisons	Member asked Mx about some tactics the contractors are using in Bruce Mackey Park.	28-Jun-21	Mx mentioned they will look into this matter internally.
29-Jun-21	N/A	Member of the Public	Email - Outgoing	Following up	Mx followed up with the member of the public and suggested attending the virtual open house for the north segment (Pape station to the Ontario Science Centre),	N/A	N/A
29-Jun-21	N/A	Member of the Public	Email - Incoming	Proposed Property Requirement	Member of the public's representative responded to the letter received regarding the proposed property requirement. Member of the public raised concerns and wanted further clarification regarding their property	5-Jul-21	Mx acknowledged the receipt of their concerns and confirmed that they will get back to the member of the public with further clarification and information.
29-Jun-21	N/A	Member of the Public	Email - Incoming	Building Transit Faster Act, 2020	Member of the public noted they have repeatedly emailed a question asking if Mx has a plan regarding their property they can share with them, and the start and end date of the project.	7-Jul-21	Mx replied the construction timelines and detailed project plans are unavailable at this time as the Project Company selected to build the project will finalize the designs and timeline. The EIAR will detail anticipated impacts and mitigation measures for the construction and operation of the project.
30-Jun-21	N/A	Member of the Public	Email - Outgoing	Facts and Fiction - follow-up	Mx followed up with the member of the public shared slide deck presented at the virtual open house and provided further clarifications	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
30-Jun-21	N/A	Member of the Public	Email - Outgoing	Follow up - detailed OL drawings	Mx followed up with the member of the public with corridor width measurement and more detailed drawings as requested. A link to the roll plots were also shared.	30-Jun-21	Member of the public inquired about whether there were property lines included in the drawing files.
30-Jun-21	N/A	Member of the Public	Email - Outgoing	Ontario Line - Follow up	Mx followed up with the member of the public and shared the east virtual open house link to replay the video or view the presentation.	N/A	N/A
30-Jun-21	N/A	Member of the Public	Email - Outgoing	N/A	Mx followed up to confirm that the graphical representation of the boundary in the interactive map may not be entirely accurate due to the technical limitations of the mapping app. And the transit corridor land designation does apply to the member of the public's property during construction of the Ontario Line.	N/A	N/A
30-Jun-21	N/A	Member of the Public	Email - Outgoing	Tiverton Ave	The landowner asked if their property is within the yellow zone presented at the past meeting.	30-Jun-21	Mx followed up with the resident to confirm that there is no requirement at Tiverton Ave for the Ontario Line project, however with design changing as the project progresses, Mx will reach out to the resident immediately if this changes.
30-Jun-21	N/A	Member of the Public	Email - Outgoing	Follow up - detailed OL drawings - Property Lines	Mx provided detailed measurements for the cross section of the corridor to SJS, and provided a link for the roll plot. Mx confirmed that no property lines are included in the drawing.	30-Jun-21	Member of the public asked if property lines are a part of the drawing.
1-Jul-21	N/A	Member of the Public	Email - Incoming	Follow up - detailed OL drawings - Property Lines	Member of the public is unsure about the property line boundaries which include parkland and many mature trees that were planted 50-60 years ago.	2-Jul-21	Mx indicated that the property line is defined by the existing fence/berm/retaining wall which has some inconsistencies due to shifting over time, and that Mx is responsible for any vegetation within the rail corridor/property boundary. A link was provided as well from a previous open house to clear up any answered questions.
1-Jul-21	N/A	Member of the Public	Email - Incoming	Follow up - detailed OL drawings	Member of the public raised concerns over whether houses were built on the ROW and is Mx acquiring the land from municipal. Member of the public requested for further clarifications on the property lines.	2-Jul-21	Mx responded to the member of the public with clarification of how the property line is defined. A link of the virtual open house was also provided in the response in order for the member to gain further details about how the future

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
7-Jul-21	N/A	Member of the Public	Email - Outgoing	Registration against title (Letter attached)	Mx reached out to the member of the public with regards to their property which has been identified as a located within the transit corridor lands.	N/A	N/A
7-Jul-21	N/A	Member of the Public	Email - Outgoing	Harcourt - Construction Timeline	Mx confirmed that the construction dates for the OL will begin in 2024 for the Northern Civil, Stations and Tunnel procurement contract	N/A	N/A
8-Jul-21	N/A	Member of the Public	Email - Incoming	Truncated Gerrard St E	Member of the public suggested Mx create more greenspace in their neighbourhood of Leslieville and solve a misdirected traffic issue that has been ongoing since 2007. Member of the public provided an attached document with further details and a Facebook page that they created on the traffic issue.	13-Jul-21	Mx indicated the parcel of land is beyond Mx property boundary and requires consultation/direction with the City. Mx indicated they do have plans to deliver new park space on the west side of the bridge.
9-Jul-21	N/A	Member of the Public	Email - Outgoing	Ontario Line - Follow up	Mx provided the link to a recent presentation, Mx indicated they don't expect negative impact to the member of the public's property. Mx also included a link to more information regarding the Building Transit Faster Act.	N/A	N/A
9-Jul-21	N/A	Member of the Public	Email - Incoming	Expropriation	Member of the public inquired if his medical building will be affected by the Mx project.	12-Jul-21	Mx indicated that a decision about the property needs in the Pape area is expected within the next 1-2 months. Mx suggest to follow up with them via email or a book a meeting with a team member and provided the link to book.
9-Jul-21	N/A	Member of the Public	Email - Incoming	Question for Virtual meeting	Member of the public inquired if the project along Queen St W at Spadina be destroyed.	12-Jul-21	Mx indicated that they'll be working with communities, local BIAs, and elected officials to minimize the impacts.
10-Jul-21	N/A	Member of the Public	Metrolinx Engage	Impact on our lives & our building	Member of the public is concerned with the Ontario Line going underneath their property and causing problems such as noise & vibration and potentially effecting the building's structure. The member of the public also asked if there will be an "interpretation centre", park & library in the most up to date old parliament site plans.	31-Jul-21	Mx confirmed that the Ontario Line alignment is not anticipated to travel underneath the member of the public's property. Mx also provided some links to maps and virtual open houses which can provide more context for the member of the public, as well as described how noise and vibration is being dealt with. Furthermore, Mx indicated that with the park and library, the province is pursuing a transit-oriented community proposal.

12-Jul-21	N/A	Member of the Public	Metrolinx Engage	Expropriation	Member of the public asked Mx if he will have to be expropriated because of the Ontario Line project.	5-Aug-21	Mx confirmed that the property is not expected to be needed for the Ontario Line.
12-Jul-21	N/A	Member of the Public	Email - Incoming	Western Battery Road, Toronto	Member of the public indicated a neighbouring building received a notice regarding Ontario Line Transit Corridor Land Designation notice and was wondering if their building is also going to be receiving such notice.	12-Jul-21	Mx confirmed the property does not fall within the transit corridor lands for the OL.
12-Jul-21	N/A	Member of the Public	Email - Incoming	Follow up - detailed OL drawings - Property Lines	Member of the public described the benefits of having invasive species trees are instead of having no trees, and asked if any of the trees on the east side of the retaining located at the west boundary of JS Park will be removed. The member of the public appreciated Mx's answer, and also wanted to see if the wall in Jimmie Simpson Park is Mx owned and if there is construction detail on the T-Wall retaining system.	12-Jul-21	Mx acknowledged member of the public's talk on invasive species. Furthermore, Mx stated an answer can't be provided for the tree removal until the tree impact analysis is complete and shared with the community in the forthcoming environmental report this Fall.
13-Jul-21	N/A	Member of the Public	Email - Outgoing	Follow up - Corktown Station	Mx indicated a colleague passed on that the member of the public was inquiring about the OL passing beneath their condo and confirmed the tunnel will run below and there is no anticipated impacts to the condo building.	N/A	N/A
14-Jul-21	N/A	Member of the Public	Email - Incoming	Questions re impact on construction zone property	Member of the public asked Mx if there will be any impact to their property because of the Ontario Line Transit Corridor construction zone, and if any mitigation measures will be put in place.	5-Aug-21	Mx confirmed that the property will not be impacted by the Ontario Line Transit corridor construction. Some temporary traffic implications in the future were noted if utilities need to be relocated at Pape & Bain.
15-Jul-21	N/A	Member of the Public	Email - Outgoing	Follow up - detailed OL drawings - Property Lines	Mx will send a note back to member of the public for who owns the retaining wall. Mx will be working with their construction team to develop a video detailing the construction sequencing for the T-wall retaining system. Mx will follow up with member of the public about the trees being in the parks property, and that the consultation time for the retaining wall will be sometime in August.	15-Jul-21	Member of the public asked if the trees are in the parks property as well as when the retaining wall would be available.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
17-Jul-21	N/A	Member of the Public	Email - Incoming	Ontario Line and Transit Corridor Land Designation	Member of the public stated that they don't want to have a note listed on their property land registry because it could effect their ability to sell in the future. The member of the public also asked if Mx will be able to renovate a run down property at Pape and Dingwall due to new restrictions being proposed for the Ontario Line.	22-Jul-21	Mx explained to the member of the public what the transit corridor lands and the designation itself represent and how it might effect their property. Mx offered to have a meeting with the member of the public to discuss further.
18-Jul-21	N/A	Member of the Public	Metrolinx Engage	Small plaza at Pape & Cosburn (facing McDonalds) demolished	Member of the public wanted to seek clarification on if the small plaza at Pape and Cosburn being demolished is for the Pape Cosburn (underground) Ontario Line station.	5-Aug-21	Mx responded and indicated that no plans have been finalized for the station at Cosburn and Pape, nor have any properties been acquired or demolished for the project in the area. Mx further noted that the demolition of the plaza is not related to the Ontario Line.
19-Jul-21	N/A	Member of the Public	Email - Outgoing	Ontario Line - Follow up	Mx followed up with the member of the public regarding their property and the impact letter they received. Mx indicated the property team will provide more details and answer questions. Mx informed that they will keep them updated on this matter.	N/A	N/A
19-Jul-21	N/A	Member of the Public	Email - Outgoing	Following Up - Ontario Line	Mx followed up with the member of the public regarding their property and indicated that Mx has mitigation measures to ensure heritage homes and attributes are handle with the utmost care. Mx provided information on the evaluation and catalogued in the Cultural Heritage Report. Mx also provided a recording of the last virtual open house.	N/A	N/A
19-Jul-21	N/A	Member of the Public	Email - Outgoing	Ontario Line - Follow up	Member of the public still critiqued Mx's numbers retaining to specific ridership and travelling numbers for the OL, and specific content about stations.	N/A	N/A
19-Jul-21	N/A	Member of the Public	Metrolinx Engage	Subway underneath my property?	Member of the public expressed concerns and wanted reassurance about the subway being built underneath her property mainly because of her building being historically old.	30-Jul-21	Mx responded back to address the member of the public's concerns. Mx indicated the reasons why the subway is being built underground, identified the Cultural Heritage Report mentioning how care is brought to heritage homes and attributes, and a detailed noise and

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							vibration assessment will be conducted with appropriate mitigation measures.
19-Jul-21	N/A	Member of the Public	Email - Incoming	Cost Comparisons	Member complained to Mx about tree cutting occurring in their area at 2am, trees flying around, and asked if they will be replaced.	20-Jul-21	Mx provided reasoning for why tree removal occurred in the member's area, and will look into the safety matter further. It was mainly a result of a tree shifting due to recent weather and obstructing a GO train track leading to minor damage on the passing GO train.
20-Jul-21	N/A	Member of the Public	Email - Incoming	August issue of Hi-Rise	Member of the public offered to put a Mx ad placement in their August issue for the condo they live in.	21-Jul-21	Mx appreciated the member of the public's email and they have forwarded that information to their creative services department to get in touch with them for the ad.
21-Jul-21	N/A	Member of the Public	Email - Outgoing	Ontario Line - Property	Mx followed up to their phone conversation and attached the letter and info sheet that was sent to the member of the public.	21-Jul-21	Member of the public indicated no letter has yet to be received and no one has been in contact with them. Member of the public provides their mailing address.
21-Jul-21	N/A	Member of the Public	Email - Outgoing	Follow up - Ontario Line	Mx followed up from a phone call with the member of the public regarding their property. Mx indicated based on the current design the member of the public will not lose their driveway in construction.	N/A	N/A
22-Jul-21	N/A	Member of the Public	Email - Outgoing	Investigative drilling work on Tiverton Avenue Starting as early as July 27, 2021	Mx provided notice for upcoming work along Tiverton Ave. Mx indicated they will be using small drill rigs and trucks to gather information and evaluate underground conditions. Work is expected to last five days.	N/A	N/A
22-Jul-21	N/A	Member of the Public	Metrolinx Engage	Don Valley/Millwood crossing	Member of the public commented on the stand a lone bridge for the Ontario Line station for it not making use of the Millwood bridge, and if the trains or the pedestrian and bicycle's can be shifted onto the box beam underneath the Millwood bridge similar to the Bloor viaduct at much less expense.	5-Aug-21	Mx responded that the Millwood (Leaside) bridge was not feasible for a few reasons. The reasons being is it cannot accommodate the additional weight of the subway train, and that the route needs to be straight to ensure the train speed is steady and there is limited noise.
23-Jul-21	N/A	Member of the Public	Email - Incoming	Ontario Line and Transit Corridor Land Designation	Member of the public asked if there would be an estimated date for construction to start and finish.	23-Jul-21	Mx anticipates that a project company for the Ontario Line will be selected in 2024 for the Northern Civil, Stations and tunnel procurement contract which includes the Pape area.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)

N/A	N/A
30-Jul-21	N/A	Member of the Public	Metrolinx Engage	House near Proposed Ontario Line	Member of the public requested if Mx could send another letter stating their property is within 30 metres of the proposed Ontario Line to ensure the right information is being disclosed in selling their house.	3-Aug-21	Mx provided a new notice letter of the transit corridor lands designation for the Ontario Line subway project.
30-Jul-21	N/A	Member of the Public	Email - Outgoing	Following Up	Mx followed up with a member of the public regarding their property and the Ontario Line project. Links were sent in order to provide context/clarify for how the transit corridor land designation might affects the member's property. Mainly it will not impact their property.	N/A	N/A
31-Jul-21	N/A	Member of the Public	Metrolinx Engage	Impact on our lives & our building	The member of the public stated they don't agree with Mx assessment and showed a Google Maps image of their property where it seems the Ontario Line will pass under their property.	N/A	N/A
1-Aug-21	N/A	Member of the Public	Email - Incoming	LINK DOESN'T WORK: Your Ontario Line Newsletter	The member of the public said that the link for the Ontario Line newsletter sent by Mx doesn't work and asked if they could resend it.	3-Aug-21	Mx re-sent the Ontario Line newsletter link to the member of the public.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
2-Aug-21	N/A	Member of the Public	Email - Incoming	We need transit that works for Toronto	Member of the public confirmed why its important to have the Ontario Line project in Toronto and would like to see it become a reality.	4-Aug-21	Mx emailed the member of the public and asked if they would like to book an appointment to discuss their thoughts/concerns further.
3-Aug-21	N/A	Member of the Public	Email - Outgoing	Following up on question about Ontario Line route	Mx followed up with a member of the public regarding their property and the Ontario Line project. The property was determined to NOT be close to the Ontario Line extension, BUT located near the Scarborough Subway Extension. Therefore, the Scarborough Subway Extension team was forwarded on this email.	N/A	N/A
3-Aug-21	N/A	Member of the Public	Email - Incoming	Follow up - detailed OL drawings - Property Lines	Member of the public asked if Mx has determined where the property lines are and who owns the retaining walls and trees in the Jimmie Simpson Park as well as the Bruce Mackie Park.	4-Aug-21	Mx confirmed the team added property lines to the roll plot. Mx also indicated they still aren't sure who owns the retaining walls, and that the environmental report coming out in the fall will provide more details on tree removals for the project.
6-Aug-21	N/A	Member of the Public	Email - Incoming	Ontario Line Community Table for Thorncliffe Park	Member of the public attached a letter sent to Malcom MacKay, Project Sponsor at Ontario Line.	11-Aug-21	Mx confirmed they will get back to the member of the public about them joining the community table.
6-Aug-21	N/A	Member of the Public	Email - Incoming	Questions re impact on construction zone property	The member of the public appreciated Mx's answer, but was concerned with a new notice for Mx construction work occurring overnight from 9pm-5am on Aug 9 and Aug 10 mainly because of the drilling. The member of the public is concerned the construction work will impact their mental health.	6-Aug-21	Mx notified the member of the public that the construction work will occur on Aug 16 and 17 instead of Aug 9 and 10. Mx will provide more specific details on the construction at Pape & Bain as soon as they can.
6-Aug-21	N/A	Member of the Public	Email - Outgoing	GO bus tours of Toronto MSF sites	Mx provided an invitation/ registration link to the member of the public for the Aug 12, 2021 GO bus tours of Toronto MSF sites.	6-Aug-21	Member of the public stated they cannot attend the bus tours on August 12, 2021 as they will be away.
6-Aug-21	N/A	Member of the Public	Email - Incoming	Error on latest e-blast on August 6/21	Member of the public provided some feedback to Mx on the announcement date for the Ontario Line mentioned in the latest e-blast.	9-Aug-21	Mx acknowledged the member of the public's email and made the correction.
10-Aug-21	N/A	Member of the Public	Email - Outgoing	Questions re impact on construction zone property	Mx confirmed that the work scheduled on August 16 & 17, 2021 will strictly occur from 3pm-9pm instead of overnight.	11-Aug-21	Member of the public acknowledged the email received from Mx.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
10-Aug-21	N/A	Member of the Public	Email - Incoming	Proposed Osgoode Station	Member of the public inquired about the development of the Osgoode Station.	11-Aug-21	Mx confirmed that the CIBC building's façade will be reinstated but the Ontario Line Osgoode Station entrance building at 205 Queen Street West will not increase in height.
11-Aug-21	N/A	Member of the Public	Email - Incoming	Impact on Property	Member of the public wanted to seek clarification from Mx if an exit tunnel for the Ontario Line will actually be at Gerrard and Carlaw based on Mx's portal map. They also asked if the exit tunnel will be underground below the houses on the west side of Pape south of the school. Furthermore, the member of the public also asked if Ontario Line will be using existing GO and VIA tracks, and when the actual location of the exit from underground will be finalized.	11-Aug-21	Mx responded and said that the portal will be closer more towards Paper compared to Carlaw, and will not touch the property of Pape Avenue Junior Public School.
15-Aug-21	N/A	Member of the Public	Metrolinx Engage	When will I need to move?	Member of the public asked Mx when they would have to move out of their apartment since it will be directly impacted by the construction at Cosburn Station.	23-Aug-21	Mx responded that the design process is still being confirmed for the Cosburn Station on the Ontario Line, but that their property would be need sometime by early 2024 or end of 2023.
17-Aug-21	N/A	Member of the Public	Email - Incoming	Pape and Danforth overnight investigative subsurface work along Pape Avenue	The member of the public expressed concern regarding overnight work noise and noted that Mx is disturbing the peace.	17-Aug-21	Mx apologized for the disruptive nature of the noise and confirmed that work should be completed tonight. Mx also noted that government infrastructure work is exempt from noise bylaw hours and overnight work is part of a requirement set by the City of Toronto.
17-Aug-21	N/A	Member of the Public	Email - Outgoing	Ontario Line Maintenance and Storage Facility	Mx provided a link to the member of the public which outlines the project details and has lots of content from any engagements to date involving SaveTPark and Mx.	N/A	N/A
17-Aug-21	N/A	Member of the Public	Email - Incoming	Construction Diversions	Member of the public asked Mx about how the lower Osgoode Station will be built, and when details will be published related to construction and proposed road closures for stations such as Queen/Spadina, and King/Bathurst.	24-Aug-21	Mx replied they do not expect the Queen Street closure or streetcar diversion to impact the work on Osgoode Station or the construction of its entrance buildings. Mx also confirmed they do not expect any full road closures or streetcar diversions in the area of Queen Street and Osgoode Station.
19-Aug-21	N/A	Member of the Public	Email - Outgoing	Letter - Transit Land Corridor	Mx provided a letter to the member of the public relating to the Transit Land	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					Corridor for the Ontario Line and how it could affect their property.		
20-Aug-21	N/A	Member of the Public	Email - Incoming	Next Ontario Line community table for Thorncliffe Park - Aug 19 at 1:00pm	Member of the public asked if Community Table meeting was cancelled from August 19, 2021.	23-Aug-21	Mx responded that the meeting was postponed due to several conflicts. Mx also confirmed a post-event survey will be sent to the attendees that attended the bus tours.
20-Aug-21	N/A	Member of the Public	Metrolinx Engage	East Segment - Riverside/Leslieville	Member of the public suggest the new raised rail lines along the east segment of the Ontario Line provides a unique opportunity to connect Bruce Mackey Park and the Riverside Community with Jimmie Simpson Recreation Centre.	2-Sep-21	Mx indicated they are working hard to ensure the new infrastructure fits well into the existing fabric of Riverside and Leslieville.
20-Aug-21	N/A	Member of the Public	Email - Incoming	Your Ontario Line Newsletter - August 20	Member of the public indicated they are concerns with the streetcar noise and construction noises and would like to know what noise mitigation will be put in effect.	27-Aug-21	Mx indicated they are committed to minimizing the effects of noise and vibration of the OL. Mx indicated as part of the Environmental Impact Assessment Report a detailed noise and vibration assessment will be completed for the OL to ensure that potential impacts are identified and appropriate site-specific mitigation measures are in place. Mx provided the link for more information.
23-Aug-21	N/A	Member of the Public	Metrolinx Engage	When will I need to move?	Member of the public appreciated Mx's answers regarding the timelines for the Cosburn Station construction.	N/A	N/A
24-Aug-21	N/A	Member of the Public	Email - Incoming	Expropriation	Member of the public followed up with Mx to ask if there is any expropriation for the building they practice at in the Pape area.	24-Aug-21	Mx replied that there has been no update on property requirements for Pape Station at this time.
24-Aug-21	N/A	Member of the Public	Email - Incoming	Residential Tenants Document	Member of the public forwarded a link to Mx describing the agreement between developers/owners for existing residential units in the CoT, as their property might be needed for the Ontario Line.	25-Aug-21	Mx suggested that the member of the public should talk to their landlord and see what impacts the Ontario Line might cause to their property.
24-Aug-21	N/A	Member of the Public	Email - Outgoing	Ontario Line Links	Mx provided the member of the public some links pertaining to the East Segment (area that includes Queen Street East) of Ontario Line. These included maps and cross section, as well as the most recent virtual open house and information about the transit corridor lands.	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
24-Aug-21	N/A	Member of the Public	Email - Outgoing	Following up on call: Ontario Line/Metrolinx	Mx followed up with the member of the public from a meeting they had and provided a map of the Ontario Line in the Pape area particularly Cosburn station.	N/A	N/A
25-Aug-21	N/A	Member of the Public	Email - Incoming	Please explain in simple terms!	Member of the public would like to seek clarification on a letter that was posted by Mx in TorStar regarding the Ontario Line which could impact their property. They confirmed that they misread announcement.	25-Aug-21	Mx wanted to confirm with the member of the public which article they were talking about so they could provide some answers.
25-Aug-21	N/A	Member of the Public	Email - Outgoing	Phone call - Ontario Line	Mx confirmed they will give a phone call to the member of the public tomorrow regarding any concerns they might have about the Ontario Line.	N/A	N/A
26-Aug-21	N/A	Member of the Public	Email - Outgoing	Phone call - Ontario Line	Mx followed up after the phone call with the member of the public and provided some information on the Moss Park Station. Mx also suggested that the member of the public should refer to the Ontario Line transit corridor lands if they want to develop their property in the future.	N/A	N/A
26-Aug-21	N/A	Member of the Public	Email - Incoming	Queen Street	Member of the public indicated they agree with community concerns that it is unreasonable to leave Queen Street in an Open cut situation for five years in relation to the OL. They suggested Mx needs to hire some Engineers with heavy construction experience.	2-Sep-21	Mx indicated the density of the built up urban area and the existing underground infrastructure requires Mx to occupy the whole roadway to safely carry out construction. Mx shared that Queen street will be built using a combination of sequential excavation mining and cut and cover method.
26-Aug-21	N/A	Member of the Public	Email - Incoming	Link for corridor map for Ontario Line	Member of the public asked Mx if they can get another link to the corridor map as the original link they got doesn't work.	26-Aug-21	Mx sent a new link to the member of the public, which they acknowledged works.
26-Aug-21	N/A	Member of the Public	Email - Incoming	Transit corridor land	Member of the public asked if Mx will need to acquire their home due to the Transit Corridor Lands Designation for the Ontario Line. They also confirmed they did not own any other property in the designated Transit Corridor Lands for the Ontario Line.	26-Aug-21	Mx indicated that the property itself is not located within the Transit Corridor Lands for the Ontario Line. Mx inquired if the member of the public owns any other properties in the planned route for the Ontario Line.
28-Aug-21	N/A	Member of the Public	Metrolinx Engage	Moss Park Designated transit community	Member of the public inquired why Moss Park Station is not designated as a transit community.	2-Sep-21	Mx indicated that due to the location of the station within the park, we have been carefully minimizing their footprint as much as possible during construction.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							Mx indicated they want to ensure they build as quickly as possible so local residents can continue to enjoy the park.
30-Aug-21	N/A	Member of the Public	Email - Incoming	Humber Bay Community & Recreation Plan	Member of the public thanked Mx for their meeting and provided the presentation deck regarding a project to replace aging break wall structures that run from Ontario Place to the Humber River.	30-Aug-21	Mx replied and noted they will connect them with the project team.
3-Sep-21	N/A	Member of the Public	Email - Incoming	You are holding a community open house on the holiest Jewish holiday of the year	Member of the public was taken back when they saw Mx was holding an OL open house on the holiest day of the Jewish year. They asked if a rabbi or Jewish leader was consulted about the timing of this event.	10-Sep-21	Mx indicated that with conflicting schedule meant that this was the date chosen for the event. Mx indicated people who can not attend can submit their questions before and that the presentation will be available on the events page.
8-Sep-21	N/A	Member of the Public	Metrolinx Engage	East Harbour - Comment Period	Member of the public inquired about the comment period for East Harbour Early Works report.	13-Sep-21	Mx replied to an inquiry regarding the public comment period for Early Works reports. Mx noted that the Lower Don Bridge and Don Yard Early Works reports were available for public review from June 22, 2021 to July 22, 2021, followed by a month review period. The final report was posted August 25, 2021. Mx also noted that the upcoming East Harbour and lakeshore East Joint Corridor Early Works Report will be available soon.
9-Sep-21	N/A	Member of the Public	Metrolinx Engage	Plans for OL Queen-Spadina and King-Bathurst Station Construction	Member of the public inquired how the street car service on the Queen, King and Bathurst routes will be maintained during construction. They are wondering if streetcar service will be rerouting or cancelled.	10-Sep-21	Mx indicated their plans is to maintain streetcar service during construction and Mx is working closely with the CoT and TTC.
9-Sep-21	N/A	Member of the Public	Email - Outgoing	Tunnel questions	Mx Toronto East confirmed to the Member of the public that they forwarded them to the Community Relations team at Mx to ask any questions on work in their specific area.	17-Sep-21	Member of the public asked the Mx if she can refer to a construction plan or design of the Ontario Line on the east side of Parliament street as it might impact their property.
13-Sep-21	N/A	Member of the Public	Email - Incoming	Thornccliffe Park Residents' Table Meeting - September 24th, 2 pm	Member of the public indicated they had the support of Kathleen Wynne and would like to invite one of the board members of TNO to attend.	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
17-Sep-21	N/A	Member of the Public	Email - Outgoing	Tunnel questions	Mx forwarded a link for the most up-to-date maps/plans for the Ontario Line in the Corktown area. Mx also confirmed a EIAR will be released sometime in 2022 to document the potential affects on the community during construction and operation.	19-Sep-21	Member of the public believes that they will still be affected by the noise and vibration of the Ontario Line since they have a ground level apartment.
20-Sep-21	N/A	Member of the Public	Email - Outgoing	Tunnel questions	Mx encouraged the member of the public for now to refer to the Noise and Vibration section of Mx's Environmental Conditions Report (ECR) to understand the noise and vibration impact in their area.	22-Sep-21	Member of the public saw that their property will not be impacted by vibration but wanted to check if construction noise would be an issue particularly with big trucks on Parliament street.
20-Sep-21	N/A	Member of the Public	Email - Incoming	Track work - Sunday overnight (Sept 19-20)?	Member of the public asked Mx if heavy machinery that was used overnight close to her area was related to the Ontario Line as it disrupted their sleep.	20-Sep-21	Mx apologized for the noise and confirmed they will follow up with the appropriate teams that oversee railway access to determine what the case was.
23-Sep-21	N/A	Member of the Public	Email - Outgoing	Tunnel questions	Mx suggested the noise and construction impacts the member of the public might be referring to are from the Corktown Early Works Report and not the actual tunnel construction. Tunnel construction will be addressed in the EIAR as it comes out in Winter 2022.	23-Sep-21	The Member of the public appreciated Mx's answers and forwarded the information to other tenants in her building. They will follow up with Mx if other questions arise.
23-Sep-21	N/A	Member of the Public	Email - Incoming	2 community groups being formed in Thorncliffe Park	Member of the public confirmed they would like to join the two committees being formed in Thorncliffe regarding design options for the Ontario Line.	N/A	N/A
23-Sep-21	N/A	Member of the Public	Email - Incoming	Track work - Sunday overnight (Sept 19-20)?	Member of the public followed up with Mx to see if they got any information from the appropriate teams on the heavy machinery work that was conducted.	23-Sep-21	Mx indicated they are still awaiting follow up from their appropriate teams that oversee railway access.
23-Sep-21	N/A	Member of the Public	Email - Outgoing	Ontario Line East segment virtual open house presentation - September 23, 2021	Mx provided a copy of tonight's virtual open house presentation and link to view it.	N/A	N/A
25-Sep-21	N/A	Member of the Public	Metrolinx Engage	Request for a meeting	Member of the public requested to speak with someone at Mx regarding the Ontario Line.	27-Sep-21	Mx suggested they can book a meeting with the member of the public but would like to know more about the topic or area they are interested in discussing pertaining to the Ontario Line.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
27-Sep-21	N/A	Member of the Public	Email - Incoming	Queen Street Station	Member of the public asked if a "station" located under the current Line 1 Queen Street subway station will be incorporated into the current Ontario Line at Queen and Yonge.	28-Sep-21	Mx confirmed that they plan on using the existing infrastructure under Queen Station including the underground streetcar station for the Ontario Line.
27-Sep-21	N/A	Member of the Public	Metrolinx Engage	Where is info about Oct 5 session?	Member of the public stated they would like to register for a virtual open house relating to the Ontario Line on October 5, 2021.	28-Sep-21	Mx provided a registration link for the virtual open house on October 5, 2021.
27-Sep-21	N/A	Member of the Public	Email - Outgoing	Connecting on the Ontario Line	Mx confirmed that they are happy to schedule a meeting and address any concerns they have on the underground/aboveground routing for the Ontario Line in the Riverside/Leslieville/Riverdale area.	N/A	N/A
28-Sep-21	N/A	Member of the Public	Email - Incoming	Queen Street Station	The Member of the public asked if the Ontario Line is a more traditional subway (Line 1,2 and 4) as opposed to the more recent LRT Model.	29-Sep-21	Mx responded that the Ontario Line won't feature the same trains and tracks system as the TTC subway but will make use of the more modern subway trains and technology.
28-Sep-21	n/a	Member of the Public	Email - Outgoing	Ontario Line community notice - Investigative drilling at 1 Thorncliffe Park Dr	Mx provided community notice regarding investigative drilling that Metrolinx will be conducting at 1 Thorncliffe Park Drive for two days starting October 4. The drilling will be done to gather information and evaluate underground conditions. With this information, Mx will determine the construction approach for the Ontario Line project.	N/A	N/A
29-Sep-21	N/A	Member of the Public	Email - Incoming	Station design and public washrooms	Member of the public inquired about how public washrooms will be included at Ontario Line stations.	4-Oct-21	Mx confirmed that they have reached out to their design team to see when details will be available for how public washrooms will be included at Ontario Line stations.
1-Oct-21	N/A	Member of the Public	Email - Incoming	Tenant Meeting with Metrolinx	Member of the public asked Mx when the next weekly/bi-weekly tenant meeting will be for his property.	5-Oct-21	Mx indicated that the follow up meetings related to their property have run their course and encouraged the member of the public to join a working group focused on design options for a) the public areas underneath the elevated guideway, and b) the public-facing walls surrounding the MSF.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
3-Oct-21	N/A	Member of the Public	Email - Incoming	Track work - Sunday overnight (Sept 19-20)?	Member of the public followed up with Mx again to see what the heavy machinery noise was and it seems to be occurring frequently.	N/A	N/A
4-Oct-21	N/A	Member of the Public	Email - Incoming	Questions about Ontario line	Member of the public had some questions to ask Mx relating to the Ontario Line in the Pape area.	4-Oct-21	Mx provided some links to the member of the public to keep up to date on the project, which includes virtual events, maps, and timelines for it. Mx also provided their availability to speak with the member of the public.
5-Oct-21	N/A	Member of the Public	Email - Incoming	Question regarding Ontario Line	Member of the public wanted to seek clarification from Mx on when construction will begin for the below grade portion on Pape Avenue and running south of Danforth on the Ontario Line.	7-Oct-21	Mx confirmed that the construction of the Ontario Line tunnel underneath Pape Avenue is expected to begin in 2024 to 2025.
5-Oct-21	N/A	Member of the Public	Email - Incoming	Draft East Harbour Station Early Works Report	Member of the public noted they had studied the Draft East Harbour Early Works Report online and noticed the map for the project both in the main notice and the AECOM report includes the entire facility located at 356 Eastern Ave. They asked for clarification on if this property will be expropriated and if not, will access be limited.	23-Dec-21	Mx clarified that the storage facility will be required and will not be available. Mx provided a brief explanation as to why this is required and when Early Works construction will begin.
5-Oct-21	N/A	Member of the Public	Email - Incoming	Pape Ave	Member of the public asked Mx if their property will need to be expropriated due to the Ontario Line.	6-Oct-21	Mx informed the member of the public that they will know more information in the next couple of months.
6-Oct-21	N/A	Member of the Public	Email - Incoming	Above Ground, Property Concerns	Member of the public wanted to seek clarification from Mx if the Ontario Line will be built above or below ground in their area (Pape and Danforth) and if it will affect their property.	6-Oct-21	Mx pointed out that the Ontario Line will be about 30 metres underground in the Member of the public's area (Pape and Danforth), and that the above ground news might have referred to other segments of the Ontario Line.
6-Oct-21	N/A	Member of the Public	Email - Incoming	Western Extension?	Member of the public asked if the Exhibition OL station will be designed to enable a future extension westward towards Dundas West station or Kipling Station.	6-Oct-21	Mx stated that there is protection in place at both ends of the Ontario Line to enable future expansion.
6-Oct-21	N/A	Member of the Public	Email - Outgoing	Station design and public washrooms	Mx confirmed that the washrooms being constructed at Ontario Line stations will be both inclusive universal (gender neutral) washrooms and gendered options. Furthermore, Mx plans to	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					adhere to size, capacity, accessibility and layout parameters per legislated requirements and the Ontario Building Code at each station.		
6-Oct-21	N/A	Member of the Public	Email - Outgoing	Following up from Metrolinx's Ontario Line team	Mx encouraged the member of the public to attend the virtual public open house tomorrow evening regarding the Ontario Line's Downtown segment, which covers Corktown Station area and First Parliament site.	N/A	N/A
7-Oct-21	N/A	Member of the Public	Metrolinx Engage	Reclaimed Wood From Trees	Member of the public inquired if there was an opportunity to purchase or donate wood to create a number of neighbourhood benches.	12-Oct-21	Metrolinx will look further into it and provide more information when it becomes available.
7-Oct-21	N/A	Member of the Public	Email - Incoming	Ontario Line Stop At Cherry Street	Member of the public emailed Mx and requested there be another stop added on the Ontario Line particularly in the Cherry Street area due to a growing concentration of population.	8-Oct-21	Mx replied that the Cherry Street area was considered for another station but with the proposed location the member of the public requested, it would have been too close with other stations therefore impacting the overall time savings for travelers.
7-Oct-21	N/A	Member of the Public	Email - Incoming	Osgoode Station Status	Member of the public indicated that the agenda for the meeting included Osgoode Station, but it was not included in the presentation.	12-Oct-21	Mx indicated the open house did focus on the Downtown segment, which included Osgoode, Queen, Moss Park and Corktown Stations. Mx indicated that no new information was mentioned as there was no significant updates to share about the station.
8-Oct-21	N/A	Member of the Public	Email - Outgoing	SimplyBook: booked a Video Meeting on Tuesday, Oct 12 2021	Mx sent a MS Teams meeting link to the Member of the public for October 12, 2021. Mx also confirmed the new meeting time works for them on October 14, 2021.	8-Oct-21	Member of the public stated they aren't available for the October 12, 2021 appointment, but have proposed October 14, 2021 instead.
8-Oct-21	N/A	Member of the Public	Email - Outgoing	Meeting to discuss construction activities	Mx offered to setup a meeting with the member of the public to discuss the future of Bonjour Brioche in their area and their property.	N/A	N/A
11-Oct-21	N/A	Member of the Public	Metrolinx Engage	Ontario Line Through Leslieville	Member of the public suggested to build a tunnel around the lines above ground in certain areas like parks and have it encased in green space so that it looks like a natural hill.	12-Oct-21	Metrolinx indicated they cannot promise it is possible from a technical and cost perspective, Mx does have a design questionnaire which is open until October 14 so the community can provide ideas on the design elements. Mx provided the link to the survey.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
12-Oct-21	N/A	Member of the Public	Email - Incoming	Osgoode Station Status	Member of the public inquired if there would be any consultation for the Osgoode Station. Member of the public wants to know if the voting for important questions was rigged regarding the trees at Osgoode Hall.	14-Oct-21	Mx indicated there is absolutely planned consultation once they have new significant updates to share. Mx wanted to make it very clear that Mx does not manipulate the votes in any way. They use the votes to gauge community interest and determine which questions we will have to time answer.
13-Oct-21	N/A	Member of the Public	Email - Outgoing	Jimmie Simpson Park	Mx followed up member of the public regarding the trees at JSP. Mx indicated they are currently completing a comprehensive tree impact analysis and any trees impacted outside of the rail corridor will be detailed in a forthcoming Arborist report by early next year. Mx indicated the compensation program they are following is at a 3:1 basis.	N/A	N/A
15-Oct-21	N/A	Member of the Public	Email - Incoming	Concern: Is Gerrard Tunnel Portal location a Superfund site?	Member of the public asked Mx if the Gerrard Tunnel Portal location is a Superfund site, if any chemical testing has been completed and if any chemicals were found.	17-Nov-21	Mx replied that at this time an environmental assessment has not been completed, and the site will be covered under the upcoming EIAR.
19-Oct-21	N/A	Member of the Public	Email - Outgoing	Following up: Ontario Line + Billy Bishop Airport	Mx addressed the question the member of the public had when they stop in at Mx's office regarding why OL does not directly connect to the Billy Bishop Airport. Mx indicated they studies station locations and provided the link for more details explaining the planning considerations.	N/A	N/A
19-Oct-21	N/A	Member of the Public	Metrolinx Engage	King/Bathurst subway station construction	Member of the public inquired if the king/Bathurst station would be closed off due to work to pedestrians and cars. They are interested in purchasing a retail store front on the North West side and would like more information.	21-Oct-21	Mx indicated they do not anticipate any further full closures or significant streetcar diversions in the downtown area. Mx provided some links for further information regarding planned closure on Queen Street between Bay Street and Victoria Street.
23-Oct-21	N/A	Member of the Public	Email - Incoming	Noise wall installation plans east of Jones Avenue	Member of the public indicated they have trains going past their property and the noise and vibration is very disruptive and have an adverse impact on their lives. Would like to know if there will be plans for noise and vibration walls installed for	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					east of Jones Avenue and north of Gerrard Street.		
23-Oct-21	N/A	Member of the Public	Email - Incoming	Noise wall installation plans east of Jones Avenue	Member of the public emailed Mx if any noise barrier walls will be placed close to the Leslie/Gerrard intersection as they find the noise and vibration from passing trains at night to be quite disruptive.	11-Nov-21	Mx emailed back and provided a link to the member to review retaining and noise walls being planned on the east side of Jones Avenue (close to their residence). Mx encouraged the member of the public to have a phone call with them to discuss further.
25-Oct-21	N/A	Member of the Public	Email - Outgoing	Follow-up to our call	Mx thanked the member of the public for meeting with them and apologized for the technical issue with the meeting booking. Mx mentioned to the member that they will reach out to their environment and engineering teams to understand more about track noises or underground construction noise once tunnel boring is complete, and the maximum allowable noise overnight.	25-Oct-21	Member of the public thanked Mx for answering their questions and for meeting with them.
27-Oct-21	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public inquired why the OL is bypassing the Island Airport as well as the new development at Ontario Place.	27-Oct-21	Mx indicated during the planning process, Mx studied station locations with a focus on bringing several benefits to the customers, including increasing access to transit, maximizing ridership, travel time saving, reduce overcrowding on existing transit services and creating better access to jobs.
29-Oct-21	N/A	Member of the Public	Email - Incoming	Fees	Member of the public asked about why people aren't swiping Presto Cards on transit systems in Toronto.	1-Nov-21	Mx directed the member of the public to speak with TTC directly about this matter.
29-Oct-21	N/A	Member of the Public	Metrolinx Engage	The heritage parliament building expropriation	Member of the public indicated they strongly object to the expropriation of the Parliament site.	3-Nov-21	Mx responded by saying they will continue to honour the First Parliament site's significance by conducting an archaeological assessment, as well as inviting monitors from Indigenous Nations and the City of Toronto.
30-Oct-21	N/A	Member of the Public	Metrolinx Engage	Heritage Expropriation	Member of the public emailed Mx concerned about the Province possibly expropriating the heritage parliament building at Queen and Parliament.	3-Nov-21	Mx responded by saying they will continue to honour the First Parliament site's significance by conducting an archaeological assessment, as well as inviting monitors from Indigenous Nations and the City of Toronto.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
1-Nov-21	N/A	Member of the Public	Email - Incoming	Residential Tenants Document	Member of the public emailed Mx to receive an update on the purchasing of their property.	5-Nov-21	Mx indicated that at this time they have had conversations with commercial tenants about investigative work taken place in the vicinity, as it may have had an impact on their operations. However, there have not been talks about property acquisition yet.
2-Nov-21	N/A	Member of the Public	Email - Outgoing	Phone Call on Thursday, Nov 4, 2021	Mx confirmed a meeting time with the member of the public.	N/A	N/A
2-Nov-21	N/A	Member of the Public	Email - Incoming	Fees	Member of the public suggested that if they had inspectors it would eliminate the problem.	N/A	N/A
2-Nov-21	N/A	Member of the Public	Email - Incoming	RE: FYI - 9.30 Media avail on Health Concerns	Member of the public wanted to seek clarification from Mx on a few media releases pertaining to a Health Impact Assessment through #Topoli's South Riverdale for the Ontario Line.	3-Nov-21	Mx indicated that they are happy to answer any questions about the environmental reports that was released, the online sound demonstration that is available, or the recent design questionnaire that was recently closed for the Ontario Line.
3-Nov-21	N/A	Member of the Public	Email - Outgoing	Phone Call on Thursday, Nov 4, 2021	Mx acknowledged the member of the public's appointment with them, and noted the topics of discussion they would like to have with Mx including a possible food drive box at the Weston UP Express Station.	N/A	N/A
3-Nov-21	N/A	Member of the Public	Email - Incoming	A few questions	Member of the public emailed Mx pertaining to an Ontario Line LSE Design Phase presentation, as well as the GO Expansion in Bowmanville and Oshawa.	13-Nov-21	Mx provided clarification on the questions asked about for the Ontario Line LSE design phase and GO Expansion in Bowmanville and Oshawa as it related to track usage.
6-Nov-21	N/A	Member of the Public	Metrolinx Engage	Semi-enclosed noise barriers near high-rise residential buildings	Member of the public expressed concern over noise in high rise buildings and suggested the use of semi-enclosed noise barriers to reduce noise traveling upwards at high-rise buildings.	23-Dec-21	Mx provided an explanation as to why this could not work and noted that this method is not economically or technically feasible for this alignment.
8-Nov-21	N/A	Member of the Public	Email - Incoming	Residential Tenants Document	Member of the public asked Mx what their standard policy is for months notice for residential tenant eviction.	12-Nov-21	Mx confirmed they will take possession of the building to begin construction on the Ontario Line by the end of July 2022.
10-Nov-21	N/A	Member of the Public	Email - Outgoing	SimplyBook: booked a Video Meeting on Monday, Nov 15 2021	Member booked a meeting to talk about the overall plan for the Ontario Line.	10-Nov-21	Mx thanked the member of the public for booking a chat on November 15 with the Ontario Line Community Relations team.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
10-Nov-21	N/A	Member of the Public	Email - Incoming	Construction - QUEEN WEST	Member of the public wanted to seek confirmation from Mx on the hours of operation for an ongoing late-night construction project with Metrolinx.	11-Nov-21	A representative from Mx forwarded the member of the public to the community relations team for the Ontario Line to seek clarification on the hours of operation, and to provide as many details as possible so they can receive the necessary help.
11-Nov-21	N/A	Member of the Public	Email - Incoming	Construction - QUEEN WEST	Member of the public provided details for the construction such as the location (mainly in the Queen Street West area) and the timing of it.	12-Nov-21	<p>Mx thanked the member of the public for those details and confirmed to them that they will connect with the work crews to gather more information.</p> <p>Mx indicated on the same day that the work does not appear to be related to the Ontario Line or a Metrolinx project and mentioned they will follow up with Toronto 311.</p>
12-Nov-21	N/A	Member of the Public	Email - Incoming	Washroom - Ontario Line	Member of the public suggested that every subway transfer station on the Ontario Line should have a washroom to prevent public urinating.	19-Nov-21	Mx indicated that they are planning for each interchange station on the Ontario Line to have accessible washrooms. Mx also encouraged the member to attend the virtual open houses on November 23 or 25.
12-Nov-21	N/A	Member of the Public	Email - Incoming	Residential Tenants Document	<p>Member of the public wanted to seek clarification with Mx if they will be evicted in July 2022 or before then.</p> <p>Member of the public provided their availability to have a meeting.</p>	12-Nov-21	Mx indicated to the member of the public that they will connect with their Property team to facilitate a call on the eviction notice.
12-Nov-21	N/A	Member of the Public	Email - Incoming	Construction noise at 3.30am?	<p>Member of the public asked Mx why there is constant construction noise happening in the early hours of the morning recently.</p> <p>Member of the public provided details for where the construction noise is occurring and what a nuisance it is.</p>	12-Nov-21	<p>Mx asked the member of the public if they could provide as many details as possible regarding the location of the work, the time of the disturbance and other details to see if this construction work relates to the Ontario Line or any other Mx project.</p> <p>Mx indicated that the work is not related the Ontario Line but they will forward the member to the Toronto East team to discuss further.</p>
12-Nov-21	N/A	Member of the Public	Email - Incoming	Noise wall installation plans	Member of the public indicated that the Leslieville community office appears to	12-Nov-21	Mx confirmed to the Member of the public that a representative will connect

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
				east of Jones Avenue	be closed, and the telephone number is disconnected. Member of the public would appreciate a phone call with an Mx representative today.		with them about a noise wall barrier being constructed in between Jones and Greenwood in the future.
15-Nov-21	N/A	Member of the Public	Email - Outgoing	SimplyBook: booked a Video Meeting on Monday, Nov 15 2021	Mx provided links to the East and North segment maps for the Ontario Line, the "Early Works" environmental report for joint rail corridor, and for understanding better the environmental assessment process. Mx encouraged the member to join one of the virtual open houses on November 23 or 25.	N/A	N/A
15-Nov-21	N/A	Member of the Public	Email - Outgoing	Residential Tenants Document	Mx thanked the member of the public's time to connect with the Property team today.	16-Nov-21	Member of the public thanked Mx.
17-Nov-21	N/A	Member of the Public	Email - Incoming	Concern: Is Gerrard Tunnel Portal location a Superfund site?	Member of the public was following up on an email sent on October 15, as they did some research on the local soil conditions close to/at the Pape Elementary School which concern them.	17-Nov-21	Mx confirmed that no Early Works environmental assessment for this specific site has been released yet. Mx also indicated they are looking to get some information in advance to share with the member.
19-Nov-21	N/A	Member of the Public	Email - Incoming	Washroom - Ontario Line	Member of the public confirmed that they are happy with the Ontario Line connect to the Richmond Hill GO train which runs through Don Valley. The member also added that it would be nice to have a staircase or elevator to connect the Richmond Hill GO line to the Ontario Line.	N/A	N/A
19-Nov-21	N/A	Member of the Public	Email - Incoming	Subway station so King and Berkely??	Member of the public asked Mx if the Corktown station was still being built on the Staples property at Adelaide to Front and south where the carwash was.	23-Nov-21	Mx confirmed the location of the Corktown station and confirmed that the Staples property at 250 Front Street East has now relocated.
19-Nov-21	N/A	Member of the Public	Metrolinx Engage	Please have mercy on my neighbourhood	Member of the public asked Mx what the construction impact of the Ontario Line will be on their community in the Distillery District.	29-Nov-21	Mx indicated to the member how they are communicating with the appropriate Distillery District (i.e. for the Distillery District Winter Village) representatives to avoid any further traffic congestion in the future.
23-Nov-21	N/A	Member of the Public	Metrolinx Engage	Finding out more	Member of the public pointed out that the "Learn more about the Ontario line" link does not work.	23-Nov-21	Mx acknowledged that the link doesn't work and would consult with the appropriate team to fix it.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
23-Nov-21	N/A	Member of the Public	Metrolinx Engage	First Parliament Site Commemoration Survey	Member of the public wanted to seek clarification for where the Interpretive Centre will be.	25-Nov-21	Mx indicated to the member that with the survey they filled out, it is meant to identify areas of importance to the local community to inform the Interpretation and Commemorative Plan (ICP). Mx assured the member that the Ontario Line plans for Corktown Station do not impact Parliament Square Park to the south of the First Parliament site.
23-Nov-21	N/A	Member of the Public	Email - Incoming	Ontario line	Member of the public asked Mx why there is an elevated line along Overlea Blvd.	25-Nov-21	Mx indicated that the main reason why the Ontario Line is above-ground through Thorncliffe and Flemingdon Parks is because of the geography of the area. Mx also mentioned that the public spaces underneath the guideway (tracks) will be designed with community input so they can function as community assets.
23-Nov-21	N/A	Member of the Public	Email - Incoming	Question: Re: Tuesday & Thursday Open House	Member of the public wanted Mx to clarify which virtual open house meeting dates (November 23 and 25) will focus on Moss Park and Corktown from a recent newsletter sent out.	23-Nov-21	Mx indicated that both virtual open house dates will feature the same presentation on the entire Ontario Line project where all stations will be included.
23-Nov-21	N/A	Member of the Public	Metrolinx Engage	East Harbour - Comment Period	Member of the public wanted Mx to clarify when the retaining wall property line and ownership is confirmed and for which walls. They also wanted a timeline on when the legal team will have this confirmed.	23-Dec-21	Mx noted that the timelines are uncertain but confirms that the wall is in Metrolinx Right of Way and will need to eventually come down to make way for new infrastructure.
24-Nov-21	N/A	Member of the Public	Metrolinx Engage	elevated track from don valley to Eglinton	Member of the public requested that the Ontario Line at Don Mills and Eglinton should be put underground and not elevated from the Don Mills crossing to the Science Centre station as it will impact their building.	25-Nov-21	Mx confirmed that guideway will not impact the member's building or the City of Toronto's development, and that they are committed to creating a structure that is elegant and complements the nature of the neighbourhood.
24-Nov-21	N/A	Member of the Public	Email - Incoming	Cosburn station building	Member of the public wanted Mx to clarify where the Cosburn station building is planned to be located.	24-Nov-21	Mx confirmed to the member that construction will only begin at Cosburn station closer to 2024 or 2025, and that the Cosburn station area is in its design phase. Mx also mentioned that as soon as they know more about the location of the station building, the information will be shared on the website.

24-Nov-21	N/A	Member of the Public	Email - Incoming	November 25 @ 6:30 pm	Member of the public had no questions and asked Mx if they can be registered for November 25 @ 630pm.	25-Nov-21	Mx confirmed that the member is registered for the open house this evening.
24-Nov-21	N/A	Member of the Public	Email - Incoming	Q&A	Member of the public emailed Mx to ask them why they did not receive the Ontario Line Q & A pamphlet only until today.	25-Nov-21	Mx apologized for the inconvenience and indicated that there was a delivery issue with the notice.
25-Nov-21	N/A	Member of the Public	Email - Incoming	Virtual Open House Notice	Member of the public complained about the notices not being sent out on time in preparation for the November 23 and 25 open houses.	25-Nov-21	Mx apologized for the inconvenience and indicated that there was a delivery issue with the notice.
25-Nov-21	N/A	Member of the Public	Email - Incoming	elevated track from don valley to Eglinton	Member of the public appreciated Mx's response but is still skeptical that the elevated line will not be 6 feet away from the wall of our building.	26-Nov-21	Mx asked the member if they can book a phone conversation with them regarding the issues that have arose.
25-Nov-21	N/A	Member of the Public	Email - Outgoing	Metrolinx Ontario Line virtual open house tonight (website link)	Mx provided a link to the member indicating where they can watch the virtual open house for the Ontario Line starting tonight at 6:30pm.	26-Nov-21	Member thanked Mx for sending the link.
25-Nov-21	N/A	Member of the Public	Metrolinx Engage	Zoom Telephone #	<p>Member of the public indicated that Mx hasn't provided local Zoom phone numbers for local constituents who are unable to join via the internet.</p> <p>Member of the public confirmed that the 438 number provided is an Montreal number, but did manage to find the local 647 number.</p>	25-Nov-21	Mx acknowledged the member's comment and provided the dial-in details for tonight's meeting.
25-Nov-21	N/A	Member of the Public	Email - Incoming	Clarifications of info in Nov 23/25 Presentation Deck	Member of the public wanted to seek clarification on some information that was shown in the Nov 23/25 slide deck.	N/A	N/A
25-Nov-21	N/A	Member of the Public	Email - Outgoing	Link to Metrolinx Ontario Line virtual open house (November 25, 2021)	Mx provided a link to the webpage where they can watch the recording of tonight's virtual open house. Mx confirmed they would also share the member's contact details with their property team to follow up with them.	N/A	N/A
26-Nov-21	N/A	Member of the Public	Email - Incoming	elevated track from don valley to Eglinton	Member of the public confirmed they are available next week for a meeting.	26-Nov-21	Mx replied that they will call them on November 30.
26-Nov-21	N/A	Member of the Public	Email - Incoming	Finding out more	Member of the public still pointed out that the link still isn't working.	26-Nov-21	Mx shared the URL to the member for where they should have been directed too.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
26-Nov-21	N/A	Member of the Public	Email - Outgoing	Following up: Metrolinx/Ontario Line	Mx thanked the member of the public for coming by their community office yesterday. Mx indicated further that the address the member inquired about will not be required/acquired for the Ontario Line.	26-Nov-21	Member of the public appreciated Mx's help.
26-Nov-21	N/A	Member of the Public	Metrolinx Engage	Corktown Station Tunnel/Station Construction	Member of the public has asked Mx how deep the tunnel will be between King St East and Adelaide under the East Side of Berkeley, and what the working hours will be for the construction crews following regular city bylaws.	26-Nov-21	Mx provided answers to both of these questions. Mx also indicated that the Environmental Impact Assessment Report (EIAR) will be released in January 2022 and that the public has an opportunity to review and provide feedback for it.
26-Nov-21	N/A	Member of the Public	Metrolinx Engage	Noise from underground trains	Member of the public asked how much noise, vibration, or other awareness of underground nearby travel will be; and how many metres away from Pape must the houses be not to be affected by the noise of sub train travel.	29-Nov-21	Mx provided answers to both of these questions. Mx also indicated that the Environmental Impact Assessment Report (EIAR) will be released in January 2022 to gain more of an understanding of the impacts and solutions related to the questions posed.
26-Nov-21	N/A	Member of the Public	Email - Incoming	Metrolinx presentation Nov 25, 2021	Member of the public indicated they had some difficulty hearing the meeting for Ontario Line via Zoom, so they wanted to seek clarification on the Leaside Bridge, Ontario Science Centre, and Don Mills in relation to it.	29-Nov-21	Mx provided answers to the questions the member of the public asked about.
26-Nov-21	N/A	Member of the Public	Email - Incoming	Ontario Line and Tiverton Parkette	Member of the public asked what will happen with Tiverton Park along the East Corridor of the Ontario Line. Member of the public appreciated Mx's prompt response as they weren't sure if their property needed to be appropriated to make way for the Ontario Line.	26-Nov-21	Mx confirmed that there will be no impact to Tiverton Park during the construction period and beyond. Furthermore, all parks in the member's neighbourhood will be opened still during our work with the exception of Gerrard Carlaw Dog Parkette.
26-Nov-21	N/A	Member of the Public	Email - Incoming	Virtual open house re Ontario Line Nov 23 and 25	Member of the public complained about the notices not being sent out on time in preparation for the November 23 and 25 open houses.	26-Nov-21	Mx apologized for the inconvenience and indicated that there was a delivery issue with the notice.
26-Nov-21	N/A	Member of the Public	Email - Incoming	Ontario Line and Tiverton Parkette	Member of the public asked what is happening to Tiverton Park on the East Corridor.	26-Nov-21	Mx clarified that Tiverton Park will not be impacted during the construction period and beyond. Mx also clarified that all parks in the member's neighbourhood will still be open during their work with

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							the exception of Gerrard Carlaw Dog Parkette.
26-Nov-21	N/A	Member of the Public	Email - Incoming	Ontario Line and Tiverton Parkette	Member of the public asked Mx if their property will need to be expropriated due to the Ontario Line.	23-Dec-21	Mx confirmed that right now there is no current requirement for the member's property to be expropriated. If any changes come about, Mx will let the member know.
27-Nov-21	N/A	Member of the Public	Email - Incoming	New stations Carlaw / Gerrard	Member of the public asked if there is a plan to have a stop at Gerrard East and Carlaw as it would be a great connection point for TTC and GO.	29-Nov-21	Mx indicated that plans have been adjusted right now so they are advancing an Ontario Line station at Gerrard East and Carlaw integrated with the bridge to service the area. Mx also mentioned that GO trains would proceed to East Harbour.
27-Nov-21	N/A	Member of the Public	Email - Incoming	Ontario Line Stations - Questions	Member of the public asked Mx why there are no stops between Corktown and East Harbour, and between Bathurst & the Exhibition also. The member also asked the station stops at Queen Street East and Moss are close together.	29-Nov-21	Mx explained to the member why these stations were and weren't selected.
27-Nov-21	N/A	Member of the Public	Email - Incoming	Bridge underpass heights	The member of the public asked why the bridges at Carlaw and Gerrard have clearances of 4.1m and 4m respectively, but there is no plan to replace these two bridges and raise them to 5m.	N/A	N/A
28-Nov-21	N/A	Member of the Public	Email - Incoming	ETA for Ontario Line project	Member of the public informed Mx that they missed the virtual open house last week and asked if there is a recording session available.	29-Nov-21	Mx provided two links for the recording of the November 23 and 25 open houses. Mx informed the line is anticipated to be operational by 2029/2030.
29-Nov-21	N/A	Member of the Public	Email - Incoming	ETA for Ontario Line project	Member of the public indicated that they live in the King West Liberty Village corridor so the project interests them very much.	N/A	N/A
30-Nov-21	N/A	Member of the Public	Email - Incoming	Transit Corridor Lands Inquiry	Member of the public asked Mx if they are located on or within 30 m of the transit corridor lands.	30-Nov-21	Mx confirmed to the member that their property does appear to fall within the transit corridor lands for the Ontario Line.
1-Dec-21	N/A	Member of the Public	Email - Incoming	King Bathurst station	Member of the public wanted to seek clarification from Mx regarding the intersection at King and Bathurst if there will be a full roadway closure along Bathurst from King Street till 38 metres north for seven years.	1-Dec-21	Mx confirmed that the road will not be fully closed as part of Ontario Line construction.
1-Dec-21	N/A	Member of the Public	Email - Incoming	Ontario Line train type	Member of the public asked if the trains for the Ontario Line will be the same size	3-Dec-21	Mx indicated that the Ontario Line will feature GOA-4 trains which will be

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					as the current subway trains, the Scarborough RT, or the LRT trains.		electric and driverless which are different from those currently used on the TTC's subway system.
2-Dec-21	N/A	Member of the Public	Metrolinx Engage	Tenant above proposed North/East Queen & Spadina Subway	Member of the public asked what will happen to their property as it is above/in the proposed development for the Ontario Line Queen and Spadina subway station.	3-Dec-21	Mx asked if the member of the public could share their address so the Property Acquisition team at Mx can help find any further details about their property.
2-Dec-21	N/A	Member of the Public	Email - Incoming	Concern: Is Gerrard Tunnel Portal location a Superfund site?	Member of the public was following up with further questions regarding the OL project moving ahead before the environmental report is completed. They asked if Mx has information on the history of the land they may be using for the TBM tunnel portal, whether they tested soil, and if there is mitigation plan for airborne particles.	23-Dec-21	Mx replied with the expected release time of the Environmental Impact Assessment Report, which is set to release in January 2022. Mx also provided information on the virtual open house that will be held to answer questions such as this from community members.
3-Dec-21	N/A	Member of the Public	Email - Incoming	Expropriation	Member of the public asked if there is any update on the expropriation of their property for the Ontario Line.	8-Dec-21	Mx is still unsure about the timeline for their property to be expropriated and apologized for the delay.
3-Dec-21	N/A	Member of the Public	Email - Incoming	Tenant above proposed North/East Queen & Spadina Subway	Member of the public figured that they won't be "displaced" for a while from the Ontario Line project which eased their anxiety, but also provided their address to Mx.	7-Dec-21	Mx mentioned for the member of the public's property they live at, the acquisition timeline is coming up sooner than mentioned in a previous email. Furthermore, Mx said they would take possession of the building to begin construction on the Ontario Line around the end of July 2022. The Property Acquisitions team was cc'ed in this email to talk to the member of the public to discuss any further questions they might have.
3-Dec-21	N/A	Member of the Public	Email - Outgoing	Following up: Ontario Line discussion	Mx received the member's request that they would be more than happy to answer their questions at either the November 23 or 25 open house.	4-Dec-21	Member of the public mentioned that they are available next Wednesday (December 8) and that a Zoom call would be great.
3-Dec-21	N/A	Member of the Public	Email - Incoming	Ontario Line: Quick MSF Question	Member of the public would like to know if there is a copy of the response Metrolinx provided to SaveTPark alternative idea for the MSF.	3-Dec-21	Mx will try to find the file. Mx provided the link for the letter as well as the Q & A.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
5-Dec-21	N/A	Member of the Public	Email - Incoming	Ontario Line Stations - Questions	Member of the public asked why nothing is being done to have quick TTC connections to the North ends of Toronto.	8-Dec-21	Mx mentioned to the member of the public that they do not have any jurisdiction over the TTC. However, they encouraged the member to email the TTC to share their feedback.
6-Dec-21	N/A	Member of the Public	Email - Incoming	A few useful works related to the Heritage Interpretation and Commemoration Plan for the Ontario Line's Corktown Station	Member of the public asked Mx if there is any intention to incorporate any representations or narratives of Toronto's Irish immigrant communities in the Corktown Station of the Ontario Line.	13-Dec-21	Mx asked member of the public if there are any resources they can forward to them so they can find a way to best implement information on Irish immigrants in relation to the First Parliament Heritage Interpretation strategy.
6-Dec-21	N/A	Member of the Public	Email - Incoming	pape/cosburn?	Member of the public asked what the project status is for the proposed stop at pape/cosburn.	8-Dec-21	Mx provided a link to the member which provided more information about the Pape station. Mx also mentioned that the Pape Station is still in the design phases, and plans have not been finalized. Mx said they would consistently provide updates for the member about the project status.
6-Dec-21	N/A	Member of the Public	Email - Incoming	Information Request Ontario Line	Member of the public asked where they can find the full PDF report that includes the map to see if their property will be affected by the construction caused by the Ontario Line.	10-Dec-21	Mx provided a link to the member to see the extent of the Ontario Line in the King/Bathurst station area and how it could impact their property (closures, road impacts in the future).
6-Dec-21	N/A	Member of the Public	Email - Outgoing	Following up: Ontario Line discussion	Mx indicated they would be happy to connect next Wednesday (December 8) with the member and asked if anyone else will be on the call.	6-Dec-21	Member of the public asked if 1030am on December 8 would be good for a meeting time. The member of the public said they would invite someone else from their campaign to come join the meeting.
6-Dec-21	N/A	Member of the Public	Email - Incoming	Humber Bay Community & Recreation Plan	Member of the public circled back on previous correspondence with Mx regarding the break wall project being planned and inquired about connecting with the project team.	8-Dec-21	Mx replied that they will follow up with the project team to get further details on handling fill from tunnels. Mx noted that it may also require coordination with the successful Project Company for the OL Project.
6-Dec-21	N/A	Member of the Public	Email - Incoming	Information Request Ontario Line	Member of the public inquired about where to find the full PDF report of the attached map.	10-Dec-21	Mx provided the member of the public with a link to the report, as well as a link to the appendix that provides a summary of impacts and a blog story that outlines the impacts as well.
6-Dec-21	N/A	Member of the Public	Email - Incoming	inquiries about Ontario Line	Member of the public sent a list of questions regarding Ontario Line and	16-Dec-21	Mx replied with responses to all seven questions.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					possible disruptions to Dingwall Avenue. They focused questions on the line between Gerrard and Pape Stations.		
7-Dec-21	N/A	Member of the Public	Email - Outgoing	Following up: Ontario Line discussion	Mx confirmed that 1030am on December 8 works for them to meet.	8-Dec-21	Member of the public provided a Zoom link for the meeting on December 8.
7-Dec-21	N/A	Member of the Public	Email - Incoming	Downtown Traffic	Member of the public expressed concerned over the construction impacts to traffic in the downtown area and cc'd Mx.	23-Dec-21	Mx replied to ensure them that Mx is working closely with municipal partners to coordinate several years of planned construction and maintenance work. Mx also provided insight into their strategy to limit traffic impacts.
8-Dec-21	N/A	Member of the Public	Email - Outgoing	Following up: Ontario Line discussion	Mx sent an email to the member of the public which provided additional information about the Ontario Line and north segment.	9-Dec-21	Member of the public thanked Mark from Mx for meeting and also the documents Mx sent.
9-Dec-21	N/A	Member of the Public	Email - Incoming	Permit inquiry EML:019300604	Member of the public asked Mx for a permit in order to do a small addition at the back of their house as it is within 30 metres from the future release line.	9-Dec-21	Mx noted that the message was received by their Toronto East Community Relations team and that in order to assist further, an address need to be provided.
9-Dec-21	N/A	Member of the Public	Email - Incoming	Bridge underpass heights	Member of the public followed up with Mx to see who they can forward their request to on the question regarding the two bridges. Furthermore, the member asked what the implications will be for raising the rail bed on the Eastern Ave bridge, and the City having a "clear span" design for the Degrassi and Logan Ave. bridges.	9-Dec-21	Mx provided the main person of contact for the member to keep in touch with regarding their questions. Mx mentioned too that they are still working through the design implications due to the request from City staff. Once updated Mx will contact the member. Furthermore, Mx also mentioned that all the bridges in this corridor will meet the 5 metres clearance requirement from the City.
9-Dec-21	N/A	Member of the Public	Email - Outgoing	Following up: Ontario Line and downtown traffic impacts	Mx shared a few resources with the member of the public that related to the Ontario Line, and downtown traffic impacts that could occur with road closures.	N/A	N/A
9-Dec-21	N/A	Member of the Public	Email - Incoming	Tenant above proposed North/East Queen & Spadina Subway	Member of the public provided meeting times to the Property Acquisitions team at Mx for when they are available to talk.	N/A	N/A
9-Dec-21	N/A	Member of the Public	Email - Outgoing	Following up: Ontario Line + transit corridor lands letter	Mx attached a copy of the transit corridor lands designation letter that went out to homeowners for the member of the public. Mx also mentioned there is an	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					online interactive map to view the boundaries of the transit corridor lands.		
9-Dec-21	N/A	Member of the Public	Email - Incoming	Question re: Slide Image	Member of the public wanted to clarify if a certain image for the Ontario Line Corktown Station was shown during a recent presentation.	10-Dec-21	Mx emailed the member of the public to show an image that was used to describe the traffic management plan during construction for the station serving Corktown. Mx also mentioned plans are subject to change.
10-Dec-21	N/A	Member of the Public	Email - Incoming	Permit inquiry EML:019300604	Member of the public provided their address to Mx.	15-Dec-21	Mx Toronto East mentioned that the member's query looks to be Ontario Line related so they have been forwarded to the Ontario Line team.
10-Dec-21	N/A	Member of the Public	Email - Incoming	Information Request Ontario Line	Member of the public mentioned they live on Stewart St and their main concerns for the Ontario Line are the haul routes and how they could impact the entire street (e.g. Parking).	N/A	N/A
10-Dec-21	N/A	Member of the Public	Email - Outgoing	Following up: Ontario Line + Queen Street impacts	Mx sent the member of the public some resources on the Queen Street closure and road impacts.	N/A	N/A
10-Dec-21	N/A	Member of the Public	Email - Outgoing	Corktown Site	Mx sent an email to the member of the public which provided a link to the First Parliament site Heritage Interpretation and Commemoration Plan Survey. Mx also requested input from them by December 17.	13-Dec-21	The member thanked Mx for listening to their concerns specifically about the proposed 46 storey heights/massing of the Corktown site. The member also requested to Mx that they hope they will listen to their concerns on the CoT's "Amended King-Parliament Secondary Plan" for stipulating height maximums in their neighbourhood.
10-Dec-21	N/A	Member of the Public	Metrolinx Engage	Information	Member of the public inquired about possible job opportunities related to Queen Station.	16-Dec-21	Mx replied to an inquiry regarding possible job opportunities. Mx provided links to the Mx Job Portal and other links for them to check out.
14-Dec-21	N/A	Member of the Public	Email - Incoming	[New post] Islamic Society of Toronto and Metrolinx to convert building in Thorncliffe Park to a new Islamic Centre with significant additional community benefits	Member emailed Mx to let them know that they are pleased to hear the news about the new Islamic Centre being built in relation to the Ontario Line project. Member also inquired about the state of Iqbal Foods.	16-Dec-21	Mx mentioned they look forward to connecting with the member in the future.

Mx further elaborated and said that any Ontario Line- related tree removals, over and above those needed for GO electrification, will happen as early as Fall 2022.
7-Jan-22	N/A	Member of the Public	Email - Incoming	Properties	Member of the public inquired about any utility relocations on the properties previously listed in correspondence with Mx.	10-Jan-22	Mx noted that the level of detail required for Mx to provide this information is not available yet, however Mx noted that construction/community notices will be provided before work begins.
7-Jan-22	N/A	Member of the Public	Email - Outgoing	Surveying along the Ontario Line: Millwood to Eglinton/Science Centre Area - Starting as early as January 10	Mx provided notice that there will be work from Millwood Drive to Eglinton/Science Centre area, starting as early as January 10.	7-Jan-22	Member of the public asked if by Eglinton they meant Eglinton, and if Millwood Drive meant Millwood Road.
10-Jan-22	N/A	Member of the Public	Email - Outgoing	Surveying along the Ontario Line: Millwood to Eglinton/Science Centre Area - Starting as early as January 10	Mx acknowledged the mislabeling of Millwood Road and noted that this has been communicated to the team to avoid confusion in the future.	10-Jan-22	Member of the public noted that Eglinton is spelt incorrectly as well.
8-Jan-22	N/A	Member of the Public	Email - Incoming	Planned Renovations to Residence within OL Transit Corridor Land +30m	Member of the public inquired about whether their property is going to be expropriated in order to plan for their future renovations.	12-Jan-22	Mx replied to confirm that their property is not required and there are no expected direct impacts to the property. Mx also provided information regarding permits for renovations on transit corridor lands.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
10-Jan-22	N/A	Member of the Public	Email - Incoming	Unacceptable tree removal in Riverside Corridor	Member of the public asked questions about the Queen East office, bridges in the Riverside area, cost of the noise barrier, and noise from the trains.	13-Jan-22	Mx thanked the member for their questions and mentioned they would get back to them as soon as possible.
10-Jan-22	N/A	Member of the Public	Email - Incoming	Link request	Member of the public inquired about the collection of feedback to commemorate the history of the First Parliament site and asked if the portal is closed.	10-Jan-22	Mx confirmed that the First Parliament Site Heritage Interpretation Commemoration Plan survey is closed, however Mx offered to pass feedback along to the appropriate personnel.
10-Jan-22	N/A	Member of the Public	Email - Incoming	Time Line and Location	Member of the public asked what the project time line is for the OL to be fully operational, as well as what is the location of Cosburn Station and where will the access points be.	12-Jan-22	Mx noted that the based on the Preliminary Design Business Case, the completion of the OL Project should be 2030 and provided further clarification on why this may change. Mx noted that the specific location of Cosburn Station will be determined after the construction project company is selected. Mx then provided links to further information on Cosburn Station.
11-Jan-22	N/A	Member of the Public	Email - Incoming	Link request	Member of the pubic asked if it was possible to get a final report on survey results and if the author of the report would be available for further questions following the release of the report.	11-Jan-22	Mx noted that the results will be compiled into a publicly-available report and that the team will be available to questions about the report.
12-Jan-22	N/A	Member of the Public	Email - Outgoing	Property Acquisition Confirmation	Metrolinx replied to an inquiry sent through Metrolinx.com Contact Us asking if a specific address would be acquired by Metrolinx. Mx confirmed that the property would be acquired but no direct impact is expected on their property.	N/A	N/A
12-Jan-22	N/A	Member of the Public	Email - Incoming	Pape Avenue, Toronto	Member emailed Mx to ask if they will need their property (ies) to accommodate for the construction of the Ontario Line.	13-Jan-22	Mx mentioned that they have followed up with their colleagues in the Property Acquisitions team to request an update on the property (ies) inquired about.
12-Jan-22	N/A	Member of the Public	Email - Incoming	Replacing Garage	Member of the public provided notice to Mx that they will be replacing a garage on their property that required Mx approval due to the stamp on their property. They asked for a contact to discuss their plans with or to schedule a meeting with.	12-Jan-22	Mx noted that following the phone call between Mx and the member of the public, alterations to their home will require Mx approval prior to obtaining a permit from Toronto Building. Mx provided links to pre-application forms and outlined the process they can expect to go through.
13-Jan-22	N/A	Member of the Public	Email - Outgoing	SimplyBook	Mx acknowledge the member of the public booking a chat with the OL	N/A	N/A

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					Community Relations Team. Mx confirmed meeting time and noted that the Community Relations team does not provide employment advice. Mx asked member of the public to confirm that they wish to keep the meeting.		
14-Jan-22	N/A	Member of the Public	Email - Outgoing	Tree Removal	Mx replied to an inquiry sent through Metrolinx.com Contact Us, asking what the tree removal around Egan Avenue is for. Mx noted that the tree removal along the Lakeshore East Joint Corridor is part of GO Expansion work and these trees have been studied under the Go Electrification TPAP in 2017. Mx added that the EA outlined trees that will need to be removed and so that work will be taking place now.	N/A	N/A
15-Jan-22	N/A	Member of the Public	Email - Incoming	Upcoming geotech and vegetation removal in 2022	Member of the public asked if some documents pertaining to the upcoming Ontario Line work in the Don Valley can be added to an upcoming Meeting of the Minds conversation.	17-Jan-22	Mx thanked the member of the public for sending the documents over, and asked if they would like to have follow up meetings in the future.
15-Jan-22	N/A	Member of the Public	Email - Incoming	Cosburn	Member of the public asked Mx for where the entrance(s) to the Cosburn station will be located.	17-Jan-22	Mx apologized for their late response, and provided a link for context related to the Cosburn Station.
15-Jan-22	N/A	Member of the Public	Email - Incoming	Daryl replacement in South Riverdale and GO track electrification timing	Member of the public asked when the new start date for the GO Train track electrification will be as it was originally scheduled for 2024.	17-Jan-22	Mx mentioned that the construction for the GO Train track electrification is expected to start in late 2022 or early 2023.
15-Jan-22	N/A	Member of the Public	Email - Incoming	Elevated Train	Member of the public asked if it is possible to share an artist concept at the Science Centre and Flemingdon Park stops.	17-Jan-22	Mx apologized for their late response, and provided some links for the Science Centre and Flemingdon Park stations.
17-Jan-22	N/A	Member of the Public	Email - Incoming	Automatic reply: Link to Metrolinx Ontario Line virtual open house (November 25, 2021)	Member of the public asked Mx if there is any update regarding the Ontario Line project manager dealing with the effected business in Thorncliffe Park Drive.	17-Jan-22	Mx apologized to the member for their late response, and mentioned that they are connecting with their Property Acquisitions team to follow up on the member's inquiry for relocation assistance.
17-Jan-22	N/A	Member of the Public	Metrolinx Engage	Timing of construction	Member of the public asked Mx where they could find information about the timing of west segment construction and the construction of the King/Bathurst station.	17-Jan-22	Mx thanked the member for reaching out, and provided a link for finding the Ontario Line projected timeline. Mx also mentioned that work is expected to begin on the Ontario Line West segment

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							(Exhibition, King/Bathurst, and Queen/Spadina Stations) to begin in 2023.
17-Jan-22	N/A	Member of the Public	Email - Incoming	Ontario Line - Pape Ave Resident	Member of the public asked Mx if they can speak to someone about the specifics of where the tracks will be and how much it will impact their way of life on Pape Avenue.	18-Jan-22	Mx apologized to the member for their late response, and provided a link for information on the Pape Station.
18-Jan-22	N/A	Member of the Public	Email - Incoming	Ontario Line - Pape Ave Resident	Member of the public would like to know if the Subway will be below my property, or whether it will be on the other side of the street.	19-Jan-22	Mx informed the member of the public that they will reach out to them with details at the earliest opportunity possible once they know more about precise environmental and community impacts as the project moves through future design stages.
18-Jan-22	N/A	Member of the Public	Email - Incoming	Following up: Ontario Line discussion	Member of the public thanked Mx for meeting with them last month. The member also followed up by asking Mx a few questions related to the Ontario Line about consultations, human health, and the environment, and revitalizing the community.	18-Jan-22	Mx thanked the member of the public for their questions and informed them that they would provide answers as quickly as possible.
18-Jan-22	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public told Mx to connect the Ontario Line to the Richmond Hill GO train line.	20-Jan-22	Mx apologized for the delayed response, and mentioned that as plans are still in development, the future Ontario Line will connect with the Lakeshore West GO line at Exhibition and the Lakeshore East GO line at East Harbour. Mx also emphasized that it would be challenging to accommodate a connection between the Ontario Line and the Richmond Hill GO line, because if they were connected, it would eliminate several key interchanges and existing relief.
19-Jan-22	N/A	Member of the Public	Email - Outgoing	Working Group Invitation	Mx sent an invite to the member to participate in the working group discussion on January 24 at 4pm in regards to the future retaining noise walls, landscape design, and vegetation plans along the joint rail corridor.	N/A	N/A
19-Jan-22	N/A	Member of the Public	Email - Outgoing	Working Group Invitation	Mx sent an invite to the member to participate in the working group discussion on January 24 at 4pm in regards to the future retaining noise	21-Jan-22	Member of the public thanked Mx for the invitation.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
					walls, landscape design, and vegetation plans along the joint rail corridor.		
19-Jan-22	N/A	Member of the Public	Email - Incoming	Pape Avenue, Toronto	Member of the public told Mx that they would like to sell their house but received word from Mx last year indicating their house or property might be needed/ be expropriated for the Ontario Line. Member of the public would appreciate an update on this matter.	N/A	N/A
20-Jan-22	N/A	Member of the Public	Email - Incoming	301-526171-V0G2M9 > Stations > Snow Removal (Walkways and Platforms) EM0002375385 EML:019300648	Member of the public mentioned that the sidewalk on Berkeley Street, which will be part of the Ontario Line located between King and Front Street, has not been plowed or shoveled since the recent snowstorm and it has caused major inconveniences.	24-Jan-22	Mx apologized for the sidewalk condition in this area, and confirmed to the member of the public that the sidewalk will be cleared today. Mx encouraged the member to reach out if there were anymore questions.
20-Jan-22	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public appreciated Mx's explanation, and discussed the difficulty to access the Richmond Hill GO Line with current infrastructure in place.	20-Jan-22	Mx provided a link which has a map of the proposed Ontario Line with stations, and thanked the member for their questions.
22-Jan-22	N/A	Member of the Public	Email - Incoming	Request for Information: Ontario Line	Member of the public asked Mx how many residents would possibly be displaced for the construction of the Ontario Line.	24-Jan-22	Mx apologized for the delayed response. Mx informed the member of the public that they will reach out to them with details at the earliest opportunity possible once they know more about precise environmental and community impacts as the project moves through future design stages.
23-Jan-22	N/A	Member of the Public	Email - Incoming	Pape Avenue, Toronto	Member of the public followed up with Mx to ask if someone from the team can call them on their personal cell phone number.	24-Jan-22	Mx thanked the member of the public for following up, and scheduled a meeting time with them on January 25, 2022.
24-Jan-22	N/A	Member of the Public	Email - Incoming	Request for Information: Ontario Line	Member of the public asked Mx if they could elaborate on how the acquisition process works. Member of the public thanked Mx for their explanation. The member also asked Mx if there is a timeline on when the design stages will be completed, and when there is a clearer idea for all the "environmental and community impacts".	24-Jan-22	Mx provided information to the member of the public for how properties are acquired which includes entering into direct negotiations with the property owners, the length of the process, and the selling or restoration of their home. Mx also mentioned to the member of the public that an Environmental Report will be available to the public in the near future, and provided a link with the weekly newsletters to stay updated.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
24-Jan-22	N/A	Member of the Public	Email - Incoming	Ontario Line - Pape Ave Resident	<p>Member of the public asked if Mx could elaborate for what type of properties may be acquired, when they would hear about this, and if there is a map of the proposed line between Gerrard and Carlaw and Pape Station at Danforth.</p> <p>Member of the public mentioned that the map doesn't show in detail whether the Tunnel will be on the Right Side, Left Side, or right in the Middle of Pape at Dingwall Avenue, and asked if Mx knows instead.</p> <p>Member of the public mentioned they tried that but still couldn't find a close up for the segment between Gerrard and Danforth.</p>	24-Jan-22	<p>Mx provided the member a map link of the Ontario Line where the north segment of the Ontario Line is shown which spans between Pape and Science Centre. Mx also discussed the compensation the property owner would receive if their house does need to be expropriated.</p> <p>Mx clarified to the member that if they drill into each station on the map, it should give them a better idea of the construction plans including tunneling and station placement.</p> <p>Mx confirmed to the member of the public that the Line will be slightly to the left falling between Eaton Ave and Pape Ave, and slightly to the west of Pape Ave in the Gerrard and Carlaw area as well.</p>
24-Jan-22	N/A	Member of the Public	Email - Incoming	Working Group Invitation	Member of the public mentioned to Mx that they rsvp'd before last Friday's deadline but did not get any information on how to participate. They are wondering if there will be another session in the future.	24-Jan-22	Mx informed the member that their email address was on the meeting invite and weren't sure why they didn't get any meeting details. Mx sent the presentation deck that was presented along with the meeting notes.
25-Jan-22	N/A	Member of the Public	Email - Incoming	Sublease Business at 2 Thorncliffe Park Dr.	Member of the public asked Mx for help in relocating their dental office which will be demolished for the Ontario Line.	26-Jan-22	Mx informed the member of the public that Mx has supports in place to ensure renters of business spaces are taken care of. Mx also mentioned that supports are tailored to a tenant's specific needs and are determined through discussions during the acquisition process.
25-Jan-22	N/A	Member of the Public	Email - Incoming	FW: Space require at new mosque business area	Member of the public requested to Mx to be moved to the new mosque location on Overlea.	27-Jan-22	Mx apologized for the delayed response, and mentioned that a team is being assembled to work with tenants affected by Ontario Line's OMSF to relocate to Overlea Blvd.
25-Jan-22	N/A	Member of the Public	Email - Incoming	FW: Space require at new mosque business area	Member of the public requested for their dental office to be moved in the area of the new mosque as their business will be impacted by the Ontario Line.	27-Jan-22	Mx apologized for the delayed response, and mentioned that a team is being assembled to work with tenants affected by Ontario Line's OMSF to relocate to Overlea Blvd.

26-Jan-22	N/A	Member of the Public	Email - Incoming	Working Group Invitation	Member of the public thanked Mx for the confirmation and asked if they can be included in future consultations/meetings/community information sessions.	N/A	N/A
26-Jan-22	N/A	Member of the Public	Email - Incoming	Following up: Ontario Line discussion	Member of the public followed up with Mx to see if they have reviewed their questions on consultations, human health, and the environment, and revitalizing the community.	26-Jan-22	Mx apologized for the delay and informed the member of the public that they are still awaiting a few responses from the necessary personnel. As soon as Mx gets answers, a formal response to the letter will be formulated and sent.
27-Jan-22	N/A	Member of the Public	Email - Incoming	FW: Space require at new mosque business area	Member of the public asked what time frame they should expect to be able to move into the new location.	N/A	N/A
28-Jan-22	N/A	Member of the Public	Email - Incoming	Snow Clearing on King along Staples Property	<p>Member of the public complained to Mx about the snow not being cleared on the King Street sidewalk closest to Berkely as it has caused a lot of problems for people of all ages.</p> <p>Member of the public indicated on the map where snow/ice still hasn't been cleared.</p>	28-Jan-22	<p>Mx sent the member of the public an image of the Corktown early works site indicating where responsibility lies with the contractor through Mx. Mx asked the member of the public to provide photos if snow/ice still has not been cleared.</p> <p>Mx thanked the member of the public for their help in pointing out where the snow/ice hasn't been cleared. In doing so, Mx asked their contractor to inform about the issue and for them to confirm when the sidewalk has been cleared.</p>
30-Jan-22	N/A	Member of the Public	Email - Outgoing	Space require at new mosque business area	Mx called the member of the public asking for their availability to discuss their options and services that are available to them as a sub-tenant.	10-Feb-22	Member of the public indicated to Mx that they would like to know the options and services they have available to move.
30-Jan-22	N/A	Member of the Public	Email - Incoming	Concern: Is Gerrard Tunnel Portal location a Superfund site?	Member of the public informed Mx that they have been emailing with them since October 21, 2021 and have not heard any responses from their previous questions. Member of the public also asked Mx if they can share a copy of the Environmental assessment.	24-Mar-22	Mx apologized for the delay in responding to the member of the public's email. Mx provided answers to the member of the public on if the school lies on top of a superfund site, if any chemical testing has been completed, how much actual testing has been done, what kind of testing has been completed, which company did the testing, the process involved if carcinogenic materials are found, how the public will know if Mx has found chemicals, and the

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							proposed mitigation measures for if chemicals are found.
31-Jan-22	N/A	Member of the Public	Email - Outgoing	Follow-up from phone call about Ontario Line	Mx thanked the member of the public for meeting with them and provided some resources with more information about the Ontario Line's future Queen/Spadina Station and the traffic/road impacts.	31-Jan-22	Member of the public thanked Mx for sending the resources.
31-Jan-22	N/A	Member of the Public	Email - Outgoing	Joint Corridor Working Group	Mx emailed the member of the public to inform them that after Monday's meeting, there will be three more focus group virtual meetings for the next three Mondays, with the Agenda for next Monday's meeting to follow.	31-Jan-22	Member of the public thanked Mx for the invitation, and mentioned that they will do their best to join the meeting this evening.
31-Jan-22	N/A	Member of the Public	Email - Incoming	Follow-up to our call	Member of the public followed up with Mx on an ETA for their questions back in October 2021 as it will decide if they should sell their townhouse or not for job related purposes.	31-Jan-22	Mx apologized to the member for their late response. Mx informed the member that the expected noise levels caused by the Ontario Line can be found in the draft EIAR which will be submitted on February 7, 2022 (link provided for report), and provided another link for registering for the virtual open houses related to the draft EIAR in late February and early March 2022.
1-Feb-22	N/A	Member of the Public	Email - Incoming	Pape Ave- tenant	Member of the public asked Mx if their noted address close to Pape will be affected (e.g. parking, relocation) by the Ontario Line in the future.	3-Feb-22	Mx thanked the member for their questions and apologized for their late response. Mx informed the member that they do not need the property on which they reside, but there will be a subsurface "impact" (due to the tunnel running underneath) so negotiations with the property owner are ongoing.
1-Feb-22	N/A	Member of the Public	Email - Outgoing	Pape Ave Update	<p>Mx emailed the member of the public to set up a meeting time on February 3, 2022 for a call related to their property.</p> <p>Mx confirmed that 230pm was good to meet on February 3, 2022.</p> <p>Mx informed the member of the public that the meeting will be regarding the impact letter that they are supposed to receive in the coming days.</p>	1-Feb-22	<p>Member of the public asked if they could meet with Mx on 230pm or 430pm that day.</p> <p>Member of the public asked to receive any info regarding their property ahead of time before the meeting.</p> <p>Member of the public asked if they will be able to review the impact letter during the call. Mx confirmed it would be.</p>

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
2-Feb-22	N/A	Member of the Public	Email - Incoming	Carlaw Avenue	Member of the public emailed Mx to ask if their small business property, which has been purchased by Mx, will need to be torn down to accommodate the Ontario Line.	10-Feb-22	Mx emailed the member of the public to clarify that their building is not expected to be demolished for the Ontario Line.
3-Feb-22	N/A	Member of the Public	Email - Incoming	Pape Ave- tenant	Member of the public wanted Mx to clarify what subsurface impact means and how it will affect them.	3-Feb-22	Mx clarified to the member of the public that the subsurface tunnel area property requirement is situated far below but may be under the property, therefore having minimal aboveground impacts. Mx also provided a link for the draft EIAR for the member to understand the impacts more in depth.
3-Feb-22	N/A	Member of the Public	Email - Outgoing	Pape Ave Update	<p>Mx emailed the member of the public to ask if they were inviting anyone else to the call.</p> <p>Mx informed the member that they should have a meeting first followed by another meeting with the realtor.</p>	3-Feb-22	<p>Member of the public confirmed that their wife and realtor will be attending the call.</p> <p>Member of the public agreed that another call should be set up with the retailer.</p>
3-Feb-22	N/A	Member of the Public	Email - Incoming	Ontario Line - Pape Ave Resident	Member of the public thanked Mx for their response but still didn't understand their explanation of the Ontario Line being slightly West of Pape and falling between Pape and Eaton, and Eaton being East of Pape and north of Danforth. The member of the public also asked Mx to elaborate on the type of construction activity that will be expected on Pape Ave between Gerrard and Danforth.	3-Feb-22	Mx emailed the member of the public back to inform them that the draft EIAR which will be available on their website on February 7, 2022 can provide some clarifications, and that a series of virtual open houses on the draft EIAR will occur in late February and early March.
4-Feb-22	N/A	Member of the Public	Email - Incoming	Ontario Line Subway Property Address: Wellington St W	Member of the public indicated to Mx that they received a property letter on January 28, 2022 and would like to receive more information from Mx on the project dates and was wondering if there are any alternative options to explore other than going through their property.	8-Feb-22	Mx thanked the member of the public for their email. Mx noted that the package of work that covers their area is the Southern Civil, Stations and Tunnel procurement package, which covers the line from Exhibition Station to the Don River and is expected to begin work in 2023. Mx also noted that the successful bidder for work to begin in 2023 will be awarded in Fall 2022, and will therefore provide a better understanding for when construction schedules and timelines will be known.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
5-Feb-22	N/A	Member of the Public	Email - Incoming	Follow-up to our call	Member of the public asked Mx for clarification on if the environmental report will outline the noise levels of all potential construction.	8-Feb-22	Mx provided a link for the full Environmental Impact Assessment Report draft to the member of the public which should entail answers to most of the questions they asked about.
7-Feb-22	N/A	Member of the Public	Email - Incoming	Scheduling a Meeting re: Ontario Line Subway and Toronto	Member of the public's representative emailed Mx that they would like to schedule a meeting with them to discuss a letter their client received regarding the Ontario Line on January 28, 2022.	N/A	N/A
7-Feb-22	N/A	Member of the Public	Email - Incoming	Ontario Line Meeting Request- Minton Place	Member of the public indicated to Mx that they receive a letter in the mail for a meeting request concerning their property in relation to the Ontario Line. The member asked Mx to respond will all of the relevant information.	8-Feb-22	Mx thanked the member of the public for their email and said they will get back to them in a few days.
7-Feb-22	N/A	Member of the Public	Email - Incoming	Construction Phasing	Member of the public asked Mx if they can send a animation for construction sequencing similar to what was done for the section north of Dundas through Carlaw, but instead between Queen and Dundas.	10-Feb-22	Mx thanked the member of the public for their question and said they would look into this right away.
7-Feb-22	N/A	Member of the Public	Email - Incoming	Draft EA: Station Designs	<p>Member of the public asked Mx if there are any drawings available showing the layout of underground, surface, or elevated structures, notably at interchange stations.</p> <p>Member of the public pointed out to Mx that the information on the neighbourhood updates is the same as in the EA- only station footprints but no cross sections or massing views for surface and elevated areas.</p>	7-Feb-22	<p>Mx thanked the member of the public for their email and provided them a link displaying the latest station updates/footprints.</p> <p>Mx informed the member of the public that those additional images, which was inquired about, would be posted very soon.</p>
7-Feb-22	N/A	Member of the Public	Email - Incoming	Muriel Ave. Toronto, Ontario	Member of the public asked if they could have a meeting Mx to clarify exactly where they would require an underground easement on their property.	8-Feb-22	Mx thanked the member of the public for their email and said they will get back to them in a few days.
7-Feb-22	N/A	Member of the Public	Email - Incoming	Muriel Avenue - Ontario Line	Member of the public emailed Mx to ask if they can seek some clarification from someone on what will happen to their property due to the underground tunneling system located underneath their house.	9-Feb-22	Mx confirmed to the member of the public that they required the rights underneath their property (20 to 30 metres below ground). Mx also informed the member of the public that there is compensation for this inconvenience,

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							and that they will not be required to sell their property.
7-Feb-22	N/A	Member of the Public	Email - Incoming	Pape Ave easement discussion	Member of the public asked Mx if they could schedule a meeting with them in regards to a letter they received about their property.	8-Feb-22	Mx thanked the member of the public for their email and said they will get back to them in a few days.
7-Feb-22	N/A	Member of the Public	Email - Incoming	Pape Ave Update	Member of the public thanked Mx for the call last week. The member asked Mx if they could refuse or object to the easement, if any compensation is guaranteed for the easement, and if Mx could put in a statement related to the noise and vibration if the house would be for sale.	8-Feb-22	Mx thanked the member of the public for their email and said they will get back to them in a few days.
7-Feb-22	N/A	Member of the Public	Email - Incoming	Junction Investments Inc. Queen Street West	Member of the public's representative emailed Mx to inform them that anything related to acquisition/expropriation in respect to their client's property shall be directed to them.	7-Feb-22	Mx acknowledged the member's representative's email.
7-Feb-22	N/A	Member of the Public	Email - Incoming	meeting request as per your letter	Member of the public emailed Mx to schedule a meeting with them regarding the impact the Ontario Line could cause to their property.	8-Feb-22	Mx thanked the member of the public for their email and said they will get back to them in a few days.
7-Feb-22	N/A	Member of the Public	Email - Incoming	METROLINX King Street West	Member of the public requested from Mx that a map be sent to them indicating the angle the subway will be cutting through their property and the amount of easement that is required for construction.	8-Feb-22	Mx provided the appropriate contacts for the member to reach out to regarding their questions.
7-Feb-22	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public would like to arrange a video chat with Mx based on a notice they received from them.	N/A	N/A
8-Feb-22	N/A	Member of the Public	Email - Incoming	Protection Zone - Ontario Line Subway	Member of the public informed Mx that they received a notice from them indicating that the Ontario Line will impact their home. 2-Mar-22	N/A	Member of the Public	Email - Outgoing	Pape Jr. School Concerns	Mx agreed with the member's request of speaking to someone that has expertise in engineering and construction.	2-Mar-22	Member of the public appreciated Mx's help and looks forward to a future meeting with them.
2-Mar-22	N/A	Member of the Public	Email - Incoming	Ontario Line-King/Bathurst-Queen/ Spadina Inquiry	Member of the public thanked Mx for their response. The member of the public also asked Mx to advise on the road closures for Queen/Spadina.	N/A	N/A
2-Mar-22	N/A	Member of the Public	Email - Incoming	Suggestions/clarifications re your south corridor presentation	Member of the public emailed Mx to follow up on some points that were raised at a recent virtual open house for the Ontario Line involving mitigation measures for construction, noise levels in the joint corridor, the Gerrard station track layout, construction timeframes, and photo caption nit.	N/A	N/A
3-Mar-22	N/A	Member of the Public	Email - Incoming	Ontario Line	Member of the public asked Mx if they can confirm if their property will require an easement.	4-Mar-22	Mx confirmed that the member of the public's property will not be impacted by the Ontario Line.
3-Mar-22	N/A	Member of the Public	Email - Incoming	Pape - Ontario Line	Member of the public reached out to Mx to enquire if an easement is required for their property for the Ontario Line construction.	3-Mar-22	Mx thanked the member of the public for their email and informed them they will get back to them in a few days.
3-Mar-22	N/A	Member of the Public	Email - Incoming	Publication of Draft Environmental Impact Assessment Report	Member of the public would like to confirm when the hardcopy of the draft EIAR will be sent.	4-Mar-22	Mx apologized to the member of the public that the hardcopy of the draft EIAR may have been lost in the mail. However, Mx informed the member that a team member will hand deliver the copy this afternoon.
3-Mar-22	N/A	Member of the Public	Email - Incoming	Pape Ave, Toronto property acquisition process	Member of the public asked Mx how much of their property they will need for the Ontario Line.	4-Mar-22	Mx apologized for the delayed response and provided a link where the member of the public can schedule a meeting with a

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
							member from the Community Relations team at Mx.
3-Mar-22	N/A	Member of the Public	Email - Incoming	Pape Avenue	Member of the public's representative contacted Mx to see if their client's property will be impacted by the Ontario Line.	N/A	N/A
3-Mar-22	N/A	Member of the Public	Metrolinx Engage	Planning approval for Ontario Line stations and OL MSF	Member of the public asked Mx how they plan to proceed with respect to land use approval for the Ontario Line.	N/A	N/A
4-Mar-22	N/A	Member of the Public	Email - Incoming	Ontario Line Subway Property Address Pape Ave	Member of the public followed up with Mx to inform them that they still haven't been contact and would like to schedule a meeting.	9-Mar-22	Mx apologized for the delayed response and provided a link where the member of the public can schedule a meeting with a member from the Community Relations team at Mx.
4-Mar-22	N/A	Member of the Public	Email - Incoming	Pape Ave	Member of the public wanted to seek clarification from Mx on the protection zone requirement involving their property that was described in a letter they received.	5-Mar-22	Mx confirmed to the member of the public that a representative will be reaching out to them directly.
4-Mar-22	N/A	Member of the Public	Email - Incoming	Ontario Line Subway - Meeting request	Member of the public followed up with Mx again based on an email sent on February 10, 2022.	N/A	N/A
4-Mar-22	N/A	Member of the Public	Email - Outgoing	Questions via Metrolinx Engage	Mx apologized to the member of the public for their delayed response. Mx provided answers to questions the member had about the authenticity of their emails, the timeline of the Ontario Line, the EPR, Townhall dates, and the potential benefits for Science Centre residents.	N/A	N/A
4-Mar-22	N/A	Member of the Public	Email - Outgoing	Pape property assessment	Mx apologized for the delayed response and provided a link where the member of the public can schedule a meeting with a member from the Community Relations team at Mx.	N/A	N/A
4-Mar-22	N/A	Member of the Public	Email - Incoming	Re corner of Don Mills and Eglinton	Member of the public provided suggestions regarding the location of the bus depot on the north east corner of Don Mills and Eglinton to provide the fasted connection from one line to the other.	15-Mar-22	Mx confirmed the recommendations have been relayed to the design team for consideration.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
5-Mar-22	N/A	Member of the Public	Email - Incoming	Environmental Assessment Draft Query	Member of the public asked for the length of time homeowners near Pape Station will experience construction elated noise and vibration.	9-Mar-22	Mx confirmed that construction will last approximately 5-6 years.
7-Mar-22	N/A	Member of the Public	Metrolinx Engage	Glass Buildings - Bird Strike Avoidance	Member of the public asked Mx what their plan was to make sure their glass structures at transit shelters are safe for birds.	16-Mar-22	Mx confirmed they have considered bird-friendly design in the Ontario Line Design Guide that will meet the City of Toronto Bird Friendly Development Guidelines.
7-Mar-22	N/A	Member of the Public	Email - Incoming	FW: Space require at new mosque business area	Member of the public emailed Mx to advise them that they are in contact with the IST and are awaiting the green signal to accommodate their dental office.	8-Mar-22	Mx noted that they have been trying to get in touch with the member of the public and asked where it's best to contact them.
7-Mar-22	N/A	Member of the Public	Email - Outgoing	Pape Ave	<p>Mx confirmed to the member of the public that the current design for the Ontario Line requires a stratified permanent subsurface easement below their property. Details for this will be finalized in August 2022.</p> <p>Mx explained to the member of the public that they do not need to purchase the whole building and instead require a portion of the underground area below the building.</p>	7-Mar-22	Member of the public thanked Mx for the information but asked if they could describe it in layman's terms.
7-Mar-22	N/A	Member of the Public	Email - Incoming	Aldwych Ave - Protection Zone - Ontario Line Subway	Member of the public informed Mx they received a notice regarding a possible protection that may impact their property. For this reason, they asked Mx if more information can be provided at this time.	15-Mar-22	Mx replied that the property may be impacted. However impacts are anticipated to be minimal as all work will be subsurface.
7-Mar-22	N/A	Member of the Public	Email - Incoming	Pape Ave. Toronto	Member of the public asked Mx to forward any information to them (related to the Ontario Line) that would effect a buyer's decision to purchase the property they currently have listed.	15-Mar-22	Mx replied that there will be an easement constructed under the property. They anticipate minimal impacts to the surface of the property, if at all.
7-Mar-22	N/A	Member of the Public	Email - Incoming	RE:	<p>Member of the public provided Mx their address.</p> <p>Member of the public informed Mx that they purchased the house in October 2021 and was not sure if they received any documentation.</p>	7-Mar-22	Mx thanked the member of the public for their prompt response. Mx also asked the member of the public if they received a letter from Metrolinx indicating potential impacts to their property.
7-Mar-22	N/A	Member of the Public	Metrolinx Engage	Bird safe glass shelters	Member of the public asked Mx if they can make all clear shelters and other structures safe for birds by adding dotted	16-Mar-22	Mx confirmed that they have considered bird-friendly designs, including glass facades that are designed to meet the

					included a Ontario Line Sound Demonstration, the Ontario Line Environmental Impact Assessment Overview Page, and Appendix 6: Noise and Vibration of the Noise and Vibration report.		
8-Mar-22	N/A	Member of the Public	Email - Incoming	Ontario Line Subway: Berkeley St.	Member of the public notified Mx that they received their letter dated from January 28, 2022 and would like to schedule a meeting with them to understand the process in Mx acquiring their property.	N/A	N/A
8-Mar-22	N/A	Member of the Public	Email - Incoming	Pape Ave Subway Infrastructure / Protection Area Meeting	Member of the public emailed Mx to request a meeting time on the topic of subway infrastructure and/or protection area within their property limits.	9-Mar-22	Mx apologized for the delayed response and provided a link where the member of the public can schedule a meeting with a member from the Community Relations team at Mx.
8-Mar-22	N/A	Member of the Public	Email - Incoming	Danforth Ave - Tenant	Member of the public informed Mx to provide them with further updates about the property acquisition process.	9-Mar-22	Mx confirmed with the member of the public that they will receive formal notices about the property acquisition process going forward.
8-Mar-22	N/A	Member of the Public	Email - Outgoing	New booking: Let's Talk! (15 minute)	Mx emailed the member of the public to confirm what meeting time they booked, and for the member to provide a street name they would like to discuss at the upcoming meeting time. Mx confirmed that would be fine.	8-Mar-22	Member of the public explained the confusion in booking two meetings times due to them and their partner working during the day. Member of the public asked Mx if they can be at two separate locations when talking to them during the day.
8-Mar-22	N/A	Member of the Public	Metrolinx Engage	Bird friendly shelters	Member of the public asked Mx to ensure that all transit shelters on the Ontario Line are bird friendly.	16-Mar-22	Mx confirmed that they have considered bird-friendly designs, including glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines.
8-Mar-22	N/A	Member of the Public	Email - Incoming	Ontario Line Environmental Impact Assessment Consultation Feedback	Member of the public attached a letter for Mx outlining their feedback related to the draft EIAR.	N/A	N/A
8-Mar-22	N/A	Member of the Public	Email - Incoming	Business Kappa Optical	Member of the public informed Mx that they would like to schedule a meeting with them about the Ontario Line.	9-Mar-22	Mx apologized for the delayed response and provided a link where the member of the public can schedule a meeting with a member from the Community Relations team at Mx.

Date of Communication	Affiliation	Correspondent	Method of Communication	Subject	Comment	Date of Response	Response and Issue Resolution (if applicable)
8-Mar-22	N/A	Member of the Public	Email - Incoming	Draft EIA Report	Member of the public asked Mx if it possible to obtain a copy of the draft EIA Report for the Ontario Line.	9-Mar-22	Mx thanked the member of the public for reaching out and apologized for the delayed response. Mx provided a link for the draft EIA and encouraged the member of the public to reach out if they had any more questions.
8-Mar-22	N/A	Member of the Public	Email - Incoming	Draft Environmental Impact Assessment - Bell Canada Conflicts	Bell Canada would like to discuss further with Mx about the 83 conflicts identified for different components such as cables and overhead lines in the draft EIAR.	22-Mar-22	Mx apologized for the delay in responding to the member of the public. Mx confirmed that their technical teams have been in contact with Bell Canada regarding the conflicts identified previously throughout the Ontario Line corridor since the beginning of the project.
9-Mar-22	N/A	Member of the Public	Metrolinx Engage	Bird Friendly Transit Shelters	Member of the public asked Mx to ensure that all transit shelters on the Ontario Line are bird friendly.	16-Mar-22	Mx confirmed that they have considered bird-friendly designs, including glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines.
9-Mar-22	N/A	Member of the Public	Email - Incoming	Environmental Assessment Draft Query	Member of the public asked if Pape and Danforth will be under construction for the entire 5-6 years, or will construction in their area will be completed within a year and move on to work elsewhere along the line.	11-Mar-22	Mx replied they are awaiting the procurement package, which will be published on the website once completed. The excavation will last two years and construction of the station will last two years.
9-Mar-22	N/A	Member of the Public	Email - Incoming	re: Today's Construction at Pape	Member of the public provided a video regarding Mx drilling near a school, noting safety and noise concerns.	10-Mar-22	Mx confirmed the contractor was not able to accommodate the work to occur during March Break. Mx confirmed they have shared the concerns with their project team to avoid similar situations in the future.
9-Mar-22	N/A	Member of the Public	Email - Incoming	West End Relief also needs a rethink/pause....	Member of the public noted plans from 1957 regarding the Relief West and connection to the proposed Ontario Line stations.	15-Mar-22	Mx thanked the member of the public for their input and have shared it with the project team.

Hello [REDACTED]

Thank you for your message.

We are committed to listening to the residents of Riverside and Leslieville so we can create the right solutions. Our plans have been updated based on what we heard from the community and now preserve the Jimmie Simpson Recreation Centre and commit to the installation of noise walls. We will continue to work with the community to develop and construct infrastructure that fits within and enhances the neighbourhoods in which the Ontario Line will run.

Running the Ontario Line on a mix of elevated, at-grade and underground sections means we can deliver a longer route that will serve more communities. By using the GO corridor, a route that is approximately twice the length of the Relief Line South can be built at a similar cost. Also, using the GO corridor will allow people to more easily connect between GO and TTC services that will both be accessible by street level, saving time compared to connections that would lead people into deep underground stations. Because we will use lighter, electric vehicles for the Ontario Line, the noise and vibration profile will be much less than the current GO trains. As details on the project's design advance, noise and vibration impact studies will be completed and shared with the community.

Feel free to reach out in the future,

Daryl Gonsalves

Subject: Ontario Line section through Leslieville-Riverside

Message:

1. Please explain why the 2km section of track through Riverside/Leslieville must go above-ground, when the same route but underground alignment would be less invasive and less destructive on our neighbourhood, businesses and environment?
2. If the Ontario Line must come above ground – why can't it remain underground heading south and rise above ground in south of Eastern Ave. in the industrial area – not residential?
3. From the Environmental Conditions Report's Area of Study, we can see that Metrolinx has not considered any alternative alignments, despite the motion Ex9.1 Amendments 19 and 20, passed by the City of Toronto in 2019, which states Mx must investigate underground routes through Leslieville. Why is Metrolinx ignoring the City directive and our community voices?
4. Why is Metrolinx not investigating an underground route in Riverside/Leslieville when a viable underground route was developed by the City of Toronto for the Relief Line?
5. How can you call this process a 'consultation' when you are only advancing one design/route/alignment forward that clearly our communities do not want?

Subject: RE: Any type of transit project that aligns with what the Premier wants.....

Hi [REDACTED]

Thanks for your message.

We have shared your email with the project team for consideration.

Further information will be provided as environmental studies and procurement activities continue, including more details on plans to address community impacts and introduce robust mitigation strategies. We ask for your patience as we complete the necessary studies and investigations to support informed discussions with the community. If you have not already, please consider signing up for our [online newsletter](#) to stay informed on the project.

Feel free to reach out should you have any further questions,

Subject: Any type of transit project that aligns with what the Premier wants.....

Greetings, some thanks, though honestly many Metrolinx folks should be ashamed of yourselves and the salaries collected.

We were already in politicized transit; that's part of our problem. Including 'caronic' denial of how cars are subsidized.

Now it's gotten bad, very bad, Fordking bad, as it were. So abject are the politricks, and so powerless and without courage many of the pols and staff, (and likely some breaks with the bruises), that the only way to begin to have decent transit arrive is for the federal level to get smart and principled, and KEEP THE MONEY HELD TIGHT, which remains uphill from politics there. Though at least they're working harder with the minority situation and are more inclined to be listening than if they too had a majority.

Federal level should both respect and defend communities, taxpayers and rationalities and be far more 'involved' in what they're funding.

I believe Montreal has had open plans and long-standing plans that haven't been swept aside every few years, though in the case of the Relief/Ontario Line, we actually do need a reset of the schemes to develop good transit, but far more on-surface and sub-regional than has been the desire, and yes, we could squeeze the billions as we do so. And to be positive, it's really really needed to get up to Eglinton ASAP.

It's likely a good thing that gee, it's taking longer to complete Eglinton since I sense that there's no real plan to ensure that any new riders on Eglinton can actually really fit on to Yonge/Line 1 with any transfers. Oops, and an oversight in the oversight. Not surprising, but a biggie.

So with climate emergency; transit urgency and overload; C-19 decimating both budgets and transit usage and fluxing up many of us; and the very long time frames for a full subway build-out - what Relief functions are possible, in the short term, and what might an intermediate Relief line with sub-regional focus look like? Shouldn't an EA actually maybe recognize that there are options to the two demands that are being lumped in to the one megaproject? Or is it generally part of the transit theatre/tragedy approach to have studies, some millions being spent, and bump it all down the years, again.

Too bad some of those multi-millions can't be used to bring in the APTA/UITP to review it all in a public fashion - that would be very good value I think for taxpayers/transit users and citizens/communities. The federal level really should be asking questions about the process of how things emerge given this vote a few years back, and I see this as voting to ignore facts for whim or something:

The EA process is even more compromised I suspect from changes of the Ford regime; it's really not analyzing options to basics, just a tinkering around the edges of the lines already drawn, and we're not getting debate/options on a few points like:

- milk run vs. sub-regional ie. Thorncliffe Park to near-core
- surface in Don Valley and tunnelling elsewhere with maybe bridges
- comparisons with GO Transit Richmond Hill line upgrades in progress it seems
- assessing what really is possible with relief of Danforth with Main/Danforth station integration and improved service
- merits of straight-line service in the old core vs. extra curve doodles to serve real estate interests, not just the province/Contario
- shallow, very shallow, surface, raised, are cut out for very deep regardless of extra costs of construction and operating eg. escalators
- NO assessment of how much concrete use in any of it, and thus climate harms and zero federal level worry about concrete use as well
- a lack of Intervenor/public-interest funding to enable communities to provide interpretation and at times needed resistance based on good expertise
- power imbalance/abuse by the province against City, already pretty feeble/carservative/stupid

If the copies of I think January 21 memo to MPPs etc is still around, my lines on map are still based on using the Don Valley up to the Thorncliffe area, and then to link to Don Mills and Gattineau Hydro corridor, somehow. Within that piece was a bit of info I was reminded of from the last Official Plan of Metro before the Harris Cons amalgamated us - that the province was to start an EA to straighten out the GO service to deliver GO trainloads to Eglinton/Don Mills - but that was never done, and that likely is a KEY part of where we should be going ie. providing both networks with a new and needed interface as well as having a N/S option beyond/east of Yonge.

So perhaps the federal level can ask about that EA? Or ask about straightening out the GO line to run down Don Mills underground even? to Eglinton/OSC parking lot? (And it could be a train storage spot as well)

And I'm favouring an entry point of Gerrard area for whatever arrives, and yes, sure, could be subway technology as we KNOW a subway technology can run openly, and it will save billion\$, if anyone's interested. (And too bad you don't get to bet your salary/wealth/houses on some of the estimates and numbers of cost/revenue/ridership eh?)

I REALLY NEED to upgrade/change this image, but have been pretty fluxed up of late, but Keeping It Simply Surface is the way to squeeze the billions and provide faster Relief for a few communities, including Scarborough.

And I'm now favouring Gerrard for an entry point due to Ryerson; multiple Hospital; walking distance to QP and UofT south side, OCAD and AGO, and also the badly placed new provincial court house, which may be the reason for the north doodle to Queen St., duh!

Doing something more expedited and a bit compromised doesn't mean we don't need a long good subway through the core, but it should be a straight line more aligned with King, and close to surface to be easily crossing over the Don as a bridge, somehow, though yup, we do tend to build our options shut, sigh. And then go east and NE to aim for Gatineau.

The core has a marvellous amount of transit coming in from GO Transit, thanks, and the King RoW is something as well. And with the Ontario Place inaccessibility, look at the 1992 WWLRT EA and think surface, including having a bit of surge capacity if that's the term - space between exit of an event and a transit facility.

And yes, GO does need a back-up and too bad we can't repurpose UPX from DUNDAS St. W. especially south and go E/W via Wellington, and then up the tracks up to Main/Danforth - and nope, not a new concept I'm sure of that, and my Ed Levy book is buried I think, for details.

So yup, a somewhat sad waste of time/monies this current effort is, though we do need improved transit and up to Eglinton.

I'm almost looking for paid work btw; wish there were finder's fees for the billions....

Carmudgeonly, which is easier in the core, and we need to boost transit ahead of car restrictions, duh!

Attachments: [image001.png](#)

Hi [REDACTED]

Thank you for your message, and your feedback on the Ontario Line. We regret the disturbance we caused by providing you with a property impact letter.

We will know more about precise environmental and community impacts as the project moves through further design stages, which will inform environmental studies. In the draft Environmental Conditions Report, you may have read some of the measures to reduce and manage impacts to residents and the environment, both during and after construction. As we learn more about the precise impacts to Hopedale, Minton Place and the Don Valley ravine, we will use these measures whenever and wherever necessary.

We know that residents of Hopedale Avenue have questions about the future look and feel of the line as well as their neighbourhoods, which is why we are sharing updates and seeking feedback throughout the development of the project. To enable this, we recently relaunched the Ontario Line [Metrolinx Engage webpage](#) where we're sharing regular project updates. We have had meetings with the Pape Area Concerned Citizens for Transit (PACCT), MPP Tabuns and Councillor Fletcher, and we will continue to hold meetings to keep citizens in Minton Place and Hopedale Avenue informed. Following health and safety guidelines, we will have opportunities for Minton Place and Hopedale residents to provide feedback and participate in virtual consultation events. We agree that public input is vital to the project and ask for your patience as we complete the necessary studies and investigations to support informed discussions with the community.

We look forward to staying connected,

Daryl Gonsalves

Subject: Ontario Line: Comments on the draft ECR

Importance: High

Dear Metrolinx leadership and Susan Lin – Manager, Property Team

We are writing to you to communicate our objection to the proposed Ontario Line, based on the lack of information and evidence provided in supporting your chosen path. In addition, we would like to urge you to reconsider your communication strategy in dealing with key stakeholders, namely the affected residents and business.

We are owners and residents of [REDACTED] located at the corner of Hopedale Avenue and Minton Place, where the future Ontario tunnel will meet and join a new bridge extending over the Don Valley Parkway. Previously, we lived at [REDACTED], 20 doors down from our current house, and also faced the Don Valley ravine. Every year on [REDACTED] we lose a bit of our backyard due to soil erosion. Given this phenomenon, we were extremely surprised to learn that the ravine is chosen as the main site connecting a tunnel to the bridge.

While we had our doubts about the technical feasibility of using these volatile ravines to join two major infrastructure installations, we gave you the benefit of the doubt and patiently waited for the environmental assessment only to receive a *Marketing Report* rather than an *Environmental Assessment*. In the Key Findings of the Natural Environment, an excerpt reads "There are no environmentally significant areas in either OLW or OLS". This is a very alarming finding and raises the question of whether some of these sites have been visited or examined by those conducting the assessment.

We have spent considerable time reviewing the details in your proposed plan and are disappointed to see such a vague report produced with very little useful information. A closer look at the identified Preliminary Potential Impacts & Mitigation Measures for Further Study, reveals only a series of vague suggestions such as "Site-specific mitigation measures for impacts to groundwater quantity" or, "Erosion and sediment control measures will be implemented." It is truly unfortunate to see one of our most important provincial agencies, tasked with improving the coordination and integration of all modes of transportation in the Greater Toronto and Hamilton Area, employ misinformation tactics and produce lengthy reports with very little substance and relevant information.

Lastly, we would like to urge Metrolinx to adopt a more considered and appropriate communication strategy when communicating with the affected stakeholders. It is inappropriate for a Metrolinx staff (Josh) to knock on our door at 8:20 pm and serve us with an expropriation letter the night before the proposed plan is made public. Your approach has unsettled our lives and added anxiety during an already difficult and trying time due to COVID-19 Pandemic.

We look forward to a more respectful and collaborative relationship, and finding the best possible way to meet the transportation needs of Torontonians and Ontarians.

Sincerely,

[REDACTED]

Thanks for your message, and your question regarding the Corktown station.

As we provide higher order transit service to the Corktown community, we are taking flood mitigation very seriously. If you have not read it yet, we provided a [downtown](#) segment update, which includes more information on the Corktown station. To learn more, you may be interested in the [soil and groundwater](#) study summary which is part of the draft Environmental Conditions Report.

Feel free to reach out with any further questions you have,

Hi [REDACTED]

Thank you for your message.

Your feedback has been shared with the project team. We use all the facts we have to update and improve evidence-based decisions about the project. Right now, initial design work on the Ontario Line is underway but not complete and we will update our plans through further design, as infrastructure requirements and project details are confirmed. If you have not already, consider signing up for our [online newsletter](#) to stay informed.

Feel free to reach out if you have further questions or feedback,

5 months ago

First point. Subway line stations are very, very expensive to build. The days of a \$40 million box cut station are so long, long, gone. If you want lots of subway line, then financially you need TO LOSE a lot of subway stations. Go trains go about 3 miles between stations, and the subway lines need to do about the same thing; to be faster from less stops, and to cost less. What are buses and streetcars for? To get you from stops every 2 blocks to your subway station !!!! There can't be a subway station every 1 half of a kilometer anymore or every two blocks ! Right ?

Lose the Flemington Park, stop at Thorncrest Village, O'Connor, Pape, interchange with GO Lakeshore East at (Queen ?), King and Yonge, maybe Bay St.? at King (Financial Capital of Canada, and home to herds and herds of hoofing office workers from Union Station),

St. Andrew (King and University), King and Spadina, King and Bathurst, and Exhibition GO. Drop all the other stations ! Only be above ground, maybe, for 2 bridge crossings of the Don Valley at Thorncliffe Park. Maybe; it might be better to stay down, and go under the Don River both times.

Second point. Why run on Queen St ??? Is it a bad habit from our past dreams ? City Hall pales in importance by far to the massive high rise skyscrapers at King and Bay !!! The previously dug out and formed station tunnel for a future Queen line under Osgoode Station hardly rates as an excuse. The King streetcar line is beyond packed, crawls as fast as you can walk oftentimes, and badly needs relief; the Queen line is hardly that stressed. Is there far more current activity, business, commerce, office buildings along King, or Queen? Queen is a run down has been street with goofy shops that often go broke and change names every couple of years. It's moribund. Go with the flow of where people want to be; It's King, not Queen. Now that's pretty obvious, and axiomatic, isn't it ?

Third point. Build it deep; extremely deep. EXTREMELY DEEP. Deep is cheap these days. Build it at least 150 to 200 feet below the surface; way, way below all utilities like sewers, wires, power lines, water mains, most underground rivers and aquifers, delicate building foundations, etc, etc. Remember; 'DEEP IS CHEAP' !! I don't care if it takes forever long elevators, and escalators to get down there. Have many, many more elevators of huge size. That'll cost megabucks, but I'm sure that it'll still be cheaper than moving sewer pipes and suspending them of hooks. Only the vertical tunnels to get to the surface would come near the ground, and that would be at only one of four usual street corners. The between lines interchange transfers would, like a mole, only break the surface as they meet the other rapid transit lines. At these stations, no new at surface constuctions would be built, but would only use the existing rapid transit facilities that already exist there. The only exceptions would be new street car loops that don't currently exist.

Fourth point. At Queen and the GO Lakeshore East line, all streetcars from Broadview, Carlton, Dundas, Queen, King, and Kingston Rd. would congeal together at a new massive streetcar loop, before going back on their ways to where they were heading. For example, Carlton cars would come down Broadview, then east on Queen into the loop, and then backtrack back up to Carlton to continue as before. A streetcar, subway, Lakeshore East and new Harbourfront line nexus in the ONE SPOT !!

Duplicate this goodness on the west side from Exhibition Go with minimal stops to to Dundas West and Bloor Go stations. Yummy !!

How about Queen and Dufferin, and then straight to Dundas West and Bloor exchange station rapido ?

Enough of my rant.

Hi [REDACTED]

Thanks for your message.

We have shared your noise and environmental concerns with the project team for consideration. In regards to your request, our team just had a meeting with the 1 Leaside Park Drive Condo Board, MPP Wynne and Councillor Robinson. Rest assured, we will be setting up more engagement opportunities for the Thorncliffe Park community, which will be promoted in our [e-newsletter](#). In addition, we look forward to sharing further information as environmental studies and procurement activities continue, including more details on plans to address community impacts and introduce robust mitigation strategies.

Subject: Ontario Line

Dear Madam,

I live at [REDACTED] at the corner of Millwood & Overlea Blvd. I wish to raise my concerns about the planned Ontario Line which will run on an elevated platform outside my window. The noise and environmental pollution will be unbearable. I ask you to please support an alternative, which

is to move the line one block west to connect to Banigan Dr which joins Thorncliffe Pk Dr West. Yes people would have to walk five minutes to the train but it is more fitting that fast speed trains, every 90 seconds, run through industrial areas rather than impact any residential areas. I also request that you have a community meeting with Metrolinx, Jaye Robinson and our condo board- reached at [REDACTED]

Thank you.

Hi [REDACTED]

Thank you for your message. We were able to confirm that the work you mentioned below is not related to the Ontario Line, but appreciate you bringing it to our attention.

Metrolinx has a number of measures we can take to reduce and manage impacts to residents and communities, both during and after construction. The [Draft Environmental Conditions Report](#) is the first step in our efforts to measure the impacts of noise and vibration and propose mitigations. It established a baseline against which anticipated impacts of construction and operation of the Ontario Line will be assessed. These assessments, along with recommendations for mitigations, will be included in the Environmental Impact Assessment reports which we expect to release in mid-2021, once the project moves through further design stages. We look forward to sharing further details as the project advances.

If you have any further questions, do not hesitate to reach out.

Sincerely,

Caitlin

There is a bulldozer drilling on Minton Place claiming it is road resurface work. Just so you are aware this activity is shaking my entire house and I am [REDACTED] removed from the Hopedale/Minton place intersection. Most of the homes in this area are 80+ years old so I want you to be very aware that we feel the effects of a small bulldozer, good luck with subway machinery. This has brought multiple people out of their homes today investigating vibrations they are feeling from MINOR road work.

[EXTERNAL]

Hi [REDACTED]

Thank you for your message, and question regarding property impact.

In terms of property impact on Hopedale Avenue, initial design work on the Ontario Line is underway but not complete. Final assessments of whether a property is needed or not will be identified through further design, as infrastructure requirements and project details are confirmed. That being said, Metrolinx has begun outreach to property owners to ensure they are aware of the project and the implications it may have on their property. Based on currently available information, your property is not directly impacted.

We will work collaboratively with our partners, residents on Hopedale Avenue and with affected property owners to ensure the lines of communications remain open and that those impacted are continually informed from planning and design through construction, as we move forward with the Ontario Line.

Feel free to reach out with any further questions,

Subject: Potential expropriation or impact to market value

Message: Good day, I have read the alignment release for the north section of the Ontario line and understand a few of my neighbours have been served "interest in property" notices. I live at [REDACTED] and would like to know A) Is there potential for full or partial expropriation of my property B) Will there be potential loss of market value or damage to my property C) what is the width and depth of this subway at the Minton Place/Hopedale crossing and will this subway be under my house? Although I can appreciate a need for more transit, this proposed route is destroying a beautiful community of homes. I have lived in the golden triangle for 20 years, a neighbourhood that has little turnover in properties- until now. I would appreciate some honest answers as we need to make some tough decisions for our family in what is already a challenging time. Thanks .

Subject: Rerouting!

I am fascinated to read that “there might be rerouting” of bus service currently servicing Pape.

Any thoughts as to which streets could be used for this purpose?

I do realize that you will know more in a couple of years. But I very much doubt if there will be much change in the roads by then.

Thanks for your message.

Because we are tunneling under Pape Avenue, current plans envision maintaining bus service along Pape Avenue throughout the duration of the project, though there might times when service is re-routed or reduced. We will know more in a couple years, once procurement and design has been sufficiently advanced.

Feel free to reach out should you have further questions,

Subject: Looking at Pape from Gerard to Danforth

Currently this area is served very well 24 hours a day by a bus route.

I have looked very carefully at the latest round of maps and writings.

It seems to me that there will be a station at the "Portal" at Gerard and then the next station is at the Danforth.

Am I missing something.

Eglinton Avenue East was served well with a number of buses before Metrolinx.Crosstown etc began work there.

Many of the bus stops have been moved/removed etc for years now, making it increasingly difficult for people who are trying to access the Eglinton buses.

What are your plans for Pape (both south and north) during construction.

Thankyou for your attention

Hi 

Thanks for your message which was also forwarded to us by Councillor Jaye Robinson.

We are continuing to refine our plans and appreciate your concerns about impacts to nearby residents in condo buildings or town homes. We will continue to work closely with communities to address any concerns and to ensure designs are sensitive and respectful of communities. You can find more information about health-related environmental conditions such as [noise and vibration](#), [air quality](#) and [traffic](#) impacts on the [Environment](#) page on our website. Studies of existing conditions have been completed and forthcoming studies will consider anticipated impacts as well propose measures to mitigate those impacts.

Our team also just had a meeting with the 1 Leaside Park Drive Condo Board, MPP Wynne and Councillor Robinson to discuss residents' concerns. Rest assured, we will be setting up more engagement opportunities for the Thorncliffe Park community, which will be promoted in our [e-newsletter](#). In addition, we look forward to sharing further information as environmental studies and procurement activities continue, including more details on plans to address community impacts and introduce robust mitigation strategies.

Nearest Ontario Line Station (Optional): Thorncliffe Park

Subject: Location of elevated Ontario Line at Overlea

Message:

I am very concerned about the location and suggested position of where the LRT will be crossing over from the Leaside Bridge to Overlea. The revised chart that you have made public will be crossing over extremely close to the condo building which I live in at [REDACTED]. There are quite a number of reasons for my concern and I would like you to immediately change the plan to a location slightly north of Millwood and Overlea.

My concerns are as follows:

1. HEALTH OF RESIDENTS: this cross over onto this corner of the street endangers the health of residents (especially in our 7 story condominium) as it would be detrimentally closer to our living space
noise and environmental pollution (impacting several residences - condos, townhomes; places of worship, seniors' home) à frequency of trains (every 90 seconds); vibration, privacy issues, physical and visual intrusion, lost air rights, safety, etc.

Living in a state of construction and traffic gridlock outside our front door for several years;

visual and physical intrusion - over valley, over small tree-lined residential boulevard

2. TRAFFIC GRIDLOCK: according to this new route, the elevated rail would cross two streets (both Millwood and Overlea Blvd.). Given that most of the line after the new Thorncliffe Station has been moved to run into the industrial area, why isn't the crossover reallocated to do the same? This is an equity issue for everyone living along Overlea Blvd.

3. ECONOMIC – PROPERTY VALUES: this will destroy property values in this segment and have a financial impact on businesses along route – (consider impact of the Eglinton LRT that has resulted in over 100 small stores closing and is taking over 11 years to build)

4. ENVIRONMENT + HERITAGE SIGN: This route would impact the appearance of the entry into Thorncliffe Park (the Heritage sign has been on that corner since the 1970s and signals the entry to the Thorncliffe community); it would destroy a

plethora of beautiful trees that form a canopy and block the current roadway, and be even closer to the adjacent Leaside Park (where hundreds of community members enjoy park space and sports games daily).

I would like you to move the Ontario Line one block west to connect to Banigan Drive which joins to Thorncliffe Park Drive. à This change would avoid impacting any residential properties, places of worship or businesses and would eliminate all of the issues noted above.

It would put the rail over ONE road (Millwood) rather than crossing two roads (both Millwood and Overlea),.

This ensures greater safety, and less disruption from construction, for all who live (and work) in this segment.

People would rather take a 5 minute walk to the train, than have all of these health impacts associated with a train in the middle of a residential community...let alone on a small boulevard.

It is more fitting that this major railway with fast speed trains every 90 seconds, run through industrial areas rather than impact any residential areas. There would still be easy access to the station at Thorncliffe Park Drive

Hi [REDACTED]

Thanks for reaching out to us and for your message about the Ontario Line.

Current plans have the Ontario Line crossing the valley on a new bridge, and turning at Overlea and Millwood to run along the north side of Overlea Boulevard. As the alignment is finalized, we look forward to sharing more detailed maps of this new bridge crossing with the community. If you have not yet, you can find more details in our [north segment update](#) on Metrolinx Engage. In regards to impacts to trees, we will work with contractors to preserve surrounding vegetation in areas where we are working. That being said, any removed trees will be compensated in accordance with Metrolinx's Vegetation Guideline protocol, which involves a landscape science-based approach to restoring greenspace that meets or exceeds bylaws and regulations. Further details will be shared in the forthcoming Environmental Impact Assessment Report.

We studied potentially running the Ontario Line under the Millwood/Leaside bridge but the costs outweighed the benefits. Our teams found doing that would mean slowing the trains significantly, reducing the overall benefits of a quick journey downtown and, in turn, creating more noise and vibration for residents due to the special track work needed for such tight curves.

Feel free to reach out should you have any further questions,

Subject: Draft ECR feedback

I am concerned about the north section from O'Connor Drive to Thorncliffe Park. I had trouble determining the exact route it would take but think it enters the ravine at Minto Place and goes through the Crothers Woods and Sewage Treatment Plant lands. This is a very sensitive wooded area and nice spot for nature walks. I imagine a lot of trees would have to be cut down. The Don Valley and Crothers Woods should be preserved as is. Could it be built attached to but under the Millwood Bridge?

Hello [REDACTED]

Thank you for reaching out to Metrolinx and apologies for the delay in our response. We understand and appreciate that the residents and owners at Minton Place and along the route have been keenly interested in receiving more detailed information about the impacts on their properties and neighbourhood.

Over the past several months, our technical team has been working to refine the plans and take them a step closer to constructability. While final design and property impacts have not been finalized, we did want residents and businesses that are likely to be impacted to be aware of the latest plans. Metrolinx does understand and acknowledge that the decision to have the portal at Minton Place, over other considered locations, includes impact to homeowners and residents in the area and the decision is not taken lightly. The route and its property implications have been selected and reviewed to balance a design that creates a more direct path for the trains while also minimizing property impact. The route includes fewer curves to ensure shorter travel times and also means less noise and vibration impacts for the line as a whole once constructed and in operation. These benefits would otherwise be reduced for area residents and future customers alike had we pursued aligning the portal closer to the existing Leaside Bridge. Though not easily apparent, as the depth of the tunnel needs to rise closer to the ground surface before crossing the valley, our design work indicates that a portal closer to the bridge would have thereby impacted more properties. We will get in contact with you again to discuss these details with you and your neighbours in the coming weeks.

The future use of land needed for construction of the Ontario Line is not yet determined but communities and municipalities will be consulted to identify benefits for the neighbourhood. While many properties required for the North contract won't be needed until 2024, it is likely that we will contact owners closer to the end of 2021 or beginning of 2022 to provide early notice and commence discussions in order to allow ample time for any negotiations or considerations. Regarding the projected timeline for construction, the Northern Civil, Stations and Tunnels Request for Qualification is anticipated to be issued in 2022, followed by major project construction beginning in your area in 2024. The final construction schedule will ultimately be developed by the consortiums who bid on the project.

Should you have any further questions or concerns, do not hesitate to reach out to us at OntarioLine@Metrolinx.com.

Sincerely,
Josh

Subject: Response to your letter of September 30, 2020

October 8, 2020

Ms. Susan Lin
Manager, Property Team
Metrolinx
20 Bay Street, Suite 600
Toronto, ON M5J 2W3

Dear Ms. Lin,

On Monday night, October 5th, a letter was hand-delivered to our door over your signature informing us that our property would be required to accommodate the Northern portion of the Ontario Line, specifically for the construction of the portal to the crossing of the Don Valley at Minton Place. This was not a complete surprise because of the initial 'line on a map' drawing of the possible route issued very early in the process. However, since that time we have been frustrated at the complete lack of meaningful communication from Metrolinx on this portion of the route. Furthermore, there was absolutely no consultation with those of us potentially significantly affected by this alignment previous to the receipt of this letter and the subsequent general release of information by Metrolinx on Tuesday.

We have several questions for Metrolinx that are of importance not only to the four households that will be displaced by this plan but also to the entire neighbourhood of Minton Place that will be adversely affected both during the construction phase and by the irretrievable damage to this closely knit neighbourhood.

1. The process of finalization of the alignment for crossing the Don River:

Let me begin by saying that we are not opposed to the construction of the Ontario Line and we do appreciate that disruptions will certainly be required in the process. However, we have not seen any evidence that Metrolinx has done due diligence in assessing alternate alignments for the Don Valley crossing. For example, an obvious alternative would have been carrying on with the tunnel up Pape Avenue to emerge into the valley beside the existing Leaside Bridge? Was this

even considered and if not, why not?

At the present time we have no assurance that the present alignment has been chosen because it is the most cost-effective and least disruptive. In fact, we have no indication that any other route was ever considered, even if it might be less expensive from an engineering point of view, as well as involving the least disruption of the neighbourhood by expropriation and construction. If Metrolinx could respond to this question in a transparent manner, preferably including engineering data and some comparative assessments of alternate routes, it would go a long way to reassure those of us who will be most severely affected.

2. We have no information on the plans that Metrolinx has for the large parcel of land to be expropriated once the portal has been completed. Will it be converted to parkland or will it be sold off to a property developer to build a large condominium with 'beautiful valley views'. If the latter is the case it will certainly affect the quality of the neighborhood for the residents that remain.

The value of the land parcel to a developer, especially in such a prime location, would likely exceed Metrolinx's expropriation costs, and there is a fear among current residents that such a potential profit scenario for Metrolinx may, in fact, be a significant consideration driving the Minton Place alignment. Again, it would be very helpful if Metrolinx could provide some clear information about their ultimate plans for the parcel of expropriated land.

3. Those of us who are under the threat of expropriation have many decisions to make about our future. However, it is difficult to even begin these considerations without a clear timeline from Metrolinx. We note that the Northern section of the Ontario Line will be the last to be built, and that already the completion date has been pushed back to around 2027. However, we know that such dates are aspirational only. Realistically, there will undoubtedly be further delays as a result of the complexities of construction of the earlier sections. Furthermore, the availability of the necessary financial support from both provincial and federal governments is clearly subject to some question.

We would therefore request as much information as possible from Metrolinx on the timeline for any expropriation process, the steps that must take place and the factors that would be considered in the determination of the expropriation value of the properties. We would trust that any such timeline would be based on realistic dates for the start and completion of the Northern section of the Ontario Line. It would be a real travesty for us if the expropriations happened too early and the land stood unused for several years or even was never used, such as was the case in Hamilton.

To date our experience with Metrolinx has not been very satisfying for us. We hope that your response to the above questions can set the stage for a better relationship. Note that this email will be followed up with a mailed hard copy.

Hi [REDACTED]

Thanks for your follow up message.

We will be working closely with the companies who are the successful bidder for the Northern Station, Civil and Tunnels contract to put safety measures in place before, during and after construction so that the conditions for workers and area residents are remain safe while we advance this important project. We'll have more information to share as construction plans are developed.

Case and point: [REDACTED] shows the Eglinton Crosstown LRT's Brentcliffe site where significant soil movement has occurred.

If the soil near Minton and Hopedale is unsuitable (and I'm fairly certain that it is, from living in the area) for the bridge and the tunnelling activities I think there is a real risk of something similar happening here.

■

On Wed, Oct 21, 2020 at 12:49 PM ■ wrote:

Hi,

I would also like to add that it would be nice to see what the costs would be for twinning the existing Millwood bridge. There are many other alignments that could be taken for the bridge whereby it could go through an existing corridor that would be less disruptive.

Another item I'm very concerned about is the soil stability in this area. As you know from taking the drilling samples, the area around Minton/Hopedale is mainly sandy soil. I think there is a significant risk to the houses in the area, and to the safety of the bridge itself because of this. Obviously I'm not an expert in the field, but I am concerned about the bridge moving, the tunnelling in the area causing soil movement in the area, and/or damage to the houses nearby by virtue of the tunneling and bridge work.

Though not easily apparent, as the depth of the tunnel needs to rise closer to the ground surface before crossing the valley, our design work indicates that a portal closer to the bridge would have thereby impacted more properties.

We will know more about precise environmental and community impacts as the project moves through further design stages, which will inform environmental studies. In the draft Environmental Conditions Report, you may have read some of the measures to reduce and manage impacts to residents and communities, both during and after construction. As we learn more about the precise impacts to Hopedale Avenue and Minton Place, we will share information with the public for input.

We know that residents of Hopedale and Minton Place have questions about the future look and feel of the line as well as their neighbourhoods, which is why we are sharing updates and seeking feedback throughout the early development stages of the project. We will continue to provide updates to Pape Area Concerned Citizens for Transit (PACCT), MPP Tabuns and Councillor Fletcher, and we will continue to hold meetings to keep citizens in the Minton Place and Hopedale Avenue neighbourhood informed. We agree that public input is vital to the project and ask for your patience as we complete the necessary studies and investigations to support informed discussions with the community.

Feel free to reach out with any further questions,

Subject: Comments on Ontario Line ECR

Hi,

I am a resident affected by the Ontario Line route and construction and I have had a chance to review the ECR and want to provide my feedback.

My primary concerns are as follows:

1) There is insufficient information in the report with which to gauge the impact of the line

It is self-evident that the actual impact of any project cannot be known without the details of what will be built. This information is not yet public and only sample area maps which are drafts "for illustrative purposes only" have been released for a portion of the route. Therefore, I request that more detailed information about the route, the route selection process, etc be provided so that everyone can discuss the selections of the route that were made.

2) There is no consideration or business case for burying the entire line.

It's very rich that Doug Ford insisted on burying the Eglinton LRT in his riding, when Eglinton is a 4-6 lane highway and ideal for an elevated section of an LRT. Meanwhile, the route of the Ontario line is not going to be tunnelled as it passes through dense residential neighbourhoods, past schools, and community centers.

It would be nice to know what the actual cost would be for the Ontario line project to be fully tunnelled.

3) Sound and Vibration

The sound and vibration analysis of the ECR does not specify any of the measures that are planning to be used during the construction of the Ontario Line. I would like to see specific, detailed reports that state where and what measures are going to be introduced during the construction and the operation of the Ontario line in order to monitor and minimize the impact of sound and vibration effects on nearby residents.

In terms of operational noise, the ECR notes that there are several strategies that may be used. However, since the train technology has not yet been selected there is no actual value in this statement.

I live specifically in the area of Minton and Hopedale Ave. I would like to know what

minimization strategies are going to be used including sound barriers. Specifically, I would like to see a plan and a commitment to the specific practices and technology that will be used in this area. Simply stating that (as shown on page 31 and Table 5-1 of the Noise and Vibration Conditions Report) there are technologies that *could* be used is not a commitment to what *actually* will be used.

4) Community Consultation

I would like to have a meaningful consultation about the construction that is to occur in the area of Minton and Hopedale. We would like to discuss:

- What exactly is going to be built in our community and when.
 - What specific noise and vibration mitigation technologies and changes are you implementing to avoid a major impact in terms of noise and vibration during the operation of the Ontario line?
- What can we expect during construction, and what commitments will Metrolinx make to reducing the impact on our community.
 - What specific noise and vibration monitoring will you be doing in the area?
 - What hours will the construction be conducted?
- What will be the configuration of the site once the tunnel and bridge are complete?
 - Will there be a park?
 - We want input on any changes to the street configuration if that is going to change.

I think that there is broad support in our community for transit construction. Obviously, Toronto needs this badly. The opposition that you are seeing is because you are doing a terrible job of consulting with the people who are going to be the most affected.

Thank you,

Hi [REDACTED]

We are continuing to refine our plans and appreciate your concerns about impacts to nearby residents in condo buildings or town homes. We will continue to work closely with communities to address any concerns and to ensure designs are respectful of communities in which they will be built. You can find more information about health-related environmental conditions such as [noise and vibration](#), [air quality](#) and [traffic](#) impacts on the [Environment](#) page on our website. Studies of existing conditions have been completed and forthcoming studies will consider anticipated impacts as well propose measures to mitigate those impacts.

Our team also just had a meeting with the 1 Leaside Park Drive Condo Board, MPP Wynne and Councillor Robinson to discuss residents' concerns. Rest assured, we will be setting up more engagement opportunities for the Thorncliffe Park community, which will be promoted in our [e-newsletter](#). In addition, we look forward to sharing further information as environmental studies and procurement activities continue, including more details on plans to address community impacts and introduce robust mitigation strategies.

If you have any further questions, do not hesitate to reach out.

Sincerely,

Caitlin Docherty

Subject: ONTARIO LINE: Avoid Overlea Blvd completely in the North Segment!

Hello Mr. Phil Verster,

My name is [REDACTED] and I am one of [REDACTED] residents living on Overlea Blvd at [REDACTED]. I have lived in my condominium since it was built (over 22 years ago) and have lived in Thorncliffe Park since the 1970s...I know my community well, and am very protective of it.

Your updated North Segment of the Ontario Line **specifically the crossover after the Leaside Bridge**

into the "Thornccliffe" portion is troublesome.

I am also voicing the concerns that several thousands of my neighbours share (both in my building and in the numerous residential areas, and businesses that front Overlea Blvd.).

Your current alignment of the Ontario Line in the North Segment now brings this major railway even closer to a seven story residential condominium (just meters from [REDACTED] as the updated sketch has the crossover happen on the South East corner of Overlea Boulevard, and Millwood Road (see Marker#1 on your updated visual).

This crossing is troublesome for many reasons including:

KEY ISSUES WITH CURRENT ALIGNMENT:

1. HEALTH + SAFETY: The crossover is currently on the corner and boulevard where there are several residential properties (especially [REDACTED]). In fact, the current route continues to negatively impact a seven story condominium, a town house complex, other condominiums near Overlea Blvd. and Thornccliffe Park, a senior's home, and several businesses on both sides of Overlea Blvd. In addition, there are numerous community organizations and numerous service providers including (the Salvation Army, Thornccliffe Neighbourhood Office, The Islamic Center, the Midwives Clinic, Food Banks, The Employment Training Center, March of Dimes, The Language Instruction for Newcomers). **All of who live and work along this segment of Overlea Blvd.**

The Health concerns for all involved who live and work here include:

- noise and environmental pollution (impacting several residences - condos, townhomes; places of worship, seniors' home, service providers) → especially with a frequency of trains (running every 90 seconds); vibration, privacy issues, physical and visual intrusion, lost air rights, safety, etc.
- Living in a state of construction and traffic gridlock outside our front door for several years;
- visual and physical intrusion - over the Don Valley, over a SMALL tree-lined residential boulevard

2. TRAFFIC GRIDLOCK: according to this updated route, the elevated rail would cross TWO streets (both Millwood Rd. and Overlea Blvd.). The traffic gridlock that this would bring is unbearable.

Given that most of the line *after* the new Thornccliffe Station has been moved to run into the industrial area, why isn't the crossover reallocated to do the same? This is an equity issue for everyone living AND working along Overlea Blvd.

- This construction chaos would also result in delays for **Emergency response calls** (of which we have many First Responders using Millwood and Overlea Blvd) to reach the Overlea and Thornccliffe areas.

3. ECONOMIC IMPACT – DESTRUCTION OF PROPERTY VALUES: this current alignment will undoubtedly destroy property values in this segment and have a financial impact on businesses along route – (consider the impact of the Eglinton LRT that has resulted in over 100 small stores closing and is taking over 11 years to build)

4. EQUITY: To add, an elevated rail running along ANY part of Overlea Blvd segregates and alienates the Overlea and Thornccliffe Community. Doug Ford, as a Toronto city councillor in 2012 led a push with his brother, then Mayor Rob Ford, to cast plans for above - ground transit in Scarborough as "second rate

and one that alienated suburban Scarborough". Doug Ford added in an interview that year... "The people have spoken loud and clear. Scarborough councillors, MPPs. Everyone in Scarborough wants underground (transit)... I listen to the taxpayers and I'm sure the premier (then Dalton McGuinty) will do the same."

→ **The people who live and work along this segment of Overlea Boulevard are speaking loud and clear in our community:** Why is it acceptable then to impose such a "second rate" plan on any other communities (such as the Overlea-Thorncliffe Park)? This is an **equity issue**.

5. ENVIRONMENT + HERITAGE SIGN: This route would impact the appearance of the entry into Thorncliffe Park (the Heritage sign has been on that corner since the 1970s and signals the entry to the Thorncliffe community); it would destroy the large cluster of beautiful trees that form a canopy and block the current roadway, and be even closer to the park space at Leaside Park (where hundreds of community members enjoy the green space daily).

PROPOSED ALTERNATIVES TO THIS ROUTE TO AVOID RESIDENTIAL IMPACT:

OPTION 1: Move the line completely underground.

→ Metrolinx has shared some potential "geographical issues", "cost" and added "time commitment" concerns on Metrolinx Engage online, but given the life-altering impact on all communities, this option must be considered.

OPTION 2: Move the Ontario Line one block west to connect over Millwood to **Banigan Drive** which joins to Thorncliffe Park Drive (and the current new station location). → This change would avoid impacting any **residential properties**, or community service providers and would eliminate many of the issues noted above. (See Aerial Attachment)

- Option #2 would **put the rail over ONE road** (Millwood) rather than crossing two roads (both Millwood and Overlea),.
- This ensures **greater safety, and less disruption** from construction, for all who live (and work) in this segment.
- Still easy access: People would rather take a 3-5 minute walk to the train, than have all of these health impacts associated with a train in the middle of a residential community...let alone on a small boulevard.
- It is more fitting that a major railway with fast speed trains every 90 seconds, run through industrial areas rather than impact *any* residential areas.
- There would still be easy access to the station at Thorncliffe Park Drive (west)

OPTION 3: MOST BENEFICIAL OPTION FOR THE OVERLEA -THORNCLIFFE COMMUNITY /IF THE LINE MUST RUN AT GRADE/OVER GRADE:

(See Aerial Attachment)

→ Move the alignment closer to the existing railway, running it along **Village Station Road** → Connect to **Pat Moore Drive** → Connect to **Thorncliffe Park** and **relocate the Thorncliffe**

Station EAST, closer to where you originally had it, on the corner of Thorncliffe Park Drive and Pat Moore Drive. (Please see attached aerial.)

ADDED BENEFITS TO THIS OPTION #3:

- This option would **avoid ALL negative community impacts** and ALL of the issues I have outlined...including to **all** residential properties, to **all** businesses, to **all** places of worship and to **all** community service providers...it is a win-win for all.
- **It would be more cost effective** as Metrolinx could run much of the line at grade level, AND have the space to do so.
- It would put the rail crossing over only **ONE road (Millwood)** rather than two...This saves Overlea Blvd from the destructive impact of construction and traffic gridlock for several years.
- **It is still easily accessible for the Thorncliffe community** (the walk is a short 3 minute walk – one block west)...This re-location of the station would arguably gain better ridership as there are more apartment bldgs. on the east side of Thorncliffe Park Drive and hence more commuters. To be clear, residents along the south side of Thorncliffe Pk. (eg. 65 Thorncliffe, 47 Thorncliffe Pk. Etc.) will opt to take a bus to Pape Station and pick up the Ontario Line there rather than walk 15 minutes to *anywhere* along Overlea Blvd. If you are truly serving the ridership, it will be the residents living and working along Overlea Blvd. who would want the line moved 1 block west (3 min walk) and avoid the chaos of construction and a railway.
- It is more **fitting that this major railway with fast speed trains, run through the northern industrial lands** rather than in dense communities....and it would connect more easily to the rest of the Ontario line as it leads to the Flemington stop.

This area of Overlea Blvd. is home to thousands of residents and workers. Please ensure that transit growth is responsible, equitable and as Metrolinx says: "completed in a way that not only serves local transit riders, but also fits into the communities they call home".

The harm caused by an above-ground rail on any part of Overlea Blvd. will be permanent, life altering, and felt for generations.

You will have much more buy in from the entire community that this rail is to serve. Please be responsible and think about the long term impact of this transit line, make the necessary changes to the current alignment. To some this is a project that you want to complete...to us, this is our HOME, WORK and LIVING space!

I look forward to hearing from you and how you will actively make changes to the current alignment in support our building and community along this segment of the Ontario Line.

Thank you,

Date: Wednesday, November 25, 2020 9:34:45 AM
Attachments: [image003.png](#)

Hi [REDACTED]

Thank you for your message which was also received by our CEO, Phil Verster. We appreciate you taking the time to email us your feedback as a long-time resident and want to take this opportunity to share some of the reasons why building above ground in your neighbourhood is a better option.

By building and operating above-ground in this area we can dramatically reduce community impacts, deliver long-needed improvements that shield residents and businesses from rail operations and improve the experience for customers.

Tunnelling and excavating is complex, time consuming and disruptive for the community. By running the line along the existing corridor, we limit the properties we need, cut construction impacts in half, and finish the work in shorter timeframes. By fitting the Ontario Line almost exactly within the footprint of the rail corridor we are able to ensure important community destinations, like Jimmie Simpson Recreation Centre, can remain in operation throughout construction and beyond. We will work continuously to limit the footprint of our work and where we do need to use park space to avoid impact to private properties, we will work with our contractors and the City of Toronto to restore the park space to its original state or better.

We know that any construction can be disruptive which is why we are also going to streamline Ontario Line construction with GO expansion work that was already planned along the rail corridor, reducing overall construction impacts to your community. Once constructed, effective and well-designed sound barriers, landscaping, and new trees and greenery will significantly reduce the sound and visibility of the corridor and the trains that will operate within it, better shielding neighbourhoods from all rail operations, including GO and VIA services. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor, as well as enhancing adjacent parks.

Surface stations also mean a better customer experience. Due to Toronto's geography, tunnelled stations would need to be as deep as 38m underground—approximately nine storeys—to be below the Don River. From there, a tunnel would have to maintain a similar depth to avoid major sewer mains. At Leslieville Station, it would take customers about four and a half minutes to get from the train to Queen Street East at an underground station. With surface stations, we are able to provide customers with a much better experience that is fully accessible, shielded from the elements, and provides an easy transfer to and from surface transit options in the area.

We are continuing to address the feedback we receive as we move forward with this important project. I hope this information is helpful and I want you to know that as we work through construction to operation and beyond, we are here for you and your neighbours. Please do not

hesitate to contact us if you have more questions.

Best,
Simon

Hi,

I am an 11-year Leslieville resident and mother of two young children. Please seriously (re)consider moving your tracks underground in our area. The devastation it would create in terms of noise and changing (even obliterating) our beloved parks (we live on [REDACTED] so right in between McCleary park and Jimmie Simpson) is really depressing and infuriating.

Thank you,

[REDACTED]

Hi [REDACTED]

Thanks for your message.

We have not yet selected contractors or suppliers for the Ontario Line project at this stage in the procurement process. In June, Metrolinx and Infrastructure Ontario issued the first two Requests for Qualifications for the Ontario Line. This is the first step in the process. Teams that possess the relevant experience and capacity to deliver each project will be shortlisted and invited to respond to a Request for Proposals this fall. More information is available on the [Procurement](#) section on our [website](#).

Feel free to reach out should you have any further questions,

Hi [REDACTED]

Thank you for your message.

We are in the process of conducting full and robust environmental assessments for the project which will include noise and vibration impact studies that will be shared with the community. We began with a report on the existing conditions which you can read about on our [noise and vibration](#) section of our website. Forthcoming reports will include details on anticipated impacts and proposed mitigations to address them. Metrolinx has a number of measures it can take to reduce and manage impacts to residents and communities, both during and after construction. Examples include fitting equipment with muffling devices, using equipment and methods that minimize vibration, and coordinating construction schedules so that noisy operations do not occur simultaneously.

If we anticipate that there will be impacts to your property on Pape Avenue, Metrolinx will contact you directly. We will work collaboratively with our partners, communities and with affected property owners to ensure the lines of communication remain open and that those impacted are continually informed from planning and design through construction, as we move forward with the Ontario Line.

You can stay updated on the project and timelines for the environmental reports by signing up for our newsletter on this [webpage](#).

Should you have further questions, we would be happy to speak with you by phone.

Sincerely,

Caitlin Docherty

Hello Ontario Line,

Submitted on Monday, October 26, 2020 - 11:35

Submitted by anonymous user: 184.147.52.122

Submitted values are:

Your name:

Your e-mail address:

Nearest Ontario Line Station (Optional): Cosburn

Subject: Tunnel under our home

Message: We live at [REDACTED] just south of Torrens Ave. I have seen the latest design that shows the tunnel going directly under our home. How will this change affect noise, vibrations etc both during tunneling and construction as well as when it goes live and trains are running? How will homeowners be protected in case there are damages to their home / property? Is there someone we could speak with about this and how it will impact us?

Hello [REDACTED]

Thank you for taking the time to speak with our colleague, Susan Lin, from the Metrolinx Property Team last week.

Susan shared your question regarding the possibility of development above the Pape station with us. The effects of the Ontario Line on surrounding and adjacent properties are being further investigated and the final alignment details will be determined through the successful bidder's package. The final design option that would allow future development above the alignment is still under investigation. Several scenarios will be discussed with owners before the expropriation process begins to outline opportunities and options relations to land uses and final land transfers.

Should you have any further questions or concerns, do not hesitate to reach out to us.

Thanks,
Gurjeet

Hi [REDACTED]

Thank you for your message and question regarding property impacts in your area.

Metrolinx is currently identifying which properties are required and will only be acquiring properties that are absolutely necessary to get transit built. During construction, we will use the existing parking area and work with local business owners to minimize the impacts of construction on commercial properties at this intersection.

We understand that residents and businesses will want specific details about impacts to their properties, and we will reach out individually to impacted property owners once we have a firm understanding of what's needed. We will also shared further information on our website as it is available.

Sincerely,
Caitlin

Hi [REDACTED]

Thank you for your follow up message.

You can find more information about [noise and vibration](#) impact studies on the [Environment](#) page on our website. Studies of existing conditions have been completed and forthcoming studies will consider anticipated impacts as well propose measures to mitigate those impacts. More information about existing noise and vibration conditions is available in the [draft Environmental Conditions Report](#) (ECR) under Section 3.4 starting on page 164. The draft ECR's [Appendix B3. Noise and Vibration Report](#) also examines these impacts in-depth.

The ECR will be followed by two future reports – the Early Works Report and Environmental Impact Assessment Report – that will identify the potential impacts and mitigations measures that Metrolinx will put in place during construction and operation of the Ontario Line. These reports will be shared starting this fall and continue through to 2022. If you have not already, please consider signing up for our [online newsletter](#) to stay informed on the project.

Do not hesitate to reach out if you have any further questions.

Sincerely,

Caitlin

Caitlan;

What does "work collaboratively with affected property owners" mean exactly? When will this report be made available and what will Metrolinx be doing for affected property owners?

I would appreciate refraining from meaningless Metrolinx platitudes as my property is directly affected by the OL. The line is scheduled to run 50 feet directly below my 100 year old building, where I'm sure the noise of boring, construction and a train every 90 seconds will be intolerable. "Should mean minimal noise", according to who, at what stage, and at what decibels? Complete nonsense.

I would appreciate facts and resources as they come available, I noted that on the urban Toronto site, the Corktown segment has been finalized. Yet, no one in our neighbourhood has been consulted or notified.

Best

[REDACTED]

On Fri, Oct 30, 2020 at 5:28 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thank you for your message and question about property impacts.

As we continue to advance the design, final assessments of the extent of any property impacts are being confirmed. Metrolinx will work collaboratively with our partners, communities and affected property owners to ensure the lines of communication remain open and that those impacted are continually informed, as we move forward with the Ontario Line. By shifting the Corktown station into the parking lot south of King Street, we are able to significantly reduce the impact to residents and traffic in the area. Although tunneling can be disruptive, the tunnels will be approximately 25 meters below Berkeley Street which reduces impacts to your and your neighbours during construction and should mean minimal noise and vibration at the surface once the Ontario Line is operational.

Further details on anticipated impacts and steps we will take, with our construction partners, to mitigate those impacts, will be detailed in the draft Environmental Impact Assessment Report which we expect to release in mid-2021.

Should you have any further questions, do not hesitate to reach out.

Sincerely,
Caitlin

Hi [REDACTED]

Thank you for your message.

You can find detailed information about the public engagement process for the Ontario Line under Section 7 in the [Draft Environmental Conditions Report](#) (ECR) from pages 387 to 398. Metrolinx has also detailed the feedback we received before its publication in the draft ECR's [Appendix C2. Engagement Summary Report](#).

During formal engagement periods that are part of the Environmental Assessment (EA) process, we document feedback and any actions we take as a result of that feedback in consultation summaries that are part of finalized EA reports. The formal engagement period for the draft ECR ended on October 17, 2020. We will include the feedback we received in the final report which we anticipate to release later this fall.

In addition to the formal engagement process for EA reports, we are always accepting feedback and responding to questions and concerns from residents via email, phone and our [Metrolinx Engage](#) website. Metrolinx Engage also includes a [public forum](#) where you can submit questions and our team will respond.

Should you have any further questions, do not hesitate to reach out.

Sincerely,

Caitlin

Message:

Where on your website do you report any of the concerns and opposition that you have received about the above-ground portion of this line? Reviewing your website on the Ontario Line, one would think that no concerns had been raised (which is not true). Not only have you failed to answer the concerns or explain why you have chosen this neighbourhood-destroying above-ground route, but you are suppressing any sign of opposition to your plans. Clearly we need a third party involved to do this assessment in order to have full transparency and to protect the public interest.

Can you please send me the link to the public feedback on the Environmental Assessment and your responses to the questions?

Thank you.

Hi [REDACTED]

Thank you for your message.

We are continuing to refine our plans and appreciate your concerns about impacts to nearby residents in condo buildings or town homes. We will continue to work closely with communities to address any concerns and to ensure designs are respectful of communities in which they will be built. You can find more information about health-related environmental conditions such as [noise and vibration](#), [air quality](#) and [traffic](#) impacts on the [Environment](#) page on our website. Studies of existing conditions have been completed and forthcoming studies will consider anticipated impacts as well propose measures to mitigate those impacts.

Our team also recently had a meeting with the 1 Leaside Park Drive Condo Board, MPP Wynne and Councillor Robinson to discuss residents' concerns. Rest assured, we will be setting up more engagement opportunities for the Thorncliffe Park community, which will be promoted in our [e-newsletter](#). In addition, we look forward to sharing further information as environmental studies and procurement activities continue, including more details on plans to address community impacts and introduce robust mitigation strategies.

If you have any further questions, do not hesitate to reach out.

Sincerely,

Caitlin

Subject: I am against the above ground metrolinx along overlea boulevard

Message: The proposed is ridiculous in my opinion. We have far too much traffic along her; We have great transit with buses. We have a whole leaside/ thorncliffe community of seniors and large families. It would be a huge personal safely risk. In addition there would be huge traffic gridlock, noise and environmental pollution another impact on long term construction and chaos and to our residents here on the north side in particular visual and physical intrusion. Move Ontario Line one block west to connect Bannigan joining Thorncliffe Drive instead.Economic and property values would be dramatically negatively affected. This is unnecessary. Thanks for listening to all of our residents here at [REDACTED]

Hi [REDACTED]

Thank you for taking the time to email us. We also received your message via MPP Wynne's office and Councillor Robinson's office.

We appreciate the questions and feedback we've been receiving from everyone at Leaside Park Terrace and Leaside Green, and we were glad to meet your board and several of your neighbours at a recent meeting with MPP Wynne and Councillor Robinson's staff. We're looking forward to many more meetings over the next several years, including in-person at our future community office in the East York Town Centre when public gatherings are safer.

We've shared the questions we've received about moving or burying the line with the project team for consideration, and we look forward to continuing to provide the community with updates as the project moves along. Part of the original rationale for putting the line aboveground in Thorncliffe was that the geography of the area would have required building the deepest station in Toronto's transit network, making for very long connections for passengers to buses at street level. This would also mean longer construction timelines and more significant impacts at the surface.

Noise, vibration, and visual impacts have been successfully mitigated at elevated transit lines in Singapore, Paris, and Vancouver, and our construction partners can draw on their expertise and make use of the latest technologies and techniques to create quieter, thinner, more attractive designs. You can read more about noise and vibration technologies in this [Metrolinx News post](#), and future environmental studies and reports will have more details about the steps we'll take to mitigate noise and vibration impacts. We'll also share renderings and images of potential designs for community feedback as plans come together over the next few years.

Thank you again for emailing. We know that the Ontario Line is a massive, complex project that will change all the neighbourhoods it touches. Community feedback is essential to the work we do, and we are grateful for your input. If you have not already, please consider signing up for our [e-newsletter](#) to stay updated on future public engagement opportunities. Please do not hesitate to reach out if you have further questions.

Sincerely,

Sivahami

Subject: Metrolinx: Ontario Line North Segment

re.: Metrolinx's Ontario Line Segment North

Franca DiGiovanni at Metrolinx,

When we purchased our condo at [REDACTED] over twenty years ago, we thought we had landed in paradise:
an unobstructed three hundred degree view of the magnificent valley framed by the city's skyline (see attached pdf. file), and accessible via one of Toronto's most beautiful avenue, the Overlea Boulevard.

We are continually awed at the sight of deers at our feet, the flight of red-tailed hawks and Canada geese by our window, the daily display of sunrises and sunsets, the storms brewing followed by a double rainbow. Lazing around on the balcony on a warm summer night before retiring to bed with the patio doors wide open.

From now on, the sights will be altered, the doors and windows permanently closed.

The proposed Ontario Line, is needed and welcome... The line of action however may require the need for more discussion.

Our city is growing at a monumental pace; we should look at this project with an eye towards the future, say 40 or 50 year from now when it will be necessary to tear it all down and relocate the system underground at a then astronomical cost.
Let's start the digging now.

The elevated system with unavoidable noise and disruption, as well as a visual assault in such a beautiful setting makes the proposed route totally unacceptable for a first class city and should not run by its citizens bedroom windows every 90 seconds.

(Montreal is constructing such elevated transit on the far west end of the island, but it is runs along busy Highway 40 in a fully industrial sector, impairing the view of the glass office buildings it obstructs... and remains an eyesore when driving by).

If above ground or elevated is absolutely imperative, a better route would be to follow Banigan Drive across Millwood Rd, away from our peaceful homes.

Thank you,

To: CEO (Metrolinx) <CEO@metrolinx.com>
Subject: Ontario Line - Proposed Route along Overlea Blvd.

Dear Phil Verster,

I am writing today in regards the Ontario Line proposed rapid transit line in Toronto. My name is [REDACTED] and I live at [REDACTED]. I have recently been advised that you currently working on a proposed rapid transit line that would run parallel to the Leaside (Millwood) Bridge and turn to run along Overlea Blvd on an elevated platform that will run directly in front on my building.

I was shocked and I am deeply concerned about this proposal for numerous reasons such as that fact that your proposal will essentially have a rail line located directly outside my [REDACTED] which faces Overlea Blvd.

Other major concerns that I have are

1. **Health of Residents:** This cross over onto this corner of the street (Overlea Blvd & Millwood) endangers the health of residents ([REDACTED]) as it would be detrimentally to our living space.
 - Noise Pollution – Impacting not only my residence but other condos, town homes, elementary schools, places of worship and seniors home due to the construction and also the frequency of the trains running once line is active.
 - Vibration, privacy issues, physical and visual intrusion, lost air rights and safety
 - Living in a state of construction and traffic gridlock outside of our front door for several years.
 - Visual and physical intrusion - over valley, over small tree-lined residential boulevard
2. **Traffic Gridlock:**
 - According to this new route, the elevated rail would cross two streets (Both Millwood and Overlea Blvd). Given that most of the line after the new Thorncliffe station has been moved to run into the industrial area, why isn't the crossover reallocated to do the same? This is an equity issue for everyone living along Overlea Blvd.
3. **Economic - Property Values.**
 - Negative impact on property values within my condo and surrounding areas, condo's, town homes and businesses.
 - Consider the impact the Eglinton LRT that has resulted in over 100 small stores closing and is taking over 11 years to build
4. **Environment and Heritage Sign:**
 - Pollution – from trains running in front of my home especially if elevated.

- Visual and physical intrusion – Being directly outside our building , over small residential boulevard and the graffiti that this will encourage
- Living in a state of construction outside my front door for several years
- Negative impact on the environment (building a second bridge over Don Valley)
- This route would impact the appearance of the entry to Thorncliffe Park (the Heritage sign has been on that corner since 1970's and signals the entry to the Thorncliffe community) it would destroy a plethora of beautiful trees that form a canopy and block the current roadway, and be even closer to the adjacent Leaside Park (where hundreds of community members enjoy park space and sports games daily)

Proposed Alternative to this route to avoid residential impact:

1. Move the Ontario Line one block west to connect to **Banigan Drive** which joins to Thorncliffe Park Drive - This change would avoid impacting any residential properties, places of worship or businesses and would eliminate all the issues noted above.
 - It would put the rail over one road (Millwood) rather than crossing two roads (both Millwood and Overlea)
 - This ensures greater safety, and less disruption from construction, for all who live (and work) in this segment.
 - People would rather take a 5-minute walk to the train, than have all these health impacts associated with a train in the middle of a residential community, let alone on a small boulevard.
 - It is more fitting that this major railway with fast speed trains every 90 seconds, run through industrial areas rather than impact any residential areas. There would still be easy access to the station at Thorncliffe park Drive.

OR

2. Move Line completely underground (Last resort but better than an elevated platform running around our home)
 - As a Toronto city councillor Doug Ford led a push with his brother, then Mayor Rob Ford, to cast plans for above-ground transit in Scarborough as "second rate" Why is it acceptable then to impose such a "second rate" plan on any other communities (Thorncliffe Park)? This is an equity issue.

I am deeply upset by this proposed line and the negative it will effect on all residences and businesses within this area along Overlea Blvd. I beg of you to reconsider this line and your current proposed route.

Hi [REDACTED]

Thank you for your follow up message.

Given the differences between the Relief Line South proposal and the current Ontario Line project, some of the property requirements identified in the Relief Line South Environmental Report will change. We are continuing to refine the exact alignment as more planning work is done as part of the Preliminary Design Business Case, which will in turn help us determine property requirements. Based on currently available information, it appears that there will be minimal subsurface impacts at [REDACTED]. Once designs are finalized and property impacts are confirmed, Metrolinx will contact you directly. We will work collaboratively with our partners, communities and with affected property owners to ensure the lines of communication remain open from planning and design through construction, as we move forward with the Ontario Line.

If you have any further questions, do not hesitate to reach out.

Sincerely,

Caitlin

Subject: Re: Property Expropriation - Queen Street West, Toronto

Good morning,

We would like to know if [REDACTED] west in Toronto will be Expropriated.

As I mentioned in my previous e-mail our family are owners of this property.

We were sent a letter few years back that this property was one of the properties in the plans for Expropriation.

Can you please provide us with information as far as this properties today ?
We have many questions from our tenants.
Thank you ,

[REDACTED]

Hi [REDACTED]

Thank you for your message and question regarding property impacts in the Queen Street West area.

Metrolinx is currently identifying which properties are required and will only be acquiring properties that are absolutely necessary to get transit built. Initial contact with property owners has begun on the alignment between Exhibition and Queen Street and Spadina Avenue. Final assessments of the exact extent of impacts will be identified through further design and planning work, as infrastructure

requirements and project details are confirmed. However, we are contacting property owners early in the process to ensure they are aware of the project and the potential for it to impact their property.

We understand that residents and businesses will want specific details about impacts to their properties, and we will reach out individually to impacted property owners once we have a firm understanding of what's needed. If you are a property owner and have a question about anticipated impacts to your property, please let us know. If you have not already, please consider signing up for our [online newsletter](#) to stay updated on the project.

If you have any further questions, do not hesitate to reach out.

Sincerely,

Caitlin

Subject: RE: Ontario Line vs. GO Corridor electrification plans
Date: Thursday, November 5, 2020 10:31:00 AM
Attachments: [image003.png](#)

Hi [REDACTED]

Thank you for your message and question about Ontario Line construction and GO electrification.

In areas where the Ontario Line aligns with sections of existing GO rail corridors, we are able to streamline our work with GO Expansion plans which helps avoid multiple disruptions in the same neighbourhoods. Construction is anticipated in 2021, when teams will break ground on integrated [early works](#) which will include existing bridge modifications and new Ontario Line bridges, rail corridor expansion, station work, and utility relocations for parts of the line shared by the GO rail corridor. You can find more information about the [projected timeline](#) for the Ontario Line project on our website and follow GO Expansion plans outside the joint corridor on their [web pages](#).

The details of construction impacts have not been finalized. Every effort will be taken to ensure that GO service and access is maintained. In the event of service disruption, alternative access and routes will be provided and displayed to the public in advance to ensure a seamless transition.

Feel free to reach out if you have any further questions.

Sincerely,

Caitlin

Subject: Ontario Line vs. GO Corridor electrification plans

Good evening,

I'm a student at U of T and am writing about the Ontario Line project. One area that I was unable to find details on was how the Ontario Line would impact the planning (and construction) of the GO Corridor electrification plans. Is it intended that the Ontario Line and GO electrification will be constructed concurrently?

Further, what type of impact to the rail Corridor are expected during the construction phase? Will the rail lines be shut down or limited at times?

Many thanks,

Subject: RE: VERY concerned Voter : Request Community Meeting re Ontario Line : Overlea Boulevard
Date: Friday, November 6, 2020 3:06:00 PM
Attachments: [image002.png](#)

Hi [REDACTED]

Thank you for taking the time to email us. We also received your message via MPP Wynne's office and Councillor Robinson's office. We appreciate the questions and feedback we've been receiving from everyone at Leaside Park Terrace and Leaside Green, and we were glad to meet your board and several of your neighbours at a recent meeting with MPP Wynne and Councillor Robinson's staff. We're looking forward to many more meetings over the next several years, including in-person at our future community office in the East York Town Centre when public gatherings are safer.

We've shared the questions we've received about moving or burying the line with the project team for consideration, and we look forward to continuing to provide the community with updates as the project moves along. Part of the original rationale for putting the line aboveground in Thorncliffe was that the geography of the area would have required building the deepest station in Toronto's transit network, making for very long connections for passengers to buses at street level. This would also mean longer construction timelines and more significant impacts at the surface.

Noise, vibration, and visual impacts have been successfully mitigated at elevated transit lines in Singapore, Paris, and Vancouver, and our construction partners can draw on their expertise and make use of the latest technologies and techniques to create quieter, thinner, more attractive designs. You can read more about noise and vibration technologies in this [Metrolinx News post](#), and future environmental studies and reports will have more details about the steps we'll take to mitigate noise and vibration impacts. We'll also share renderings and images of potential designs for community feedback as plans come together over the next few years.

Thank you again for emailing. We know that the Ontario Line is a massive, complex project that will change all the neighbourhoods it touches. Community feedback is essential to the work we do, and we are grateful for your input. If you have not already, please consider signing up for our [e-newsletter](#) to stay updated on future public engagement opportunities, and please do not hesitate to reach out if you have further questions.

Sincerely,

Sivahami

Subject: VERY concerned Voter : Request Community Meeting re Ontario Line : Overlea Boulevard

Good afternoon

I am a resident of [REDACTED] living in a Condo building that will be directly impacted by the Ontario Line that will go over Overlea Boulevard. As we have had no voice in this, I kindly request that you arrange a community meeting with our Condo board, Jaye Robinson,. I do not oppose the Ontario Line, however there are simple changes that would still provide its convenience to the population without the extreme disruption of the current location.

Here are some of the key concerns myself and us, as a community , have

HEALTH OF RESIDENTS: this cross over onto this corner of the street endangers the health of residents (especially in our 7 story condominium) as it would be detrimentally closer to our living space

- **noise and environmental pollution** (impacting several residences - condos, townhomes; places of worship, seniors' home) à frequency of trains (every 90 seconds); **vibration, privacy issues, physical and visual intrusion, lost air rights, safety**, etc.
- Living in a **state of construction and traffic gridlock** outside our front door for several years;
- **visual and physical intrusion** - over valley, over small tree-lined residential boulevard

TRAFFIC GRIDLOCK: according to this new route, **the elevated rail would cross two streets** (both Millwood and Overlea Blvd.). Given that most of the line after the new Thorncliffe Station has been moved to run into the industrial area, why isn't the crossover reallocated to do the same? This is an equity issue for everyone living along Overlea Blvd.

ECONOMIC – PROPERTY VALUES: this will destroy property values in this segment and have a **financial impact on businesses** along route – (consider impact of the Eglinton LRT that has resulted in over 100 small stores closing and is taking over 11 years to build)

ENVIRONMENT + HERITAGE SIGN: This route would impact the appearance of the entry into Thorncliffe Park (the Heritage sign has been on that corner since the 1970s and signals the entry to the Thorncliffe community); it would destroy a plethora of beautiful trees that form a canopy and block the current roadway, and be even closer to the adjacent Leaside Park (where hundreds of community members enjoy park space and sports games daily).

PROPOSED ALTERNATIVES TO THIS ROUTE TO AVOID RESIDENTIAL IMPACT:

1. **Move the Ontario Line one block west to connect to Banigan Drive which joins to Thorncliffe Park Drive.** This change would avoid impacting any residential properties, places of worship or businesses and would eliminate all of the issues noted above. |

- It would **put the rail over ONE road** (Millwood) rather than crossing two roads (both Millwood and Overlea),.
- This ensures **greater safety, and less disruption** from construction, for all who live (and work) in this segment.
- People would rather take a 5 minute walk to the train, than have all of these health impacts associated with a train in the middle of a residential community...let alone on a small boulevard.
- It is more fitting that this major railway with fast speed trains every 90 seconds, run through industrial areas rather than impact *any* residential areas. There would still be easy access to the station at Thorncliffe Park Drive

OR

2. **Move line completely underground.** (*Last resort but better than an elevated platform running around of our home.*)

- As a Toronto city councillor Doug Ford led a push with his brother, then Mayor Rob Ford, to cast plans for above-ground transit in Scarborough as "second rate." Why is it acceptable then to impose such a "second rate" plan on any other communities (Thorncliffe Park)? This is an **equity issue**.

Please let me know what your intentions are.... All Toronto residents affected have a right to their voice!

Regards

Submitted values are:

Your name:

Your e-mail address:

Nearest Ontario Line Station (Optional): Exhibition

Subject: Midtown GO Train connection

Message:

Once the Midtown GO Train project comes into focus in the coming decades, after the other projects are complete, there could be a "Don Mills" GO Station located near the Science Centre Stations for Line 1 and the Ontario Line. It would become a major transit hub, especially for commuters from the east (maybe even Peterborough and someplace called Scarborough).

Provision should be made for such a transit hub at Don Mills Road between Wynford Drive and the railway right-of-way.

Hi,

I am wondering if I can get an update on the “do not anticipate impacts “ as I understand a decision has been made to build the subway (elevated way?) platform on the west side on the existing Go platform. I live on the west side.

I don't feel continually informed. I would have thought there would have been community conversation before these decisions.

Subject: Expropriations on elevated portion of Ontario Line

Dear Metrolinx,

A representative of yours managing the twitter account (fs) indicates there will be expropriations of homes along the elevated portion of the Ontario Line. I also understand from some of your promotional material that construction will be starting soon. The representative also is indicating that you are presently identifying properties.

I love my home and wish to understand the risk of expropriation before I decide to invest further in it.

Is there a way to understand the risk for my address (or any other address for that matter)?

Hi [REDACTED]

Thank you for reaching out and sharing your feedback about the Ontario Line route between Thorncliffe Park and Flemingdon Park stations.

Our teams considered running the line along Overlea Boulevard in this area and studied this as a potential route, as you may have seen in the area maps under the [north segment neighbourhood update](#) on our website. However, our teams ultimately decided to adjust the route through Thorncliffe Park and Flemingdon Park and run the line along the hydro corridor based on feedback from residents and to avoid potential impacts to several important properties, including Valley Park Middle School and the adjoining cricket pitch.

However, we understand how important it is to preserve green space in the communities where we are building. Metrolinx will work with its contractors to preserve surrounding vegetation in areas where we are building. For example, removed trees will be compensated in accordance with [Metrolinx's Vegetation Guideline](#), which provides a landscape science-based approach that exceeds the requirements of applicable bylaws and regulations.

If you have any further questions, do not hesitate to reach out.

Sincerely,

Caitlin

Submitted values are:

Your name:

Your e-mail address:

Nearest Ontario Line Station (Optional): Thorncliffe Park

Subject: Please reconsider the Thorncliffe Park to Flemingdon Park route

Message:

Thank you for your work on the Ontario Line. I recognize that planners have to consider many factors in routing a transit line: cost, community impact, efficiency, etc. - and I recognize that there's no solution that satisfies everyone.

That said, please reconsider routing the Ontario Line between Thorncliffe Park to Flemingdon Park through green space (even if it is a Hydro corridor). Toronto has very little green space, and routing the line this way reduces the value of this space. Moreover, there already is a wide ROW on Overlea that could be used, and impacts to existing houses of worship and businesses can be managed. Also, routing the line along the street keeps all transportation uses in a single area, and opens up the option of an additional station closer to where people already live/buy/worship.

Thank you - [REDACTED]

Hello,

I live in Riverside the neighbourhood that will have the proposed Leslieville station.

The proposed station will be located at Queen and Degrassi street within the Riverside BIA boundaries and not Leslieville.

I feel the name for the proposed station should be named Riverside Station. I've attached a map of the Riverside BIA boundaries showing Queen and Degrassi street is within Riverside.

Even though I'm opposed to the above ground station I feel that the name of the station should be named Riverside.

Thanks,

Hi [REDACTED]

I apologize as I did not get a chance to review the specific details of the Transit Corridor Lands letter until after our meeting on Monday.

That said, I am happy to discuss what this means with you and I appreciate you reaching out. The language going on your property title is purely for informational purposes only. This is very similar to residential properties located in subdivisions or properties near an airport. You will still be able to sell, lease or rent your property. This language will be removed from your property title once the Ontario Line opens.

What this all means is if you are planning to build, change or place a building, other structure or road on or under your property, a (no cost) permit from Metrolinx may be required in addition to (and prior to) any necessary municipal permits. The same applies to excavation and water drainage work. **This letter is not a letter of expropriation** nor does it necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. You can look up your property [here](#) to see where it sits within the transit corridor lands and buffer area, which are together labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in **blue**. I attached a picture of the area around your home so it is easier to visualize.

Like I mentioned previously, we will answer questions about the transit corridor lands at our upcoming virtual open house on June 24 at 6:30pm. You can sign up for the virtual open house [here](#). Happy to answer any additional questions,

Daryl,

We connected via Zoom on Monday and I just received a notice that Metrolinx will be placing a note on my property title indicating that the land is within transit corridor land. It's unbelievable that you didn't mention this on our call, especially as I was discussing my concerns about this project affecting property values in the area. Could you please explain how this is not just another form of expropriation? I am very concerned with how Metrolinx is approaching engagement with the community.

Thanks,
[REDACTED]

On May 25, 2021, at 6:39 PM, Ontario Line <ontarioline@metrolinx.com> wrote:

H [REDACTED]

Thanks for reaching out again. In our previous correspondence, I offered to chat over the phone so we can have a better conversation. That offer is still there if you would like to take it. Once restrictions lift and it is safe to do so, I look forward to meeting with you to continue the conversation.

An initial cost assessment was completed and the additional cost of an underground approach will exceed \$800 million due to the requirement for deep underground stations. In addition, Metrolinx updated City Council that the average costs per kilometre for the Ontario Line was \$0.6 - 0.7 billion compared to the tunneled Relief Line South of \$0.8 – 1.0 billion. That being said, cost is just one factor because going underground does not mean no impact. Our initial analysis revealed tunneling would delay completion between 15 and 24 months – adding to the length of time the neighbourhood would be disrupted by construction. Due to the requirement for a tunnel portal, numerous homes along McGee and Saulter Streets would be required, including the popular Saulter Street Brewery. In addition, there are technical challenges that make an underground route unfeasible such as a tunnel slope that exceeds vehicle limitations and multiple interferences with critical sewer infrastructure.

To give you a better understanding of how current Ontario Line plans were developed, Metrolinx used a robust [business case process](#) where planners balanced considerations including:

- How many people could be served,
- How much travel time could be saved
- How many connections could be made to other major rapid transit lines
- How quickly and effectively the line could be built to bring relief faster to the

network

- How effectively any local impacts could be managed, and
- How to ensure maximum transit benefits within the approved budget

Like everything, there are pros and cons no matter which option you choose – but we only choose options that we know will offer maximum benefits with the least amount of impact to the community. We understand that building transit through Toronto will require difficult decisions and disruption but we are committed to doing everything we can to minimize those impacts. [Our latest article](#) shares that the noise barriers which are part of our Ontario Line plans will result in daytime and nighttime noise levels being lower than they currently are at many locations around Riverside and Leslieville.

In a previous email you mentioned your concerns about park land and green space. As we previously discussed, Ontario Line plans will stay primarily within the existing rail corridor. We won't be impacting space that isn't absolutely needed to get transit built and we're taking extra care to avoid temporary impacts wherever we can. The Jimmie Simpson Recreation Centre, basketball court and hockey rink will not be affected, and all the other neighbourhood parks and playgrounds will still be there once the project is complete.

Please let me know if you would like to chat further on the phone,

Metrolinx,

Could you please finally provide a detailed breakdown of the cost comparisons of an above ground option through Riverside as compared to an underground option, which takes into account the ongoing costs of operating both? I've asked this question several

times to this group and haven't received a sufficient response. I feel like my only recourse is to submit a complaint to the Ombudsman if I do not hear back.

Many thanks,

On Mar 26, 2021, at 2:44 PM,

Josh and Simon,

Could you please elaborate on Metrolinx's recent decision to realign the portion of the OL that cuts through our community such that there will be two tracks on the western portion of the corridor? Why was there no consultation with the community on this decision? How does this tie out with your promise that the OL will fit entirely within the current footprint of the corridor?

Truthfully, I am very concerned with Metrolinx's decision making process with respect to this project. As a resident that lives within 25 meters of the corridor, I am very concerned with the impacts to the health and safety of our community. Metrolinx has done nothing to address these concerns so far. And this is very disappointing.

I would request a meeting with you and your team as soon as possible to try to understand the impacts on our community.

Many thanks,

On Feb 19, 2021, at 5:21 PM,

Hi Simon,

I'm following up after another week of not hearing back from Metrolinx. Would you kindly ensure that my concerns are responded to in a timely manner?

Many thanks,

[REDACTED]

On Feb 12, 2021, at 4:41 PM,

Hi Simon,

I have not yet received a response from you.
Are you planning on responding, or is there
another email that I should reach out to?

Thanks,

[REDACTED]

On Feb 7, 2021, at 12:25 AM,

Hi Simon,

My obvious concern with this
response is that Metrolinx
appears to have decided on an
above ground option between the
Don River and Gerrard (the
"Affected Area") without
adequate consultation with the
neighbourhoods affected, or
adequately considering any
relevant factors, other than the
perceived "\$800 million cost-
savings". This is exactly why
Metrolinx needs to publish a
detailed estimate for an
underground alignment in the
Affected Area - in order to give

the public an understanding of what is driving Metrolinx's decision in this regard. In particular, Metrolinx needs to consider the following factors in such estimate:

- Whether OL capacity can be increased by using an underground option in the Affected Area;
- What non-financial costs will be payable by the residents and businesses in the Affected Areas in connection with an above-ground alignment; namely, with respect to the health and safety of individuals in close proximity to the above-ground alignment?
- What are the expropriation costs payable by the Ontario government, and are those costs significant enough to impact the perceived \$800 million cost-savings for an above-ground option?
- Are there increased maintenance costs associated with an above-ground option on the rolling stock? Are those costs significant enough to impact the perceived \$800 million cost-savings for an above-ground option?
- What value does Metrolinx place on the parkland that it is proposing to destroy in connection with the above-ground option? Are those costs significant enough to impact the perceived \$800

million cost-savings for an
above-ground option?

It is extremely unfortunate that Metrolinx's only justification for an above-ground alignment through the Affected Area is to achieve a perceived cost-savings of \$800 million, especially when, by your own admission, there has been no detailed estimate for an underground alignment in the Affected Area. How can a decision of this magnitude be made without Metrolinx considering all of the relevant factors, in accordance with its governing statute?

Many thanks,
[REDACTED]

wrote:

Hi

My name is Simon and I am the station specialist for the Leslieville and Gerrard Stations. Thank you for your follow up questions.

A detailed estimate of the costs of an underground alignment for the portion of the Ontario Line from East Harbour to Gerrard has not been completed given the technical challenges that make this route infeasible, including a tunnel slope that exceeds vehicle limitations

and multiple interferences with sewer infrastructure. However, Metrolinx worked with the city's Transit Expansion Office, to provide an update to city council on this issue, noting that average costs per kilometre for the Ontario Line was \$.6 - .7 billion compared to the Relief Line South of \$.8 – 1.0 billion. You can find more detail on page 10 of the city's [Fourth Quarter 2020 Update on Metrolinx Transit Expansion Projects](#).

Released on December 17, 2020, the [Preliminary Design Business Case](#) confirmed the rationale and benefits of the Ontario Line's alignment, including the at-grade portion within the joint corridor. Forthcoming environmental reports will provide more details about anticipated impacts on the environment and community and how they will be mitigated through construction and into operation.

We look forward to sharing more details about the project in the coming months. In the meantime, please don't hesitate to contact us or let us know if you're interested in setting up a call with our team for

more information.

Best,

SIMON GRANAT

Subject: Re: Ontario Line - Cost
Comparisons

Hi Josh,

Following up on the below, I understand that the City has asked Metrolinx to provide an underground costing and Metrolinx has failed to provide such costing in time for this week's executive meeting. Could you please clarify what has caused this delay? As a reminder, myself and many others have asked for this to be done for many months and

nothing sufficient has been provided to date.

I would appreciate if Metrolinx could be more transparent about their own calculations and rationale for favouring an above ground option. How can we ask our federal politicians to fund this project when your agency has not been transparent about the true costs of this capital project?

Many thanks,

wrote:

Hi [REDACTED]

Thank you for your email about the Ontario Line. We know your neighbourhood is important to you – it's important to us too! We will be bringing forward a comparison of the impacts and benefits of various construction approaches for public discussion but in the interim we appreciate the opportunity to share some of the

thinking behind
the decision to
use the existing
rail corridor.

A tunneled
approach is
complex, time-
consuming and
disruptive due to
the amount of
excavation that is
required. In areas
where there are
practical
alternatives, such
as an already
Metrolinx-owned
right of way, we
can drastically cut
down on
construction
impacts to
communities and
finish the work in
shorter
timeframes. It also
allows us to
significantly
reduce the
amount of
property we need
to accommodate
near-term
construction and
long-term
operations, not to
mention avoiding
considerable
impacts to local
traffic and
businesses when
you consider the
major excavations
and adjoining

construction
laydown areas
that would have
been needed to
build stations as
well as the
emergency exit
buildings under
the Downtown
Relief Line South
plans.

We will be
coordinating
previously
announced GO
expansion work
with Ontario Line
construction to
avoid multiple
disruptions in your
community while
still containing our
work to the
existing rail
corridor – staying
almost entirely
within its current
footprint. The new
Ontario Line
tracks will be a
continuous rail
design with no
joints, supported
by rubber bases.
The trains will be
automated, which
means less noise
and vibration
when trains come
to a stop.

To better shield
communities
living alongside

the joint rail corridor from all rail operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor. We will provide the details from this analysis in upcoming environmental reports.

Transit operators here and around the world are successfully operating different types of

rail service side-by-side, including Scarborough Rapid Transit and Stouffville GO train operations between Kennedy and Ellesmere roads, the Calgary South LRT which runs alongside CP rail for a portion, and the Ringbahn line of Berlin's S-Bahn which operates next to German Federal Railways operations for its entirety.

This has an added benefit for customers. At the proposed location of the new station at East Harbour, the Ontario Line would have to be buried more than 38 metres or nine stories underground to be below the Don River. From here, a tunnel would have had to maintain a similar depth all the way to the station at Gerrard and Carlaw to avoid major sewer mains in that area. Stations built this

deep
underground
would have
required
approximately
three separate,
very long
escalators to
reach the
platforms.
Together, these
would have made
it four and a half
minutes longer for
customers to get
to and from the
platform level at
every station in
the area, including
the station at
Queen Street in
Leslieville.
Bringing these
stations above
ground avoids
those long
connection times
while providing
customers with a
fully accessible
experience that is
shielded from the
elements and
encourages more
transfers from the
crowded streetcar
network and from
GO services.

I hope this
provides some
additional context
to show how
Metrolinx
considers benefits

and impacts rather than a purely financial perspective. However, in terms of costs for the Don Yard to the Gerrard portals portion of the Ontario Line, the rail systems costs are similar whether the alignment is above or below ground, but the estimated cost of tunneling is \$330M. The biggest cost benefit comes from not having to build three stations (at East Harbour, Leslieville and Gerrard) deep underground, which means a further cost benefit of \$700M is realized.

By building and operating above-ground in this area, we will dramatically reduce community impacts, improve the customer experience and deliver long-needed

improvements
that shield
residents and
businesses from
rail operations.
We will continue
to share more
information as
design of the
Ontario Line
advances and look
forward to
engaging with the
community to
understand and
address their
concerns.

I hope this
information is
helpful. If a follow-
up discussion with
members of our
team would be
useful, please let
me know and we
can set something
up.

Sincerely,

Josh Vandezande
Senior Manager,

Subject: Ontario
Line - Cost
Comparisons

On September 30, 2020, I understand that the Toronto city council passed a motion directing the City Manager to report to the November 18, 2020 meeting of the Executive Committee regarding, among other things, a price comparison on constructing the Ontario Line above ground versus below ground from Don River and Gerrard. Assuming that Metrolinx is

working on these cost comparisons to assist the City Manager in this reporting obligation, is Metrolinx in a position to share those comparisons to the public at this point?

As residents of Riverside, one of the most densely populated residential neighbourhoods in Canada, my family and I are deeply concerned about the increased presence of above-ground heavy rail along the Lakeshore East Go Corridor. For this reason, I would like to better understand the cost-benefit analysis that is driving the decision to elevate the Ontario Line through our neighbourhood.

Please note that my expectation is that Metrolinx will provide a

much more detailed analysis regarding cost comparisons than what was contained in the initial business case (more specifically, Table 31 therein). I have reviewed those comparisons and have found them very unhelpful as they do not provide enough meaningful information to help me understand the Government of Ontario's proposal to elevate the Ontario Line through this portion.

I appreciate your timely response.

Hi [REDACTED]

Thank you for taking the time to reach out to us again. We also received your message below via MPP Wynne's office and Councillor Robinson's office.

We appreciate the questions and feedback we've been receiving from everyone at Leaside Park Terrace and Leaside Green, and we were glad to meet your board and several of your neighbours at a recent meeting with MPP Wynne and Councillor Robinson's staff. We're looking forward to many more meetings over the next several years, including in-person at our future community office in the East York Town Centre when public gatherings are safer. We've also shared the questions we've received about moving the line with the project team for consideration. We will continue to provide the community with updates as the project moves along.

Noise, vibration, and visual impacts have been successfully mitigated at elevated transit lines in Singapore, Paris, and Vancouver. You can read more about noise and vibration technologies in this [Metrolinx News post](#). Future environmental studies and reports will have more details about the steps we'll take to mitigate noise and vibration impacts. We'll also share renderings and images of potential designs for community feedback as plans come together over the next few years.

Thank you again for emailing and staying in touch. We know that the Ontario Line is a massive, complex project that will change all the neighbourhoods it touches. Community feedback is essential to the work we do, and we are grateful for your input. Please do not hesitate to reach out if you have further questions.

Sincerely,

Caitlin

Subject: Metrolinx- Overlea Blvd/Thornccliffe Park

I am an owner of a condo at [REDACTED] and am really concerned and disappointed about the new Ontario Line plans which plan on building the above ground portion right outside our condo building. This crossover onto the corner of our street will seriously endanger the health of our residents, as it is detrimentally close to our living room and bedroom areas. For those of us that face right onto Overlea Blvd the vibration, privacy issues, physical and visual intrusion, air quality etc. would be unbearable -especially for many elderly owners.

There appears to have been no consideration made for any of us that will be greatly impacted by this new development which will literally be right outside. Imagine sitting on your balcony and having trains go by every 90 seconds. Also our property values will drop tremendously which will greatly impact everyone during these hard times - especially senior residents in the building who plan on using the proceeds of this condo to fund any future nursing home expenses.

I have attached a report that was written by a resident in our building and I encourage you to review this and seriously consider the suggestion of moving this line one block west to connect over Millwood to Banian Drive.

Regards

Message:

Hi Metrolinx

My name is [REDACTED] I am a potential buyer for [REDACTED] which will be directly south of the new platform at the Ontario Line Leslieville Station. I am trying to find some information of the construction impacts of the above ground platform addition + potential new rail (from what I understand) in terms of noise, dust, vibration etc, and also what that timeline looks like. According to the project timeline the major construction will begin in Summer 2023, but I'd like to know more info of the construction timeline after start date. I am an architect, so I am familiar with construction terminology and can happily speak to an engineer if required.

Please give me a call at [REDACTED]

Thank you!

Hi Vanessa -

Our son plays in the back yard every day. As he is not yet two, he can be counted on to touch everything he sees.

We ask that you please respect this safe area.

I understand that it may well be permitted under the Survey Act, but sending staff on to peoples property at this time seems counter to public health guidelines with Toronto being in the Red - Control category.

Moreover, it makes our family uncomfortable.

I would like to respectfully request again that no one come on to our property at this time.

Thanks,
[REDACTED]

Your Message

Dear Ms. Wynne:

Just over 15 years ago, I purchased a condo at [REDACTED] The unit was thoughtfully chosen for a number of reasons, not the least of which was/is the lovely view I have of the Toronto Skyline and the trees of the Don Valley. When purchasing the condo, on the Millwood side of the building, I reasoned that it would be virtually impossible for any developer to ever obstruct that awesome view.

And now...the proposed Ontario Line...nothing short of heart-breaking for all of the owners at [REDACTED]

[REDACTED] In a few years, trains will be rumbling by my unit, kitty corner at Millwood and Overlea Boulevard, less than 250 feet from my balcony and floor to ceiling condo window. It is virtually impossible to grasp that this could actually happen, and I keep asking myself if those designing the line would want the same eye sore, noise and intrusion on their own homes.

I am currently single, 68 years of age, counting on the, up to now, steadily increasing value of my condo as an investment when/if needed for my future care.

The line itself will be unattractive and obstructive, but directing it kitty corner so close to our building is quite honestly unbelievable and seemingly done with no regard for the condo owners at

If I was younger and able to financially manage a new mortgage, I would move immediately. But, at my age, I do not have the financial resources to do so. Now, not only will the comfort and enjoyment of my home be compromised, the re-sale value will be less and my financial plan for my later years kyboshed! Ms. Wynne, I think I have to reluctantly accept that the Ontario Line is a "given", but if there is anything at all that you could do to impact the design of the rail, I for one, and may others, would be most appreciative. Thank you.

With every good wish,

[REDACTED]

Dear [REDACTED]

Thank you for taking the time to email us. We appreciate what this community means to you as a long-time resident. We also received your message via MPP Wynne's office and Councillor Robinson's office.

We value the questions and feedback we've been receiving from everyone at Leaside Park Terrace and Leaside Green, and we were glad to meet your board and several of your neighbours at a recent meeting with MPP Wynne and Councillor Robinson's staff. We're looking forward to many more meetings as the project advances, including in-person at our future community office in the East York Town Centre when public gatherings are safer.

We've shared the questions we've received about moving or burying the line with the project team for consideration. Part of the original rationale for putting the line above ground in Thorncliffe was that the geography of the area would have required building the deepest station in Toronto's transit network, making for very long connections for passengers to buses at street level. This would also mean longer construction timelines and more significant impacts at the surface.

Noise, vibration, and visual impacts have been successfully mitigated at elevated transit lines in Singapore, Paris, and Vancouver, and our construction partners can draw on their expertise and make use of the latest technologies and techniques to create quieter, thinner, more attractive designs. You can read more about noise and vibration technologies in this [Metrolinx News post](#), and future environmental studies and reports will have more details about the steps we'll take to mitigate noise and vibration impacts. We'll also share renderings and images of potential designs for community feedback as plans come together over the next few years.

Subject: ONTARIO LINE: [REDACTED] Crossing of the Ontario Line after the Leaside Bridge
→ avoid Overlea Blvd. Completely

Hello,

My name is [REDACTED] and I am one of [REDACTED] residents living on Overlea Blvd at [REDACTED]. [REDACTED] am senior, as are many of the residents. I have lived in my condominium since 2014 and have lived in East York since the early 1970s...I know my community well, and am very protective of it.

Your updated North Segment of the Ontario Line, **specifically the crossover after the Leaside Bridge into the "Thornccliffe" portion is troublesome.**

I am also voicing the concerns that several thousands of my neighbours share (both in my building and in the numerous residential areas, and businesses that front Overlea Blvd.). In fact, you will be hearing from hundreds of members of my community on this matter.

Your current alignment of the Ontario Line in the North Segment now brings this major railway even closer to a seven story residential condominium (just meters from [REDACTED] Leaside Park Drive) as the updated sketch has the crossover happen on the South East corner of Overlea Boulevard, and Millwood Road (see Marker #1 on your updated Metrolinx visual).

This crossing is troublesome for many reasons including:

KEY ISSUES WITH CURRENT ALIGNMENT:

1. HEALTH + SAFETY: The crossover is currently on the corner and boulevard where there are several residential properties (especially [REDACTED] Leaside Park Drive). In fact, the current route continues to negatively impact a seven story condominium, a town house complex, other condominiums near Overlea Blvd. and Thornccliffe Park, a senior's home, and several businesses on both sides of Overlea Blvd. In addition, there are numerous community organizations and numerous service providers including (the Salvation Army, Thornccliffe Neighbourhood Office, The Islamic Center, the Midwives Clinic, Food Banks, The Employment Training Center, March of Dimes, The Language Instruction for Newcomers). **All of who live and work along this segment of Overlea Blvd.**

The Health concerns for all involved who live and work here include:

- noise and environmental pollution (impacting several residences - condos, townhomes; places of worship, seniors' home, service providers) → especially with a frequency of trains (running every 90 seconds); vibration, privacy issues, physical and visual intrusion, lost air rights, safety, etc.
- Living in a state of construction and traffic gridlock outside our front door for several years;
- visual and physical intrusion - over the Don Valley, over a SMALL tree-lined residential boulevard

2. **TRAFFIC GRIDLOCK:** according to this updated route, the elevated rail would cross TWO streets (both Millwood Rd. and Overlea Blvd.). The traffic gridlock that this would bring is unbearable.

Given that most of the line *after* the new Thorncliffe Station has been moved to run into the industrial area, why isn't the crossover reallocated to do the same? This is an **equity issue** for everyone living AND working along Overlea Blvd.

- The construction chaos would also result in delays for **Emergency response calls** (of which we have many First Responders using Millwood and Overlea Blvd) to reach the Overlea and Thorncliffe areas.

3. **ECONOMIC IMPACT – DESTRUCTION OF PROPERTY VALUES:** this current alignment will undoubtedly destroy property values in this segment (especially in my building) and have a financial impact on businesses along route – (consider the impact of the Eglinton LRT that has resulted in over 100 small stores closing and is taking over 11 years to build).

4. **EQUITY:** To add, an elevated rail running along ANY part of Overlea Blvd segregates and alienates the Overlea and Thorncliffe Community. Doug Ford, as a Toronto city councillor in 2012 led a push with his brother, then Mayor Rob Ford, to cast plans for above - ground transit in Scarborough as "second rate and one that alienated suburban Scarborough". Doug Ford added in an interview that year... "The people have spoken loud and clear. Scarborough councillors, MPPs. Everyone in Scarborough wants underground (transit)... I listen to the taxpayers and I'm sure the premier (then Dalton McGuinty) will do the same."

→ **The people who live and work along this segment of Overlea Boulevard are speaking loud and clear in our community:** Why is it acceptable then to impose such a "second rate" plan on any other communities (such as the Overlea-Thorncliffe Park)? This is an **equity issue**.

5. **ENVIRONMENT + HERITAGE SIGN:** This route would impact the appearance of the entry into Thorncliffe Park (the Heritage sign has been on that corner since the 1970s and signals the entry to the Thorncliffe community); it would destroy the large cluster of beautiful trees that form a canopy and block the current roadway, and be even closer to the park space at Leaside Park (where hundreds of community members enjoy the green space daily).

PROPOSED ALTERNATIVES TO THIS ROUTE TO AVOID RESIDENTIAL IMPACT:

OPTION 1: Move the line completely underground.

→ Metrolinx has shared some potential "geographical issues", "cost" and added "time commitment" concerns on Metrolinx Engage online, but given the life-altering impact on all communities, this option must be considered.

OPTION 2: Move the Ontario Line one block west to connect over Millwood to **Banigan Drive** which joins to Thorncliffe Park Drive (and the current new station location). → This change would avoid impacting any **residential properties**, or community service providers and would eliminate many of the issues noted above. (See Aerial Attachment)

- Option #2 would **put the rail over ONE road** (Millwood) rather than crossing two roads (both Millwood and Overlea).
- This ensures **greater safety, and less disruption** from construction, for all who live (and work) in this segment.
- Still easy access: People would rather take a 3-5 minute walk to the train, than have all of these health and environmental impacts associated with a train in the middle of a residential community...let alone on a small boulevard.
- It is more fitting that a major railway with fast speed trains every 90 seconds, run through industrial areas rather than impact *any* residential areas.
- There would still be **easy access to the station at Thorncliffe Park Drive** (west)

OPTION 3: MOST BENEFICIAL OPTION FOR THE OVERLEA – THORNCLIFFE COMMUNITY IF THE LINE MUST RUN AT GRADE/OVER GRADE:
(See Aerial Attachment)

→ Move the alignment closer to the existing railway, running it along **Village Station Road** → Connect to **Pat Moore Drive** → Connect to **Thorncliffe Park** and **relocate the Thorncliffe Station EAST, closer to where you originally had it, on the corner of Thorncliffe Park Drive and Pat Moore Drive.** (Please see attached aerial.)

ADDED BENEFITS TO THIS OPTION #3:

- This option would **avoid ALL negative community impacts** and ALL of the issues I have outlined...including to **all** residential properties, to **all** businesses, to **all** places of worship and to **all** community service providers...it is a win-win for all.
- **It would be more cost effective** as Metrolinx could run much of the line at grade level, AND have the space to do so.
- It would put the rail crossing over only **ONE road (Millwood)** rather than two...This saves Overlea Blvd from the destructive impact of construction and traffic gridlock for several years.
- **It is still easily accessible for the Thorncliffe community** (the walk is a short 3 minute walk – one block west)...This re-location of the station would arguably gain better ridership as there are more apartment bldgs. on the east side of Thorncliffe Park Drive and hence more commuters. To be clear, residents along the south side of Thorncliffe Pk. (eg. 65 Thorncliffe, 47 Thorncliffe Pk. Etc.) will opt to take a bus to Pape Station and pick up the Ontario Line there rather than walk 15 minutes to *anywhere* along Overlea Blvd. If you are truly serving the ridership, it will be the residents living and working along Overlea Blvd. who would want the line moved 1 block west (3 min walk) and avoid the chaos of construction and a railway.

- It is more **fitting that this major railway with fast speed trains, run through the northern industrial lands** rather than in dense communities....and it would connect more easily to the rest of the Ontario line as it leads to the Flemington stop.

This area of Overlea Blvd. is home to thousands of residents and workers. Please ensure that transit growth is responsible, equitable and as Metrolinx says: "completed in a way that not only serves local transit riders, but also fits into the communities they call home".

The harm caused by an above-ground rail *on any part of Overlea Blvd.* will be permanent, life altering, and felt for generations.

You will have much more buy in from the entire community that this rail is to serve. Please be responsible and think about the long-term impact of this transit line, make the necessary changes to the current alignment. To some this is a project that you want to complete...to us, this is our HOME, WORK and LIVING space!

I look forward to hearing from you and how you will actively make changes to the current alignment in support our building and community along this segment of the Ontario Line.

Thank you,

Hi [REDACTED]

Thank you for your message and question about the Ontario Line.

We are currently advancing the Ontario Line plan with 15 proposed stations, including a station at King & Berkeley that will service the Corktown community, the Distillery District, and the George Brown College St. James Campus. You can read more in our [neighbourhood updates](#).

The current station locations were chosen based on many considerations, including future ridership as well as constructability and community impacts. We are not considering additional stations at this time.

Thank you again for your email. Please don't hesitate to reach out again with any further questions.

Best,
Sivahami

Hello Ontario Line,

Submitted on Sunday, November 22, 2020 - 22:51

Submitted by anonymous user: 2607:fea8:42a0:3343:5085:6552:f5e3:affb

Submitted values are:

Your name:

Your e-mail address:

Nearest Ontario Line Station (Optional): Corktown

Subject: What about Distillery District

Message:

Hello,

I am wonder why did you not plan a stop specifically for Distillery District.

Not only this place that is home to many people is the place for a Christmas festival.

But more then that. The city extension is planned onto a former port territory.

How many people will live there? Is is obviously - a lot.

Don't you think that a stop somewhere at Chary Street would be good idea for those future developments?

Thank you for your reply in advance,

Best regards,

[REDACTED]

Attachments: [image001.png](#)

Hi [REDACTED]

Thank you for taking the time to email us about the Ontario Line. We are committed to responding to the concerns we receive and appreciate the opportunity to share some of the thinking behind our plans. By building at-grade through the shared rail corridor in Riverside and Leslieville, we are able to cut construction impacts in half. A tunneled approach is complex, time-consuming and disruptive due to the amount of excavation that is required. In areas where there are practical alternatives, such as an already Metrolinx-owned right of way, we can drastically cut down on construction impacts to communities and finish the work in shorter timeframes. It also allows us to significantly reduce the amount of property we need to accommodate near-term construction and long-term operations, not to mention avoiding considerable impacts to local traffic and businesses.

We will also streamline Ontario Line construction with GO expansion work that was already planned along the rail corridor, reducing overall construction impacts to the community. We will work continuously to limit the footprint of our work, and where we need to use park space to avoid impact to private properties, we will work with our contractors and the City of Toronto to restore the park space to its original state or better. With surface stations, we are able to provide customers with a much better experience that is fully accessible, shielded from the elements, and provides an easy transfer to and from surface transit options in the area. To reduce noise once the Ontario Line is in operation, we will line the corridor with effective and well-designed sound barriers, landscaping, and new trees and greenery. Our preliminary analysis shows that these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line while also reducing the noise and vibration profiles of the GO and VIA trains that currently use the corridor.

We are continuing to address the feedback we receive as we move forward with this important project. Please do not hesitate to contact us if you have more questions.

Thank you,
Sivahami

Hi [REDACTED],

We are still finalizing designs and will share updates about impacts to park spaces as soon as we have them. We know how important McCleary Playground is to the community. Wherever park spaces are needed in order to avoid impacting private properties, we will work with our contractors and the City of Toronto to restore them as much as possible, including compensating for removed trees in accordance with [Metrolinx's Vegetation Guideline](#).

Please let us know if you have any further questions.

To: [REDACTED]

Hi [REDACTED]

Thank you for your email. The station will be located where the rail bridge crosses Queen Street East, just west of McGee Street. You can view maps and more detailed information on our East

[Neighbourhood Updates page.](#)

The Ontario Line will fit almost exactly within the existing rail corridor footprint. After construction, the corridor will be lined with effective and well-designed noise walls, landscaping, and new trees and greenery. Noise wall specifics have not yet been finalized (designs will be brought forward for community feedback as the project progresses) but our preliminary analysis shows these combined measures will effectively eliminate noticeable noise and vibration impacts from the Ontario Line while also reducing the noise and vibration profiles of the GO and VIA trains that currently use the corridor.

Let us know if you have any other questions and if you haven't already, please consider signing up for [our e-newsletter](#) to keep up to date with the project and receive notice about future virtual community meetings.

Best,
Sivahami

Subject: RE: Ontario Line - Noise and Vibration Report - vibration testing / vibration receptors

Hi [REDACTED],

Thank you for providing feedback (attached) on the Ontario Line draft Environmental Conditions Report. We wanted to share some additional information in response to your questions about noise and vibration.

Metrolinx is committed to minimizing and managing the effects of noise and vibration of the Ontario Line on its neighbours – during both construction and operations. As we mentioned previously, for the draft Environmental Conditions Report, vibration measurements were taken at locations within the study area that accommodate spaces and equipment that are potentially more sensitive to ground borne noise and vibration than typical residential buildings, including recording studios, theatres, and hospitals.

As project planning and design advance and further details on planned transit facilities are available, additional noise and vibration estimates or measurements will be considered for locations beyond those included in the draft Environmental Conditions Report. Measurements or predictions of the baseline levels, or a combination of both can be used for impact assessment studies, as per current guidelines such as the [Environmental Noise Guideline - Stationary and Transportation Sources - Approval and Planning](#) (Ministry of the Environment (now Ministry of Environment, Conservation and Parks), 2013). Impact assessment studies will consider and adopt appropriate vibration impact criteria for buildings susceptible to vibration damage.

Noise and vibration impact studies are currently in progress and results will be available as part of the forthcoming Early Works and Environmental Impact Assessment Reports, which are expected in spring and summer 2021. When they are released, they will be posted on the [Metrolinx Engage website](#) and we will share the notice in our online newsletter.

Please let us know if you have any additional questions.

Thanks,
Sivahami

Hi Daryl,

Thank you for your below response.

I am relieved to hear that Metrolinx will monitor noise and vibration before, during, and after construction. I trust that reasonable thresholds will be established, and that this monitoring will be appropriately placed throughout the full corridor, factoring in varying geography, and not just narrowly next to the line itself.

I have now provided my comments to the Draft Environment Conditions Report, and have accessed the north segment update – thank you for bringing it to my attention. Finally, I have signed up for the online newsletter.

Regards,
[REDACTED]

To: [REDACTED]
Subject: RE: Ontario Line - Noise and Vibration Report - vibration testing / vibration receptors

Hi [REDACTED]

Thank you for reaching out to us, and for your message about noise and vibration impacts.

In the draft Environmental Conditions Report, Section 3.2 of the Noise and Vibration study specifically looks at vibration sensitive areas due to the presence of vibration sensitive equipment. Examples of areas that require these specialized sensors would include hospitals, recording studios

and theatres.

This does not mean that Metrolinx is not concerned about the noise and vibration impact to residents along the Ontario Line. In the executive summary of the study, Hopedale Avenue/Minton Place is recognized as a residential area with lower noise levels. Some practical steps we take to reduce noise and vibration in residential areas include fitting equipment with muffling devices, using equipment and methods that minimize vibration, and coordinating construction schedules so that noisy operations do not occur simultaneously. Metrolinx will monitor noise and vibration before, during and after construction, testing to see if more measures are necessary. Noise and vibration impact studies will be done once further details on the project's design become available.

We encourage you to provide your comments by October 17, 2020 to the [Draft Environment Conditions Report](#), specifically using feedback questions at the end of the study summary on [noise and vibration](#). This morning, we also released the [north segment update \(Pape to Science Centre\)](#) which you may be interested in. If you have not already, we encourage you to sign-up for our [online newsletter](#) so you receive the latest information on the project as it becomes available.

To: Ontario Line
Cc: Nicolas Valverde; Councillor Paula Fletcher
Subject: Ontario Line - Noise and Vibration Report - vibration testing / vibration receptors

Good evening,

Thank you for publishing the Environmental Conditions Report for the Ontario Line Project.

I have reviewed Appendix B3 of the report. Section 3.2 of the appendix indicates that no vibration-sensitive receptors with special requirements beyond residential sensitivity were identified for the Ontario Line North segment.

I live at [Redacted] next to the Millwood/Leaside bridge. My home, along dozens of others, are perched at the top east edge of the valley; my house already vibrates, noticeably at times, due to heavy traffic, especially traffic on the bridge.

Will residential vibration testing be completed, and vibration receptors be installed, in the future for

the Ontario Line North in general, and for the east valley edge specifically?

I am very concerned about vibrations for two reasons: (1) potential lower quality of life living in my home, and (2) potential structural damage to the foundation of my home given its closeness to the edge of the valley. I would expect that my neighbours along Hopedale Ave share my concerns.

Kindly advise at your earliest convenience.

Regards

Hi there,

I just wanted to say that I live at Pape and Danforth Area, and I'm supportive of the rail line going above ground. I don't think we should spend millions of dollars tunnelling if the above ground option is significantly cheaper. I have little sympathy for those who bought next to a rail line, and are upset that the train frequency has increased. The value of their property likely took into consideration their proximity to rail corridor...

You're better served really explaining how the acoustical barriers will better their quality of life, as I'm sure many areas just have fence.

My only negative criticism, is that that the change in alignment, puts the Ontario line slightly out of reach to the high density priority neighbourhood of Regent Park...

Thanks,

Subject: "Your Neighbourhood" flyer

Hi there,

I received this flyer in the mail this week (I'm just off Pape, north of Gerard).

I have all sorts of questions about this hastily planned line, but I support it in principle - and believe the above ground portion makes good sense for residents of Toronto should it be more cost effective and rapidly built.

The NIMBY movement emerging around Jimmy Simpson CC, which this mailer is clearly a response to, makes me furious.

Are there ways for others in the community to make our voices heard to counter the NIMBYs, eg upcoming public consults, or community coalitions in support of the line?

Hello Bismah,

Thank you very much for your information which makes a lot of sense.

I guess you have heard about PACCT. They dropped off leaflets all over the neighbourhood to get people involved to scrutinise every move Metrolinx makes and makes wild claims about dropping property values due to construction and then running subways. Typical NIMBY's.

Regards,

[REDACTED]

On Thu, Dec 3, 2020, 10:01 Ontario Line, <ontarioline@metrolinx.com> wrote:

Hello [REDACTED]

Thanks for your email and your interest in the Ontario Line. The tunnelling below Pape Avenue will be done by a tunnel boring machine working 20 - 30 meters below ground as the Ontario Line will run below Line 2.

We will construct a bridge at Minton Place to cross the Don Valley. The route has been selected and reviewed to balance a design that creates a more direct path for the trains while also minimizing property impact. The route includes fewer curves to ensure shorter travel times and also means less noise and vibration impacts for the line as a whole once constructed and in operation. These benefits would otherwise be reduced for area residents and future customers alike had we pursued aligning the portal closer to the existing Leaside Bridge.

Construction for the north segment of the Ontario Line is scheduled to start in 2024, following the completion of the Ontario Line Environmental Impact Assessment Report.

You can also learn more about the Pape area on our website by visiting the [north segment neighbourhood update](#).

Message:

Hello Metrolinx,

Will the Pape Avenue part be done by a tunnel boring machine or in open pit fashion and on which side of the road? My guess would be right below Pape Avenue if it's open pit. Next, how will you cross the Don Valley? Does it require an additional bridge crossing diagonally below the Millwood bridge?

Subject: RE: Thank you for keeping our community at the heart of your planning

Hi [REDACTED]

Appreciate your email and sharing your thoughts with us.

Our design decisions put community first, and the planned route was selected to minimize community impacts. There will be some Early Works projects in the joint corridor that are expected to begin in 2021 and we estimate that the Leslieville station construction will start in mid-2023, with timelines driven by the successful awarding of the construction contract. We are working through confirming the exact height, location, and timelines for noise wall installation and that information will be shared with the community for feedback in 2021. Throughout construction and operation, we will be available to support the community and answer questions as we work to build much needed higher order transit.

To learn more about how the Ontario Line, you can visit [our website](#) and if you haven't already, please consider signing up for [our e-newsletter](#) to keep up to date with the project.

Thanks again for taking the time to share your thoughts,

Subject: Thank you for keeping our community at the heart of your planning

Hi Metrolinx

I received your notice in the mailbox today about What did we think about the most when planning the Ontario Line ? Your neighbourhood.

Thank you for that. I love our community here.

May I ask when construction will begin to put in the Leslieville Station near McGee St. And Queen St. East ?

And when will the attractive noise barriers to reduce the sound of the Ontario Line be installed ?

Thank you again for putting our neighbourhood at the forefront of your planning and decision making.

Thank you Simon for your answer- I'm hoping that an permanent eastern bridge/ tunnel will be considered between Atlantic and Strachan to service the growing population of high rises and utilize the Go station and Ontario Line.

Hi [REDACTED]

Thanks for your question regarding Exhibition station.

Our plans will improve pedestrian connectivity across the rail corridor at Exhibition Station. We recently released information about [early works in this area](#) which will include opening an existing but currently unused tunnel and north station entrance. We will be extending the tunnel to Atlantic Avenue until a new north entrance is constructed. During early works, we will also be installing a temporary pedestrian bridge spanning the rail corridor to provide additional access capacity to reach station platforms and enhance cross-corridor access for trips to and from Liberty Village. The bridge will also reduce potential congestion in the existing tunnel during special events at Exhibition Place and/or Ontario Place.

While early works are ramping up, we continue to design the permanent station concourse that will serve both GO and Ontario Line customers and improve connections for pedestrians. We will have further station details to share in the future when the design of

the new Exhibition Station is sufficiently advanced to be shared with the public.

I hope this answers your question. We look forward to sharing more details as our work moves ahead. If you haven't already, please consider signing up for [our e-newsletter](#) to help stay up-to-date on the latest project information.

Hello [REDACTED]

Thanks for your email and sharing your thoughts with us.

The [Ontario Line](#) will be tunnelled below ground through the Entertainment District and the Line will bring 15.5 kilometres of much-needed rapid transit service to Toronto, making it faster and easier for hundreds of thousands of people to get where they need to be each day. We expect to break ground on early works at Exhibition Station in 2021 and start some of the major construction downtown in 2023.

You can read more information on the Ontario Line by visiting our [website](#) and if you haven't already, please [sign up for our e-newsletter](#) to receive project updates as planning progresses.

Thanks again for sharing your thoughts. If you have further questions, please don't hesitate to reach out.

Thanks for your question.

Ontario Line construction will happen in different phases. First, early works and then major construction.

Early works construction is anticipated to begin in summer 2021. Early works are being advanced where the project connects to other planned transit projects and where portions of the alignment run in parallel to the existing rail corridors. You can read more about [early works](#) on our website.

After early works, we expect major construction from Exhibition Station to the Don Yard to start mid-2023. Please note that timelines may change and are subject to the market response during procurement.

If you haven't already, please consider signing up for [our e-newsletter](#) to help stay up-to-date on the latest project information.

Thanks again and please don't hesitate to contact us if you have more questions,

Subject: RE: Ontario Line

Hi [REDACTED]

Thanks for your follow up questions.

In areas where there are practical alternatives to tunneling, such as an already Metrolinx-owned right of way, we can reduce impacts to communities and finish the work in shorter timeframes. A tunneled Ontario Line would have to be buried approximately 40 metres from East Harbour all the way to Gerrard and Carlaw in order to avoid major sewer mains, specifically the midtown interceptor sewer. We are continuing to refine our plans, based on feedback from the community. As we plan and carry out our work, we will minimize the impact to parks and trees. Where those impacts are unavoidable, we will compensate trees in accordance with [Metrolinx's Vegetation Guideline](#). We will have more to share in 2021 as we advance our designs and complete environmental studies. This will help us answer your questions in greater detail.

To better shield communities living alongside the joint rail corridor from all rail operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. The new Ontario Line tracks will be a continuous rail design with no joints, supported by rubber bases and the trains will be automated, which means less noise and vibration when trains come to a stop. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor.

Throughout the project we will maintain an open dialogue with businesses and work to help them stay accessible and successful during construction. We have already begun our outreach to BIAs and individual businesses to understand their operations and questions about the project. Businesses will be represented on community liaison tables that we will be setting up

along the entire alignment. Once we move into construction, we will partner with business improvement areas on shop-local initiatives and work with construction teams to keep access to businesses clear and clean.

We appreciate the opportunity to respond to your concerns and look forward to continuing to engage with the community as the project moves forward.

Sincerely,

SIMON GRANAT

Subject: Re: Ontario Line

Thank you for your very prompt reply.

I ought to be re-assured by your response, but I find myself very surprised by many of your assertions, which seem inconsistent with the logic applied elsewhere. Is surface rail somehow only less disruptive than tunneling in east downtown, but not in the suburbs?

I am also surprised with your comment that the rail footprint will be almost exactly the same when doubling the number of rail lines, and you will keep your work in the existing corridor. Perhaps we just disagree about the meaning of 'almost exactly', and 'work'.

I am also surprised by the assertion that the tunneling and station would have to be 9 stories below grade. The deepest TTC stations in old Toronto are no more than five stories deep by my estimate. (I have at times counted the stairs, invariably on the way up). Similarly, I've seen the sewer line 100m north of Queen St. East: it is about 3 metres below grade. There must be a main trunk at greater depth, but it is disappointing to hear that sewers and the local geology are so different on this side of the City.

I think your comment that above ground "provides much needed higher order transit access compared to tunnelling" implies that Metrolinx would not build a Queen St East station if it were required to tunnel, due to the cost, and I can see that underground subway station construction can be very costly and disruptive to surface activities, as it has been on Eglinton. Yet somehow the TTC managed to build lots of them in downtown Toronto. Those stations lack the grand entrance buildings that characterize the Spadina/York subway extension, but otherwise have been working

well for about 60 years. Furthermore, I understood that Metrolinx was planning shorter train sets and therefore smaller stations than the downtown TTC system. Finally, I think that cost is a strange justification for elimination of what would likely be a high performing station on a necessary line, when the government insists that it will proceed with entirely new Scarborough and Eglinton West (suburban) transit lines that by Metrolinx' own analysis have been shown to not pass a cost benefit test.

I suppose I would be able to place more trust in your responses if I knew that Metrolinx would bear the cost of the disruption through agreements with the City for interim and permanent loss of parkland and roadways, and would provide business disruption compensation for what promises to be a protracted construction period. You do say disruption is less for surface rail. Words are cheap. Do your agreements with the City and landowners compensate them appropriately, so we can infer that surface rail disruption has been priced and considered by Metrolinx and remains the best approach? Or does Metrolinx want the community to just trust them, without putting its money where its mouth is, so to speak?

Thank you for your consideration.

On Dec 3, 2020, at 10:16 AM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi 

Thank you for writing, and sharing your thoughts with us.

The Ontario Line route puts community interests first. The route was created by carefully anticipating issues, talking with residents and businesses. The above ground alignment has unique and significant benefits for your community. Having the line above ground is the least disruptive option, drastically reduces property impacts, improves customer service, and provides much needed higher order transit access compared to tunneling.

By having the line above ground we drastically reduce property and traffic impacts than if the line were tunneled. Tunnelling is a complex, time-consuming and disruptive process. Our careful design fits the Ontario Line almost exactly in the rail corridor's footprint and cuts property impacts in half. By keeping our work in the existing corridor we are significantly reducing the property needed to accommodate near-term construction, and long-term operations. This is especially impactful considering that tunneling requires laydown areas needed to build stations and emergency exit buildings between stations. Another benefit of the at-grade route is its faster construction—meaning fewer community and

traffic impacts.

There's a much better customer service experience above ground, too. Due to Toronto's geography and municipal sewer infrastructure, the Ontario Line would have to be buried very deep below ground. In fact, we estimate station locations through this part of the City would need to be approximately nine stories below ground. As a result, it would take customers approximately four and a half minutes to get from Queen Street East to the train at Leslieville Station. Having surface stations means that riders can seamlessly transfer to their other TTC connections, shop, or get where they need to go quicker.

Lastly, I want to address safety. Safety is the centre of everything we do at Metrolinx. We would not design or operate a service that was not safe for our customers, community and our employees. I would like to share that the approach to run trains along a joint rail corridor is not new. This approach is similar to other operations such as the Scarborough Rapid Transit and Stouffville GO train operations between Kennedy and Ellesmere Roads, and Line 2 and CP railway operations between Bloor Street West and Kipling Station.

Thanks for the solicitation of my opinions that you sent in the mail.

My opinion is that you are going above ground in Riverside to save a little money at the expense of the local community, because the provincial government's, and metrolinx's, priority is to better serve communities that are likely to support the governing party. I find your 'caring about the community' posture disingenuous. Here's why I think so:

- 1) Nowhere in Canada is a six lane rail or auto highway being build through an existing and historic downtown residential community of a major city. Only in Toronto is the government seemingly bent on implementing strategies more at home in the 1950s.
- 2) Nowhere else in Toronto has a surface subway been built so close to residential development. In every case I can think of -Rosedale, Bloor High Park, Downsview, Scarborough east of Warden, there are significant gullies or separations. Why have our standards fallen precipitously under Metrolinx? What justifies the unusual and disruptive treatment in this case? There has to be a better reason than "it's the best way to make intermodal transfers work at East Harbour", as your mail-out implies.
- 3) In the inner suburbs, where the governing party gets more support, the priority has been to build underground subways in Scarborough and North York even where surface right of ways already exist, and surface land is a lot less valuable (compare the development activity). In Riverside your plan will blight valuable land. It is clear that the new Ontario and GO rail lines are primarily designed to improve service to suburban areas. Metrolinx has used end to end travel times as its most important benchmark for evaluating new stations. Our community appears to be expressly (pardon the pun) not important to Metrolinx. Oh, and I have not forgotten the placement of a gas generating station in our community, and the expensive political cancellations in suburban neighbourhoods. The bias is real.
- 4) The land that will be taken to increase the surface lanes from 3 to 6 is important space for the neighbourhood, much of it a buffer with the existing railway, and very expensive to replace. Perhaps if Metrolinx were required to fully replace it, and build with current buffer space standards in keeping with the frequency of the rail traffic and the residential contiguous use, Metrolinx would find it more attractive to go underground.
- 5) The business and neighbourhood traffic disruption will be brutal. Is Metrolinx providing compensation for this, like the contractor on the Gardiner Expressway (lane occupancy charges), and to the BIAs and others who will be harmed for

years? Your reputation for timely completion on Eglinton, a big wide thoroughfare, is in tatters. The work in this case would be much more complicated, fully integrated into the community - with no staging grounds on the right of way. Perhaps if compensation for these disruptions was properly included in your agreements, Metrolinx would reconsider going underground.

6) The project involves tunnel boring machines at both ends of the surface section - they are available to continue the work. I have been told by your drillers that your core sample drilling has gone down over 180 feet, which seems only needed if you are considering tunnelling. I think you know it is the appropriate solution.

I believe you are capable and prepared to bury this line if it becomes politically necessary. Why wait. Recommend the obviously more reasonable approach and tunnel through Riverside, and earn the trust of the people you serve.

Hi [REDACTED]

Thanks for writing and sharing your thoughts about noise, vibration and the Ontario Line. We appreciate your questions and concerns and agree that Riverside and Leslieville is a very special place.

The route of the Ontario Line, above ground and within the joint corridor, is carefully designed with community in mind. Tunelling is a time consuming and complex process. Due to underground interferences at Queen and Gerrard Streets, the Ontario Line platforms would have to be almost seven stories underground. Where there are practical alternatives, such as an already Metrolinx-owned right of way, we can drastically cut down on construction impacts, reduce property impacts, and shorten the overall construction time.

We will be coordinating previously announced GO expansion work with Ontario Line construction to avoid multiple disruptions in the community while still containing our work to the existing rail corridor – staying almost entirely within its current footprint. To better shield communities living alongside the joint rail corridor from all rail operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. The new Ontario Line tracks will be a continuous rail design with no joints, supported by rubber bases and the trains will be automated, which means less noise and vibration when trains come to a stop. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor. A more detailed analysis will be shared for public consultation in upcoming environmental reports.

We are committed to listening to the residents of Riverside and Leslieville so we can provide you with the information you need about the benefits of the project while helping to manage any impacts. Our plans have been updated based on what we heard from the community and we will continue to work with you to deliver infrastructure that fits within and enhances the neighbourhoods we will serve.

if you haven't already, please sign up for our [e-newsletter](#) to stay engaged with the project.

Thank you and please don't hesitate to contact us if you have further questions,

Subject: RE: Ontario Line - Bruce Mackey Park

Hi [REDACTED]

Thanks for your email. We agree that the parks in your neighbourhood, and greenspace throughout the city and province, is valuable. We are applying significant design and engineering effort to fit the Ontario Line almost exactly within the existing rail corridor. Wherever park spaces are needed in order to avoid impacting private properties, we will work with our contractors and the City of Toronto to restore them as much as possible, including compensating for removed trees in accordance with [Metrolinx's Vegetation Guideline](#). We are still finalizing designs and will share updates about impacts to park spaces as soon as we have them. We have already committed to shielding the community from the rail corridor by adding effective, well-designed noise walls, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. Our preliminary analysis shows that when combined with the other mitigation we will put in place, the noise and vibration impacts from the Ontario Line will be eliminated and we will reduce the noise and vibration profiles of the GO trains that currently use the corridor. A more detailed analysis, including noise wall details and aesthetics, will be shared for public consultation in upcoming environmental reports.

Thank you for reminding us how important Bruce Mackey park is to the community. We look forward to staying in touch as the project moves ahead. Please sign up for our [e-newsletter](#) to stay updated with the latest developments.

Subject: There is a solution to the Scarborough transit issue (letter, Dec. 7)

Letter-writer Jim Skeels is absolutely correct in asking why usage of the very wide and long Gattineau Hydro corridor hasn't been added in to the options for transit improvement in Scarborough. In the last 6 years I've been proffering a similar view at City Hall, and it's sadly related to how transit has been politicized, and has degenerated to not being motivated to serve taxpayers and transit users. The Gattineau corridor doesn't serve a shopping mall; and while building a longer transitway through these 12 kilometers would still use a lot of concrete, the big construction interests don't get enough of a slice. And the majority of politicians aren't necessarily rational, nor are they really worried about squeezing the billions, let alone millions - it's not their money, especially if all three governments get involved, regardless of the merits or not of a proposed project, especially when Scarborough 'deserves' a subway. But the arguments for upgrading the Gattineau to transit go beyond what Mr. Skeels noted: transit is faster when it goes on the diagonal, and also, by boosting transit off-road, not only is it a lot less to do, the boost to transit won't impact car drivers beyond offering improved transit, and this could also apply to 401 congestion as this line could also feed people in to the new Eglinton transit line. However, we may not have factored in any boost in Eglinton riderships feeding in to the Yonge line, so there's also a real need for triage of transit in to the core: hence a reset being needed of Relief schemes to examine options for surface transit within the Don Valley, including a re-purpose of parts of the Don Valley Parkway. Maybe this could be a subway; but if a subway, it should be going in to the core around the Gerrard St axis towards the many real destinations and density there, and leave building a core east-west

subway for better planning than what we've had this last decade. Hints of both of these ideas actually have existed in previous decades of course, like the subway plan of 1957 that had a Relief West subway extension out to Islington, and I've heard that the late Jack Layton had asked about the Gatineau usage, another reason for avoidance, regardless of the billions in savings.

(Older and cruder line-on-map that somehow is tilted 90 degrees from within computer, dang)

Subject: Re: Pandemic impact - no rush to build and cheap out - Ontario line

Thank you Simon,

I really appreciate your reply and feedback! I thought this was just an automated/one way email address!

I am fully aware of your explanation and the details of the Ontario line. I do not doubt what you said. It is a valid solution and you mentioned only positive points.

However, there is also nothing wrong with my approach/solution (original relief line design) either. Ontario line has its pros and cons and so does the original relief line design before the election, whether it is cost, time to build or Alignment and etc.

The issue is not that the Ontario line is better as you position your feedback, it is the fact that Ontario line exists for political reasons. There was already a plan on the table (before the election) that the city needs and just like the past 30-40 years, a new government (any party) comes in and has a grand new political plan. And changes everything up. It's a vicious cycle.

At the end of the day, no matter how much you try to sell the Ontario line to the residents of Riverdale/Leslieville, this project will more negatively impact (less positively) the neighbourhoods permanently vs. the original design.

You do not live there.

Now the question is which political party feels which design is the lesser of the two evils, in this case, and the answer is Doug Ford. Ironically, the saviour of build subway, subways subways.

Anyways, thanks for your time. I really do appreciate your time and hearing me out.

Regards,

Subject: [REDACTED] and cheap out - Ontario line

Hi [REDACTED]

Thanks for sharing your thoughts about the Ontario Line with us. The community's needs are at the centre of our decision making. Because of the Ontario Line's mix of

below ground, at-grade and elevated track, it is able to reach more communities sooner and offer an improved customer experience with less construction impacts.

At twice the length of the previously proposed Downtown Relief Line South, the Ontario Line will give residents of Thorncliffe Park, Liberty Village, Flemingdon Park, and Liberty Village access to higher order transit, and be built within a similar timeframe. Tunneling is complex, time-consuming and disruptive due to the amount of excavation required. In areas where there are practical alternatives—such as the Metrolinx owned right of way—we can drastically cut down on construction impacts to communities and finish the work in a shorter timeframe. In fact, in the East from the Don Yard to Gerrard, our plans have the Ontario Line fitting almost exactly into the current railway footprint, and by doing that we can cut property impacts by half. In the above-ground areas, construction techniques will be faster and simpler which results in less construction impacts for residents. As a result, we can provide more transit, quicker, with fewer property impacts.

To better shield communities living alongside the joint rail corridor from all rail operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. The new Ontario Line tracks will be a continuous rail design with no joints, supported by rubber bases and the trains will be automated, which means less noise and vibration when trains come to a stop. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor. A more detailed analysis will be shared for public consultation in upcoming environmental reports.

Having the Ontario Line as a mixture of tunneled, at-grade, and elevated track also supports a better customer experience. For example, due to Toronto's geography, between the Don Yard and Gerrard Station, the Ontario Line would have to be buried more than 38 meters below ground to cross below the Don River, and continue at that approximate depth to avoid Toronto sewer infrastructure. As a result, a tunneled station would need to be so far below ground that it would take passengers approximately four and a half minutes to get from Queen Street East to board the train underground. Surface level stations in this area mean that we can provide a better customer experience. Customers can hop on or off the Ontario Line quickly and easily, getting downtown, coming home, or easily getting where they need to go.

We look forward to sharing more details as our work moves ahead. If you haven't already, please consider signing up for [our e-newsletter](#) to help stay up-to-date on the latest project information.

Subject: Pandemic impact - no rush to build and cheap out - Ontario line
Importance: High

Hi,

my opinion, this was purely a political decision vs. What is really required for this route

If we are going with the Ontario line vs. The original relief line before Ford got elected at least build the tunnels to be upgraded in the future using subway cars on line 1 and line 2 just like how Crosstown was designed

Now that there is no rush to build this due to the pandemic has decreased demand and political reasons to build the line 1 north ext asap we can now bury the lines as intended using the original route before Ford was elected
Don't tear up neighbourhoods along the rail corridor Don't increase the noise along that route Cars running frequently, especially as demand increases is not fair for those neighbourhoods

The current proposal now feels like the Scarborough RT all over again

Just build a big chunk of the line right the first time So we don't have to spend more money later to fix a poor decision made in the past

Thanks

Hi Josh,
Thank you for your time to write this email to us, it means a lot to our family
This is good news for us, and we cannot wait to have the formalized notice in the mail, for this!

Our fingers are crossed that our place will not get impacted!

Thank you again for this update

Kind Regards,

On Thu, Dec 10, 2020 at 1:58 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Your email to the TransitTO account regarding your property has been shared with me for response. I recognize the frustration you are experiencing and will be working with you to find a resolution.

In 2018, a letter was sent to property owners who may be impacted by the Relief Line South. Since that time, the Relief Line South has been replaced by the Ontario Line.

A number of changes have been made between the planned Relief Line South and the Ontario Line, including an extension of and changes to the planned route. While the Ontario Line design is not final at this time, it has developed sufficiently that we are confident that [REDACTED] will not be directly impacted by the construction of the project. In early 2021, we will be sending letter to advise property owners of any changes to anticipated impacts. However, we wanted to share this update with you in advance given the time sensitivity

We invite you to visit our website to learn more about the Ontario Line, which will bring 15.5 kilometres of much-needed rapid transit service to Toronto to make it faster and easier for hundreds of thousands of people to get where they need to be each day. You can also sign up for our e-newsletter to receive regular updates.

We also have staff available to answer any questions you may have. Thank you for your patience and understanding as we work to advance this important project.

Hello [REDACTED]

Thank you for following up

That option was not studied as part of the initial options analysis for the Ontario Line. The proposed Ontario Line route and its 15 stations was selected with a view to making the best use of available funding to increase access to transit, maximize ridership, achieve travel time savings, reduce overcrowding on existing transit services and create better access to jobs. You can read more about the planning rationale for the current Ontario Line alignment in our [Initial Business Case](#).

As previously mentioned, we are protecting for future expansion to the north should additional funding be available.

Best,

Simon

Hi [REDACTED]

Thank you for your question.

The Ontario Line, as it is proposed, will be nearly 16km in length with 15 stations. We will lay a little extra track north of Science Centre Station to protect for future expansion, but at this point in time we are only funded for these stations. Further information about the planning rationale and project benefits will be included in the Preliminary Design Business Case which we expect to release before the end of the year.

Subject: RE: Construction and rail noise!??
Date: Thursday, December 17, 2020 9:33:00 AM
Attachments: [image001.png](#)

Hello [REDACTED]

Thank for your email

Heading north from Cosburn station, the Ontario Line will travel underground along Pape Ave to Minton Place, where a bridge will be constructed in order to cross the Don Valley to travel towards Thorncliffe Park. This route has been selected and reviewed to balance a design that creates a more direct path for the trains while also minimizing property impact. The route includes fewer curves to ensure shorter travel times and also means less noise and vibration impacts for the line as a whole once constructed and in operation. On our [website](#) you will find station-specific maps for the route the Ontario Line will take in the north segment (between Pape station and the Ontario Science Centre station), including one for the Don Valley Crossing.

Metrolinx has a number of measures we can take to reduce and manage impacts to residents and communities, both during and after construction. Some practical steps we take to reduce noise and vibration in residential areas include fitting equipment with muffling devices, using equipment and methods that minimize vibration, and coordinating construction schedules so that noisy operations do not occur simultaneously. Additionally, the Ontario Line is using fully automated, electric trains which will result in reduced noise and vibration than what we are used to from the current GO trains and subway trains.

I hope this helps, and please do not hesitate to let us know if you have any further questions.

Best,

Bismah

Hello [REDACTED]

Thank you for your patience while we looked in to your inquiry

Given the differences between the Relief Line proposal and the current Ontario Line project, some of the property requirements identified previously will change

Previously identified and newly affected property owners will be notified and advised of any property impacts, including owners of properties that were identified in the Relief Line South Environmental Report that are no longer required. Final assessments of the exact extent of impacts will be identified through further design and planning work, as infrastructure requirements and project details are confirmed

If there is any anticipated impacts to your property at [REDACTED], Metrolinx will contact you directly in 2021. We will work collaboratively with our partners, communities and with affected property owners to ensure the lines of communication remain open from planning and design through construction, as we move forward with the Ontario Line

If you have any further questions, please do not hesitate to reach out to us

Subject: Re: Ontario Line

Thanks for sending back the Metrolinx party line on this. Not helpful though and did not respond to my concerns. No actual consultation with the neighbourhood has occurred. None of our concerns have been addressed. Destroying a neighbourhood to save us 4 minutes? Nobody wants this. Nobody believes this work will fit within the existing rail corridor. If this project proceeds as planned, irreparable and needless harm will be done to this neighbourhood. I have yet to see any evidence that "community considerations" factored in. Restoring park space? You cannot restore what you have torn apart and paved over.

As for the Don River issue: you could come above ground in that area and still pass over it, instead of under it. The line does not need to come above ground at Gerrard in order to pass over the Don where the line is planned. I know that many people asked about this as an alternative and I have yet to see a rationale explanation.

We had a plan to improve transit in the area - the DRL. Mr. Ford, as always, decided that he knew better and threw years of planning and already spent resources out the window and replaced it with the Ontario Line. All without any consultation. I'm quite sure that some are benefitting from this, but let's not pretend it is Leslieville/Riverside.

Metrolinx should stop the lies and deception in relation to the Ontario Line. The truth is, it is being built with total disregard toward my neighbourhood and to pretend that it is being done for my benefit only adds insult to injury.

On Dec 18, 2020, at 3:44 PM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thank you for sharing your thoughts with us.

By running the Ontario Line along the existing corridor, we are able to cut construction impacts in half, and get the work done quicker. Fitting the work within the rail corridor also means that we are able to minimize our construction footprint. We understand that community institutions are important to you, and they are important to us too. By building and operating the Ontario Line above ground South of Gerrard means that important community destinations like Jimmie Simpson Recreation Centre can stay open during construction and beyond. We will work continuously to limit the footprint of our work, and where using park space cannot be avoided, we will strive to limit our footprint, as well as work with our contractors and the City of Toronto to restore the park space to its original state or better. We are also taking further steps to reduce disruption by streamlining Ontario Line construction with GO expansion work that is already planned for the rail corridor. As a result, we are able to further reduce impacts and disruption in the community, including dramatically reducing property impacts than if the Ontario Line were tunneled.

Decisions made about the Ontario Line and its route are made with the goals to increase the customer experience, better access to transit, and create more access to jobs, while balancing cost and community considerations. Due to Toronto's geography, the Ontario Line would need to be at a depth of approximately nine stories below ground to pass under the Don River. The Line would then need to continue at that depth to avoid major Toronto sewer infrastructure. At Leslieville station, for example, it would take customers approximately four and a half minutes to get from the station to the train if the line were below ground. Another benefit is that by having surface stations, riders can get where they need to go quicker and easier. This will make for a seamless travel experience for passengers transferring between the Ontario Line and the existing TTC network, while easing overcrowding on Line 1 and connecting more people to high-order transit. The Ontario Line will be further integrated with the TTC by running as a part of the TTC network, accessed with a TTC fare, and customers will be able to pay with PRESTO, as they do today.

Thank you again for writing and sharing your thoughts with us, and don't hesitate to let us know if you have any further questions

Subject: Ontario Line

Just read your latest propaganda - I still see nothing in it to justify or to even attempt to justify the destruction of my neighbourhood for the above-ground portion of the line south of Gerrard. Is that reckless plan still on?

Nor does the utopian picture you paint indicate how the Ontario Line will in fact be integrated with the TTC. For example, will it be a separate fare?

How much of Jimmie Simpson park and the surrounding neighbourhood will be destroyed to make way for this "gift" that is being foisted upon us? What development will be permitted in exchange for funding this portion of the line?

So many unanswered questions remain, but it is clear that the concerns of the people most directly impacted by this above-ground portion have to date been ignored

Shame

Hello [REDACTED]

Thank you for your email

You may have heard that this past week Metrolinx released the [Preliminary Design Business Case](#) for the Ontario Line, and the [provincial government issued](#) Requests for Proposals for two procurement packages for the Ontario Line. As we move through this procurement phase and receive innovative design proposals from successful bidders, we look forward to sharing more information and station designs with the community.

To learn more about how the Ontario Line, please consider [signing up for our e-newsletter](#) on our website to keep up to date with the project.

I hope this helps, and please do not hesitate to let us know if you have any further questions.

Hello [REDACTED]

Thank you for your follow-up question. The short answer is that we don't have all the information to answer your question in detail yet but we'd like to stay in touch and keep you updated as the project moves along.

We are in the process of conducting full and robust environmental assessments for the project. With the measurements taken on Gertrude Place and elsewhere along the alignment, we have an established baseline against which any anticipated impact will be measured. We will be able to share more specific information about the potential impacts (including sound and air quality) and mitigation measures that will be deployed once the Environmental Impact Assessment Report is finalized and released in mid-2021.

[Procurement](#) for the Northern Civils Stations and Tunnels contract, which includes work that will occur along Pape Avenue, will commence in 2022. Through this process, Metrolinx and Infrastructure Ontario will select a consortium of companies to design and build the northern portion of the Ontario Line infrastructure. Bidders will have the opportunity to set out their proposals for how the Ontario Line can be constructed efficiently and innovatively, working within specifications set out by Metrolinx, including limitations on impacts to noise and air quality. We'll have more information to share as the procurement process advances.

We will work with communities to ensure a comprehensive array of measures are in place to address any impacts and to ensure designs are sensitive and respectful of communities.

Please let us know if you have any further questions and we look forward to staying connected.

Hello Bismah,

Thank you for your reply.

The general information about the project is clear and we'd also like to know about any plans concerning [REDACTED] in particular.

Do you have information on plans involving this street?

Thank you.

Regards,

On Dec 22, 2020, at 9:11 AM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hello [REDACTED]

Thank you for your email. Building transit can be messy and disruptive but we know how important a neighbourhood is to residents and will work with our contractors to design and construct infrastructure in a way that minimizes the impact on people who live there.

The [Final Environmental Conditions Report](#) which was released recently and includes feedback received from the public is the first step in our efforts to measure air quality, noise and vibration. It established a baseline against which anticipated impacts of construction and operation of the Ontario Line will be assessed. These assessments, along with recommendations for mitigations, will be included in the Environmental Impact Assessment Report which we expect to release in mid-2021, once the project moves through further design stages. In your area, noise measurements were taken on Gertrude Place, as you will find on page 171 of the [Final Environmental Conditions Report](#). Additional measurements and modeling of anticipated noise and vibration as well as impacts on air quality will be included in forthcoming reports.

Metrolinx has a number of measures we can take to reduce and manage impacts to residents and communities, both during and after construction. Some practical steps we take to reduce noise and vibration in residential areas include developing traffic management plans, fitting equipment with muffling devices, using equipment and methods that minimize vibration, and coordinating construction schedules so that noisy operations do not occur simultaneously. It is important to note that the Ontario Line tunnels will be very deep which will significantly reduce noise and vibration impacts. Additionally, the Ontario Line is using fully automated, electric trains which will result in reduced noise and vibration than what we are used to from the current GO trains and subway trains.

We look forward to staying in touch as the project advances. To learn more about how the Ontario Line, please consider [signing up for our e-newsletter](#) on our website to receive regular updates.

I hope this helps, and please do not hesitate to let us know if you have any further questions.

Good afternoon Josh

I live on [REDACTED] I'd like to know what plans have been made to protect neighbourhood streets such as mine from heavy trucks of any sort, sound and air pollution during construction ?
The "study area" shown on the map on the Metrolinx notice I received (undated) gives me no idea if my street has been considered or "studied"

I would appreciate specific information about my street
Thanks you

Regards

Hi Daryl,

Excellent, thank you for the clarification, much appreciated

Obviously if things change please let me know

Best Regards,
[REDACTED]

On Tue , Dec 22, 2020, 2 00 p m Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi

Based on our current plans, the Ontario Line tunnel is not anticipated to be under your home. At this time, we do not anticipate impacts (encroachments or other requirements) to your property at [REDACTED]. That being said, final impacts will be identified as the project design advances.

Next year we will release the Environmental Impact Assessment Report which will provide more details on potential impacts and mitigations measures Metrolinx will deploy.

I hope this provides some clarity to your question and if you have any more questions or concerns, please feel free to reach out to our team.

Hello Daryl,

Thank you for your communication. A quick follow-up to reconfirm as to not misunderstand or misinterpret, you state "we do not anticipate impacts to your property at [REDACTED] does this mean that there will be no anticipated encroachments or requirements for rented or purchased easements?"

In other words the Ontario Line will not be running under our property at any point?

Thanking you in advance and I look forward to your further clarification.

Regards,
[REDACTED]

Thank you for your question. Construction on the Ontario Line will begin in 2023. Construction on the north segment, which includes Science Centre station, is expected to begin in 2024. You can view the full timeline [here](#) (click "Project Timeline").

An extension to the zoo was not studied as part of the options analysis for the Ontario Line. The current route ends at the Ontario Science Centre but tail tracks will be laid north of the station to protect for future expansion, should additional funding be made available. The proposed Ontario Line route was selected with a view to making the best use of available funding to increase access to transit, maximize ridership, achieve travel time savings, reduce overcrowding on existing transit services and create better access to jobs. You can read more about the planning rationale for the current Ontario Line alignment in our [Preliminary Design Business Case](#).

Please let us know if you have any other questions.

Best,
Sivahami

Hi [REDACTED]

Thank you for your response.

There are no current plans to extend the Ontario Line further west or north of Exhibition Station. The tail tracks mentioned will provide an opportunity to extend the Ontario Line in the future, but Exhibition is the final westernmost station under the current plans. However, the Ontario Line will also provide connections to other transit services. At Exhibition Station, the Ontario Line will connect directly with the Lakeshore GO train line, as well as multiple TTC streetcar and bus routes at the Exhibition Loop, providing riders with various transit options to travel further west or north of the station.

Should you have any further questions, please do not hesitate to contact us.

Sincerely,

Caitlin

Hello [REDACTED]

Thank you for your questions about the Ontario Line. For simplicity, we'll respond to all four in this email.

We appreciate your feedback regarding the station names and will share it with our project team. The current names of stations are simply working names and there will be a community engagement process to select the final names for the Ontario Line stations. Given Toronto's rich history and diversity, we are looking forward to lots of creative suggestions. We also have an Indigenous Relations Office which is engaging with Indigenous communities and First Nations whose treaty lands the Ontario Line will be running on to communicate about the project and to provide opportunities for review and participation as the project advances.

Regarding your question about the Don Yard and how the Ontario Line construction will intersect with current GO and VIA service, significant coordination effort is underway to ensure that GO and VIA service is maintained.

You also asked about the Ontario Line alignment along Don Mills and to the Flemingdon Park station. The location for the tracks on the west side was chosen in order to reduce impacts to number of important properties. Making this adjustment is part of our ongoing work to reduce impacts to residents, business owners and important community services. We factor in residents' feedback wherever we can to make sure the new transit line is built in a way that not only serves local transit riders, but also fits into the communities they call home. An above-ground alignment in this area also helps to reduce property impacts due to the significant amount of land required for tunnel installation but also because the geology of the area would require tunnels that are very deep – it would take passengers four and a half minutes to get from street level to the platform. Surface level stations in this area mean that we can provide a better customer experience, allowing customers to hop on or off the Ontario Line quickly and easily, connecting to other transit or easily getting where they need to go.

In regards to your question about Moss Park station, the [Downtown Neighbourhood Update](#) on Metrolinx Engage displays the planned locations of the Ontario Line station platforms which are below ground. Detailed design and planning work are underway to determine the exact location of the Moss Park station entrance and relation to TTC services, such as the Sherbourne TTC bus. When planning station entrances, we study how to speed up delivery, reduce building costs, minimize community impacts and improve transit connections for customers. We look forward to sharing more information about this and other downtown stations soon.

Please do not hesitate to reach out if you have any further questions.

Nearest Ontario Line Station (Optional): Science Centre

Subject: Station names

Message: Metrolinx has published a policy that station names should be "simple, logical, durable, self-locating, and unique". Further "repetition of key names should be avoided". Based on this the names "King-Bathurst" and "Queen-Spadina" fail. Both station names are double barreled which is not simple. Neither name is unique because each repeats the name of two existing subway stations: "Are we meeting at the King station or Bathurst station?". Both names include repetition of the names of two streetcar lines. What work is being done to find more appropriate names for these stops? What role do indigenous people have in the process of station naming?

Subject: Re: Metrolinx Adverts in my Buildings Garbage

I have to be honest it seems like nothing was done. I don't understand how we don't have enough hospital beds for Covid-19 patients and we need funding for the homeless but people just say raise taxes? How about we take things like this seriously and save millions of dollars in waste. Its debateable that we need these cards at all but to not hold vendors responsible and not hold staff responsible for overprinting by such large amounts seems very selfish. This is why people fight for less government when what we need is a government who cares.

I think I am going to send this story to the media. I am very disapointed with how it was handled. This last email sounds like a "we're done" kind of response.

Hi Bismah

Well that sounds bad enough as it is but just to clarify nothing was delivered to the doors or mailroom or office. I live in the building that I found the postcards. So I don't think anything was left over. I think it was all just chucked without anything being done at all.

For my company we require delivery people to take photos of the hallway after the delivery. Also each house. That way people can be held accountable for what they are being paid to do.

Of course it is likely that the same person hired to do my building did the same for all other buildings.

Subject: RE: Metrolinx Adverts in my Buildings Garbage

Hi [REDACTED]

We were able to get to the bottom of this issue.

In order to bring community awareness to the Ontario Line, we had a contractor deliver postcards to residential buildings and businesses along the future route of the line. The postcards you found were left over at the end of an individual's deliveries. The contractor unfortunately did not return the remaining postcards at the end of their deliveries. As you noted, the wasting of taxpayer resources is not something to be taken lightly. We will be recovering the costs of these discarded materials and reinforcing the importance of a zero-waste approach with anyone who we work with to support future community engagement efforts.

We appreciate that you took the time to bring this to our attention so that we could look into the matter and take appropriate steps.

Please do not hesitate to reach out at any time if you have any questions or concerns,

Hi Bismah!

I found them yesterday January 5th at [REDACTED].

There were many many more in the garbage I just took these because my bag was full.

Please let me know what else I can do.

Thanks!

Subject: Metrolinx Adverts in my Buildings Garbage

Hi Everybody!

I hope this email finds you well.

I am hoping I can be of help uncovering a possible issue of fraud or waste regarding this pile of almost 1000 metrolinx post cards in my buildings garbage.

I imagine that these were meant to be distributed to my building via mail or door to door distribution. They were all found in the downstairs parking lot garbage. I saw a ton of paper and wanted to sort to bring to the recycling, then I noticed that it is from metrolinx and we all paid for these to be printed and possibly distributed.

As an active citizen and business owner I like to know tax dollars are not being wasted and this is a clear case of waste. I hope we can find who did this and make sure it is not happening in other buildings and cancel the contract with whoever's job it was to distribute these.

We must work together to help keep taxes low so we can grow together, and to use the taxes we have efficiently to make for a clean and liveable city for all of us. Lets find out what happened please. Thanks so much for your help. I am happy to do what I can to help with the situation.

Hello [REDACTED],

Thank you for your valuable feedback on the Ontario Line.

The Ontario Line will actually run on dedicated tracks which will be next to but not the same as the tracks used for GO Trains. However, customers will be able to change between GO Trains and Ontario Line trains at the future East Harbour station, selected by whichever route or system is best for their destination.

The proposed Ontario Line route and its 15 stations was selected with a view to making the best use of available funding to increase access to transit, maximize ridership, achieve travel time savings, reduce overcrowding on existing transit services and create better access to jobs. For example, the Ontario Line will decrease crowding on Line 1 by up to 15 percent overall and up to 14 per cent at Union Station (14,000 fewer people) during the busiest hour. It will also extend subway service to high-density neighbourhoods that need better transit – places like Liberty Village, King West, Thorncliffe Park and Flemingdon Park – and have quick and easy links to the TTC's Line 1 and Line 2 subways, GO Transit's Lakeshore East, Lakeshore West and Stouffville GO train services, the Eglinton Crosstown LRT, and multiple TTC streetcar and bus routes.

We appreciate you taking the time to share your thoughts, and we hope you will continue to stay engaged as the project advances. You can do so by signing up for our newsletter on our [website](#), if you have not already.

Please feel free to reach out at any time if you have any further questions or comments,

Message:

Regarding planning of the Ontario Line. I notice that it will run on existing Go track from Gerrard to Eastern Station.

My suggestion is provide an additional "Express Route" from Eastern Station to Union Station that follow the existing track, along with the exiting route from Corktown to Exhibition station.

There are two advantage

- 1. This express route to union can provide extra incentives for commuter to travel on the Ontario line**
- 2. This can push forward the opening day of the Ontario line, without needing to wait for the completion of the downtown stations.**

The "Express route" can be serve available only in rush hour. It can also further extend to the Exhibition Station following the Go track.

Hi [REDACTED],

Thank you for providing your feedback on the Ontario Line

We appreciate your feedback regarding the Corktown, Flemingdon Park and Science Centre station names and will share it with our project team. The current names of the Ontario Line stations are simply working names and there will be a community engagement process to select the final names for the Ontario Line stations. Given Toronto's rich history and diversity, we are looking forward to lots of creative suggestions, especially those from transit enthusiasts such as yourself.

You also suggested an additional station at Queen and Dufferin to service neighbourhoods such as Parkdale. I am happy to share that in order to protect for possible future expansion, current Ontario Line plans have tail tracks being laid west of Exhibition station to protect for future expansion, should additional funding be made available. Similar to Exhibition station, current Ontario Line plans also protect for future expansion at the Science Centre station as well.

In regards to your suggestion of a potential station at Distillery/Cherry Street, the proposed Corktown station is intended to serve the Distillery District and high levels of existing and planned residential development, as well as providing relief to the busy 504 King Streetcar by diverting passengers to the Ontario Line. We are working closely with the TTC to develop complementary plans for future transit expansion, including for the Portlands.

To provide some more details on the planning process, Ontario Line station locations were studied with a goal of increasing access to transit, maximizing ridership, achieving travel time savings, reducing overcrowding on existing transit services and creating better access to jobs. These criteria are balanced by cost and other community considerations. If you want to learn more, you can read the [Preliminary Design Business Case](#) (page 41 provides an overview of every Ontario Line station with a rationale for the location and proposed transit connections). To stay up to date with the latest information, I hope you will consider signing up for the Ontario Line [online newsletter](#) if you are not already subscribed.

Thank you again for your suggestions and feedback. Feel free to reach out should you have additional questions or feedback to provide.

Best,
Daryl

Submitted values are:

Your name: [REDACTED]
Your e-mail address: [REDACTED]
Nearest Ontario Line Station (Optional): Queen/Spadina
Subject: Feedback/Input
Message:
Hi,

I wanted to take a moment to provide feedback on the Ontario Line alignment as proposed. I live near Queen/Spadina station and I am very interested in transit so wanted to air my observations, regardless of whether they're good ideas or not!

1. King-Liberty GO Station - Although not part of the proposed line, I view this proposed GO station location as less beneficial to the network and a duplication of service when the Liberty Village neighborhood will be serviced by both GO and now a subway station to the south. It would be more helpful if the station was located at Queen and Dufferin - there is more space to accommodate a new station and could serve otherwise poorly serviced neighborhoods like Parkdale and the developments which are approved or planned near that intersection. It would also provide connectivity with the 501 streetcar, otherwise requiring transfers at Queen and Spadina. Could improve the network connectivity.

2. Corktown Station - This station isn't actually in Corktown anymore. A different name should be used to refer to it (Parliament/ Berkeley?). It's a bit confusing. :)

3. Cherry/Distillery Station - It seems like there is a major missing piece in the plan. Where is the station at Cherry Street? Although it's largely unpopulated in its existing condition, it seems like a missed opportunity for the thousands of future transit users who would make use of a station at Cherry - future West Don Lands residents, future East Bay Front/quayside' residents, and future residents of the Portlands/Villiers Island who will likely ride a new Cherry streetcar and would benefit from a transfer at a Cherry Station. This is a critical connection for future users of the Ontario Line. I go often to Cherry Beach and the Portlands and it's currently a nightmare to get there on transit. People living in the Portlands will be left out of the transit network or forced to ride a slow Queens Quay East streetcar (if that ever happens) in order to get into the downtown. I recognize that it might be a tricky station to build, but it seems like it would have immense long-term public benefit.

4. East Harbour Station - I think the revised station and transfer with GO is way better than the previous Relief Line!

5. Flemingdon Park Station - This station is now at the Science Centre yet the station further away on the Crosstown is called Science Centre. The naming of stations seems confusing again as transit plans have evolved, especially with the OL Science Centre station now being north of Eglinton! You should consider renaming the station at Eglinton that will be the transfer station (although I recognize it might be a little late for it). Ideally transit station names help you get to where you want to be going. :)

6. Science Centre station - In the Big Move, potential future use of the freight CP rail line near this station was indicated as an opportunity for future passenger service. How could that transfer connection be future-proofed under the current plans for the OL?

Thanks!

Hello [REDACTED],

Thank you for your email and your questions. We've gotten to know your street a little bit and given its proximity to the rail corridor, we understand that residents will have questions about how their property and neighbourhood will be impacted.

We expect that much of the new infrastructure required for the Ontario Line will fit within the existing rail corridor and we will be adding effective, well-designed noise barriers that will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. Final assessments of the exact extent of impacts to individual properties are being identified through further design and planning work, as infrastructure requirements and project details are confirmed. We will reach out individually to impacted property owners once we have a firm understanding of what's needed and keep them updated from planning and design through construction. Metrolinx will only be acquiring property that is absolutely necessary to get transit built and our preferred approach is to enter into direct negotiations with a property owner to reach a mutually agreed-upon purchase agreement. Even if the expropriation process is initiated, we will still continue negotiating and remain committed to providing fair market value and reasonable compensation for all property rights that are required.

More details regarding anticipated noise and vibration impacts and recommendations for how we will mitigate them, including noise wall details and aesthetics, will be shared for public consultation in an upcoming environmental report this summer.

Don't hesitate to reach out if you have any further questions. If you haven't already, please consider signing up for the Ontario Line [online newsletter](#) as it is a great way to stay updated about the Ontario Line.

Hi [REDACTED],

Thank you for writing to us again with your suggestions, and to TransitTO for copying us into the conversation. We responded to your similar question on January 22nd, and we're happy to provide you the latest updates.

As we have discussed before, the route which is about 16 kilometres long between Exhibition and Ontario Science Centre is the plan that Metrolinx is pursuing. For now, this includes 15 stations. Should additional funding be available in the future, there are protections in place for possible expansion.

In regards to your suggestion about private financing, I want to reiterate the Ontario Line is using a public-private partnership (P3) procurement model. By utilizing a P3 approach, the Ontario line can access private financing, expertise and innovation. Other benefits include increased budget and schedule certainty. To learn more about the P3 approach, you can read the [Preliminary Design Business Case](#) (Procurement Model Overview, page 114) and the [procurement section](#) of our online engagement hub.

Feel free to reach out should you have further questions,

Hi [REDACTED],

Thank you for your inquiry. I've copied Metrolinx's Ontario Line team (ontarioline@metrolinx.com) to also consider and address your inquiry.

As part of the [Ontario-Toronto Transit Partnership](#), the City and the Province established a [Memorandum of Understanding \(MOU\) for Transit-Oriented Development \(TOD\)](#). The TOD strategy, spearheaded by the Province of Ontario, focuses on leveraging opportunities through which the private sector, in cooperation with public sector entities, would deliver some critical elements of station infrastructure and intensify development around proposed transit stations.

As the Ontario Line is identified as a priority transit project, the Province intends to pursue TOD to generate the following outcomes:

- Exchange of Value: Creating new investment and revenue opportunities between the public and private sectors, where possible.
- Increased Transit Ridership: Developing transit-oriented communities in which residents choose transit as their first mode of transportation.
- Improved Customer Experience: Enhancing station areas to make the interaction with the customer seamless (e.g., through creating desirable commerce and retail concourses, etc.).
- City Building: Developing communities that provide residents and workers with new places to live, work and play.

Moreover, there are a number of other transit expansion projects currently underway in the City of Toronto, at varying phases of planning, design and construction. Collectively, these projects will enhance and extend the rapid transit network in the City and region and provide seamless mobility options to people and key destinations. For more information on Transit Expansion projects in Toronto, visit www.toronto.ca/transitto.

Thank you,
Transit in Toronto Project Team

Hi Gang,

Is there any way the Ontario Line can have public private support that the REM in Montreal is getting?

Would making the line longer with branches attract private money?

I wonder with the following extensions and branches if the OntarioLine could attract a pension

fund.

My thoughts are going west to the top of Humber Bay with a branch west along the lake shore and a branch north along Jane.

Going east the line would continue north along Don Mills past Sheppard with a branch along Sheppard.

All lines were previously discussed in Transit City. This project would tie everything nicely together and be a larger project to pitch to investors.

Cheers,

A solid black rectangular box used to redact a signature.

Hello [REDACTED]

Thank you very much for taking the time to share your thoughts. We know that your neighbourhood is important to you, and our plans have been updated based on what we heard from the community. I'd like to share some information about the project and how we plan to manage impacts while bringing significant improvements to transit in Toronto.

By building at-grade through the shared rail corridor in Riverside, we are able to cut construction impacts in half. A tunneled approach is time-consuming and disruptive due to the amount of excavation that is required. In areas where there are practical alternatives, such as an already Metrolinx-owned right of way, we can reduce construction impacts to communities and finish the work in shorter timeframes. It also allows us to significantly reduce the amount of property we need in order to accommodate near-term construction and long-term operations, not to mention avoiding considerable impacts to local traffic and businesses when you consider the major excavations and adjoining construction laydown areas.

Still, we know that construction is disruptive, which is why we will be coordinating previously announced GO expansion work with Ontario Line construction to avoid multiple disruptions in the community while still containing our work to the existing rail corridor – staying almost entirely within its current footprint. To better shield communities living alongside the shared corridor from all rail operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor. A more detailed analysis will be shared for public consultation in upcoming environmental reports which will be released for public consultation.

We hope that you will let us know if you have any further questions or concerns. If you haven't already, you may also wish to sign up for our [e-newsletter](#) to stay engaged with the project.

Thank you,

Simon

Hello [REDACTED]

Thank you for writing us again with your suggestions. We appreciate your time and interest in the Ontario Line and will share your suggestions with our team.

As we have discussed before, with currently available funding, the alignment of 15 stations between Exhibition and Ontario Science Centre is the one that Metrolinx is advancing. However, in order to protect for possible future expansion, current Ontario Line plans have tail tracks being laid west of Exhibition station and at the Ontario Science Centre station, should additional funding be made available.

In regards to your suggestions about private financing, you may be interested in knowing that Metrolinx and Infrastructure Ontario will use a public-private partnership (P3) procurement model. This will ensure the Ontario Line is delivered efficiently and cost effectively from construction through operations with access to private financing, expertise and innovation. The P3 approach will leverage private sector innovation in design and construction and increase budget and schedule certainty. If you want to learn more about the P3 approach, you can find more information in the [Preliminary Design Business Case](#) released last year.

To stay up to date with the latest information, I hope you will consider signing up for the Ontario Line [online newsletter](#) if you are not already subscribed.

Thank you again for your suggestions. Feel free to reach out should you have additional questions or feedback to provide.

Subject: Private Investment

Hi Gang,

Is it too late to get private investment involved similar to the REM in Montreal by making the project much bigger?

In an earlier email to me, you mentioned there are future considerations for the Ontario Line.

I am suggesting the following for investors' approval with government considerations:

As a person who likes to draw lines on a map with data, I would like to use prior Transit City information.

I would like you to consider extending the Ontario Line north past Finch with a branch along Sheppard East toward the zoo with a branch north off Sheppard toward Malvern. The Finch West LRT east extension now has a destination, extended east toward Don Mills and the Ontario Line. Maybe further east.

I would like you to consider extending the Ontario Line west along Lakeshore Road past the Humber Loop and a branch north to Jane at the top of Humber Bay.

Most of these projects would be above ground, elevated and occupying Transit City routes with frequent faster higher order trains in their own right-of-way with automation and platform baracades.

This project would be much more appealing to investors and the public.

Thank-you for your time and good luck.

Hello [REDACTED],

Thank you for your email and interest in the Ontario Line

The Ontario Line will cross the Don River and Don Valley Parkway near Eastern Avenue, just southwest of Corktown Commons Park and connect to a future GO/Ontario Line station at East Harbour-

More details about this rail bridge expansion can be found in the [Fast Neighbourhood Update](#) on Metrolinx Engage by selecting 'Lower Don Bridges' from the drop down list

To stay up to date with the latest information, I hope you will consider signing up for the Ontario Line [online newsletter](#) if you are not already subscribed

Hi [REDACTED],

Thank you for sharing your feedback about the First Parliament Site.

As part of the Ontario Line project, Metrolinx will be working with the City, the Ministry of Heritage Sport Tourism and Culture Industries and the Ontario Heritage Trust to ensure an outcome for this site that everyone can be proud of.

While the First Parliament site will be used during construction of the nearby Ontario Line station serving Corktown, Metrolinx will be making every effort to minimize impacts on cultural and heritage sites. We work with experts before, during, and after construction to ensure cultural and heritage spaces are treated with care. Any ground disturbing activities on the First Parliament Site will only begin once robust archaeological assessments are completed. Metrolinx will ensure any archaeological findings or historical features will be properly documented or conserved and, where possible, made accessible for the public to learn more about. All of this work will be completed by professional archaeologists licensed under Section 48 of the Ontario Heritage Act. To learn more, you can read the [Downtown Neighbourhood Update](#) on Metrolinx Engage and select 'Corktown' from the drop down category. We also published a [blog post](#) about how Ontario Line plans will protect and pay tribute to the legacy of the First Parliament Site. If you have not already, consider signing up for our [online newsletter](#) where updates on the First Parliament Site will be shared with the community.

Please do not hesitate to reach out if you have any further questions,

Postal/Zip Code:

Comments: Mr. Ford - I just read in the paper that Metrolinx wants to use the First Parliament site in Toronto for a subway station. I am totally opposed to this. It is bad enough that you are demolishing heritage buildings in the east end now you want to destroy the site of the First Parliament in Toronto? This is a site of provincial and national importance. There are remnants underground that survived the burning of the site by the Americans in the War of 1812 and you want to totally destroy it for a transit station? Unacceptable. This is really going too far. A properly interpreted site would be a major tourist attraction to this city. This site is the cradle of our democracy. Why would you want to destroy it? Please think about this. This is the wrong thing to do. This is a mistake. This can't happen. Look at another site for your transit stop. Please provide me the assurance that you will work with the city and the heritage community to properly protect and commemorate this site fitting its provincial and national significance. Do you want to be the Premier who is remembered for destroying this highly significant heritage site?

[REDACTED], I would request a letter response to this please.

The First Parliament site**

Message:

I am writing to reinforce the importance of the First Parliament Site and the need to preserve it. And not have the Ontario Line ruin the plans for it.

The First Parliament site is such an important part of our history, not only to Ontario but to the country. Not only is it so important in the history of the war of 1812, but it was also the place where the first act in the British Empire to abolish slavery, was signed in 1793. To honour this site is honouring the men who fought to keep Canada in Canada and to freeing people from slavery.

This important site also needs to be preserved due to it being our first Parliament, as well as its history following. A lot of work has already been put in place in order to honour this significant part of our history with plans to commemorate it. If this was America it would have been done long ago.

This site should not be used for anything other than as an historical site. So little of our history remains and this is a VERY significant one.

This should have consultation with the city and with other involved parties.

Hello [REDACTED]

Thank you for sharing your thoughts on the Ontario Line, and where it will run above ground near your home. We recognize and understand how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and Riverside and Leslieville residents. We hear your concerns about the proposed noise walls, too.

We heard from you and your neighbours about our plans to bring the Ontario Line above ground, and our updated plans keep the line largely in the existing rail corridor, reducing the impact on parks and your neighbourhood during construction, while leaving more parkland when construction is done.

On the sound barriers, we are still developing our initial designs. The goal is to use well-designed sound barriers, landscaping, trees and greenery to reduce sound from the corridor and provide a pleasant aesthetic. More information, including an opportunity for virtual public open houses, will be shared through our e-newsletter in the coming weeks.

We are committed to designing infrastructure that is a good fit for your community and will work with our contractors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with [our Vegetation Guideline](#).

Thank you again for taking the time to write and share your concerns. Our plans have been updated based on what we heard from the community so far. We will continue to share more mitigation plans as soon as we have them. You can learn more about the latest updates [here](#).

Subject: The Ontario Line and its path of destruction - please help

Hello,

I live on [REDACTED] here in Toronto. I am an active daily commuter on public transit. I am not against the expansion of public transit in any way. I am an advocate, but one for smart planning. I also cherish what feels like not quite enough green space in this city. For us residents of Riverside, Riverdale and Leslieville (speaking only for my neighbourhood though others are negatively affected as well), the planned construction of the Ontario Line will reduce the green space we have and replace it with an ugly high wall. There are many other issues that come with the proposed aboveground plan for the OL, but today, I am only speaking on this one. Do not fund an aboveground plan, I refuse to call it a solution. It should be reconsidered and put underground where it belongs. Keep our green spaces and

don't do what the attached images will leave us.
thanks

It has come to my attention the further work is planned early next at Various locations along and adjacent to Pape avenue

I have already left a message asking for the notices of this work to be delivered to all the householders along the route.

I am sending this note to ensure that your work crew are aware of ongoing construction at the North West corner of Pape and Riverdale. Many of the workers at this site park both on Pape and along Riverdale everyday.

Hi [REDACTED],

Thank you for following up and providing your feedback.

I understand your concern given your building was built in the 1870s and is of historical significance. In the Ontario Line [Environmental Conditions Report](#), the series of row houses from 53-79 Berkeley Street are recognized as heritage properties ([see Appendix B5, page 32, reference# OLS-042](#)). As further studies are completed and the Environmental Impact Assessment Report is prepared, a Heritage Detailed Design Report will be completed. This will give your community a better understanding of the full range of anticipated impacts and associated mitigation options Metrolinx can deploy.

To answer your question about the current route, it was updated for a few reasons. By moving construction off the street and into where the Staples is currently located, we can ensure the popular King streetcar and Parliament bus continue to operate throughout construction. In addition, by positioning the station to the east, it will speed up construction and reduce costs. That being said, I recognize your concern with current route. Our commitment to you will be open lines of communication as we move forward with planning and design, through construction.

In regards to your property, I want to reiterate that Metrolinx will reach out to property owners directly once property impacts are finalized. Should any property rights be required, Metrolinx is committed to providing fair market value and reasonable compensation. The [Expropriations Act](#) provides guidance on how compensation is determined and we work with qualified appraisers and other experts if this process is initiated.

I hope this helps and happy to continue the conversation,

Hi Darryl,

Thank you for your response. My concern of course is that even a subway tunnel deep underground and using the latest technology will still result in noise coming into my building. It is also likely to cause vibrations that could damage the building structure. My building is a row house built in the 1870's and its condition is fragile, so it could easily be affected by the construction and/or on-going operation of the subway. In fact, the whole strip on the east side of Berkeley Street between Adelaide and King is a series of row houses built in the 1870's to house Irish workers new to the country. These workers were from County Cork in Ireland, which gave my neighbourhood its name, Corktown. The row houses are heritage buildings and are of historical significance, being some of the last vestiges of Old Toronto.

I know that the original proposal for the subway route entailed a sharper angle between Queen and King which would put the route on the other side of Berkeley until it intersected with King. This route would not have directly affected my property and most of the other properties on the east side of Berkeley. Is there any chance that the final route will revert to the original proposal or is the revised route down the east side of Berkeley set in stone? A reversion to the original plan would do much to address my concerns with the subway project.

If Metrolinx decides to run the subway underneath my property then my preference would be that Metrolinx purchase the property from me at its fair market value. I am not satisfied that a subway running under my property would not make noise, cause damage, or otherwise compromise the useability or market value of the building.

Yours truly,

[REDACTED]

Hi [REDACTED],

Thank you for reaching out to us.

I recognize the importance of your property to you and the wider community you serve. Based on our current plans, Metrolinx anticipates that the Ontario Line will pass deep beneath [REDACTED]. As we are still in the stages of planning for this project, property requirements have not been finalized. Once property requirements are finalized, we will contact impacted property owners directly. We will work collaboratively with our partners, communities and with affected property owners to ensure the lines of communication remain open from planning and design through construction, as we move forward with the Ontario Line.

If you want to learn more about the Ontario Line station serving Corktown, please read the [Downtown Neighbourhood Update](#) in our online engagement hub and select 'Corktown' from the drop down list. While there will be trains running underneath your property, the Ontario Line will use the latest vehicle

design and rail technology, resulting in significantly less noise than what we are used to from the TTC's current subway trains.

Finally, I want to introduce myself. My name is Daryl and as the Ontario Line project advances, I am focused on engaging the community around the Ontario Line station serving Corktown. If you have not already, consider signing up for our [online newsletter](#) to receive updates about the project as they become available. Please reach out should you have any further questions about the Ontario Line.

Subject: Pile driving activity by the Don River

Good morning, Councillor

Can you tell me what construction project is going on in the indicated area below? It is on the west side of the Don, across from my building at

They've had a big pile driver there, and for a week or so they've been pounding away at exactly the same spot.

At first I thought maybe they were driving infrastructure columns along the perimeter for a new building. But they're just targeting that one particular spot.

So, I'm curious about the purpose of the project, and equally interested to learn when the somewhat distracting pounding will end.

Thank you,

Hi [REDACTED]

Thank you for reaching out to us.

At this time, station entrance locations that customers will use to access the Ontario Line are still being determined. At King/Bathurst, the underground station platform is on a diagonal and shifted to the southeast corner of the intersection which avoids construction impacts to the historic Wheat Sheaf Tavern. We expect to be in a position to share more details over the next couple months.

As more information is available, we will update the [West Neighbourhood Update](#), select 'King/Bathurst' from the drop down list, and share updates through our newsletter. If you haven't already, consider signing up for the [Ontario Line newsletter](#) so you receive the latest information.

Please reach out should you have any further questions,

Hi [REDACTED],

Thank you for reaching out to us.

With currently available funding, the route Metrolinx is advancing includes 15 stations between Exhibition and Ontario Science Centre, with no plans to extend further north along Don Mills Road. That being said, tail tracks will be laid north of the Ontario Science Centre station to protect for future expansion, should additional funding be made available.

The proposed Ontario Line route was selected with a view to making the best use of available funding to increase access to transit, maximize ridership, achieve travel time savings, reduce overcrowding on existing transit services and create better access to jobs. You can read more about the planning rationale for the current Ontario Line route in our [Preliminary Design Business Case](#). If you have not yet, consider signing up for our [e-newsletter](#) so you receive all the latest updates on the Ontario Line project.

Feel free to reach out should you have further questions,

Subject: RE: Metrolinx's gross hypocrisy

Hello [REDACTED],

My apologies again for not seeing your message until after you resent it. Thank you for the opportunity to provide some information regarding plans for construction of the Ontario Line in your community.

The planning premise of the Ontario Line is fundamentally different than the Downtown Relief Line. The Ontario Line will operate underground, at-grade and on elevated structures. Because of this, it is able to cover a larger geography, provide more stations and expanded network integration, and generate greater benefits for travellers -- expanded access to recreational and economic opportunities, including for lower-income Torontonians.

Metrolinx sees significant benefits for customers in a surface transfer at East Harbour, Leslieville and Gerrard stations. Surface stations in this area will save customers significantly more time in their journeys than underground stations because they would have to be almost 40 metres deep in order to avoid sewer mains. The surface impacts of constructing stations underground is significant. By building and operating above-ground in the Riverside and Leslieville area, we can reduce construction impacts on area residents and businesses and finish the work in shorter timeframes. Yes, there will be some impacts to the adjacent parks but we expect they can be managed and, in fact, that we can help improve the enjoyment of the parks by adding attractive noise barriers with vegetation to break up the visual impact and new tree plantings. We will also be working with the City of Toronto and Toronto Region Conservation Authority to develop a robust tree replacement program.

For the portal north of Gerrard Street East, we are able to use nearby parking lots and some existing commercial space which means we don't need to acquire residential property in this area and are able to minimize construction disruption to neighbours in the area. This is not possible in the area between Eastern Avenue and Queen Street given the residential density. This is one of the reasons why an above ground alignment in this area is preferred.

We are in the process of conducting full environmental assessments for the project, and we are working closely with the Ministry of the Environment, Conservation and Parks to

ensure we strictly follow all applicable guidelines and regulations. The draft assessment reports will be released for a 30-day public review period and will include requirements for thorough construction and traffic management plans that require construction teams to minimize the impacts on the neighbourhood in which they will be building with a particular focus on sensitive areas such as Pape Avenue Junior Public School.

We are committed to a regular dialogue with the community, sharing updates and seeking feedback throughout the project. Because we have segmented our procurements, there is not yet as much detailed information to share on the portion of the Ontario Line east of the Don River, including the portal at Gerrard. However, we will share information with the community as soon as it is available and do our best to answer any questions you may have along the way.

Could we setup a time to discuss your concerns by phone sometime next week? Please let me know the best time and way to reach you.

Thank you again for your patience.

Dear Mr. Vester,

I sent this to Josh Vandezande more than a week ago, and have not had even the courtesy of acknowledgement, let alone a reply.

For an organization that claims it is "all about communication," you seem to have a great facility for

ignoring communication that you don't like. But that is pretty typical of the way you ignore and overlook the groups in the communities you are disrupting.

I am therefore re-sending this email to you for reply.

I look forward to hearing from you.

Yours sincerely,

[REDACTED]

wrote:

Dear Mr. Vandezande,

A friend of mine forwarded a Metrolinx blog that exposes your organization's gross hypocrisy.

Here's the blog post:

<https://blog.metrolinx.com/2021/02/12/the-most-common-question-from-leslieville-and-riverside-why-cant-metrolinx-run-the-ontario-line-underground/>

In this post, one of the things your organization says is:

Before a subway line could be dug under the existing GO tracks, a portal would need to be built between Eastern Avenue and Queen Street. A portal is a large reinforced concrete structure that holds the earth in place to provide an opening for trains going in and out of the underground tunnel.

What this post fails to say is that this is **precisely** the kind of portal that Metrolinx is proposing to build at Gerrard near Carlaw on your current, back-of-the-napkin plan for the Ontario Line. But perhaps your writer just happened to forget that little fact.

And such a portal would only need to be built if Metrolinx insists that the Go and Ontario lines all meet at the surface, rather than have commuters move up or down from one line to the other, as they do at, say, Yonge and Bloor. You say that having the lines on the same level will save commuters time. What you do not say is how many person-**centuries** of time will be lost by attempting to do it this way. And you do not seem to care how much disruption and destruction your proposal will produce on the surrounding community.

Further, you say that building a line underground would also be disruptive. This is no

doubt true, but what you do not bother to say is that building it above ground would be substantially *more* disruptive than following the TTC's original plan to have a tunnel 30 meters underground.

The TTC plan for the Downtown Relief line – which, by the way, would have already begun construction, according to the last plans – would not have destroyed the parks in our area, would not have required the destruction of vast numbers of mature trees, would not have endangered pedestrians, disrupted the local bus routes and car travel, and would not have required the steady stream of diesel-belching dump trucks running in and out of the area around the Pape School that your plan does.

Your blog is consistent with Metrolinx's so-called "community consultation", which consists of alternatively ignoring the community, attempting to pacify us with mealy-mouthed press releases and blogs that fail to address the issues, and misleading statements, such as the one implying that the Jimmie Simpson Park would be spared when you actually have said nothing of the sort.

Moreover, before you have even started, you are already announcing delays. Your assurances that construction will all be short and sweet, and lovely when it's done, are nothing more than camouflage.

This forces us to believe that your Ontario Line will be at least as much a fiasco as the Eglinton Crosstown Express has been, bankrupting local businesses, disrupting the lives and safety of the community, and ignoring the needs of residents and businesses in favor of the contractors and developers who benefit from being involved.

Your claim that the dozens of mature trees that will be cut down will be replaced is awfully hollow when your current plans indicate that it will be at least a dozen years before replacements are put in place. And, of course, the trees that are used to replace the mature trees will be saplings that will take at least another dozen years to become full-sized trees. That being so, how comforted are we supposed to feel about your vaunted plans, given that many of us will not be around to see replacements of comparable size or beauty?

So, if your organization truly wants to engage the community, I suggest, just for starters, that you stop issuing these hypocritical, mealy-mouthed blogs. All you are doing is proving to us that you are prepared to speak out of both sides of your mouth at the same time.

I look forward to a reply.

Yours truly,

Hi [REDACTED],

Thank you for your questions and your feedback, they are very valuable to us.

The planning premise of the Ontario Line is fundamentally different than the Downtown Relief Line. The Ontario Line will operate underground, at-grade and on elevated structures. Because of this, it is able to cover a larger geography, provide more stations and expanded network integration, and generate greater benefits for travellers -- expanded access to recreational and economic opportunities, including for lower-income Torontonians.

You're right that Metrolinx sees significant benefits for customers in a surface transfer at East Harbour, but this is also true at Leslieville and Gerrard stations. Surface stations in this area will save customers significantly more time in their journeys than underground stations because they would have to be almost 40 metres deep in order to avoid sewer mains.

The surface impacts of constructing stations underground is significant. By building and operating above-ground in the Riverside area, we can reduce construction impacts on area residents and businesses and finish the work in shorter timeframes. Yes, there will be some impacts to the adjacent parks but we expect they can be managed and, in fact, that we can help improve the enjoyment of the parks by adding attractive noise barriers with vegetation to break up the visual impact and new tree plantings. We will also be working with the City of Toronto and Toronto Region Conservation Authority to develop a robust tree replacement program.

We hear your concerns about the lack of information at this moment. As our design work and more studies are completed, we will be sharing more information with the community. There are virtual townhalls planned and more environmental reports which will be shared so residents can provide feedback and help guide the look and feel of the Ontario Line in their neighbourhood.

In terms of the portal, even the lighter Ontario Line trains are limited to a maximum grade, or steepness. Due to this restriction and the location of nearby utilities, the portal would need to be built in the area of Eastern Avenue and extend as far as Queen Street. As the blog stated, the impacts to the community would be significant.

Thank you for taking the time to provide your feedback. We hope you will continue the conversation with us.

Hi Simon,

I appreciate your continued efforts to respond to my concerns. I wish I found your arguments more convincing.

First, I understand all transit projects are different. However, that doesn't explain why you have chosen this one and stick to it as the only option.

Any construction through Leslieville/Riverside will be disruptive. We know that. The above ground route will be permanent disruption rather than temporary. We survived the building of the Leslie st barns and the expansion of the Connaught yard already. We're tough - maybe a bit weary. At least we were consulted on those.

The blog emphasizes the importance of it being above ground because the East Harbour development wants it that way. We know this is a major factor for Metrolinx and probably carries a great deal more weight than the homes and businesses that will be disrupted with the current plans.

The argument on the portal: please clarify - one of the arguments we were given for the lighter OL cars was that they could climb a steeper grade than a regular subway car. So what is the difference in grade needed for a subway train and the new improved OL trains? We are not arguing with the possibility of the train going above the river... just where it will come up from underground.

Your entire argument is based on putting the OL under the existing track. If it's underground, it does not have to follow the existing track. Surely there were some preliminary studies of where the relief line was supposed to go?

Phrases like "we are still developing our initial designs..." "our early studies..." "If a tree does not need to be removed"... are not very reassuring. There are obviously many unknowns still. It feels like Metrolinx is making it up as it goes along. What will you do if the "robust environmental assessment" (presumably according to the new 'build-it-fast' legislation) shows there are problems?

You claim to be working closely with city staff, but have ignored our elected officials... also not very reassuring. And how have your plans been updated after hearing from people in the neighbourhood? Were you NOT planning sound barriers, protecting at least some parks and

planting trees before we spoke up?!!!

Thanks for your time, but I don't think my questions have been answered.

[REDACTED]

On Feb 23, 2021, at 10:21 AM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thank you sharing your thoughts and concerns with us. We understand how important minimizing disruption and protecting greenspace are to you and your neighbours.

We hear your concerns about running the Ontario Line above ground in Riverside. It's important to recognize that all transit infrastructure projects, including the Eglinton Crosstown and the Ontario Line, are very different from each other and therefore been planned and designed very differently. For the Ontario Line, our analysis shows building an underground tunnel east of the Don River would be extremely disruptive to the Leslieville and Riverside communities. Going underground requires that we also build a tunnel portal which means buying homes along McGee and Saulter Streets, and major impacts to local businesses, most of the parks in the area, and community organizations nearby. By using the existing rail corridor, we are able to reduce property impacts, provide a great customer experience, and build the Ontario Line quicker. If you haven't already read it, our recent [blog post](#) has more detailed information.

Our updated plans keep the line largely in the existing rail corridor which reduces property impacts by half compared to tunneling. When it comes to sound barrier and station design, we are still developing our initial designs but our goal is to use well-designed sound barriers, landscaping, trees, and greenery to reduce sound from the corridor and provide a pleasant aesthetic for the neighbourhood. Our early studies indicate our noise and vibration mitigation measures will effectively eliminate noise and vibration from the Ontario Line and reduce the noise from current GO trains.

Regarding Jimmie Simpson Recreation Centre, our updated plans will avoid impacting the centre so it can continue to operate during construction and beyond. Our plans also reduce the impact on parks in the neighbourhood during construction, while leaving more parkland when construction is done. On vegetation removal, if a tree does need to be removed from a park to ensure safety during construction and operations, we will work with the City on vegetation compensation that meets or exceeds the requirements of applicable bylaws and regulations.

We are in the process of conducting a full and robust environmental assessments for the

project, and we are working closely with the Ministry of the Environment, Conservation and Parks to ensure we strictly follow all applicable guidelines and regulations. The early works environmental report for the shared rail corridor will be released for public consultation later this year, followed by the Environmental Impact Assessment Report, which will look at the impacts we expect during construction and operation of the line and the recommended mitigations to protect residents and businesses.

We are working closely with City of Toronto staff to plan this project at every step along the way. Our plans have been updated based on what we have heard from the community so far and we are looking forward to opening our community office in Riverside so we can continue our dialogue with the people who live and work there. Thank you again for taking the time to write and share your concerns.

Sincerely,

Simon Granat

Thank you for your reply.

However, I can't see how any decisions you have made put the community interests first. There hasn't been any meaningful consultation with the community. Even our elected municipal representatives and our zoning plans seem to be ignored by the province.

"Property impacts" might be worse while burying the line, but property impacts will be permanent with the current design.

Tunnelling (or burying) might be more complex, disruptive work, but it seems it's fine for Etobicoke, Scarborough and the central part of the Eglinton line where above-ground routes have been nixed.

Shorter construction time results partly from the Province's relaxation of environment study requirements, and enhanced powers of expropriation. Even with that, no one really believes your timeline.

Above ground stations will also take out a chunk of space available to the community - I

heard at first they would be single cars, which would not require such big platforms, but since then I have heard they will be multi-car and hence, longer platforms. Residents may be able to travel further, and faster, but that is not likely to benefit the residents of our neighbourhood who are expected to bear the brunt of the permanent disruption. The entire concept is to take pressure off subway Line 1 from the influx of commuters coming in from the East. Many of us chose to live downtown - often at additional sacrifices - so that we could walk, cycle, or take a short street-car ride to downtown. I grant that the residents north of the Danforth might appreciate it - especially the ones who live where there will be a tunnel.

Thanks for the reference to the Metrolinx Vegetation guidelines. However, after a quick read, I'm not sure how this will apply, for example, to the rows of trees on either side of the track between Dundas and Queen streets, where the tracks are currently hidden behind rows of mature trees. Does the 7 metre (or is it 4 metres - there are different measures in the report?) clearance apply when there is a wall? 7 metres vegetation-free through there will take quite a chunk out of the parks. One of the responses to removing trees from public land is to compensate the municipality (how much?) and download the responsibility to them, for a project they had no say in. It looks like seedling trees will be provided, when provided at all, and these will probably not mature until the tracks have outlived their lifespan, and will likely NEVER hide the ugly sound barriers.

My home will not be directly affected as I live closer to [REDACTED]. However, residents along that route are likely to find their homes un-livable, even if they are not expropriated. I am a frequent user of Jimmy Simpson recreation centre; I've enjoyed many festivals in that park; I regularly shop and dine along Queen St. East - and I feel I won't with a monstrous six-lanes of tracks with massive walls and trains going by every minute or two. It will very much hurt the neighbourhood forever.

If you treated all neighbourhoods equally, I might feel we needed to step up and sacrifice too. But clearly, the folks who live along the Eglinton west extension and Scarborough - in spite of their lesser density - deserve better treatment than we do. I'm sorry, but I still don't see this as anything but a lose-lose deal for our neighbourhood.

On Feb 19, 2021, at 12:47 PM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hello [REDACTED],

Thank you for your email and sharing your thoughts on the Ontario Line within the Riverside and Leslieville neighbourhoods.

We understand that your neighbourhood is important to you, it's important to us as well. Design decisions have been made that put community interests first. The Ontario Line route will result in fewer property impacts, quicker construction, and a better customer experience.

There is much more than financial considerations to consider when it comes to going underground at Leslieville and Riverside. Tunnelling is time consuming, complex and disruptive work, especially when considering the need for additional laydown areas, building emergency exit buildings, utility relocates, and major excavations. The plan to fit the Ontario Line almost entirely within the already existing rail corridor, is a practical alternative that will drastically reduce property impacts and have much shorter construction time, compared to tunneling.

The above ground stations have a benefit for customers, too. Due to Toronto's geography and underground infrastructure, a tunnelled route would need to be approximately 38 metres below ground. We estimate that it would take customers approximately four and a half minutes to get from Queen Street East to the platform at Leslieville Station. By having a surface station, customers will be able to take advantage of quick transfers, being able to hop on and off the Ontario Line to get where they need to go quicker and easier.

Additionally, the Ontario Line will provide residents the opportunity to travel further. Stretching from Exhibition to the Ontario Science Centre, the Ontario Line will be twice as long as the previous Relief Line South proposal, and built within the same timeframe. The Ontario Line will serve more people, we estimate 390,000 daily boardings compared to the approximately 200,000 boardings from the Relief Line South and provide much needed higher order transit relief to underserved communities.

We appreciate and recognize concerns about noise and vibration and Leslieville's unique character. We are committed to installing a host of mitigation measures including using electric trains, tracks with rubber bases, continuously welded tracks, and noise walls with vegetation and greenery. Our early analysis shows that we will effectively eliminate noise and vibration from the Ontario Line and

reduce noise and vibration from trains currently operating in the joint corridor. In regards to your concern for the loss of existing trees, Metrolinx will work to preserve trees and surrounding vegetation. Where this is not possible, removed trees will be compensated in accordance with [Metrolinx's Vegetation Guideline](#) that provides a landscape science-based approach and exceeds applicable bylaws and regulations.

Thank you for sharing your thoughts with us about the Ontario Line and please don't hesitate to contact us if we may be of service,

Thank you for today's update.

However, I find it unconvincing.

One of the arguments is the difficulty of going under the existing tracks - if the OL is to go underground through Leslieville, there is no reason it must follow the tracks - it could go further east, as the Relief Line was intended.

If it is too expensive to put a tunnel under the Don, surely it does not have to go above ground all the way from Gerrard Square!

People in Leslieville expect to have their lives disrupted during construction, whatever mode is finally decided. They lived through years of construction on the Leslie st Barns project - with good grace,

and a chance to have their say at all stages - and expect the OL/Relief line to be a much bigger project. What they don't want is the rest of their lives disrupted by the constant noise and danger of six rails of train running every minute or two metres from their homes, parks, recreation centres, restaurants, etc. for the rest of their lives. The sound proposed sound barriers replacing all the trees that currently line the track through most of the neighbourhood will be an eyesore and divide the community.

Besides, on the radio earlier this week, your representative said that the reason for not putting it underground is because it would cost \$800,000 more. If money is the case, please explain why on wide open, 6-8 lane Eglinton west, through semi-suburban Etobicoke, the track has to go underground? Surely that will be a less justifiable additional expense.

Please let me add my voice to the multitude who think that putting the OL above ground through Leslieville is a bad idea

Hi [REDACTED],

Thanks for writing us and sharing your concerns about the Ontario Line. We recognize and understand the importance and unique character of your community – it is important to us too. I'm happy to provide some answers to the questions you raised and tell you when further details will be available.

With the Ontario Line, we are able to build a line that is double the length and reach more communities within a similar timeframe and budget. The above ground route provides a number of benefits compared to tunneling. In particular, tunnelling is time-consuming, complex and disruptive work especially considering the laydown areas, utility relocates, emergency exit buildings, and major excavations needed. Having the Ontario Line within the shared GO/VIA/Ontario Line corridor will reduce property impacts by half compared to tunneling, shorten construction time and provide a better customer experience. As we continue with our initial design, we will be sharing more information including cross sections of the rail corridor that show exactly where the one new GO track, two Ontario Line tracks, and new noise barriers and landscaping will be added. However, we don't anticipate this additional infrastructure will mean any significant property impacts to this area.

You asked about the portal locations. Due to Toronto's geography, and the limitations of how quickly a train can safely descend below ground, the parking lot and commercial space just north of Gerrard Street is an ideal location for the portal and allows us to avoid impacting residential property in the area. In other parts of the Ontario Line alignment, we are able to locate the portal within or alongside our rail corridor where there is sufficient space for construction and excavation. This is not the case along the rail corridor from Eastern to Queen Street East.

Noise barriers along the shared corridor are something the Riverside community has long been asking for and we're pleased that the Ontario Line project creates the opportunity for us to respond. In March, we hope to share more information with the community about how design of the barriers can help reduce their visual impact and fit them into the natural backdrop of the community. The exact locations and heights of the noise walls will be determined as part of our environmental assessment process. We expect to release a separate report on early works in the shared rail corridor for public consultation later this year. No construction will begin until the environmental reports are completed.

We appreciate your continued patience as we continue to refine the design and alignment of

the Ontario Line. Let us know if you have any further questions.

Why do you keep sending out material with such unconscionable lies? I just received your latest piece of propaganda that was designed not to answer Leslieville/Riverside community concerns, but rather to try to convince the community that the above-ground portion of the so-called Ontario Line is not only for our own good, but necessary. What utter lies.

You do not need the huge portal that you describe - show us an independent engineering report that supports this and/or supports that it needs to be where you say? Show us an independent report that explored other options?

Please explain how you can create the portal that will be needed at Gerrard / Pape on that small patch of land, but will be unable to do so south of Queen?

You say that the additional 3 lines will "largely" fit within the existing GO corridor. What does that mean exactly. Show us the plans please.

What will these noise barrier walls look like? Show us renderings please. How high will they be? Why don't you show us what our beautiful neighbourhood will look like after Metrolinx has finished building a barrier right through its heart?

Finally, I will again ask why the DRL was scrapped? It was carefully studied, planned and

deemed viable and appropriate for the neighbourhood. Your master Ford decided that he knew better and threw out the DRL plans with no warning, no consultation and no justification. He has set transit plans back yet again and if his new plans go forward, they will destroy this neighbourhood.

Shame on Ford. Shame on Metrolinx and this entire anti democratic and corrupt process.

I look forward to receiving your response, but please don't bother if all you are going to do is feed me more lies.

Hi [REDACTED],

Thank you for your interest in the Ontario Line and writing your policy paper about the project.

Like you identified, the Ontario Line will be delivered through a public-private partnership or 'P3' project. This approach for financing and procuring large public infrastructure projects uses private-sector resources and expertise to deliver projects on time and on budget. A group of companies—including contractors, equipment suppliers, and investors—come together under this model and agree to deliver a project for a fixed price under a long-term contract. This group is known as a consortium. Metrolinx and IO establish the scope and purpose of the project on behalf of the Province, which guides the consortium's work. There are a couple of reasons why partnering with the private sector using a P3 model is an effective way to deliver large, complex infrastructure projects. First, P3s leverage private sector innovation in design and construction. Second, P3s increase budget and schedule certainty by transferring appropriate project risks to the private sector consortium. To learn more about the P3 approach, you can read the [Preliminary Design Business Case](#) (Procurement Model Overview, page 114) and the [procurement section](#) of our online engagement hub.

There will be three separate Public-Private partnership (P3) contracts procured for the Ontario Line to maximize participation and competition from the market and ensure the success of the project. Creating three separate contracts makes the size and risk of the packages more manageable and removes the need for one consortium to consist of multiple, specialized skillsets (e.g., vehicle provider and tunnel contractor) that would make forming integrated project companies more difficult.

1. The Rolling Stock, Systems, Operations and Maintenance (RSSOM) package is a 30-year-term contract to design-build-finance-operate-maintain the entire Ontario Line.
2. The Southern Civil, Stations and Tunnels package is a design-build-finance contract for the southern segment of the Ontario Line, from Exhibition/Ontario Place to the Don Yard tunnel portal (west of the Don River).
3. The Northern Civil, Stations and Tunnels package is a design-build-finance contract for the northern segment of the Ontario Line, from Gerrard Station to the Ontario Science Centre.

In advance of these contracts, Metrolinx will also break ground on a package of early works that will be traditionally procured (not using the P3 model). These will include upgrading existing bridges, building new bridges, expanding the rail corridor, installing some station infrastructure, and relocating utilities for parts of the line that are shared by the GO rail corridor. This work is slated to begin in 2021.

For more information, please contact Infrastructure Ontario.

Hello,

My name is [REDACTED] and I'm in my final year of Public Administration and Governance program at Ryerson University. Our policy paper is based on the public private partnership of Metrolinx and Infrastructure Ontario. Our professor would like us to obtain the partnership agreement for this but we can't find anything online. Is there anything that you can share with us? We just need to more info about the decision makers for this partnership, any important agreements or how it is funded and how decisions are made. Or basically anything that describes the partnership overall. Will you please help us out?

Regards,

[REDACTED]

Hi Daryl,

Thank you for responding to my questions. Can you expand on the procurement? Are you referring to the procurement of the design or construction with the dates that you have provided. I would like to understand how and when the design is being procured and whether this is conventional design-bid-build, design build or has the design already been completed.

Regards,

[REDACTED]

Hi [REDACTED],

Thank you for leaving a voicemail and reaching out via email as well.

The expansion of the existing rail bridge over the Don River will take place as part of the Lower Don Bridges Early Works project. Happy to respond to some of the questions you have asked:

- Before procurement or construction of any Early Works, we will release an Early Works report that will detail the project's scope, impacts and detail the mitigation measures Metrolinx will deploy. For the Lower Don Bridges Early Works, we expect to release this report in mid-2021.
- We expect to begin the procurement for the Lower Don Bridges Early Works in the second half of 2021. This will follow a traditional procurement process.
- Construction for the Lower Don Bridges Early Works is expected to start in 2022.

All three Early Works projects associated with the Ontario Line (Exhibition, Lower Don Bridges and Lakeshore East Joint Corridor) will involve upgrading existing bridges and/or building new bridges.

- As part of Exhibition Early Works, there will be a temporary pedestrian bridge built to facilitate north-south access. More information can be found in the [Early Works report](#) which has already been released on our online engagement hub. Exhibition Early Works procurement is set to begin in mid-2021.
- Design of the Lakeshore East Joint Corridor Early Works is still ongoing. We expect to release the Lakeshore East Joint Corridor Early Works Report in the second half of 2021 and start procurement in early 2022.

If you have not already, consider signing up for our [e-newsletter](#) to remain updated on the project.

Feel free to reach out should you have any further questions,

Hi [REDACTED],

Thank you for sharing your thoughts on the Ontario Line, and I am happy to address your questions about Jimmie Simpson Park.

First off, we recognize and understand how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and Riverside and Leslieville residents. Our plans to run the Ontario Line above ground in this area means we will stay almost entirely in the existing rail corridor, reducing the impact on parks and your neighbourhood during construction, while leaving more parkland when construction is done. Throughout the project, we will work with our contractors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with [our Vegetation Guideline](#). Providing ongoing access to beloved community park space, such as Jimmie Simpson, will be a top priority for us as we deliver this important project. In addition, regular communication and safety measures will be in place to keep the community and park visitors safe.

We are taking the time to fine tune our design and look forward to sharing more details about anticipated impacts through environmental reports that will be released for public consultation later this year. These reports will also include information about how Metrolinx will mitigate any impacts during construction and operation. That being said, I can already share with you we will be providing well-designed sound barriers, landscaping, trees and greenery to reduce sound from the rail corridor and reduce the visual impact. More information, including an opportunity for virtual public open houses, will be shared through our [e-newsletter](#) in the coming weeks.

Thank you again for taking the time to write and share your concerns. Our plans have been updated based on what we heard from the community so far. We will continue to share more information and incorporate community feedback as we move ahead with this important project.

Feel free to reach out should you have any questions in the future,

Hi [REDACTED],

Thank you for sharing your experiences and questions about fumes from rail traffic. We are taking steps to reduce emissions in a number of ways that we'd like to tell you about.

The Ontario Line trains will be electric and we are planning to electrify the GO corridor, reducing fumes from trains. We also anticipate that the Ontario Line will encourage people to leave their cars at home and take transit instead resulting in 28,000 fewer daily cars on the road. If you wish to learn more about the look and feel of the Ontario Line in your neighbourhood, please visit our online engagement hub and select the [East Neighbourhood Update](#) to learn more.

If you have not already, consider signing up for our [e-newsletter](#) so you receive all the latest updates.

Thanks again for your email and please don't hesitate to contact us if we may be of service,

My name is [REDACTED].

I am a senior living at [REDACTED].

Our Apt building is located on [REDACTED].

Fumes from trains bother me and sometimes cause headaches.

My concern is with an increase of those fumes with more rail traffic.

I have read over the points you mention in a recent flyer that was left in our lobby but I did not notice anything mentioned about air pollution.

I am wondering if your trains run on Hydro? and therefore there is no air pollution?

Please let me know.

Thank you for this. I am confident that no one would like to have lights flashing in their child's bedroom in the middle of the night.

Thank you for articulating these concerns to the contractors.

Best,

[REDACTED]

On Fri, May 7, 2021 at 3:25 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thanks for your patience while I looked into this further.

I can confirm that last night, two separate crews were working in the rail corridor, one related to the Ontario Line, and the other work related to GO Expansion.

The field crew associated with the Ontario Line was a 3-person survey crew working along the Metrolinx rail corridor as part of the ongoing, corridor-wide survey plan described in the [top notice on our website](#). This surveying work was carried out to confirm the limits of the rail corridor for both GO Expansion and Ontario Line tracks. The work had to be carried out overnight due to lack of daytime access from active train use, and by extension, safety reasons for the field crew carrying out the work. The contractor is anticipated to complete this surveying working within the rail corridor for an additional week, pending weather conditions and intermittent access based on scheduling availabilities.

The second crew is associated with the Lakeshore East GO Expansion project. They were carrying out work for track expansion purposes. I'm still following up with that team to find out if any notice was provided and how it was distributed.

I have shared your concern about the field crew's noise with the contractor related to the Ontario Line work. They have asked us to relay their apologies about the disturbances, and have committed to carrying out the remaining surveying work as quietly as possible. We have also reminded the contractor and their field crew to be respectful of all neighbouring residences adjacent to the rail corridor, especially as it is work taking place overnight. In terms of the light you mentioned, the contractor confirmed that they are using the least amount of lighting – generated from a mid-sized vehicle's headlights and a safety beacon on the top of the vehicle – in order for them to see the areas they are working in but also committed to review whether it could be pointed away from residences near the tracks.

We will continue to work with our teams to try and get as much advance notice to people as possible. Let me know if you have any further questions or concerns I can help you with.

Very best,
Vanessa

Hi Vanessa -

Thanks for sending this. I will forward as needed. Have a good weekend.

On Fri, Mar 12, 2021 at 12:18 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

There was a breakdown in communication between our team and the contractor that was on site at Tiverton. We recognize that Metrolinx, along with our contractors, need to do better in order to minimize disruptions to you and your fellow neighbours. Below, I have summarized the steps we are taking to improve the situation going forward:

- Regarding contractors' responsibilities, yes, Metrolinx puts contracts in place outlining specific rules and responsibilities to ensure our contractors abide by all regulations and obligations under a variety of protocols. Although there appears to have been some breakdown in communications between the on-site crew and the contractor's management which they are addressing, what we feel was really missing is a lack of appreciation for the impact on the neighbours. We have reminded our contractor about the importance of being responsive to concerns and providing clear and accurate information. While work vehicles may sometimes need to be positioned close to a work site and, as a result, temporarily block road or sidewalk access, we have also reminded our contractors about the need to be good neighbours. This will include

seeking permission before parking on any private property, providing specific advance notice of the need to occupy any city-owned parking lots and being ready to move their vehicle(s) when requested.

- The contractor will also have an additional representative on-site in the future in order to ensure work is adhering to the work plans, City permits, and what we have communicated to residents. This will be in addition to the field crew's supervisor.
- As Josh and our team have done in the past, we will have a member of our community relations team on site the morning of the work start date, in order to liaise with the contractor's representative and answer any questions residents might have. This proactive approach has helped to resolve concerns quickly in the past.

We have met with the contractor to discuss the matter and they asked us to relay their apologies for the breakdown in communications and for not being good neighbours to you and your fellow neighbours. They also shared the following context:

- On both Friday and Monday morning at 9am, we immediately alerted the contractor's management once we reviewed your concerns and asked for them to look into and resolve each concern immediately. There was some delay and challenges with addressing the concerns, as you know. The contractor has committed to make improvements in this area.
- There was a need to temporarily block access to the city-owned parking lot at the southeast end of Tiverton due to the restricted space on Tiverton Avenue. While this was communicated to the City as part of the permit approval process, this was not shared with our team, and by extension, you and your fellow residents in advance so that alternate parking arrangements could be made.
- The field crew was supposed to have a spotter who was looking out for potentially blocking vehicles or driveway access temporarily in order to help mitigate some of the temporary movement of work vehicles and/or access to work locations in the public right-of-way where vehicles were parked. The spotter was meant to knock on doors of residences should there have been any potential temporary parking impacts. Unfortunately, the spotter did not do so, which led to the temporary parking of a field vehicle on your neighbour's private driveway.

I want to thank you again for taking the time to write and call in with your concerns and feedback. We will continue to share information with you and your community as soon as we have them, and look forward to implementing the above steps in order to minimize as many disturbances as possible in your neighbourhood for future work.

Kind regards,
Vanessa

Hi Caitlin -

I have a few questions from the street that I would like to share. Can you kindly respond via email? It's just easier to share the answers that way.

Some of these Q's overlap, but I've tried to capture as much as I could from my neighbours.

I think it's best to consider these questions more about the ongoing relationship with the families here, and less about trucks in driveways.

Questions:

1) What caused the community to be ignored with respect to how work would be conducted

on Tiverton? This refers to the blocked cars, parking on sidewalks and using our driveways. We were told this would not happen and it did. We were told this would stop and it did not.

2) What does metrolinx have in place to ensure contractors respond to direction?

3) Can you provide proof that this direction was actually given to and acknowledged by contractors?

(I note that this may be unreasonable, but if something can be provided that would be helpful).

4) What are the penalties to contractors that don't observe directions?

Thanks for keeping the lines of communication open.

Update:

Vehicles continue to block parking access. One is now in my neighbours driveway. Can this situation be managed please?

On Mon, Mar 8, 2021 at 7:40 AM [REDACTED] wrote:

Good morning Caitlin -

Disappointingly, this morning the crew had chosen to park their vehicles in such a way that they are blocking in many of our vehicles.

I don't have time to speak with them, I have to get my son ready for daycare and start my work day. Someone else may.

This SHOULDNT be the community's responsibility in any event.

It's inconsiderate to block our vehicles in.

Hi [REDACTED],

Thank you for following up. Safety is always paramount at Metrolinx, and we know many families and young children live and play in the neighbourhood. We hear your concerns and have communicated the importance of being courteous neighbours to our contractors as they conduct this essential work.

Our Community Relations team monitors Ontario Line construction work regularly and will continue to work with our contractors to ensure this work is carried out with as minimal disruption to the residents on Tiverton Avenue as possible. Should any issues or concerns from the community arise, you can immediately give us a call at 416-202-5100 during regular work hours or send us an email anytime.

Please do not hesitate to reach out if you have any further questions.

Many thanks,

Caitlin

Hi Caitlin,

Thanks for following up so rapidly. This is appreciated.

To speak plainly, the families in this community have lost trust in your messaging after what happened last time Metrolinx contractors were working on Tiverton.

That said, this doesn't seem to be anything that will cause serious disturbance.

I will note on behalf of all the families here that we know it's challenging to operate large vehicles or find parking on our narrow street, but we ask that your crew be courteous to the neighbours and be mindful of the many children.

Will there be someone from Metrolinx on site that we can speak with?

Can you please provide a main point of contact should any issues arise?

Thanks kindly,

[REDACTED]

Hi [REDACTED],

Thank you for your questions yesterday about Ontario Line [hydrovac work happening along the Lakeshore East rail corridor](#), specifically on Tiverton Avenue. It was a pleasure to meet you, and I appreciate you taking the time to speak with me when I dropped off the notice. As discussed, I am writing to follow up on your questions about whether equipment will be left on-site and the laydown area.

Equipment will not be left on-site. Crews will bring a truck equipped with a mounted vacuum, known as a hydrovac truck, which uses water to bore holes into the soil to locate underground utilities. They will also bring two other field vehicles (one backfilling truck and one with a coring machine) and three workers' vehicles as part of regulatory health and safety standards.

Due to this work's nature, we do not require a laydown area since the equipment is mounted on the trucks. Crews will bring the vehicles to the south end of Tiverton Avenue by the rail corridor (south of the laneway that connects Tiverton Avenue and West Avenue, west-side of the rail corridor) to conduct this work. They will ensure their vehicles do not block any driveways and will park along the street where they are allowed to do so.

Thank you again for taking the time to speak with me. Please do not hesitate to reach out if you have any further questions.

Kind regards,

Caitlin

Hi [REDACTED],

Thank you for your patience.

I was able to confirm with our Community Relations group that the station serving Corktown will be located where the Staples currently is, on the east side of Berkeley between King and Front. To reduce community impacts and keep construction off the street, the First Parliament Site will be used to support construction of the Ontario Line.

In the attached image, the first bubble refers to the location of the station while the second bubble refers to land which will be used for construction activities also known as the First Parliament Site.

If you have not already, please sign up for the Ontario Line [e-newsletter](#). This is a great way to receive all the latest updates about the project.

Dear Marcia Elie,

Thanks for your prompt reply, but unfortunately you really didn't address my questions, so your clarification really didn't clarify.

Below is a copy of my initial inquiry, and I've highlighted the matter that interests me most — the planned location of the future Corktown station.

Re the Downtown portion of the Ontario Line, there appears to be confusion regarding what may happen on/around the so-called First Parliament site, which is a stone's throw from where I live. I've read numerous media reports saying that the "site" will be expropriated and be the location of the future Corktown station. However, the Metrolinx website indicates that the Corktown station will be located on the east side of Berkeley between King and Front, and not on the heritage "site" which is south of Front. The Metrolinx website doesn't actually specify what will be developed on the heritage "site", only that its archaeological and historical significance will be a factor. I've already noticed that core drilling is currently underway at various locations on the "site" -- when I spoke with workers they informed me that their drilling was related to eventual tunnelling for the Ontario Line. Can you please briefly clarify the confusion regarding where the Corktown station will

be located, and what is currently proposed for the actual First Parliament heritage site?

In your reply you state that the First Parliament site is needed for the future Corktown station. However, the following image and information taken from the Metrolinx website indicate that "The station serving Corktown will be located to the east side of Berkeley Street at King Street East." That would place the station north of Front Street and the First Parliament site.

So, leaving aside whatever may happen to the First Parliament site, is the information posted on the Metrolinx website correct? Will the Corktown station be "on the east side of Berkeley at King Street East"?

Regards,

Dear [Redacted],

Thank you for contacting Metrolinx.

We appreciate your feedback regarding the Ontario line and the future location of the Corktown station. I apologize that there is confusion where this station will be built. Please let me clarify.

The First Parliament site is needed for the future Corktown subway station of the Ontario Line. While the land is needed to support the Ontario Line, our aim is to discuss our shared needs with the City to reach a mutually beneficial agreement on a path forward.

We've always envisioned this as a partnership. Communities are at the heart of our project and we heard from a lot of you last fall and we are excited to continue community engagement on the Ontario Line in March.

Hello [REDACTED],

Thanks again for reaching out to us!

As we discussed over the phone, we are still in the planning stages for this project and a lot of details are yet to be finalized. However, the forthcoming Environmental Impact Assessment Report, which we plan to share for review and comment next year, will detail anticipated noise and vibration impacts during both construction and operation of the project, as well as associated mitigation measures to reduce these impacts.

The being said, the Ontario Line tunnels are proposed to be built 20 to 30 meters below ground at Pape and Danforth (north of the property we discussed), approximately twice the depth of the existing TTC Line 2, which should reduce noise and vibration impacts in that area. Along with that, the Ontario Line will also use modern technology for operations, including electric vehicles than are smaller and lighter than the conventional trains we are used to seeing around Toronto. Some other practical steps that we take to reduce noise and vibration in residential areas include fitting equipment with muffling devices, using equipment and methods that minimize vibration, and coordinating construction schedules so that noisy operations do not occur simultaneously.

If you haven't already, you may also wish to [visit our website](#) where you can sign up for our electronic newsletter where we will share updated information as it becomes available.

We hope that this information is helpful! Should you have any further questions or concerns, do not hesitate to reach out to us.

Thanks!

Hi [REDACTED]

Thank you for following up. I appreciate your point about the literature, and that you took the time to write.

I've raised this with my manager who confirmed that this was a mistake and committed to work with our communications team on increased factual review in any future product development. While we do want to provide reassurance that a range of mitigations will be applied to address noise and vibration, as well as the visibility of the corridor, we know that it's important to be accurate and clear when we communicate with the public.

Thank you again for bringing this to our attention and our apologies for the mistake,

Hi Simon,

Thanks for the overview and detailed response, but your email seems to indicate a different message than the material that was sent to the community. The documentation provided to the community specifically states that the project "will introduce effective and well designed sound barriers, landscaping, and new trees and plants to significantly reduce the sound AND visibility of all trains in the rail corridor".

That would lead a reasonable reader of the material to perceive that the 3 mitigation measures mentioned will have an impact on noise, when in reality only the sound barriers will have some mitigating effect. This is misrepresentative as it overstates how many measures are being applied to

manage noise.

Given the importance of this issue within the community this should really be corrected. How does the project propose to handle this moving forward to ensure accurate and representative facts are distributed within the community?

Hi [REDACTED],

Thank you for your question about noise mitigation.

We sent that specific piece of mail to your community to encourage people to learn more about our plans and to solicit feedback from folks like yourself. The trees and additional shrubs that we are hoping to plant are to break up the *visual* impact of the noise and retaining walls which will be used along with other measures to reduce noise and vibration from the rail corridor. We have written a [blog](#) that goes into further detail.

Right now, you can access the Ontario Line [Final Environmental Conditions Report](#) which established a baseline through a series of studies. Once we complete further studies using this baseline, we look forward to sharing additional reports that provide more information on impacts and mitigation measures Metrolinx will deploy. If you are interested, there will be an opportunity for virtual public open houses. More details will be shared through our [e-newsletter](#) in the coming weeks.

Feel free to contact us with any further questions,

Good morning,

We received the attached notice in the mail about the project, which mentions that trees will be planted to help reduce noise. That is factually incorrect as you would need a large depth of trees to see even the slightest reduction. I previously worked in the industry conducting noise assessments.

Please advise what reduction in noise you are expecting from the trees. If the statement you made in your notice is incorrect it would be prudent for Metrolinx to correct its statement and properly inform the stakeholders impacted by this project.

To: [REDACTED]
Subject: Ontario Line - Historic Rail Station (Leslieville)
Date: Monday, March 1, 2021 4:30:00 PM
Attachments: [image003.png](#)

Hello [REDACTED],

Thanks again for the conversation and feedback a couple of days ago. It was great connecting with you!

I have shared your feedback, comments and questions with the team. I did find some information on why we aren't utilizing the historic rail station at DeGrassi and Queen. Here is some history behind that station: the historic "Riverdale railway station", built in 1896, was located on De Grassi Street just north of Queen Street East. The Canadian National Railway (CNR) took over the station in 1923. CNR discontinued passenger train service at the station in 1932 and demolished the building in 1974. At that time, the Queen Street West streetcar and freight trains would cross each other at-grade. There was a crash in 1904, that led to the development of what we now know as the Queen Street Bridge.

Therefore, it no longer exists and cannot be used for Leslieville Station. There is a small cement platform in the rail corridor which we will be removing in order to create additional space within the corridor to realign tracks. This means we need less space beyond the current Metrolinx property line. That being said, throughout the lifecycle of the project, we will be working to preserve any heritage elements in this area.

We hope that this information is helpful! Should you have any questions or concerns, do not hesitate to reach out to us! Hi [REDACTED],

Thank you for reaching out, and your question about property requirements.

In order to see if there is any information to share about specific properties, do you have an address of the property you are inquiring about you can share with us to look into? That being said, there is limited information we can provide at this moment because design work on the Ontario Line is underway but not complete. Final assessments of whether a property is needed or not will be identified through further design, as more details are confirmed.

If a property is directly or partially impacted, Metrolinx will contact the property owner directly via email and letter. We will work collaboratively with our partners, communities and with affected property owners to ensure the lines of communications remain open and that those impacted are continually informed from planning and design through construction, as we move forward with the Ontario Line.

If you have not yet, consider signing up for our [e-newsletter](#) to receive all the latest updates.

Hello [REDACTED],

Thank you for reaching out to us and for your patience.

Given the differences between the Relief Line South proposal and the current Ontario Line project, some of the property impacts identified as part of the Relief Line South proposal will change. We are still continuing to refine the exact alignment and identifying which properties are required. Property requirements will be finalized through further design and planning work, as infrastructure requirements and project details are confirmed.

Once designs are finalized and property impacts are confirmed, Metrolinx will contact you directly. We expect further information will be available in 2022. We will work collaboratively with our partners, communities and with affected property owners to ensure the lines of communication remain open from planning and design through construction, as we move forward with the Ontario Line.

If you have not yet, consider signing up for our [e-newsletter](#) to receive all the latest updates.

Hi [REDACTED],

Great to chat again and thank you to [REDACTED] for copying us.

In terms of our ongoing work to refine plans in response to the feedback we have heard from the community, I understand from the project team that the goal of this adjustment is to make maximum use of the space in our existing corridor in order to further protect parks and greenspace. By reconfiguring the corridor and positioning the Ontario Line tracks beside one another on the western side of the existing rail corridor instead of having one track on either side, we are able to minimize our construction footprint even more by limiting station infrastructure to just one side instead of two and better integrate the new stations with the bridges. We'll also be able to provide a much better experience for customers, who will be able to access both northbound and southbound trains from a single centre platform. The change in plans will not cause delays to construction, nor increase costs.

We understand there is frustration but the Ontario Line team has been working hard with GO Expansion colleagues and City of Toronto staff to advance these initial designs to a point that we can bring forward updated plans to the community for discussion. We are holding a virtual community meeting in the coming month to update Leslieville and Riverside on the Ontario Line and we hope that you will be able to join. Details will be shared through our e-newsletter: bit.ly/2O4E8qf.

Hi David,
Thanks for the response.

I guess I'm still a little foggy on the plans in respects to where and how the tracks will be built and what parks, homes and neighbourhoods will be disrupted?

The latest I've heard is that,

... "Ontario Line alignment in our area to have both Ontario Line tracks run on the west side of the rail corridor, rather than straddling the GO tracks as had been previously proposed."...

Which from what I understand is different and more disruptive than what was presented as the way forward -

On a personal note, our home is situated at [REDACTED] Tiverton Ave. At the foot of the street the rail bridge crosses Dundas Street east. While The crews were drilling for soil samples, the level of vibration resonating through our heritage home was 8/10.

I can only imagine how hard it will be on old foundations when actual pilings are drilled and hammered in to support the bridge. Testimonials from home owners in the junction during the UP line creation serves as a warning and worry to us all.

Ultimately, I would suggest we all understand the need for improved transit in and around the city. The frustration seems to come from lack of clarity in regards to the actual plan and it's actual and real effects on the concerned neighbourhoods.

Thanks.

On Mar 23, 2021, at 17:20, David Phalp <David.Phalp@metrolinx.com> wrote:

We are responding to your inquiry submitted to the Ministry of the Environment, Conservation and Parks (MECP).

Firstly, thank you for taking the time to share your thoughts and feedback. Metrolinx understands and values that we are planning work in areas where people live, work and play.

We wanted to connect with you directly as we have two overlapping projects planned in your area – the [Ontario Line](#) subway project and the [Lakeshore East GO Expansion Project](#) (Pape Avenue to Kennedy Road). The joint-corridor will be a shared railway where the Ontario Line will run parallel to existing GO Service. The Ontario Line tracks are planned to run on the north side of four (three existing and one new) GO train tracks. Using the existing rail corridor and streamlining Ontario Line construction work with planned GO Expansion means we can keep mostly within an existing footprint, and minimize impacts to surrounding neighbourhoods as much as possible. Each project has its own dedicated Community Relations team who would be happy to assist in answering any specific questions you might have with regards to either project and the joint-corridor.

With respect to your interest in the GO Rail Network Electrification Addendum. In response to your comments (which have been included in **bold italics** below) contained in your email received March 5, 2021, we have provided the following clarifications and responses.

Thank you for taking the time to read the note below regarding the

"Notice of Environmental Project Report Addendum GO Expansion Program."

Please consider this a written objection to the expansion of the line in relation to the Lakeshore East Corridor.

The plan in place without question will upset numerous parks and other communal greenspaces in the affected neighborhoods. More than ever, these spots need our protection as they are the places where communities are made, enjoyed and maintained.

The Lakeshore East Corridor is cutting through one of Toronto's oldest areas. Numerous heritage homes, irreplaceable buildings and parks are under threat from the expansion of this line.

The expansion will not only be disruptive from a geographical and environmental perspective but also from a human one. The people who call this neighbourhood home and the people who seek out this neighbourhood for its parks and other amenities will forever be missing a piece of what has made this area irreplaceable for the last 100+ years.

The Significant Addendum to the previously approved 2017 GO Rail Network Electrification EPR has been undertaken to assess additional electrification infrastructure required for new tracks and layover facilities (which were studied as part of separate Metrolinx studies called "New Track & Facilities TPAP" and "Scarborough Junction Grade Separations TPAP") proposed across various portions of the GO Rail Network that were not previously examined as part of the 2017 EPR. In addition, updated assessments of noise, vibration and air quality associated with increased service levels across six Metrolinx-owned rail corridors, including the Lakeshore East Corridor have also being undertaken.

With respect to assessment of impacts, each new transit project undergoes an Environmental Assessment in accordance with Ontario Regulation 231/08 (Transit Projects and Metrolinx Undertakings). A Transit Project Assessment Process (TPAP) is a centralized

environmental assessment created specifically for transit projects. The process involves an investigative pre-consultation phase followed by a regulated consultation phase (up to 120-days) to develop an Environmental Project Report (EPR). The report includes project scope, consultation and an environmental impact assessment (including Natural Environment, Cultural Heritage, Land Use and Socio-Economic, Visual, Noise and Vibration, Air Quality, Vegetation etc.) with associated mitigation measures where required. The EPR goes through a 30-day public review period before being submitted to the Minister of the Environment Conservation and Parks' for a final review.

In accordance with Section 15 of Ontario Regulation 231/08, Metrolinx assessed the significance of the proposed changes to the GO Rail Network Electrification Project that are inconsistent with the previously approved 2017 EPR. Thorough assessments of potential impacts, including the natural environment and cultural heritage features have been completed as part of the EPR Addendum and mitigation has been identified to avoid/offset these effects, as applicable. Specifically, no built heritage resources or cultural heritage landscapes will be directly or indirectly impacted by the works proposed as part of the EPR Addendum.

It is important to note that the additional electrification infrastructure proposed as part of the GO Rail Network Electrification EPR Addendum is primarily located within the existing Metrolinx Right-of-Way (ROW). Limited impacts beyond the Metrolinx ROW are anticipated.

Updated noise and vibration studies have been undertaken to assess potential impacts associated with Metrolinx's new detailed service plan and to determine where mitigation is warranted. Metrolinx follows a specific Ontario Provincial Protocol (Ministry of Environment, Conservation and Parks (MECP)/GO Transit Protocol for Noise and Vibration Assessment. More detailed information regarding the Noise and Vibration Assessment Update completed for the Lakeshore East corridor, including further clarification regarding assessment methodology and mitigation, is available within Section 4.7.7 of the EPR Addendum at the link below:

https://www.metrolinxengage.com/sites/default/files/go_rail_network_electrification_epr_addendum_1.pdf

A copy of the Noise and Vibration Assessment report (provided as EPR Addendum Appendix G6) for the Lakeshore East corridor can also be viewed at:

https://www.metrolinxengage.com/sites/default/files/appendix_g6_-_lse_noise_and_vibration_study_0.pdf

The GO Rail Network EPR Addendum and associated supporting studies can be viewed on the Metrolinx Engage website at:

<https://www.metrolinxengage.com/en/content/go-rail-network-electrification-epr-addendum>

In addition, with emptying offices spaces and lease occupancy of over 42+% and growing in the downtown core, how many people can we expect to use this rail corridor in the future? Ultimately, is it really needed?

Aside from further environmental and human impact studies, the current situation should require us to do deeper study into the actual need for an expanded rail corridor in its proposed form.

While progress is something that is always in motion, it feels like now is the time to stop and evaluate what is at stake.

Metrolinx is focused on building a faster, more efficient and sustainable regional transit network as part of the GO Expansion Program. The long-term goal and vision of the GO Expansion Program is to provide 15-minute two-way all-day service on core segments of the rail network. GO Expansion consists of many different projects. The largest piece represents all the work that is required to enable service levels identified in the [GO Expansion Full Business Case](#), including new trains, signals, systems, track, as well as the maintenance and operation of the system for years to come.

The GO Expansion program consists of six elements, the following five GO Expansion elements, are undertaking a Transit Project Assessment Process (TPAP) or TPAP addendum regulated by the Province of

Ontario. These projects include TPAPs – [New Track and Facilities TPAP](#), [Scarborough Junction Grade Separation TPAP](#), [Stouffville Rail Corridor Grade Separations TPAP](#), and addenda - [the Network-Wide Structures Project](#) (an Addendum to the Barrie Rail Corridor Expansion TPAP 2017), and [an Addendum to the GO Rail Network Electrification TPAP 2017](#). The [Union Station Trainshed Heritage Conservation](#) project is being addressed in a Minister’s Consent Application and a Strategic Conservation Plan.

Metrolinx understands the future “normal” may look different, as people continue to adjust their work and commuting patterns. Investments such as GO Expansion are now needed more than ever because the travel patterns of the future will be two-way all-day and much less about commuter peaks in the mornings and evenings. This is more about connecting the different cities in the GTHA, with organizations and businesses seeing more decentralization in the years to come.

Infrastructure Ontario and Metrolinx are continuing to advance the procurement of these important infrastructure projects on behalf of the province. We are working closely with all of our partners, stakeholders, and the private sector to move forward and will re-assess our procurement schedule, if necessary, as the global situation continues to evolve.

As noted above, this current commenting opportunity is with respect to the GO Rail Network Electrification EPR Addendum. Through the application of identified mitigation and monitoring measures, no negative impacts are anticipated to natural or cultural heritage environments.

Should you have any further questions or comments, please reach out via Torontoeast@metrolinx.com.

Thanks Gurjeet for getting back to us.

I appreciate the response, but I would ask that Metrolinx think about how they communicate, and how it might be construed. Again, by sharing some of the information and not all of it, it created a large amount of emotional turmoil in our household. I've mentioned this already, but the expropriation is already extremely distressing to myself and my family every single day. Miscommunication only makes it worse for us.

Thanks,

Hi [REDACTED],

Thanks for reaching out – I'd be happy to share some more details and clarity about the surveying taking place in your neighbourhood, and why it is required.

Our contractor is surveying a larger area around the Ontario Line route to collect further data in the public right-of-way, in order to help avoid future construction impacts on homes and businesses in your neighbourhood. The area being surveyed is to ensure that all the existing conditions are accounted for, and that measurements are exact to prevent unnecessary impacts – including structural, noise and vibration – on existing and adjacent infrastructure to the planned portal location and route. At this time, the Ontario Line route as it has been mapped in this area, including the portal at Minton Place, is the plan we are advancing. There have been no changes to the proposed route or portal location in this area.

We thank you for your continued patience as we work to gather this information. No work is planned to begin in your neighbourhood before 2024. As we have additional information to share about plans for work in the area, we will continue to provide updates to you directly, through PACCT and via our e-newsletter.

Hi Metrolinx,

Emailing about the survey plan that was shared by PACCT. They shared an image of the area about to be surveyed. It does not appear clear on why such a large area is now being explored. I'd like to know why. Can you explain please? Are you possibly thinking about moving your intended path across the valley? It looks that way. As one of the property owners who are being asked to leave I would hate to think this is creating a false sense of hope. Without clear communication from your side that is exactly what the conversation is in our household.

I know I've said this before but unless you've been in our situation I don't think you can clearly understand the emotional duress we are under as a family not knowing what our future is. Every day is a struggle. And lack of communication like this only adds to it. I will ask again, Metrolinx please communicate clearly to us. It's what this situation requires and we're not getting it.

I am also going to add that I noticed surveying happening last week, or the week before that where the green circles are on the attached map. Is that related? And if so, why is it not included on this map?

Thanks,

Mr. Ganat,

While I appreciate the answer and the rapid mailing of a canned response, your logic is specious at best and erodes what ever trust Metrolinx has in this neighbourhood.

When I look at the disruption caused by the Eglinton line, it is a false argument that building above ground will lead to different or less intrusive construction. It won't.

And the stops east of Leaside are not moving any faster towards completion that the stops to the west of there. Construction will be a misery no matter what for anyone in this neighbourhood – a misery we are willing to shoulder to get this transit line buried and built.

As one of the anticipated BIG users of the new line, I think I am ok with an extra 240 seconds to reach the platform – that has never stopped me from using subways lines buried that deep in Washington DC, Prague, or London.

Any loss of park space is unacceptable so soft pedaling it as “some impacts to parks” is at best a falsehood. The largest park and community centre in this neighbourhood would be gone with this plan – how do you propose to replace Jimmie Simpson? You can't and there would be no way to get that park back once gone. And why would you build subway stops away from core east/west transit corridors – doesn't that defeat the purpose? I guess heading up or down in a sheltered station for an extra 240 seconds is a journey too far but walking half a kilometer from Broadview or Carlaw in all sorts of weather is ok?

Rest assured my neighbours and I will fight this change in plan (as in early approved plans had the line buried). I have suffered through the misery of infrastructure construction with a 12 story building erected not 15 feet from the back of my house. We learned a lot in that three and half year process. Still can't figure out why you think this neighbourhood will stand for a fifty foot scar across it or why you would jeopardize the good will you will need to get this line built.

If you are so proud and confident in your plans, why is your CEO being backed into corners via CBC Radio ambushes before he will own up to what's happening?

Why are you breaking 80 years of TTC transit precedence to bury subways lines in dense established neighbourhoods that lack six lane roads?

Shame on Metrolinx for thinking this neighbourhood is too poor, disorganized and uncaring to accept this change in what was initially promised and planned.

What was good enough for Leaside is good enough for Riverdale/Leslieville.

What was good enough for York University is good enough for Riverdale/Leslieville.

What was good enough for Yonge and Eg is good enough for Riverdale/Leslieville – bury then build that line.

See you at the next public meeting; I'll be the one with the sign.

Subject: RE: good enough for Leaside but not Riverdale/Leslieville? - bury the Ontario Line

Hi [REDACTED]

Thank you for your email to Metrolinx CEO, Phil Verster. We understand you are passionate about Leslieville and Riverside - your neighbourhood is important to us too! Community feedback is an important factor in the project decisions we make. We will be bringing forward a comparison of the impacts and benefits of various construction approaches for public discussion, but in the interim, we appreciate the opportunity to share some of the thinking behind the decision to use the existing rail corridor.

Metrolinx sees significant benefits for customers in a surface transfer at East Harbour, Leslieville and Gerrard stations. Surface stations in this area will save customers significantly more time in their journeys than underground stations because they would have to be almost 40 metres deep in order to avoid sewer mains. By building and operating above-ground in the Riverside and Leslieville in the rail corridor that Metrolinx already owns, we are also able to reduce construction and property impacts on area residents and businesses and finish the work in shorter timeframes. In fact, we expect that our work will remain largely within the existing rail corridor footprint as opposed to a tunnelled option would have resulted in significantly more impacts.

We will only use property that is absolutely necessary. While there may be some impacts to parks, it will be to avoid impacts to private property. Throughout the project, we will minimize our impacts on parks and return land to the same condition or better once construction is complete. We expect that over the long term, we can help improve the enjoyment of the parks by adding attractive noise barriers with vegetation to break up the visual impact. We will also be working with the City of Toronto and Toronto Region Conservation Authority to develop a robust tree replacement program.

In our recent [blog](#), we provided more information about why burying the Ontario Line through Leslieville and Riverside would result in significant community impacts. Since the Ontario Line cannot

go under the Don River, a large portal would have to be built. Due to the maximum grade, or steepness, that modern train technology can accommodate, the portal would have to be somewhere in the area of Eastern Avenue and extend all the way to Queen Street. Many homes, community organizations and small businesses would be impacted.

Thank you again for taking the time to send us your concerns. Metrolinx will continue to work closely with the City of Toronto, councillors, community groups, neighbours and businesses to build a transit line that serves the needs of communities along the entire alignment.

EXPÉDITEUR EXTERNE: Ne cliquez sur aucun lien et n'ouvrez aucune pièce jointe à moins qu'ils ne proviennent d'un expéditeur fiable, ou que vous ayez l'assurance que le contenu provient d'une source sûre.

Dear Mr. Verster,

I have been disheartened to see the original plans for the much needed Ontario Line now has an above ground rail link planned through two of Toronto's oldest and most diverse neighbourhoods - Leslieville and Riverside. The plans for SIX parallel rail lines will effectively ruin both neighbourhoods. It will build a huge divide separating the east end from the balance of the city to the west of us, decimate our trees, eliminate six parks (SIX PARKS!!?), endanger the lives of people unfortunate enough to live alongside the new tracks especially those neighbours in government housing who will have no choice or ability to move.

This short-sighted view needs to be revised and rethought immediately. If burying the Eglinton Line was good enough for the Leaside neighbourhood, why isn't burying the Ontario Line good enough for Riverdale/Leslieville? Maybe that's a question you should answer at your next public forum or meeting?

This "easy" solution is anything but easy or simple. This plan will see dozens of new bridges needing to be build, the destruction of ALL our parks, the expropriation of swaths of private homes, the massive disruption of core east/west transit lines like the Queen and Gerrard streetcar routes.

Do you really want your legacy to include building the second Gardner Expressway – another concrete monstrosity that cuts and divides our green city?

I am resigned to the misery of five to six years of construction, noise, vibration, dirt & dust, re-routed traffic and crummy arterial roads as this would be necessary to move Toronto's transit plan and network into the 21st century and to meet Toronto's green and carbon-reduction targets.

I was happy to make that sacrifice as EVERYONE in Toronto knows this line is desperately needed.

BUT if you do not fight to ensure the **right transit** is built for our future (and believe me a six-track scar ripping through this neighbourhood cleaving it into two while enduring 800+ trains a day passing through is not it), you will be in for a rude awaking.

Don't doom Leslieville/Riverside to a cold, concrete-divided future.

Do your job – advocate for sustainable transit and fight for the transit we deserve.

Bury and Build the Ontario Line.

Hi Daryl,

I cannot shake this idea of the Ontario line somehow intercepting or servicing GO riders using the Kitchener/Barrie/UPExpress line.

My solution will:

1. Reduce transfers
2. Address rolling stock issues
3. Give more choice in a busy area
4. Bring service quicker in a staged introduction.

And for only a few million dollars more.

My solution is for the Ontario Line to be extended to Union Station while tunnel boring continues north of Bloor and along Queen.

This will bring Ontario line service quicker to the public and look like the initial Relief Line.

Next, use the Ontario Line driverless rolling stock on the UP Express as electrification happens.

Ontario Line Rolling Stock will be high platform. Only Union Station needs platform modifications.

The opportunity now exists for the UP Express and Ontario Line to interline through Union Station.

This layout now solves issues about transfers, rolling stock possible rolling stock storage and earlier staged introduction of the Ontario Line.

Cheers and thanks for listening.

Subject: Ontario Line Update
Date: Friday, March 12, 2021 12:20:00 PM

Hi [REDACTED],

I hope this email finds you well and you are enjoying the gradual approach of spring.

I'm writing to provide a brief update on environmental assessment and early works project timelines.

We anticipate that the draft Joint Corridor Early Works report will be released for public consultation in September 2021, this report will discuss impacts and recommended mitigations for the Early Works in the joint corridor. The public will have the opportunity to provide their feedback before the report is finalized. Contrary to what I told you in October 2020, the limits of the early works *will* include the portion of the rail corridor behind your condo property on First Avenue. I expect we will have details regarding any anticipated impacts and proposed noise wall design concepts to share in six to eight weeks time and hope we can setup another meeting with some of your members. No early works construction is planned prior to July 2022.

Finally, we anticipate the draft Environmental Impact Assessment Report (EIAR) will be released for public consultation in January 2022. This report will look at work impacts, recommended construction mitigations, and operations for the full project. Similar to the Joint Corridor Early Works Report, the public will have a 30 day period to review the EIAR and provide comment on the draft report.

Thanks again for your patience while we continue our initial design work and environmental studies. I look forward to setting up an opportunity for the team to reconnect with the First Ave Condo members. Let me know if you have any questions in the meantime.

Attachments: [image001.png](#)

Hello [REDACTED],

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We'd like to share some information about how our plans for the Ontario Line will take the concerns you have raised into account and how we will be streamlining our work with GO Expansion work to reduce impacts.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

I want to also share that we recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Dear Mr Chair, Donald Wright!

If you lived anywhere near Leslieville, I would not need to write this letter - because you would know that Leslieville is an older Toronto community just east of downtown, and houses well over a hundred years old are squished together in a well established community. Being close to the tracks doesn't make it a posh neighbourhood. But it IS a well established neighbourhood to many of us. We like where we live and we don't want our homes destroyed so that a much needed commuter train can pass by. We don't want our neighbourhoods destroyed because 1 train every 90 seconds passes by. (Can you actually imagine that? I can't. I keep thinking that information can't be right. But there it is.)

Burying the line underground may be time consuming and costly. But that cost would be shared by all. Having the train run above ground would only cost the neighbourhood where it passes through, by expropriating houses or creating such a noise hazard that the value drops and people sell homes for cheap and move, losing not just their homes but their investment.

Do you live in Rosedale? Forest Hill? Some nice place in King City? I live in Leslieville. Please visit our neighbourhood and see the train tracks that you're thinking of adding more trains to. Then you will know what that is simply NOT an option!

Attachments: [image001.png](#)

Hello [REDACTED]

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They

have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association's newly released "Canadian method of risk evaluation and assessment for railway systems." This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

To Mr. Donald Wright,

I would like to request that the Ontario Line become the Relief Line and go underground once more. The health and safety of our community is at stake. I was excited to have the Relief Line starting as the city needs more transit. I have been following the design process for years, filling out questionnaires in the early stages etc.

I was very disappointed in the abrupt change to the Ontario Line just as Toronto was starting to put shovels in the ground for the Relief Line.

The Ontario Line cannot stay above ground in the downtown urban core. We live in an area where space is a premium. We value the small spaces that we have and the Ontario Line impacts this along its entire route.

I read the "McMaster University's Health Forum survey of existing literature, [Planning Mass-Transit Projects](#)" and it states many reasons to put the rails underground.

Please consider the downtown communities and how they function.

Sincerely,

From: [Ontario Line](#)

Attachments: [image001.png](#)

Hi [REDACTED],

Thank you for your question.

According to current plans, the Ontario Line tunnels will run below [REDACTED] however there are no anticipated impacts to the condo building itself. In terms of flood protection, we are working with the Toronto Region Conservation Authority to ensure Ontario Line plans are coordinated with flood protection plans in the area. As we move forward with the design of the Ontario Line, flood protection is a key consideration and priority.

If you have not yet, consider reading our [website](#) for more information on the Ontario Line and to sign up for our e-newsletter. Since you live in the Distillery District, scroll down and click the 'Downtown Neighbourhood Profile'. From this page, you can read more about all the Ontario Line stations close to your neighbourhood.

Feel free to reach out should you have any further questions,

Can you tell me if the subway line is going right under the condo building at [REDACTED]? Surely there is going to be an issue with regard to this being in a flood protection area. Will that not be a problem when it comes to going so deep? Its my understanding that we couldn't have a second level of parking because of this very issue.

Donald Wright, Chair,
Metrolinx Board

chair@metrolinx.com

Re: **Save Jimmie Simpson
Keep the Ontario Line Underground**

Dear Donald Wright:

I'm deeply concerned and disturbed by the proposal for a potential construction and operation of an Above Ground Ontario Line.

I'd like to bring to your attention five (5) reasons, to please use your utmost efforts to keep the Ontario Line Underground:

- As an engineer I'm very familiar with unavoidable noise and vibrations, which I will be exposed to as an immediate resident. The expected noise and vibration levels will cause severe adverse health impacts. It's also well understood that noise walls are not nearly as effective as required.
- It appears that the proposed Ontario Line trains will be travelling about 20 meters closer from residential homes, including social housing than guidelines recommend.
- It's actually nothing less than shocking to me that any person with a healthy common sense would even consider a reduction of any parkland in downtown Toronto. I assume you are well aware that the Above Ground Ontario Line would be violating the Parkland Strategy.
- As a proud Canadian I do appreciate a healthy democratic decision making process. I'm very concerned about a potential commencement of construction prior to the release, discussion and public approval of an Environmental Impact Assessment.
- It's also apparent that any construction without the benefit of a completed environmental assessment and public consultation breach a federal funding requirement.

I appreciate your consideration of my concerns,

As a non-resident of the area i write to support the community in it's struggle to protect the local environment from an above-ground 'subway' line.

The extra cost of tunnelling the stretch in question is a blip when seen in light of the overall cost of the project. It is even less significant when considered over the life of the subway line and when compared to the direct and indirect costs of the impacts on the community over the same time period.

If the extra funds cannot be generated by using the above-ground option in Etobicoke, where there is hardly a case for tunnelling, then i would be happy to see a tax levy for this specific purpose.

Hi [REDACTED],

Thank you for providing your feedback again on this topic.

We hear your concern about tunneling in the downtown core. Our initial analysis of current Ontario Line plans shows going underground for the downtown core is possible and in fact, safe. We are currently completing environmental studies and designs which will provide the community a full understanding of the impacts and associated mitigations Metrolinx can deploy. Right now, you can access the [Final Environmental Conditions Report](#) which included a study on [existing natural environment conditions](#). We look forward to sharing more designs and reports with the community as they become available.

Once again, thanks for following up on your concern and we hope this provided some clarity.

Feel free to reach out should you have any additional questions,

Subject: Ontario line crates MORE problems than it solves

Message: No matter how hard you try, you cannot go underground through the downtown core in an area bounded by Jarvis, Dundas, University and Lake Ontario. You CANNOT use lower Queen due to THREE elevator shafts on the eastbound platforms. You CANNOT go below the buildings in the above area as most go 5 stories below ground and are on stilts due to Lake Ontario being right below that. The ONLY option is surface, unless you want to flood the downtown core. Check your consultants report that you have ignored and quietly buried way. I have told you how you can have a relief line using EXISTING resources and fully operational in less than 5 years, but you ignored it. This line disrupts more lives and communities than it really needs to do. It serves NOBODY and does NOTHING but add time to use transit. It is worse than the current Sheppard subway. So, go ahead and create another white elephant that will become just another money pit and destroys downtown, just like the Scarborough SRT (look how that turned out).

Hi [REDACTED]

Thanks for your question.

We hear your concern about noise in the community – it is important to us as well! The notice you received likely referred to the [Final Environmental Conditions Report](#) which established a baseline of current conditions, including noise. From this baseline, we are completing additional studies to provide the community with a full understanding of Ontario Line impacts and associated mitigation measures Metrolinx can deploy. If you are interested, there will be an opportunity for virtual public open houses where topics such as noise will be discussed. More details will be shared through our [e-newsletter](#) in the coming weeks.

That being said, Metrolinx has proven solutions in our toolbox to mitigate noise and protect your community. You can read more about our evidence-based approach to noise and vibration during construction and operation in our [blog post](#). It is also important to note that the Ontario Line will be using electrified trains that are smaller, lighter and have a different noise profile when compared to GO or TTC trains.

I hope this provides some clarity and happy to answer any further questions you have,

Hello [REDACTED]

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

The anticipated impacts of constructing and operating the Ontario Line will be comprehensively analyzed in upcoming environmental reports that will be released for public consultation over the

next year. A dedicated Joint Corridor Early Works Report, that will consider the advance construction work that will take place in Riverside and Leslieville, will be released this fall. This will be followed by the Ontario Line Environmental Impact Assessment Report which is expected in early 2022. Each report is released in its draft form for public review and comment during a formal 30-day consultation period. Feedback received during the consultation is incorporated in the final reports, which guide further project plans and designs.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. We are undertaking our first such assessment for the rail corridor in Riverside and Leslieville. This study will follow the Canadian Standards Association’s newly released “Canadian method of risk evaluation and assessment for railway systems.” This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. Our plans have been updated based on what we heard from the community so far. We will continue to share more mitigation plans as soon as we have them. You can learn more about the latest updates on our [website](#). We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Re: **Save Jimmie Simpson**
Keep the Ontario Line Underground

Dear Donald Wright:

I'm deeply concerned by the proposal for a potential construction and operation of an Above Ground Ontario Line.

I'd like to bring to your attention five (5) reasons, to please use your utmost efforts to keep the Ontario Line Underground:

- unavoidable noise and vibrations, which I will be exposed to as an immediate resident. The expected noise and vibration levels will cause severe adverse health impacts. It's also well understood that noise walls are not nearly as effective as required.
- It appears that the proposed Ontario Line trains will be travelling about 20 meters closer from residential homes, including social housing than guidelines recommend.
- reduction of already limited parkland in downtown Toronto. The Above Ground Ontario Line would be violating the Parkland Strategy.
- As a proud Canadian I do appreciate a healthy democratic decision making process. I'm very concerned about a potential commencement of construction prior to the release, discussion and public approval of an Environmental Impact Assessment.
- It's also apparent that any construction without the benefit of a completed environmental assessment and public consultation breach a federal funding requirement.

I appreciate your consideration of my concerns.

Hello [REDACTED]

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

The anticipated impacts of constructing and operating the Ontario Line will be comprehensively analyzed in upcoming environmental reports that will be released for public consultation over the next year. A dedicated Joint Corridor Early Works Report, that will consider the advance construction work that will take place in Riverside and Leslieville, will be released this fall. This will be followed by the Ontario Line Environmental Impact Assessment Report which is expected in early 2022. Each report is released in its draft form for public review and comment during a formal 30-day consultation period. Feedback received during the consultation is incorporated in the final reports, which guide further project plans and designs.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound

from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association’s newly released “Canadian method of risk evaluation and assessment for railway systems.” This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for residents in Riverside and Leslieville on April 22, starting at 6:30pm – you can sign up [here](#).

We must express our profound opposition to the above ground expansion of the Ontario Line through the neighbourhoods of Riverside and Leslieville. The danger to the health and safety to us the residents is too extreme to let the project proceed as envisioned by Metrolinx. You appear to be ignoring the normal protocols which must be followed to vet a project of this disruptive magnitude. Please do your due diligence and reconsider the above ground option.

Dear Donald Wright,

My family and I live at the intersection of [REDACTED], right next to where part of the Ontario Line is being proposed by the current provincial government and Metrolinx. This is an urgent concern for me and my family given that this will create a significant impact on our lives insofar as there will be loud trains running very close to our house every few minutes above ground with the current proposal.

Current noise levels already exceed the Ontario Ministry of Environment and WHO guidelines.

Doubling of rail tracks will expose residents like myself and my family to dangerous levels of noise and vibration. Noise walls are not effective when significant noise reduction is required. Metrolinx conspicuously did not carry out a vibration study in our neighbourhood.

There has already been a gross lack of due diligence and public consultation regarding this matter from the province and from Metrolinx. I am asking you to help to protect our community. How will you help to address the various environmental, health, and safety concerns regarding this issue? How will you help to protect families and residents from such impacts? How will you prevent harm to communities?

I hope that you will work with my community to advocate to bury the Ontario Line and put it underground. I would be glad to speak with you further about this matter.

Best regards,

Dear Donald Wright,

As a resident of Riverside, I am writing to you to ask you to do what you can to ensure that the coming Ontario line is built underground. The expansion of public transportation, in a great city like Toronto, is crucial. But equally important is the health and safety of the communities that these transportation systems serve. Building the Ontario line above ground would not have serious health and safety implications in the short term, but would also negatively affect the health of this community forever. This is a growing neighbourhood with lots of kids. The homes are mostly modest in size, with little to no backyards. The existing green spaces in our community are vital, they are our backyards, our way of enjoying the outdoors.

I know there may be financial implications to burying the Ontario line through our community, but in the long run, it is so important to the health and vitality of the people in this area for generations to come. Please let me know if there is anything I can do to help convince you to bury the Ontario line, it is so important!

Thank you for your consideration,

Hi [REDACTED],

Thank you for your follow-up.

As we make progress in the project, we will be reaching out to property owners individually to respect their privacy. As we move forward, Metrolinx will only be acquiring properties that are absolutely necessary to get transit built. Consider reading our [blog post](#) about how we have refined plans to reduce property impacts in Leslieville and Riverside.

I understand you are concerned about noise and disturbances after construction. As we move forward, our commitment is to reduce community impacts throughout and beyond construction. Even after the Ontario Line is built, the work of reducing noise and vibration will start at the source – the train and the track. Here are some proven solutions we will deploy, as needed:

- When the Ontario Line trains are running, they will be electrified, which means they will be quieter than TTC or GO trains, in addition to clean and fast.
- At track level, we will be deploying rail dampers and resiliently supported rail ties technology that helps trains and subways run quietly over the tracks, very similar to soundproofing. I have attached a picture of a rail damper for your reference.
- In the shared rail corridor, where Ontario Line trains will run alongside GO trains, ballast mats could be installed on GO track – these are like cushions under the tracks that help soften the vibrations and sounds as trains pass over them. I have attached a picture of a ballast mat for your reference.
- For the Leslieville and Riverside communities, we will also be installing noise walls in certain above-ground areas, which will deflect even more noise. Wherever possible, these will be surrounded by attractive landscaping with trees and shrubs to keep things looking nice. Our initial studies show that the noise walls will reduce almost all of the noise from Ontario Line trains and reduce the noise from other railway traffic.

Feel free to reach out with any further questions,

Hi Daryl

What properties do you anticipate being impacted?

Furthermore, "noise and disturbances" are not a concern solely during the construction phase but after as well.

I will sign up for the newsletter.

Thank you

Hi [REDACTED],

Thank you for your follow-up.

Based on current plans, we do not anticipate property impacts to [REDACTED]. Given your proximity to the rail corridor, I understand you are concerned about dust, noise and your safety. Minimizing disturbances to the neighbourhood is an important part of the construction planning work we will do with our contractors.

As we move towards the construction phase of the Ontario Line, we have a variety of best practices to manage dirt and dust we'll be looking for our contractors to employ in order to manage the impact of construction on communities across the Ontario Line. You can learn more [here](#). In addition, we also will employ proven solutions to monitor and mitigate noise and vibration. There is some more information available [here](#). We will be releasing further details in our Final Environmental Impact Assessment report in spring 2022, which will share specific impacts and associated mitigations Metrolinx will take to minimize disruptions to communities across the Ontario Line.

In regards to train derailment, safety is central to everything we do – we would not design or operate a service that was not safe for our customers, our communities, or our employees. The Ontario Line will operate using remotely operated trains on an automatic signalling system which is currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Before the Ontario Line opens for communities to use, there will be robust testing program to ensure the system is safe.

If you have not yet, consider signing up for the Ontario Line [e-newsletter](#) to receive all the latest updates.

I hope this provides some helpful information. Feel free to reach out should you have any more questions,

Hello Daryl

Thank you for your reply.

The property is at the north end- [REDACTED]. Is there a timeframe for completion of the final assessment?

Other concerns include dust, noise and the possibility of a train derailment.

On Wed., Mar. 17, 2021, 1:20 p.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thanks for your question, and I am happy to provide some clarity regarding property needs for the Ontario Line.

Given the relative distance from Booth Avenue to the rail corridor where the Ontario Line will be running, we do not anticipate there will be any direct property impacts. However design work on the Ontario Line is not yet complete. Final assessments of whether a property is needed or not will be identified through further design, as more details are confirmed. Can you please provide a specific address to see if there is any further information we can share at this moment?

If a property is directly or partially impacted, Metrolinx will contact the property owner directly via email and letter. We will work collaboratively with our partners, communities and with affected property owners to ensure the lines of communications remain open and that those

impacted are continually informed from planning and design through construction, as we move forward with the Ontario Line.

Again, thank you for reaching out and feel free to ask any further questions,

Daryl-

I appreciate the response. To be involved in the procurement process do we need to submit or fill out any type of supplier questionnaire information? Can that be found at the portal?

Thanks

[REDACTED]

Hi [REDACTED],

Thank you for your interest in the Ontario Line, and the Lower Don Bridges.

As you may know, we expect to begin the procurement for the Lower Don Bridges as part of the 'Lower Don Bridges Early Works' in the second half of 2021. There will be more information posted on our [MERX portal](#) later on this summer when procurement begins.

If you have not yet, consider signing up for our [e-newsletter](#) to receive all the latest updates, including when procurement for the bridges begins.

Have a good day,

Daryl Gonsalves

Subject: Lower Don Bridges

Message:

Good Morning, I wanted to reach out to you with regards to the Lower Don Bridges. I would like to stay in the loop on the design of the bridges and the possibility of providing bending and fabrication on them. We are an AISC supplier of advanced steel bridges with induction bending capabilities and the bridge design for the Lower Don Bridges would be a good fit. You can see the last bridge we worked on at the following link:

With our background, I believe we would help with planning and engineering if the designer has material or bending questions.

Please feel free to contact me at

Thanks

Hello [REDACTED]

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of Riverside (and Leslieville) where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area.

We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Mr. Chair...

I am re-sending you this message and this time copying the Save Jimmie Simpson team, and community advisory contact.

Thanks

>>

>> Mr. Chair...

>>

>> We in the community hear from Metrolinx that burying the line (the preferred option for the community) is technically difficult. I don't see it - once you separate it from the current rail line right of way it could run out all the way to Booth in order to get below grade. And of course you still have the abandoned but previously supported option of going under the river (i.e. continue the tunnel from Union that you already have planned).

>>

>> On the other hand, politically, if you don't bury the line, the Premier will not be able to avoid being labelled the guy who favours the suburbs at the expense of the urbanites - without regard to cost. A zealot. And this could play very badly in 2022, when he will be busy saying the deficit is not his fault.

>>

>> So my advice to you and the Premier - start digging.

Hello [REDACTED],

Thank you for your email sent to the Chair of Metrolinx, Donald Wright.

Your neighbourhood is important to you – it's important to us too. We want to work closely with the community to make sure our plans for constructing in your community preserve the character of the neighbourhood while bringing much needed transit capacity to the city.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks are, especially now. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Dear [REDACTED],

My partner [REDACTED] and I live on [REDACTED] and will be directly affected by the Ontario Line.

We value the green space and trees in front of the tracks, the quiet between currently infrequent trains, and not having unsightly sound barriers that will reduce our sunlight.

We want to see the Ontario handled responsibly, leaving our street attractive, green, bright, and as quiet as possible. We have put everything into our property and want to see its value preserved.

Yours truly,

[REDACTED]

H [REDACTED]

Thank you for taking the time to share your feedback.

The Ontario Line builds on the previous Relief Line South plans. By using a mix of different route options, we are able to bring more high-order transit to more communities sooner than previously planned, including Thorncliffe Park and Flemingdon Park. Our commitment is to reduce community impacts throughout and beyond construction, and you can learn more about it [here](#).
