As we continue with our initial designs we are responding to community concerns, including preserving the Jimmie Simpson Recreation Centre so it's not impacted at all during and beyond construction, working with the City to design attractive and effective sound barriers, and planning a suite of mitigation techniques to reduce sound and vibration impacts from the Ontario Line. Going forward, there will be further opportunities for community feedback through virtual public open houses. More details will be shared through our [e-newsletter](#) in the coming weeks.

Again, thank you for sharing your feedback.

Subject: Absurdity

Message: I will continue to oppose your thoughtlessness, your bullying, and your lies, Doug Ford. After all the community consultations over years by the city, the Ont gov't now butts in and decides that they don't care what was approved previously, and is trying to force the destruction of our community. Absurd. After all that was paid for the initial consultations, Ont gov't just throws it out and tells us this is what they are going to do. Disgusted. Doug - you don't give a ---- about Toronto, you have shown us over the years many times. When in council you ignored the experts and lied to Scarborough about transit, you will not do the same with us.

Hello [REDACTED],

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

The anticipated impacts of constructing and operating the Ontario Line will be comprehensively analyzed in upcoming environmental reports that will be released for public consultation over the next year. A dedicated Joint Corridor Early Works Report, that will consider the advance construction work that will take place in Riverside and Leslieville, will be released this fall. This will be followed by the Ontario Line Environmental Impact Assessment Report which is expected in early 2022. Each report is released in its draft form for public review and comment during a formal 30-day consultation period. Feedback received during the consultation is incorporated in the final reports, which guide further project plans and designs.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them

forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association’s newly released “Canadian method of risk evaluation and assessment for railway systems.” This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Dear Sir,

I am writing on the subject of the proposed construction of the Ontario Line, which will pass through my Leslieville neighbourhood.

There is no question that improved transit in the City of Toronto is much needed. And as planning

for the Ontario Line is underway, I [REDACTED]
want to add my voice to those advocating for an underground solution through the area from south of Gerrard to Eastern Avenue.

As a long-time resident of this area, I am particularly concerned by the potential impact to the many green spaces in the area, especially Jimmie Simpson and Bruce Mackey parks. These green spaces are much needed, and greatly contribute to the beauty, vibrancy and essential character of this community.

Like many others, I am concerned about public health impacts, rail safety, and the proposed kickstarting of construction prior to completion of a thorough environmental assessment.

I encourage the Government and Metrolinx to take a long-term and considered perspective in designing and delivering this much needed infrastructure, taking community concerns into account.

This can be a signature project for the City of Toronto and the Province for decades to come. Please do this right.

Yours truly,

[REDACTED]

Hi [REDACTED]

Thank you for taking the time to provide your feedback. Happy to respond and begin a conversation.

Utilizing the existing rail corridor in Leslieville and Riverside is not only about the money involved. More importantly, we [shared](#) why running the Ontario Line in the existing rail corridor is the right approach for the community but also for an effective transit network. Surface stations in this area will save customers significantly more time in their journeys than underground stations because they would have to be almost 40 metres deep in order to avoid sewer mains. By building above ground in this area, we can avoid at least five major excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. The most significant excavation associated with the underground option would be a tunnel portal that would have been required between Eastern Avenue and Queen Street. With the above ground plan, we are able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and Riverside and Leslieville residents. We are committed to designing infrastructure that is a good fit for your community and will work with our contractors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with [our Vegetation Guideline](#). We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage.

Due to careful planning and streamlining construction with other projects in the area, we can keep mostly within the existing rail corridor footprint which minimizes impacts to surrounding neighbourhoods.

Again, thank you for taking the time to write to us. Feel free to reach out with any further questions and we are happy to continue the conversation.

Nearest Ontario Line Station (Optional): Leslieville

Subject: Ruining Parks, Trees and the Go Line berm should not be extended.

Message: This section needs to be underground. The trees and parks and berms along the Leslieville corridor add to the character of this neighbourhood. It will ruin it. There was an underground plan. Go back to that. There should not be an expanded rail berm along the Go corridor. There are so many parks, homes, business that will be negatively impacted by an above ground expansion. Terrible planning to try to save money.

Dear Mr Wright,

As a resident and tax payer in the Leslieville/ Riverdale neighbourhood, I am glad that plans are starting about increasing public transportation. However, I understand that for just the portion through our neighbourhood, the proposed Ontario Line will be above ground (running below ground from Gerrard Square north and heading east into downtown). This is shocking. It will have a devastating impact on the area, destroying many mature trees and parkland as well as contributing unknown amounts of additional noise and pollution into the neighbourhood. This gives me great concern for the health and safety of our community. I am a strong believer and consumer of public transit but firmly believe that we need to get this right. Listen to the people who will be using this and experiencing it daily as part of their daily lives.

Bury the Ontario Line

Thank you

Dear Mr. Wright,

As you are aware, the Toronto residents of Riverside and Leslieville are unilaterally opposed to the proposed destruction of our neighbourhood by Metrolinx and Doug Ford. That you should believe yourselves entitled to decide the fate of two historic Toronto neighbourhoods and the hundreds of thousands of residents who live here by elevating (rather than burying) the Ontario Line is nothing less than an attack on human life and the democratic process designed to protect collective rights.

Do you know anything about Karma?

Metrolinx has NOT conducted valid environmental testing nor ANY studies of the **mental health impact** on hundreds of thousands of residents that will be adversely affected by the eight fold increase in train traffic, not to mention the obliteration of the ONLY parks existing in the area.

Given the EXTREMELY close proximity to a thousand private homes, an Elementary school, historic Degross Street, a seniors home, a low income apartment building, six of the ONLY six parks that exist in the neighbourhood and a huge recreation centre with outdoor hockey rink used by hundreds of children it is my belief that allowing this construction to move forward is a veritable **crime against humanity, existing wildlife habitat and Toronto tourism.**

Is this even legal from an environmental law perspective? **As a mental health practitioner of almost twenty years I assure you that the adverse psychological affects on humans devoid of nature and exposed to continuous noise are real and PALPABLE.** I don't need to tell you how vitally important our parks have become during the covid pandemic when the only place where ISOLATED people have been able to meet for almost a year has been in these parks. By elevating the Ontario Line rather than burying it, as was the original plan of previous governments, the residents of Riverside and Leslieville will have to walk 3 kilometres to the closest park. Nevertheless they will NOT BE ABLE TO ESCAPE the ever-present sound of 800 daily trains running within a few metres of their faces.

We are not against development. Indeed as you are fully aware there has been an existing plan in place for a number of years that involves burying the Ontario-line due precisely to the fact that this is a **highly sensitive residential area with very few existing parks** and one of the few welcoming neighbourhoods in the city that provides housing for many low income families, seniors and the homeless.

According to Phil Verster Metrolinx's decision to elevate the line is based on high cost and yet recent cost analysis has shown that his claims are EXCESSIVELY EXAGGERATED. In fact he has at the same time mandated that the **Ontario line running through Etobicoke where the premier lives is to be buried.** The cost of burying the line in Etobicoke will be far more costly (1.8 billion to be precise) to tax payers it turns out than the cost of burying the Ontario line in Riverside. (800 million).

Nevertheless a price tag cannot and should not be placed on the physical and mental health of thousands of Toronto residents. This is criminal. Especially when mandated by non-elected corporate civilians. Given that the federal government has recently allocated 14.9 Billion Dollars to public transit there is no excuse.

Please act as on our behalf and bring this pending disaster to a firm STOP. In the interim I will be seeking consultation with the Ontario Human Rights Tribunal. If **protection against elitism** is not part of their mandate I will be advocating for it.

Yours sincerely,

Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association’s newly released “Canadian method of risk evaluation and assessment for railway systems.” This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Dear [REDACTED]

I look forward to more public transit in Toronto, but I fear that the Ontario Line lacks meaningful public consultation and adequate environmental, health and safety assessments.

I understood that the TTC was ready to start construction of a thoroughly evaluated, publicly supported and funded relief line subway. Then our new provincial government dismissed that plan, replacing it with a new plan with extensive above grade sections through densely developed inner city neighbourhoods. How to square that with the billions of extra dollars being budgeted to extend rapid transit underground in the low-density suburban neighbourhoods of Scarborough and Etobicoke?

I believe that the current plan lacks adequate evaluation. It feels rushed, with little or no consultation with the people who will be directly affected. I've heard that our public parks along the route might be damaged as trees may be cut down. Has the public even seen details of the current design proposal, or studies and costing of any alternatives? Furthermore, I've heard that the scope of the EA has been scaled back substantially.

Please allow for meaningful public input and adjust your plans for the Ontario Line accordingly. Then carry out a fulsome EA, to protect us and to protect future generations.

Thank you,

[REDACTED]

Received March 24, 2021

February 14th 2021 Metrolinx
Communication Officer Van der Valk,

we all know that without History there is no future, only money greed power being repeated through history in the ever presence of now seen in the Ford government 'Boogie Alley Politics' where Money is The value of Human Worth and Nature's gifts from which the hope promise of a better future never comes. Metrolinx does it's job for a government needing votes as our past is erased for a smart city.

The Ontario Government applied an expropriation order for the historic property site of our First Parliament of 1798. Has the City Council dsignated that property as an Historical Cultural Heritage property accordingly to the Ontario Heritage Act Part 4 Section 29 and listed on the Munciple Register as such kept by the Munciple Clerk?

The Act is to ensure the preservation of threaten historical properties for the benefit of present and futre generations. Doesn't the government need to legistrate changing the Act to expropriate these Heritage properties or can they just run shotgun over anything they want to do?

A City that allows it's History to be destroyed is a city that strives for a future that reaches for something it's not, becoming Beggars to Sidewalk Labs instead of Innovators with Fab Lab of Barcelona Spain. The Youth without History wanders, looking for their Identity elsewhere for their imagination hopes and dreams are in America, not here. The Heritage Act is as much a farce as 'We the North' is a farce needing Americans to be our heroes e.g. Rapters Hollywood, Rap Songs etc., to feel our worthiness is acknowledged as something more than just a bunch of Wanna-be's from not knowing our Heritage. If Councillors don't care enough to confront the government on protecting our Birthright than we are not much more than Wanna-be's and Beggars.

We live in an undiscovered country, that is not in schools, not in Movies, not on Screens, not anywhere, just politicians bargaining us away for money, convience and votes for our hopes and dreams. Sad.. so sad.. to be what could be... EH!

Not

Sincerely,

And sending my regards to Metrolinx all the best in Their bean counting. After all there are other Historic sites for the government to rail over. I'm sure eh!

Subject: your feedback regarding Metrolinx projects in the Lakeshore East corridor
Date: Wednesday, March 24, 2021 9:04:00 AM

Recently, our colleagues on the Toronto East Community Relations team provided you with information about GO Expansion plans in your area, in response to an email you sent to the Ministry of the Environment, Conservation and Parks. As there is also work on the Ontario Line planned in this corridor, we wanted to take the opportunity to provide you with some information about the project.

The [Ontario Line](#) will bring nearly 16 kilometres of much-needed rapid transit to Toronto to make moving around the city better, faster and easier than it is today. The line will stretch from the Ontario Science Centre in the northeast to Exhibition Place in the southwest. Current plans for the line include 15 potential stations, including six interchange stations and over 40 new connections with GO train services and existing subway, streetcar, and bus services.

You pointed out that Toronto's commuting patterns and transit needs are likely to change. That's a big part of what we are building a system that provides frequent service and connects more communities so people can get where they need to go, whether for work or play, across the city and region. By 2041, we expect the Ontario Line will:

- accommodate 388,000 daily boardings;
- ensure more than 255,000 people live within a 10-minute walk to transit;
- on average, provide access to 47,000 more jobs within a transit ride that is 45-minutes or less.

There will be several [environmental assessments](#) completed for any work proposed under the Ontario Line project, and the assessment process is already underway. The first step in the process was the Environmental Conditions Report which characterized existing conditions, including background/ambient levels of noise, vibration and air quality. Anticipated impacts will be comprehensively analyzed in subsequent Early Works Reports and an Environmental Impact Assessment Report, which will also include recommendations for robust mitigation measures to preserve and protect communities in which Metrolinx and its contractors will be building and operating. There will be significant engagement as these reports are released for public feedback in 2021 and into early 2022.

We recognize how important green space and local parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our contractors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, both transit projects will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To better shield communities living alongside the joint rail corridor in your area from all rail

operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor. We will provide the details from this analysis in upcoming environmental reports.

Please let us know if there are any questions we can answer about the Ontario Line.

Sincerely,

Daryl Gonsalves

Attachments: [image001.png](#)

Hi [REDACTED],

We are happy to hear you out but name calling is not appreciated and makes it harder for us to engage with you.

Every infrastructure project is different and Metrolinx looks at every option when delivering transit for a community. Underground doesn't always mean less impact. We posted an [article](#) about our analysis of an underground option east of the Don River and found it would be extremely disruptive to Leslieville and Riverside.

In terms of our ongoing work to refine plans in response to the feedback we have heard from the community, I understand from the project team that the goal of this adjustment is to make maximum use of the space in our existing corridor in order to further protect parks and greenspace. By reconfiguring the corridor and positioning the Ontario Line tracks beside one another on the western side of the existing rail corridor instead of having one track on either side, we are able to minimize our construction footprint even more by limiting station infrastructure to just one side instead of two and better integrate the new stations with the bridges. We'll also be able to provide a much better experience for customers, who will be able to access both northbound and southbound trains from a single centre platform. The change in plans will not cause delays to construction, nor increase costs.

The Ontario Line team has been working hard with GO Expansion colleagues and City of Toronto staff to advance these initial designs to a point that we can bring forward updated plans to the community for discussion. We are preparing for a virtual open house at which we'll be able to provide more details. Our e-newsletter will have registration details, once available.

Have a good day,

Daryl Gonsalves

Seriously? You people are idiots. Put the Ontario line underground. The new route west of the existing tracks is not an improvement. Do the right thing now instead of 10 years from now when you're forced to do it anyway.

You're fine with putting light rail underground in less populated areas on Eglinton, but you won't bury the line in an areas that is densely populated and undergoing lots more development. You people are idiots.

From: [Ontario Line](#)
To: [REDACTED]
Subject: RE: Relief Line
Date: Monday, April 5, 2021 9:02:00 AM

Hi [REDACTED]

The Ontario Line builds on the previous Relief Line South plans, providing much more than just downtown relief. The Ontario Line will operate underground, at-grade and on elevated structures. Because of this, it is able to cover a larger geography, provide more stations and expanded network integration, and generate greater benefits for travellers. Communities in Thorncliffe Park and Flemingdon Park will be able to access an Ontario Line station whereas the Relief Line did not extend service to them.

By building and operating above-ground in the Riverside and Leslieville area, we can reduce construction impacts on area residents and businesses and finish the work in shorter timeframes. Yes, there will be some impacts to the adjacent parks but we expect they can be managed and, in fact, that we can help improve the enjoyment of the parks by adding attractive noise barriers with vegetation to break up the visual impact and new tree plantings. We will also be working with the City of Toronto and Toronto Region Conservation Authority to develop a robust tree replacement program.

Our commitment is to reduce community impacts for Leslieville and Riverside throughout and beyond construction, and you can learn more about it here: bit.ly/3cCekLQ

We know that people have concerns and questions about Ontario Line plans. It's important to note that no construction will begin until Summer 2022 and before then there will be two environmental assessment reports for the joint corridor portion of the project. These reports will provide a clear picture of anticipated impacts and how they will be mitigated. Each draft report is released for a 30 day public consultation period.

We are holding a virtual community meeting in the coming month to update Leslieville and Riverside on the Ontario Line and we hope that you will be able to join. Details will be shared through our e-newsletter: bit.ly/2O4E8qf

Happy to answer any further questions,

Why did Metrolinx do away with the Relief Line and why are you insisting on ruining the Leslieville area by going above ground with your Ontario Line?

Subject: RE: Moss Park station
Date: Tuesday, March 30, 2021 9:07:00 AM
Attachments: [image001.png](#)

Hello [REDACTED]

Thank you for your email about the Ontario Line station serving Moss Park. We are still in the initial stages of our plans and do not have detailed answers to all your questions yet but will keep working with Councillor Wong-Tam's office and area community groups to share details as they are available and seek feedback along the way.

We are working with city staff to identify the preferred location for the station entrance building as well as the necessary adjacent space for construction and laydown areas, balancing impacts to traffic, residential properties, businesses and Moss Park. We are also exploring how to best coordinate our work with city plans for upgrades to the nearby community centre and park, which have similar timelines, and looking forward to bringing an update to the community this Spring.

We recognize that access to green space is vital, now more than ever, and we will be working with the city to ensure that park space is maintained for the community to use while construction is underway. We expect construction in this area to begin in 2023 and last for up to seven years but impacts will depend on the phase of the construction we are in. For example, once station mining and tunnel work is complete, we can get busy with park restoration activities. Again, exact details of this restoration phase are not yet sufficiently advanced but Metrolinx and its contractors would conduct initial landscape remediation and then coordinate any further rehabilitation efforts with the broader park upgrade plans that will be led by the city.

We will be hosting a round of virtual open houses this spring so Moss Park residents can understand the look and feel of the Ontario Line in their neighbourhood and ask questions of our project teams. I hope you will be able to participate. We would also welcome the opportunity to connect with you by phone or participate in a community group meeting.

If you have not yet, please consider signing up for the Ontario Line [e-newsletter](#) to receive all the latest updates and details for the open houses.

Best,

Bismah

Subject: Moss Park station

EXTERNAL SENDER: Do not click any links or open any attachments unless you trust the sender and know the content is safe.
EXPÉDITEUR EXTERNE: Ne cliquez sur aucun lien et n'ouvrez aucune pièce jointe à moins qu'ils ne proviennent d'un expéditeur fiable, ou que vous ayez l'assurance que le contenu provient d'une source sûre.

Good morning,

I was looking at the plans for Moss Park station, and noticed that it will be located on the southern edge of Moss Park – minimizing impact on the park itself. However I also read the following statement:

“A station in the Moss Park area will be located on the edge of the park which reduces construction impacts on traffic and transit flow along Queen Street. After construction, the park area will be restored and returned to the city for programming or redevelopment.”

This implies that the park in its entirety will be unavailable during construction (since it will be ‘returned to the city’), which seems unreasonable since the station will only be occupying the southern flank.

Also the statement says the park will be “restored” and returned to the city for “re-development”. These are vague statements and I would like to more information. Specifically:

1. Will Moss Park be available during construction? If not, why?
2. If Moss Park in whole or part will not be available, what is the expected duration of it being inaccessible?
3. When construction is complete, who will be doing this “restoration and redevelopment” and has planning for that begun?

Thank you,

[REDACTED]

Attachments: [image001.png](#)

Hi [REDACTED]

The Riverdale area is in what we're calling the "East" segment which extends from the Lower Don Bridge all the way up Pape to Danforth.

In terms of timelines, some "early works" construction in the Lakeshore East Joint Corridor (the rail corridor) is expected to take place in mid-2022. These early works involve rail corridor expansion between Eastern Avenue and Logan Avenue; you can read more [here](#). Before that work takes place, an early works environmental report will be released for public review and feedback at the end of 2021, and the Environmental Assessment and Impact Report covering the whole project will be released for public review and feedback in early 2022.

Construction on East segment stations and tracks, including the portal in the parking lots just north of Gerrard and Carlaw, is expected to begin in 2024 as part of the Northern Civil, Stations and Tunnel procurement package.

Please let us know if you have any other questions.

To: [REDACTED]
Subject: Re: Above ground train Ontario Line at Leslie like
Date: Wednesday, April 14, 2021 11:49:00 AM
Attachments: [image001.png](#)

Hello [REDACTED],

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association's newly released "Canadian method of risk evaluation and assessment for railway systems." This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area.

Hi Donald

I am very concerned that Metrolinx has decided to put the trains above ground in the Leslieville section.

I live on [REDACTED] behind [REDACTED] and my house already shakes everytime the current trains pass by.

I know that Metrolinx is extremely concerned about the trains derailing and crashing into the new construction building that is being proposed at the bottom of Degraffi and Queen at 8 Degraffi. So much so that they want the developer to build a crash wall in front in order for project to proceed. Does Metrolinx have this same concern for all the existing houses along Wardell / Degraffi Avenue that are even closer to the proposed tracks? Or is this building special?

Is the plan to build a crash wall along that entire street? Seems expensive and absolutely hideous, no?

Why are we not sticking to the same underground plan down Carlaw Ave. for the previous relief line that was approved which is more commercially zoned?

It seems completely absurd to have all these trains a few metres from people's homes.

Isn't there some sort of health and safety setback that you have to follow? Or are health and safety studies ignored for the Ontario line?

Bury the line and build better transit that is future proof. 800 million doesn't seem very much for putting the line underground to avoid having a train derail and crashing into our houses especially when this is being done for way more in Doug fords Etobicoke.

Regards,

[REDACTED]

Subject: Re: The Ontario Line and its impact on the Riverside and Leslieville communities
Date: Wednesday, April 14, 2021 4:48:00 PM
Attachments: [image001.png](#)

Hello [REDACTED]

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

The anticipated impacts of constructing and operating the Ontario Line will be comprehensively analyzed in upcoming environmental reports that will be released for public consultation over the next year. A dedicated Joint Corridor Early Works Report, that will consider the advance construction work that will take place in Riverside and Leslieville, will be released this fall. This will be followed by the Ontario Line Environmental Impact Assessment Report which is expected in early 2022. Each report is released in its draft form for public review and comment during a formal 30-day consultation period. Feedback received during the consultation is incorporated in the final reports, which guide further project plans and designs.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound

from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Chairperson Wright,

I am a resident of the Riverside neighbourhood in Toronto and am writing you regarding the Ontario Line and its impact to the environment, health and safety of my community. The over ground plans for the Ontario Line proposed by the Province and Metrolinx are problematic for the following reasons:

1. The doubling of rail tracks, over ground and in close proximity (less than 10 m) from residential and social housing exposes residents to dangerous levels of noise, vibration and pollution. This is supported by the [WHO](#). Noise walls are not effective, when significant noise reduction is required - such as having 4 rail

lines within 10 m of social housing or a residential neighbourhood. Moreover, no vibration study was conducted by Metrolinx for the impacted neighbourhoods

2. From a rail safety perspective the proposed plan of 10m set back from residential homes is far below the recommended minimum of 30m set by RailCan in 2013. How and who is approving this exception and what is the rationale?
3. The latest funding agreement set out by the federal government stipulates “no site preparation, vegetation removal or construction will occur for a Project ... until Canada is satisfied that the federal requirements under the Canadian Environmental Assessment Act ... are met.”

For these and many other reasons, including lack of public consultation throughout this process, we are asking for your support on the following :

- Ensure a proper Health Impact Assessment (HIA) is incorporated into the Environmental Assessment to understand the health impacts for the communities that surround the line.
- Review efforts and plans to put the Ontario Line underground from north of Gerrard St E to south of Eastern Ave

Yours truly,

Hi [REDACTED]

Thank you for your questions. Metrolinx is already planning to increase capacity for the [Richmond Hill GO line](#) that runs along the rail corridor you mention and it would be challenging to accommodate the Ontario Line in that corridor. Furthermore, realigning the Ontario Line to use this corridor would eliminate several key interchanges, most notably at the future East Harbour station, reducing the potential relief the Ontario Line will bring to the existing subway and surface transit network in Toronto.

Reconstructing the DVP or vehicle arteries would not fall under the purview of Metrolinx as we are a transit agency, but the Ontario Line [Preliminary Design Business Case \(PDBC\)](#) does note that one of the benefits of the project is that it is expected to take over 28,000 cars off the road each day. The PDBC also lists all the considerations used to arrive at the plan that we are advancing, including projected population and employment numbers.

Please let us know if you have any other questions,
Sivahami

Nearest Ontario Line Station (Optional): Queen
Subject: Alternate routes and future transit demand
Message:
Hello Metrolinx,

What consideration, if any, was given to increasing capacity by expanding the northward rail corridor, from Union Station, that runs alongside Bayview Avenue? Could this have been in place of or in conjunction with the "Ontario Line," to reduce the impact of the latter?

In addition, has a sensitivity analysis been conducted that accounts for the potential impact of autonomous ride sharing (AKA, Transportation as a Service) on the need for increased public transport capacity and possibly shrinking major vehicle arteries (e.g., the DVP by half)? I can provide supporting information, which has strong evidence that Full Self Driving (100% driverless cars) will be technologically possible in 2021, and automobile ownership by individuals will drop 90%+ in the five years, after regulatory approval. I will hold off though until I hear back, if this has even been considered.

Thank you,

[REDACTED]

H [REDACTED],

Just following up on this thread – as you may have seen, the April 8 presentation and Q&A session was rescheduled to April 15 [here](#). You can also submit and vote for questions before and during the session. Let me know if you have any trouble with the page.

I also found a more detailed transit network map [here](#).

Let me know if there's anything else I can help with, and have a great day,
Sivahami

Hi Sivahami,

Can you kindly send me the April 8th meeting registration ? I can't seem to find it. I registered for the Eglinton LRT one.

Thanks

Subject: Ontario Line - First Parliament Site
Date: Tuesday, March 30, 2021 9:28:00 AM
Attachments: [image001.png](#)

Hello [REDACTED],

Thank for your correspondence addressed to Mr. Verster and Ms. van der Valk on the topic of the First Parliament site.

We absolutely agree that the history within the First Parliament Site should be preserved and honoured for all the reasons you provided. As part of the Ontario Line project, we are currently working with the City, the Ministry of Heritage Sport Tourism and Culture Industries and the Ontario Heritage Trust to ensure an outcome for this site that everyone can be proud of.

While the First Parliament site will be used during construction of the nearby Ontario Line station serving Corktown, we will be making every effort to minimize impacts on cultural and heritage sites. We work with experts before, during, and after construction to ensure cultural and heritage spaces are treated with care. Any ground disturbing activities on the First Parliament Site will only begin once robust archaeological assessments are completed. We will ensure any archaeological findings or historical features will be properly documented or conserved and, where possible, made accessible for the public to learn more about. All of this work will be completed by professional archaeologists licensed under Section 48 of the Ontario Heritage Act. To learn more, you can read the [Downtown Neighbourhood Update](#) on Metrolinx Engage and select 'Corktown' from the drop down category. We also published a [blog post](#) about how Ontario Line plans will protect and pay tribute to the legacy of the First Parliament Site. If you have not already, please consider signing up for our [online newsletter](#) where updates on the First Parliament Site will be shared with the community in the coming weeks.

Please do not hesitate to reach out if you have any further questions,

Bismah

Attachments: [image001.png](#)

Hi [REDACTED]

Thank you for reaching out to Metrolinx. From your message to our colleagues, we understand that you are a householder at [REDACTED] Queen Street East and are looking for more details about Metrolinx's projects in your neighbourhood.

We wanted to connect with you directly as Metrolinx has two overlapping projects planned in your area – the [Ontario Line](#) subway project and the [Lakeshore East GO Expansion Project](#) (Pape Avenue to Kennedy Road). The joint-corridor will be a shared railway where the Ontario Line will run parallel to existing GO Service. The Ontario Line tracks are planned to run on the north side of four (three existing and one new) GO train tracks. Using the existing rail corridor and streamlining Ontario Line construction work with planned GO Expansion means we can keep mostly within an existing footprint, and minimize impacts to surrounding neighbourhoods as much as possible. Each project has its own dedicated Community Relations team who would be happy to assist in answering any specific questions you might have with regards to either project and the joint-corridor.

Based on current plans, we do not anticipate property impacts to [REDACTED] Queen Street East. Given your proximity to the rail corridor, I understand you may be concerned about dust, noise and your safety. Minimizing disturbances to the neighbourhood is an important part of the construction planning work we will do with our contractors. As we move towards the construction phase of the Ontario Line, we have a variety of best practices to manage dirt and dust we'll be looking for our contractors to employ in order to manage the impact of construction on communities across the Ontario Line. You can learn more [here](#). In addition, we also will employ proven solutions to monitor and mitigate noise and vibration. There is some more information available [here](#).

We will be releasing further details in our Final Environmental Impact Assessment report in spring 2022, which will share specific impacts and associated mitigations Metrolinx will take to minimize disruptions to communities across the Ontario Line. If you have not yet, consider signing up for the Ontario Line [e-newsletter](#) to receive all the latest updates.

I hope this provides some helpful information. Feel free to reach out should you have any further questions.

Hi [REDACTED]

Thank you for your email. The proposal you suggested was not considered by our teams.

The Ontario Line provides much more than just downtown relief. With 15 stations and over 40 new connections with GO train services and existing subway, streetcar, and bus services, the Ontario Line will get people where they need to be faster and easier across the city, whether for work or play.

One of the benefits of the Ontario Line's alignment is that it is expected to reduce crowding at Union by 14%, partly by offering multiple major transfer points for GO Transit, rather than having all transit lines converge on a single point at Union Station. Both Exhibition and the new East Harbour station will be interchange stations, offering GO commuters arriving from Peel and Durham Regions the opportunity to disembark at Exhibition or East Harbour rather than Union in order to continue into downtown on the Ontario Line. You can read more about the rationale for the plan that Metrolinx is advancing for the Ontario Line in the [Preliminary Design Business Case \(PDBC\)](#).

Please let us know if you have any further questions.

Instead of building a separate Ontario Line, was splitting the Yonge-Spadina line at Union ever considered? The Yonge line would then run from Richmond Hill to Union to Exhibition while the Spadina line would run from Vaughan to Union to Science Center (possibly going a couple blocks east from Union, tunneling north to Queen, turning east, and rejoining the planned alignment where

Queen meets the railroad tracks). If there was a cross-platform transfer at Union (which might be an engineering nightmare to build) it should be more convenient than a separate line.

Hi [REDACTED],

Thank you for your question. We are still in early stages of the project and it is too soon to confirm anticipated impacts to park spaces during construction. However, we know how important the park and archery range are to the local community and we are committed to working with the City of Toronto to restore park spaces to the same condition or better once construction is complete. If the archery range remains open during construction, safety will be a top priority and regular communication and safety measures will be in place to keep users safe.

We expect to release our Environmental Impact Assessment for the project in early 2022 and this will include a thorough analysis of environmental impacts anticipated from the project as well as things that Metrolinx and its contractors can do to mitigate those impacts. You can learn more about our environmental assessment process [here](#).

Please sign up for our e-newsletter [here](#), and feel free to reach out to us at this email, OntarioLine@Metrolinx.com, with questions and feedback about the project.

Thanks,
Sivahami

Hi [REDACTED],

We created those advertisements to raise awareness of the Ontario Line and share where communities can find more information. As a matter of privacy, we cannot share where our colleagues live.

That being said, every neighbourhood the Ontario Line will serve, including Riverdale and Leslieville, is important to us. By using a variety of at-grade, underground and elevated construction approaches, we are able to connect more communities across the city. Metrolinx will be implementing a range of measures to make sure the project blends in with the unique fabric of each area. For example, along the shared rail corridor from Pape to Eastern Avenue, we will be installing well-designed and effective noise walls that block the sights and sounds of all rail traffic and working with the city's parks department to reduce the visual impact of these barriers. The community will have several opportunities to help guide the design of the project and there will be a virtual open house coming up in April where you can find out about the latest developments and ask questions.

You can also read more about our [analysis of an underground option](#) east of the Don River and more of the mitigation measures we will implement as we move forward with the Ontario Line.

Please sign up for our e-newsletter: bit.ly/2O4E8qf if you would like to stay updated.

Morning Daryl,

Hoping you had a good weekend.

Making sure you and your team were able to view the last Save Jimmie Simpson meeting
https://www.youtube.com/watch?v=QhCIV_Im8SI&t=4s

It's a pretty meaty agenda.

My only advise is to make sure (as best as possible) to be able to answer much of the quasi factual pieces that pop up.

Green space doom. Huge concern as they feel all of these parks will be effected.

I know you don't have the measurements per se but this slide is killer. Unless it is addressed, its an up hill battle as to MX being called a liar in regards to protecting green space.

Anyways, not trying to do a blow by blow, just make sure you understand the arguments and are able to article answers even if that answer is no.

If it's no, make sure to explain why, don't leave it for them to fill in that blank.

Cheers,

Hi [REDACTED]

It was great meeting you on the Ryerson Bike tour and I hope you are doing well these days.

Anne Marie mentioned you reached out about the misinformation and lots of concern in the east end about the Ontario Line. We were wondering if you would like to connect and provide your insights about how we can build trust in this area. We can also share the timeline associated with the Ontario Line and an update on our plans. If you are interested, please share some times you are available next week and we can organize a video meeting.

Some of my colleagues in the Ontario Line Community Relations team would like to join as well: Franca, Josh and Sivahami.

Have a good day,

From: [Ontario Line](#)
To: [REDACTED]
Subject: Ontario Line update
Date: Thursday, April 1, 2021 9:01:00 AM
Attachments: [image001.png](#)

Hi [REDACTED],

You may have heard some mention of an update to the Ontario Line plans in your area. I wanted to reach out and tell you what we know now and when we expect to be in a position to share more details.

We are looking at reconfiguring the corridor and positioning the Ontario Line tracks beside one another on the western side of the existing rail corridor instead of having one track on either side. This would mean we are able to minimize our construction footprint even more by limiting station infrastructure to just one side instead of two and better integrate the new stations with the bridges. We'll also be able to provide a much better experience for customers, who will be able to access both northbound and southbound trains from a single centre platform.

The Ontario Line team has been working hard with GO Expansion colleagues and City of Toronto staff to advance these initial designs to a point that we can bring forward updated plans to the community for discussion. We are planning a virtual open house for April to provide an update to the community and seek feedback. As we have mentioned previously, no construction will begin until summer 2022, after a robust environmental assessment has been completed, including public consultation.

I will reach out once I have further details about the upcoming virtual open house, as well as any impacts from the repositioned Ontario Line tracks as soon as I have more information. In the meantime, don't hesitate to reach out if you have any questions I can help you with.

Very best,
Vanessa

Attachments: [image002.png](#)
[image001.png](#)
[image003.png](#)

Hi [REDACTED],

Thanks for your follow-up email and your questions on social media as well.

Rearranging the corridor with both Ontario Line tracks on the west side doesn't mean the tracks are closer to homes. As you can see from the image that we [recently shared with the community](#), the six tracks stay mostly within the rail corridor. In addition, this change allows us to reduce the need for permanent infrastructure which means even fewer impacts to parks that the community enjoys. What we're working on now is how the design of retaining walls to protect the parks and provide a foundation on top of which we will install noise walls that will protect the community from the sights and sounds off the corridor and bit landscaped so they reduce visual intrusion and blend in the with parks.

We're still in the early stages of design and there will be many future opportunities to provide your feedback. For your neighbourhood, environmental assessment reports will be released in fall 2021 and early 2022 that will detail associated impacts of the Ontario Line and proven solutions Metrolinx will deploy to mitigate those impacts. Before construction starts, there will be opportunities to provide feedback alongside each of these reports. You can learn more [here](#). Details will be shared through our [e-newsletter](#).

We'd like to setup a time to chat with you on the phone or via Microsoft Teams. Let us know when would be convenient for you.

Thank you,

Hi Sivahami,

The new drawings will impact the homes on [REDACTED] by being closer to peoples' actual homes versus in the park. Though this change has been taken to consider "community feedback" I am quite certain no one in the neighbourhood would have fathomed that the solution would be to increase the proximity to peoples' homes. This is less than the recommended set back by Rail Canada and the World Health Organization. How is Metrolinx obtaining feedback from all of the people who will now be directly beside this expansion at an unsafe distance? What measures is Metrolinx willing to take to make this safe for ALL individuals?

EM0002369449

H [REDACTED],

Thanks for your email about Ontario Line plans in your neighbourhood, and thank you for the work you do on the frontlines as a nurse.

Metrolinx is looking at reconfiguring the corridor and positioning the Ontario Line tracks beside one another on the western side of the existing rail corridor instead of having one track on either side. It's important to note that we're still committed to fitting the Ontario Line mostly within the existing corridor. This would be done by shifting the GO tracks to the east. The homes on Wardell and De Grassi would not be blocked by the new configuration.

Having both of the Ontario Line tracks on the west would mean we are able to minimize our construction footprint even more by limiting station infrastructure to just one side instead of two and better integrate the new stations with the bridges. We'll also be able to provide a much better experience for customers, who will be able to access both northbound and southbound trains from a single centre platform.

The Ontario Line team has been working hard with GO Expansion colleagues and City of Toronto staff to advance these initial designs to a point that we can bring forward updated plans to the community for discussion. We are planning a virtual open house for April to provide an update to the community and seek feedback. This open house will also provide an opportunity for us to share some of the initial work we have been doing on noise and vibration mitigation, including well-designed noise barriers, that will shield the community from the sights and sounds of the rail corridor.

No construction will begin until summer 2022, after a robust environmental assessment has been completed, including public consultation. This environmental assessment process began in 2019 and is ongoing, with noise, vibration, and air quality studies. More information is available [here](#).

Please sign up for our newsletter or check our [website](#) for more information about the upcoming virtual open house. In the meantime, please reach out if you have any further questions.

Thanks,
Sivahami

To: Ontario Line <ontarioline@metrolinx.com>

Subject: 301-499539-H1S4Q8 > Construction > Construction Impacts Not Noise EM0002369449

I am a resident of the Riverside neighbourhood in Toronto and writing to you regarding the Ontario Line and its impact on the environment, health, and safety of my community. My family just recently moved into this cherished neighbourhood where we finally had outdoor space. I am shocked and appalled that without public consultation my home and neighbourhood have been put in jeopardy. I am a registered nurse and have been working on the frontlines during this pandemic, not only do I have to worry about my family's safety through my work but also in my own home.

The proposed Ontario Line over ground plans are problematic for the following reasons:
1. The new proposed changes will directly impact the homes of those on both Wardell Ave and De Grassi St by blocking access to homes and increased proximity to the rail

tracks, as well as indirectly impacting many other residents. Had the most recent changes in plans been disclosed we would not have purchased our home. The doubling of rail tracks, over ground and in close proximity (less than 10 m) from residential and social housing exposes residents to dangerous noise levels, vibration and pollution. This is supported by the World Health Organization. Noise walls are ineffective, when significant noise reduction is required - such as having 4 rail lines within 10 m of social housing or a residential neighbourhood. Moreover, Metrolinx has not completed a vibration study for the impacted neighbourhoods.

2. The proposed plan of 10m setback from residential homes is far below the recommended minimum of 30m set by RailCan in 2013. This is unsafe.

3. The changes to the ground plans are in complete contradiction to the latest funding agreement set out by the federal government which stipulates "no site preparation, vegetation removal or construction will occur for a Project ... until Canada is satisfied that the federal requirements under the Canadian Environmental Assessment Act ... are met.

For these and many other concerns, including lack of public consultation throughout this process, we are asking for your support on the following:

- Put the Ontario Line underground from north of Gerrard St E to south of Eastern Ave.
- A proper Health Impact Assessment (HIA) needs to be incorporated into the Environmental Assessment to understand the health impacts for the communities that surround the line.

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Hi [REDACTED]

Given the differences between the Relief Line South proposal and the current Ontario Line project, some of the property requirements identified in the Relief Line South Environmental Report will change, but we are still determining what those changes will be. Once designs are finalized and property impacts are confirmed, Metrolinx will contact you directly, likely in mid-2022.

Thank you for your patience as we take the time to ensure we get this right, and our apologies for the wait. We will work collaboratively with our partners, communities and with affected property owners to ensure the lines of communication remain open from planning and design through construction, as we move forward with the Ontario Line.

If you have any further questions, please don't hesitate to reach out.

Sincerely,
Sivahami

Hello,

I was contacted by Metrolinx and the City of Toronto in April 2018 regarding expropriation of my property at [REDACTED] for what was then the Relief Line project. At an in-person meeting with staff from the City of Toronto Real Estate Services department, I was told that my property would be

needed temporarily, and returned to me upon completion of the construction work.

Can you confirm the status of my property in the latest plans for the Ontario Line? I have held off on making significant repairs or new investments in my property pending resolution of this question. It would be helpful to know if expropriation is still a possibility and, if so, an estimate of timeline for beginning the process.

Hi [REDACTED],

Great chatting with you on the phone.

Today, we released some [updated drawings of the alignment in the area along with a blog post](#) explaining the change. I hope this gives your clients a better picture of how we will reconfigure the corridor to accommodate the six tracks without significantly exceeding the Metrolinx property boundary. Based on these refinements, we will be working on designs of the retaining walls to be put in place along the property line to protect the adjacent properties. As soon as we have sufficiently advanced those designs to determine whether there are impacts to the edges of the [REDACTED] property, we will get in touch to setup a meeting with your clients. Every effort is being made to minimize our need for additional property while we make improvements to the corridor that will benefit the area for many years to come.

As discussed, we are organizing a virtual community meeting in the coming month to discuss that latest plans for the area residents and businesses. Details will be shared through our e-newsletter which you can sign up for on our [website](#).

Have a good day,

Daryl Gonsalves

It sounds sketchy - I would recommend you call him - loading everything on the west does not sound good.

Hi [REDACTED]

Thanks for your email. Simon has moved on to a new role and I will be working with Josh on community relations in the Riverside area.

Here is a quick summary of the current situation: Metrolinx is looking at reconfiguring the corridor and positioning the Ontario Line tracks beside one another on the western side of the existing rail corridor instead of having one track on either side. We're still committed to fitting the Ontario Line mostly within the existing corridor. Having both of the Ontario Line tracks on the west side would mean we are able to minimize our construction footprint even more by limiting station infrastructure to just one side instead of two and better integrate the new stations with the bridges. We'll also be able to provide a much better experience for customers, who will be able to access both northbound and southbound trains from a single centre platform.

The Ontario Line team has been working hard with GO Expansion colleagues and City of Toronto staff to advance these initial designs to a point that we can bring forward updated plans to the community for discussion. We are planning virtual open house for April to provide an update to the community and seek feedback. We are taking the time to get this right and no construction will begin until summer 2022, after a robust environmental assessment has been completed, including public consultation.

We will share details about the virtual open house when the date is confirmed. Once we have a clear picture of what this will mean in terms of your property at [REDACTED], we will reach out to you directly.

Sincerely,

DARYL GONSALVES

[image001.png](#)

Hello [REDACTED]

Thanks again for taking the time to meet with us today.

As promised, please find attached a notice about visual surveying work along the rail corridor starting April 8 and anticipated to be complete on the same day. The field crew will be carrying out visual assessments and taking measurements along the rail corridor using handheld cameras and measuring tools. This will support public information materials being developed regarding proposed noise walls. You can find more details in the attached notice.

As you may know, construction projects that will provide added transit capacity are recognized as an essential service in the most recent Provincial orders related to COVID-19. Contractors and staff are instructed to follow all health and safety requirements.

This notice is being emailed to Elected Officials and community groups. It will also be carried by field crew carrying out the work.

Daryl will be in touch with some more details and links we discussed, but in the meantime, don't hesitate to let me know if you have any questions.

Hi [REDACTED],

[REDACTED], it was nice speaking on the phone yesterday. We have confirmed that our virtual open house for Thorncliffe Park and Flemingdon Park will take place [on Thursday, April 15 at 6:30pm](#). We have also posted a [blog piece](#) discussing the location of the maintenance and storage facility, and updated our website [here](#) (click on Maintenance & Storage Facility).

Please share the link metrolinxengage.com/OLliveApril15 with your tenants so that they can register for the open house and submit questions. A recording will also be made available for anyone who cannot attend.

This public event is the first of a series we are hosting through April and May for all the Ontario Line station areas, and there will be many more opportunities for the public to learn about the project and provide feedback. Please let me know if you have any questions about the open house or about the Ontario Line project.

Thanks,
Sivahami

Hello [REDACTED]

Thank you for your response and for sharing your concerns.

While the First Parliament site will be used during construction of the nearby Ontario Line station serving Corktown, we will be making every effort to minimize impacts on cultural and heritage sites. Archaeological plans for the site are currently being developed in collaboration with the City of Toronto, representatives of the Mississaugas of the Credit as treaty holder, the Ontario Heritage Trust, Infrastructure Ontario and archaeological experts, as part of the First Parliament Working Group. Metrolinx will also work in consultation with these partners to establish a Heritage Interpretation and Commemoration Plan which builds on the robust Heritage Interpretation Strategy for this site, as well as opportunities for further public engagement.

I'll take this opportunity to share with you that Metrolinx is hosting virtual open houses for the Ontario Line starting this Thursday. There will be an open house on the downtown segment which includes Corktown station on April 26th at 6:30pm. You can find the registration details here: <https://www.metrolinxengage.com/en/OLliveApril26>

Lastly, if you have not yet done so, I'd encourage you to sign up for our e-newsletter on the [Ontario Line website](#) to stay in the loop for further updates.

Please do let us know if you have any questions.

Best,

Bismah

Thank you for keeping me informed. I am totally against putting condos and a community centre on a significant piece of this country's history. Of all places to do it. Will Ft. York's lands be next. It wouldn't surprise me or maybe Queen's Park.

Hello [REDACTED]

Thank you for your response and sharing your concerns.

While the First Parliament site will be used during construction of the nearby Ontario Line station serving Corktown, we will be making every effort to minimize impacts on cultural and heritage sites. We work with experts before, during, and after construction to ensure cultural and heritage spaces are treated with care. Any ground disturbing activities on the First Parliament Site will only begin once robust archaeological assessments are completed. Metrolinx will be carrying out Stage 4 Assessment on the entire site, which will ensure that all archaeological artifacts and features are delineated and catalogued. Where possible, Metrolinx will endeavour to protect archaeological features in-situ.

Archaeological plans for the site are currently being developed in collaboration with the City of Toronto, representatives of the Mississaugas of the Credit as treaty holder, the Ontario Heritage Trust, Infrastructure Ontario and archaeological experts, as part of the First Parliament Working Group. Metrolinx will also work in consultation with these partners to establish a Heritage Interpretation and Commemoration Plan which builds on the robust Heritage Interpretation Strategy for this site, as well as opportunities for further public engagement.

In terms of the long term vision for the site, the Province is working with the City of Toronto to develop a public engagement process for this Fall and the details will be communicated in the near future.

I'll take this opportunity to share with you that Metrolinx is hosting virtual open houses for the Ontario Line starting this Thursday. There will be an open house on the downtown segment which includes Corktown station on April 26th at 6:30pm. Bismah - i was just looking at the announcement and site plans. So it appears that the province is going to destroy the very foundations of the democracy of this province. What is left of the First Parliament Site should be protected and preserved in situ. Instead the province wants to build a huge condo on it and destroy it. What a shame. How sad. The government you work for has no pride in this province or its history. I am opposed to these plans.

Nearest Ontario Line Station (Optional): Gerrard

Subject: new hubs at Corktown and East Harbour announced today.

Message:

The newsletter I received today says "the Province will work closely with the City of Toronto, stakeholders and Indigenous Nations - in particular the Treaty 13 signatory, the Mississaugas of the Credit - to collaborate on a meaningful plan to commemorate the rich heritage of Canada's First Parliament site." Our past experience working with you as "stakeholders" has not been very productive. We have not felt our concerns have been seriously addressed. Will the process be different with the Corktown hub? Will you be willing to change plans if significant archeological finds are encountered and/or if there are serious objections from First Nations, the city or other stakeholders? Or do we get to decide no more than, say, the murals painted on the walls?

Subject: RE: Ontario Line | Post Open House feedback
Date: Tuesday, April 13, 2021 8:40:00 AM

Hi [REDACTED],

Thank you taking the time to write to us.

We are delivering a subway line that is two times (nearly 16 kilometres vs 7.5 kilometres) the length of the original proposed Relief Line South Project, and will bring more transit to more in-need communities sooner than previously planned. In order to accommodate the demand for transit in the future, the Ontario Line will be able operate 40 trains per hour, every 90 seconds.

Included in the Ontario Line Preliminary Design Business Case, the Ontario Line is expected to have a ridership of 388,000 daily boardings and relieve crowding at Bloor/Yonge and Union stations by 22% and 14% respectively during the busiest hour. This is possible because we anticipate trains running every 90 seconds during peak times. This way customers never have to wait long for a train and are on their way to their destination sooner. You may be interested to know that the business cases for the Ontario Line also include the planning rationale behind the Ontario Line, including how this investment will address a range of challenges facing the city's transportation system, while providing environmental and social benefits.

Yes, the planning process for the Ontario Line considers future population growth and the associated increased demand for transit. On serving the Portlands, we are working with the City of Toronto and their Waterfront East LRT initiative to explore opportunities to integrate both transit projects and create the best customer experience.

Hello,

I am writing specifically about the change of plans from the original 'Downtown Relief (subway) Line' to this 'Ontario Line'. As far as it was explained during the Open Houses is that the vehicles/cars that will be used in the Ontario Line are smaller than the subway cars used in the TTC system. I was told the vehicles are similar to the ones used in the Vancouver transit system. I am concerned about the ability of the Ontario Line to handle the capacity of riders that it will be serving. Perhaps not so much initially, but during the entire lifespan of the Ontario Line.

It's interesting that City's transit planners and experts, who have the most intimate and substantial knowledge and experience with local transit needs, determined subway cars that are used elsewhere in the TTC system would be needed and that the full line should go underground.

With the population of the city planned for substantial growth including yet undeveloped areas such as the large-scale Portlands which no doubt will feed passengers into the Ontario Line, has this substantial population growth been factored into capacity (initially and future) requirements of the Ontario Line? If yes, please share data on the capacity the Downtown Relief Line was planned to handle vs the Ontario Line. I imagine this critical decision making data is readily available.

Best,

[REDACTED]

I am sending this email from the traditional territory of many nations including the Mississaugas of the Credit, the Anishnabeg, the Chippewa, the Haudenosaunee, and the Wendat peoples and is now home to many diverse First Nations, Inuit, and Métis peoples. I also acknowledge that Toronto is covered by Treaty 13 with the Mississaugas of the Credit.

Sivahami,

If there is a document that describes how Metrolinx measures impact to community, and how it weighs factors in this case, I would love to see that.

You have to understand, for example, that no youth walks to Costco to get life and spiritual guidance. They do that at, for example, the Hifz Academy. Will that be walkable when all is said and done? You could move Costco to the industrial park, and put the train storage there, and you know what, people would drive to Costco, which is what almost everyone does right now. But even better, move the train storage to the industrial park, the most logical thing in the world!

It's so blindingly obvious that in any holistic view of community impact, what you're doing has far more impact than some sites that were on the long and short list, and certainly more impact than, say, the Costco site. This is like structural racism 101. It's like a book was opened to the page on the interstate highway development in the Jim Crow US and the destruction of Black commercial areas, and someone who chose this MSF plan was like, Yes that! Obviously I'm angry about this.

A true consultation would involve dialogue with community, and an openness to going back to the drawing board. Haven't felt much of that here.

On Mon, Apr 26, 2021 at 9:06 AM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

We measure community impact partly based on whether it would be possible for us to help relocate impacted organizations and avoid job loss, and a larger footprint does mean more of an impact.

As I mentioned, we are 100% committed to ensuring that Iqbal's stays in the neighbourhood and continues to serve as a community institution. We will also work with every impacted business and organization to support them with relocation, and the mosque will continue services at the 20 Overlea Blvd location.

I understand that Thorncliffe residents may not have all the information they need in order to feel assured about this. We know we have a lot of work to do to build trust and help the community understand that we will do everything we can to support all the businesses and organizations to continue to thrive.

If this email thread isn't feeling like a good dialogue, please let me know if you'd like to have another video meeting to talk instead. You can also reach me at your convenience on the Ontario Line general line, 416-202-5100.

Thanks,

Sivahami

I think your definition of impact on community seems to be about square footage of the MSF. I can tell you 100% that if you saved businesses like Iqbal's, you'd have less impact on the community. Furthermore, there's this feeling from speaking with you that the mosque is ok with this. We need to be clear about what a mosque is -- it's not just the board of the mosque, it's the people who attend. If you polled all the people who go to the mosque about this plan, you would learn the community 99.9% views this as a negative impact to the community.

I spoke with a local youth yesterday about this and she said the Iqbal's butcher is a community institution -- it's not just some store. She said if Costco disappeared, no one would mind that much -- but she zeroed in on the Iqbal's butcher, and said that is so close to everyone's heart. That's another way of measuring impact on community. Metrolinx needs to actually consult with community on this, and stop talking like this is a done deal.

Please let me know how Metrolinx measures "impacts to the community."

██████

On Wed., Apr. 21, 2021, 8:53 a.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi ██████,

Sorry for the delay getting back to you.

The technical team let me know that the Costco site was not on the narrowed-down "longlist" of MSF locations (which is on our website [here](#); click on "Maintenance & Storage Facility"), but it was given consideration. What they found was that although it would have reduced some of the property needs on Banigan Drive, it would have required a larger tract of land in total due to the shape and location of the land, which would have resulted in more impacts to the community. It would also have had more of an impact on the valley.

Let me know if you want any clarifications on that. Thanks again for your innovative thinking.

Thanks. We'll look into this. Please let me know about the Costco space. For example, it seems a site between the elevated/at grade Ontario Line and Beth Nelson Dr was not considered, based on Thursday's presentation. If you gave the Costco parking lot a haircut, and you went adjacent to the HONI land, you could fit a lot on that side of the line. That could preserve some land on the west side of the line, and actually have more commercial space closer to the train station. It's a poor use of land, train storage, right outside Thorncliffe Park station. That's ideal land for commercial use.. walk out of the station, walk to Iqbal's, the pharmacy, etc..

Your Project Sponsor Malcolm MacKay said bring ideas, let's discuss. So let's discuss. You have a whole site in yellow below that could reduce your impact on local businesses. And push more of the train storage and power station away from Overlea, which is prime commercial. Costco definitely doesn't need such a huge parking lot, and you have the power to expropriate this space. Work with the community.

On Fri, Apr 16, 2021 at 3:31 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

I'll definitely follow up with the project team on a more detailed answer, but here's a broad explanation:

The maintenance and storage facility will be at ground level. If parts of the MSF are on either side of a rail corridor, the tracks would need to get up to a higher height at the crossing (or a lower height if a tunnel were used). Trains can only climb at a grade of about 3-4%, so they would need quite a long runway to be able to get to that height. It would mean that more land would be needed for the full site. In comparison, when crossing a river valley, the tracks can stay at the same height, so there is no change in the overall footprint of land that's needed.

We recognize that this is a major change to the community, and building new transit in existing neighbourhoods is unfortunately never easy. But I really want to emphasize that we're going to work with each and every business and community organization to help them find a new home, and we're going to work with the community before and throughout construction to make sure that Thorncliffe Park continues to thrive.

Thanks again for your advocacy, and please let me know if you have any other

questions. Again, I'll follow up when I have more details on the hybrid site option.

Thanks,

Sivahami

This wasn't answered. Why not a hybrid of Site 1, 2 and 3, so that the storage and power facility are in the Leaside Site 3 area? Come on, is the over/under on CP Rail really not worth saving a community? You're building multiple bridges across the river! You can do this.

Please have this responded to.

Thanks Sivahami. I'm sure you're feeling the heat, because locals are feeling disrespected by how all this has gone down.

Many people have been talking about the site just north of the CP rail corridor. I hope

that site was considered, and if not, it should be.. Why would you take away prime land next to a new train station (Thorncliffe Park station) for MSF storage, instead of leaving that land so businesses can grow next to a new train station?

I hope that is on the agenda!

Hello [REDACTED]

Thank you for your email.

Metrolinx is participating in a townhall meeting on the First Parliament site this Thursday evening, which is likely what you are referring to. The information for that event can be found here:

<https://www.firstparliament.to/townhall>

I'll take this opportunity to share with you that Metrolinx is hosting virtual open houses for the Ontario Line starting this Thursday. There will be an open house on the downtown segment which includes Corktown station on April 26th at 6:30pm. You can find the registration details here:

<https://www.metrolinxengage.com/en/OLliveApril26>

Please do let us know if you have any questions after either session. I understand from my colleagues has previously raised concerns regarding the noise and vibration impacts at the Alumnae Theatre facility. As we shared last year, the Ontario Line tunnels will not pass directly under your location. Furthermore, we expect that many of these impacts will be significantly reduced by the depth of the tunnels and other mitigations we are putting in place to reduce noise and vibration at source, a full study of anticipated impacts will be included in the Environmental Impact Assessment Report which is now tracking to be released in early 2022.

Best,

Bismah

Date: Thursday, April 15, 2021 12:46:00 PM
Attachments: [image001.png](#)

Hi [REDACTED]

Thanks for your question.

Underground does not always mean less impact. In our planning and design work, we have found that using the existing 100+ year old rail corridor in Riverside and Leslieville will help us minimize impacts to the local community and connect more neighbourhoods with higher order transit sooner while getting cars off the road and reducing our greenhouse gas emissions. Tunneling the Ontario Line through this area would delay completion between 15 and 24 months – also adding to the length of time the neighbourhood would be disrupted by construction – and it would result in significantly more impacts to local businesses, homes and park space. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond. In addition, we have committed to continuous noise walls that we will work with the community to deliver. We have written more about this in an article which you can read [here](#).

Our plans have been updated based on what we heard from the community so far. We will continue to share more mitigation plans as soon as we have them. Please take a moment to read our [latest update](#) about plans for this area.

Hello, and once again you have not addressed my concerns here. I suppose you can only respond with lip service rhetoric.

I want to know why Metrolinx would go against Toronto City Council which has voted in favor of burying the Ontario Line. I also want to know why Metrolinx has not taken any feedback from the community into consideration during the planning of this project. Where are the plans and proposals for putting this line underground? I want to see these plans and so does my community.

I repeat because perhaps Metrolinx learns with repetition:

- **Current noise levels already exceed the Ontario Ministry of Environment and WHO guidelines. Doubling of rail tracks will expose residents to dangerous levels of noise and vibration.**
- **The [World Health Organization \(WHO\)](#) warns of adverse health impacts from exposure to low-frequency noise of railway traffic.**
- **Noise walls are not effective when significant noise reduction is required.**
- **Metrolinx conspicuously did not carry out a vibration study in our neighbourhood.**

Again, if you can do it in Etobicoke, you can do it for a more densely populated neighborhood. I demand that you bury the Ontario Line.

--

On Mon, Apr 19, 2021 at 1:08 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thanks for your follow-up.

The Ontario Line is following a robust environmental process that is ongoing and not complete. Before any construction begins, environmental reports will comprehensively analyze the impacts of construction and operating the Ontario Line. The reports to be released are as follows:

- A dedicated Joint Corridor Early Works Report, that will consider the advance construction work that will take place in Riverside and Leslieville, will be released this fall.
- The Ontario Line Environmental Impact Assessment Report which is expected in early 2022. This will look at impacts and mitigation measures associated with constructing and operating the entire project.

These reports will provide a better understanding of any potential health and noise impacts associated with the Ontario Line. In addition, the reports will also evaluate the effectiveness of the proven solutions Metrolinx will deploy, including the effectiveness of the noise walls. As previously mentioned, early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains.

Each report is released in its draft form for public review and comment during a formal 30-day consultation period. Feedback received during the consultation is incorporated in the final reports, which guide further project plans and designs.

Thank you for taking the time to write and I hope you find the time to attend the town hall we are hosting on Thursday.

Have a great weekend,

Thank you for your reply, but you have fundamentally not addressed my concern.

I have also CC'd both my MP (Julie Dabrusin) and MPP (Peter Tabuns) to this email.

Metrolinx has not conducted a full or proper Environmental Assessment for this proposed project, which I find to be reprehensible given that **the Ontario Line proposal plans to put tracks within 10 meters of my family's home** (health and safety regulations demand that tracks must be at least 30 meters from residences). Because you have not conducted such an assessment, you are not able to tell me the long term health and safety impacts of such proximity to these tracks. Metrolinx is putting the health and safety of my family and community at risk and this is entirely unacceptable.

I repeat because it seems you do not understand:

- **Current noise levels already exceed the Ontario Ministry of Environment and WHO guidelines. Doubling of rail tracks will expose residents to dangerous levels of noise and vibration.**
- **The [World Health Organization \(WHO\)](#) warns of adverse health impacts from exposure to low-frequency noise of railway traffic.**
- **Noise walls are not effective when significant noise reduction is required.**
- **Metrolinx conspicuously did not carry out a vibration study in our neighbourhood.**

I demand that you work towards a new proposal for this project and that Metrolinx bury this line. Again, if you can do it in Etobicoke, you can do it for a more densely populated neighborhood.

I would be glad to speak with you once you have the results of a proper and honest Environmental Assessment and Noise Impact study completed. Please let me know when you expect to carry out such studies.

--

Fri, Apr 16, 2021 at 10:04 AM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thank you for writing to us again.

In terms of noise impacts, we are first addressing it at the source. Ontario Line trains will be fully electric and have a significantly quieter noise profile compared to TTC or GO trains. Once we have our initial designs for continuous noise barriers, we will bring them forward to Riverside and Leslieville for public feedback to ensure they fit well in the community they will serve. Metrolinx also has many other tools which will be deployed during construction and beyond to mitigate noise and vibration.

If you would like to chat further, I am available for a meeting. [Here is a link](#) to select a time that works for you and we can continue the conversation over phone or a video call. If you are available, I hope you attend the upcoming virtual open house for east end residents.

Have a good day,

Daryl Gonsalves

This is not acceptable. I want the line buried. Your current project will destroy the neighborhood and comprise our quality of life with noise and vibrations. You are building underground in Etobicoke but will come through Riverside above ground? This makes no sense. Saving money is no excuse to ruin our neighborhood.

Again, I demand to know how you will be protecting us from noise and vibrations that will cause significant health problems as a result of your proposal.

On Wed., Apr. 14, 2021, 3:41 p.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

The anticipated impacts of constructing and operating the Ontario Line will be comprehensively analyzed in upcoming environmental reports that will be released for public consultation over the next year. A dedicated Joint Corridor Early Works Report, that will consider the advance construction work that will take place in Riverside and Leslieville, will be released this fall. This will be followed by the Ontario Line Environmental Impact Assessment Report which is expected in early 2022. Each report is released in its draft form for public review and comment during a formal 30-day consultation period. Feedback received during the consultation is incorporated in the final reports, which guide further project plans and designs.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be

effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees.

Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore.

Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association's newly released "Canadian method of risk evaluation and assessment for railway systems." This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

My family and I live at the intersection of [REDACTED], right next to where part of the Ontario Line is being proposed by the current provincial government and Metrolinx. This is an urgent concern for me and my family given that this will create a significant impact on our lives insofar as there will be loud trains running very close to our house every few minutes above ground with the current proposal.

Current noise levels already exceed the Ontario Ministry of Environment and WHO guidelines. Doubling of rail tracks will expose residents like myself and my family to dangerous levels of noise and vibration. Noise walls are not effective when significant noise reduction is required. Metrolinx conspicuously did not carry out a vibration study in our neighbourhood.

There has already been a gross lack of due diligence and public consultation regarding this matter from the province and from Metrolinx. I am asking you to help to protect our community. How will you help to address the various environmental, health, and safety concerns regarding this issue? How will you help to protect families and residents from such impacts? How will you prevent harm to communities?

I hope that you will work with my community to advocate to bury the Ontario Line and put it underground. I would be glad to speak with you further about this matter.

Best regards,

[REDACTED]

Subject: RE: Ontario Line Disruption

H [REDACTED],

Thank you for your email, and for offering your home for vibration monitoring. For our vibration studies, we focus on monitoring locations where vibrations are a special concern, like theatres and hospitals. For homes, we are able to extrapolate the data from those locations using sophisticated computer modelling. Our noise and vibration studies will feed into an Environmental Impact Assessment Report that will be released for public review in early 2022. More about our

environmental assessment process [here](#).

In the area of your home, we will be tunnelling around 30 metres below the surface, twice as deep as Line 2, so that we can run underneath Pape Station. For context, the average basement and foundation together are about 5.6 metres deep. The tunnel will also be located directly under the Pape Avenue roadway, not under your home. During construction, the tunnel boring machine will travel about 10-15 metres per day, so if you do feel vibrations from it, that should only last a few days as it passes. We will do a survey of nearby homes before construction begins so that we can document any foundation concerns in advance.

Once the line is operational, our goal is for there to be no change in the amount of noise or vibration that people experience compared to now, and we're studying the best methods available to ensure that. The trains themselves are not expected to be felt or heard at the surface, partly because of the depth of the tunnel and partly because the vehicles will be lighter than Line 2 trains. We will also use technology like rail dampers for the tracks, which will help the trains run quietly and prevent vibration from extending out into the ground. You can read more about the technologies we'll use on [Metrolinx News](#).

Please let me know if you have any other questions. If you haven't already, please sign up for our [e-newsletter](#) to keep up to date on the project.

Good morning

Thanks for your email. We understand your concerns and will be working closely with the community to mitigate impacts and disruptions. It is common practice for us to conduct preconstruction inspections and/or continuous vibration monitoring for properties particularly close to construction sites. This will give the project team a better understanding of foundation impacts and decisions can then be made to mitigate these impacts.

We'll have more information to share about some of these measures in the future. Hope that helps answer your question. Please don't hesitate to reach out if you have any further questions or concerns.

Hi [REDACTED],

Thank you for taking the time to chat today. As discussed, here are a some resources which may be helpful to you:

- As per your confirmation, I have signed you up for the [east Virtual Open House](#) on April 22, starting at 6:30pm. You will receive a confirmation email. This open house will cover East Harbour, Leslieville and Gerrard. The presentation will include maps/graphics of the rail corridor based on the latest information as well as a cross-section and information regarding retaining and noise walls. The rest of the time will be dedicated to answering questions from the community.
- I have attached an image of the refined route in the rail corridor. To learn more about the update, we have written this [article](#) explaining the realignment.
- Like I mentioned the Ontario Line will use electric trains which are quieter than TTC or GO trains. In addition, we have all sorts of noise mitigation such as rail dampers, ballast mats, etc. To learn more, click this [link](#).
- I want to clarify the Gerrard portal will be located west of the Gerrard Square, within the rail corridor for the most part. This is where the NoFrills and LCBO are located. I have reached out to my colleagues to get a status update on what are the latest property discussions and will get back to you when I hear back.
 - I have attached a photo of a tunnel portal to give you a sense of what it could look like.
- Early Works construction in the rail corridor between Eastern Avenue and Logan Avenue will begin in 2022. This includes bridge work, relocating utilities, constructing noise barriers/retaining walls and corridor work.
 - North package construction will start in 2024. This includes Gerrard station, Leslieville station and the Gerrard tunnel portal.
 - Before any construction begins, there will be an environmental report with all the details. By the end of this year, we will release the Joint Corridor Early Works Report.
 - In early 2022, the Final Environmental Impact Assessment Report will be shared and that looks at impacts across the entire project and the mitigations Metrolinx will deploy.
- I have attached an image of how landscaping can be used to enhance space near existing rail tracks, particularly in Jimmie Simpson Park. The exact location, height and design will be confirmed as planning work continues.
- One final note is that we have a community office on Queen Street East so we are a short walk away once restrictions lift.

The open house will showcase more maps/graphics to help you understand the look and feel a little better. As we move forward with design, we are excited to share more with the community.

Consider signing up for our [e-newsletter](#) to receive all the latest updates.

Please reach out should you have any further questions.

Thanks Sivahami. I'm sure you're feeling the heat, because locals are feeling disrespected by how all this has gone down.

Many people have been talking about the site just north of the CP rail corridor. I hope that site was considered, and if not, it should be.. Why would you take away prime land next to a new train station (Thornccliffe Park station) for MSF storage, instead of leaving that land so businesses can grow next to a new train station?

I hope that is on the agenda!

On Thu, Apr 15, 2021 at 10:22 AM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thanks again for our call, and my apologies for the delay getting back to you!

I passed along your questions about why it isn't possible to construct on hydro lands and why the Costco site would not have made sense, and will get back to you soon.

At the virtual open house tonight, we will also go into detail about all the other alternative sites that were under consideration. Thanks for registering. The recording will be available [on the same page](#) afterwards.

Please let me know if you have any other questions,

Hi [REDACTED]

We agree with you that community impact is not easily measured, and also that local services and hubs like Iqbal's and the Hifz Academy are incredibly important beyond quantifiable measure. Our plan is to support them to stay in the neighbourhood, and we're working with them one-on-one on different solutions for that, based on their specific needs. I should also note that the property acquisition process is working within legal guidelines to ensure that they experience no financial loss.

Business relocation would not have been possible if the MSF location had been in the industrial area of the business park, and that means that permanent job losses would have been much more likely. Because of the nature of the manufacturing and industrial sectors, job losses there would have had ripple effects in many other sectors. With the current plan, we are confident that we can support relocation and that's why we consider it to have lower impacts in the end.

You're right that we aren't holding a full public consultation about the location itself, because the decision is highly technical. For example, the Costco site wasn't a technical possibility for the reasons I mentioned earlier, i.e. location, land shape, and impacts to the valley. In examining options, we rely on a thorough analysis of the technical considerations, restrictions and requirements by the project team and stakeholders like the City and environmental agencies. Now that we have a preferred location, what we do want to work with the community on is how to make sure that the MSF and the Ontario Line itself integrates well into the fabric of the neighbourhood.

We are working with local elected representatives on a resident table that will meet regularly to discuss Ontario Line plans and the public realm in Thorncliffe Park. Would you be interested and have the capacity to participate? This table would be separate from more informal meetings we are holding with individual buildings and groups to hear from residents -- I would also really appreciate your/Engaged Communities' input on setting up one of these informal meetings.

Please let me know, and thank you,
Sivahami

Sivahami,

If there is a document that describes how Metrolinx measures impact to community, and how it weighs factors in this case, I would love to see that.

You have to understand, for example, that no youth walks to Costco to get life and spiritual guidance. They do that at, for example, the Hifz Academy. Will that be walkable when all is said and done? You could move Costco to the industrial park, and put the train storage there, and you know what, people would drive to Costco, which is what almost everyone does right now. But even better, move the train storage to the industrial park, the most logical thing in the world!

It's so blindingly obvious that in any holistic view of community impact, what you're doing has far more impact than some sites that were on the long and short list, and certainly more impact than, say, the Costco site. This is like structural racism 101. It's like a book was opened to the page on the interstate highway development in the Jim Crow US and the destruction of Black commercial areas, and someone who chose this MSF plan was like, Yes that! Obviously I'm angry about this.

A true consultation would involve dialogue with community, and an openness to going back to the drawing board. Haven't felt much of that here.

On Mon, Apr 26, 2021 at 9:06 AM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

We measure community impact partly based on whether it would be possible for us to help relocate impacted organizations and avoid job loss, and a larger footprint does mean more of an impact.

As I mentioned, we are 100% committed to ensuring that Iqbal's stays in the neighbourhood and continues to serve as a community institution. We will also work with every impacted business and organization to support them with relocation, and the mosque will continue services at the 20 Overlea Blvd location.

I understand that Thorncliffe residents may not have all the information they need in order to feel assured about this. We know we have a lot of work to do to build trust and help the community understand that we will do everything we can to support all the businesses and organizations to continue to thrive.

If this email thread isn't feeling like a good dialogue, please let me know if you'd like to have

another video meeting to talk instead. You can also reach me at your convenience on the Ontario Line general line, 416-202-5100.

Thanks,
Sivahami

I think your definition of impact on community seems to be about square footage of the MSF. I can tell you 100% that if you saved businesses like Iqbal's, you'd have less impact on the community. Furthermore, there's this feeling from speaking with you that the mosque is ok with this. We need to be clear about what a mosque is -- it's not just the board of the mosque, it's the people who attend. If you polled all the people who go to the mosque about this plan, you would learn the community 99.9% views this as a negative impact to the community.

I spoke with a local youth yesterday about this and she said the Iqbal's butcher is a community institution -- it's not just some store. She said if Costco disappeared, no one would mind that much -- but she zeroed in on the Iqbal's butcher, and said that is so close to everyone's heart. That's another way of measuring impact on community. Metrolinx needs to actually consult with community on this, and stop talking like this is a done deal.

Please let me know how Metrolinx measures "impacts to the community."

On Wed., Apr. 21, 2021, 8:53 a.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Sorry for the delay getting back to you.

The technical team let me know that the Costco site was not on the narrowed-down "longlist" of MSF locations (which is on our website [here](#); click on "Maintenance & Storage Facility"), but

it was given consideration. What they found was that although it would have reduced some of the property needs on Banigan Drive, it would have required a larger tract of land in total due to the shape and location of the land, which would have resulted in more impacts to the community. It would also have had more of an impact on the valley.

Let me know if you want any clarifications on that. Thanks again for your innovative thinking.

Thanks. We'll look into this. Please let me know about the Costco space. For example, it seems a site between the elevated/at grade Ontario Line and Beth Nelson Dr was not considered, based on Thursday's presentation. If you gave the Costco parking lot a haircut, and you went adjacent to the HONI land, you could fit a lot on that side of the line. That could preserve some land on the west side of the line, and actually have more commercial space closer to the train station. It's a poor use of land, train storage, right outside Thorncliffe Park station. That's ideal land for commercial use.. walk out of the station, walk to Iqbal's, the pharmacy, etc..

Your Project Sponsor Malcolm MacKay said bring ideas, let's discuss. So let's discuss. You have a whole site in yellow below that could reduce your impact on local businesses. And push more of the train storage and power station away from Overlea, which is prime commercial. Costco definitely doesn't need such a huge parking lot, and you have the power to expropriate this space. Work with the community.

On Fri, Apr 16, 2021 at 3:31 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

I'll definitely follow up with the project team on a more detailed answer, but here's a broad explanation:

The maintenance and storage facility will be at ground level. If parts of the MSF are on either side of a rail corridor, the tracks would need to get up to a higher height at the crossing (or a lower height if a tunnel were used). Trains can only climb at a grade of about 3-4%, so they would need quite a long runway to be able to get to that height. It would mean that more land would be needed for the full site. In comparison, when crossing a river valley, the tracks can stay at the same height, so there is no change in the overall footprint of land that's needed.

We recognize that this is a major change to the community, and building new transit in existing neighbourhoods is unfortunately never easy. But I really want to emphasize that we're going to work with each and every business and community organization to help them find a new home, and we're going to work with the community before and throughout construction to make sure that Thorncliffe Park continues to thrive.

Thanks again for your advocacy, and please let me know if you have any other questions. Again, I'll follow up when I have more details on the hybrid site option.

Thanks,
Sivahami

This wasn't answered. Why not a hybrid of Site 1, 2 and 3, so that the storage and power facility are in the Leaside Site 3 area? Come on, is the over/under on CP Rail really not worth saving a community? You're building multiple bridges across the river! You can do this.

Please have this responded to.

Hi [REDACTED],

Thanks so much. The Councillor's office forwarded us your email to them as well. The area on the other side of the rail corridor was one of the alternative sites studied, so it will be discussed in the open house, but I'm also happy to follow up with you afterwards if you have further questions/clarifications.

Again, I really appreciate you taking the time to reach out. Please share our phone (416-202-5100) and email (ontarioline@metrolinx.com) with others in the community so we can answer their questions and concerns directly, too.

Thanks Sivahami. I'm sure you're feeling the heat, because locals are feeling disrespected by how all this has gone down.

Many people have been talking about the site just north of the CP rail corridor. I hope that site was considered, and if not, it should be.. Why would you take away prime land next to a new train station (Thornccliffe Park station) for MSF storage, instead of leaving that land so businesses can grow next to a new train station?

I hope that is on the agenda!

Hi [REDACTED],

Thank you for taking the time to write to MPP Wynne with your concerns. We appreciate MPP Wynne's office for sharing your concerns with us. Please feel free to reach out to this email address or 416-202-5100 with any further questions about the Ontario Line.

The location for the maintenance and storage facility was chosen after extensive study in collaboration with the City of Toronto. We are committed to supporting each and every impacted business and community organization to relocate and continue to thrive. You can read more about the decision-making rationale and how we will support businesses [here](#) (click on "Maintenance and Storage Facility").

We know how important the mosque and Iqbal's are to the community. While the IST's location at 4 Thorncliffe Park Dr will be affected, the IST leadership wants to make clear that the mosque itself will not be affected; mosque services will continue at the new 20 Overlea Blvd location, which is not impacted by the maintenance and storage facility. We are also going to work closely with Iqbal to find a new location for the store in the neighbourhood.

We also appreciate that Thorncliffe Park is very dense, and that is why we are pleased that the Ontario Line will bring higher-order transit to the community. At future public meetings, we will present more information about what we will do to keep noise levels down at the maintenance and storage facility.

Again, please let me know if you have any further questions.

Thanks,
Sivahami

Subject: Concerned Resident - Metrolinx's Proposed East York Site for the Ontario Line

Good morning Ms. Wynne,

My name is [REDACTED]. I am an engineering student at the University of Toronto and a resident of the Thorncliffe neighbourhood in DVP West. The purpose of my email is to submit my concern and overwhelming

in my neighbourhood. This is not only detrimental to myself and my family but to this entire neighbourhood and many people outside of this area.

The proposed design currently demolishes two buildings at the heart of this neighbourhood; the

Dar-us-Salam mosque and the Iqbal Foods store. The Thorncliffe area holds several minority demographic groups with a very dominant Muslim population. As Muslims, the only place of worship and religious significance in the area is Dar-us Salam. People from all over Toronto and speakers from across the world visit this mosque due to its history in the city and significance for hosting a large Muslim community. It has been a building of several events, functions and holds cultural importance as well. So much so is the demand that the mosque had to buy another massive area of land in the past couple of years, just to accommodate the local population. To propose a plan that demolishes this building entirely without any transparency or talks with the local community is insensitive and utterly disrespectful.

The proposed design also runs through Iqbal Foods store which is a staple convenience store for everyone in Thorncliffe. This store has so much demand that people from all over GTA visit this store. Their meat shop for example is sold out daily even though they bring in thousands of pounds of meat a day. Anything the local community requires is available there. Spices, drinks, delicacies from Pakistan, India, Bangladesh, Sri Lanka, Afghanistan etc which are not available in most places are all available at Iqbal in the same aisles. This store is a backbone for this community.

Furthermore, we have 3 of the largest schools in this area and Thorncliffe is one of the densest if not the densest residential areas in Canada. So noise pollution and safety concerns due to this construction will cause more harm than good.

I have a plethora of other reasons why this is a bad choice but I do not want to convolute this email. I have stated at least 3 of the most important reasons at the moment.

Metrolinx stated in their plan "We feel confident that the decision we've made comes with the least amount of impacts to the community..." and "...Leaside Business Park was selected because studies showed that it keeps impacts to the local community to a minimum..." but these statements are just false claims and lies and proves that they made their decision based on the least amount of impacts to themselves.

As MPP of DVP West, it is my request that you take the considerations and voices of the people of this neighbourhood into account and force Metrolinx to stop this imprudent idea. I am disappointed that our community has been forced to even discuss such a topic. Metrolinx has a live virtual open house today at 6:30 pm at the following link: <https://www.metrolinxengage.com/en/OLliveApril15>. I would be grateful if you can join and support our community and help in stopping metrolinx to even have the faintest of thought of making Ontario line pass through Thorncliffe.

Regards,

Hi [REDACTED]

Thank you for reaching out and for your suggestion. We chose the Osgoode and Queen as Ontario Line interchange stations to connect with existing TTC Line 1 stations, providing much-needed congestion relief and a simple and seamless transfer between the two lines. We anticipate that we can relieve Line 1 of about 5,000 trips during the busiest hour of the day with the current Ontario Line plans.

We appreciate your suggestion for a station entrance/exit location at Nathan Phillips Square but must note that the general route for the Ontario Line and its 15 station locations is finalized. To provide some more details on the planning process, we studied station locations with a focus on increasing access to transit, maximizing ridership, achieving travel time savings, reducing overcrowding on existing transit services and creating better access to jobs. If you want to learn more, you can read the [Preliminary Design Business Case](#) (pages 43-45 provide an overview of the downtown Ontario Line stations and the rationale for selecting these locations).

Thank you again for reaching out. If you are not currently subscribed, please consider [signing up for our newsletter](#) to stay up to date with the latest project information. Please do not hesitate to contact us in the future if you have any further questions.

Kind regards,

Caitlin

Subject: Ontario Line - Follow-up

Hi [REDACTED],

Thank you for taking the time to chat today. As discussed, here are some resources which may be helpful to you:

- As per your confirmation, I have signed you up for the [east Virtual Open House](#) on April 22, starting at 6:30pm. You will receive a confirmation email. This open house will cover East Harbour, Leslieville and Gerrard. The presentation will include maps/graphics of the rail corridor based on the latest information as well as a cross-section and information regarding retaining and noise walls. The rest of the time will be dedicated to answering questions from the community.
- I have attached an image of the refined route in the rail corridor. To learn more about the update, we have written this [article](#) explaining the realignment.
- Like I mentioned the Ontario Line will use electric trains which are quieter than TTC or GO trains. In addition, we have all sorts of noise mitigation such as rail dampers, ballast mats, etc. To learn more, click this [link](#).
- I want to clarify the Gerrard portal will be located west of the Gerrard Square, within the rail corridor for the most part. This is where the NoFrills and LCBO are located. I have reached out

to my colleagues to get a status update on what are the latest property discussions and will get back to you when I hear back.

- I have attached a photo of a tunnel portal to give you a sense of what it could look like.
- Early Works construction in the rail corridor between Eastern Avenue and Logan Avenue will begin in 2022. This includes bridge work, relocating utilities, constructing noise barriers/retaining walls and corridor work.
 - North package construction will start in 2024. This includes Gerrard station, Leslieville station and the Gerrard tunnel portal.
 - Before any construction begins, there will be an environmental report with all the details. By the end of this year, we will release the Joint Corridor Early Works Report.
 - In early 2022, the Final Environmental Impact Assessment Report will be shared and that looks at impacts across the entire project and the mitigations Metrolinx will deploy.
- I have attached an image of how landscaping can be used to enhance space near existing rail tracks, particularly in Jimmie Simpson Park. The exact location, height and design will be confirmed as planning work continues.
- One final note is that we have a community office on Queen Street East so we are a short walk away once restrictions lift.

The open house will showcase more maps/graphics to help you understand the look and feel a little better. As we move forward with design, we are excited to share more with the community. Consider signing up for our [e-newsletter](#) to receive all the latest updates.

Please reach out should you have any further questions.

Hi [REDACTED],

Thank you for the follow-up.

Yes, I walk and ride by bike down Wardell and Degrassi Street often. We also have a community office on Queen Street East so I hope we can continue the conversation in-person, when it is safe to do so.

We understand there are concerns and we hope the community works with us as we hold more open houses, release environmental reports and explore mitigation measures, such as continuous noise walls. Refinements have been made to ensure the Ontario Line stays almost perfectly within the existing rail corridor.

If you are available, I would like to meet with you to hear you out more and answer any questions you have. Here is a [link](#) to quickly book a meeting with us at a time that is convenient for you.

Again, thank you for writing and I hope you will be available to participate in the upcoming virtual town hall I linked previously.

Hi Daryl,

Just curious have you even walked down wardell or degrassi street?? Just imagine yourself living there with your family and having the trains almost at arms reach from front doorstep.

I Would like your opinion when you finally walk down those streets and imagine yourself living there.

Let me know when you get a chance to so and your thoughts.

I feel like the people designing this haven't actually done a site visit maybe a google map search? It's crazy that you have decided that's it's better to use a 100 + year old rail corridor then go underground . Have you not learned from the above ground Scarborough train?

But I am not surprised of this as it's typical toronto transit designers with no future visions and still investing in ancient streetcars!

Hello [REDACTED]

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate

noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association's newly released "Canadian method of risk evaluation and assessment for railway systems." This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Hi Donald

I am very concerned that Metrolinx has decided to put the trains above ground in the Leslieville section.

I live on boulton avenue behind degrassi street and my house already shakes everytime the current trains pass by.

I know that Metrolinx is extremely concerned about the trains derailing and crashing into the new construction building that is being proposed at the bottom of Degraffi and Queen at 8 Degraffi. So much so that they want the developer to build a crash wall in front in order for project to proceed.

Does Metrolinx have this same concern for all the existing houses along Wardell / Degraffi Avenue that are even closer to the proposed tracks? Or is this building special?

Is the plan to build a crash wall along that entire street? Seems expensive and absolutely hideous, no?

Why are we not sticking to the same underground plan down Carlaw Ave. for the previous relief line that was approved which is more commercially zoned?

It seems completely absurd to have all these trains a few metres from people's homes. Isn't there some sort of health and safety setback that you have to follow? Or are health and safety studies ignored for the Ontario line?

Bury the line and build better transit that is future proof. 800 million doesn't seem very much for putting the line underground to avoid having a train derail and crashing into our houses especially when this is being done for way more in Doug Ford's Etobicoke.

Regards,

Hi [REDACTED],

Thank you for reaching out to us and taking the time to share your concerns.

Yes, the Access Storage location on Beth Neilson Drive will need to relocate to accommodate the maintenance and storage facility. We appreciate that many Access Storage customers have long-term relationships with them, and we know that this is a big change. While we are committed to providing relocation supports and compensation for small businesses, community organizations, and residents directly impacted by the Ontario Line, we are not in a position to support the individual customers of each impacted business. Access Storage should be in touch with you soon about timelines and potential options.

The maintenance and storage facility location was chosen after extensive study in collaboration with the City of Toronto and the TTC, and after meetings with impacted properties to understand what supports they would need for relocation if their property was needed. We understand how important the small businesses, organizations, and mosque are to the Thorncliffe Park community, and we are committed to working with each and every one of them to support them with relocation. As we mentioned during the presentation, the mosque's leaders have stated that while the building is affected, the mosque itself is not; mosque services will continue at the adjacent building they already own, and which is not impacted. For the other businesses, we will do everything we can to ensure that they can relocate and continue to thrive.

We know that the timing of the April 15 open house was not ideal, and we have apologized. We wanted to offer people the opportunity to hear from us and ask questions as soon as possible after the announcement, and [the recording is available](#) for those who couldn't attend. We adjusted our virtual format for our [April 19 open house](#) to allow more interaction, and we will be holding many more meetings in the weeks and months to come, including in additional languages.

Thank you again, and please let me know if you have any further questions,
Sivahami

Subject: Ontario Line MSF

Message:

Hi, my name is [REDACTED], I live near [REDACTED]. It is my understanding that the proposed location for the Ontario Line MSF will require the destruction of the Access Storage East York location on Beth Neilson Drive. My family has had a storage unit at this location continuously for the past 15 years, since our house is too small to store many items that we only use seasonally, like bikes, camping equipment and winter tires. My question is: will people who rent storage units at this location be compensated for having to relocate their belongings, and will Metrolinx assist tenants in finding other nearby secure storage facilities where their belongings can continue to be stored for the same/similar price? While the site is owned by Access Storage, the ultimate burden of relocation falls on the renters at this facility (i.e. my family). From my understanding, this is also one of the more affordable locations to rent storage units in this area, and I worry that Metrolinx doesn't seem to be reaching out to the dozens (if not hundreds) of families who rent at this location and who will now be required to move, nor does Metrolinx seem to be making preparations to accommodate these members of the community.

I also watched the full town hall held on April 15 for Thorncliffe Park community members. It was, quite frankly, an embarrassment. 30 minutes of non-answers to questions typed into a 160-character chat box is NOT public consultation. The meeting was also held at 6:30pm during Ramadan, at the end of a long day when many members of the Thorncliffe Park community are fasting from sun up to sun down. As I understand, the notices for the meeting were also only sent out in English. It shows a level of insensitivity, indifference, and quite honestly, outright racism, towards a marginalized, underserved, majority-minority community, one which is being disproportionately impacted by COVID-19, that Metrolinx should be deeply ashamed of. Would Metrolinx have held this meeting at 6:30pm, supper time,

on Good Friday? or Christmas Day? I think not. Given that the MSF impacts primarily Muslim businesses and places of worship in Thorncliffe Park, I for one believe Metrolinx should investigate the decision to hold that town hall at that time on grounds of community discrimination based on religion. I find the decision questionable at best, but if that decision were made with the goal to discourage Muslim members of a community from attending the meeting, I would find that absolutely and thoroughly disgusting. I think that given the circumstances, Metrolinx should apologize and broadly investigate, both to correct mistakes that were made in planning the town hall and ensure that these mistakes are avoided, as well as improve future town halls. I sincerely hope that the format of the meetings, the technology used and the attitude displayed in general by Metrolinx to address communities impacted by its projects is changed and much improved by the time of the next town hall for the Ontario Line. If your agency continues to adopt a "my way or the highway" attitude, making no space for public opinion in transit discussions and ignoring community members, I can almost guarantee you that the Toronto public will fight every move you make tooth and nail; even if it literally means being stuck on the highway into the 2030s.

We are the ones who live here. These are our communities. Our homes. Our lives. Before COVID-19, my family and I were all habitual TTC users, taking the subway to work/school almost every day. Like most Toronto residents, I am fully, entirely, and acutely aware of the need for the Ontario Line, and I support its construction. But you will never get it built by steamrolling the communities you are supposed to be serving. This project already has opposition from communities along significant portions of its route; If you want to win them back, you need to start discussing with communities about how to integrate this infrastructure in a beneficial way, instead of simply informing them of what IS going to happen and how it WILL impact their community based on decisions that Metrolinx has already made. You should include the communities in the process for making those decisions; that is what public consultation is. There is a way to do it right, so Metrolinx should figure out how to stop getting it so, so wrong, so that Toronto can get the transit it needs, in a way that it celebrates.

Please do better. I would urge Metrolinx to apologize to the community for the April 15 town hall, and to make a general statement to Toronto residents and Toronto City Council promising to improve the public consultation process, provide communities the opportunity to weigh in BEFORE important decisions are made, and include more input from council, community organizations and the TTC in general. I hope to hear back from somebody at Metrolinx soon regarding Access Storage East York.

Thanks,

Hi [REDACTED],

Thank you for your email. Metrolinx and the TTC are working together to ensure that the bus network serves the communities along the Ontario Line even better. The Ontario Line will provide a faster option for passengers who are travelling further distances while also reducing crowding at key points in the TTC subway network, but buses will still serve an important function in these communities.

Please let me know if you have any further questions.

Sivahami

Date: Wednesday, April 21, 2021 8:52:00 AM
Attachments: [image001.png](#)

Hi [REDACTED],

Thank you for joining us for the April 15 open house. We acknowledge that the virtual format could use improvement, and we tried a new call-in option at our [April 19 open house](#) to allow more interactivity. We hope to continue trying new formats and options as we continue to engage with the community.

In answer to your questions... We expect the elevated guideway (tracks) to be around 2-3 storeys up, but we won't know the exact height until 2023, when the constructors are chosen from the bidding process. Their proposed designs will be shared for feedback with the community. Construction will begin in 2024 at the earliest.

Yes, the guideway will cut across the corner of Millwood & Overlea. The exact location and size of the curve was chosen to ensure that the passing trains are as quiet as possible; moving away from the corner would have required a tighter curve, which would increase noise and vibration. We recently met with the board of your condo and committed to another meeting to review more detailed plans for the Millwood and Overlea intersection. We know that residents of your building have concerns and questions and we want to work with you to address them.

Your original email to MPP Wynne last fall also mentioned noise and vibration, and I want to take a moment to note that our target is to have no significant change in noise levels compared to today's levels, and we're doing detailed studies on how this will be best achieved. We're currently using data from the [noise and vibration study](#) from our [Environmental Conditions Report](#) to complete noise modelling studies that predict future levels of noise in the community and how those levels can be reduced. Our studies so far show that noise and vibration from the project can – and will – be effectively mitigated. More details will be shared in our Environmental Impact Assessment Report, which will be released for public review in early 2022. More about our environmental assessment process [here](#).

The reason the guideway follows Overlea Blvd is so that the station can be situated at Overlea Blvd & Thorncliffe Park Dr. Analysis showed that moving the guideway and station further away, e.g. to Banigan Dr, would put hundreds of residents out of walking distance to the station. We appreciate your privacy concerns, and we'll ask the project team if they have more information about potential solutions.

Please feel free to reach out again with any further questions,
Sivahami

I did join into the MetroLink's video designed to "engage". As has been expressed in many of the "questions", it was very disappointing as I might add were many of the comments - I certainly don't support insults or unkindness.

I am an owner of a condo at [REDACTED] and I face but I call south looking over the parking lot and at the downtown skyline. I did submit a question but I don't know where to find the answer so I'm going to ask question again if that's OK. What will the height of the elevated track be as it comes across the Millwood bridge and turns on to Overlea Boulevard? The other part of my question is where will the track make the turn from Millwood onto Overlea Boulevard? At one time it was going to cut across the corner. I am very concerned about many of the consequences of this line including blocking my view, one of the main reasons I chose this particular condo. Additionally, the closeness of the track to my balcony if in fact it cuts the corner will only be a few hundred feet away from the building and will impact my privacy every 90 seconds!

The proximity can only do value my condo when it comes time for me to leave.

I have written to the politicians and I would say again that I don't think anyone associated with MetroLink's would want or design a train line that would go have a similar impact on THEIR home. I am asking you with everything in my being to continue further along Millwood and cross somewhere further along.

Kindly reply to my inquiry about the crossover and the height of the rail. Thank you.

Hi [REDACTED],

Thanks for raising this with our team. It's unfortunate that some participants chose to publicly share their anti-LGBTQ sentiments as part of last week's event. While we did attempt to delete any posts that were inconsistent with our engagement policies, we didn't catch them all fast enough. We've added additional staff to help monitor for this issue at our future events and will be emphasizing our policies more clearly.

Thank you again for reaching out. We're glad that you took the time to participate and hope that we can provide a better experience at our virtual events going forward.

Hi [REDACTED],

The location for the maintenance and storage facility was chosen after extensive study in collaboration with the City of Toronto. We are committed to supporting each and every impacted business and community organization to relocate and continue to thrive. You can read more about the decision-making rationale and how we will support businesses [here](#) (click on "Maintenance and Storage Facility").

We know how important the mosque is to the community. We are in discussion with the Islamic Society of Toronto (IST) regarding the property at Thorncliffe Park Dr, which will be affected by our plans. However, the IST leadership wants to make clear that mosque services will continue at the new 20 Overlea Blvd location, which is not impacted by the maintenance and storage facility.

We have also informed the IST that a portion of the front lawn of Overlea Blvd will be needed for the elevated guideway (elevated train tracks), and that we will provide compensation for that portion of the property.

Please let me know if you have further questions.

Hi [REDACTED],

Thank you for taking the time to write to us and provide your feedback.

We understand the community has concerns with Ontario Line plans and we want to continue working with you as we share more opportunities for public feedback and open our community office in Riverside. Not sure if you had a chance to attend our virtual open house last night but I would like to highlight some of the information we shared.

Protecting parks in your neighbourhood while making use of the 100+ year old rail corridor means we can reduce community impacts by avoiding significant excavations compared to a tunneled option. Current plans ensure the Ontario Line remains in the existing rail corridor which means the Jimmie Simpson Recreation Centre can continue operations throughout construction and beyond.

Providing ongoing access to your beloved green space in the community is a top priority for us as we deliver this important project. If we need a small parcel of park space in order to avoid impacts to homes or businesses, we will work with the City of Toronto to ensure it is thoughtfully restored to its original condition, or better. When it comes to trees, we are working hard to avoid impacts unless absolutely required. That being said, with our commitment to deliver effective continuous noise walls for your neighbourhood, we will also plant new trees and other greenery. The attached graphic gives you an idea of how the new tracks will be arranged in the corridor, mostly within the Metrolinx property boundaries.

Thank you for taking the time to write to us and please let us know if you have any further questions.

Hi Sivahami - thanks so much for the the reply. That reply was exactly what I was looking for and it helps address my concerns about noise. Our house is [REDACTED] so it sounds like the impact of noise or vibrations will be negligible.

Thanks,

On Wed, Apr 21, 2021 at 9:03 AM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Sorry that you didn't get the answers you were looking for on Monday night. We're happy to answer specific questions directly at this email or by phone at 416-202-5100.

The tunnel south of Danforth will go directly under Pape Avenue, which means that residents living on either side of Pape or along streets like Strathcona will be less likely to feel vibrations or sounds from the train during operation, or from the tunnel boring machine during construction. The tunnel boring machines will also move at about 10-15 metres per day, so even if you are right on the corner of Pape and Strathcona and do feel some vibrations from below, you will likely only feel them for a few days as the boring machine passes by. You can see the a graphic illustrating

the route of the Ontario Line on the [Fast segment page](#) of our website. Click on “Pape South” for the section that includes Strathcona.

The Ontario Line tunnel will also be around 20-30 metres underground in this section, twice as deep as Line 2 (for context, the average basement and foundation together are 5.6 metres deep), and the trains will be lighter than Line 2 trains, so you will not experience the kind of noise and vibration that residents along the Danforth currently feel. In fact, we expect that most residents along Pape won’t feel or hear anything from the Ontario Line trains once they’re in operation.

Please let me know if you’d like to have a call to discuss any of this in more detail.

Thanks,
Sivahami

Thanks for the info. Can you advise which meeting will discuss the routing south of Danforth but north of Gerrard? The information is not clear in your description. I signed up for the meeting last night that listed “Pape” and it turns out that I was at the wrong meeting to get my question answered.

Basically what I am trying to determine is the route south of Danforth and whether it goes directly under Pape or whether it goes to either side. We live on a street called Strathcona Ave and want to understand how close to our house the subway and tunnel will go and what the vibration and sound impacts will be.

I would appreciate confirmation about the meeting or an answer with a map to my question above.

Thanks again.

Subject: RE: Hopedale Ave
Date: Wednesday, April 28, 2021 9:09:09 AM
Attachments: [image001.png](#)

Hi [REDACTED],

Thank you for your email, and for your patience as I checked in with our project team. Unfortunately, we are not able to provide a specific answer to your question at this time, but our teams are continuing to work on plans for the area and we will share more details about potential depth/width ranges when we have that information. Our anticipated property requirements have not changed and we have already reached out to property owners whose properties will be directly impacted by the project.

I know you've had questions before about noise, vibration, and tunnelling, and I'm happy to be able to share some new information on that front. Our goal is to have no significant change in noise levels during operation compared to today's noise levels, and we're doing detailed studies on how this will be best achieved. We're currently using data from the [noise and vibration study](#) from our [Environmental Conditions Report](#) to complete noise modelling studies that predict future levels of noise in the community and how those levels can be reduced. Examples of options to reduce noise and vibration include rubber mats under tracks and floating concrete slabs that keep the tracks separate from the base of the tunnel. Both of these measures help prevent train noise and vibration from transferring to the earth around the tunnel. As well, the tunnel portal, where the trains will emerge from the underground tunnels to cross the Don Valley, will be covered to reduce noise in the community. While they build the portal, the constructors will also further stabilize the valley slope as part of the Ontario Line project.

As we've mentioned, the Environmental Conditions Report will feed into an Environmental Impact Assessment Report. That report is expected to be released for public review in early 2022. More about our environmental assessment process [here](#).

Please let me know if you have any further questions,
Sivahami

Hi [REDACTED]

Sorry for missing that! Here is an example image of a guideway in Richmond BC that is similar to what we expect the Overlea guideway to look like. There are lots of options for the public realm underneath the guideway, and we look forward to getting community feedback on potential ideas when we're further along in the design process.

Let me know if you have any other questions.

Sivahami

Hi [REDACTED]

My sincerest apologies again for being late to call you! It was such a pleasure chatting and I look forward to staying in touch. As I mentioned, you can reach me at 416-202-5100 if you have any further questions.

Quang Pham, Manager of Property Acquisitions, can be reached at quang.pham@metrolinx.com and 437-522-0849. I'll let him know that we spoke, including about the 16,000 square feet of rental space that may become available at the end of Keslow's lease next year.

Thanks, and have a great day,
Sivahami

Hi [REDACTED],

Thank you for your email.

Metrolinx and the TTC are working together to ensure that the bus network serves the communities along the Ontario Line even better. The Ontario Line will provide a faster option for passengers who are travelling further distances while also reducing crowding at key points in the TTC subway network, but buses will still serve an important function in these communities, and our understanding is that all the bus lines that currently serve both communities will continue operating. We'll have more detail about any potential route changes as the project progresses.

Please let me know if you have any further questions.

Thanks,
Sivahami

Hi [REDACTED],

Thanks for your follow-up and great to continue the conversation.

We recognize the character of your neighbourhood and our priority is to advance Ontario Line plans to deliver higher order transit while minimizing impacts as much as possible. In the article I previously shared, we looked at tunneled options which would have resulted in the acquisition of numerous homes along McGee and Saulters Streets, including the beloved Saulters Street Brewery.

Based on the homework we did in the business case process I mentioned, utilizing the existing rail corridor while staying mostly within the Metrolinx property boundary is a solution to minimize impacts to homes and parks, while creating an effective transit system. Based on our early designs, we are confident we can deploy effective mitigations that address the community's concerns. For example, Ontario Line plans have committed to the installation of seamless noise walls which will make the neighbourhood quieter than it is today at a majority of locations along the rail corridor.

We understand the community wants more engagement so we have committed to monthly touchpoints to discuss these mitigations as we advance the forthcoming environmental reports. These engagements will offer a chance for us to prove to the community that our mitigations are effective and also a chance for community members to provide direct feedback.

Thanks again for taking the time to write to us .

Feel free to reach out should you have any further questions,

Thanks so much for the response!

As was communicated on the call, there is massive community support for going underground so as not to disrupt our small and unique neighbourhood. I don't necessarily support the under Carlaw plan that is being INACCURATELY identified as a community backed plan. The reality is no one in the Carlaw/Queen area was

given any chance for feedback.

Having said all this, I fully believe any delay in construction to bury the line, even within the current rail corridor, would be fully accepted by the community. Is this a plan that MetroLinx is willing to revisit and consider as the only underground option?

Forcing an above ground solution when clearly the community is opposing this will not resolve well. Although not ideal for some, a proposal that is under the rail corridor would perhaps be a resolve that everyone could agree to. Having everyone in alignment would certainly make the entire process easier and friction free.

Thoughts on this?

On Tuesday, April 27, 2021, 9:45 AM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thank you for writing and providing your feedback on the recent east virtual open house.

At Metrolinx, we complete [business cases](#) to determine how best create new transit capacity in a way that would minimize negative impacts while achieving the greatest benefits. Throughout this planning work, we have found that using the existing rail corridor in Riverside and Leslieville will help us minimize impacts to the local community and connect more neighbourhoods with higher order transit sooner while getting cars off the road and reducing greenhouse gas emissions.

[In an article here](#), we looked at tunneled alternatives but found they would be more disruptive to the community and increase the construction schedule by 15 and 24 months. We are advancing Ontario Line plans that use the 150 year old rail corridor because we are confident that we can provide effective mitigations and achieve the best customer experience for those using the Ontario Line.

As we discussed at the end of the meeting, we know the community wants more information and more engagement opportunities so we committed to more frequent touchpoints in the future as we advance the forthcoming environmental reports by the end of this year.

Again, thank you for writing to us. Feel free to reach out should you have any further questions,

Subject: Meeting follow up questions

Message:

Thanks for the meeting tonight. I am under the belief that the only underground option you attempted to cost out was under Carlaw Avenue. As you likely heard on the call tonight, this community has not had a real chance to discuss this project. Fletcher and a small group of concerned residents had NO input into the Carlaw underground plan. Regardless of the money they wasted already, I would be most interested in hearing if a straight line underneath Pape would be considered. There is more resident density with all the new condos on Carlaw and the total supporter number would far outnumber the small count of Pape Ave residents. People near the current rail line would also very likely support this (they have valid proximity concerns). I know Fletcher has NOT compromised, but this is your chance to hear the community and react in a way that meets the VAST MAJORITY of residents needs. I also wonder what happened to the proposal of tunneling under the current

railway as a means to minimize disruption. As you saw tonight, the people of Leslieville are adamant in wanting an underground solution. You do NOT have to relent to Fletcher's specific Carlaw plan in order to secure a victory. Actually, a move back to Pape would be a clear sign her pandering politics of a few voters does not work. Metrolinx can own some REAL community consultation and have support instead of pushback for the duration of the project. Please advise, and thanks in advance.

P.S. I don't typically make comments about individuals, but Fletcher/Save Jimmie Simpson and the LSE CAC are all aligned ONLY for a Carlaw plan and will not engage in anything else (sorry they also support Steven's plan, but this is also up Carlaw). Don't even ask to see a plan, instead feel free to work for the residents and not these niche groups to create your own plan. The reality is that residents would be overjoyed for a plan calling for a straight line under Pape (and the old TTC yard could be used for staging).

So the bottom line is the whole community wants an underground plan, but the vast majority want it under Pape as was originally designed.

Thanks for your consideration.

Hi [REDACTED],

Thank you for reaching out. We are actually hosting an upcoming virtual public open house for the West Segment of the Ontario Line, which includes Exhibition Station (the closest Ontario Line station to Liberty Village), and the future King-Bathurst and Queen-Spadina Stations. This virtual open house is taking place next Thursday, April 29, starting at 6:30 p.m. You can register and submit questions [here](#) on our website.

You can also learn more about Ontario Line plans for Exhibition Station under our website's [West Segment Neighbourhood Update](#) page and [Exhibition Station Early Works](#) page. The West Segment page provides a general overview of plans for Exhibition Station, and the Early Works page details the first phase of construction activities at the station which are expected to commence later this year.

Please consider [signing up for our e-newsletter](#) to stay up-to-date on project plans and future engagement opportunities. If you have any questions or feedback, please don't hesitate to contact us via email, phone (416-202-5100) or through our online engagement platform [Metrolinx Engage](#). We hope you can join us at the virtual open house next Thursday!

Thank you,

Caitlin

Hi Daryl,
Quieter then no train going by? That's what I'm talking about. There are currently no trains going by most of time so u say quieter then no train?
You are telling me it's quieter than the 1 train that goes by now.
That is not the point.

It's the Continuous noise that concerns me as well even if it's quieter then the current trains.
It's the continuous noise! Do you understand continuous noise vs train very rarely going by?

You never never answer my questions?

Tiverton photo I sent you was about set back.
Does metrolinx think that set back is ok and where is example of set back that close to 6 trains?

Hi [REDACTED],

I understand that picture looks disturbing and thanks for reaching out again.

As part of Ontario Line early works in your neighbourhood, we will be doing an extensive refurbishment of the Queen Street rail overpass. This will be done according to the latest bridge construction standards set by the City of Toronto and the Province of Ontario.

I can assure you that the project team is taking safety very seriously. In my previous emails, I provided some background on how Metrolinx is looking to international rail best practices to determine all potential hazards, like derailment, and properly mitigating them as much as possible. It's important to note that Ontario Line's train technology has automatic control which will have the latest monitoring technology so sensors can detect if the trains need to stop due to any hazard

on the rail tracks.

As we advance design and develop this standard, Metrolinx will have more so share on safety and our construction plans.

Have a good day,

Hi [REDACTED],

Thanks for taking the time to meet me on Wednesday morning and for attending the open house yesterday. I hope this will be start of many conversations as we move forward with the Ontario Line.

Responding to your points of concern:

1. The six-track joint corridor will be subject to an evaluation conducted with an Independent Safety Assessor to ensure the utmost safety standards are in place for passengers, operating and maintenance staff, and the communities that the Ontario Line will travel through. This evaluation will follow the European Standard the European Common Safety Method for Risk Evaluation and Assessment and will consider a range of factors, including operations, safety, and security measures, emergency procedures and maintenance. As we discussed, the Ontario Line will use remotely operated trains that run on an automatic signalling system which are considered to be the safest model in use.
2. As discussed in last night's open house, [here is a link to a recent blog post](#) where we share initial data from the noise studies which look at

the effectiveness of noise walls in rail corridor. Early results show the sound of every train passing through Leslieville and Riverside will be reduced by up to 50%. Noise levels throughout the day and night will also be lower than they currently are at a majority of locations along this part of the route. Once the findings are reviewed and verified, they will be shared with the community in the Lakeshore East Joint Corridor Early Works which will be released later this year.

3. As you saw with the two cross sections last night, Metrolinx will be able to stay almost entirely within the existing Metrolinx property boundary.
4. Above-ground rapid transit is already a proven solution in cold-weather cities across the world, including the TTC's existing subways here in Toronto. As we select a successful bidder to deliver the train technology, we will review the track record of the proposed technology in cold weather.
5. Vancouver (Canada Line), Montreal (REM) and London (Docklands Light Railway) are a few examples of other transit systems that have used above and below ground routes to significantly expand their transit systems through urban environments. Our experts looked around the world for best practices and how to best deliver this project.

Our decision to build the Ontario Line in the existing railway was

based on plans to limit or reduce the combined impacts of rail traffic to surrounding communities, including private residences, businesses, parks, streets and existing transit.

I understand you have concerns and we welcome you to bring them forward as we continue more frequent engagement with your community in advance of the Lakeshore East Joint Corridor Early Works Environmental Report this fall. As we move forward, we are committed to working with the community to ensure the Ontario serves the neighbourhood with maximum benefits and the solutions put into place allow you to enjoy your neighbourhoods for years to come.

Please reach out should you have any additional questions or feedback,

Hi Daryl,

Thanks for meeting us today. Have you read this guideline but for new

developments.

Some points of concern:

1. safety , crash walls for 8 degrassi recommended by metrolinx so obvious safety concern by them even with these new trains but grandfathered approach for all others?

2. Noise levels and constant noise what is recommended levels for being this close to tracks and what will be achieved?

3. Cross section showing closest house and train what is the recommended setback vs what is being proposed. Will this be clear to everyone?

4. Above ground seems like it will cost way more compared to underground. Maintenance in winter ex. Go trains always shut down during winter snow and Scarborough above trains. I don't see how a new train system would avoid winter maintenance.
, working with old railway corridor expensive, many engineering studies, Walls walls walls \$\$\$, retaining walls, crash walls, noise walls etc,. Artwork landscaping to try and make it look nice, destroying neighbourhood as no one will want to live next to this no matter how beautiful , wonderful and compelling you try and make it seem. I think realistically you can also see this.

Example of an old neighbourhood where trains are this close to houses and thriving would be beneficial.

Overall I just think going underground will be a future ready approach and just makes sense in many ways however what I got from you today was metrolinx will

proceed with above ground plan as they have done the studies to support this.

Hi [REDACTED]

Thanks for reaching out.

We are looking at how best to deliver seamless noise walls along the existing rail corridor in Riverside and Leslieville which includes the bridges you listed as well. We'll have more to share as designs and environmental assessments advance over the rest of this year.

If you have not already, consider signing up for our [e-newsletter](#) to receive all the latest updates.

[Cross section 1.jpg](#)

Hi [REDACTED],

It was good to chat with you on Wednesday. Thank you for your insights on the community and for sharing your concerns.

In regards to your property at [REDACTED], our teams are still analyzing the impacts and requirements as we continue to refine our plans. If there are any impacts to your property, Metrolinx will reach out to you directly.

The additional tracks are being carefully planned to stay mostly within the existing Metrolinx property boundary. What this means is the berm/hill you see behind your property will stay mostly where it is but changes will be made in order to create more useable area to accommodate additional tracks as well as retaining and noise walls to protect the community. As you can see from the attached cross section taken at Jimmie Simpson Community Centre, we will be staying mostly within the existing corridor. More detailed maps and plans will be released once designs in the area are sufficiently advanced.

The good news is the Ontario Line trains will be electrified and have a substantially lower noise profile when compared to GO and VIA trains that operate in the corridor today. In addition, Metrolinx will install proven solutions to reduce noise and vibration: noise walls, continuously welded rail, rail dampers, ballast mats, floating slabs of concrete, and more. Our recent [blog post here](#) shares the latest data which shows the sound of every train passing through Leslieville and Riverside will be reduced by up to 50 per cent after the new subway goes into service compared to today's levels. Noise levels throughout the day and night will also be lower than they currently are at the majority of locations along this part of the route. We look forward to working with the community as we move forward on the retaining and noise walls which will be used.

Please feel free to reach out should you have any additional questions.

Have a good weekend,

Hello [REDACTED],

Thank you for attending our virtual open house and asking a question to our panelists.

You asked about impacts to the Ralph Thornton Community Centre. The beloved community resource will be able to continue operations throughout construction and beyond. Our work in the area will be contained to the area around the bridge at Queen Street and along the rail corridor. As you heard last night, we are committed to protecting parks and minimizing impacts to private property. I just wanted to personally reach out and clarify this if the answer the panel gave seemed unclear.

If you have any further questions about the Ontario Line, please do not hesitate to reach out anytime,

Daryl Gonsalves

[image001.png](#)

Hi [REDACTED],

Thank you for your question and your kind words. We recognize the need for more engagement with your community and as we start making more progress with the project, we are excited to share more information.

Since the Ontario Line is a massive project, we have split the work into three different packages and multiple 'Early Works' projects. For the East section, three pieces of work are important to note: Lower Don Bridges Early Works, the Lakeshore East Joint Corridor Early Works and the Northern Civil, Stations and Tunnels package. I have attached a graphic to this email to help visualize the timeline.

Lower Don Bridges Early Works

- New Ontario Line bridge will be added to the north side of the existing rail bridge.
- Expected to start in 2022, following public consultation on the draft environmental report this summer.

Lakeshore East Joint Corridor Early Works

- Expected to start in mid-2022, following public consultation on the draft environmental report this fall, and last for at least three years.
- Includes GO rail corridor vegetation removal, grading, realignment of existing tracks and new track, relocation of utilities, refurbishment of all existing bridges (Queen, Dundas, Logan), installation/upgrading retaining and noise walls.

Once early works are concluded, station construction for Leslieville and Gerrard will begin followed by rail track installation. Construction of the tunnel beginning at Gerrard and running north up Pape is expected to begin in 2023.

As we advance procurement, we will have a better idea of when the each piece of work will be completed. The opening of the Ontario Line is expected by 2030.

We recognize construction of major transit infrastructure is disruptive and we are here to help. Along the way, we will strive to keep the community updated with advance notification where possible and we will be close by with our community office on Queen Street.

Let me know if you have any further questions,

Subject: Ontario Line East question.

Message:

Hi there,

Thank you for putting on the virtual open house for the East section last night. I'm encouraged by your team's commitment to holding monthly meetings, as well as the upcoming opening of your office on Queen. In the meantime, I'm hoping to get a rough idea of the construction timeline specifically for the East Section, including Leslieville Station. Are you envisioning three years, five, one? Will construction go on throughout work along the entire line, so closer to a decade? I won't hold Metrolinx to any numbers, as I know variables are a fact of life for transit around the world, but would like some sense of how long we can expect disruption, no matter how rough that estimate is. Thanks again for last night, and I look forward to your reply.

Subject: RE: access to the greenspace behind your condo for environmental survey and recording
Date: Wednesday, May 5, 2021 7:46:21 AM

Hi [REDACTED]

Thanks for following up. I've passed along your concerns to the team leading the environmental assessment. The work AECOM is doing now will supplement the joint corridor noise impact study that is part of the Ontario Line environmental assessment. We want to be able to explain the anticipated impacts and demonstrate how planned mitigations will address those impacts and result in improved conditions.

-
Our noise model uses typical rather than shortened (as a result of COVID pandemic) train consists, and future GO service levels and trains are consistent with those outlined in the GO Rail Network Electrification EPR Addendum noise study (<https://www.metrolinxengage.com/en/content/go-rail-network-electrification-epr-addendum>). We do account for the future 4th track as well.

We are continuing to work on detailed design for the joint corridor and expect to be able to provide you and your neighbours with an update this spring or early summer which will include more information regarding the bridge work planned nearby.

Vibration measurements are not part of the work that AECOM is doing right now but there will be vibration modelling included in the Joint Corridor Early Works Report that will be released this fall and we're hoping to be able to share some results before then.

We'll be in touch again soon,

Josh

Josh,

I met with your AECOM contractor on Tuesday April 27/21.

I pointed out the following to him:

1. The GO Train service is infrequent since covid and most of the trains consist of 6 rather than 10+ carriages. This will have an impact on noise calculations.
2. The future RER is scheduled to have electric trains to Oshawa and Stouffville. The new service to Bowmanville may continue to use diesel engines.
3. There is a 4th GO train track to be added on the east/south side which readings today cannot track.
4. The 2-future subway lines (currently under discussion) will be closest to our property on the west/north side and, again, the sound cannot be calculated accurately today.

We have also asked Metrolinx to perform some VIBRATION tests.

Additionally, no drawings have been presented to show where the 6 tracks may run and where the new Logan Ave. bridge (to the north of the existing one) may impact property lines on the west and east side of Logan Ave.

Please advise.

Regards,

On Apr 23, 2021, at 10:31 AM, Josh Vandezande <Josh.Vandezande@metrolinx.com> wrote:

Hello

I'd open with a comment about snow in April but by now you have probably heard them all!

One of our contractors, AECOM, will be capturing ambient sound and video information and taking measurements along the rail corridor to support public information materials being developed to help people understand how the solutions we will be putting in place will reduce noise from the corridor. We'd like to have AECOM setup in a place between the corridor and your homes that will provide the most accurate depiction of the anticipated results.

We estimate AECOM would be on site for no more than four hours at some point in the next couple weeks. The work is weather-dependant so we'll let you know the day before the crew will be at your location.

Let us know if it's ok for AECOM to access the condo property for this work.

Thanks and stay well,
Josh

<ontarioline@metrolinx.com> wrote:

H [REDACTED],

It was great to chat with you last week. I connected with my colleagues internally and here is some more information you requested:

Ontario Line train specifications

- Ontario Line trains will be fully electric and smaller than the trains TTC uses.
- They will be fully automated which is the safest system in use around the world. Train doors will automatically open and close in sync with platform edge doors that will be installed at all stations, keeping both passengers and objects safely separated from moving vehicles.
- Trains could be about 100 metres in length assuming a three metre car width
- There will be capacity to run 40 trains per hour during rush hour which means an interval of 90 seconds between each train.
- More details will be shared in the future as we advance in the procurement process.

Noise wall design

- I have attached pictures of some design ideas that the team is considering.
- Public engagement on retaining and noise wall design concepts will begin in early Summer 2021.

Bridges

- As part of the 2022 construction work, all of the bridges will be refurbished to accommodate the Ontario Line and GO Expansion.
- There are no further details I can share as they are still finalizing requirements and design.

Property impact process and compensation

- Right now, there are no impacts identified to 1038 Dundas Street East at this current moment in time.
- If Metrolinx confirms that a property is needed/impacted to support construction or operation of the Ontario Line, you will receive direct confirmation from us informing them that this is case. After that, Metrolinx will arrange to meet with the you to answer any questions you have, including how much property is needed and why, how the acquisition process works and expected timelines. Multiple meetings will take place throughout this process to ensure you have the information and support you need. Like I mentioned on our call, we are still confirming requirements and we expect to complete this by fall 2022. If your property is impacted or required, Metrolinx will compensate you at fair market value, and our commitment is to ensure owners do not experience a financial loss.

I hope this helps and feel free to reach out if you have any further questions,

Daryl Gonsalves

Hi [REDACTED],

Thanks so much for our call. It was a pleasure talking with you.

My colleague Daryl Gonsalves will give you a call back soon (I've mentioned that you prefer weekdays after 11am) with what we hear back from the project team about the following items:

- Whether the Dundas bridge will be expanded westward in the direction of your property at 1038 Dundas St E, and by how much
- The pre-surveying process used to document the conditions of homes and buildings near work sites, and whether your property will be one of the homes we will document
- More detail if possible about the compensation process if any damage is done to your stone foundation by drilling taking place near your property (I was mistaken about this being in our FAQs so I don't have a link to share right now)
- A more detailed timeline regarding when work will take place near your property ([here](#) is the overall project timeline, which shows Early Works construction in the rail corridor beginning in 2022)

Please let me know if I missed anything in this list.

I also wanted to share a couple of links to our [noise & vibration studies](#) and [neighbourhood maps](#) for your area. The maps there will be updated very soon to show the new plan to have the Ontario Line tracks together. If you aren't already, please subscribe to our e-newsletter [here](#).

Hi [REDACTED]

Thanks for your follow-up.

For the Lakeshore East Joint Corridor Early Works, we are still finalizing the design before determining the best construction method to use and a construction work schedule. Once we start determining the construction schedule, we consider impacts to the community, safety issues, rail traffic, coordination with other construction in the area, etc. Once we start construction, we will establish lines of communication with the community so you are aware of what work is happening and what to expect for the future. We know construction means disruption but we are looking at how best to minimize it wherever we can.

Feel free to reach out should you have any further questions,

Hi Daryl,

Thanks for your reply from a couple of weeks ago now (please see below).

I do have another question:

In terms of the Early Works part of the project for Lakeshore East Joint Corridor, does Metrolinx anticipate much of the work happening at night?

We've heard that is likely the case due to safety issues surrounding work happening during the day as the majority of trains use the corridor.

Can you let me know any thoughts on this?

Thanks very much,

[REDACTED]

- Includes GO rail corridor vegetation removal, grading, realignment of existing tracks and new track, relocation of utilities, refurbishment of all existing bridges (Queen, Dundas, Logan), installation/upgrading retaining and noise walls.

Once early works are concluded, station construction for Leslieville and Gerrard will begin followed by rail track installation. Construction of the tunnel beginning at Gerrard and running north up Pape is expected to begin in 2023.

As we advance procurement, we will have a better idea of when the each piece of work will be completed. The opening of the Ontario Line is expected by 2030.

We recognize construction of major transit infrastructure is disruptive and we are here to help. Along the way, we will strive to keep the community updated with advance notification where possible and we will be close by with our community office on Queen Street.

Let me know if you have any further questions,

Subject: Ontario Line East question.

Message:

Hi there,

Thank you for putting on the virtual open house for the East section last night. I'm encouraged by your team's commitment to holding monthly meetings, as well as the upcoming opening of your office on Queen. In the meantime, I'm hoping to get a rough idea of the construction timeline specifically for the East Section, including Leslieville Station. Are you envisioning three years, five, one? Will construction go on throughout work along the entire line, so closer to a decade? I won't hold Metrolinx to any numbers, as I know variables are a fact of life for transit around the world, but would like some sense of how long we can expect disruption, no matter how rough that estimate is. Thanks again for last night, and I look forward to your reply.

Hi [REDACTED]

Thanks for your email and for attending our open house last week.

We have noise and vibration engineers completing this important study and once complete, we will be sharing it with the community through the Lakeshore East Joint Corridor environmental report which will be released in the fall. This environmental report will include a 30-day consultation period and be released well before construction begins in 2022.

We know the community has many questions about noise and vibration so we shared some initial results from the study so far which tells us that Ontario Line plans will ensure noise levels will be lower than they currently are at many locations along Riverside and Leslieville. Right now, we can confidently say the sound of every train passing through many locations in these neighbourhoods will be reduced by up to 50 per cent. To learn more, please read the [latest blog](#) we released which summarizes the information you heard at the open house last week. We will be sharing more information as soon as we can.

Feel free to reach out should you have any further questions,

Hello Metrolinx,

I am a resident of Leslieville and I attended the Open House virtual meeting on April 22, 2021.

Today I received the Metrolinx email newsletter in my inbox that included the following statement,

At the virtual open house for the East segment last night, the Ontario Line team shared details about how seamless noise walls proposed along the existing rail corridor in the neighbourhoods of Riverside and Leslieville are expected to result in quieter, more peaceful streets, with noise levels lower

than they are today at many locations along this stretch of the Ontario Line.

If possible, could you please provide the engineering and/or scientific data to support this claim?

Please excuse me for saying, but without real scientific data to support a claim that trains running every 45 seconds will be quieter than the current situation, your claims resemble KGB-style propaganda. It's hard to understand how this current plan could be quieter.

Thank you,

[REDACTED]

Hey just a quick note.

I have seen the planning drawings for Ontario line and GO for park and noise barriers. I would highly suggest to use updated front end pictures of TTC and GO driver end cars. The more aerodynamic design of the end drive cars are an important viewpoint to showcase . We do not ride on freight trains.

Best Regards and stay safe,

Date: Tuesday, April 27, 2021 9:54:00 AM
Attachments: [image001.png](#)

Hi [REDACTED],

Thank you for reaching out again and sharing your ideas.

As we discussed before, the Ontario Line plan has been created through a business case process to achieve the best social and environmental return on investment. There will be protections for future expansion so we do appreciate you to taking the time to suggest future expansions or modifications to existing plans.

We will continue to share your ideas with the project team for future consideration, when more funding becomes available down the line.

Have a great day,

Daryl Gonsalves

EXPÉDITEUR EXTERNE: Ne cliquez sur aucun lien et n'ouvrez aucune pièce jointe à moins qu'ils ne proviennent d'un expéditeur fiable, ou que vous ayez l'assurance que le contenu provient d'une source sûre.

Dear Metrolinx,

I trust everyone is doing well. If I had a billion dollars or two for Toronto's next project, may I suggest the following with advantages and disadvantages.

I am still of the opinion that automated LightMetro should be used on the future UPEXpress.
Why?

1. There will be commonality with the OntarioLine.
2. Storage/maintenance facilities can be shared.
3. The platforms on the UPEXpress are already high floor.
4. Opportunity to easily expand, intertwine and automate future sections and branches. ie.

[REDACTED]
Keep reading.

If Metrolinx does not want to put a single service track or double track through Union to connect the Ontario Line with the UPEXpress (Proposal 1.0) then;

The UPEXpress and the Ontario Line should meet at Exhibition Station and interline as automated LightMetro (Proposal 2.0).

Proposal 2.0 will set the UPEXpress free from GO and GO RER operation. The TTC will now be responsible for the OntarioLine/UPEXpress operation.

The UPEXpress portion no longer needs to service Union Station.

Keep reading.

A tunnel or elevated portion with stations, to be determined, will extend the OntarioLine west and north to the rail corridor after the junction or before Dundas.

I would suggest a cut and cover line along Roncesvalles to Dundas West without a mezzanine and direct entry from street level to your platform. Sure it is a little disruptive. A shorter route up Dufferin should be less disruptive but you will need to fly over the Milton GO. Both options fulfill a long planned proposed u-shaped subway line connecting the Bloor subway line through downtown Toronto.

Please, keep reading.

The Advantages:

1. Since all GO Trains can off load Pearson bound travellers at Exhibition and East Harbour on the OntarioLine. There is no need for the UPEXpress to go to Union Station.
 2. Since the UPEXpress is no longer needed at Union this avoids building crossovers or flyovers or elevated platforms at Union.
 3. The two tracks and platform can be freed up at Union Station or removed.
 4. All platforms at Union can now be designed to be the same height providing more flexibility.
 5. The UPEXpress/OntarioLine now offers a larger watershed for Pearson bound users and vice versa. There is no need to travel to Union. More stations and destinations are served by the UPEXpress/OntarioLine.
 6. Walking distances and time is shorter for transfers at East Harbour and at Exhibition compared to Union.
 7. Pearson bound travellers from the Richmond Hill GO train should be rare or non existent and vice versa. Travellers to/from Richmond Hill will travel direct to/from Pearson.
 8. The UPEXpress/OntarioLine becomes local and will be TTC operated with additional stations to be determined to serve more Torontonians. ie. King, Queen, Roncevalles, Dufferin, Dundas, St.Clair, Islington, Kipling, etc
- This frees up the Kitchener GO RER to stop at Bloor, Mount Denis and Pearson avoiding Weston, St. Clair, Spadina and Liberty Village.
9. Fares to be the same as the TTC.
 10. Frequent automated LightMetro service from every 15 minutes to 3 minutes or better makes up (slightly) for the longer ride by reducing wait times.
 11. Frequent, high speed and affordable alternative travel into and out of downtown Toronto for commuters and travellers.

12. Frequent, high speed and affordable alternative travel into and out of Pearson for commuters and travellers.

13. Toronto gets a new retrofitted automated LightMetro line at a fraction of the cost of a Subway.

14. Options are now open for future branch lines to connect and use LightMetro automated technology ie. LakeshoreWest, Jane, DonMills, Dufferin, etc.

Disadvantage(s):

1. Additional cost to tunnel from Exhibition to the rail corridor.

An alternative would be to elevate the section from Exhibition to the rail corridor to reduce costs.

Route to be determined.

2. Those needing a GO bus at Union will need to transfer from the UPEXpress/OntarioLine. Numbers should be low. Studies needed.

3. Voltages are different than GO RER but they can be the same as the future Ontario Line. There are planned mixed voltages on the east side of Union Station.

4. It will be slower to Pearson and into downtown Toronto due to more stops.

This can be fixed with the future Kitchener GO RER trains running through Pearson (above or below grade).

Transfers are no longer required for travellers from Gueph, Kitchener, London, etc.

You can now charge more.

Bottom line, the opportunity now exists for Pearson to be a truly complete transit hub, available to local, regional and intercity travellers.

Sorry, I do not have a business case. Give me a week.

Subject: RE: Expropriation and Furnishing question
Date: Monday, May 3, 2021 11:27:04 AM
Attachments: [image001.png](#)

Hi [REDACTED],

Thank you for your patience as we worked with our colleagues on the property team.

Properties we acquire are appraised by an independent appraiser to determine fair market value on the effective date of the appraisal report, based on similar comparable properties, and with consideration of highest and best use. Renovations to permanent fixtures that are done before the date of the appraisal report would be considered part of the market value in this case. However, furniture would not be considered part of the market value.

As you may know, the Don Valley crossing is part of the [North Civils procurement package](#), for which financial close will take place at some time in 2024. Based on that timeline, negotiations and acquisitions would begin in 2023.

Hope that helps. Please let me know if you need more information.

Thank you,
Sivahami

Hi Metrolinx,

My name is [REDACTED]. I live at [REDACTED] with my wife and child. We were given a notice of intent to expropriate last October for sometime in 2024.

I have a question. We spent the last three years (and hundreds and hundreds of thousands of dollars) custom renovating our home (ourselves and a contractor) into the place where we could spend the rest of our lives. We closed out our permit late 2020. We are very proud of the work we've done. It's fantastic- we love it and we love our neighbourhood. I'm sure you've heard this before, but this is home we planned on living in for the rest of our lives.

We'd like to upgrade a few things now that we've been living in it for a while. In particular, upgrading the fireplace to gas, fixtures and some furniture. These would be expected things one would do in a new home. As I'm sure you're aware furniture and fixtures are chosen based on the residence, and are not easily interchangeable when moving.

Which means the intent to expropriate has put us in a difficult position. We'd like to purchase these items- again like most new home owners, this was the plan all along. But now we're wondering if we do that, will we see that return on investment should we be forced out of our home, or is it better not to spend the money?

I don't want to spend the money because I don't believe we will see that money back, but my wife very much wants to because she wants to make this house, however short it may be, our home. It has caused a lot of conflict between us, which, try as we might, trickles down into our day to day lives as a family. It really is stressful- in fact, I would go so far as to say this entire process has really added a life altering amount of stress on our young family. [REDACTED] my wife, is on copy and can verify.

As the instigator of this stress I am looking to Metrolinx to offer some guidance on how we proceed as homeowners who have been given an intent to expropriate. Will we get a return on the thousands of dollars we'll need to spend to get the home to where we dreamed it would be when we started this?

Thank you,

[REDACTED]

Hi [REDACTED]

Thank you for writing to us and for participating in the recent virtual open house. A lot of the discussion last week was focused on the area around the future Leslieville station because we had new information to share about anticipated impacts there.

Right now, we are still finalizing details related to the portal at Gerrard, looking at how we can best reduce our requirements as much as possible. Once that is complete and any property requirements are identified, we will reach out directly to property owners to make them aware. Due to legal sensitivities, we cannot share more about these conversations with employees or tenants but we will provide information to the public as soon as possible.

Feel free to reach out should you have any further questions,

Hello [REDACTED],

Thank you for your email about the virtual open house for the downtown segment.

We appreciate and have noted your feedback. All those who registered for the event will be receiving a survey inviting feedback on the session, and we look forward to using this to inform our future sessions.

We would welcome the opportunity to discuss your questions or concerns about Moss Park station. If you would like to provide a window this Friday or early next week, we can schedule time for a discussion via a phonecall or a Microsoft Teams meeting. Please let us know if you have a preference, and if it is a phonecall, we would ask that you provide your phone number.

Best,

Just realized, my misunderstanding: Ontario Line joins above-ground from Pape/Carlaw @Gerrard and heads downtown from there.

I know there is work happening between Greenwood and Coxwell for GO expansion (adding 4th line). Never mind on my questions on my prior email.

On Mon, Apr 26, 2021 at 6:52 PM [REDACTED] wrote:

I've been exploring the available documents and filmed public consultation sessions (thank you for

this) and have been wondering if there is any information about the above-ground segment between Greenwood and Coxwell (I live just south of the right-of-way across from Monarch Park.

1. How long after the Ontario Line goes active (around 2019) before GO transit lines are electrified?
2. Are the noise-reduction walls going to be running all the way up through the Greenwood to Coxwell corridor? I had heard that there would not be sound reduction walls put into place there and would rather know what the actual plan is rather than the rumour.
3. Will the existing GO/VIA corridor rails be moved to the south within the existing corridor between Greenwood/Coxwell, or will the Ontario Line rails be added to the right of way to the north of the existing lines without moving them?
4. It is not at all clear whether the Sound Profile is per-train or average ambient sound. Right now in this corridor, we have a few trains per hour passing our house at or near maximum speed so the seconds of elevated noise per train add under a minute of elevated noise per hour. If I understand correctly, the number of trains passing through the corridor will eventually be multiple trains per minute. It is not clear to me what the speed per Ontario Line train as they pass this point since the stations on the Ontario Line will be much closer, the likelihood of slower trains running more frequently, even with vibration reduction and noise mitigation, the average ambient sound would go up. Where can I find more details on the sound profile along the entire above-ground corridor, with more details along the segment by which I live?

Hi Siva,

Our Ontario Line LIVE meeting was understandably focused on the MSF location, but I am wondering if the Innocon Leaside Plant at [REDACTED] will be departing to make way for the guideway and bridge to Flemingdon Park.

Are you able to provide any insights? Seems like it would be at least partly in the way of construction.

Thanks,

Hi [REDACTED],

We have been trying to improve our process through each of our open houses in response to community feedback. After we heard concerns about a lack of interaction at the April 15 open house, we initiated a call-in option for the April 19 open house, and then a post-event survey for the April 22 open house to collect more input. We plan to include both the call-in option and survey for our future events, including for the next open house for the Thorncliffe Park area, which we hope to hold in June.

All of the virtual open houses are taking place in geographic sequence, beginning in the north because we wanted to provide an opportunity for questions as soon as possible after the announcement of the maintenance and storage facility location, and proceeding south along the alignment. It does mean that the April 15 event had the most lessons for us, and we know we have lots of room for improvement. We're looking forward to holding many more meetings in the community, including the community tables that Aafaq mentioned below and which you will be invited to as a tenant at 2 Thorncliffe Park Drive. We hope you are able to attend.

Thank you,
Sivahami

Hi [REDACTED],

Thank you for copying the constituency Office of MPP Wynne.

MPP Wynne appreciates your message and she has in fact raised concerns with regard to Metrolinx's handling of community's concerns in Thorncliffe Park with the Minister of Transportation in the house. She has also addressed a letter to the minister and also spoke to Metrolinx CEO Phil Verster and his

team.

MPP Wynne initiated two community tables in her meeting with CEO Verster, one to deal with issues relating to the small business community and another related to the residents concerns with representatives from both small business and residents respectively, elected officials, etc., details of which will be available soon.

This would be in addition to the regular town halls by Metrolinx.

In the meantime, we are taking the liberty of forwarding your concerns to the Community Relations Team at Metrolinx to take steps to deal with the concerns that you have raised.

Sincerely,

Aafaq

Aafaq Shaikh

Executive Assistant & Office Manager

Constituency Office of MPP Kathleen Wynne

Subject: Fwd: Thank You - The Ontario Line East Segment LIVE April 22, 2021

Dear Respected Elected Officials,

Thank you for continuing to advocate for our community. Your efforts **to stop environmental racism that exploits vulnerable communities** is duly noted and greatly appreciated.

I recently received a post-event survey (see below) for the East Segment of the Ontario Line. I've asked several attendees who joined the April 15th event for the North Segment (Thornccliffe Park, Flemingdon Park, Science Centre), if they received something similar, and the answer, unsurprisingly was "NO". We had over 500 attendees and over 700 questions and comments posted in the event (the most from all of the other segments, to date!). Why didn't our community receive a similar survey? Are our voices and concerns not important? I **hope you will join me in asking Metrolinx why our community continues to be flagrantly dismissed and disrespected in this "consultation" process.** The only item I received from Metrolinx after the April 15 event was a link to the recording. <https://www.metrolinxengage.com/en/OLliveApril15>. This is not just an oversight, it's outright condescending.

It's also noteworthy that Metrolinx used the April 15th session for the Thornccliffe Park community to "pilot" their open house meetings. Based on our feedback, they quickly pivoted and made changes to

their format. **Subsequent open houses had a third party moderator, an option to join via zoom and ask questions live, and a significant amount of time dedicated to Q&A.** In addition to the “mistakes” Metrolinx has already made in “consulting” with the Thorncliffe Park community, we can all agree that these actions are specifically targeting a vulnerable community. I am certain you agree that Metrolinx needs to be held accountable as our community expects meaningful and transparent consultation.

Kindest Regards,
[REDACTED]

Subject: Thank You - The Ontario Line East Segment LIVE April 22, 2021

Hello,

Thank you for registering for the April 22 virtual presentation and live Q&A focused on East Harbour, Riverside, Leslieville, South Riverdale, and Gerrard. If you weren't able to make it, you'll find the video recording [here](#). We're looking forward to holding many more meetings in the future.

During the event, we had over 200 attendees and received over 285 questions. During the virtual open house, we answered top-voted, pre-submitted questions, as well as live questions from participants using a call-in option. The call-in option was added for this meeting based on community feedback, and will be also used for further virtual engagements. Participants asked questions related to the feasibility and costing of tunneled alternatives, and potential impacts to the community such as noise, vibration, parks, safety and the character of their neighbourhood. We'll be adding more of last night's questions on our [FAQ page](#) soon.

[Take the post event survey now](#)

Very regular community engagement will be held as the project moves towards the release of draft environmental reports for this part of the alignment.

Please feel free to reach out directly at 416-202-5100 or OntarioLine@Metrolinx.com, and stay up to date on the Ontario Line through our [e-newsletter](#) and [news blog](#).

Thanks,
Ontario Line Community Relations Team

Subject: follow up regarding Corktown station
Date: Tuesday, April 27, 2021 6:58:00 AM

Hi [REDACTED],

Thanks again for participating in last night's virtual open house for the Ontario Line downtown segment. I followed up with Infrastructure Ontario regarding your question about MZO's and got a bit more information about the next steps for development at Corktown station:

The Province's aim is to work with the City through a streamlined review process for our proposed transit-oriented communities development concepts while maintaining stated project timelines. Infrastructure Ontario noted they are looking forward to beginning that review process with the City of Toronto but also said that independent of the approval process necessary to advance transit-oriented communities development, the Province was committed to engage and consult with both the City of Toronto and the public around all transit-oriented communities development proposals.

The public consultation for development at Corktown is expected to begin this fall and Metrolinx will post/share more information as soon as we receive it.

I hope this is helpful. Talk soon.

Hi [REDACTED],

Thank you for your question and your interest in the Ontario Line.

Given that we are still early in the project, design has not sufficiently advanced to the point where we can share full plans or designs. That being said, there are some resources you can access and some information I can share:

- The Ontario Line trains will be fully electric and will not have to wait for very long to catch one. There will be 40 trains per hour, every 90 seconds. The trains can achieve a top speed of 80km/hour and an average speed of 30km/hour. A full trip on the Ontario Line from Exhibition to the Science Centre will take just 30 minutes. To read the preliminary design business case for the Ontario Line, visit this page: bit.ly/3sQW7is
- The Ontario Line will have a projected daily ridership of 388,000. Although we have not determined the exact carrying capacity of each train, bidders will be required to provide a system that can achieve this ridership.
- I have attached one cross section for your review to showcase how the Ontario Line will run in the shared rail corridor through Riverside and Leslieville. As we make more progress, more of these renderings and designs will be available.
- The upcoming downtown and west virtual houses will show more cross sections for your review. I invite you to sign up here if you are available: bit.ly/2Pp5at7

You can learn more about the Ontario Line and sign up for our e-newsletter here: bit.ly/2PmYCv2

Hi,

I was wondering if there was a full plan and profile design of the line that could be shared along with typical cross sections. In addition are there any vehicle design requirements that have been decided that can be shared. Specifically with respect to operational speed and carrying capacity.

Thanks,

H [REDACTED],

Thanks for the follow-up.

GO Expansion will add one additional track and Ontario Line plans will add two additional tracks. Since both Ontario Line and GO Expansion project schedules overlap, Metrolinx will be able to streamline construction in the area. I have attached a cross section graphic to help visualize what certain points of the rail corridor could look like. More detailed design work is continuing which will allow us to confirm the locations of the retaining walls and any impacts to adjacent property. Thanks for your patience while we complete this work.

Ok thanks for the update. Just a couple quick things.

I understood there was a 4th GO track to be installed (Ontario Line) and in addition to the subway expansion (relief line), which would bring 2 additional tracks.

Has the 4th GO line been greenlit or is that on hold? Is it 2 separate projects or are they contingent on each other?

Thanks

Hi [REDACTED]

Thank you very much for joining us last week! Operations and maintenance responsibilities for the Ontario Line are still being defined and will be determined as planning for the project advances. We're working closely with our partners at the TTC to ensure our services complement one another and best serve the community.

Regarding fare, our goal with the Ontario Line is to provide a seamless travel experience for customers. It will run as part of the existing TTC network and be accessed with a TTC fare to achieve this. As they do today, customers will pay with PRESTO.

You may wish to consider [signing up for our newsletter](#) to stay updated on project milestones and future engagement opportunities. Please also do not hesitate to contact us directly if you have any further questions.

Thanks again,

Caitlin

Subject: What will the fare schedule look like?

Message:

Hi! I just finished attending your live seminar for the Ontario line - West, and I had a question involving ownership/fare scheduling.

Will this line be given for management by the TTC? If not, how will the fare schedule look like? Are you planning on matching the TTC rate? How will you implement a transfer system between the two systems?

Thanks so much, the meeting was very informative!

Hi [REDACTED],

Anne Marie passed on your email so we could tell you a bit more about the Ontario Line plans for Thorncliffe Park.

There are a number of businesses and community organizations that will be impacted by the future maintenance and storage facility, but we are working with each of them to ensure they can continue to thrive and relocate if that is their wish. We know how important the mosque and Iqbal's are to the community. While Islamic Society of Toronto's location at 4 Thorncliffe Park Dr will be affected, the society's leadership has already made clear that mosque services will continue nearby at their new 20 Overlea Blvd location, which is not impacted by the maintenance and storage facility. We are also going to work closely with Iqbal to find a new location for the store in the neighbourhood.

You can read more about the how the location of the facility was chosen and how we will support businesses [here](#) (click on "Maintenance and Storage Facility").

Please let us know if you have any other questions about the Ontario Line project.

Be well,

Josh

Hello AnneMarie,
Hope you are well.

I've just seen [REDACTED] piece about the Thorncliffe plans. I can't be sure from the map, but the blue demolition shadow seems to cover a large building south and east of the plaza where Iqbal's is located.

Would this building be the Masjid Darussalam? Is Metrolinx proposing to demolish a mosque to build a train yard? Please tell me this is not the case.

Thank you.

Subject: RE: GO/Ontario Line Transfer at Exhibition Station
Date: Wednesday, May 5, 2021 8:42:00 AM
Attachments: [image002.png](#)

Hi [REDACTED]

Thank you for your question about the future joint Ontario Line-GO platform at Exhibition station. Please accept our apology for the delay in responding.

We hear your concern and feedback regarding the practicality of the eastbound Ontario Line and westbound Lakeshore GO line sharing a joint platform. This is an issue our project teams have also considered. We investigated several construction options when developing the current layout, including possibly crossing the Ontario Line over when travelling westbound into Exhibition station as you suggested, but the operational complexity and associated costs of switching to a left-side configuration outweighed the potential benefits of having cross-platform transfers.

That said, we are developing plans for a new overhead concourse at Exhibition station and the need for easy and intuitive GO and Ontario Line customer access and reduced transfer times is a key priority.

If you haven't already, please consider [signing up for our newsletter](#) to stay updated on the Ontario Line and future public engagement opportunities. Please do not hesitate to contact us if you have any further questions.

I see the GO Westbound and Ontario Line will share a platform.

If Ontario Line trains run on the right side, that would be Ontario Line Eastbound meeting with GO Lake Shore Westbound train; a transfer very few would use.

Is there an intention to run Ontario Line trains on the left-side (opposite of TTC subway) so an Ontario Line Westbound train will share a platform with GO Lake Shore Westbound?

Has there been consideration to having the OL tunnel cross-over (duck eastbound below westbound) between Bathurst and Exhibition? That is, OL trains run on the right most of the time, but on the left at Exhibition station only to provide a convenient westbound transfer?

Subject: your question re: Don Valley impacts
Date: Thursday, April 29, 2021 7:57:00 AM

Hi [REDACTED],

Apologies again that we didn't get a chance for the panel to answer your question about consideration of overlapping projects at the virtual open house last week. I followed up with our environmental team and wanted to pass along their response.

Minimizing and mitigating impacts of our work on the natural environment is a priority for Metrolinx as we expand transit capacity for to serve Toronto and the GTHA. Our Ontario Line and GO Expansion teams continue to coordinate in support of the delivery of projects in and around the Don Valley. As part of the environmental assessment carried out for each project, Metrolinx looks at impacts within project-specific study areas. Our study areas are developed in consultation with applicable regulatory agencies. For natural heritage, we examine features within a 120 m study area extending from the outer limits of anticipated disturbance associated with a project. This aligns with the maximum distance from a natural heritage feature that potential impacts are recommended for study in areas off the Canadian Shield, per the Ministry of Natural Resources and Forestry's Natural Heritage Reference Manual.

The mitigation measures put forward in the Ontario Line Environmental Conditions Report to address project impacts in the Don Valley, such as tree compensation plantings in accordance with the Metrolinx Vegetation Guideline, will be refined in the forthcoming Environmental Impact Assessment Report which we anticipate sharing for public review and comment in early 2022.

Metrolinx will continue to coordinate delivery of projects in the Don Valley to minimize community impacts. We are also working closely with the TRCA to confirm effective mitigation of our projects in the Don Valley.

Thanks again for participating in our event, Floyd. We will continue to share updates with the community as more information and the environmental studies are available.

Sincerely,

Josh

Yeah I'm still not convinced. I think there should be a cherry street stop.

As you can see the moss park and corck town are too close together and the one on the east of don valley is too far away (not to mention the physical barrier of the don).

I understand overall connectivity and time savings for business case... but I think it's a mis step to not include a cherry street or to move the cork town station down.

On Fri, May 7, 2021 at 5:00 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thanks for your questions!

Yes, the planning process for the Ontario Line considers future population growth and the associated increased demand for transit.

On serving the Portlands, we are working with the City of Toronto and their Waterfront East LRT initiative to explore opportunities to integrate both transit projects.

To provide some more details on the planning process, Ontario Line station locations were studied with a goal of increasing access to transit, maximizing ridership, achieving travel time savings, reducing overcrowding on existing transit services and creating better access to jobs. These criteria are balanced by cost and other community considerations. If you want to learn more, you may wish to read the [Preliminary Design Business Case](#) (page 41 provides an overview of every Ontario Line station with a rationale for the location and proposed transit connections).

Here is the walkability map for Corktown station which shows in yellow the area that is within a comfortable 10 minute walk:

Please let me know if you have any further questions.

Stay safe,

Hi.

Thank you for your response. Was the Portland's redevelopment and the ridership generated from that considered in the planning rationale between skipping the cherry street station?

Also. Is there a walk ability or pedestrian connectivity map for cork town /east harbour? So that I can see how close these will be?

Also how will the waterfront east lrt be integrated ?

On Tue, May 4, 2021 at 10:20 AM Ontario Line <ontarioline@metrolinx.com> wrote:

Hello [REDACTED],

Thank you for your questions, and I hope this finds you well.

The alignment of 15 stations between Exhibition and Ontario Science Centre is the one that Metrolinx is advancing.

Within a 6-minute walk from the Distillery District, the Ontario Line Corktown station is intended to serve this area, Corktown, St. Lawrence Market and the West Don Lands as well as provide relief to the busy 504 King Streetcar. We anticipate that 26,400 people to be within a comfortable 10-minute walk from Corktown station, and at peak hours we anticipate a ridership of 4100 people. When looking at the possibility of a station on Cherry street, one of the important considerations was spacing between stations. If we put a station in this area then then we are very close to both Corktown and East Harbour Stations, and this can have and impact on overall time savings for travellers.

We are working closely with the City, TTC and Waterfront Toronto to develop complementary plans for future transit expansion such as the Waterfront East LRT and a streetcar extension down Cherry Street, with the goal of creating the best possible customer experience.

I hope this helps answer your questions, but please do let me know if you have any further questions. To stay up to date with the latest information, I hope you will consider signing up for the Ontario Line [online newsletter](#) if you are not already subscribed.

Best,

To Whom It May Concern,

I'm wondering why there has not been a station planned at Cherry Street. This new connection to the portlands/distillary district/East Bayfront as well as to the StreetCars planned for this area just makes sense.

Is there a plan to have future stations added along the line in this area? There is also the heritage feature of the old Cherry Street Station building that could be incorporated into the design.

Hi [REDACTED],

It was nice meeting you today. I will follow up with our project team about the following items:

- How many track crossovers are currently proposed for the Ontario Line
- Whether constructors will be required to use a system that allows two-way operation on each track in the event of an emergency or disruption
- Whether the Ontario Line will make use of longer (double/triple-length) escalators rather than multiple normal-length escalators
- Whether each station will have a minimum of two elevators

Please let me know if I'm missing anything. I will also let my colleague Bismah know that you would like a call to discuss the tunnel borer launching location near Corktown. She'll call you at 647-280-3056.

Please feel free to write to us at this email or call 416-202-5100 if you have any further questions.

Thanks,
Sivahami

Subject: Ontario Line video meeting details

Hi [REDACTED],

Thank you for booking a chat about Ontario Line design and operations. We're looking forward to connecting with you tomorrow (Friday, April 30) at 11:30am on Microsoft Teams. Please see below for the link to join the video meeting.

Microsoft Teams meeting

Thanks,
Ontario Line Community Relations Team

Hi [REDACTED]

Thanks for taking the time to talk today, and thanks Wilfred for connecting us.

[Here's our webpage](#) with more information about the Ontario Line maintenance and storage facility site selection process (scroll down and click "maintenance and storage facility"). That page also has maps showing the location of the stations in Thorncliffe Park and Flemingdon Park.

I will sign you up for the Ontario Line e-newsletter. You can also read more about the project on our [website](#) and on [Metrolinx News](#).

As I mentioned, I would be happy to answer any further questions and concerns here at ontarioline@metrolinx.com or by phone at 416-202-5100. If you prefer to contact the Metrolinx CEO, Phil Verster, you can email his office at CEO@metrolinx.com.

If you would like to submit your suggestion for TTC bus shelters to the TTC, they have a form [here](#) that will allow you to get updates directly from them.

Thanks, and hope to talk again soon,
Sivahami

Subject: Ontario Line and the Building Transit Faster Act
Date: Monday, May 3, 2021 8:42:27 AM
Attachments: [OL south Pape alignment May 2021.jpg](#)

Hi [REDACTED]

More than a month ago you sent a couple questions regarding the latest Ontario Line plans, the recently announced Building Transit Faster Act and whether we had a clearer sense of timelines and impacts in your neighbourhood. I apologize for the delay in getting back to you.

After the portal, which will be built in the parking lots near Kal Tire, the Ontario Line will run underground up the middle of Pape Avenue. We are working on updated maps for our website but the attached zoom in shows your area. Design for this part of the line is continuing but we expect that the tunnels will be approximately 20-30 metres deep as they pass your house. We will be putting in a range of measures to prevent noise and vibration from operation of the trains to reach the homes above. The tunnels will be built using tunnel boring machines which allows us to minimize the amount of surface disruption required along Pape as the machines will send the dirt and rock they remove back out the end of the tunnel. The Gerrard station, portal and Pape tunnels are part of the North contract and work is not expected to begin there until 2024 at the earliest.

The area south of Gerrard station is known as the joint corridor because GO, VIA and Ontario Line trains will operate there. Work in that area is expected to begin in summer 2022, after the environmental assessment is complete.

The Building Transit Faster Act is not yet in force for the Ontario Line. We are still determining the exact alignment of the line which will be used to determine which properties fall within transit corridor lands. Once these determinations are made, likely in June, we will be writing to each impacted property owner and holding public engagement events so people can learn more and ask questions. If your property is on, partly located on, or within 30 metres of transit corridor lands, this means:

- If you are planning to build, change or place a building, other structure or road on or under your property, a permit from Metrolinx might be required. This is in addition to (and prior to) any required municipal permits. No application fee will be charged for permit from Metrolinx.
- The permit will help avoid conflicts with nearby transit construction and reduce the likelihood that you might have to stop or redo your work in the future.
- We may need to visit your property to help prepare transit plans. These visits will not take place in your home and you will be notified at least 30 days in advance. If any work is required on your property, we'll work with you to come to agreement on how to carry out the work and determine compensation.

These changes will help transit construction stay on schedule while also giving property owners certainty about the improvements they can make. Getting plans approved early on will help people save time and avoid extra work.

I hope this helps. Please let us know if you need any further info.

Attachments: [image001.png](#)

Hi [REDACTED]

Thanks for taking the time to write to us and sharing your experiences with walking along Wardell Street.

The Ontario Line is following a robust [Environmental Assessment process](#) and one important component which we did not have too much time to speak about at the April 22 open house are the natural environment studies. The [Environmental Conditions Report](#) released last year studied the natural environment along the Ontario Line route, which includes wildlife in and near the communities where the Ontario Line will serve. As we complete these comprehensive studies looking at the impact of construction and operation of the Ontario Line on wildlife, we will propose solutions. All of this information will be shared in the forthcoming environmental reports which will be released later this fall and in early 2022.

Once again, thanks for writing to us and participating in the April 22 open house. We will be sharing more engagement opportunities and we look forward to sharing the results of these studies once they are completed.

Feel free to reach out should you have any further questions,

Message:

I attended your virtual public meeting on April 22 and just wanted to make a few comments.

I started taking daily walks with my dog along the park on Wardell Street about 20 years ago and have continued the habit with my second dog. Yesterday the robins and cardinals were singing loudly and a group of 5 red-winged blackbirds was fluttering about in the bushes on the railway right-of-way. That area, with its bushes, tangles of vines and scrubby trees, provides such an important micro-habitat for birds - in the winter there are chickadees, hairy and downy woodpeckers, cardinals and goldfinches. In the spring we have kinglets, brown creepers, vireos and a variety of warblers passing through. I've seen Cooper's hawks and sharp-shinned hawks and kestrels. There are groundhogs and I once saw a coyote.

I was disappointed during the Metrolinx presentation to hear the chair say that you would 'consult' with the community about what we wanted in those parks - perhaps a bench or some shrubs. You can't replace the natural habitat which is there now by doing some sort of manicured planting. I realize it's your r-o-w and you will do what you want with it. Already much of the underbrush seems to have been cleared. However, I just want to voice my concerns about something else that this community will be losing because of the above-ground railway corridor expansion.

Please provide a response to this submission.

Thank you.

Regards,

[REDACTED]

Hi [REDACTED],

Don't apologize, it's a large project and we can always do better to improve our maps.

That's correct. Ontario Line plans will not impact or modify Leslie Barns. Since you live on Woodfield Road, your neighbourhood will not be impacted by Ontario Line construction. Once the Ontario Line is completed, the Eastern Avenue (East Harbour Station) and Queen Street (Leslieville Station) will in fact serve your neighbourhood as you can easily connect via the TTC streetcars.

If you neighbours have any more concerns, feel free to reach out to me directly.

Daryl

Hi Daryl,

Thank you very much for taking the time to answer my question. I guess I find the map a little confusing for which I apologise. Plus, as I mentioned, there are a lot of rumours about Leslie Barns being a part of this so I thought I might ask about it.

I live on Woodfield Road and was wondering if there are plans for Leslie Barns or how these new lines might affect those who live on this street.

When I look at your map, I don't see anything to do with Leslie Barns at all.

I would be happy to share the information with my neighbours whom are concerned as I am as well.

Thank you so much.

Hi [REDACTED]

Thanks for reaching out. I am not sure I understand your question so apologies if I do not provide all the information you need. Happy to follow-up if you can provide more details. I am assuming you live in the east end based on your question.

The Ontario Line will include a new East Harbour station which will be at Eastern Avenue, just on the east side of the Don River. From there, the Ontario Line will continue north and east to stop at Queen Street (Leslieville Station) and Gerrard/Carlaw (Gerrard Station). Our maintenance and storage facility will be in Thorncliffe Park.

You may have also been mentioning the TTC's streetcar yard, Leslie Barns, which is a different facility for different types of vehicles.

To learn more about the Ontario Line stations I mentioned, [click here](#).

To learn about the Ontario Line in general and sign up for our e-newsletters, [click here](#).

Hi [REDACTED]

I apologize for the long delay getting back to you!

The location we presented in the virtual open house is the location we are moving forward with at this time. We recently put together a more detailed report explaining the decision-making process and factors considered, and will be updating our website soon.

While the MSF is expected to begin construction at the end of 2022 or early 2023, the elevated guideway in Thorncliffe Park is expected to begin construction in 2024, so we are still in the earliest planning phases for it. We will definitely provide renderings and maps once we are further along and know more about options for its design. We'll share those options with the community to get feedback on ways to minimize visual impacts while enhancing the public realm underneath the guideway.

Finally, the Ontario Line was first announced by the Government of Ontario in April 2019. The location of the MSF was announced on April 8, 2021 on [Metrolinx News](#).

Thanks,
Sivahami

Hello Sivahami,

Thank you for providing such thorough information regarding the Ontario Line and answering my questions in such honesty.

I had watched the April 15th, 2021 Live event and had been left with some questions/ points of concern. I will list my following concerns on the Ontario Line here...

1. Stated at One hour, 11 minutes, 18 seconds Councilor Jaye Robinson had left a live question "...will this decision be reconsidered?" I just wanted clarification on the final stance of the reconsideration regards the

MSF Location. Malcolm Mackay's answer was unclear as to his stated that there were things that Metrolinx can and can not consider. What is the final answer to Jaye's question?

2. Stated at One hour, 5 minutes, 33 seconds someone had asked for a specific map to showcase how the elevated guideway would look like in the Thorncliffe Neighborhood. Would a map or sketch/ imagery be provided at a later date?

A non-related question from the live event is what year did the Ontario Line get proposed to the City of Toronto? When was the Leaside Business Park location for MSF first publicized to Community Residents living in the apartments? I am not talking about when the news was brought to the business Tenants.

Thank you,

On Thu, May 13, 2021 at 10:53 AM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

The virtual event on April 15 was an open house, not a consultation. We did not conduct a formal public consultation to determine the location of the MSF because the decision was highly technical. Instead, we collected and analyzed information about all the sites and collaborated closely with City of Toronto staff in the Economic Development & Culture division and the Transit Expansion Office to understand which option would have fewest permanent job impacts while still meeting all the technical requirements. Now that the site has been chosen, we look forward to working with the community in order to ensure that the infrastructure fits into the fabric of the neighbourhood.

Thank you for bringing our attention to the fact that the recording of the open house was no longer working. It is now fixed and should be viewable. Please let us know if you have any further questions.

Thanks,
Sivahami

Hi Sivahami,

I appreciate you providing links to the longlisted location list and the FAQ page on the Maintenance Storage Facility. I did have some more follow-up questions in regards to this MSF project. My

questions are related to the Public Consultation done for this project.

Could you please provide a date on which the Public Consultation occurred?

I had seen that on April 15th, 2021 Metrolinx had hosted the online open house. Was the open house a public consultation for the Future Maintenance Storage Facility? Why was the meeting stated as an open house vs. calling it a public consultation on the flyers? I do believe that was falsely advertised to the public if this Open house acted as a public consultation

I have also tried to watch the Ontario Line LIVE but received an error that it can't play. Is there a way to view the open house now?

I appreciate your time,

On Wed., May 5, 2021, 12:24 p.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thank you for reaching out to us. Metrolinx looked at many options from the western terminus at Exhibition all the way to the east and to the northern end of the alignment. A list of nine longlisted sites were brought forward for more detailed analysis, some of which were ruled out because they weren't big enough or they affected too many businesses and jobs that we wouldn't be able to help relocate. The site selection process, with the longlisted location list, is available on [this page](#) (scroll down and click "Maintenance and Storage Facility"). We chose the proposed site because we were confident that we could help relocate impacted businesses, community organizations and jobs within the community or nearby, and we are still confident about that. We have begun working one-on-one with each small business and organization to make sure they continue to thrive – their continued success is very important to us. More information about the MSF is also available on our [FAQ page](#).

If you have further questions, please feel free to reach us at this email, ontarioline@metrolinx.com, or by phone at 416-202-5100. If you haven't already, please sign up for our e-newsletter [here](#) to stay up to date on the project.

Thanks very much,
Sivahami

Nearest Ontario Line Station (Optional): Thorncliffe Park

Subject: re:Maintenance and Storage Facility

Message:

As a Thorncliffe Park Resident, I had a few questions in regards to the future build of the Maintenance and Storage Facility residing in the Southeast portion of the Leaside Business Park.

My concerns and questions are derived from the Metrolinx blog post on April 8th, 2021 titled "East York Site selected for Ontario Line Maintenance and Storage Facility."

As mentioned in the blog post, Metrolinx had several months of assessment and exploration of nine potential locations for MSF before selecting Leaside Park.

I would like to respectfully request factual data of the analysis of this decision. 1st defining the nine locations by name and providing any further information regarding the rationale of why the locations weren't selected.

Another point of inquiry from the article is where it states that the future MSF "Impacts the community to a minimum"

My question is What tools does Metrolinx have to analyze community impact.

In conclusion, as a resident, I want to know and see documentation in which was used to assess this decision. Is this report open to the public?

It would help us as residents to have some clarity in the rationale behind the selection of Southeast portion of the Leaside Business Park.

Hi [REDACTED],

Thank you for sharing these ideas with MPP Wynne as well. I will pass along your first question about storing some of the trains at [REDACTED].

In answer to your second and third questions, I will note that Canvarco Road falls under the longlisted Site 3 (Leaside), as detailed [here](#). Site 3 was ruled out in part because it would require a larger land area. The reason, in my layperson's understanding, is that if parts of the MSF are on either side of a rail corridor, the tracks would need to get up from ground level to a higher height at the crossing (or a lower height if a tunnel were used). Trains can only climb at a grade of about 3-5%, so they would need quite a long runway to be able to get to that height. It would mean that more land would be needed for the full site, causing more community and job impacts.

Again, we can discuss this in more detail at the community table. Looking forward to it.

Thanks,
Sivahami

Subject: Re: Opportunity for ongoing dialogue with Metrolinx on ON Line

Hi Kathleen,

Sharing three ideas with you, in map form, that may be feasible alternatives to the MSF plan that was formally released on April 8th.

These ideas aim to relocate train storage from Thorncliffe Park, either partially or wholly, but retain the vehicle maintenance functions of the MSF on the north side of the hydro corridor.

The ideas also aim to keep local businesses and community spaces together, and to improve the situation for residents on Overlea Boulevard as well.

Idea #1:

Move up to 20% of Train Storage Capacity to 50 Beth Neilson Drive.

Idea #2:

Move 100% of Train Storage Capacity to Canvarco Road.

Idea #3:

Move 100% of Train Storage Capacity to Canvarco Road & Utilize [REDACTED] for Wash, Paint, and Wheel Truing

I'm not certain what are truly final decisions at this point. However, it stands to reason that more flexibility remains until such time that Metrolinx has actually acquired the Thorncliffe Park properties (if it hasn't already).

Best Regards,

Hi [REDACTED]

I have been in conversation with Metrolinx for some time and last week I met with Metrolinx CEO Phil Verster and his team. I have been working to impress upon them that residents need responses to their many questions and they need to be part of the ongoing decision-making process.

In response to the last meeting with property owners, I have initiated a formation of a Table of concerned residents in Thorncliffe Park for regular communication with Metrolinx on community concerns regarding the Ontario Line project.

In addition to residents' representatives of Thorncliffe Park, the Table would be inviting representatives of MP, Councillor's office, The Neighbourhood Office and the Don Valley Community Legal Clinic. And of course, Metrolinx would have a team at the table.

The idea is to have regular discussions at the table which would also inform the agenda for the regular town halls.

I hope you will agree to become a member of the Table. If so, please let us know and we

will send you the details of the first meeting as soon as it is finalized.

It would be great if we could have your contact number.

Sincerely,

Kathleen

Hi [REDACTED]

Vanessa shared the details of your call with me and I am happy to respond. My name is Daryl and I am a Specialist focused on engaging the east end community in Riverside and Leslieville. We operate from a shared inbox so feel free to email this address if you want to contact me.

At this time, there aren't any details we can share regarding impacts at First Avenue as the project design and plans have not been finalized. As we complete further design work and confirm impacts, we will reach out directly to property owners. We understand folks want information about impacts to homes and we expect to have a firm understanding of property requirements by fall 2022. It is important to note that we do everything we can to minimize impacts to homes and if any impacts are identified, our priority is to reach an amicable solution with property owners.

You mentioned wanting to view the recent virtual open house and you can do that by [visiting this link here](#). There are many more engagements planned to answer questions and allow you to provide your feedback. To stay updated with the project, consider signing up for our [e-newsletter here](#).

Hi [REDACTED],

I just wanted to follow up to thank you for reaching out to us and taking the time to chat yesterday.

We appreciated you sharing your concerns about the construction impacts to the park and community. We know that building a large transit project like this one can be disruptive by nature, and we are working closely with the city to coordinate construction plans and mitigate impacts to the community best we can. We look forward to having more to share about the plans for this station at our next round of open houses in early to mid-June, and on an ongoing basis as the procurement for this (south civils) contract comes to a close mid next year.

As always, please do not hesitate to reach out if you have any further questions or concerns.

Stay safe,

Bismah

Subject: New Metrolinx Ontario Line Community Notice - Investigative drilling and environmental sampling work on Minton Place and Hopedale Avenue - starting as early as May 10
Attachments: OLine - Minton Place and Hopedale Avenue - starting as early as May 10.pdf

Hello [REDACTED],

Please find attached a notice about investigative drilling and environmental sampling work on Minton Place and Hopedale Avenue that will be starting as early as this Monday, May 10th. The drilling work will begin at the Hopedale Avenue location before moving to the Minton Place location, and is anticipated to last up to three weeks at each location. As work is taking place on public roadways, the contractor has raised the possibility that a few driveways in each work location may be blocked intermittently during drilling hours, but a spotter and associated traffic control crew will always work with residents to move in, out and around the work zone whenever necessary. Please see attached for the notice which contains further details.

We will be dropping off hard copies of notices to residents today, and will also have a member of our team on site the morning of the work start date, in order to liaise with the contractor's representative and answer any questions residents might have. In the meantime, residents are always welcome to contact us directly if they have any further questions ahead of work beginning.

This notice is being emailed to Elected Officials and community groups. It will also be distributed to residents in the area, carried by field crew carrying out the work, and be available on our website.

Please let us know if you have any questions.

The Ontario Line Community Relations Team

Good morning [REDACTED],

Thank you for your letter to Metrolinx CEO, Phil Verster, and for sharing your feedback about the Ontario Line. Please find attached our response to your letter dated May 4, 2021.

Thank you again for taking the time to send us your concerns. Please do not hesitate to contact us in the future.

Sincerely,

Caitlin

Dear [REDACTED]

Thank you for contacting our CEO's office and sharing your feedback about the Exhibition station location choice as the western terminus for the Ontario Line. We appreciate your suggestion to align the Ontario Line route with King Street West but must note that the general route for the Ontario Line and its 15 station locations is the plan we are advancing. We would like to share some more details on how this alignment will deliver more transit sooner to meet current and future demand.

During the planning process, we studied station locations with a focus on bringing several benefits to our customers, including: increasing access to transit, maximizing ridership, achieving travel time savings, reducing overcrowding on existing transit services and creating better access to jobs.

The Exhibition terminus station was chosen as it provides the best connection to the GO network in addition to surface transit, including the bus and streetcar network. This connection will create a more resilient and integrated transit network by shortening journeys, alleviating congestion at Union Station by facilitating easy transfers between the GO and the subway, and by providing a rapid transit route into the downtown and the heart of the Financial District when travelling from the west.

Exhibition station also has the third-highest projected ridership out of all Ontario Line stations, surpassed only by Queen and East Harbour stations, other key connection stations. Our estimates for peak-hour ridership at Exhibition station are as follows:

- 12,100 total passengers
- 8,400 boardings
- 3,700 alightings
- 6,300 transfers to/from the Lakeshore West GO line

By comparison, our peak ridership estimates are enclosed below for the next and second busiest station, East Harbour, and for King-Bathurst station, which connects riders to King Street West:

East Harbour station:

- 14,900 total passengers
- 7,000 boardings
- 7,800 alightings
- 8,600 transfers to/from Lakeshore East GO and Stouffville GO

King-Bathurst station:

- 5,100 total passengers
- 3,000 boardings
- 2,100 alightings
- 2,400 transfers to/from surface transit, such as the King and Bathurst streetcars

The transit hub and transfer point at Exhibition Station will bring much-needed higher-order transit to the dense residential and commercial area around Liberty Village, an Urban Growth Centre that will have one of the largest percentage of future growth. For example, it is anticipated that this station will serve over 12,100 residents and 17,600 jobs within a comfortable 10-minute walk.

It is important to note that our plans protect for the possibility of expanding the line. We will be constructing tail tracks that extend west of Exhibition station to protect for possible future expansion. Part of the reason we can protect for future expansion at Exhibition station is because we have the space to do so. We need ample space at each Ontario Line terminus station to store trains so we can adapt to ridership demands and provide more frequent service during peak periods, providing much needed relief to other congested Toronto transit systems like the TTC's Line 1.

We also need to construct a tunnel to run the line underground as it heads east through downtown Toronto. This tunnel construction requires a significant amount of land for laydown and staging of the tunnel boring machine and other equipment needed to dig and remove excavated materials. Exhibition station has the space to meet both these needs, which helps reduce community impacts, costs and the construction timeline.

Thank you again for reaching out to us. We hope you will continue to stay in touch with us as the project moves along. Our team is available to answer any further questions you may have and can be reached at OntarioLine@Metrolinx.com or (416) 202-5100.

Sincerely,

Caitlin Docherty

Hi [REDACTED]

Thank you for getting in touch.

No, we are not planning a station close to [REDACTED]. Stations are planned at the intersections of Pape & Danforth and Pape & Cosburn. Property requirements at those locations will not be finalized until at least 2022, after which construction is expected to begin in 2024. You can find maps of the planned route [here](#).

Though we will not be building a station at 864 Pape Avenue, the Ontario Line subway tunnel will run underneath Pape Avenue past that location. Construction for the tunnel will also begin in 2024. As you may know, any construction taking place within 30 metres of a planned transit route needs to be reviewed and may need an additional permit from Metrolinx so that we can help avoid conflicts between your project and transit construction and reduce the likelihood that you might have to stop or redo any work in the future. No application fee will be charged by Metrolinx for this permit.

To start a review into whether a permit is needed, please contact development.coordinator@metrolinx.com. Please include property information as well as a description of your work or site plan, or any architectural drawings (if available) in your initial email. A representative will be in touch to guide you through the Metrolinx review process. More information [here](#).

If possible, can you share with me the City staffer or department that informed you that you wouldn't be able to build? I'd like to follow up to ensure that they have all the information they need to support other projects in the area.

If you have any other questions about the Ontario Line project, please email us at ontarioline@metrolinx.com or call 416-202-5100. You can also sign up for our e-newsletter [here](#).

Thanks very much,
Sivahami

Message:

We are planning an affordable housing project at [REDACTED] on the west side of Pape just north of Fulton Ave. The City of Toronto has advised that we may not be able to proceed because Metro Linx may want to build a station at that location for the new Ontario Line. Could you please let us know whether we should put our plans on hold or can we go ahead with our project?

Hi [REDACTED],

Thanks for emailing us. I'm cc-ing our colleagues on the Eglinton Crosstown team to answer your questions.

To clarify, the [Eglinton Crosstown](#) runs east-west across Eglinton from Mount Dennis to Kennedy. The [Ontario Line](#) is a separate project that will begin construction in 2024. The Ontario Line will connect with the Eglinton Crosstown at Don Mills & Eglinton before heading south and into downtown.

If you have questions about the Eglinton Crosstown, you can email their team at crosstown@metrolinx.com or call 416-482-7411. If you have questions about the Ontario Line, please feel free to email us again at ontarioline@metrolinx.com or call 416-202-5100.

Thanks,
Sivahami

Hi

Just wondering..... I live in the Don Mills and Eglinton Ave area. I try to avoid Eglinton Ave as much as possible, the roads are pretty bumpy and uneven, can you tell me when they will be repaved?

I am curious about the stations along Eglinton, how are people going to get on and off safely?

How long will it take to go from one end of the city to the other on metrolinx? Will you offer free ridership once it is ready to experience it?

UP express ride is a great one . We used to do airport shopping. But paid Newspapers were writing against it also. UAE makes a lot of money through airport shopping.

Hope Ontario lines will soon be completed as well as Scarborough East as here in downtown Toronto we do not get even varieties of South Asian food and French Food although this is one of the best tourist spots of North America .

Even Srilanka was once flourished when the airlines were operated by Dubai . Hope Srilanka and British Kerala will soon have World's largest Port at Vizhinjam coming up from Adani soon who bided Australian Great Barrier Reef ports .

Adani but I think will soon co operate with Canada .

Here we have beautiful 1000 Islands as attached but nobody promotes it . Even Billy Bishop Airport I read people over here does not allow large aircrafts . Unnecessary strikes and racism going on everywhere even during pandemics .

Hope PM will correct all these soon .

Dear friends,
I reside very close to Pape and cosburn, I fact just a short block away.
A small plaza on Pape at Cosburn appears to have been expropriated and demolished.

Is that where the station is to be located ?

When will construction is expected on the station? But more Important what road closure, lane

reduction on paper are expected/planned , when does the project is expected to start

Hi [REDACTED]

That's so wonderful to hear. Thank you for letting us know. We'll be sure to pass your message along.

We just heard back from the team that they actually won't be done their work on Hopedale Avenue by Friday because they need to collect further soil and rock samples. Work on Hopedale is anticipated to take up to May 31, 2021 as originally listed in the notice, and our team will follow up with you once they complete work. They will still pressure wash the street on Friday as they committed to do so, and they will also do a regular daily wash at the end of every work day.

Please let me know if you have any questions.

Good afternoon Sivahami

Thank you for getting back to me and confirming the cleanup plans.

I would like to take this opportunity to recognize the good work this crew is doing and how courteous they are. I had a few conversations with the drilling crew (Acosta I believe), namely Mike, and I can say that he is a true professional and gentleman. I was just looking around yesterday when he proactively approached me to see how I am doing and whether I have any concerns or not. He was very understanding of the concerns the neighbours have and asked if there is anything else that can be done to alleviate the stress.

While, this is not an ideal scenario, the crew are doing the best possible work to complete work with minimal disruption.

Please pass on my complements and regards to the crew, if possible.

Regards,

Hi [REDACTED]

Construction along Pape is expected to begin in 2024. We don't yet know whether traffic diversions or equipment storage will be needed in the Pape & O'Connor area, though our goal is to minimize disruption as much as possible. We'll have more details once the constructor is chosen for this package of work.

You can read more about the procurement process [here](#). The Pape section will be part of the Northern Civil, Stations and Tunnel package of work, which will go out to tender in 2022. The latest project timeline is available [here](#).

I'm happy to chat more about this on our call, and we can also discuss any other questions you may have.

Thanks,
Sivahami

Hi Ontario Line Relations Team,

I live about one block away from Pape and O'Connor. I am trying to fine details about the work in the area - timelines to start and finish, scope of work, and activity in the area. On the latter point, activity is storage of equipment in the area, parking for the workers (i.e. will our street become a busy parking lot every morning, road closures and diverting traffic, and will the street become a conduit for heavy equipment to be transported).

Thank you

Hi [REDACTED]

The Ontario Line is intended to integrate with the existing transit network, and bus service is an important part of that network.

The TTC's fleet is working towards less reliance on diesel with support from the federal government, as outlined in [this TTC report](#). This is part of the TTC's commitment to be 50% zero emissions by 2028-2032 and 100% zero emissions by 2040. You can read more [here](#), and you can reach out directly to the TTC [here](#) if you have any questions.

Thanks,
Sivahami

Just so I understand correctly, the Federal Liberal Government is providing billions of dollars to fund greener transit projects in Toronto that are NOT going to relieve diesel-powered buses?
Why are we not investing in greener transit projects that get diesel-powered buses off the road?

Thanks for your response.

How many bus lines are being removed by the Ontario Line between Ontario Place and downtown Toronto?

Thank you,

On Thu., May 13, 2021, 10:56 a.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thank you for reaching out to MPP Wynne's office with your ideas for the Ontario Line.

We are working closely with the TTC to ensure that the surface transit network integrates with Ontario Line stations, including by building bus bays at key stations. Overall access to transit service will still fit the TTC's own service level standard (i.e. distances between transit stops are still expected to be within 400m), but individual bus routes may shift to avoid the kind of duplication of service that you describe. We will have more information about this as we continue planning with the TTC on how best to serve all the residents in the different communities served by the Ontario Line.

Overall, car traffic remains the primary producer of hydrocarbons in the city, and it is a greater problem than diesel buses. The Ontario Line will serve 374,000-388,000 trips per day, including 60,000-62,000 new trips by non-transit users. This will help eliminate 28,000 car trips per day

and save 7.2 million litres of automobile fuel and 14,000 tonnes of GHG emissions per year.

Again, thank you for reaching out. Community input is vital to what we do, so we welcome questions and feedback by email at ontarioline@metrolinx.com and phone at 416-202-5100, as well as at our ongoing community engagement events. We recently held a series of virtual open houses with over 1000 participants. Hi Sivahami,

Please see the below email from a constituent who has raised a very valid point of need to include eliminating fossil-fuel transit while building new transit.

Can you please enquire and share with us whether Metrolinx has taken this approach while planning for ON Line?

Thank you,

Subject: The Ontario government is pushing a transit project to start that has community impacts

The Ontario Government is pushing the Metrolinx Ontario Line project to start without any neighborhood consultation. There are many aspects of this project that have a tremendous impact on the communities they travel through and the Ontario Government is neglecting to account for these impacts.

The Federal government is funding \$12 billion in transit projects in Ontario, and we welcome this capital injection for badly needed transit projects, but we need a more intelligent approach to planning these projects. For instance, the Ontario Line is an electric LRT/subway that duplicates many bus lines that are serviced with buses burning diesel fuel. Those bus lines won't be eliminated. We should be looking at ways to eliminate buses burning hydrocarbons and replace with cleaner energy transit. The planning for the Ontario Line has not included any consideration to eliminate fossil-fuel-burning transit. We need to have a more thoughtful process that integrates any new transit into the current system.

To: [REDACTED]
Subject: RE: Riverside Station (Queen and Degrossi)
Date: Thursday, May 13, 2021 10:26:00 AM
Attachments: [image001.png](#)

Hi [REDACTED],

Thank you for reaching out and for choosing transit to get where you need to be.

You can find more information about the planning behind in the Ontario Line in the [Initial Business Case](#) and the [Preliminary Design Business Case](#). Strategic criteria that influenced the location of the Ontario Line station serving Riverside included:

- How many people could be served
- How much travel time can be saved
- How many connections could be made to other major rapid transit lines
- How quickly and effectively the line could be built to bring relief faster to the overall network
- How local impacts could be managed
- How to ensure maximum transit benefits within the approved budget

Like you identified, there is a congestion problem. We expect this particular station to be part of the solution by providing a popular transfer opportunity between the streetcar network and the Ontario Line. It will also make destinations in the city more accessible. For example, a trip from Leslieville to Exhibition, which was previously only served by a combination of surface network routes, can now be completed on a one-seat ride on the Ontario Line. A trip across the entire Ontario Line will also take 30 minutes or less, getting you from Exhibition Place all the way to the Ontario Science Centre in record time – something that cannot be achieved with additional buses or streetcars in an already congested city. Our estimate shows the Ontario Line will have daily ridership of 388,000.

Construction means some level of disruption and we are committed to working with your community on Allen Avenue to mitigate those disruptions. One example is coordinating construction schedules so that noisy operations do not occur simultaneously. As we make more progress with design, construction plans and mitigation solutions to protect the community, we will share this all in the forthcoming environmental reports this fall before any construction begins. Before those reports are released, we will also hold more open houses soon to provide a better understanding of the look at feel of this project in your community.

My name is Daryl and I am your contact at the Ontario Line. We are opening a community office on Queen Street East so feel free to visit us in the future if you have any concerns or questions. Consider signing up for our [e-newsletter](#) to receive all the latest project updates.

Feel free to reach out should you have any further questions,

I have lived in the community (Allen Avenue) for thirty years and have seen a lot of good changes to the neighbourhood. So I am greatly interested in the proposed Ontario line and specifically the proposed Riverside station at Queen and Degrassi.

One of the reasons given for the need for the station is:

“Eliminating the station would greatly reduce customer benefits – especially for people living in the immediate vicinity – and the much-needed relief for the 501 streetcar will be lost.”

I don't own a car so one of the reasons I have lived in the community for so many years is the excellent public transit available: the 501 Queen, 503 Queen, 504 King, 505 Dundas and 506 Gerrard streetcar lines.

So I wonder how many local residents will take advantage of the proposed Riverside station at Queen and Degrassi which will create a huge disruption to the surrounding residential area.

Could you please provide me with the data you used to determine that people living in the immediate vicinity have a need for / would use this station.

I agree that the 501 streetcar line is overcrowded. Has Metrolinx, in conjunction with the TTC, considered alternative solutions that would be much less expensive and cause less disruption to the community, such as:

- A) An express bus along Queen from Victoria Park to the proposed Moss Park station. The bus could pick up/drop off riders at major intersections only.
- B) Increase in the number of streetcars on Queen street or a car free corridor as was done on King Street.

I look forward to your reply.

Hi. The Potter's Studio (a not for profit) has been a part of the Thorncliffe community for decades.

We provide education and funding to local groups as well as providing a base for local artisans. Our patrons know where we are located. Relocation would severely impact our members and support base.

In addition, local residents bring broken ceramics to be repaired or rebuilt. These items have great functional and sentimental value to the owners. Without us, those precious items would go into landfill.

Because we are long term, stable residents of the community and a not for profit, our rent is very low. Finding and funding a comparable new facility would be nearly impossible.

It would be sad for our guild to leave the area.

[REDACTED] (copied) our President, is running point on the relocation project.

I look forward to a fair and equitable outcome.

On Thu, May 13, 2021, 10:43 AM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thank you for your email, which Councillor Robinson also shared with us.

The site for the maintenance and storage facility was chosen because it had the fewest permanent job impacts of all the options we looked at while still meeting all the technical requirements. The Celestica site was ruled out because it is at what's called a transit node – the intersection of two higher order transit lines (the Eglinton Crosstown and the Ontario Line). It is a more appropriate location for the plans already underway there for mixed-use development, including affordable housing and a large new municipal community centre. You can read more about the site selection process [here](#) (scroll down and click “maintenance and storage facility”).

We are working one-on-one with the businesses and organizations that are impacted by the maintenance and storage facility to make sure they continue to thrive – their success is very important to us. We will also work with the community to ensure that the new infrastructure fits into the fabric of the neighbourhood and keeps disruptions to a minimum. We look forward to many future community meetings to discuss how we can do that, including our next series of virtual open houses. If you haven't already, please sign up for our e-newsletter [here](#) to stay up to date on future events.

Subject: Metrolinx vs Thorncliffe

Hi. I want to thank you for your support in protecting the Thorncliffe community. Communities like this do not spring up spontaneously. They are built over time and cannot be easily replaced.

I have a suggestion that may help both Metrolinx and Thorncliffe. There is an unoccupied property at the northwest corner of Don Mills and Eglinton. A developer is building condos there. It is the old IBM (and Celestica) site.

There are several advantages of the site for Metrolinx

- there is no one living or working on the site right now. They can start building the MSF right away.
- it is at the rail head. Trains could travel straight under Eglinton and emerge in the MSF.
- if Metrolinx ever wanted to expand the line northwards, the MSF could be used as a

starting point without additional expropriation or disruption

- Metrolinx can use the same facility to partially support the Eglinton Crosstown since the line will pass right by the MSF.
- the site is (was) serviced by two traffic entrances (Eglinton and Don Mills) when it was the IBM plant. Entry for workers should not be an issue.
- traffic at the intersection is already disrupted due to Eglinton Crosstown construction.

What's a few more months?

- The train line that is supposed to service the proposed MSF in Thorncliffe also cuts across the top of this property. Running a short spur would be simple.
- Since the area is not residential, ongoing noise from the MSF would not be an issue. (avoiding future noise complaints).

I think it would be better to expropriate unoccupied land rather than destroy an entire community hub just to park and maintain train cars.

Thank you for your efforts and thank you for your consideration.

Now that you've read this, please go wash your hands.

I am writing this today to bring to your attention a major flaw which Metrolinx has in the design and proposal for the Ontario Line and in particular a section which will be extremely close to where I live.

I am coping all of you on this because of the announcement yesterday by the Federal government that it will now be funding this infrastructure project and it is in the best interest of all parties to get it right and not be bulldozed by Metrolinx and take into consideration all stakeholders.

The section of the Ontario Line that I am concerned about is where it crosses over the DVP and then crosses onto Overlea Blvd. I understand from the latest version of the plans, that the line will cross the DVP on the north side of the Leaside Bridge and then cut across the property at 1 Leaside Park Drive and then go on the north side of the Overlea where they are currently some businesses.

This does not make sense because if the Line goes over the DVP on the north side, it means that it will have to crossover a major intersection at Millwood, Pape and Donlands to get from Pape to the north side. If the Line were to cross over the Leaside Bridge on the south side it would not interfere with this intersection as much. Then when it has to cross over to get to Overlea, it can cross over north of the intersection of Overlea and Millwood and not have to cross and take over land on [REDACTED]. If the crossover was slight north of the Millwood and Overlea intersection, it would be more in line with where it will run anyways and not create extra burden for the residents of [REDACTED].

Keep in mind that the intersection of Overlea and Millwood is a vital part of the traffic in Toronto as the Leaside Bridge is the only major crossover of the Don Valley in this area and is vital to get traffic from East York to Laird and Eglinton. This line will not substantially reduce the traffic in the area it is imperative that cars, trucks and buses continue to be able flow smoothly at this intersection and by moving it slightly north of the current plan, it can be achieved.

Also I am very concerned that Metrolinx may not be aware there are two stories of underground parking on 1 Leaside Park Drive right at the exact location where the current plan takes the line, and that can not be seen from the street and by drilling to put in the supports for the Ontario Line at this location, it could affect the integrity of the underground parking. If the Line is moved slightly north of the intersection, then this can be avoided. Also you can not move a condo building, but the offices at [REDACTED] and the Masonic Temple, which is not utilized very much over the past 5 years, can be readily moved.

There has not been enough community and stakeholder involvement by Metrolinx in this planning process. I hope that all of your copied on this email who represent us will help us in our discussions with Metrolinx to bring to the proper decision that affects the owners and residents of this particular section of the Ontario Line.

We are counting on all of you for your support.

Thank you.

Attachments: [image001.png](#)

Hello [REDACTED]

Thank you for your email.

I am understanding your questions to be about the First Parliament site and Corktown station, and am happy to provide some information on this, but please let me know if your questions are about another Ontario Line station.

The First Parliament site is required for subway construction of the Ontario Line and is also the site of a proposed transit-oriented communities (TOC) development that will support local transit needs. While the site is now mostly occupied by a parking lot, a car dealership, and a car wash, we want to make sure that any history hidden under the surface is interpreted and commemorated as part of the Ontario Line design. To this end, archaeologists will investigate the site beginning in the Fall of 2021 before construction begins so that important features and artifacts can be documented and conserved.

As archaeological work gets underway and we begin to understand what type of features and archaeological resources exist, the First Parliament Working Group will advise the Province on appropriate commemoration for the history and artifacts that may be uncovered at the site. The Working Group consists of representatives from Metrolinx, Infrastructure Ontario, the Ministry of Heritage, Sport, Tourism and Culture Industries, as well as nine different City of Toronto departments and the Mississaugas of the Credit First Nation. This includes the development of a robust Heritage Interpretation and Commemoration Plan for this site which builds on the Heritage Interpretation Strategy and the Master Plan work led by the City and reflects the community's input. There will be further opportunities for community consultation and engagement as the environmental and archaeological process related to the Corktown station and First Parliament site advances.

On the long-term development vision for the site, following review by the City of Toronto the Province will be engaging with the local community to gather feedback on the proposed plans to ensure they meet the needs of the community they will serve. The Province will also engage with Indigenous partners to better understand their interest in the project and plan to launch engagement in Fall 2021. The specific details around station entrance design will be determined based on criteria set for the constructor by Metrolinx. This will ensure consistency for customers along the entire Ontario Line route while still allowing for exterior elements at each station entrance to reflect the unique character of the neighbourhood.

I hope this is helpful, but please don't hesitate to let me know if you have any further questions.

Best,

Bismah

Subject: Architectural Design Elements

Message:

Hi Metrolinx,

I am excited about the Ontario Line, the recognition of the site and the neighbourhood enhancement that Metrolinx will bring. However, from the initial drawings of the site, it appears that the architectural design doesn't match the heritage designated buildings in the immediate area, could you confirm whether or not that there is language in place for the exterior station elements and street level frontage of the new developments within the study area are to match the historical buildings or if this decision will be left to the developers?

Regards,

H [REDACTED],

Thank you for sharing your suggestions with MPP Wynne. We do have a robust relationship with Hydro One and Infrastructure Ontario, and worked collaboratively with them to arrive at the current proposed MSF location. Moving a hydro corridor to accommodate the MSF would still require additional lands in another location, creating additional community and jobs impacts.

As you know, the site was chosen because it had the fewest permanent job impacts of all the options we looked at while still meeting all of the technical requirements. At the same time, we were confident that we could help relocate impacted businesses and organizations to nearby locations, and that's something we're still confident about

We'll discuss this more at the community table, and we're so glad you're able to attend.

Talk soon,
Sivahami

Subject: [Ontario Line] Fwd: Vancouver SkyTrain Expansion & BC Hydro Transmission Lines

Hi Kathleen,

I reached out to Translink in Vancouver about their current Surrey-Langley SkyTrain extension project. BC Hydro will be removing, relocating, and reinforcing hydro transmission lines and hydro distribution lines in two, separate locations to make room for the daily operation of the SkyTrain on its route between stations.

The Translink representative helpfully attached a project update that was produced by BC Hydro last month, which includes the project timeline and very helpful diagrams. This is a very similar project to the Ontario Line in Thorncliffe Park and Flemingdon Park and, on the surface, seems to demonstrate a more robust partnership between the regional public transit provider and publicly-held utilities, for the benefit of the community.

There may be a valid, technical reason why our hydro corridor isn't being adjusted to move train storage away from our neighbourhood. Conversely, it might be the case that cooperation across agencies is poor, and the appropriate effort to bring everyone into the same room has not been made.

The issues between the property owners, including IST, and the business owners are complex, with many residents stuck in the middle. From a community planning perspective though, it would be ideal to find a solution that keeps the Banigan Drive / Thorncliffe Park Drive West intersection open, as it has been for 70 years, and open up all corners of our neighbourhood rather than strand and isolate parts of it permanently.

This really can be a complete community opportunity that benefits today's residents and future generations for decades to come, rather than simply being a 'transit project.'

Hope that you will find the BC Hydro pamphlet helpful.

Best Regards,

[REDACTED]

Dear [REDACTED]

Thank you for contacting the Surrey Langley SkyTrain email, we have received and recorded your inquiry.

We appreciate your interest in the Surrey Langley SkyTrain project. TransLink is working closely with the provincial government to align direction with the government's interest to deliver the project to Langley.

For the latest information regarding BC Hydro's power line work related to this project, please see the attached update. Feel free to contact BC Hydro at projects@bchydro.com or 604 623 4472 directly for more information.

For the latest news on the project, please see here: <https://www.surreyangleyskytrain.ca/news> and please subscribe to receive our project updates, if you haven't yet done so: <https://www.surreyangleyskytrain.ca/community>

Thanks again for your interest in the project.

Best,

Date: Tuesday, May 25, 2021 5:32:00 PM

Hi [REDACTED],

Thank you for your patience and your questions on a previous email thread to me and for your email to the Chair of Metrolinx, Donald Wright. For simplicity, I will respond to both of them here.

The overall noise model will use typical continuous train traffic rather than levels you hear now or during the pandemic. In addition, we take into account future GO service/trains outlined in the GO Rail Network Electrification EPR Addendum noise study. The Ontario Line noise study will provide a full methodology when it is released as part of the forthcoming Environmental Report. Once that can be shared, I look forward to hearing your thoughts and addressing any concerns you have. Along with noise improvements, we will also deploy proven solutions to address the visual impacts. We hope to engage you and the community on what options would be best to fit within the fabric of Riverside and Leslieville.

Continuing our previous discussion, Metrolinx would not design or operate a system that will be unsafe for communities. For any new development near an active rail corridor, crash walls are required as a proactive safety measure. Metrolinx is confident the Ontario Line can be delivered within the rail corridor that has existed for 150+ years and we will continue sharing more information on how this can be successfully done. To ensure safety, we are working with the Standards Council of Canada which involves bringing in an independent safety assessor who will not only play a role in ensuring safety during the design, building and commissioning phases of the Ontario Line, but also for on-going inspection once the Ontario Line is in operation.

If you would like to chat further, I am happy to connect again via phone call.

Subject: Ontario line Leslieville

Hi Donald,

Can you please send me an example of where residential homes have been 2m away from 6 train tracks running continuously with no crash wall.

That's what's going to happen in Leslieville on Tiverton Avenue.
Also why does Metrolinx require crash walls for new build on Degraess Street but no crash wall for their own build along all those existing old homes?

Can a study be done for continuous noise vs now where there is no noise as trains rarely go by?
Metrolinx states it will be quieter than the current trains going by but it doesn't talk about the effects of constant quieter train noise?

Hello Sivahami,
Thank you for your reply. I would suggest that your field crew is being less than truthful.
Are you seriously expecting me to believe that this has nothing to do with the drilling for the Ontario Line? Would you believe it?
Is this how Metrolinx builds trust with communities? Is this how I can expect Metrolinx to treat my community going forward?

Good Evening Councillor Fletcher and MPP Tabuns,
Taking my dog for a walk this evening, I discovered a 50 gallon barrel of unknown waste hidden under a Norway Spruce in the park at the end of my street. See attached photos (apologies if they are blurry, the light conditions were poor).

I am assuming this is waste material resulting from the drilling currently being conducted along Hopedale between Pape and Minton. Please note that I can hear this drilling clearly in my house, and I received no advance notification from Metrolinx that this drilling was taking place.

I am also assuming it's illegal to dump waste in a city park.

I called 311 to report it and was told by the agent that all they could do was report it to the park manager. I asked them to provide me with the contact info of the park manager so I could follow up.

Needless to say, it is completely unacceptable for Metrolinx to do this. Any attention you could give this matter, which should be considered quite serious, would be welcome.

Subject: Metrolinx Community Notice - Surveying work on public roadways along the rail corridor -

Taking place on May 18th

Hi [REDACTED],

We're reaching out to let you know that surveying will be resuming in your neighbourhood on May 18th from 9 a.m. to 5 p.m. to identify locates ahead of further investigative geotechnical drilling, with the possibility of work times being shortened pending weather and field conditions. Surveyors will be working entirely on public roadways along the rail corridor between Eastern Avenue and Gerrard Street East. Should work begin later than the anticipated start date or should work be delayed by unforeseen circumstances, we'll reach out with an update.

The work is non-intrusive in nature and being carried out using handheld and tripod-mounted equipment which will be monitored at all times, and not be left overnight at any point. All work will be carried out within public roadways. A field crew of one or two persons will also use monitoring equipment to locate utilities in the field and may use water soluble paint marking to note their locations, while a second crew will take measurements. All work will be carried out within public roadways with no impacts to traffic or transit. Pedestrian access on sidewalks will be maintained at all times. Please see attached for the notice.

This notice is being emailed to Elected Officials, community groups, and to area businesses. It will also be carried by field crew carrying out the work, and will also be available on our website.

Please let us know if you have any questions.

Thanks for the reply . Billy Bishop airport does not allow bigger aircrafts due to resistance from Parkdale we believe .

If that all sorted out, it will be a great win.

Also some cost escalation news is just seen which we hope you will sort out soon.

Hi [REDACTED],

Thank you for reaching out and for your question about the Ontario Line's western route and terminus station. We have been working with the TTC to make sure the Ontario Line best serves Toronto residents and provides the necessary relief to existing transit networks, such as existing subway lines, streetcar routes and busses, as well as plans for future services.

During the planning process, we studied station locations with a focus on bringing several benefits to our customers, including increasing access to transit, maximizing ridership, achieving travel time savings, reducing overcrowding on existing transit services and creating better access to jobs. We chose Exhibition station to be the western terminus for the Ontario Line because it provides the best connection to the GO network in addition to surface transit. It is also important to note that our plans protect for the possibility of expanding the Ontario Line and future integration opportunities.

Please rest assured that we will continue to work closely with the TTC and City of Toronto as the project moves forward. Thank you again for writing. Feel free to reach out if you have any further questions.

Kind regards,

Caitlin

It looks like duferin TTC terminal expansion is not considered which is just metres away from exhibition , which can bring equally the entire benefits the whole project is giving considering the same is connected to the huge population of North and west downtown and the entire existing TTC lines and even the hub to the entire CNE shows . Whether TTC has no role or say in this big project?? despite King Dufferin has the largest street car intersection of TTC and has closeby the largest TTC West terminals and maintenance centres as well as the resistant Parkdale Area which has stopped all big aircrafts flying in to Billy Bishop Airport !! the hub of downtown Toronto tourism .

Ontario Line Early Works

In advance of major construction that will break ground on the Ontario Line in 2023, we will also break ground on various ‘early works’ construction activities. Early works are happening along certain parts of the line to reduce delays to the major contracts, supporting a faster and more efficient delivery of this new line.

But what exactly do we mean when we say ‘early works’? Think of early works as the minor work you would complete to get your house prepared for major home renovations – these initial activities would allow a contractor to come in and complete the major work more quickly and efficiently.

There will be early works contracts for areas and stations along the line such as Exhibition Station, the site of the future Corktown Station,

the Lower Don bridges, Don Yard and Lakeshore East Joint Corridor.

Early works construction begins this fall at Exhibition Station, while further early works at other areas will begin following the completion of early works environmental assessments, including public review and feedback of those draft reports.

We've released two Early Works Reports to date for Exhibition Station and Corktown Station. The [Final Exhibition Early Works Report](#) was released in February of this year, and we recently released the [Draft Corktown Station Early Works Report](#) on May 12. The Draft Corktown Station Early Works Report is open for public feedback until June 11. [Learn more about early works.](#)

Investigative Drilling and Rail Corridor Surveying

Geotechnical drilling and surveying continues at several points along the Ontario Line route to gather information on ground conditions.

A few recent notices informed residents of work taking place on:

North Segment:

[Investigative drilling work and environmental sampling on Minton Place and Hopedale Avenue - Starting as early as May 10](#)

Downtown Segment:

[Investigative drilling work on Jarvis Street at Queen Street East – Starting as early as May 10](#)

Hi [REDACTED],

Thank you for reaching out and asking about the station entrance locations for the future Ontario Line Queen-Spadina station.

At this time, there is limited information we can provide because design work on the Ontario Line is underway but not complete and conversations with property owners are ongoing. You can find the latest information about the Queen-Spadina station under the [West Segment Neighbourhood Update](#) section on our website.

If you own property near the Queen Street West and Spadina Avenue intersection, please share the address with us, and we can look into it further.

If Metrolinx identifies a property that will be directly or partially impacted, we will directly contact the property owner. We will work collaboratively with our partners, communities, and affected property owners to ensure the lines of communications remain open. Those impacted are continually informed from planning and design through construction as we move forward with the Ontario Line. You can find more general information about [property and transit construction](#) on Metrolinx's website.

We look forward to sharing more information once available. Please consider [signing up for our newsletter](#) to stay updated on the Ontario Line if you are not already registered.

Thank you,

Caitlin

Attachments: [image002.png](#)

Hi [REDACTED],

Thank you for emailing. The part of the Ontario Line that will run along Pape Avenue is still being designed and finalized. It's part of the "North Civils" package of work, the last of three Ontario Line packages, and is expected to go out for bid in 2022 (more about procurement [here](#)). We will also be releasing an extensive Environmental Assessment Impact Report in 2022, which will include noise and vibration studies and ways we plan to address any anticipated issues. That report will be released in draft form first, and public feedback will be incorporated into the final version before major construction begins (see timelines [here](#) and read about our environmental assessment process [here](#)). As soon as we have more details about the alignment of the tunnels, we will share them on our website and in our e-newsletter.

What we do know right now is that the Ontario Line tunnels in the area around Pape & Danforth will be about 30 metres underground in order to get underneath Line 2. For context, Line 2 is about 11 metres underground, and most home basements and foundations are about 6 metres underground. We do not expect that most people will feel or hear the trains once the line is in operation, partly due to the depth of the tunnels, and partly due to other measures we are planning to use in the tunnels to prevent train noise and vibration from transferring into the earth around the tunnels, and our goal is for there to be no perceivable difference between the current state and the future. You can read more about some of these noise and vibration mitigation measures [here](#). During construction, we do expect that residents may temporarily hear or feel the tunnel boring machines as they pass by. The machines will dig the tunnels at a rate of around 15 metres per day. We'll have more details about construction plans later in the project planning stages as well.

Please let me know if you have any further questions, and please sign up for our e-newsletter [here](#) if you haven't already so that you can keep up to date on the latest news, including future virtual open houses about the project.

Thanks,
Sivahami

HI - I am interested in getting more information about the path of the Ontario Line underneath Pape avenue (Between Danforth & Cavell Ave). Can you please let me know where I can find these detailed plans. Specifically I am interested the amount of noise and vibration that will be experienced in houses directly above.

Thank you

Attachments: [OLine - Surveying between Logan Avenue and Pape Avenue - starting as early as May 25.pdf](#)
[image001.png](#)

Hello [REDACTED]

Please find attached a notice about continuing surveying work that will be taking place on public roadways between Logan Avenue to Pape Avenue starting as early as May 25th. Should work begin later than the anticipated start date or should work be delayed by unforeseen circumstances, we'll reach out with an update.

The work is non-intrusive in nature with no anticipated noise impacts, and will be carried out using handheld and tripod-mounted equipment monitored at all times to locate utilities in the field, take measurements, and may use water-soluble paint to note their locations. The field crew will be carrying out some of the surveying overnight at two locations indicated in the notice in order to minimize disruptions to area residents and businesses. All work will be carried out within public roadways with no impacts to traffic or transit. Pedestrian access on sidewalks will be maintained at all times. Please see attached for the notice.

This notice is being emailed to Elected Officials and community groups. It will also be carried by field crew carrying out the work, and will also be available on our website.

Please let us know if you have any questions.

Hello [REDACTED],

Thank you for your email.

The Ontario Line will bring 15.6 kilometres of much-needed rapid transit service to our city to make it faster and easier for hundreds of thousands of people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition Station/Ontario Place in the southwest with 15 stations, including six interchange stations, and 17 new connections to GO train lines and existing subway and streetcar lines.

You may wish to learn more through our [project website](#) or subscribe to our e-newsletter there to stay updated on the latest Ontario Line developments.

Please do not hesitate to let me know if you have any further questions.

Stay safe!

Hi [REDACTED],

Thank you for your email.

We are working one-on-one with each affected business or non-profit organization to find the best options for them based on their needs. Our goal is to ensure that Iqbal Halal Foods and other affected community businesses are able to stay within walking distance so that they can continue to serve Thornccliffe Park residents.

Please let me know if you have any further questions,
Sivahami

Hi [REDACTED]

Thank you for reaching out and sharing your feedback with us about protecting for future westward expansion of the Ontario Line.

Our plans do protect for the possibility of expanding the line in the future to improve transit access and meet demand. We will be constructing tail tracks that extend west of Exhibition station, the Ontario Line's western terminus, to protect for possible future expansion. By connecting to Lakeshore West GO train services at Exhibition, this station will help people connect to more places and spread demand across the broader transit network. The transit hub and transfer point at Exhibition Station will also bring much-needed transit to the dense residential and commercial area around Liberty Village and make getting into and around the city much easier than it is today.

Regarding roughing at King-Bathurst or Queen-Spadina stations for future tunnelled westward expansion, we appreciate your suggestion and will pass it on to our project team. To stay updated on the Ontario Line, please consider [signing up for our newsletter](#).

Thank you,

Caitlin

Subject: Suggestion on West End Ontario Line to save future re-work: Roughing for possible future western spur and future cost savings

Message: Dear Sir/Madam: I'm writing to you to provide a suggestion for planning the west end of the Ontario Line. It is very possible that once the west end extension is built, people will realize that it makes sense to have a spur/line to Dundas West TTC/GO/UPS, which will also serve Parkdale and Roncesvalles. Think of the foresight used for the Bloor/Danforth viaduct bridge, when accommodations were made for a possible future subway line; this came to fruition later after the bridge was built, and the city saved countless millions. By building some roughing/accommodation around the planned Queen/Spadina or King/Bathurst stations, it would make a future western spur dramatically cheaper to build. Also keep in mind that any new streetcar overhauls along that corridor would get older/dated by the time such a western spur were considered. Having a longer term view will be more beneficial to our neighbourhoods. Your thoughts are greatly appreciated.

Hi there,

Just received from [REDACTED]

Please call to discuss the noise, vibration and health mitigation of going from 169 daily trains on the corridor today to 1505 daily in 10 years time.

60% of the trains (912) will be Ontario Line as planned which is why the route must go underground from east of East Harbour station through a portal parallel to the south side of Eastern Ave. before curving north to a station at Carlaw and Gerrard.

This alternate route will save the neighbourhood, its parks, trees and homes.

I note also that the trains to Oshawa and the extension to Bowmanville are to be diesel because Metrolinx does not own the route east of Oshawa and will presumably run on existing CN tracks. Please confirm.

The number of trains and frequency to Stouffville will also grow exponentially on the 4th GO track which is to be installed and is to be electric.

All of the noise and vibration studies you are currently undertaking must include these scenarios as a whole and cannot be studied in isolation.

Regards,
[REDACTED]

Date: Re: Corktown station construction question -
Thursday, June 3, 2021 12:22:20 PM

Hi [REDACTED],

Thank you for your email about Corktown station on the Ontario Line.

Corktown Station will be constructed on the site where the Staples is located, just north of Front street. The site just south of Front street, between Berkeley Street and Parliament Street, commonly known as the First Parliament site, will be used to support the construction of Corktown Station and tunnelling activities associated with the Ontario Line project in order to reduce community impacts and keep construction off the street.

[Corktown Station early works](#) include the demolition of existing buildings (including the ones you have mentioned), removal of structures and asphalt, decommissioning of utilities and soil removal and/or remediation where required. These early works are being advanced to prepare the site for archaeological assessments and future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station. Demolition for Corktown Station early works is planned to begin as early as September 2021 and will be followed by environmental due diligence activities including archaeological assessments. The main contract work – tunneling/underground construction activities and Corktown Station construction – is anticipated to start in 2023.

Removal of the buildings currently on site is covered in the [Draft Corktown Station Early Works Report](#), which provides details on the purpose of these works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a record of consultation. The Draft Corktown Station Early Works Report is currently available for review on the project webpage (<http://www.metrolinx.com/ontarioline>) and feedback on the Draft Early Works Report can be provided via the webpage form or by writing to the project email address ontarioline@metrolinx.com until June 11, 2021. The assessment of project operations and construction of Corktown Station and other project components will be outlined in the Ontario Line Environmental Impact Assessment Report planned to be released in early 2022.

Metrolinx is committed to minimizing and managing the effects of noise and vibration of the Ontario Line on its neighbours – during both construction and operations. As noted in the Draft [Corktown Station Early Works Noise & Vibration Report](#), construction noise mitigation measures may include, but won't be limited to performing construction during daytime hours where possible, using equipment compliant with noise level specifications from the Ministry of Environment, Conservation and Parks, and siting construction vehicles and construction laydown and staging areas away from sensitive receptors where possible. Other practical steps

we take to reduce noise and vibration in residential areas include fitting equipment with muffling devices, using equipment and coordinating construction schedules so that noisy operations do not occur simultaneously. These mitigation measures will be refined and updated as project planning progresses. Metrolinx will also monitor noise and vibration during construction to see if more mitigation measures are necessary.

I hope this helps address your questions, but please don't hesitate to let me know if you need any further information.

Best,

Bismah

Hello,

I live at [REDACTED] and I'd like to know the planned scope of works for Corktown station construction across the road.

Specifically, where are you planning to locate the station exactly? Are you planning to demolish the Porsche dealership at 68 Parliament street or is it just Staples at 250 Front East?

When will the demolishing and construction start?

Any additional info is appreciated, if available.

Hi

Thanks so much for taking the time to talk with us yesterday. It was a pleasure to meet you.

[Here is the link](#) I mentioned where we explain how the site was chosen (click "Maintenance and Storage Facility"). There is also more information on [our FAQ page](#), which is expected to be updated this morning.

Please feel free to call my cell at 437-881-2618 if you have any other feedback or insights, or if you have questions I might be able to answer, and please share [this meeting booking link](#) with anyone who might want to have a call or video meeting with me. I'd love to meet them!

This email address, ontarioline@metrolinx.com, is also the best place to ask questions about the Ontario Line. I answer questions about stations from Pape to Science Centre, and my colleagues answer questions for other parts of the line. I'll also make sure to send you an email when we have a date for our next virtual open house.

Looking forward to staying in touch,
Sivahami

Hi [REDACTED]

Thank you for emailing, and thank you to Vivi for passing along the question.

Metrolinx is working closely with the TTC to ensure that the existing surface transit network integrates well with the Ontario Line to better serve residents along the line. While I am not aware of any plans to connect the St. Clair LRT to the Ontario Line, I will note that the Ontario Line will connect with Line 5 (the Eglinton Crosstown) at Science Centre station, located at Don Mills & Eglinton. Thorncliffe Park residents will be able to access Line 5 by travelling two stations north to Science Centre station, or Line 2 by travelling two stations south to Pape station. More [here](#).

Please let me know if you have any further questions about the Ontario Line project, and consider signing up for our e-newsletter [here](#) if you haven't already.

Thanks,
Sivahami

Subject: St. Clair LRT east to Thorncliffe Park Station?

Hello,

Greetings from the west end.

With the Ontario Line apparently going forward and including a Thorncliffe Park station, I couldn't help wondering. Has there ever been discussion around extending the St. Clair LRT east to the same Thorncliffe Park station, helping complete the mobility grid for the neighbourhood?

It seems like the right time to consider it, in terms of the planning process for the station and Line.

Many thanks,
[REDACTED]

Hello [REDACTED],

Thank you for your email.

The section of the Ontario Line that will run along Pape Avenue is still being designed and finalized. It's part of the "North Civils" package of work, the last of three Ontario Line packages, and is expected to go out for bids in 2022 (more about procurement [here](#)). We will also be releasing an extensive Environmental Assessment Impact Report in early 2022, which will include noise and vibration studies and ways we plan to address any anticipated issues. That report will be released in draft form first, and public feedback will be incorporated into the final version before major construction begins (see timelines [here](#) and read about our environmental assessment process [here](#)). As soon as we have more details about the alignment of the tunnels, we will share them on our website and in our e-newsletter.

What we do know right now is that the Ontario Line tunnels in the area around Pape & Danforth will be about 30 metres underground in order to get underneath Line 2. For context, Line 2 is about 11 metres underground, and most home basements and foundations are about 6 metres underground. We do not expect that most people will feel or hear the trains once the line is in operation, partly due to the depth of the tunnels, and partly due to other measures we are planning to use in the tunnels to prevent train noise and vibration from transferring into the earth around the tunnels, and our goal is for there to be no perceivable difference between the current state and the future. You can read more about some of these noise and vibration mitigation measures [here](#). During construction, we do expect that residents may temporarily hear or feel the tunnel boring machines as they pass by. The machines will dig the tunnels at a rate of around 15 metres per day. We'll have more details about construction plans later in the project planning stages as well.

Please let me know if you have any further questions, and please sign up for our e-newsletter [here](#) if you haven't already so that you can keep up to date on the latest news, including future virtual open houses about the project.

Best,

Bismah

Nearest Ontario Line Station (Optional): Pape

Subject: Density

Message:

Hello,

I strongly support the construction of the Ontario line and utilizing the existing rail corridors above ground to save time and resources. Density has to be a priority along these stations, I would love to see mixed use mid/high-rises incorporated into the new stations rather than wasteful one storey standalone buildings like most TTC stations are today. The Danforth near Pape is particularly underdeveloped and would love to see more high density residential as this becomes a transit node. Can't build this soon enough!

Cheers,

[REDACTED]

Date: Thursday, June 3, 2021 1:33:13 PM
Attachments: [image002.png](#)

Dear [REDACTED],

Thank you for reaching out and sharing your feedback about the Ontario Line maintenance and storage facility location. This location was selected based on a comprehensive process, taking into account a number of considerations, which I am happy to outline below.

The Ontario Line will bring higher-order transit to the Thorncliffe Park community, making it faster and easier for people to get where they to be every day. An essential part of any transit line is the maintenance and storage facility. Metrolinx identified the preferred location for the facility based on extensive study with the City of Toronto. We needed a large parcel of land already zoned for industrial use and close to the Ontario Line route. Because we knew there would be impacts to businesses and community organizations, we looked for a site where we could work with property owners and tenants to help them relocate to a new location nearby.

We know how important the community organizations and businesses are to the community, which is why our highest priority is helping each affected business and community organization relocate elsewhere within the community or nearby. The Islamic Society of Toronto has told us that their current mosque at 4 Thorncliffe Park Drive will move to their new property at 20 Overlea Boulevard, which will not be impacted by the maintenance and storage facility. We will continue working directly with them to support that move.

We also chose the maintenance and storage facility site because it had the fewest permanent job impacts of all the options we looked at while still meeting all necessary technical requirements. We looked at land options from the western terminus at Exhibition through to the eastern and northern end of the line. A list of [nine sites](#) was brought forward for more detailed analysis, some of which were ruled out because they weren't big enough or affected too many businesses and jobs.

As you can see, the process leading to the decision to locate the MSF at this location has been extensive. Having said that, we are consistently engaging with the community to incorporate input on the design of the MSF, and collaborate on how to minimize impacts to the community, both during construction and when the project is operational.. We look forward to hearing from the community at regular open houses, and we are also accessible via email, phone, or [video meetings](#). Even when public gatherings are safer, we still plan to offer virtual engagement opportunities to reduce barriers to participation for those who cannot attend in person.

We have also been meeting regularly with the community since the last virtual open house, including impacted organizations, businesses and residents in the Thorncliffe Park area. We have worked directly with MPP Wynne and her office to organize and facilitate these engagements on a scheduled weekly or biweekly basis.

We will work with the community to ensure that the new infrastructure fits into the neighbourhood's fabric and keeps disruptions to a minimum. We look forward to many future engagement opportunities to discuss how we can do that, including our next series of virtual open houses. Please consider signing up for our e-newsletter [here](#) to stay up to date on future events, and do not hesitate to give us a call at 416-202-5100.

Thank you,

Caitlin

Dear MPP Mulroney and Members of Metrolinx,

As a teacher in the Thorncliffe Park neighbourhood, I am deeply concerned about the impacts of the proposed Maintenance and Storage Facility on our community. According to the [2016 census data](#), Thorncliffe Park's poverty rate is over 45%, which is more than double Toronto's. I see first hand the *limited* resources available to my students, their families, and the community. This proposal is taking more away from the little that is there to begin with.

I support the community's need for better access to transit and I support the Ontario Line; however, I cannot accept Metrolinx **replacing a community hub that serves a population of over 30,000 in a 2.2 square kilometer area with a train yard**. In a community that lives vertically, in 34 high-rise and low-rise apartments, more space should be allocated to community resources, not less.

I am extremely disappointed with the lack of consultation and the manner in which the

community was informed of the decision to place the train yard in the community. After speaking with MPP Wynne's office, they echoed my concern and shared with me the letter their office sent and your response. Our community agrees, as there is a petition with over 7500 signatures asking to move the train yard from Thorncliffe Park.

I believe that Metrolinx has options to **move the train yard to a different location**, or even identify several satellite locations. Choosing the densely populated Thorncliffe Park displays ignorance and a lack of responsibility towards the community. It is evident of environmental racism and Metrolinx's biased and discriminatory actions towards a predominantly immigrant population.

Metrolinx has shown itself to be agreeable to "hybrid" solutions. It is their responsibility to dedicate a sincere effort to **finding an alternate location for this potentially hazardous component of the Ontario Line in a high density neighbourhood** and then cost those options for serious consideration.

In conclusion, I believe that Metrolinx has not done due diligence nor conducted meaningful consultations with the community that will be detrimentally affected by the train yard.

Sincerely,

[REDACTED]

[image004.png](#)

Hi [REDACTED],

Thank you for reaching out and sharing your suggestion for retail/community opportunities under rail tracks. We appreciate your recommendation and will pass it on to our project team.

To answer your question, Metrolinx owns a majority of the railway in which we operate, including the land below the tracks. However, it is important to note that we may not own 100 percent of the railway in certain locations as we share the right of way with CN, CP Rail, etc. In these cases, we would have agreements to operate and occupy space on the corridor in a shared manner.

A comparable example of property ownership and retail integrated with transit lines is shops within stations, such as TTC. These retail locations are leased out to occupants, but ownership of the area is maintained by the 'landlord' (TTC in this example).

Thank you again for writing and sharing your feedback with us. Please consider [signing up for our newsletter](#) to stay updated on the Ontario Line. Feel free to reach out if you have any further questions.

All the best,

Caitlin

Hey Metrolinx,

Have you considered opportunities for the rail corridor to serve community functions through the provision of retail/community uses below the tracks where the grade changes would support? This is a pretty common practice and Europe and makes these the tracks more of an amenity than a barrier. Also a potential revenue opportunity.

Who owns the rights below the tracks?

On Thu, Apr 29, 2021 at 4:11 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Hope this email finds you well.

I wanted to share a heads up that the contractor will be conducting a site visit tomorrow afternoon to review the locates that have been marked by Ontario One, in order to further plan how they might best position their equipment that will minimize impacts to residents. They will only be visually assessing both work areas, and will not be using any equipment or spray paint.

Work is still anticipated to begin May 10, 2021, and we are planning on sharing the notice with PACCT as well as dropping off hard copies of notices to residents next Wednesday. As mentioned previously, we'll also have a member of our team on site the morning of the work start date, in order to liaise with the contractor's representative and answer any questions residents might have.

I will share the notice with you once further details have been finalized, but in the meantime, let me know if there's any questions I can help you with.

Very best,

Vanessa

Subject: RE: Metrolinx Survey Expansion - Hopedale Avenue

Hi [Redacted]

Thanks for your patience as we looked into your question, and for bringing this to our attention.

The markings the resident shared are related to locating plotting for some further geotechnical drilling work that is needed to support the portal design, and as Josh mentioned below, does not indicate a change in our plan or property requirements.

Investigative drilling to evaluate underground conditions is planned to begin May 10, 2021 and will take place at two locations in the area:

Although the location on Hopedale not directly above the future location of the tunnel, geotechnical information from this spot will be used to supplement previously collected data regarding slope stability and subsurface conditions. The alternative would have been to drill on someone's property in the area which we try to avoid as much as possible.

Prior to drilling work beginning, the contractor will have a company named Ontario One visit the location to mark out the locations of underground utilities. As a first step, they had to mark where the planned boreholes will be. While we were waiting for a confirmed start date before sending you notice of upcoming work, we have asked the contractors to let us know when they plan to visit a site, even if it is to mark out work or utility locations in the public right-of-way. We know these

“surprises” can be disconcerting for residents and will keep information flowing as much as we can to avoid confusion.

In terms of next steps, Ontario One will be sending out different public locaters depending on what utilities are in the area, over the next couple of weeks before drilling starts. Neither Metrolinx nor our contractor have line-of-sight as to precise dates this may take place, but it will happen during Monday-Friday during business hours. We have reminded them of the importance of remaining within the right-of-way unless prior notice is provided.

For the drilling work that will begin on May 10, work is anticipated to last up to three weeks at each location, which means work is anticipated to last up to June 21, 2021. Drilling will only take place Monday-Friday during the day, and drilling will be similar to what residents have experienced previously, where the drilling is intermittent throughout the work day and work period in order for the field crew to reach the depths needed. They will be starting at the location on Minton Place, before moving to the location on Hopedale Avenue. The contractors are still finalizing details, and we will be sharing a notice with PACCT and area residents (in hard copy) the week before work begins. In addition, as Josh and our team have done in the past, we will have a member of our community relations team on site the morning of the work start date, in order to liaise with the contractor’s representative and answer any questions residents might have.

Please let me know if you have any further questions I can help you with.

Very best,

Vanessa

Good morning Malcolm and Josh,

This email was sent to us yesterday. It summarizes the distrust that our neighbours have for Metrolinx.

Our executive was not notified of surveying being done nor the purpose of surveying. Our neighbours believe this is for further expropriation and, frankly, we will think the same unless you show us details plans that would state otherwise.

This is not the kind of email that, 1 week ago, I envisioned sending you two.

See below for details and we will await your response.

Dear All - I have attached a series of photographs showing survey markings put onto Hopedale Avenue this afternoon under & beside my vehicle (outside of my home) on Hopedale Avenue.

These survey markings - clearly Ontario Line related due to the "OL - have now expanded to homes 6 houses East of Minton Place. I am continually appalled, angered and gravely upset by the lack of communication and disregard for personal property and the current economic and pandemic climate shown by Metrolinx and their sub-contracted firms.

Not only does this serve as nothing more than a reminder of potential eviction (sorry, expropriation) but just as we saw this time last year when similar markings were sprayed onto lawns, front yards and steps, there has been blatant disregard for the potential impact to personal property.

Trust you can appreciate my concerns and will add to continued discussion points. I will be adding to my own legal folder.

Regards

Hi [REDACTED]

Thank you for taking the time to write to us and I appreciate your honesty.

In the online world created from the pandemic, we have done our best to expand engagement options. As we rolled out virtual town halls, we have responded to concerns about word counts by introducing a 'zoom room' feature where residents can call in and ask their questions live. This will be included in the upcoming June 24 open house for east end residents. You can register [here](#). We will be discussing project updates and the changes from the Building Transit Faster Act.

We do want to work with the community as we advance Ontario Line plans. It is critical to delivering the project successfully. Designs have been updated to rearrange the tracks to respond to community concerns and further reduce our footprint by sliming down station infrastructure. We look forward to working with the community on the design of the noise walls and vegetation options so the Ontario Line fits within the fabric of the community.

The latest campaign in Riverside and Leslieville is aimed at providing a solid set of facts so residents are informed of the latest information. There is still progress to be made on the project as design is still being worked out but we do know that we will mostly stay within the existing rail corridor, the area parks will still be there when work is complete and noise wall options can be effective/attractive. Most importantly, the green lines someone painted in the community are incorrect. We understand construction means disruption but we want to ensure any discussion of the Ontario Line starts with a solid foundation of facts.

I want to hear your concerns more and have a discussion with you. Do you have any availability to connect next week on Wednesday or Thursday? Please share some times and I will create a Microsoft Teams meeting for us.

Have a great weekend and thank you once again for writing to us,

Subject: Consultation method

Message: I find your public consultation method to be restrictive and frustrating. The limit on the length of questions which may be registered is petty, annoying and offensive. There is a lack of detailed information being made available before and during the consultations. The tone of those answering questions during consultations is patronizing. There is a distinct feeling of "we know best" and "we have already decided the outcome". You are paying lip service to the concept of public consultation. Your PR department dismisses any information which does not fit your narrative as "myths within the community" yet that information is far more detailed and precise than anything you have shared publicly.

Daryl,

May I be clear?

There is only ONE tunnelled alignment that the Riverside community has requested which is defined by [REDACTED] as you point out.

If Malcolm Mackay and others think otherwise, please ask them to accept this option and cost it out. I am happy to meet with him to go through all the details.

Also, I'm happy to talk about bridges and measurements.

I/we have been waiting for months to get dimensions while recognizing that the route and track layout has been a moving target. It has changed configuration on more than one occasion.

I have already signed up for the virtual open house. With luck, this will be the last one and we will be able to meet in person going forward.

I am available all day next Monday, Tuesday or Wednesday, and Thursday morning.

Regards,

Attachments: [image001.png](#)

Dear [REDACTED],

Thank you for reaching out and sharing your feedback about the Ontario Line maintenance and storage facility location. This location was selected based on a comprehensive process, taking into account a number of considerations, which I am happy to outline below.

The Ontario Line will bring higher-order transit to the Thorncliffe Park community, making it faster and easier for people to get where they to be every day. An essential part of any transit line is the maintenance and storage facility. Metrolinx identified the preferred location for the facility based on extensive study with the City of Toronto. We needed a large parcel of land already zoned for industrial use and close to the Ontario Line route. Because we knew there would be impacts to businesses and community organizations, we looked for a site where we could work with property owners and tenants to help them relocate to a new location nearby.

We know how important the community organizations and businesses are to the community, which is why our highest priority is helping each affected business and community organization relocate elsewhere within the community or nearby. The Islamic Society of Toronto has told us that their current mosque at 4 Thorncliffe Park Drive will move to their new property at [REDACTED], which will not be impacted by the maintenance and storage facility. We will continue working directly with them to support that move.

We also chose the maintenance and storage facility site because it had the fewest permanent job impacts of all the options we looked at while still meeting all necessary technical requirements. We looked at land options from the western terminus at Exhibition through to the eastern and northern end of the line. A list of [nine sites](#) was brought forward for more detailed analysis, some of which were ruled out because they weren't big enough or affected too many businesses and jobs.

As you can see, the process leading to the decision to locate the MSF at this location has been extensive. Having said that, we are consistently engaging with the community to incorporate input on the design of the MSF, and collaborate on how to minimize impacts to the community, both during construction and when the project is operational. We look forward to hearing from the community at regular open houses, and we are also accessible via email,

phone, or [video meetings](#). Even when public gatherings are safer, we still plan to offer virtual engagement opportunities to reduce barriers to participation for those who cannot attend in person.

We have also been meeting regularly with the community since the last virtual open house, including impacted organizations, businesses and residents in the Thorncliffe Park area. We have worked directly with MPP Wynne and her office to organize and facilitate these engagements on a scheduled weekly or biweekly basis.

We will work with the community to ensure that the new infrastructure fits into the neighbourhood's fabric and keeps disruptions to a minimum. We look forward to many future engagement opportunities to discuss how we can do that, including our next series of virtual open houses. Please consider signing up for our e-newsletter [here](#) to stay up to date on future events, and do not hesitate to give us a call at 416-202-5100.

Thank you for taking the time to write to us [REDACTED] and please reach out if you want to continue the conversation.

Daryl

Hi [REDACTED]

Thank you for your email to MPP Wynne with regards to your concerns on the Maintenance and Storage Facility (MSF) being placed by Metrolinx in Thorncliffe Park.

MPP Wynne has raised the issue in the Legislature with the current government. She has also written to the Minister of Transportation asking her to visit Thorncliffe Park to understand the concerns of the small businesses and also the residents in the area with regard to the ON Line and the location of MSF. Please see the copy of the same along with the Minister's reply attached herewith.

MPP Wynne has also spoken to the CEO of Metrolinx Phil Verster and his team members in the matter and conveyed the community's concerns. She has also attended a number of meetings with Metrolinx and community members to seek answers to the concerns raised.

It is important that the community also raises its voice and writes directly to the Minister of Transportation at minister.mto@ontario.ca.

We have copied Metrolinx on your message to enable them to respond to your concerns. MPP Wynne will continue to advocate on behalf of residents in the matter.

Sincerely,

Aafaaq

Subject: Metrolinx Train Yard

Hello,

I am a constituent living at [REDACTED] I want to reach out regarding the proposed train yard that metrolinx wants to build right in the middle of my community. I am very against this as it will completely damage the neighbourhood. I don't know how this is even possible for them to bulldoze an entire community for this and it was very hurtful to discover that they had the option of

building the trainyard in an already industrial area in Leaside, but still chose to ruin the community.

Can you please tell me what steps, if any, you have taken to address this issue?

I would really appreciate it if you could stand up for this community. Without your support, our entire neighbourhood will be completely demolished. All of the important businesses will move away and we will be left isolated, living in the middle of an uninhabitable area. No one wants to live in a train yard.

Thank you,

A solid black rectangular box used to redact the signature of the sender.

Hi [REDACTED]

Great to e-meet you. I recall in our previous conversations you mentioned an interest to stay updated on the project so I want to reach out to you directly.

The next Ontario Line virtual open house for East Harbour, Leslieville/Riverside, Gerrard is scheduled for June 24 at 6:30pm. Your neighbours and you can sign up for the virtual open house [here](#).

Have a good weekend,

Thanks in particular please include the additional email, because I want to be very clear that I'm not asking Metrolinx to invent a transportation planning process that is anti-racist.. they don't need to, because much thought has been given to these things, ie what I sent before:

This is a good article on being anti-racist in environmental and transportation planning:

<https://www.urban.org/urban-wire/how-transportation-planners-can-advance-racial-equity-and-environmental-justice>

In particular, you can see that a community like Thorncliffe, where this big decision is being made, is being involved on the back end of the decision! Boom: systemic racism. How could it not be? If Phil Verster is a genius, as Kathleen said?, he doesn't need to look very hard.

Thanks Sivahami.

This is what I said, would love to get Phil Verster's reflection, he said he would think about this... obviously my concern is about systemic racism in the selection process. Is Phil really thinking there is no systemic racism in the selection process? Be Anti-Racist in the selection process -- figure out what that would mean -- and go back to the drawing board.

Anyway, here are my comments that I look forward to a response to:

I'd like to talk about systemic racism in the selection process -- it's not just about pure hard facts, as Phil said, it's about which facts are used, as [REDACTED] said. At the last meeting CEO Phil Verster said race was not involved -- at a micro level, I believe that. But that's not what systemic racism is.

I want to bring attention to the recent report on the firing of two Black train dispatchers by Metrolinx because their Toronto Police Services police check came back negative (I'll post a cbc link in the chat) see here: <https://www.cbc.ca/news/canada/toronto/metrolinx-toronto-police-background-checks-1.6050296>). These fired employees raised a humanitarian complaint. I don't believe Metrolinx was *intentionally* racist in that case BUT one thing they realized was that their police check process was systemically racist, systemically disproportionately excluding Black people because Toronto Police Services disproportionately targets Black people. You know what Metrolinx did? Metrolinx changed their police check method.

We need this same kind of thinking with the train yard decision. Metrolinx has made a systemically racist decision with the train yard -- similarly with the anti-Black racism in the train dispatcher case, by in this case using a poor, systemically racist train yard selection process as [REDACTED] described. And like with the police check process, Metrolinx needs to go back to the drawing board and improve their process. A better process, an anti-racist process, would not select Thorncliffe for a train yard -- I 100% believe that.

This is the article on the systemic racism I mentioned and Metrolinx by CBC:
<https://www.cbc.ca/news/canada/toronto/metrolinx-toronto-police-background-checks-1.6050296>

Hi Sivahami,

I have heard a lot of community members mention the attached area but I haven't seen Metrolinx' response on it. See attached.

Black lines is [REDACTED] Green is [REDACTED], [REDACTED].

The Metrolinx Wicksteed description includes Canada Post lands, which doesn't make much sense.

Happy to have a time slot with Malcolm to discuss, it's a site I hear from quite a few people and would be good to get some feedback.

Good

Thank you for reaching out and sharing your feedback. We appreciate your suggestions for station entrance locations and development near the future Ontario Line station at King and Bathurst.

The King-Bathurst station will be located underground on a diagonal directly underneath the King Street West and Bathurst Street intersection. Unfortunately, the Portugal Square/St. Mary's Parish and 629 Adelaide Street West locations are too far north to construct station entrances. You find more details about the King-Bathurst station and view the map [here](#) on our website (click on the "King/Bathurst" heading and it will open up with the map and further details).

Infrastructure Ontario (IO) is leading a [transit-oriented communities](#) program for the Ontario Line, which includes any developments above and beyond constructing the transit line itself. IO has announced plans for two stations at Corktown and East Harbour to date and we look forward to sharing more information once announced by IO.

We have an upcoming public virtual open house for the Ontario Line's West Segment this Thursday, June 10 at 6:30 p.m., which includes Exhibition, King-Bathurst and Queen-Spadina stations if you are interested in attending. You can register [here](#) and submit questions ahead of time, or we will also have a Zoom Room set up during the event to ask questions live.

Please also consider [signing up for our newsletter](#) to stay updated on the Ontario Line. Thank you again for writing.

All the best

Subject: Potential Redevelopment Idea for Area around St. Mary's Parish
Message:
Hello,

I live at [REDACTED] and I would like to make a suggestion to redevelop the area around Portugal Square. The parking lot behind the church and the crescent that encircles St. Mary's Parish is an optimal site for the subway entrance. (see the following coordinates: 43.64462195593105, -79.40470155191561)

<https://www.google.com/maps/place/629+Adelaide+St+W,+Toronto,+ON+M6L+1A8/@43.6456881,-79.4061473,170a,35y,97.94h,44.97v/data=!3m1!1e3!4m5!3m4!1s0x882b34e0fa622ecf0x9ca8ec30708830f58m2!3d43.644660414d-79.4050188>

<https://www.google.com/maps/@43.6448279,-79.4048936,3a,75y,76.89h,90.21t/data=!3m1!1e1!3m4!1sbVNIvQJwY45pxfanSXl2QI2e0I7i163848i8192>

I do not have any connection to the church, but redeveloping the land to allow underground parking instead of a surface lot would add value by creating park land. The closed court is optimal for urbanized garden/park as it is restricted to high traffic flow. 629 Adelaide St W is also a site that would be optimal for development into a mixed use facility with restaurants, subway access etc...

Hello [REDACTED],

Great to e-meet you. My name is Daryl and I work with the Community Relations team at Metrolinx on the Ontario Line.

I saw your story on an east end community group page and wanted to see if you would be interested in connecting sometime this week. I want to introduce myself, hear more about your business, your concerns about the Ontario Line and answer questions with the latest information we have.

If you have some time this week, we can chat on Microsoft teams, a phone call or an in-person meeting outside with masks and social distancing. Do you have any availability this Wednesday?

Looking forward,

Hi [REDACTED]

Thank you for your email. You can look up your property [here](#) to see where it sits within the transit corridor lands, which are labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in blue.

The size of the transit corridor lands vary along the Ontario Line, and are not limited to the location of the station or tunnel. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and technical considerations that could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands. We want to make sure we’re accounting for future planning and construction decisions without impacting more people than we need to.

In essence, the transit corridor land designation means that if you are planning to build a building, structure, or road on or under your property, a (no cost) permit from Metrolinx may be required prior to any necessary municipal permits. The same applies to excavation and water drainage work. More information [here](#). The letter we sent does not necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. The language going on your title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please let us know if you have any further questions about transit corridor lands or the Ontario Line project, and consider signing up [here](#) for our e-newsletter, and registering [here](#) for our virtual open house for the Pape/Cosburn area, taking place on June 30.

Thanks,
Sivahami

Hi [REDACTED],

Thank you for your email. Daryl and I work together on the Ontario Line team, and I am the specialist for the Pape area.

I'm sorry that you did not receive a letter; you should have, and it may have been a mailing error. You can look up your address [here](#) to see where it sits within the transit corridor lands and buffer area, which are together labelled as the "Priority Transit Project (Planned Subways) Corridor Development Permit Zone" and shown in blue.

As Daryl may have mentioned, the size of the transit corridor lands vary along the Ontario Line corridor, and are not limited to the tunnel/track bed or station area. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and how the project is to be built. An additional 30-metre buffer area was then set around the transit corridor lands to allow for any other needs that could come up during further design and construction work. We want to make sure we're accounting for future planning and construction decisions without impacting more people than we need to.

Daryl may also have mentioned that Pape station is still in the early design stages, so we do not yet have information about station entrances and exits or construction staging areas. We do know that the station will be located on the northeast side of Pape & Danforth, which you can see in the preliminary map of the alignment [here](#). During construction, our goal is to minimize impacts to the roadway and surrounding community, and we will lay out our plans to limit noise, traffic, etc. in an Environmental Assessment Impact Report, which will be released in early 2022 for public review and feedback. More [here](#).

Please consider signing up for our e-newsletter [here](#), and also consider signing up [here](#) for our next virtual open house for this area, taking place on June 30.

Please let us know if you have any further questions.

Thanks,
Sivahami

Hi Darryl,

Nice speaking with you. As discussed, I currently live at [REDACTED] and did not receive the letters like my neighbours. Please add me to the circulation list and as well I have the following questions regarding Pape Station:

- 1) Are new entrances/exits being proposed, and if so, what specific locations are being considered?
- 2) What specific locations are being considered for construction staging areas?

Given we live across the street from Pape station and seeing what happened along Eglinton over the past 5 years, we would like more information.

Looking forward to hearing back from you,

[image002.png](#)

Hi [REDACTED]

Thank you for following up. Please accept our apology for the delay in responding. We have been receiving a high volume of correspondence, and we are making every effort to get back to residents as soon as possible.

Regarding construction timelines and detailed project plans, the Project Company (PCo) selected to build the project in this area will finalize the designs and construction methods based on our specifications, so we do not have further details at this time. We anticipate a PCo will be selected in 2024 for the Northern Civil, Stations and Tunnel procurement contract, which covers this area. The most up-to-date plans available for this area are available in the North Segment section [here](#) on our website.

Our upcoming full Environmental Impact Assessment Report (EIAR) will also detail anticipated impacts and mitigation measures for the construction and operation of the Ontario Line. We anticipate the draft EIAR will be released in early 2022, and it will be open for public review and comment. Feedback received on the draft EIAR will be factored into the final report. You can find more information about the EIAR and our environmental assessment process [here](#) on our website. We will also announce its release and any other project milestones or announcements in our [e-newsletter](#).

Please do not hesitate to reach out if you have further questions. Thank you again for writing.

Sincerely,

Caitlin

To Whom It May Concern.

I have repeatedly emailed questions and no one has had the respectful nature to even respond. What kind of Crown Corporation is Metrolinx? This is extremely important to me because Metrolinx will be on the deed....hello! How would you feel if someone had the legal opportunity to expropriate your property?

Pretend that you care and respond to the questions below in a timely, knowledgeable & articulate manner please.

Do you have a plan that you can share with me please?

When is the start date and end date of the project please?

Thank you.

Hi

Thank you for your email. You can look up your property [here](#) to see where it sits within the transit corridor lands, which are labelled as the "Priority Transit Project (Planned Subways)

Corridor Development Permit Zone” and shown in blue.

The size of the transit corridor lands vary along the Ontario Line, and are not limited to the location of the station or tunnel. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and technical considerations that could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands. We want to make sure we’re accounting for future planning and construction decisions without impacting more people than we need to.

In essence, the transit corridor land designation means that if you are planning to build a building, structure, or road on or under your property, a (no cost) permit from Metrolinx may be required prior to any necessary municipal permits. The same applies to excavation and water drainage work. More information [here](#). The letter we sent does not necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. The language going on your title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please let us know if you have any further questions about transit corridor lands or the Ontario Line project, and consider signing up [here](#) for our e-newsletter, and registering [here](#) for our virtual open house for the Pape area, taking place on June 30.

Thanks,
Sivahami

To Whom It May Concern,

I received a letter this morning from Metrolinx regarding the aforementioned Act.

I live on [REDACTED] and am very concerned with the language in this letter. If you can be so kind and provide me with more info regarding this project it would be greatly appreciated.

Regards.

To whom it may concern,

I received in the mail today a letter stating that my property [REDACTED] is located on or within 30m of transit corridor land.

My assumption is that the Ontario Line is supposed to go up Pape (?) and my property is 150m away from the centreline of Pape Avenue. How wide is the transit corridor?

I have looked through the website and I have not found a map determining the borders of the transit corridor. Could you please send me that information so that I understand how my property might be affected?

Thank you in advance for your help.

Kind regards,

[REDACTED]

Thank you for your reply. Yes, we do own property in the Leslieville area and it does indeed sit on the transit corridor lands. The notification envelope was confusing as it was addressed to “homeowner” which lead us to believe it related to our residential property in Mississauga.

Thank you for the clarification!

Good morning,

I am a homeowner on [REDACTED] and today I received a letter signed by Franca Di Giovanni regarding the above mentioned project. I have learned that my property is on or within 30 metres of transit corridor land. Please clarify this for me as I cannot honestly imagine what you are talking about. Are you building a subway through my property? This very vague letter provides me no actual detail of how my property is impacted. Please clarify.

Thank you,

[REDACTED]

Hello,

I received a letter dated June 3rd regarding notice that Metrolinx is making a note on the title of my property.

My home is located at [REDACTED] and is NOT WITHIN 30 METRES of the transit corridor as per the plans publicly shared on this project. I do not want Metrolinx to unnecessarily change the title of my property.

Please do not make these changes without my permission or consent.

Best regards,

[REDACTED]

Hi Franca,

Just received a notice stating that our property [REDACTED] is in a 30 meter buffer area around the transit corridor. Based on plans we've seen the corridor lies under Pape street and our house is 110 meters to Pape.

Could you please provide additional details outlining the measurements that create the 30 meter buffer that our property falls in.

Thank you,

Hi [REDACTED],

Thank you for your email. You're right that at Pape & Withrow, the tunnel will be underneath the Pape Avenue roadway. The size of the transit corridor lands vary along the Ontario Line, and are not limited to the location of the tunnel/track bed.

You can look up your property [here](#) to see where it sits within the transit corridor lands, which are labelled as the "Priority Transit Project (Planned Subways) Corridor Development Permit Zone" and shown in blue. The boundaries of the transit corridor lands were determined by technical teams at Metrolinx and the Ministry of Transportation who looked at the existing infrastructure, the route and design of the line, and technical considerations that could impact transit plans, e.g. utility relocations, road closures and traffic control, construction access, points of interactions with major road intersections, and tunnel boring activities. Those considerations are why the boundaries are wider than just the tunnel/tracks. Then, an additional 30-metre buffer was added to cover any possible contingencies. Together, the full width of the transit corridor lands ensure that we are accounting for future planning and construction decisions without impacting more people than we need to.

The transit corridor land designation means that if you are planning to build a building, structure, or road on or under your property, a (no cost) permit from Metrolinx may be required prior to any necessary municipal permits. The same applies to excavation and water drainage work. More information [here](#). The letter we sent does not necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. Good evening,

I received notice today that my house [REDACTED] is within 30 meters of transit corridor land for the upcoming construction of the Ontario Line.

Is there a publicly available online survey that demonstrates the buffer zone and that my home falls within it? It is ~50m from Pape Ave. by my measure.

Obviously this designation impacts my ability to build and may affect future land value, so I want to be sure I have been accurately designated within the buffer zone.

Best Regards,

[REDACTED]

Subject: RE: Transit Corridor as it relates to
Date: Tuesday, June 8, 2021 6:53:00 PM
Attachments: [Joint Corridor Transit Corridor Lands.PNG](#)
[image001.png](#)

Hello [REDACTED],

Thank you for writing to us.

The size of the transit corridor lands vary along the Ontario Line corridor, and are not limited to 30 metres from the existing the rail corridor where the Ontario Line will run. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and many technical considerations beyond that which could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands.

What this all means is if you are planning to build, change or place a building, other structure or road on or under your property, a (no cost) permit from Metrolinx may be required in addition to (and prior to) any necessary municipal permits. The same applies to excavation and water drainage work. The language going on your title is purely for informational purposes only similar to properties located in subdivisions or properties near an airport. You will still be able to sell, lease or rent your property.

This letter is not a letter of expropriation nor does it necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. You can look up your property [here](#) to see where it sits within the transit corridor lands and buffer area, which are together labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in **blue**. I attached a picture of the transit corridor lands around your home to make it easier to visualize.

We hope to answer more questions about this letter at our upcoming virtual open house on June 24 at 6:30pm. You can sign up for the virtual open house [here](#).

Happy to answer any additional questions and chat on the phone if that is more helpful,

Hello,

We live at [REDACTED] and received a letter today informing us that our house was located on, or within 30 metres of transit corridor land. By my rough measurements 30 metres from our house is where the playground equipment area starts in Degrassi Park. I calculate it is about 140 metres to the west side of Wardell before crossing it to go into Bruce Mackey Park.

Can you please advise the actual boundaries of the transit corridor and is the west side of it actually in Degrassi Park.? When I look at the latest map of the route in our area it appears the western boundary is still Bruce Mackey Park. Will await your response.

Thanks

I received a notice this week from Mertrrolinx indicating that my property is within 30 metres of transit corridor land. I live an extended distance from Pape ave - estimated to be at least 125 metres from Pape. I am confused - Please provide a map of the proposed line with the side streets named - with the corridor designated, and to scale so that I can see if this applies to me.

Thanks

[image001.png](#)

Hi ,

Thank you for your email. Absolutely, we'd be happy to have a call with you. Can you give us a number where we can reach you, and a window of time that would work?

In the meantime, you can look up your property [here](#) to see where it sits within the transit corridor lands, which are labelled as the "Priority Transit Project (Planned Subways) Corridor Development Permit Zone" and shown in blue.

The size of the transit corridor lands vary along the Ontario Line, and are not limited to the location of the tunnel/track bed. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and technical considerations that could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands. We want to make sure we're accounting for future planning and construction decisions without impacting more people than we need to.

In essence, the transit corridor land designation means that if you are planning to build a building, structure, or road on or under your property, a (no cost) permit from Metrolinx may be required prior to any necessary municipal permits. The same applies to excavation and water drainage work. More information [here](#). The letter we sent does not necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. The language going on your title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Happy to discuss any further questions on our call. Please also consider signing up [here](#) for our e-newsletter, and registering [here](#) for an upcoming virtual open house.

Thanks,
Sivahami

Hi Metrolinx, I've just received a letter informing that my property is within 30 of the transit corridor.

Would it be possible to have a call to better understand the specific implications of this for my property?

Thanks!

Hi Sivahami,

Thank you for the quick response!

I periodically get mail from City Hall – one a year, maybe-- addressed to a previous owner of my current home. From what you've said below, I suspect the Metrolinx letter was for them.

I'm very relieved my fence can go up with no further permits/surveys!

Again, thanks for your quick response.

Stay Safe,

Subject: RE: Notification Letter recently received on Transit Corridor.

Hi

Thank you for your email. Do you possibly own additional property in Toronto near the route of the [Ontario Line](#)? That is what the letter would have been about, not your home near Birchmount Rd.

You can look up your property [here](#) to see where it sits within the transit corridor lands, which are labelled as the "Priority Transit Project (Planned Subways) Corridor Development Permit Zone" and shown in blue.

If you do own property located in the transit corridor lands, the designation essentially means that if you are planning to build a building, structure, or road on or under your property, a (no cost) permit from Metrolinx may be required prior to any necessary municipal permits. The same applies to excavation and water drainage work. More information [here](#).

If you do not own any other properties, please let us know so that we can do some more digging to find out why you may have received the letter!

Thanks,
Sivahami

Good Afternoon,

I just received a letter informing me that my home is within 30 metres of a transit corridor.

I'm a bit surprised at this because we have a cemetery one street over on Birchmount, that stretches from Birchmount to Kennedy, and ravine lands directly to the south (our street dead-ends on the ravine), and Warden Subway to the west, (1.6 KM away). There's been no notification of any new transit development in the immediate area, apart from the Crosstown along Eglington Ave to the north of us (1.9 KM distance) and it looks like there may be some development at the Scarborough Go station at Midland and St. Clair Ave E (1.8 KM distance).

Can your office provide more info on the transit corridor that we're within 30 meters of?

Also, of concern, we've paid for a fence to be erected down the property line of the driveway between us and our neighbors. And also paid for the survey. We're just waiting for the contractor to give us a firm start date. Is our planned and paid for fencing, something that will need additional permits from Metrolinx? Please advise.

Yours,

[REDACTED]

H ,

I hope this message finds you well. I am writing to follow up on your question about whether your property at may be impacted.

Our property team confirmed what we discussed on the phone on Tuesday. Given how far your property is from the rail corridor where work on the Ontario Line will occur, it's highly unlikely your property will be impacted. If anything changes, Metrolinx will reach out to you directly to notify you and begin discussions, but as I noted, it's unlikely.

If you have any further questions, please do not hesitate to reach out.

Thank you,

Caitlin

Subject: Following up on call about the Ontario Line

Hi [REDACTED]

you very much for reaching out and taking the time to speak with me today. As we discussed, I have included links to a few resources below for more information:

- Map of Designated Transit Corridor Lands for the Ontario Line:
https://maps.metrolinx.com/Third_Party_Coordination_Permitting/
- Information about the Ontario Line in your area:
<https://www.metrolinxengage.com/en/content/ontario-line-neighbourhood-updates-east>
 - We have split the line up into four 'segments' and your area falls within the East Segment.

- To find more information about the station near your property, click the “Leslieville” heading at the link above, and it will open up with more information.

I will also try to find out more information from our teams about whether your property at [REDACTED] may be impacted. I will follow up with you as soon as I receive more information.

Please do not hesitate to reach out if you have any additional questions in the meantime.

Thanks again,

Caitlin

Hello

Thanks for your question!

As you may be aware, the Ontario Line will bring 15.6 kilometres of much-needed subway service to Toronto. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition Place in the southwest.

The Ontario Line station serving Corktown will be located to the east side of Berkeley Street between King Street East and Front Street East. You can find more details about Corktown station [here](#).

Starting as early as this September, [Corktown Station early works](#) will include the demolition of existing buildings (including the ones you have mentioned), removal of structures and asphalt, decommissioning of utilities and soil removal and/or remediation where required. These early works are being advanced to prepare the site for archaeological assessments and future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station. The demolition for Corktown Station early works is planned to begin as early as September and will be followed by environmental due diligence activities including archaeological assessments. The main contract work – tunneling/underground construction activities followed by Corktown Station construction - will start in approximately 2023.

I'll take this opportunity to let you know that we are hosting a Virtual Open House for the Downtown Segment of the Ontario Line, which includes Corktown station, next Thursday June 17th at 6:30pm. You can register for the event [here](#).

I hope this helps, and please don't hesitate to let me know if you have any other questions.

Subject: RE: Notice of being within transit corridor
Date: Tuesday, June 8, 2021 6:56:00 PM
Attachments: [Joint Corridor Transit Corridor Lands.PNG](#)

Hi [REDACTED]

Thank you for writing to us.

The size of the transit corridor lands vary along the Ontario Line corridor, and are not limited to 30 metres from the existing the rail corridor where the Ontario Line will run. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and many technical considerations beyond that which could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands.

What this all means is if you are planning to build, change or place a building, other structure or road on or under your property, a (no cost) permit from Metrolinx may be required in addition to (and prior to) any necessary municipal permits. The same applies to excavation and water drainage work. The language going on your title is purely for informational purposes only similar to properties located in subdivisions or properties near an airport. You will still be able to sell, lease or rent your property.

This letter is not a letter of expropriation nor does it necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. You can look up your property [here](#) to see where it sits within the transit corridor lands and buffer area, which are together labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in **blue**. I attached a picture of the transit corridor lands around your home to make it easier to visualize.

We hope to answer more questions about this letter at our upcoming virtual open house on June 24 at 6:30pm. You can sign up for the virtual open house [here](#).

Happy to answer any additional questions and chat on the phone if that is more helpful,

Daryl Gonsalves

Hi. Are there plans that show the 30 m buffer area. We received a notice and I don't see how our property would be in this zone based on what Metrolinx shared on their plans. This notice on a land registry is very serious and I'm wanting to understand the accuracy as I believe this is an error. We are across the road from the tracks and there is a parke and a large home across the road.

I received the notice identifying my property as being in the 30 meter buffer zone for the Ontario Line.

Is it possible to obtain information about how that is configured/mapped out?

Our home is [REDACTED]. Being included in this 'zone' makes no sense to me. Can you provide more context please.

Also, if being in this 'zone' negatively impacts the value of my property, what compensation can I expect from the province?

Hello

Surveying work will be continuing on Thursday, June 10th on public roadways along the rail corridor between Eastern Avenue and Gerrard Avenue, and anticipated to be completed on the same day in order to support the Ontario Line project design. See attached for our notice.

A one or two-person crew will use monitoring and measuring equipment to locate utilities in the field and apply paint markings on the ground to note physical location of underground utilities. A second crew uses surveying equipment to take measurements of the utility locations. All work will be carried out within public roadways. Further details can be found in the notice.

This notice is being emailed to Elected Officials and community groups. It will also be carried by field crew carrying out the work, and be available on our website.

Please let us know if you have any questions.

Hi

It was a pleasure talking with you on the phone.

Here are the links I mentioned

- [Maps of the tunnel \(alignment\) along Pape](#)
- [Interactive map of the transit corridor lands](#)
- [Virtual open house on June 30](#)

See below for a cross-section of the Pape station interchange. You were right, 30m refers to the bottom of the tunnel, not the top. The top will be about 25m below street level. Again, for context, most basements + foundations are together about 6m below street level. This image is from the presentation we gave at our last virtual open house for this area, which can be found [here](#).

Please let us know if you have any further questions!

Thanks

Hello,

I am one of the owners at [REDACTED] in Toronto.

We've received notice from your company that our property extends to within 30 metres of transit corridor lands. Can you please provide a map of the corridor and the method by which you have calculated this distance? this appears to be an erroneous designation by any contortion of geometry.

[REDACTED]

Hi [REDACTED]

Thank you for your email. You can see the latest plans for the Ontario Line route [here](#) (click “Gerrard” for the zoomed-in map showing First Avenue).

The size of the transit corridor lands vary along the Ontario Line, and are not limited to the location of the tracks/route. You can look up your property [here](#) to see where it sits within the transit corridor lands, which are labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in blue.

The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and technical considerations that could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands. We want to make sure we’re accounting for future planning and construction decisions without impacting more people than we need to.

In essence, the transit corridor land designation means that if you are planning to build a building, structure, or road on or under your property, a (no cost) permit from Metrolinx may be required prior to any necessary municipal permits. The same applies to excavation and water drainage work. More information [here](#).

The letter we sent does not necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. The language going on your title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please let us know if you have any further questions about transit corridor lands or the Ontario Line project, and consider signing up [here](#) for our e-newsletter, and registering [here](#) for our virtual open house for the East segment of the line, taking place on June 24.

Thanks,
Sivahami

Hi,

My name is [REDACTED] and I am the owner of [REDACTED]. I recently received a letter dated June 3, 2021 from Metrolinx advising that my property is located "on, or within 30 metres of, transit corridor land".

Please provide me with all information relied upon by Metrolinx to come to this conclusion, including the border for the "transit corridor lands" that are being used to determine if a property is within 30 metres of the "transit corridor lands".

Metrolinx's letter suggests that it knows what lands may be used for the route and construction of the proposed line. To my knowledge, this information has not been shared with affected property owners, like myself. As you have identified my property as one that will be affected, I would ask that Metrolinx immediately disclose what lands will be used for the route and construction of the proposed line.

I would ask that Metrolinx cease and desist from taking any further steps to place any form of notice on the title of my property until this information has been provided and I have had a chance to review it.

Regards,

[REDACTED]

Well I like to think there is still hope that the line will go underground.
You are not an essential service despite what the province likes to think. There is nothing essential about this right now.
Your letter does not give us anything useful except stress and worry. The final plans are not in place as far as we have been told and telling residents such is misleading. We will fight for our homes, our trees, our peace.
Metrolinx is not welcome in our neighbourhood at this time. There is not a single resident in the neighbourhood I have spoken with that is for this project in the way metrolinx proposes.

On Tue, Jun 8, 2021 at 7:12 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi

Thank you for taking the time to write to us. I do understand this time is stressful for everyone. The letter was required as we wanted to inform residents as soon as possible and open the lines of communication.

That was me at the community office today as we are considered an essential service. Part of my responsibility is to notify residents of upcoming geotechnical work related to the Ontario Line and that was what I was doing today. When restrictions lift, I hope to have in-person conversations with residents on Saulter Street.

I am happy to clarify what the letter means for you. If you are planning to build, change or place a building, other structure or road on or under your property, a (no cost) permit from Metrolinx may be required in addition to (and prior to) any necessary municipal permits. The same applies to excavation and water drainage work. I received a letter from Franca Di Giovanni today regarding the location of our family home being within 30m of the transit corridor.

I am absolutely appalled by your lack of tact, disregard for us and our neighbors, and blatant ignorance.

As you know, Toronto remains under a 'stay-at-home' order. Our children are not in school, families are stressed trying to work at home and take care of their kids. Or worse, they are losing their business or can't work in their trade. The mental health of kids is not great - meaning parents are ultra taxed. And it is at this time, you have the audacity to send us a letter stating you might need access to our properties to build an above ground transit system that is going to result in demolishing our homes, cutting down our trees, forcing us to live through years of construction if our homes do remain and then when it's done, we will have

to listen to trains going by every minute!

Do you not think this is despicable! Are you not ashamed of yourself?

How about I tell you, without any actual permits, approval, public awareness of the real plan, that we're going to maybe force you out of your home, or just your neighbours and then take over some of your property, you'll listen to construction for years and then constant trains? Sound ideal? Or even reasonable?

We're not talking about affecting one or two people. We're talking hundreds! In the middle of a beautiful downtown neighbourhood with multi-million dollar homes!

The rail can be built underground and there is a good plan for it.

Don't send us letters like this ever again! Open your office on Queen - oh wait, there's a stay-at-home order in place! You can't. I did however see someone accepting packages today - why are they in office by the way? you are NOT an essential service!! Perhaps you should go door to door and hear what the community has to say? When it is safe to do so of course. I wouldn't want to treat any of you at the hospital.

All I can say at this point is that you clearly have no idea what you are doing. You don't have a proper plan. You are placing fear in the people along the rail in the middle of a global pandemic. You have the ability to build this underground, to wait until the pandemic is over, to have respect for the people who live here. So have a session with your bosses and tell them that this isn't going to work. The letter sent should get Franca fired for outright heartlessness and having the result of the community hating this project more than we already do.

Saulter Street resident

Hello

Thank you for writing to us.

The size of the transit corridor lands vary along the Ontario Line corridor, and are not limited to 30 metres from the existing the rail corridor where the Ontario Line will run. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and many technical considerations beyond that which could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands. This is why your home on Booth/Colgate falls within these lands despite being 100m away from the rail corridor where the Ontario Line will run.

What this all means is if you are planning to build, change or place a building, other structure or road on or under your property, a (no cost) permit from Metrolinx may be required in addition to (and prior to) any necessary municipal permits. The same applies to excavation and water drainage work. The language going on your title is purely for informational purposes only similar to properties located in subdivisions or properties near an airport. You will still be able to sell, lease or rent your property.

This letter is not a letter of expropriation nor does it necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. You can look up your property [here](#) to see where it sits within the transit corridor lands and buffer area, which are together labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in **blue**. I attached a picture of the transit corridor lands around your home to make it easier to visualize.

We hope to answer more questions about this letter at our upcoming virtual open house on June 24 at 6:30pm. You can sign up for the virtual open house [here](#).

Good morning Franca.

We received a letter from Metrolinx yesterday informing us that our property falls within 30m of the proposed transit corridor land.

Curious if the measurement is taken from Booth Avenue sidewalk/roadway as our house is 100m away from the tracks.

Can you please provide an explanation on this assessment/calculation?

Hi [REDACTED]

It was a pleasure to talk to you. Let me recap the info I provided.

The size of the transit corridor lands vary along the Ontario Line corridor, and are not limited to 30 metres from the existing the rail corridor where the Ontario Line will run. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and many technical considerations beyond that which could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands. This is why your home on Tiverton falls within these lands despite being a distance from the rail corridor where the Ontario Line will run.

What this all means is if you are planning to build, change or place a building, other structure or road on or under your property, a (no cost) permit from Metrolinx may be required in addition to (and prior to) any necessary municipal permits. The same applies to excavation and water drainage work. The language going on your title is purely for informational purposes only similar to properties located in subdivisions or properties near an airport. You will still be able to sell, lease or rent your property.

This letter is not a letter of expropriation nor does it necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. You can look up your property [here](#) to see where it sits within the transit corridor lands and buffer area, which are together labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and **shown in blue.**

We also have upcoming virtual open houses and the one for Tiverton residents is scheduled for June 24. You can sign up [here](#).

Feel free to reach out if you have more questions and I look forward to keeping Alex in the loop,

Attachments: [image001.png](#)

Hi [REDACTED]

It was nice speaking with you on the phone. Here are the links I mentioned:

- Information about the transit corridor land designation can be found at metrolinx.com/permits
- The interactive map is partway down the page; [here is the direct link](#)
- You can register for the virtual open house on June 30 [here](#)

To repeat or clarify what we discussed on the phone, the boundaries of the transit corridor lands were determined by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure, the route and design of the line, and technical considerations that could impact transit plans, e.g. utility relocations, road closures and traffic control, construction access, points of interactions with major road intersections, and tunnel boring activities. Those considerations are why the boundaries are wider than just the track corridor. Then, an additional 30-metre buffer was added to cover any possible contingencies. Together, the full width of the transit corridor lands ensure that we are accounting for future planning and construction decisions without impacting more people than we need to.

The intention of the transit corridor land designation is to prevent conflicts during construction. So until 2030, you may need to get a (no cost) permit to build a building, structure, or road on or under your property, prior to getting any necessary municipal permits. The same applies to excavation and water drainage work. The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies to you. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete. It doesn't prevent you from selling or renting the property during the project.

Please let us know if you have any further questions.

Thanks,
Sivahami

Further to our previous communications, we have received your letter dated January 28, 2022 in reference to a protection zone to be established underground in an area within our property by means of an easement placed on the title to the property. This is clearly over and above the temoorsry buffer zone transit corridor notice on our title during the construction of the Ontario line and will remain as a permanent limitation on our rights to the use and enjoyment of our private property.

Your letter provides very little by way of explanation as to the necessity, impact area, process of the work involved, our ability to enjoy the use of our property during construction, the type of compensation and the methodology used for your use of our property, our ability to enjoy the use of our property in the future, and the injurious impact on the value of the property at present and in the future.

Your letter on page 2 states, in the paragraph under the heading Next Steps and Contact Information, that you would like to share more information. We request a report in writing outlining the more specific information as indicated in your letter.

Thank you for your kind attention.

Sincerely

[REDACTED]

Hello Sivahami

Thank you for your reply.

Has Metrolinx carried out a study including but not limited to the impact of the restrictive covenants on properties and the construction activities along the corridor on market valuations in the affected area? If so can you please provide a copy.

I also request the following information:

1. Detailed evidence based analysis for the justification for the width of the corridor.
2. Detailed reports on the investigative drilling work and environmental sampling on Minton Place and Hopedale which as per your community notice dated May 5, 2021, started on May 10, 2021.
3. Drilling and environmental sampling report as they relate to the construction of the portal on Minton Place and Hopedale Avenue.
4. Detailed report on the geotechnical and slope stability investigation for the sketch found on page 14 of the Powerpoint presentation.
5. Any report including but not limited to investigations into services and utility interruptions and road closures or limitations in the staging area for the construction of the portal as it pertains to Minton Place and Hopedale Avenue.
6. Any report or study including but not limited to studies on the feasibility of using the existing Leaside Bridge for the purpose of the Ontario Line crossing the Don Valley.

Thank you in advance,

Sincerely

Hi [REDACTED]

Thanks again for our call, and for your questions. I'm dividing the email below into two sections, about the transit corridor lands and about the portal construction.

TRANSIT CORRIDOR LANDS

See attached for a screenshot of the transit corridor lands (in blue) near your home. The screenshot is taken from [this interactive map](#). You can remove extra layers like the green layer

from the map by clicking on the "layers" icon on the top right corner (it looks like this: ) and unchecking all the layers except the one called "Priority Transit Project (Planned Subways) Corridor Development Zone."

As we discussed, the transit corridor lands were identified and designated by an Order-In-Council, and we sent letters to the properties as soon as possible after the Order-In-Council in order to ensure that property owners had as much information as possible, as early as possible. The boundaries of the transit corridor lands were determined by technical teams at Metrolinx and the Ministry of Transportation who looked at the existing infrastructure, the route and design of the line, and technical considerations that could impact transit plans, e.g. utility relocations, road closures and traffic control, construction access, points of interactions with major road intersections, and tunnel boring activities. Those considerations are why the boundaries are wider than just the track corridor. Then, an additional 30-metre buffer was added to cover any possible contingencies. Together, the full width of the transit corridor lands ensure that we are accounting for future planning and construction decisions without impacting more people than we need to.

The intention of the transit corridor land designation is to prevent conflicts during construction. So until 2030, residents within the transit corridor lands may need to get a (no cost) permit to build a building, structure, or road on or under their property, prior to getting any necessary municipal permits. The same applies to excavation and water drainage work. More information [here](#). The letter we sent does not necessarily mean that we need to access or acquire any residents' property in the future – you would receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

PORTAL CONSTRUCTION

The slides from the April 19 virtual open house are available [here](#). Slide 14 shows the elevation of the Don Valley Parkway compared to the elevation of the top of the valley, i.e. the Minton Place road surface. I will follow up with you as soon as we have the updated drawings of the portal from above and as a cross-section. We are also working on an elevation map of the bridge across the Don Valley. Both are in design stages now as we slightly adjusted the alignment of the Ontario Line in Thorncliffe Park for both technical reasons and in response to community input.

We will share more about the adjusted alignment and answer questions about transit corridor lands at the next virtual open house on June 30, which is open for registration [here](#). Please let me know if you have any other questions. Hope we can stay in touch.

Thanks,
Sivahami

Date: Wednesday, June 9, 2021 11:43:00 AM
Attachments: [image001.png](#)

Hi [REDACTED]

Thank you for taking the time to reach out to us. It was a pleasure speaking with you today.

As discussed, Metrolinx is hosting a series of virtual open houses for the Ontario Line. Each open house will include a presentation on the transit corridor lands and a Q&A period. You can register [here](#) and submit questions for the session on June 30 at 6:30 p.m. There are other open house dates available as well for other areas across the project, which you can see [here](#). Each open house will be recorded and posted on the respective registration page to watch later if you cannot attend live.

You can also look up your property [here](#) to see where it sits within the transit corridor lands, which are labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in blue. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and technical considerations that could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands. We want to make sure we’re accounting for future planning and construction decisions without impacting more people than we need to.

In essence, the transit corridor land designation means that if you are planning to build a building, structure, or road on or under your property, a (no cost) permit from Metrolinx may be required prior to any necessary municipal permits. The same applies to excavation and water drainage work. More information [here](#). The letter we sent does not necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. The language going on your title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please let us know if you have any further questions about transit corridor lands or the Ontario Line project, and consider signing up [here](#) for our e-newsletter.

Thanks again,

Caitlin

Hi

Thanks for following up. We have followed up with our project team and can share that the graphical representation of the boundary in the interactive map may not be entirely accurate due to the technical limitations of the mapping app.

Letters were sent to addresses based on Property Identification Numbers (PINs), which was a much more accurate process, and your property's PIN was confirmed to be in our database of properties located within the transit corridor lands + 30 metre buffer. This means that the transit corridor land designation does apply to your property during construction of the Ontario Line.

We wanted to note that adding language to a title is a common practice, alongside notices on title regarding [easements or rights-of-way](#), etc. The language on the title is not intended to prevent anyone from initiating renovations or expansions on their home; we are just asking owners to reach out to us prior to getting any necessary municipal permits so that we can coordinate their plans with Ontario Line plans. The information we require is largely the same as what the City of Toronto permitting process requires, and there is no cost.

Thanks again for writing. Please do not hesitate to reach out if you have any further questions.

Sincerely,

Caitlin

Date: Thursday, June 10, 2021 3:13:00 PM
Attachments: [image001.png](#)

Hi [REDACTED],

I hope this message finds you well. Thank you for reaching out and taking the time to speak with me yesterday.

We have just released the locations of the station entrance buildings for the Ontario Line at Exhibition, King-Bathurst and Queen-Spadina stations. You can see the updated maps [here](#) on our website and read more about the locations [here](#) on our blog. As you will see, based on our current design concepts, the building at [REDACTED] Queen Street West is not required for an entrance building at this station.

I sincerely apologize, as I am not sure I mentioned that we are hosting an information and Q&A session tonight for the Ontario Line's West Segment at 6:30 p.m. The presentation will include the maps and details about the station entrance building locations. You can register and submit your question(s) ahead of time [here](#), or you can also join us via a Zoom room to ask questions live. Once you register, the confirmation email will include the link to the Zoom room. If you cannot attend, we will record the session and post it on the registration page to watch later.

Regarding the information you received from the property owner about a letter from Metrolinx for 390 Queen Street West, would you be able to provide any further details? If we have a sense of the content or subject of the letter, we can try to provide some additional context.

Please do not hesitate to reach out if you have any questions.

Thank you,

Caitlin

From: [Ontario Line](#)
Subject: RE: [REDACTED] Add on 2 BDR in 5-7 yrs.
Date: Thursday, June 10, 2021 11:00:00 AM

Hi [REDACTED]

Thank you for your email, I'm so glad it was helpful. The Ontario Line tunnel will go underneath the Pape Avenue roadway. The tunnel will be 20-30 metres deep in this area, much deeper than the infrastructure under the roadway (which is usually 2 metres deep).

So your home is not close to the tunnel area. As we discussed on the phone, the reason that your home is in the transit corridor lands is that we want to be aware of any potential conflicts with construction of the Ontario Line, including road access, utility impacts, etc. even though your home is not close to the tunnel itself.

Once you and your grandson have plans for the structure you want to build, please contact development.coordinator@metrolinx.com. Please include property information as well as a description of your work or site plan, or any architectural drawings (if available) in your initial email. A representative will be in touch to guide you through the Metrolinx review process. After the Metrolinx process is complete, you will need to apply for separate permits with the City of Toronto.

Please let me know if you have any other questions about the Ontario Line.

Thanks,
Sivahami

Hello Sivahami !

Thank you so much for the map with our house location !!

So the transit line goes west of Pape Ave to avoid all the infra structure under Pape Ave..

Our house is closer to the western edge of the corridor. How far do you estimate from the transit line ?

We have the goal of adding an average size two bedroom at the back to the house for another grandson [REDACTED]

The lot is deep, 160 feet .

This may be in 5 to 7 yrs from now!
Please guide me how to apply for the permit with you and the city.

Thank you very much !!

Sincerely

Sent: Thursday, June 10, 2021 12:22
Subject: RE: Connecting about the Ontario Line

Hi

Thanks for emailing – I'm glad it finally worked!

You're right that the tunnel along Pape will run underneath the roadway, except at Pape and Cosburn where the stations will be, and near Gerrard where the tracks will connect to the rail corridor via a tunnel portal. However, the size of the transit corridor lands vary along the Ontario Line, and are not limited to the location of the tracks.

You can look up your property [here](#) to see where it sits within the transit corridor lands, which are labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in blue. The boundaries of the transit corridor lands were determined by technical teams at Metrolinx and the Ministry of Transportation who looked at the existing infrastructure, the route and design of the line, and technical considerations that could impact transit plans, e.g. utility relocations, road closures and traffic control, construction access, etc. Those considerations are why the boundaries are wider than just the tracks. Then, an additional 30-metre buffer was added to cover any possible contingencies. Together, the full width of the transit corridor lands ensure that we are accounting for future planning and construction decisions without impacting more people than we need to.

The transit corridor land designation is intended to help avoid construction conflicts with the Ontario Line. It is not intended to prevent renovations from taking place, just to coordinate your plans with Ontario Line plans. So until 2030, you may need to get a (no cost) permit to build a building, structure, or road on or under your property, or do excavation or water drainage work, prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. More details [here](#) and [here](#). The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete. It doesn’t prevent you from selling, leasing, or renting your property during the project.

Please let me know if you have any further questions about transit corridor lands or the Ontario Line project, and consider signing up [here](#) for our e-newsletter, and registering [here](#) for our virtual open house for the north segment of the Ontario Line, taking place on June 30.

Thanks,

Sivahami

Hi,

Thanks so much for writing -- I appreciate the extra effort. Here's the text of my original E-Mail:

Yesterday I received a letter from your organization with the Subject line RE: Ontario Line and Transit Corridor Land Designation under the Building Transit Faster Act 2020. This letter explained that because my property was within 30 meters of the transit corridor land for the Ontario Line, there might be an impact to my property.

I'm trying to understand how my property (about half a block away from Pape Ave) is within 30m of the corridor. Google Maps shows that I'm about 190m from Pape, so either the corridor has moved East, or the corridor is really, really wide.

The maps I am able to find show the two buried lines will be on the West side of Pape, so I'm curious to learn more about this corridor.

Thanks,

[REDACTED]

Hi [REDACTED]

Absolutely, happy to provide more information about the transit corridor lands designation.

You can look up your property on the map [here](#) to see where it sits within the transit corridor lands, which are labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in blue. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and technical considerations that could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands, which is the 30-metres the letter referred to. My apologies the language in the letter was not the clearest. The reason an additional 30-metre buffer was applied to the designated transit corridor lands is to account for future planning and construction decisions without impacting more people than we need to.

In essence, the transit corridor land designation means that if you are planning to build a building, structure, or road on or under your property, a (no cost) permit from Metrolinx may be required prior to any necessary municipal permits. The same applies to excavation and water drainage work. You can find more information [here](#). The letter we sent does not necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. The language going on your title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please do not hesitate to reach out if you have any further questions.

All the best,

Caitlin

Thanks Caitlin.

I also have another question about the letter we received because we are in 30 metres of the transit corridor. Our house is in fact more than 80 metres from the current fence line of the existing rail. Are you able to provide me with a map of measurements of the existing rail corridor for the proposed above ground portion between Dundas and Gerrard? It doesn't seem right to me that our property title is going to be flagged. I want to see proof that we are in fact within 30 meters of the rail corridor. Please provide confirmation of this.

Thanks,

Hi

Thank you very much for taking the time to reach out yesterday morning. It was a pleasure speaking with you.

Please accept my apology, as I forgot to mention that we are hosting a virtual open house for the project in your area on Thursday, June 24 at 6:30 p.m. The open house will include a presentation on the transit corridor lands and a Q&A period. You can register [here](#) and submit questions. The open house will be recorded and posted on the registration page to watch later if you cannot attend live.

Regarding the Ray McCleary Towers, I can confirm that we do not anticipate requiring the building for the Ontario Line. We are also looking at ways to mitigate noise and vibration and staging requirements for any work taking place in this area. We will outline the details about proposed mitigations in the Early Works Report for the Lakeshore East Joint Corridor, which is on track to be released this September. We are looking to advance the noise and vibration studies earlier because we know the community wants to see them. In addition, there will be a consultation with the community to determine the best retaining/noise wall design that fits within the fabric of the neighbourhood it will serve.

As discussed, you may wish to consider [signing up for our e-newsletter](#). Once the draft Early Works Report for the Lakeshore East Joint Corridor is released, we will send out the notice to our e-newsletter distribution list. Please let us know if you have any further questions.

Thanks again,

Caitlin

Subject: Follow-up - Ontario Line

Hi [REDACTED]

It was a pleasure to talk to you on the phone – something we enjoy as well. Just recapping the information we talked about:

The size of the transit corridor lands vary along the Ontario Line corridor, and are not limited to 30 metres from the existing the rail corridor where the Ontario Line will run. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and many technical considerations beyond that which could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands. This is why your home on Dingwall falls within these lands despite being a certain distance from Pape Avenue where the Ontario Line will run.

What this all means is if you are planning to build, change or place a building, other structure or road on or under your property, a (no cost) permit from Metrolinx may be required in addition to (and prior to) any necessary municipal permits. The same applies to excavation and water drainage work. The language going on your title is purely for informational purposes only similar to properties located in subdivisions or properties near an airport. You will still be able to sell, lease or rent your property. It will be removed once the Ontario Line opens.

This letter is not a letter of expropriation nor does it necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. You can look up your property [here](#) to see where it sits within the transit corridor lands and buffer area, which are together labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and **shown in blue**. I attached a picture of this area so you have context:

On 10/06/2021 12:15 p.m., Ontario Line wrote:

Hi [REDACTED]

Thanks again for calling.

As we discussed, the transit corridor land designation is not intended to prevent renovation or expansion projects from taking place, just to coordinate resident plans with Ontario Line plans. So until 2030, property owners within the transit corridor lands may need to get a (no cost) permit to build a building, structure, or road on or under their property, or do excavation or water drainage work, prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. More details [here](#) and [here](#). The transit corridor designation does not necessarily mean that we need to access or acquire the property in the future – property owners will receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete. It doesn't prevent property owners from selling, leasing, or renting their property during the project.

If your clients have questions about the boundaries of the transit corridor lands, the mapping application [here](#) shows them as the "Priority Transit Project (Planned

Subways) Corridor Development Permit Zone” in blue. The boundaries were determined by technical teams at Metrolinx and the Ministry of Transportation who looked at the existing infrastructure, the route and design of the line, and technical considerations that could impact transit plans, e.g. utility relocations, road closures and traffic control, construction access, etc. Those considerations are why the boundaries are wider than just the tracks. Then, an additional 30-metre buffer was added to cover any possible contingencies. Together, the full width of the transit corridor lands ensure that we are accounting for future planning and construction decisions without impacting more people than we need to.

Please let us know if you or your clients have any further questions. We are also holding a series of virtual open houses this month to answer questions about transit corridor lands and other Ontario Line topics. Dates and registration details [here](#).

Hi [REDACTED]

Thank you for attending the Ontario Line West Segment open house last week and reaching out to us. Please accept our apology for the delay in responding.

We anticipate the tunnel depth in this area of the line will be approximately 30-40 metres deep. We know condominiums and other buildings with deep parking garages are prevalent in the city's downtown core, which one of the reasons we are tunnelling the line so deep through this area.

To find out more information and whether there are any possible interferences between Ontario Line project plans and proposed future developments, please visit [Metrolinx.com/Permits](https://metrolinx.com/Permits) or email development.coordinator@metrolinx.com.

Thank you again for writing. Please do not hesitate to reach out if you have any further questions and consider [signing up for our newsletter](#) to stay updated on the Ontario Line.

All the best,

Caitlin

Hi,

I was on the live meeting yesterday regarding the West Segment of the Ontario Line. I noticed that the line runs through the Portland/Adelaide area. Our company owns buildings in that area and wondering how it will affect us in the future? I understand the tunnel is way below ground.

However, if we were planning on building condos later on, how will that affect us? As well, how deep will this tunnel be?

Thank you.

Hi

Thank you for your email, and sorry for the delay getting back to you.

If you live near Pape station, the meeting most applicable to you would be the North meeting [on June 30](#), which will cover the whole area from Pape to Science Centre. The southernmost boundary of the North segment is around Pape & Riverdale. The east segment focuses on the rail corridor southwest of that.

In April, we divided the North area into two meetings, with Pape station to the Don Valley [on April 19](#), preceded by the area north of the Don Valley on April 15, but we are putting the two areas back together for the June 30 meeting.

Hope that helps! Please let me know if you have any further questions, and consider signing up for our e-newsletter [here](#).

Thanks,
Sivahami

Hi [REDACTED]

Thank you for following up. Please accept our apology for the delay in getting back to you.

The tunnel will be about 20-30-metres deep underneath Pape Avenue as it passes your street, and it will be constructed using tunnel borers deep underground. We expect that the significant depth of the tunnel will reduce impacts to homes, and we will also conduct checks of foundations along the line beforehand.

The Project Company (PCo) selected to build the project in this area will determine what equipment is needed, so we do not have further details about the technology at this time. We anticipate a PCo will be selected in 2024 for the Northern Civil, Stations and Tunnel procurement contract, which covers this area.

Our upcoming full Environmental Impact Assessment Report (EIAR) will also detail anticipated impacts and mitigation measures for the construction and operation of the Ontario Line. We anticipate the draft EIAR will be released in early 2022, and it will be open for public review and comment. Feedback received on the draft EIAR will be factored into the final report. You can find more information about the EIAR and our environmental assessment process [here](#) on our website. We will also announce its release and any other project milestones or announcements in our [e-newsletter](#).

Please do not hesitate to reach out if you have further questions.

Thank you,

Caitlin

Hi Vanessa,

Thanks for the additional information; it is helpful. Do you know how deep the subway tunnel will be, or will that be determined after the environmental assessment, etc.? And will they be using new tunneling technology (developed, I believe, by Elon Musk) that speeds up and minimizes disruption? Needless to say, my neighbours and I are worried that the subway line will create both noise and vibrations, and there are many old homes on the street (mine was built in 1908) with foundations that may be adversely affected. If that happens, who is responsible for the cost of repairs?

Sincerely,

[REDACTED]

Hi

Thank you for your email, and sorry for the delay responding to you.

The size of the transit corridor lands vary along the Ontario Line, and are not limited to the location of the tracks. You can look up your property [here](#) to see where it sits within the transit corridor lands, which are labelled as the “Transit Corridor Lands + 30-metre buffer area” and shown in blue. Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. More information [here](#).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. More details [here](#) and [here](#). The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of

the Ontario Line is complete.

In terms of construction for the Ontario Line in the Riverside/Leslieville neighbourhood, it's anticipated to begin in 2022 after the environmental assessment process and all reports are complete. We will lay out our plans to limit noise, vibration, etc. in a forthcoming Environmental Assessment Impact Report, which will be released in early 2022 for public review and feedback. More [here](#).

Please let us know if you have any further questions, and consider signing up [here](#) for our e-newsletter, and registering [here](#) for one of our upcoming virtual open houses to learn more about transit corridor lands and the Ontario Line project.

Very best,
Vanessa

Dear Ms. Di Giovanni,

This week I received your letter, informing me that my property at [REDACTED] in Riverdale is located on, or within, 30 metres of transit corridor land for the Ontario Line project. This notification was both a surprise and a concern, as it contained no information whatsoever about where, precisely, this line will run nor where, precisely, the tunneling in my neighbourhood will take place. So I'm none the wiser as to how, exactly, will my property be impacted.

It is my understanding that the environmental assessment has not been completed; so when is this project slated to begin and what is the timeline for its completion?

In short, your letter raised more questions than provided answers.

Kindly provide me with a detailed map of where I sit on this transit corridor and where this work will physically happen. Frankly, this should have accompanied your letter, along with a timeline.

Sincerely,

[REDACTED]

Hi [REDACTED],

Following up on my email below.

1. Please review the presentation we provided at our open house on June 24. Slide 11 provides exact measurements of our impacts and the net increase in green space we will give back to the community. No park will be smaller after the Ontario Line is complete.

2. Please see above table in the presentation (Slide 11). In addition, [please see here](#) for detailed drawings of current Ontario Line plans.
3. We are currently working with the City of Toronto to look at the existing parks and see if we can refurbish existing amenities or add new ones. We will also consult with the community on what the noise/retaining walls will look like and how that space can bring value to the community.
4. Gerrard Dog park will need to close due to Ontario Line and GO Expansion construction. We are working with the City to explore alternative green space that can be used to hold programming in the interim.
5. Regarding noise and vibration, please refer to my answer provided below.

Feel free to reach out should you have any further questions,

Subject: RE: Facts and Fiction - follow-up

Hi

Apologies for the delay in responding. I appreciate you writing to us and starting a conversation.

I am gathering some more information to share with you. In the meantime, here are some initial comments:

1. Due to progress with design, we are currently developing a graphic to share with the community in the [upcoming June 24 open house](#) regarding the Ontario Line and the neighbourhood parks. It will detail where we expect to grow by a small margin beyond our property line (only near the new stations to accommodate the station platform). If you can't make it, let me know and I will ensure you receive this graphic.
2. See answer above. We will have more to say on this specific point at the virtual open house this Thursday.
3. We are looking at a variety of options that we hope to present to the community shortly after we have completed discussions with City of Toronto staff on feasibility and their requirements. Some examples include: noise walls and additional vegetation such as embankments, vertical walls, tree planting (see link [here](#), slides 20 to 23). This summer, we will hold consultations with the community to see which feasible options they want to see implemented for the noise/retaining walls.
4. All community spaces are important. I bike through Riverside and Leslieville quite often and see the value these spaces have. We are working hard to think of creative solutions to avoid impacts and mitigate where it is possible. Right now, we are determining the impact at Gerrard Carlaw dog park due to the station at Gerrard and will have more to share in the upcoming June 24 open house. Again, if you can't make it, I will ensure you receive this information. Under current design, careful planning has ensured Bruce Mackey Park, Jimmie Simpson Park and Recreation Centre will be open to the public during construction and beyond the Ontario Line and GO Expansion.
5. The statement was made due to preliminary analysis from the ongoing noise study. In the current situation, there is no mitigation. Ontario Line plans have committed to continuous noise walls to protect the community from the sights and sounds of all railway traffic (see this [link](#) and attached image). Once it has been completed, and the findings have been verified, we will release it to the public. The environmental report for this area is due to release this fall (currently on track for September). The study will assess not only the increase in trains from the Ontario Line but also GO Expansion as well.

If it helps, I am happy to also have a telephone conversation for the week of June 28 so we can continue the discussion.

Hi. I received your Facts and Fiction handout earlier this month, and I have a few requests for clarity:

1. Myth / Reality #1 - if the rail corridor extending "far into neighbouring properties and streets" is a myth, but you later concede that "we will extend past our boundaries in park areas around the new stations at Queen and Gerrard", it feels like you're hanging your argument on the word "far". So, just how far do your engineering plans indicate that you will extend past said boundaries? I'm looking for a calculation, a hard number here, not a descriptive phrase.
2. Still with Myth / Reality #1 - again, based on your engineering plans, please tell me how much park space you calculate you will give "back to the community in other areas". And, could you also please tell me specifically where these other areas are? As you're able to confidently say that you "will" be doing this, you should be able to say where.
3. Myth / Reality #2 - "We'll also make safety our top priority and work with the community to restore it to a better state after we're done." What does "it" refer to in this statement - "the community" or "park space" from the previous sentence? And what are some ways you might do this (I'm hoping you have some possible ideas, if you're going to make this claim)? And who will be the decider of whether or not whatever you do has in fact made it a better state?
4. Myth / Reality #3 - "Important community spaces will close because of the Ontario Line" is countered with "They won't - they will stay open." Does this mean that there may be some community spaces which you consider 'unimportant' that may close? If so, which spaces? If not, why didn't you simply say 'ALL community spaces will stay open'?
5. Myth / Reality #5 - "It will not be noisier - it will be quieter." At some of the town hall meetings I've attended, 'noise' has been identified/measured/quantified not only in volume but also frequency and duration - i.e., with an increase in the number of trains, noise of some level will occur more frequently. Would you not agree that for those occasions in a day when there will be some level of train noise where there previously wasn't any train noise (because there was no train), those occasions are examples of when "the community will be noisier"?

Thank you for taking the time to read this. I would appreciate an answer to my questions.

Thank you for writing. Please accept our apology for the delay in our response. We hear your concerns about the transit corridor lands designation and appreciate you sharing your feedback with us. We hope to provide some additional context to clear up any confusion.

The transit corridor lands were designated through a provincial Order in Council. For the Ontario Line, that Order in Council was signed June 3, which is when the new conditions come into effect. The conditions apply as of that date, and the notices will appear on property titles shortly after that – it may take several weeks. To see the boundary of the transit corridor lands, you can look up your property [here](#); the boundary is labelled as the “Transit Corridor Lands + 30-metre buffer area” and shown in blue. The planned Ontario Line route is shown in maps [here](#).

Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information at [Metrolinx.com/Property](https://www.metrolinx.com/Property).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us for a no cost permit prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. You can find more information at [Metrolinx.com/Permits](https://www.metrolinx.com/Permits).

The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please consider signing up [here](#) for our e-newsletter and registering [here](#) for our virtual open house this Thursday, June 30 to learn more. The June 30 open house will focus on the area of the Ontario Line that will run along Pape Avenue and up to Don Mills & Eglinton.

Thank you again for writing. Please do not hesitate to reach out if you have further questions.

Sincerely,

Caitlin

I own a house at [REDACTED] Last week I received a notice that the title on my

property is being changed to reflect that I am in a transit corridor.

I am concerned about this damaging the value of my property. My house is practically the only thing I own. I am 60 and was planning on selling it to pay for my retirement.

Have you already changed my title?

Also, when will you be starting the work?

Subject: RE: Transit corridor lands
Date: Monday, June 28, 2021 5:16:00 PM
Attachments: [image001.png](#)

Hi [REDACTED],

Thank you for writing. Please accept our apology for the delay in responding. To see the boundary of the transit corridor lands, you can look up your property [here](#); the boundary is labelled as the “Transit Corridor Lands + 30-metre buffer area” and shown in blue. The planned Ontario Line route is shown in maps [here](#).

We would also like to provide some additional background information about the transit corridor land designation. Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information at [Metrolinx.com/Property](https://metrolinx.com/Property).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us for a no-cost permit prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. You can find more information at [Metrolinx.com/Permits](https://metrolinx.com/Permits).

Please consider signing up [here](#) for our e-newsletter and registering [here](#) for our virtual open house this Thursday, June 30 to learn more. The June 30 open house will focus on the area of the Ontario Line that will run along Pape Avenue and up to Don Mills & Eglinton. We also held an open house on June 24 that focused on the route along the rail corridor; you can watch the recording of that event [here](#).

Thank you again for writing. Please do not hesitate to reach out if you have further questions.

Sincerely,

Caitlin

Hi,

I live at [REDACTED] I was informed by letter that our house is in the transit corridor lands 30m buffer zone.

Could I please have a map of the transit corridor lands and the 30m buffer zone around Pape and Harcourt Ave.

I'm selling my house and this is useful information to provide to my prospective buyer.

Thank you in advance with your help in providing this map.

Dear Sir or Madam,

Please find my letter of today's date attached.

I would appreciate it if you would please confirm receipt.

Regards,

[REDACTED]

June 15, 2021

VIA EMAIL (ontarioline@metrolinx.com)

Metrolinx
97 Front Street West
Toronto, ON M5J 1E6

Dear Sir or Madam:

RE: [REDACTED] Cummings Street - Registration Against Title

I am the homeowner of [REDACTED] Cummings Street. I received a letter advising that my property is located on or within 30 meters of transit corridor land created under the *Building Transit Faster Act, 2020* for the Ontario Line. The letter further advised that a notice will be registered against the title to my property on the Ontario land registry.

The image of my property on the Metrolinx GIS map system, excerpted below, shows that my property is at the very outer boundary of the Transit Corridor Lands + 30-metre buffer area. My house is the black dot, which is 140 m away from the current transit corridor at its closest point.

I am in the midst of preparing my home for sale to move my family to a more appropriate home for raising our young family. I believe the registration against title will detrimentally impact our ability to move as planned. This unexpected news has caused us great stress and anxiety since our plans to purchase a new house have instantly been sidelined.

I am writing to request confirmation of the location of the regulatory boundary of the Ontario Line transit corridor as it approaches and passes my property.

I would appreciate hearing from you as soon as possible.

Yours very truly,

[REDACTED]

Hi [REDACTED]

Following up on our call this morning, I'd like to confirm that your property at [REDACTED] Coxwell Avenue is not on the transit corridor lands or within the 30m buffer. This can be confirmed by checking on the [Third Party Coordination and Permitting Application](#) on our website.

The letter was intended to reach the property owner at [REDACTED] as this property is within the transit corridor lands and buffer.

Hope this helps, and please don't hesitate to let us know if you have any further questions or concerns.

Best,

Bismah

Hi [REDACTED],

Thank you for reaching out and for your question about coordinating Ontario Line construction with other planned projects. Please accept our apology for the delay in our response.

As the Dufferin Gate Loop and Dufferin Bridge plans fall under the TTC and City of Toronto, respectively, we cannot comment on the status or timelines of these projects. However, we can confirm that we are working closely with the TTC and the City of Toronto to coordinate our plans for the Ontario Line at Exhibition station with other proposed projects in the area. We are working together to plan how to meet future transit needs and ensure customers have easy access to both the Ontario Line and TTC services at Exhibition Station with accessible TTC stops.

We look forward to bringing more detailed project and design plans to the community in the future. Please consider [signing up for our newsletter](#) to stay updated on the Ontario Line, including any future engagement opportunities or milestone announcements. Thank you again for writing.

All the best,

Caitlin

Hello,

I just finished reading a Report that was presented by the TTC Engineering Department for the Exhibition Place Board of Governors outlining the plan for the Dufferin Gate Loop connection

through the new proposed Dufferin Bridge to Exhibition Station. This outlines a plan to connect to the current tunnel (that is outlined to change with the new Ontario line construction).

I am wondering if there were anything that you are working on with the TTC to carry out this work in tandem so disruption to the community will be minimal and happen at the same time? I participated in the recent town hall, subscribe to the newsletter, have read the business case and have read through the website and have seen nothing mentioning this project that the TTC had put on hold due to Ontario Line Construction at Exhibition Station.

Thank you for your time and look forward to learning more about this plan.

Good morning Caitlin:

Here is a consolidated set of questions about the numbers you have provided

- 1 After deducting the transfer passengers from total boardings at some stations, notably at Science Centre, the remaining "walk in (or out)" trade seems rather low Does the projection for Science Centre reflect planned development at this location?
- 2 The projected demand at Corktown, where there will be a large "Transit Oriented Community", is comparable to that at Leslieville (Riverside) where no development is intended Does the demand model reflect the TOCs that will be encouraged at various locations on the route, and how do you account for the low demand at Corktown and Gerrard (for example) where new development is likely or planned?
- 3 The ten minute walking distances for most stations overlap with the effect that population and jobs will be double-counted
 - Do you have catchment area values for each station individually without overlaps?
 - Does the demand model look at the entire network and model each rider once, or is demand at each station modelled independently based on population and jobs within a ten minute walk?
- 4 Ontario Line materials claim that there will be "255,000 more people within walking distance to transit"
 - All of the station sites are already served directly by transit or with a short walk (East Harbour) The operative word here is "more" which appears to be untrue Transit service and network access will be improved for many people, but none of them is without service today
 - The number cited appears to include populations from overlapping catchment areas and therefore double-counts many who will benefit
 - Would Metrolinx care to comment?
- 5 The figures for congestion within Bloor-Yonge station double count passengers transferring between routes who are both an alighting and a boarding Do you have a count for the number of trips that either begin or end at Bloor-Yonge Station?

The full article, in which these are included, is at

Thanks

To: [REDACTED]
Subject: RE: Ontario Line Demand Projections (Follow up)

Hi

Thank you for your patience while we gathered the information to respond to your questions We have enclosed responses below:

Question: So my question is what are the projected number of on-train passengers in the peak hours (am and pm) and for both directions at key locations:

- East of Exhibition Station
- East and West of Osgoode
- East and West of Yonge
- East and West of East Harbour
- South and North of Danforth (Pape Stn)
- South and North of Thorncliffe Park
- South of Science Centre

Response: We have attached a chart with the 2041 AM Peak Hour ridership forecasts for the Ontario Line This chart is also available on our website under the Alignment & Stations section of the [FAQs](#), and we have updated the station profiles under the [Neighbourhood Updates](#) to include boardings and alightings We've also included some additional charts with the numbers broken down below, including boardings, alightings and volume per station, by direction, as well as line profile plots The volume figures should include the on-train data requested for the AM peak hour

Ontario Line PDBC: 2041 AM Peak Hour – Ridership by Station and Direction

Station	Westbound/Southbound		
	Boardings*	Alightings*	Volume
Science Centre	3,600	-	3,600
Flemington Park	1,400	100	4,900
Thorncliffe Park	1,600	200	6,300
Cosburn	1,800	100	8,000
Pape	6,700	1,200	13,500
Gerrard	1,800	200	15,100
Leslieville	1,900	400	16,600
East Harbour	5,600	3,200	19,000
Corktown	1,900	600	20,300
Moss Park	1,500	2,800	19,000
Queen	1,300	8,400	11,900
Osgoode	1,100	5,800	7,200
Spadina-Queen	500	3,000	4,700

Station	Eastbound/Northbound		
	Boardings*	Alightings*	Volume
Exhibition	8,400	-	8,400
King-Bathurst	2,600	900	10,100
Queen-Spadina	1,700	2,000	9,800
Osgoode	1,900	3,200	8,500
Queen	3,300	3,700	8,100
Moss Park	1,000	2,000	7,100
Corktown	900	700	7,300
East Harbour	1,400	4,600	4,100
Leslieville	600	1,100	3,600
Gerrard	600	600	3,600
Pape	900	1,400	3,100
Cosburn	400	300	3,200
Thorncliffe Park	500	800	2,900

King-Bathurst	400	1,200	3,900
Exhibition	-	3,700	200

**Totals may not add up due to rounding*

Flemingdon Park	200	1,000	2,100
Science Centre	-	2,200	100

**Totals may not add up due to rounding*

Station	Both Directions		
	Boardings*	Alightings*	Total Ridership*
Exhibition	8,400	3,700	12,100
King-Bathurst	3,000	2,100	5,100
Queen-Spadina	2,300	4,900	7,200
Osgoode	3,000	9,000	12,000
Queen	4,500	12,100	16,600
Moss Park	2,500	4,800	7,300
Corktown	2,800	1,300	4,100
East Harbour	7,000	7,800	14,900
Leslieville	2,500	1,500	4,000
Gerrard	2,400	900	3,300
Pape	7,500	2,700	10,200
Cosburn	2,200	400	2,600
Thorncliffe Park	2,100	1,100	3,100
Flemingdon Park	1,700	1,100	2,800
Science Centre	3,600	2,200	5,800

Question: If you have off-peak projections (e.g. midday, evening, weekend) those would be useful too.

Response: We do not have station level off-peak projections for Ontario Line. Daily was determined based on expansion factors to capture the off-peak ridership at the system level.

Question: I am trying to get a feel for the line's behaviour as part of the network not just for the traditional rush hour and the "relief" of major interchanges, but on an all day basis by comparison with other rapid transit lines. Surely you must have at least the peak figures as these would be generated as any part of demand modelling, and you are already citing station-specific numbers for effects at Bloor-Yonge.

Response: Please see the peak figures provided above.

Question: On a related note, the PDC says (under 5. Improved comfort and safety) that there will be 6,000 fewer trips on Line 1 (-15% crowding) and 14,000 fewer trips at Bloor-Yonge (-22% crowding). Does the 6K figure apply to Line 1 north of Bloor (ie people who are diverted off of the Yonge line onto the OL) while the 14K figure refers to passengers diverted off of Line 2? What are the percentage reductions relative to? A 15% reduction at 6,000 trips equates to a peak hour of 40K which is more than the planned capacity of Line 1. A 22% reduction at 14,400 trips equates to a peak hour of 63.6K which is very substantially above the capacity of either line. Where do these numbers come from and how were they calculated?

Response: The 6,000 fewer trips on Line 1 metric is the reduction/diversion of AM Peak Hour volume at the busiest point of Line 1, southbound between Bloor-Yonge and Wellesley Stations (i.e. the business as usual (BAU) AM Peak Hour volume south of Bloor-Yonge is projected to be 41,000, and with Ontario Line in place, the volume reduces to 35,000). Conversely, the 14,000 figure is the change in the number of AM Peak Hour boardings and alightings at Bloor-Yonge Station, on both Line 1 and Line 2 (i.e. AM Peak Hour Line 1 and Line 2 boardings and alightings at Bloor-Yonge in the BAU is projected to be 65,000, and with Ontario Line in place, the total boardings and alightings reduce to 51,000).

We hope the above information proves helpful. Thank you again for reaching out.

Kind regards,

Caitlin

Further to my note below, the PDC includes two maps (Figures 4-1 and 4-2) which show the peak hour and all day boardings for each station, but only as generic ranges. Also, they do not show directional values, nor on train accumulated loads (net of boardings and alightings).

You obviously have these details or you would not be able to produce what you have already published. All I ask for is a copy of the info.

Thanks

[Redacted Signature]

From: [REDACTED]
Sent: June 23, 2021 12:37 PM
To: 'Ontario Line' <ontarioline@metrolinx.com>
Subject: RE: Ontario Line Demand Projections

Good afternoon:

To clarify my question: You have published an aggregate count of all day riders, and more recently the station usage counts (ons/off) However, you have not published the passengers per hour per direction values for each station-to-station link, something that has an obvious bearing on the level of service you will have to operate

For example a common stat cited for the Yonge subway is the peak hourly demand at various points such as southbound AM peak leaving Finch, Eglinton, Bloor and St George Stations On Line 1, the counter peak numbers are important too because traffic on that line is becoming less directional (ie am peak inbound, pm peak outbound)

So my question is what are the projected number of on-train passengers in the peak hours (am and pm) and for both directions at key locations:

- East of Exhibition Station
- East and West of Osgoode
- East and West of Yonge
- East and West of East Harbour
- South and North of Danforth (Pape Stn)
- South and North of Thorncliffe Park
- South of Science Centre

If you have off-peak projections (e.g. midday, evening, weekend) those would be useful too. I am trying to get a feel for the line's behaviour as part of the network not just for the traditional rush hour and the "relief" of major interchanges, but on an all day basis by comparison with other rapid transit lines. Surely you must have at least the peak figures as these would be generated as any part of demand modelling, and you are already citing station-specific numbers for effects at Bloor-Yonge

On a related note, the PDC says (under 5 Improved comfort and safety) that there will be 6,000 fewer trips on Line 1 (-15% crowding) and 14,000 fewer trips at Bloor-Yonge (-22% crowding). Does the 6K figure apply to Line 1 north of Bloor (ie people who are diverted off of the Yonge line onto the OL) while the 14K figure refers to passengers diverted off of Line 2? What are the percentage reductions relative to?

A 15% reduction at 6,000 trips equates to a peak hour of 40K which is more than the planned capacity of Line 1. A 22% reduction at 14,400 trips equates to a peak hour of 63.6K which is very substantially above the capacity of either line. Where do these numbers come from and how were they calculated?

Many thanks

Subject: RE: Ontario Line Demand Projections

Hi [REDACTED]

Thanks for following up. Please accept our apology for the delay in responding.

We appreciate you flagging an error in our [blog post](#). We have since corrected the blog to reflect that 24,400 is the total ridership (boardings and alightings) during the busiest travel hour for these three stations (Exhibition, King-Bathurst, and Queen-Spadina).

The overall ridership projection numbers for the Ontario Line are included in the [Preliminary Design Business Case](#) (PDBC) in Table 4-1 on page 65 or E-2 in the Executive Summary. We are sharing all remaining station-specific projections during our upcoming virtual open houses and updating our website.

To your second question, we can confirm that the total use of the station refers to the boardings and alightings at Queen/Spadina.

To your third question, could you please provide some additional context regarding what data you are seeking for on-train demand levels? Are you referring to the project-wide demand levels?

Thank you again for writing. We look forward to receiving clarification on your third question.

Sincerely,

Caitlin

Good afternoon:

I have been corresponding with the Ontario Line's team about some of the numbers in their recent online articles and presentations, but their auto-response to my last email mentions sending to the media relations address "for the fastest response"

Q1: When are you going to publish demand numbers for the Ontario Line for the whole line rather than dribbling them out bit by bit in blog articles and station profiles?

Q2: A question about an inconsistency in the numbers you quoted

In this article:

<https://blog.metrolinx.com/2021/06/10/ontario-line-station-footprints-from-exhibition-to-queen-and-spadina-reveal-quick-connections-to-major-transit-lines/>

you state:

The figures below are conservative estimates based on the year 2041:

- 61,900 people living within a 10-minute walk of the stations
- 84,000 jobs nearby
- 24,400 projected daily trips
- 12,500 projected transfers

However, in this article:

<https://www.metrolinxengage.com/en/content/ontario-line-neighbourhood-updates-west>

there are drop-downs for each station. For Queen/Spadina, you state:

Stats and Facts*:

- 22,800 people in walking distance to the station
- 7,200 customers will use the station during the busiest travel hour
- 3,800 transfers
- 42,200 jobs in the area

*Forecast for the year 2041

Note that the demand is cited per busiest travel hour, not all day. If you add the values for each station, you will get 24,400 which is the all day total shown in the first article. If these really are hourly numbers, that implies a vast amount of all-day riding just from these three stations which would be hard to believe.

Which is it? Peak hour or all-day?

Also, there is a question of what you mean by "usage". Is it originating trips, aka "boardings" or people passing through the station in either direction? I ask because the Queen/Spadina profile also includes:

"Easy access to the Ontario Line will relieve crowding on the popular 501 Queen and 510 Spadina streetcar routes, with almost 3,800 streetcar riders transferring to and from the Ontario Line every day."

Note that this is a "to and from" number, not a one-way value.

Q3: Finally, do you have on-train demand levels? You must have if you already have station-level projections.

As you always ask about my deadline, I would like to have the daily/peak hour issue resolved by Thursday afternoon so that when I write up the public meeting Thursday evening, I use the correct context. You may want to check your own web pages for accuracy too.

Regards,

[REDACTED]

Subject: Ontario Line-Province announced proposals for Exhibition, King-Bathurst and Queen-Spadina stations
Date: Thursday, June 17, 2021 11:35:00 AM
Attachments: [image001.png](#)

Hi [REDACTED]

I hope you've been well! I am writing to share that the province of Ontario has announced its proposal to build vibrant live-work-play communities along the future Ontario Line at Exhibition, King-Bathurst and Queen-Spadina stations.

This proposal is part of the government's [TOC program](#), which incorporates collaboration with municipalities and third parties to bring more jobs and housing closer to transit along the routes of the province's subway projects. You can find more information about the province's announcement and proposed TOC plans [here](#).

The proposal would transform Exhibition Station into a connected transit hub with new housing, office and retail space that would support approximately 2,300 jobs. Transit riders will be able to connect to GO Transit, TTC services and the future Ontario Line subway, making it more convenient to get to this popular destination for sporting events, concerts and other attractions, as well as the growing Liberty Village community.

The province is also proposing a TOC at the future King-Bathurst station. The proposal looks to add more housing and office space while retaining heritage buildings and structures, recognizing this vibrant neighbourhood's character.

At the future Queen-Spadina station, the proposed TOC would provide more housing, retail space for businesses and convenient access to transit, including the TTC streetcar and future Ontario Line.

Following the City of Toronto's review, the province will host engagement with the public, stakeholders and Indigenous partners beginning this coming winter.

Please let me know if you have any questions, and I am more than happy to set up a date and time to connect over a call.

Thank you!

Caitlin

Attachments: [Metrolinx Ontario Line BTFA Letter.pdf](#)
[image002.png](#)

Hi [REDACTED]

Thank you for writing. Please accept our apology for the delay in responding.

The letter you received was regarding transit corridor lands (attached), which vary in size and are not limited to the location of the Ontario Line track route. To see the boundary of the transit corridor lands, you can look up your property [here](#); the boundary is labelled as the “Transit Corridor Lands + 30-metre buffer area” and shown in blue. The planned Ontario Line route is shown in maps [here](#).

We would also like to provide some additional background information about the transit corridor land designation. Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information at [Metrolinx.com/Property](https://www.metrolinx.com/Property).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us for a no-cost permit prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. You can find more information at [Metrolinx.com/Permits](https://www.metrolinx.com/Permits).

The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please consider signing up [here](#) for our e-newsletter and registering [here](#) for our virtual open house this Thursday, June 30 to learn more. The June 30 open house will focus on the area of the Ontario Line that will run along Pape Avenue and up to Don Mills & Eglinton.

Thank you again for writing. Please do not hesitate to reach out if you have further questions.

Sincerely,

Caitlin

Subject: New Metrolinx Ontario Line Community Notice - Investigative drilling work within the Metrolinx rail corridor from Queen Street East to Gerrard Street East - Starting as early as June 24
Date: Friday, June 18, 2021 11:23:00 AM
Attachments: [image001.png](#)
[OLine - Rail corridor from Queen to Gerrard - starting as early as June 24.pdf](#)

Hello [REDACTED],

Please find attached a notice about investigative drilling work that will be taking place within the Metrolinx rail corridor from Queen Street East to Gerrard Street East, starting as early as June 24. Should work begin later than the anticipated start date or should work be delayed by unforeseen circumstances, we'll reach out with an update.

The field crew will access the Metrolinx rail corridor from 383 Eastern Avenue, and permission to enter has been secured with the property owner. Further details can be found in the notice.

This notice is being emailed to Elected Officials and community groups. It will also be carried by field crew carrying out the work, and will also be available on our website.

Please let us know if you have any questions.

Hi [REDACTED]

Thank you for reaching out. Please accept our apology for the delay in responding.

We hear and appreciate your concerns about impacts to Osgoode Hall grounds. We always strive to reduce or avoid impacts to these kinds of properties wherever possible. In areas where we can't avoid impacts, we're confident we can conserve heritage attributes and protect the neighbourhood's unique characteristics.

We appreciate your suggestion for an alternative Ontario Line Osgoode station entrance location on University Avenue and will pass it on to our project teams.

Thank you again for writing. Please consider [signing up for our newsletter](#) to stay updated on the Ontario Line.

All the best,

Caitlin

Subject: University Park and Osgoode station

Message: Has the team considered building the Osgoode entrance on the current University Avenue itself? The University Park proposal (<https://universitypark.evergreen.ca>) envisages substantially narrowing University Ave, reducing the number of lanes on the eastern side. By building in the current roadway, this could allow you to build a station entrance, very close to the proposed site without impacting Osgoode Hall (and the trees) whatsoever. The station entrance in this location would also encourage the University Park proposal, encouraging expansion of the parkland around Osgoode Hall.

Hi [REDACTED]

Thanks for reaching out. Please accept our apology for the delay in responding.

I agree with you, face to face conversations are a lot more helpful for everyone involved. I have had a few in-person meetings with residents outside and enjoyed them.

We have some renovations to complete within the office as it is being repurposed from previously serving as a retail location. Unfortunately, I do not have an ETA to share with you but we are moving as fast as we can with our contractors to complete it. Once it is complete, we will announce the opening through our social media, virtual open houses and e-newsletter.

Feel free to reach out should you have any further questions,

Subject: RE: Corridor Land Designation letter
Date: Tuesday, July 6, 2021 3:47:00 PM
Attachments: [image003.png](#)

Hi [REDACTED]

Please accept our apology for the delay in reaching out. We hear your concerns about the transit corridor lands designation and appreciate your feedback. We hope to provide some additional context to clear up any confusion. To see the boundary of the transit corridor lands, you consult our online interactive map [here](#), and you can also look up your specific address. The boundary is labelled as the “Transit Corridor Lands + 30-metre buffer area” and is shown in blue.

Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information at [Metrolinx.com/Property](https://www.metrolinx.com/Property).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us for a no-cost permit prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. You can find more information at [Metrolinx.com/Permits](https://www.metrolinx.com/Permits).

The letter we sent does not necessarily mean that we need to access or acquire your property in the future; you will receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions or properties near an airport, and it will be removed from the title after the construction of the Ontario Line is complete.

Please do not hesitate to reach out if you have further questions. You can also book a meeting (via phone or Teams video call) with one of our team members [here](#) on our website and sign up [here](#) for our e-newsletter to receive regular project updates.

Thank you again for writing.

Sincerely,

Caitlin

Consent from resident seeking further explanations

=====

Thank you [REDACTED] Looking forward to hearing the explanation from Metrolinx.

Thank you [REDACTED], I hope that the group's meeting yesterday brought a lot more information for us.

What is not clear to me is area that needs their permission? Who needs to give whom permission? And permission to do what? I think this is critical information for our community to plan for and they are avoiding telling us. [REDACTED] has been doing persistent dedicated work to bring this to light. Once we can extract a clear scope of the impact on us as a whole then we can plan things better. We need to keep at it, let me know if there is anything more I can do to help.

Thanks again for your support.

Sent from [Mail](#) for Windows 10

From: [Tabuns - QP, Peter](#)
Subject: FW: Corridor Land Designation letter

Thank you for copying me on this email exchange. I too was shocked by the breadth of the corridor. It is as much as 2 and 3 times larger than the corridors designated for the Eglinton West LRT and the Scarborough Subway Extension.

I have asked Metrolinx for an explanation and will share it with you as soon as I receive it.

Peter

Subject: Re: Corridor Land Designation letter

My simple, brief answer:

we've demanded an explanation from Metrolinx and we have a 3 PM meeting with them tomorrow. We will have more answers after that.

Just to slightly walk you back: the transit corridor, according to Metrolinx, is area that would need their permission before doing permitted work. It is NOT area marked for expropriation, land work, etc.

We are very concerned about the implications of their definition of "transit corridor" and why so many side streets are involved. We are also concerned that there is a possibility that there indeed is more than meets the eye to their map. We don't think that it involves expropriation targets, but we are perplexed why such a large swath of land is needed to be designated as part of their corridor.

On Thu, Jun 10, 2021 at 6:54 PM [REDACTED] wrote:

Hi

Thank you for bringing these issues to us including the extreme lack of communication by MetroLinx. Without your work, we would be completely in the dark. I am extremely concerned and have a lot of questions when I read your notice. The map noting blue for scope is so lacking in information and quite frankly does not respect the people living in this established community. When I see the blue, it encroaches on more than just homes, it impacts community services including two of our schools, a community centre, places of worship and retail services. Please find some questions below and that I am hoping you can ask at your next meeting:

- What does blue mean exactly for the scope of work and the transit corridor?
- What is involved with the scope of work?
- Is there more of an impact on homes/buildings being expropriated etc. than what we are led to believe?
- Why can't they provide our community with more detail and more information?
- If they can't be forthcoming with information, what are they hiding?

I have copied Peter Tabun's office as well for awareness.

Thank you again,
[REDACTED]

Corridor Land Designation letter

A good number of our members may have found a letter

from Metrolinx in their mailbox. In our last newsletter, we stated that Metrolinx would be sending these letters out shortly.

In our last meeting with Metrolinx, we discussed the corridor land designation, and Metrolinx gave their take on what the designation meant for homeowners. PACCT asked to see a detailed map of the transit corridor, but only a small map was provided.

PACCT is disappointed by the language used in the letter and we were surprised by the number of homes that fall under the transit corridor designation. We contacted Metrolinx and they finally provided us with a more detailed map.

The transit corridor's in light blue.

We have asked Metrolinx to explain the east-west branches of the corridor and why that scope is needed. We have asked for an immediate answer and, at the time of this letter, we have not received it.

PACCT has an upcoming meeting date with Metrolinx and we will be discussing the true short and long-term implications of being on the transit corridor. We can say that we're frustrated and surprised (but not shocked) by the lack of notice given to us by Metrolinx, including not providing PACCT with the letter's contents prior to it going out and not giving PACCT a map to show the scope of impact.

Our upcoming meeting with Metrolinx will further push their need to have meaningful engagement with our group and will include our community's asks regarding positive project outcomes. There's plenty of work that Metrolinx needs to do to satisfy our group and other neighbourhood groups that will be impacted by the Ontario Line's construction and operation. PACCT will advance our suggestions of net-positive outcomes and we expect Metrolinx to be ready partners in building meaningful transit and legacy projects.

Call for Volunteer: Web Editor Needed!

We at PACCT wear many hats. The hat that fits us most poorly is the web editor hat.

We're looking for a neighbour that can give our website a refresh. We need a short-term helper that can give us a new look. If that's you, then [please email us!](#)

Hi ,

Thank you for taking the time to speak with me today.

As discussed, I'm writing to provide the Ontario Line virtual open house details for this Thursday, June 24 at 6:30 p.m. This open house will focus on the project in the '[East Segment](#)', which includes the future East Harbour, Leslieville/Riverside, and Gerrard stations. You can register [here](#) on our website. On the registration page, you can submit questions, upvote questions, and watch the open house recording later if you want to revisit it or if you can't attend live. Additionally, you can also participate via our 'Zoom room' and ask your question live during the event if you prefer.

I have also passed on your contact information to my colleague, Daryl, who will endeavour to get back to you as soon as possible to answer any additional questions about project plans in your area.

Please do not hesitate to reach out to us in the future. Thank you for your time.

All the best,

Caitlin

Hello [REDACTED]

Thank you for your email. I apologize for the delay in responding as I checked in with the project team on your questions.

To address your specific questions, the Ontario Line will head south just east of Berkeley Street to stop at Corktown Station which will be located just north of Front Street. After that, it will travel southeast underneath Parliament Square Park. The alignment is not anticipated to travel underneath the Place St. Laurent or Harmony B properties you mentioned, nor beneath Hahn Street. The Ontario Line will be travelling beneath portions of the Distillery District and we do not anticipate impact from this to any of the existing properties. It is important to note that in this area the Ontario Line tunnels will be approximately 20-30m beneath the surface. In case you haven't seen it yet, we updated the maps on our website last month and this one shows the Ontario Line route from Osgoode to the Don Yard which I think may be helpful to you:

https://www.metrolinxengage.com/sites/default/files/downtown_overview.jpg

Additionally, you can find here the recordings of the virtual open houses we have held this year which outline the plans for this segment of the Ontario Line:

<https://www.metrolinxengage.com/en/ontarioline/live>

I recognize that the work of building transit can be disruptive, and I would like to share that Metrolinx is committed to minimizing and managing the effects of noise and vibration of the Ontario Line on its neighbours – during both construction and operations. As a part of the Environmental Impact Assessment Report (forthcoming early 2022), a detailed noise and vibration assessment will be completed for the Ontario Line to ensure that potential impacts are identified, and appropriate site-specific mitigation measures are in place. These commitments will be carried forward into constructor contracts. Construction noise mitigation measures may include but won't be limited to performing construction during daytime hours where possible, using equipment compliant with noise level specifications from the Ministry of Environment, Conservation and Parks, and siting construction vehicles and construction laydown and staging areas away from sensitive locations where possible. Other practical steps we take to reduce noise and vibration in residential areas include fitting equipment with muffling devices and coordinating construction schedules so that noisy operations do not occur simultaneously. These mitigation measures will be refined and updated as project planning progresses.

I hope this helps address your questions, but please don't hesitate to let me know if you need any further information or want to set up a call to discuss further.

Best,

Bismah

Hello,

I live at [REDACTED] and received your transit corridor letter dated June 3rd.

I have some questions and concerns about the letter as I did not see that it was very thorough in light that you will be registering some type of notice on the title to my property. I called on Monday, June 21, 2021 @12:41 pm and nobody called me back. I was told that Metrolinx would be available to answer our questions 24/7 and that there would always be someone available. Clearly, this is not the case.

I would also like to mention that I am an active and busy real estate agent in the area and will need to know exactly what is happening with the title to properties so that I can represent people and the sale of their homes properly.

I have personal concerns as well as business concerns;

1. Could you please provide a comprehensive map of the transit corridor from Pape north to the DVP?
2. What exactly will the notice say that will be registered on the title to my property and others in the corridor and the 30 metre range?
3. When will this notice be registered on the title of my property and others?
4. When will the notice be taken off the title of my property and others?

5. When is the construction going to start near me?

I am planning some work at the front of my house over the next two years including but not limited to foundation waterproofing and landscaping.

1. How do I determine if I need a permit from Metrolinx to do this exterior work at my home and when does this permit requirement take effect?
2. How long does it take to get a permit and how onerous is the process?
3. I would assume that there is no cost for this?

You are dealing with my biggest asset and lifelong savings and as such, I would expect that I will receive a thorough, respectful and comprehensive response to this email.

Thank you,

--

Hi

I appreciate you taking the time to write and start a conversation.

1. The portal at Gerrard is planned to ensure the Ontario Line will be underground before it reaches the school itself. It won't affect safe access to Pape Avenue public School. We're working closely with the school and parent council on plans to keep the area safe for students and faculty while also protecting the building and playground. For families who choose transit, the nearby station at Gerrard will make getting to and from school simpler.
2. [Here](#) are the detailed drawings you requested.
3. As we have mentioned in the town hall last week, the noise and vibration studies are ongoing and will be shared once they are complete and verified. The environmental report is currently on track for release this September (fall)
4. Bridges will be replaced in consultation with the city and we will be building them to their current standards, with five metres between the bottom of the bridge and the roadway. By comparison, the Queen Street bridge has a clearance of only 3.9 metres. This means the connecting rail tracks must also be higher. They will be raised by 1.1 metres at Queen, 0.9 metres at Dundas, and 0.6 metres at Logan. Replacing these bridges now means they will last for at least another 100 years and will avoid the need for frequent and disruptive repair work on aging infrastructure.
5. While bridge construction will result in temporary traffic and transit impacts, Metrolinx will communicate these impacts early and often through many different communications channels to help people plan their trips in advance. We also have a community office on Queen Street East and feel free to report any safety hazards to this email – OntarioLine@Metrolinx.com or give us a call. We take safety very seriously.
6. Metrolinx is committed to ensuring local businesses stay accessible, visible and 'open for business' throughout construction. We will do this through promotional materials, partnerships with BIAs, signage/wayfinding, marketing campaigns, workshops, events, partnerships with the city and streetscape maintenance. We are in close contact with the Corktown Residents and Business Association and of course, the West Don Lands Committee and St. Lawrence Residents Association/ St. Lawrence Market BIA.

Hope this helps,

Feel free to reach out should you have any further questions,

Hello - [REDACTED]

I have some questions about the Ontario Line project.

- 1) Why is a portal on a city works yard going to be more disruptive to the community compared to being in the middle of a residential area next to an elementary school?
- 2) Where can I access the survey drawings with measurements of how the tracks will all fit within the existing transit corridor as your illustrations suggest? I'm looking for the drawings from Gerrard to Eastern.
- 3) Where can I access the consolidated sound and vibration study for the Ontario Line, SmartTrack, electrification, and increased GO services through the Gerrard-to-Eastern corridor that scientifically demonstrates how 1,500 trains daily won't lead to more noise and vibrations?
- 4) When the Ontario Line was proposed, one of your selling points was that the bridges from Gerrard to Eastern wouldn't need to be redone. Now you are saying they will need to be redone. What other parts of the project are you projecting to be repurposed to the community based on your original plan?
- 5) I am a pedestrian and business owner, living in Riverside but my company is in Corktown. How will you guarantee my safety as I walk to work considering the bridge reconstruction on Eastern and Queen?
- 6) With the new location of the Corktown stop, my business will be negatively affected as my company is in a historical building across from the proposed Corktown stop site. How will the construction noise, construction vibration, staging areas, etc, impact my team's ability to work when we're back in the office? After holding onto our office space through COVID, we are now concerned that we'll have to leave as a result of your change of plans and alignment to what the city of Toronto had originally planned. What compensation are you offering to businesses who will have to relocate as a result of the destruction of the Corktown community?

I look forward to receiving your answers.

Hi [REDACTED]

Thanks for the suggestion. We will see how we can make this more clear in our communications and online resources.

Also appreciate your note about including this information in the downtown segment as opposed to the east segment. One of the reasons we included it in the east segment is that it coincided nicely with the release of the early works report this week, which we will note tomorrow during the presentation.

Best,

Bismah

Hello, Metrolinx — please update your blog with a reference to the pedestrian/cycling infrastructure that will be included to connect East Harbour station/employment zone with the residents and amenities in eastern Canary/Corktown. Attached is a grab from your April Open House meetings with the slide for the Lower Don Bridge — it mentions “improving connections for cyclists and pedestrians”, so those improvements should be part of this blog (unless the new intent is to provide that in some other way than this particular new bridge? Even so, if there's a change like that since April, the blog should explain it, please).

Hi [REDACTED]

Thank you for writing. Please accept our apology for the delay in responding.

The letter you received was regarding transit corridor lands, which vary in size and are not limited to the location of the Ontario Line track route. To see the boundary of the transit corridor lands, you can look up your property [here](#); the boundary is labelled as the “Transit Corridor Lands + 30-metre buffer area” and shown in blue. The planned Ontario Line route is shown in maps [here](#).

Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information at [Metrolinx.com/Property](https://www.toronto.ca/metro/property).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us for a no-cost permit prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. You can find more information at [Metrolinx.com/Permits](https://www.toronto.ca/metro/permits).

The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. The notice of transit corridor land designation is strictly meant to be informational, similar to properties located in certain subdivisions or properties near an airport. The notice will be removed from the title after the construction of the Ontario Line is complete.

Please do not hesitate to reach out if you have further questions. You can also book a meeting (via phone or Teams video call) with one of our team members [here](#) on our website and sign up [here](#) for our e-newsletter to receive regular project updates.

Thank you again for writing.

Sincerely,

Caitlin

Hello,

I recently received a letter from you stating that I am within the area of the Ontario Line. I am at [REDACTED] Lewis Street, Toronto,

Respectfully, I ask you for more detail on how this transit expansion will directly affect me and my property.

I look forward to your prompt response.

Thank you,

Hello

We were quite concerned when we received the letter concerning this corridor. We were quite shocked that we are considered to be in the corridor, in light of the fact that we are so far removed from this line. We would really appreciate information on how this will impact our property. We are not sure if there will be trucks or equipment on our small property. How will we be impacted? Also will any damage done be repaired/restored to our satisfaction? Our street address is [REDACTED]

Any information that you can give us will be appreciated.

Thank you

Hi [REDACTED],

Thank you for writing. We hear your concerns about the transit corridor lands designation and appreciate you sharing your feedback with us. We hope to provide some additional context to clear up any confusion.

The letter you received was regarding transit corridor lands, which vary in size and are not limited to the location of the Ontario Line track route. To see the boundary of the transit corridor lands, you can look up your property [here](#); the boundary is labelled as the “Transit Corridor Lands + 30-metre buffer area” and shown in blue. The planned Ontario Line route is shown in maps [here](#).

Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information at [Metrolinx.com/Property](https://www.metrolinx.com/Property).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us for a no cost permit prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. You can find more information at [Metrolinx.com/Permits](https://www.metrolinx.com/Permits).

The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please consider signing up [here](#) for our e-newsletter and registering [here](#) for our June 30 virtual open house to learn more. The June 30 open house will focus on the area of the Ontario Line that will run along Pape Avenue and up to Don Mills & Eglinton. We also held an open house on June 24 that focused on the route along the rail corridor; you can watch the recording of that event [here](#).

Thank you again for writing. Please do not hesitate to reach out if you have further questions.

To whom it may concern,

I am deeply troubled by the letter I received 2 weeks ago stating that my property lies within a 30 m transit corridor for the proposed Ontario line, scheduled to rip through the heart of my neighbourhood.

I understand that the current government has deemed it appropriate to strip residents of their right to voice any opposition to your plans. I find this law shockingly undemocratic and heavy handed.

Nonetheless, I am left with this very disturbing notice that you may be using my property (or destroying it) should you like to. My house is approximately 130 years old and is a beautifully maintained and renovated home. I do not take kindly to being told that for now I need not worry about losing my home, but perhaps down the line this may change.

I am also furious that you are assuming the right to add anything at all to my deed.

I want clarity now on your plans for my property, along with details of exactly how wide this raised platform is going to be. From what I can determine from your hazy images, it will be much wider than you are admitting to.

How is it alright to bypass a proper environmental assessment just because you can? I would wager you know what the results would be should you do it, so you won't.

It's just a little neighbourhood to you. This is a vibrant, historical neighbourhood that seeks transit done right. That means burying the line as has been deemed safe and logical.

Why not use the extra money spent burying the line in Etobicoke that has no neighbourhood to cut through and apply it here.

How is it that other world class cities know how to bury lines below or near rivers and you won't entertain the idea- supposedly to save 4.5 min for those outside the hood. Outrageous!

I am angry, and I will not let this bulldozing in my neighbourhood continue without a fight.

Please contact me to explain what your specific plans are for my property.

Thank you for time.

Greetings: Please advise re the above questions namely i) will the houses on the west side of Pape south of the school be affected, ii) will the Ontario line join the existing tracks used by GO and Via that run behind Gerrard Square and and iii) when will the exit location be finalized?

Thanks.

On Wednesday, August 11, 2021, 03:09:44 p.m. EDT, [REDACTED] wrote:

Thanks. Good to know it will be underground past the school - and will it also be underground all the way below the houses that are on the west side of Pape south of the school? It looks to me that the Ontario line trains will use the existing track that is shared by GO trains and VIA that runs south of the NoFrills - is that correct?

Last, when will the actual location of the exit from underground be finalized?

On Wednesday, August 11, 2021, 12:56:37 p.m. EDT, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

You are correct, that's my mistake. The portal will be closer to Pape than Carlaw. We are still finalizing the exact location of the portal and what the property impacts will be, but we do know that it will not touch the property of Pape Avenue Junior Public School, and the trains will be underground by the time the tunnel passes the school.

Please let me know if you have any further questions.

Thank you for this information.

One clarification/follow up. You state that trains will exit the tunnel at "approximately Gerrard & Carlaw." Yet, the according to the map on your website the portal is clearly located at the bottom of Pape immediately south of Pape Ave school. The distance from where the portal is indicated to Gerrard & Carlaw is relatively far but, more importantly, there are many existing building structures, between those two locations. Kindly clarify which is correct - the online map or the statement of "approximately Gerrard & Carlaw."

http://www.metrolinx.com/en/greaterregion/projects/ontario-line.aspx?gclid=EAlaIqobChMln4ql1rKp8glV121vBB2aQwpiEAAAYASAAEgLDvD_BwE&gclidsrc=aw.ds

On Thursday, August 5, 2021, 10:25:41 a.m. EDT, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thank you for your email, and sorry for the delay getting back to you. Please see below for answers to your questions.

1. When will construction on the Pape section commence?

Construction on the north segment of the line, which includes Pape Avenue, is expected to begin in 2024/2025. Construction at Pape Station (i.e. on the northeast corner of Pape & Danforth) may begin earlier than that in order to coordinate work with the TTC. Advance utility work along Pape may also take place before 2024 in order to prepare for tunnelling. We will know more about exact locations and timing after we finish collecting information about utility locations over the next several months. This segment of the line is part of a later package of work than the downtown or west-end segments, so we are not as far along in the design and planning stages.

2. Exactly where will the subway exit from the underground?

The subway will exit from underground into the rail corridor through a tunnel portal at approximately Gerrard & Carlaw. We'll share more information about the exact location of the portal as the design work is finalized.

3. What will happen to the houses on the east side of Pape directly across from Pape Ave school?

We do not expect there to be impacts to the houses on the east side. We also don't expect impacts to the school. The subway tunnel will be completely underground by the time it passes the school, and the tunnel will be mostly underneath the Pape Avenue roadway.

4. How will traffic be impacted on Pape south of Danforth during the construction? Will it be closed or reduced lanes?

5. What is the plan to enable continued access during the construction period to Strathcona Ave and

other streets between Carlaw and Pape?

We don't yet know the exact traffic impacts of construction south of Danforth or around Strathcona, but we will do as much as possible to reduce impacts to residents and businesses. There may be times that lanes are temporarily reduced for utility relocations, and our goal is to keep those lane reductions to a minimum. Unlike utility relocations, tunnel boring activities are not expected to require lane reductions since it takes place deep underground.

6. How long will the construction under Pape from O'Connor to the exit near Pape Ave school last?

The construction in this area will be done in stages, so the whole section will not necessarily be experiencing construction at the same time, but we will know more about exact timelines after the third party constructor is chosen in 2024; they will take the parameters given to them by Metrolinx (including requirements to reduce impacts to residents and businesses) and then present a potential timeline to us. As mentioned above, most construction will begin in 2024/2025, and construction of Pape Station may take place earlier than that. The line is expected to be in operation by 2029.

7. Will east-west traffic on Riverdale Ave across Pape be possible during and/or after the construction period?

We do not yet know about traffic impacts, but we do not currently expect east/west traffic to be impacted during construction.

Thank you for your patience, and please let us know if you have any further questions.

Thank you,
Sivahami

Greetings: I am writing to ask about getting information regarding this matter including anticipated impact on my property at [REDACTED]

Please advise as to the best way to have a conversation with someone who can answer questions about timing, property impacts and options, route details, community involvement, etc.

Thank you.

Hi

Thank you for reaching out. Please accept our apology for the delay in responding.

Regarding Ontario Line exact construction timelines and anticipated impacts, the Project Company (PCo) selected to build the project in this area will finalize the detailed designs and construction methods based on our specifications, so we do not have further details at this time. We anticipate a PCo will be selected in 2024 for the Northern Civil, Stations and Tunnel procurement contract, which covers this area.

Our upcoming full Environmental Impact Assessment Report (EIAR) will also detail anticipated impacts and mitigation measures for the construction and operation of the Ontario Line. We anticipate the draft EIAR will be released in early 2022, and it will be open for public review and comment. Feedback received on the draft EIAR will be factored into the final report. You can find more information about the EIAR and our environmental assessment process [here](#) on our website. We will also announce its release and any other project milestones or announcements in our [e-newsletter](#).

Please do not hesitate to reach out if you have further questions. Thank you again for writing.

Sincerely,

Caitlin

Subject: RE: Transit Corridor
Date: Friday, June 25, 2021 4:05:00 PM
Attachments: [image002.png](#)

Hi [REDACTED]

Thank you for writing. We hear your concerns about the transit corridor lands and hope to provide some additional context to clear up any confusion.

The letter you received was regarding transit corridor lands, which vary in size and are not limited to the location of the Ontario Line track route. To see the boundary of the transit corridor lands, you can look up your property [here](#); the boundary is labelled as the “Transit Corridor Lands + 30-metre buffer area” and shown in blue. The planned Ontario Line route is shown in maps [here](#).

Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information at [Metrolinx.com/Property](https://metrolinx.com/Property).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us for a no cost permit prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. You can find more information at [Metrolinx.com/Permits](https://metrolinx.com/Permits).

The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please consider signing up [here](#) for our e-newsletter and registering [here](#) for our June 30 virtual open house to learn more. The June 30 open house will focus on the area of the Ontario Line that will run along Pape Avenue and up to Don Mills & Eglinton. We also held an open house on June 24 that focused on the route along the rail corridor; you can watch the recording of that event [here](#).

Thank you again for writing. Please do not hesitate to reach out if you have further questions.

Sincerely,

Caitlin

Hello Metro Linx:

I am very concerned about the Transit Corridor for the Ontario Line and what this means for my home. I live at [REDACTED]. I am confused about what the Transit Corridor will mean for my home.

Please email me or call me to discuss and clarify what the transit corridor will mean for my home.

My phone number is [REDACTED]

I expect to hear from you soon.

Thank you,

Hi [REDACTED],

Thank you for following up. We hear your concerns and share your desire to avoid impacts to properties and structures with heritage value. Our preferred approach is always to avoid impacts where possible.

Building a subway through such a densely populated urban area is a challenge. The TTC's entrances for the existing Line 1 Osgoode Station do not provide sufficient capacity for the ridership expected when the Ontario Line is in operation. We also looked at various other location options for the Ontario Line Osgoode Station entrance buildings in this area. The proposed locations are the only ones where we can construct the station entrances and meet the necessary safety and code requirements.

We are working to minimize the footprint of Osgoode Station to the greatest extent possible. There will be an impact on the historic fence, but we will protect, conserve, and reinstate it after the station and entrance is constructed. We will have to remove a section of the fence while construction is underway, and this will give us an opportunity to do restoration on the fence. We will work with the Law Society of Ontario, the City of Toronto's Heritage Preservation Services and the Ministry of Heritage, Sport, Tourism and Culture Industries to make sure we are not impacting more than we need to here. We will provide more information as it becomes available.

Please know that we are committed to protecting as many trees as possible while building the Ontario Line. If any trees need to be removed, we will work with the City of Toronto to provide compensation in accordance with [Metrolinx's Vegetation Guideline](#), which provides a landscape science-based approach that exceeds the requirements of applicable bylaws and regulations. More details on tree removal and compensation will also be provided in our Environmental Impact Assessment Report that will be made available to the public for review and comment in early 2022.

Thank you again for writing. I would also be happy to set up a time to connect over a call if you have any further questions, and you can also [book a meeting](#) at a date and time of your convenience on our website.

Kind regards,

Caitlin

Hello Caitlin,

This saddens me greatly, because that corner is one of the most beautiful ones in downtown Toronto. In addition to the heritage fence, there are majestic mature trees and gardens making a green corner beside one of Toronto's main traffic arteries. Since 1963, the TTC managed to preserve this corner without need for any land acquisition from Osgoode Hall. Now, Metrolinx, with the power of the Province behind it, is able to do whatever it wants. It will be impossible to build a station the size shown in the renderings without the removal of many large trees.

I am constantly surprised by Metrolinx's attitude towards "public consultation". I'm accustomed to proper Environmental Assessments where design alternatives are considered within the context of a public forum. Metrolinx's approach, on the other hand, is to make its decisions, announce them to the public, and then say that it has consulted the public.

There have been several articles in the media recently about Metrolinx's rather cavalier attitude to acquiring entire privately owned properties in Liberty Village for redevelopment, rather than just the amount of land needed for a station. I feel that Metrolinx has strayed far from its origins as an arm's length, impartial agency, and has become a highly politicized arm of a provincial government which is increasingly out of touch with local governance and due process.

Regards,

On Jun 30, 2021, at 11:06 AM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi

Thank you for following up. We are planning to locate a station entrance building on the southwest corner of the Osgoode Hall property, as announced during our Ontario Line virtual open house on June 17 and detailed on our [website](#).

For the fence surrounding Osgoode Hall, we will dismantle and reinstate the fence under the direct supervision of a qualified expert with knowledge and experience in metal and stone masonry. We commit to avoiding, to the greatest extent possible, impacts to the fence, striving to remove only the necessary portions. Before construction, protective hoarding, barriers, or material will be placed around portions of the retained fence, entrance gates and any landscape elements that will be preserved.

The project is in its early stages of planning, and we will be engaging with communities on these plans as we gather more details. We are also directly engaging with Osgoode Hall's concerned stakeholders and will continue to do so as project plans and designs progress.

Please do not hesitate to reach out if you have further questions.

Thank you,

Caitlin

Hi Caitlin,

I have reviewed the Cultural Heritage Report and the consultant's recommendations regarding the Osgoode Hall fence and gates (designated under Part 4 of the Ontario Heritage Act and part of a National Historic Site.

OLS-113

130 Queen St West

Project components are adjacent to OLS and may include New Osgoode Station

See attached pages from the report.

Would you please confirm whether the consultant's "preferred options" of avoidance will be followed (i.e. design the project to avoid the property), or whether Metrolinx has elected to pursue the "alternative options" of demolition and relocation?

Given the property's status as a National Historic Site, it is imperative that Metrolinx publically discloses its intentions now. Having seen the rendering published by Metrolinx of the proposed Osgoode Station building within the heritage landscape of Osgoode Hall, I fear that the "alternative options" have been selected without consulting the public on even the most basic massing and location of the station's design.

Would you please provide clarification on Metrolinx's current approach to the Osgoode Hall property? It's all very well to offer platitudes saying Metrolinx will work with heritage professionals and municipal heritage staff, but public disclosure of basic design intent is sorely missing on this project.

Thank you.

Jun 28, 2021, at 2:43 PM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi

Thank you for writing. We hear and appreciate your concerns about impacts to Osgoode Hall grounds.

We always strive to reduce or avoid impacts to these kinds of properties wherever possible. They're so important to the fabric of the city, and we know we need to do everything we can to preserve our stock of older buildings. Heritage properties are unique – depending on the recognition status, there are different requirements we must meet if we need to change these kinds of properties to accommodate new transit projects. We will continue to work with cultural heritage specialists and the City of Toronto's heritage preservation services to minimize impacts to heritage buildings.

We also completed a comprehensive inventory of heritage properties and cultural heritage landscapes for the initial Environmental Conditions Report, which you can view [here](#) on our website. The final environmental report for the Ontario Line, the Environmental Impact Assessment Report (EIAR), will also include a full Heritage Detailed Design Report (HDDR). The HDDR will give us a better understanding of the full range of anticipated impacts and associated mitigation options, including preservation or commemoration of impacted heritage properties.

All environmental reports are shared with the public and, as with any of our report findings, we'll seek community feedback on any plans. All feedback is recorded and factored into our project delivery plans wherever possible. We currently anticipate the final EIAR will be released in early 2022 for public review and comment.

Please don't hesitate to follow up if you have further questions and consider [signing up for our newsletter](#) to stay updated on the project, including the EIAR release.

Thank you,

Caitlin

Line Station (Optional): Queen

Subject: Osgoode Station: Preservation of Osgoode Hall heritage fence

Message:

I have seen a rendering produced by Metrolinx showing a proposed above grade station building at the northeast corner of Queen St West and University Ave. The planners at City of Toronto Heritage Preservation Services will have a lot to say about your cavalier attitude towards the Osgoode Hall wrought iron fence constructed in 1868. Only by destroying a large section of this heritage designated fence can you build the station building at the corner.

<https://www.osgoodehall.com/fence.html>

Metrolinx has prepared designs which ignore provincial heritage legislation and municipal planning policy.

Subject: Ontario Line transit corridor lands
Date: Friday, June 25, 2021 2:25:00 PM
Attachments: [image002.png](#)

Hello,

Thank you for reaching out to MPP Tabuns regarding the letter you received from Metrolinx. The MPP asked us to contact you with more information.

The letter you received was regarding transit corridor lands, which vary in size and are not limited to the location of the Ontario Line track route. To see the boundary of the transit corridor lands, you can look up your property [here](#); the boundary is labelled as the “Transit Corridor Lands + 30-metre buffer area” and shown in blue. The planned Ontario Line route is shown in maps [here](#).

Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. More information [here](#).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. More details [here](#). The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions or near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

If you would like a phone call to discuss the transit corridor lands or other questions in more detail, please reply to this email or book a time for a meeting with us [here](#). We thank you for your patience as our small team responds to a higher volume of inquiries than usual, and we look forward to speaking with you.

Please consider signing up [here](#) for our e-newsletter, and registering [here](#) for our June 30 virtual open house to learn more. The June 30 event will focus on area of the Ontario Line that will run along Pape Avenue and up to Don Mills & Eglinton. We also held an open house on June 24 that focused on the East Segment (the route along the rail corridor); you can watch the recording of that event [here](#).

Thank you again for reaching out to us,

Caitlin, Bismah, Daryl, and Sivahani
Ontario Line Community Relations Team

Hi Jackie,

Thanks for the reply.

Yes. A 30 minute call/zoom on Monday at 2:30 pm is do-able for me, but I have a hard stop at 3, as I have another meeting at that time. And I was thinking that the 30 minutes might benefit from being a zoom chat, as that would allow participants to "share screen" if/as needed, and being able to share visuals might be helpful -- just a thought -- and, yes, I have a licence and can send a zoom link as needed.

Thanks for the background on the "previously studied" route. Your comments appear to confirm that that "previously studied" route is no longer an option being considered, and that the project is now down to fine tuning the "go north up Pape" tunnel plans....if that is not the case, please advise.

And, just for clarity, I understand the need for a buffer zone around the transit corridor that bounds the actual tracks/tunnel/etc. I just don't understand how a need for a formalized 30m buffer becomes a need for hundreds of meters of formalized buffer down all the side streets all the way up Pape, and beyond. That is the cognitive dissonance between the conceptual "here's how we decide on the transit corridor and buffers" presentation of last evening, and the reality that is displayed on the transit corridor map. Hence my persistence in seeking to understand.

Thanks again -- and please let me know if I can contribute the zoom invite for the 2:30 conversation.

Subject: RE: East Segment Virtual Open House

Hi

Thanks for following up. We are currently working to update all the maps on our website to reflect the most up to date project plans, which is why the maps have changed over time as project plans and designs are refined.

The previously studied route shown in the map in your screenshot was an option we were studying during our last in-person open houses, in January and February 2020. By Fall 2020, we had adjusted the location of the tunnel portals near Gerrard & Carlaw, which allowed us to create a much straighter route up Pape Avenue. Later, in Spring 2021, we adjusted the location of the tunnel portals again when we switched from a plan to have the Ontario Line tracks "straddle" the GO tracks in the joint corridor to have them side-by-side instead. More about this adjustment [here](#). We are still revising all the maps on our Neighbourhood Updates pages to reflect this change. These route changes are separate, however, from the transit corridor land designation.

In terms of the size of the transit corridor lands, it varies along the Ontario Line, and are not limited to the location of the tracks. The link to the app in my previous email gives you a better sense of the width of the lands. I've taken your address at 59 Cavell Ave, Toronto, M4J 1H5, and it does appear to fall within the transit corridor lands.

I know the fact that the lands extending further than the track bed seems a bit confusing, but the transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas.

I'd be happy to pull together a 30min call with our Property team who are experts in this. It may be useful to have them walk through the rationale and answer any specifics you may have. Does 2:30pm Monday work? I can send an invite shortly if it does.

Also, a quick note that the June 30th virtual open house is now open for registration, and it will include the area around Pape station, should you be interested in attending. Details [here](#).

Best,

Hello Jackie,

Your email arrived just as I was dialing the general number provided last evening....thanks for following up.

Thanks for the explanation about the email – and I need to share with you that the address I used was off one of the website pages for info about the Ontario line. I understand the concept of the transit corridors; my question has always been “where the heck is the transit

corridor (plus buffer) that would overlap with my property?", as I am 100 m away from Pape, which is over 3 times the distance for a buffer zone.

I tried to find out information on the Metrolinx websites – no luck. What I did find was a map of the Pape South section of the Ontario Line, which shows an underground route going up Pape to Danforth and beyond – and then shows a second route, swinging over to Jones and then angling back through the neighbourhood to the Pape Station. I include my screenshot from earlier this week (included below), which I included in my email to your firm. This was on your website till Thursday morning, when it disappeared. It shows this second route (marked with a "1" in black circle) – and that route would pass directly under my home(!).

So **Two Questions:**

Question 1: Is this "previously studied" route now off the table and no longer in the plan? I want to assume that is the case, but given that it still shows on the Pape page of the North section (I include a screen shot, below), I need your firm to confirm this point, one way or the other.

Question 2: Assuming the Answer to Question 1 is that the "previously studied" route is no longer part of any plan, then please help me understand how my home (and the homes of my neighbours all the way to the far end of the block) are designated as being in the transit corridor and buffer area. I appreciate there is a different kind of general notice about roadway work, etc that seems to be being applied all the way past Jones and into the Pocket (which seems odd) – but from where I sit, there is no reason for my property to being designated as in a transit corridor and buffer zone. Can you shed some light on this – including some specifics, please?

Jackie, I hope you are able to answer tis questions for me – or, if they are not your questions to answer, that you can pass my inquiry along to whoever is able to answer them. Thanks in advance for your help in getting these matters clarified.

Subject: East Segment Virtual Open House

Hi

Thank you for joining us last night in the zoom room, and for asking your question!

The team has gone through our inbox after the meeting to ensure we didn't miss the email you had mentioned during the live session. We also connected with our colleagues who oversee the GO Transit portion of the line (torontoeast@metrolinx.com), who indicated that your email was sent to them rather than the Ontario line email inbox (ontarioline@metrolinx.com), which may be the reason you didn't get the right response. I've attached the chain just to make sure this is the issue you were referring to (transit corridor lands).

Here you can find the Metrolinx webpage that provides an overview of the Building Transit Faster Act (BTFA) regulations, and what this means for those who are within the Transit Corridor Lands.

<http://www.metrolinx.com/en/projectsandprograms/constructionanddevelopment/corridor-development-permit.aspx>

Also on this page, you can find a link to the App that allows you to search a particular address to determine whether (and where) it falls within the Transit Corridor Lands: https://maps.metrolinx.com/Third_Party_Coordination_Permitting/

If you have any other questions, please don't hesitate to reach out. We want to ensure there's no confusion about this designation and what it

means for you, and we're happy to set up a call with our property team to walk you through any outstanding concerns you may have if they weren't already answered during last night's session.

Best,

JACKIE CZAJKA

Attachments: [Joint Corridor Transit Corridor Lands.PNG](#)
[image001.png](#)

Hi

It was a pleasure to speak to you this morning and learn more about your family and your heritage home.

I want to reiterate that construction access is currently being planned to access the rail corridor through the main roads and not First Avenue. We are currently completing environmental studies and expect to share the first Ontario Line environmental report with your community this fall (September) followed by another one early 2022. Construction is anticipated to start mid-2022.

To view the virtual open house that took place on June 24, a replay is available [here](#). You can also review the associated presentation we delivered to the community [here](#).

The reason you received the letter is because transit corridor lands represent the areas where we may need to carry out activities to plan and build the Ontario Line project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries of the transit corridor lands extend further away from the planned route of the project in certain areas. More information [here](#). You can look up your address [here](#) to see the "Transit Corridor Lands + 30-metre buffer area" in blue. I attached a picture of this area around your home so you have some context.

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. More details [here](#). There is no fee to apply for a Metrolinx permit. If you are planning any of these activities, please visit metrolinx.com/permits or send an email to development.coordinator@metrolinx.com. The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies.

Construction is expected to begin in 2022, but the designation is meant to support both planning and construction, and planning for this area has begun. The designation will be added to title shortly, and the language is purely for informational purposes, similar to properties located in certain subdivisions or near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please let us know if you have any further questions, and consider signing up [here](#) for our e-newsletter,

Hope this helps and I appreciate your feedback on the public engagement/consultation thus far.

Have a good day,

Daryl Gonsalves

[image006.png](#)

Hi

I hope this message finds you well. Thank you for taking the time to speak with me last Thursday about the Ontario Line and the letter you received about the transit corridor lands.

During our conversation, you asked about possible impacts to or acquisition of your property at [REDACTED] Jarvis Street. I followed up with our property management team, and they confirmed that we do not anticipate any direct impact to your property at this time, and we do not anticipate needing to acquire your property.

You can find a map of the future Moss Park station and surrounding area (the closest station to your property) [here](#) on our website. I've also enclosed a screenshot of the map below that shows approximately where your property is in relation to the Ontario Line route. As you can see, the Ontario Line route (which is underground in this area) shifts a bit to the north as it passes Jarvis Street. The station entrance building is also located further east and north of Queen Street in Moss Park.

Hi

Following up on your discussion, seeing as your property is between the Ontario Line stations at Gerrard/Carlaw and Pape/Danforth, you may wish to find more information about the Ontario Line on the east and north segments of our [Neighborhood Updates Page](#).

Tomorrow evening at 6:30pm we are hosting a virtual open house for the north segment (Pape station to the Ontario Science Centre), for which you can register [here](#). The recording for a similar session we held last week on the east segment can be found [here](#).

I hope this helps, and please don't hesitate to let our team know if you require any further information.

Best,

Bismah

Subject: [REDACTED] Proposed Property Requirement

Without Prejudice

Dear Mr. Multani

I represent [REDACTED], the owner of the above-noted property.

My client was very distressed to receive your letter dated 21 June 2021 stating that a portion of her property will be required to support construction work on the Ontario Line. We cannot understand why Metrolinx would require the property for this purpose and propose to leave my client in such a state of limbo for years. This will have the effect of sterilizing the use and saleability of the property.

My client is in fact in the process of negotiating the sale of her house for \$1.25 million. The Metrolinx threat in your letter will kill that deal. We hold Metrolinx responsible for all damages that will result. [REDACTED] will not be able to sell the property for years unless Metrolinx either (a) resiles from the proposed taking, or (b) purchases the

property.

Please advise us immediately and in any event no later than this Friday which option Metrolinx will choose.

This email is intended solely for the addressee(s) and may contain privileged or confidential information. The sender does not waive any privilege, copyright or other rights. If you have received this email in error, please delete it and notify the sender of the error by reply email or otherwise.

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Hi

It is an interesting question to which I do not have full understanding of the history behind it.

The property line is defined by the existing fence/berm/retaining wall. It is not perfect as these items may have shifted around the many years they existed. For areas where we are exceeding our property lines, conversations are underway with the City and individual property owners.

For the trees, I am not aware of who planted them but I do know Metrolinx is responsible for any vegetation within the rail corridor/property boundary and we have our own [vegetation guideline](#) we follow. I also believe many of the trees in the existing corridor are invasive and the tree survey in the forthcoming environmental report will provide more details.

If you did not get a chance to attend our open house, we [provided more details](#) about how future retaining wall locations will unlock more green space for the community. There is a table on Slide 11 which provides the approx. numbers for your review.

Best,

Daryl

Hi Daryl,

Mx says it will do the work (mostly) inside the property lines. I am looking at other Mx maps and wondering how the Mx property came to include parkland and many mature trees planted 50-60 years ago as well as things such as the corner of a house at Paisley and Booth.

Did the City plant trees by mistake (Jimmie Simpson, Mcleary Park and Bruce Mackey) in the rail right of way? Was the house built over the R.O.W. 100 years ago? Or is Mx taking that land from parks? I get that houses will be expropriated just don't understand the property line discrepancies.

Hi

It was a pleasure to speak to your husband and yourself. I hope you got to work in time.

As promised, [here](#) is the east virtual open house link to replay the video or view the [presentation](#). I also mentioned to your husband the roll plan can be viewed [here](#).

Metrolinx completes a series of business cases to enable government to make decisions that are informed by the best available evidence. Our goal is to ensure the best possible ridership while minimizing impacts on homes, businesses and communities. Once we identify which communities the line will serve, we're able to then reach out to them to start discussing any impacts and how we'll solve for them. Thanks to the feedback from local community groups in your area, we have found even more creative ways to avoid construction activities in the parks within your community.

When determining the Ontario Line's Route and elevation, planners balanced considerations like:

- How many people could be served,
- How much travel time could be saved
- How many connections could be made to other major rapid transit lines
- How quickly and effectively the line could be built to bring relief faster to the network
- How effectively any local impacts could be managed, and
- How to ensure maximum transit benefits within the approved budget

I know you also mentioned the Eglinton line and why different alignment decisions were made. I want to say it's not about choosing one neighbourhood over another. We have a unique opportunity here to make use of a space that we already own, where trains are already running and where GO Expansion work was already planned. We're able to streamline the Ontario Line work into the same place, meaning we're not spreading out across multiple construction areas in the community. Where there's an opportunity like this, it makes sense to take it – especially when we have so many solutions available to us that will effectively manage any impacts. Tunneling the Ontario Line through this area would delay completion between 15 and 24 months – also adding to the length of time neighbourhoods would be disrupted by construction.

Again, thanks for taking the time to chat and I do recognize your advocacy and feedback on a tunneled alternative,

Feel free to reach out should you have any further questions,

Hello,

My wife and I just moved [REDACTED]. I watched your meeting from last Thursday about where the train tracks would go.

I've attached a screen clipping from the video. I was wondering whether or not our property is in the yellow zone that it would have to be acquired (in picture: "potential lands required")

Because we just moved here, I don't know if the previous owner was informed of anything.

Could you please let me know.

Thank you.

[image001.png](#)

Hi

Due to your request, the team has added property lines to the rollplot (see attached).

I checked in with our property team again on that specific retaining wall in Jimmie Simpson Park. They are still figuring it out with City staff and do not have an answer yet. I will update you when I hear something.

For the trees, if they fall within the existing fence, they are most likely Metrolinx trees. The forthcoming environmental report this fall will provide more details regarding the extent of tree removals.

Hi Daryl,

Just following up from several weeks back. Has Metrolinx determined where the property lines are and specifically who owns the retaining walls and trees that appear to be in Jimmie Simpson Park? And similarly on the opposite side, who owns the trees in Bruce Mackie Park?

Thanks,

[REDACTED]

Hi

I inquired internally on your question of ownership of that specific retaining wall. Right now, we are investigating who is responsible for it and I will send you a note when I hear back. There was talk that it might be leftover from the old Grand Trunk Railway.

As part of the upcoming noise/retaining wall consultation, we are working with our construction team to develop a video detailing the construction sequencing for the T-wall retaining system. This will help the community understand the 'look and feel' of this work.

Best,

Daryl

Morning [REDACTED],

I hear you. Invasive trees still provide oxygen and shade despite their impacts to biodiversity

and local ecosystems. In the vegetation guideline I linked previously, we have a section on invasive species (page 39).

I know the wall you are talking about. Unfortunately, I cannot provide an answer at this moment until the tree impact analysis is complete and shared with the community in the forthcoming environmental report this fall. We specifically used a T-wall construction method for the retaining wall because it minimizes impacts to trees. The report will provide details on trees that will be protected and those that will be removed/pruned.

Best,

Daryl

Thanks Daryl,

1. For the record, "invasive species", from a health standpoint still provide oxygen and much needed shade and (as I am sure you would agree) are far better than no trees when tackling climate change. The birds certainly do not discriminate.

2. More specifically, there is a very old retaining wall along the west boundary of JS Park. I presume this is the property line as you mention below. When the tire factory was converted to a park, trees were planted on the east side of the wall. I believe they are about 50 years old, providing shade, co2 sequestration, noise and visual screening. They run between JS rec centre and Paisley Ave. Will those trees be removed? Have they been identified as "to remain" in any reports?

Hi

It was nice to talk with you on the phone. You can see a map of the planned tunnel underneath Pape Avenue [here](#). The map of the planned station at Gerrard & Carlaw is [here](#) (click on "Gerrard").

As I mentioned, transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. More information [here](#).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate resident plans with Ontario Line plans by asking residents to reach out to us prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. More details [here](#). The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions or near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please let us know if you have any further questions, and consider signing up [here](#) for our e-newsletter. You can also view recordings of our recent virtual recent open houses [here](#). The segments you might be most interested in are the East segment (which includes Gerrard station) and the North segment (which includes the tunnel along Pape).

Thanks,
Sivahami

[image005.png](#)
[image006.png](#)
[image009.png](#)

Hi

Thank you for your follow-up letter. The [online interactive map](#) is the map of the transit corridor lands. We developed the map in this interactive format so residents could look up their addresses and zoom in or out on their area as needed. We have attached a screenshot of your address as it appears on the map.

Please note that letters were sent to addresses based on Property Identification Numbers (PINs), and your property's PIN was confirmed to be in our database of properties located within the transit corridor lands. This means that the transit corridor land designation does apply to your property during the construction of the Ontario Line.

The Order In Council (OIC) will be published publicly, which we are working towards. We can follow up with you and share it once notices are registered on title, and the OIC is indexed. For reference, the Ontario Line OIC will be nearly identical to the OIC published for the Scarborough Subway Extension, which was one of the priority transit projects under the *Building Transit Faster Act, 2020*: <https://www.ontario.ca/orders-in-council/oc-3932021>

If you have further questions, we would be happy to schedule a 30-minute call/video call with our property team who are experts in this. It may be helpful to have them walk through the rationale and address any concerns or answer any specific questions you may have. Please let us know if this is something you're interested in, and we can propose some possible dates and times to connect.

Thank you again for writing.

Sincerely,

Caitlin

On Fri, Jun 18, 2021 at 3:49 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi ██████████

Thank you for following up. Please accept my apology for the delay in responding.

The boundaries for transit corridor lands were set by looking at the existing infrastructure in the area, the route and design of the transit line, and how the project is to be built – factors that are unique to each transit line. This work was conducted by technical teams at Metrolinx and the Ministry of Transportation. An additional 30-metre buffer zone was then applied around the transit corridor lands. The transit corridor lands were then designated through a provincial Order in Council.

For the Ontario Line, that Order in Council was signed on June 3, which is when the new conditions come into effect. Addresses were obtained from municipal tax assessment roll information, which were pulled for the transit corridor lands. We can confirm that your property at ██████████ Street does fall within the boundaries.

The notice of designation will appear on a title search, which could be conducted by the buyer's lawyer as part of the sale process. It is important to note that other notices commonly appear on property title, and they are just meant to be informational. It is not intended to implicate impacts related to construction, but rather simply notify the future resident that you are within proximity to transit.

Please note that properties that fall within either the designated transit corridor lands or the additional 30-metre buffer are subject to the same requirements. There is no difference in the language that goes on the notice on title or the permitting requirements for properties that fall within the designated transit corridor lands vs. properties that fall within the additional 30-metre buffer.

Thank you again for writing. Should you have further questions, please do not hesitate to contact us.

Sincerely,

Caitlin

Hi Jamie,

Thank you for reaching out with the attached letter. We can confirm that your property does fall within the designated transit corridor lands, as indicated on the map in the screenshot in the attached letter.

I would also like to follow up on our conversation via phone on Monday and the questions raised about the notice on title. The notice on title is a standard legal document and cannot be amended on a case-by-case basis. The notice will reference the Order in Council that designated the transit corridor lands and indexing number.

As discussed, the transit corridor lands designation is similar to other types of notices that commonly appear on property title, such as those that live in an airport zone. The notice of transit corridor land designation is strictly meant to be informational and does not prevent you from renting, leasing, or selling your property. The notice on title will be removed once construction of the Ontario Line is complete.

Thank you again for writing. Please do not hesitate to contact us if you have any further questions.

Sincerely,

Caitlin

Hi

Thank you for reaching out. Please accept our apology for the delay in responding.

Regarding Ontario Line exact construction timelines and anticipated impacts, the Project Company (PCo) selected to build the project in this area will finalize the detailed designs and construction methods based on our specifications, so we do not have further details at this time. We anticipate a PCo will be selected in 2024 for the Northern Civil, Stations and Tunnel procurement contract, which covers this area.

Our upcoming full Environmental Impact Assessment Report (EIAR) will also detail anticipated impacts and mitigation measures for the construction and operation of the Ontario Line. We anticipate the draft EIAR will be released in early 2022, and it will be open for public review and comment. Feedback received on the draft EIAR will be factored into the final report. You can find more information about the EIAR and our environmental assessment process [here](#) on our website. We will also announce its release and any other project milestones or announcements in our [e-newsletter](#).

Please do not hesitate to reach out if you have further questions. Thank you again for writing.

Sincerely,

Caitlin

Hi [REDACTED],

Thank you very much for following up. We have recently confirmed that there is no longer a need to acquire [REDACTED] Pape Avenue after refining project plans. While the Ontario Line tunnel will still run underneath the property, there is no need to acquire or expropriate it.

I also want to note that we have just released the draft Environmental Impact Assessment Report (EIAR) for the project. You can read more about the report, the studied impacts (during both construction and operations) and measures Metrolinx and our contractors can use to reduce impacts [here](#) on our website.

Along with the release of the draft EIAR, registration is now open for upcoming virtual open houses where you can hear from project experts and ask your questions about the report. Two of each focus on different geographical segments of the Ontario Line route. The first two cover the Pape area:

- [February 22, 2022](#) - Science Centre to Gerrard
- [February 24, 2022](#) - Science Centre to Gerrard
- [March 1, 2022](#) - Gerrard to Exhibition
- [March 3, 2022](#) - Gerrard to Exhibition

I hope this information is helpful. Please do not hesitate to reach out with any questions.

Kind regards,

Caitlin

Hi Caitlin,

Is there an update for a plan for the medical building at [REDACTED] Pape Avenue? Will the tenants there be expropriated?

We have heard from other businesses along Pape of expropriation but have not heard if our business will be affected or not.

Of course this information is important for the medical professionals in the building, continuity of care and in limiting interruptions for our patients.

How do we find out how and if our businesses will be affected by the metrolinx project/construction?

Any insight is appreciated.

Thank you,

Hi [REDACTED]

Thanks for your follow-up.

I know which area you are talking about. I can confirm that parcel of land is beyond the Metrolinx property boundary and requires consultation/direction with the City. Right now, we have plans to deliver new park space on the west side of the bridge like you see below. I will relay your message to the project team for consideration however, it may be worth it to note that it is unlikely to fit into the project scope due to timelines, compacity and construction impact.

Feel free to reach out with any further questions,

Daryl Gonsalves

Hi Daryl

Thank you for your reply!

I understand what you are saying in terms of that stretch of asphalt being city property. There is a small slice of greenspace between truncated Gerrard and the rail bridge (pic below for reference). What I am hoping is to simply have that greenspace expanded to cover over truncated Gerrard, creating a new park. Is all that land owned by the city? Would it be possible for Metrolinx to coordinate with the city to develop this space as the Ontario Line is being constructed? I have attached Nicolas Valverde, our neighbourhood's contact at Paula Fletcher's office, to this message in the hopes that some coordination between the levels of government can occur and this chapter on that small slice of Toronto rail and street history can be closed with a happy ending.

Hi [REDACTED]

Thank you for your continued advocacy on this subject. I do appreciate how well you crafted the document and I love the history you included. I frequently walk/drive past that area and I understand what you are referring to – it is confusing and odd to have it laid out that way. I can see how it leads to traffic that should not pass by there.

In terms of the Metrolinx work in the area, we will be working on the rail bridge and the [future Ontario Line station at Gerrard](#). Although we will be impacting the dog park, we will be converting land just south of the park to restore and expand the Gerrard Parkette when the Ontario Line is completed (see 'Gerrard' drop down). As part of Ontario Line plans, we will be building continuous noise walls to reduce the sights and sounds of the rail corridor. The area you are referring to is unfortunately City land that we simply do not have jurisdiction over – this belongs entirely to the City and they ultimately will decide what happens to it.

If you do have any questions about the Ontario Line plans, feel free to reach out anytime.

Have a great weekend,

Daryl Gonsalves

Hello

I am a resident of Leslieville near Gerrard and Carlaw and our neighbourhood has been trying to work with the city on solving an issue for 10+ years. In my most recent communication with Paula Fletcher's office, they suggested that this issue might be resolved as part of the Ontario Line construction. This is an opportunity for Metrolinx to create more greenspace in our neighbourhood and solve a misdirected traffic issue that has been ongoing since 2007. You guys could be heroes! For a detailed description of the history of this issue please see the attached document. I have gathered 20+ emails of my neighbours who I regularly update on this issue. I also created a Facebook page to document the ongoing misdirected drivers, despite the city's efforts to solve this issue.

Please start with the attached document. One correction I need to make (this will make sense after you read it) at the end I infer that the residents of truncated Gerrard will "lose" their frontage. As one of those residents pointed out, they would NOT "lose" their frontage, their frontage would simply be extended to straightened Gerrard St E.

Here is a link to the Facebook page:

<https://www.facebook.com/WhyTwoGerrards>

Here is a link to the discussion and show of support from City Council on this issue. One correction here, they state this section is "Gerrard Street between Carlaw Avenue and Badgerow Avenue". It's actually between Carlaw Avenue and Boston Avenue (although most of the misdirected drivers do end up on Badgerow).

http://app.toronto.ca/tmmis/viewAgendaItemHistory.do?item=2019.TE8.73&fbclid=IwAR1Z0nm54p7A0tebVd55w0NA_O5UKIvyHY8iZwzcT-kWkkNZyZ7UXTlVw8

On the Facebook page you will find MANY videos of misdirected drivers who ignore all the signage. Here are links to the most recent. This was just a couple of weeks ago, but this type of thing is a regular occurrence:

<https://www.facebook.com/WhyTwoGerrards/videos/509372763611798>

Hi

You can view the June 24 presentation [here](#), including the appendix which has noise/retaining wall renderings. You can also click [here](#) to view the Ontario Line Roll Plot – a technical drawing of Ontario Line and GO Expansion plans. This drawing in particular helps provide a visual to your question about the future station at Queen Street East.

You had some questions and I collected some answers from my colleagues:

- We have reached out to the Ontario real estate associations TREB and OREA when implementing the designation notice. We do not anticipate negative impacts to property value. That said, real estate values are very subjective and in some cases, people value being closer to transit.
- The statutory authority that enabled the designations on property titles was the Ontario Ministry of Transportation. The legislation itself was the [Building Transit Faster Act](#).

I also attached a picture of the transit corridor land looks like near your home.

Best,

Daryl

Hi

Thank you for reaching out. Building a subway through such a densely populated urban area is a challenge, but we're committed to keeping people moving during construction. Our top priority is maintaining safe access for all.

We'll be working with communities, local BIAs, elected officials and the TTC on plans to maintain safe access to local stores and businesses with robust safety measures and frequent communication. These plans will involve:

- avoiding or minimizing impacts to existing transit services as much as possible;
- communicating early and often about any temporary impacts to roadways and transit lines;
- looking at other projects that may be taking place to see how they might affect our plans;
- ensuring communications about any changes are clear and highly visible across many different channels.

We currently anticipate construction will begin as early as 2023 for the south portion of the Ontario Line from Exhibition to the Don Yard portal (west of the Don River) under the Southern Civil, Stations and Tunnel procurement package. You can find the projected timeline [here](#) on our website. Please also note that the delivery timeline will be confirmed through the procurement process.

You can also find more information about the Queen-Spadina station and surrounding area [here](#) on our website.

Please consider signing up for our e-newsletter to stay updated on the project, and don't hesitate to reach out if you have further questions.

Thank you,

Caitlin

Will the project along Queen St W at Spadina destroy the street like Eglinton Ave has been for the past 8 years?

Hi Bismah,

Well, I disagree. The map shows the OL passing under or very near to under the extreme Eastern corner of [REDACTED]. Please confirm.

image.png

Also 20-30 m down is nice but I have been in buildings in town where we feel the passing of the subway. It is of concern.

Thanks & Cheers,

[REDACTED]

Good afternoon [REDACTED]

I apologise for the delayed response as I checked in with our project team on your inquiry.

I can confirm that the Ontario Line alignment is not anticipated to travel underneath [REDACTED]
[REDACTED] In case you haven't seen it yet, we updated the maps on our website last month and this one shows the Ontario Line route from Osgoode to the Don Yard which I think may be helpful to you: https://www.metrolinxengage.com/sites/default/files/downtown_overview.jpg It is important to note that in this area the Ontario Line tunnels will be approximately 20-30m beneath the surface.

Additionally, you can find here the recordings of the virtual open houses we have held this year which outline the plans for this segment of the Ontario Line and may address other questions you have: <https://www.metrolinxengage.com/en/ontarioline/live>

I recognize that the work of building transit can be disruptive, and I would like to share that Metrolinx is committed to minimizing and managing the effects of noise and vibration of the Ontario Line on its neighbours – during both construction and operations. As a part of the Environmental Impact Assessment Report (forthcoming early 2022), a detailed noise and vibration assessment will be completed for the Ontario Line to ensure that potential impacts are identified, and appropriate site-specific mitigation measures are in place. These commitments will be carried forward into constructor contracts. Construction noise mitigation measures may include but won't be limited to performing construction during daytime hours where possible, using equipment compliant with noise level specifications from the Ministry of Environment, Conservation and Parks, and siting construction vehicles and construction laydown and staging areas away from sensitive locations where possible. Other practical steps we take to reduce noise and vibration in residential areas include fitting equipment with muffling devices and coordinating construction schedules so that noisy operations do not occur simultaneously. These mitigation measures will be refined and updated as project planning progresses.

In regards to your question about the park and library, the province is pursuing a transit-oriented community proposal which you can learn more about [here](#).

I hope this helps address your questions, but please don't hesitate to let me know if you need any further information or want to set up a call to discuss further.

Best,

Bismah

Hi [REDACTED],

Thank you for your question, and sorry for the delay getting back to you.

In short, [REDACTED] is not expected to be needed for the Ontario Line. The tunnel in the area around Pape & O'Connor will be around 15-20 metres deep and directly underneath the Pape Avenue roadway, so it will not pass below [REDACTED]. (For context, most home basements & foundations are about 3 metres deep.)

We will have more information about construction timelines and impacts as designs are finalized. This segment of the line is part of a later package of work than the downtown segment, so we are further behind in planning stages. Construction of the tunnel is expected to begin in 2024/2025, but you may not see or hear any construction around O'Connor until 2026, depending on scheduling. As soon as we know more, we will share that information on our website and in public open houses.

Please let us know if you have any further questions, and please consider signing up for our e-newsletter [here](#) if you haven't already.

Thanks,
Sivahami

Hi [REDACTED],

According to our records, [REDACTED] Lynn Williams is listed as the registered owner of several other properties [REDACTED]. The address that received the notification letter might not be within the designated lands because we issued them to owner addresses. Hence, it is likely that another property or properties owned by [REDACTED] fall within the transit corridor lands, as the building at [REDACTED] Lynn William Street does not. You can see the transit corridor lands and look up specific properties [here](#) on our online interactive map.

We can confirm that we did not issue a notification letter to [REDACTED] Western Battery Road, as this property does not fall within the transit corridor lands for the Ontario Line.

Please do not hesitate to reach out if you have any further questions.

Thank you,

Caitlin

Hi Bismah:

Thanks so much for all this info. It is appreciated. Do you mind if I share with others in our building?

Tue, 13 Jul 2021 at 13:19, Ontario Line <ontarioline@metrolinx.com> wrote:

Hello

Hope this email finds you well.

My Metrolinx colleague Mike Winterburn passed on that you inquired with him about the Ontario Line subway passing beneath your condo building at [REDACTED], and I'm happy to share some information to address the questions you posed.

According to current plans, while the Ontario Line tunnels will run below [REDACTED] there are no anticipated impacts to the condo building itself. We anticipate in this area that the Ontario Line tunnels will travel 20-30m beneath the surface, with the exact depths to be confirmed as project planning progresses.

You may already be aware, but Corktown Station will be constructed on the site where the Staples is located, just north of Front street. The site just south of Front street, between Berkeley Street and Parliament Street, commonly known as the First Parliament site, will be used to support the construction of Corktown Station and tunnelling activities associated with the Ontario Line project in order to reduce community impacts and keep construction off the street.

In terms of timelines, we anticipate early works in this area to begin this fall. [Corktown Station early works](#) will include the demolition of existing buildings on both the north and south sites, removal of structures and asphalt, decommissioning of utilities and soil removal and/or remediation where required. These early works are being advanced to prepare the site for archaeological assessments and future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station. The main contract work – tunneling/underground construction activities and Corktown Station construction – is anticipated to start in 2023. The assessment of project operations and construction of Corktown Station and other project components will be outlined in the Ontario Line [Environmental Impact Assessment](#) Report planned to be released in early 2022.

In case you missed it, we held a virtual open house last month where we shared details about the Downtown Segment, including Corktown station. You can find the recording for that event [here](#).

I hope this helps, but please don't hesitate to reach out if you have any further questions.

Best,

Bismah

Subject: RE: Aug 9 & 10 Pape & Fw: ASAP re Re: Questions re impact on construction zone property

Hi [REDACTED],

Thank you for your email and follow-up.

We just now learned that the work that was scheduled for August 9 and 10 has been postponed to August 16 and 17. We will distribute new notices next week sharing this updated timing. The work will still be overnight – this was a requirement that came from the City of Toronto when we applied for permits to do the work, in order to reduce traffic impacts.

Unfortunately, the permitting process has a very tight turnaround at the City of Toronto, so we sometimes don't receive confirmation of the approved start date until 3-4 business days in advance, at which point our goal is to print and distribute notices to the community at least 2 business days in

advance. We also post notices online [here](#) and in our e-newsletter. The tight approvals process also means that sometimes work is postponed on short timelines as well.

I'm sorry I don't have more specific details about the exact timing of the overnight work at . The workers will do everything they can to make the work go as quickly and efficiently as possible, with as little disruption as possible. I will seek an update about how the August 16 work went so that I can give you an update on August 17.

Please let me know if you have any further questions.

Thanks,
Sivahami

Hello Sivahami or to Whom it may concern,

Further to my earlier response today, regarding the overnight work requiring construction equipment at Pape and Bain on Aug 9 & 10. Can anyone tell us HOW MUCH of the night(s), and WHAT TIME this will be happening at [REDACTED] SPECIFICALLY?

Between us my husband and I have 5 medical appointments, including heart and major dental surgery, Tuesday to Thursday Aug 10 to Aug. I needed to schedule work on a tree at risk of significant damage. We are both seniors. I fear for the impact on us of the overnight disruption for 2 nights of the week.

Please pass this along to anyone who can be more specific than was the astonishing notice sent to us only yesterday of "Overnight investigative subsurface work along Pape Avenue".

Thanks,

[REDACTED]

To: Ontario Line <ontarioline@metrolinx.com>

Subject: ASAP re Re: Questions re impact on construction zone property

You have responded with a fine email. Thank you. However, it coincided with a notice we received only yesterday from Metrolinx about construction work overnight on our street from 9pm to 5am this Monday and Tuesday Aug 9 and 10. I strongly object and have questions.

The work is "digging trenches and test pits *in sidewalks and roads*". I assume this means drilling. In any case it is unacceptable on such short notice during COVID when options for accommodations are limited (e.g. budget booking at universities is unavailable) to conduct such work in precisely the hours recommended for healthy sleep - rising and going to bed with the sun.

I do not have the means or the desire to pay for hotel accommodation, which is expensive, nor do I want to wait until 9 pm to see what is "noticeable", that is when I normally fall asleep. Authorities recognize **IT IS NOT POSSIBLE TO "MAKE UP" SLEEP.**

The staff at Community Relations to whom I was referred at the notification number confirmed there would be **drilling**. He said the contractor, Plainview Utilities, said the noise level would be **85 decibels. Is this an accurate report?** As I replied, a quiet air conditioner runs at 50 to 60 decibels, so the decibel number for drilling into concrete as per the notice does not seem credible.

Another question is how it was determined that the intersection of [REDACTED] (and the other sites along Pape) was too busy for this work in the daytime. We live here and there has been daytime work before at our intersection, I believe by Metrolinx, during the day. There was extensive daytime infrastructure work at Pape and Danforth this spring and summer. My health is very important to me. Were residents consulted?

I called to find out when Metrolinx could confirm the work will be taking place Mon and Tues 9 pm to 5 am as stated, since "work may be delayed or rescheduled due to inclement weather or unforeseen circumstances". The "Duration" is "2 nights". Apparently a further update is expected? I was told I would "notice" it. Why should it be up to residents to leave their homes as needed when they might normally be asleep?

What is Metrolinx offering to offset this disruption?

Regards,

From: Ontario Line <ontarioline@metrolinx.com>

Sent: August 5, 2021 11:40 AM

To: [REDACTED]

Subject: RE: Questions re impact on construction zone property

Hi [REDACTED]

Thank you for your email, and sorry for the long delay getting back to you.

We don't expect there to be impacts to your property at [REDACTED]. The tunnelling in the area will be deep underground and situated underneath the Pape Avenue roadway. You can see maps [here](#). Construction on the tunnel portal near Gerrard & Carlaw will begin in 2024/2025, and then the tunnel will be built northwards from there. The tunnel boring machine will move underground at a rate of about 10-15 metres a day, so if you hear noise from the boring machine as it passes Bain Avenue, it will last a few days.

To prepare for the tunnel construction, there may be some advance utility relocation work along Pape, which could potentially have some temporary traffic implications for Bain Avenue if utilities need to be relocated at Pape & Bain – we will know more once we complete surveying and mapping the locations of the utilities and know which intersections will require that kind of work.

Examples of mitigations for construction work are listed in the [Noise & Vibration study](#) released in fall 2020 as part of the [Ontario Line Environmental Conditions Report](#). A full Environmental Impact Assessment Report, which will incorporate additional studies, will be released in January 2022 for public review and input.

Please let us know if you have any further questions, and consider signing up for our e-newsletter [here](#) if you haven't already.

Thank you,
Sivahami

Hello Caitlin,

Thank you for your reply.

Would you have an estimated date when the Ontario line might start construction and when it might be finished?

Thank you,

[REDACTED]

On Thu, Jul 22, 2021 at 5:18 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thank you for writing. Please accept our apology for the delay in responding. We hear your concerns about the transit corridor lands designation and appreciate your feedback. We hope to provide some additional context to clear up any confusion.

Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information at [Metrolinx.com/Property](https://www.metrolinx.com/Property).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us for a no-cost permit prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. You can find more information at [Metrolinx.com/Permits](https://www.metrolinx.com/Permits).

The notice of transit corridor land designation is strictly meant to be informational, similar to properties located in certain subdivisions or properties near an airport, and does not prevent you from renting, leasing, or selling your property. The notice will be removed from the title after construction of the Ontario Line is complete.

Please do not hesitate to reach out if you have further questions. You can also book a meeting (via phone or Teams video call) with one of our team members [here](#) on our website and sign up [here](#) for our e-newsletter to receive regular project updates.

Thank you again for writing.

Sincerely,

Caitlin

Hello Ms. Di Giovanni,

Thank you for the letter regarding the Ontario Line and Transit Corridor Land Designation under the *Building Transit Faster Act, 2020*.

I look forward to using the Ontario Line when it is built and think it a necessary part of Toronto's transit development plans.

Please note that I do not wish to have a note listed on my property land registry especially when the Ontario Line is years away from shovels in the ground. I believe this note would restrict my ability to sell should I wish to, and impact resale value.

Also, I have a question with regard to restrictions on renovations - there is a building on the north east corner of Pape and Dingwall with three attached garages which have generated numerous local complaints due to their run-down nature and vermin sightings. With the new restrictions you are proposing, will it be possible to renovate this property at all??

Please advise, with thanks,

[REDACTED]

Hi [REDACTED]

Thank you for your question, and sorry for the long delay getting back to you.

Metrolinx has not finalized plans for the station at Cosburn & Pape, and we have not acquired or demolished any properties for the project in the area. The demolition of the plaza is unrelated to the Ontario Line.

The section of the Ontario Line along Pape Avenue is part of a later package of work than the downtown section, so we are not as far along in design and planning. For Cosburn, we expect to know more about exact station details and impacts by the end of 2023, but of course we will share information earlier than that if we are able to. Construction is expected to begin in 2024/2025.

Please let us know if you have any further questions, and consider signing up for our e-newsletter [here](#) if you haven't already.

Thank you,
Sivahami

Hi [REDACTED],

It was a pleasure speaking to your husband and you last week. I understand the project has caused some anxiety for your family and I do apologize. As we move forward, please reach out with any questions you have so we can keep you updated with the latest information we have available.

I followed up with our property team and a property impact letter was sent to your condo corporation on June 21, 2021 via registered mail. I also followed up with [REDACTED], present of First Avenue Condos to make him aware. [REDACTED] will be connecting with our property team who will provide more details and answer any questions.

I want to ensure you folks are aware as I committed to keeping you updated on this.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Hello

Hope this finds you well.

Apologies for the delay in getting back to you on your questions about any impacts to your property at [REDACTED] as I checked in with our project team.

As we discussed over the phone, Metrolinx has a built in a number of mitigation measures into the Ontario Line program to ensure heritage homes and attributes are handled with the utmost care. All known or potential heritage properties were evaluated and catalogued in our [Cultural Heritage Report](#) that was released in 2020. [REDACTED] is documented in the Cultural Heritage Report under the reference number [REDACTED].

As a part of the Environmental Impact Assessment Report (forthcoming early 2022), a detailed noise and vibration assessment will be completed for the Ontario Line to ensure that potential impacts are identified and appropriate, site specific, mitigation measures are in place. These commitments will be carried forward into constructor contracts. These commitment includes vibration criteria for heritage homes specifically. In addition, prior to any construction commencing, the constructor must demonstrate to Metrolinx how they will comply with these limits, including details on mitigation measures to be employed. This will all be documented in the constructor's noise/vibration management plans that will need to be review and approved by Metrolinx.

As we discussed, you can find here the recordings of the virtual open houses we have held this year which outline the plans at Moss Park station: <https://www.metrolinxengage.com/en/ontarioline/live>

I will give you a call later today to ensure your questions were addressed here.

Best,

Bismah

Hi

Great chatting this morning.

Please see here for the [replay](#) of the June 24 open house. The presentation can be viewed [here](#). In the presentation, you will find updates about the neighbourhood parks, construction access to the rail corridor and renderings in the appendix for what the retaining/noise walls could look like.

We also have made the technical drawings available [here](#). In cyan, you will see the proposed locations of the retaining/noise walls.

Feel free to reach out should you have any further questions,

Hello [REDACTED],

Thank you for your email about the Ontario Line station serving Moss Park.

When planning station and station entrance locations, our project teams study how to minimize community impacts, improve transit connections for customers, speed up delivery, and reduce building costs and risks. While the Relief Line South plan originally contemplated the tunnel and this station being underneath Queen street in this area, TTC and the City of Toronto were investigating relocating the station under Moss Park as it was determined that in-street construction would have a significant impact on the community due to the construction impact on the roadway and transit and traffic network. Shifting the tunnel and station off the street allows for an open cut excavation and construction approach within Moss Park which minimizes the construction impact and footprint, reduces costs and compresses the construction schedule.

I'd like to note that Metrolinx has built in a number of mitigation measures into the Ontario Line program to ensure heritage homes and attributes are handled with the utmost care. All known or potential heritage properties were evaluated and catalogued in our [Cultural Heritage Report](#) that was released in 2020.

As a part of the Environmental Impact Assessment Report (forthcoming early 2022), a detailed noise and vibration assessment will be completed for the Ontario Line to ensure that potential impacts are identified and appropriate, site specific, mitigation measures are in place. These commitments will be carried forward into constructor contracts. These commitment includes vibration criteria for heritage homes specifically. In addition, prior to any construction commencing, the constructor must demonstrate to Metrolinx how they will comply with these limits, including details on mitigation measures to be employed. This will all be documented in the constructor's noise/vibration management plans that will need to be review and approved by Metrolinx.

I hope this helps, and please don't hesitate to let me know if you have any further questions or concerns,

Bismah

Hi

It was a pleasure to chat with you this afternoon.

As discussed, [here is a link](#) to the technical drawings of the Ontario Line at this point of the design process. I zoomed into the area of your home below. As you can see below, the laneway looks to still exist after construction will complete. That said, design is still ongoing so this could change.

I also want to draw your attention to a presentation we showed the public on June 24 found [here](#). In it, we detail how we will access the rail corridor through the main streets to avoid impacts to local roads. There is an access route via Dundas Street East to the rail corridor behind the laneway as seen the second picture below.

Feel free to reach out should you have any further questions,

Hi [REDACTED]

Thank you for your question, and sorry for the delay getting back to you. We did study crossing at the Millwood (Leaside) bridge but found that it was not feasible for a few reasons.

First, the Leaside Bridge was originally built to potentially handle a streetcar line, but instead, it was expanded to accommodate an additional two lanes of car traffic. We found that the way that the bridge was built and widened means that it can not accommodate the additional weight of a subway train, which would already be heavier than the intended streetcar. At the same time, we looked into adding a separate Bloor Viaduct-like track below the bridge as you suggest, but found that the footing of the bridge and the way it is built into the valley wall would make for a very complex and potentially unsafe construction approach.

Separate from construction issues, we also found that the curve of Pape Avenue leading to the bridge would require the subway tunnel to curve in a way that would reduce train speeds and also increase noise and vibration impacts to residents. Most noise from trains (which we are working to minimize) is caused when the train interacts with the tracks at curves – that's when the train wheels lean into the sides of the tracks. We try to reduce noise at curves by making them as wide as possible, but that also slows the train down. So the best solution for both speed and noise is usually to keep the route as straight as possible.

Please let us know if you have any further questions, and consider signing up for our e-newsletter [here](#) if you haven't already.

Thanks,
Sivahami

Subject: Don Valley/Millwood crossing
Message:

I am curious as to why a stand a lone bridge or crossing is being proposed for the Ontario line and is not making use of the Millwood bridge. It seems to be wide enough to accommodate the Ontario line on the surface As it is three lanes in each direction and never congested. If I am wrong in this assumption that the traffic load could be accommodated with two lanes in each direction could the Trains or the pedestrian and bicycle's be shifted onto the box beam underneath the Millwood bridge Similar to Bloor viaduct at much less expense then building a standalone bridge for trains.

To: [REDACTED]
Subject: Follow-up on our call about Transit Corridor Lands
Date: Friday, July 23, 2021 9:27:00 AM
Attachments: [image001.png](#)

Hi [REDACTED],

Thank you for our call this morning.

You can view maps of the Ontario Line route in the maps [here](#). However, as we discussed, the size of the transit corridor lands vary along the Ontario Line, and are not limited to the location of the tracks. You can look up your property [here](#) to see the boundary, labelled as the “Transit Corridor Lands + 30-metre buffer area” and shown in blue.

Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. More information [here](#). The language going on the title is purely for informational purposes, similar to language on title about easements or rights-of-way, or notes for properties located in certain subdivisions or near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. More details [here](#) and [here](#). You can email development.coordinator@metrolinx.com to discuss your planned project and see if we need further information before next steps.

Please let us know if you have any further questions, and consider signing up [here](#) for our e-newsletter.

Thanks,
Sivahami

Hi [REDACTED],

Thank you for your email.

Construction for the [North segment](#) of the Ontario Line is expected to begin in 2024/2025, but work along the rail corridor south of Gerrard will take place in mid-2022, and construction at Pape Station may potentially take place earlier than 2024 as well.

Regarding what may be seen near Bain Avenue... before construction begins, there may be advance utility work done along Pape Avenue to prepare for tunnelling, but we don't have exact locations or timelines on that yet – it will depend on what is learned about utility locations over the next several months of research and surveying.

Sorry we don't have more specific details right now, but I hope this is helpful. Please let us know if you have any further questions.

Thanks,
Sivahami

Message:

I'm a resident/ home owner on Bain Ave which is in between pale and Gerrard. I'm wondering when construction is slated to begin on that part of the new line. I'm looking at selling my house in the next few years and want to avoid listing my home amid construction times if possible.

Subject: RE: Osgoode Station Entrance Design Question
Date: Monday, August 9, 2021 3:44:00 PM
Attachments: [image003.png](#)

Dear [REDACTED],

Thank you for your email. We also know that transit is sorely needed in Toronto and the broader region. Building a subway through the heart of the largest city in Canada in some of the areas of greatest density was never going to be easy. We know it will have impacts for some, but the necessity of the Ontario Line requires us to make these difficult decisions to build the transit network needed for this region.

Osgoode Station is one of the four interchange stations the Ontario Line has with the TTC subway network, providing a direct connection to Line 1 Yonge-University. As you know, it will serve an estimated 12,000 riders arriving and departing Ontario Line trains during the AM peak hour alone in 2041, making it the third busiest station on Ontario Line.

The station will be located directly below the existing Line 1 station with a connection to the existing TTC concourse within the same 'fare paid' zone below ground. The existing Line 1 concourse level will also need to be expanded to meet fire code requirements as an interchange station. The major challenges involve constructing under, and connecting to, the existing station with minimal disruption to daily operations and minimizing any risk of damaging the structural integrity of the station itself. Within such a highly urbanized area, the work is further constrained by the limited availability of undeveloped land to construct a vertical shaft to access the deep below-grade construction site and for a suitably sized site to accommodate necessary laydown and staging activities on the surface.

In the case of Osgoode station, we know the passenger demand at this station necessitates the need for crowd management provisions and efficient surface network transfers. Two entrances, one at the west and one at the east end, of the new station are required to accommodate the anticipated passenger volumes and to meet safety and fire code requirements.

The TTC's entrance for the existing Line 1 Osgoode Station does not provide sufficient capacity for the ridership expected when the Ontario Line is in operation. We also looked at various other location options for the Ontario Line Osgoode Station entrance buildings in this area. The proposed locations are the only ones where we can construct the station entrances and meet the necessary safety and code requirements.

We are working to minimize the footprint of Osgoode Station to the greatest extent possible. We will work with the Law Society of Ontario, the City of Toronto's Heritage Preservation Services and the Ministry of Heritage, Sport, Tourism and Culture Industries to make sure we are not impacting more than we need to here.

In answer to your question about why Moss Park station has only one customer entrance, we have

modelled all the stations to ensure adequate life safety entrances. Where we only have one entrance, we also building in emergency exits. We have accessibility and redundancy with escalators and two elevators, and we've done the work to make sure the stations are safe in the event of an emergency.

One of the advantages of building new stations is that we can design them to optimize the pedestrian flow and ridership. We can also try to minimize the footprint of the station buildings. Being in a park, Moss Park is one example where we want to minimize the permanent footprint. Where we are not interacting with an existing station, we can design the station in such a way that the single headhouse/entrance has everything needed.

Thank you again for writing,

Caitlin

Good afternoon:

This email is going to two organizations so that you both see the same questions. Only part of this is applicable to the TTC, but they may wish to comment on the status of their existing station. (Stuart: please forward this as appropriate.)

One of the outstanding issues about Osgoode Station is why or if it is actually necessary to locate an entrance building on the Osgoode Hall lands.

The original Relief Line Station lay between York Street and the west side of University Avenue. It had two entrances: one was at York Street, SE corner, and the other was through a new joint entrance to both stations on the southwest corner through the old Bank of Canada building. (See attached drawing)

With the shift of the Ontario Line station box westward, the west entrance of the OL station will be

through the old bank on the SW corner at Simcoe. The new east entrance is proposed for the Osgoode Hall lands. Why, by analogy to the original design, is this entrance not simply consolidated with the existing station entrance on the NE corner rather than taking a bite out of the historic lands of the Hall?

I know that there is a need for two exit paths under fire code but must they be completely separate from the existing structure? Why would this not have applied equally to the original Relief Line design?

Any significant change in the use of an existing station requires that it be brought to current code. The existing Osgoode Station only has one exit path. Does the additional load the OL interchange represents trigger a need for a second exit from that station too (ie something surfacing in the median of University Avenue from the north end of the station)? There has never been any discussion of this as part of the OL project. Is the OL providing two completely separate entrances to its station to avoid triggering the need for a second exit from the existing Osgoode Station?

A related question:

The design for Moss Park Station does not show a second exit. Why?

Many thanks

Subject: Geotechnical Investigative Drilling at Parking Lot near Queen Street East and Strange Street - starting as early as August 3
Date: Thursday, July 29, 2021 5:30:00 PM
Attachments: [OLine - Parking lot near Queen Street East and Strange Street - starting as early as August 3.pdf](#)

Good afternoon [REDACTED]

Please see the attached notice for upcoming geotechnical drilling work at the parking lot near Queen Street East and Strange Street starting as early as August 3, 2021. This work has been coordinated closely with Fontbonne Ministries. There are two days of investigative drilling (August 4 & 5) from the hours of 5pm to 10pm. We understand Bonjour Brioche closes at 2pm but wanted to give you a heads up anyways.

Please feel free to contact our office if you have any questions about this work.

Regards,

The Ontario Line Community Relations Team

Hi [REDACTED],

Thank you for reaching out. Please accept our apology for the delay in responding.

We have attached a copy of the letter sent to owners to provide notice of the transit corridor lands designation for the Ontario Line subway project. You can also see the boundary of the transit corridor lands on our online interactive map [here](#) and look up your specific address. The boundary is labelled as the "Transit Corridor Lands + 30-metre buffer area" and is shown in blue.

Please do not hesitate to reach out if you have any questions.

Kind regards,

Caitlin

Attachments: [image001.png](#)

Good morning [REDACTED]

Thank you for your patience while I looked in to your question with my colleagues.

I'd like to confirm that the transit corridor land designation does not apply to the property at [REDACTED].

In case you are still interested, you can [REDACTED] labelled as the "Transit Corridor Lands + 30-metre buffer area" and shown in blue, and where the property lies in relation to it.

In case you are interested generally, the transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. More information [here](#). The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. More details [here](#) and [here](#). The letter we sent to impacted properties does not necessarily mean that we need to access or acquire the property in the future – one would receive separate letters if either situation applies. The language being placed on the title is purely for informational purposes, similar to properties located in certain subdivisions, or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please let our team know if you have any further questions. I hope you will also consider signing up [here](#) for our e-newsletter to stay in the loop for future updates.

Best,

Bismah

Your top questions about the transit corridor lands answered

Under the *Building Transit Faster Act* passed in 2020, new transit corridor lands have been designated for the Ontario Line and other priority transit projects. The goal is to reduce disruption for communities so people can enjoy the benefits of living near rapid transit sooner.

Metrolinx is answering the top questions community members have had about the Building Transit Faster Act and the designated transit corridor lands. [Learn more by clicking here.](#)

Investigative Drilling and Rail Corridor Surveying

Geotechnical drilling and surveying continues at several points along the Ontario Line route to gather information on ground conditions.

A few recent notices informed residents of:

[Investigative drilling and environmental sampling work at 265 Front Street East - Starting as early as July 24](#)

[Surveying Property Boundaries from Eastern Avenue to Queen Street East – starting as early as August 2](#)

[Investigative drilling work in parking lot near Queen Street East and Strange Street – starting as early as August 3](#)

You can find all current community notices [on our website](#).

Community profile - Corktown Neighbourhood

Picture: King and Parliament Intersection. Photo provided by Corktown Residents and Business Association.

Since its first settlement in 1819, Corktown remains a village gateway community. Located east of Berkeley Street between Shuter and Eastern Avenue, its main streets are largely occupied by 19th Century buildings. An integral part of Toronto's Old Town district it is easily accessible by foot, bike, or transit. Visitors of all ages will find something intriguing along with exceptional restaurants, cafes, and owner-occupied storefront businesses – all ready to serve you.

Corktown's architecture and rich history is what makes it special. Having served as the home to early Irish settlers, which is how it got its name, this is also where Kentucky freedom seekers, Thornton and Lucie Blackburn settled in the early 1800s. Today, the site of their former home is a National Historic site. Visitors can also see a 19th century one room schoolhouse, historic places of worship, and picturesque side streets.

Today, an optimistic renaissance is emerging as a new generation of residents and businesses look forward to the new Ontario Line station at King and Berkeley which will serve this community.

Dear Premier Doug Ford,

cc: Transportation Minister Caroline Mulroney, and Metrolinx

Transit riders have spent years waiting for fast, reliable and affordable new transit.

We need to build transit in Toronto, and it has to be built right, and built now.

That is why I am calling on you to:

- Build transit without delay;
- Commit to keeping transit in public hands, and not sell off our system to big business;
- Ensure riders pay only one flat fare for to ride the TTC and the Ontario Line;

- Listen to local residents' concerns; and,
- Expand the underground section of the line to include the route from Pape and Danforth to south of Eastern Avenue.

We get one shot to build transit. Let's build it right.

I look forward to your response,

[REDACTED]

Subject: GO bus tours of Toronto MSF sites - Thursday, August 12

Hi Thorncliffe Park Community Table members,

I'm happy to share that we have finalized the GO bus tours of Toronto MSF sites for next week, on **Thursday, August 12**. The tours will be a chance to view MSF sites and also ask questions and have a discussion with Malcolm and other project team members.

We have booked two tour times to try to accommodate as many people as possible. We hope that you are able to join at one of these times:

- **Afternoon tour:** August 12, 1:00-5:30pm
- **Evening tour:** August 12, 6:00-9:00pm

[Click here for more details and the registration form.](#)

Space is limited, so please register by **Sunday, August 8** so that we can confirm numbers by Monday.

Thanks,
Sivahami

Hi Daryl,

It was great talking with you last week, and thank you for following up on this. Thanks for giving me a good indication of the likely timeline for this project; that helps a lot.

If I have further questions down the road (and track), I will certainly ask, but this should cover things on my end for the time being.

Thanks again, wish you all success on this and other Metrolinx projects, and I hope you stay cool and hydrated during this humid spell.

Cheers,

[REDACTED]

Nearest Ontario Line Station (Optional): Cosburn

Subject: When will I need to move?

Message:

Hi, I have a question about the proposed Cosburn Station on the Ontario Line...

I see by your current timeline that by 2024 you are aiming to finalize the financial procurement for the North section (Pape to Science Centre) and construction would begin after that.

Currently, I live in an apartment that would be directly impacted by the construction of Cosburn Station. So my question is: By this timeline, when is my absolute deadline for moving out of here? Early 2024? Sooner? Please let me know.

Thanks very much.

Subject: RE: Pape and Danforth overnight investigative subsurface work along Pape Avenue
Date: Tuesday, August 17, 2021 6:04:00 PM
Attachments: [image001.png](#)

Hello [REDACTED]

First and foremost, I'm sorry about the disruptive nature of the noise last night.

I have followed up with the work crew and confirmed that this work should be wrapping up after tonight, and they will do everything they can to make the work go as quickly and efficiently as possible, with as little disruption as possible.

As you may know, government infrastructure work of this nature is normally exempt from the noise bylaw hours. Details can be found [here](#), under Article 3 (exemptions), subsection 591-3.1. In addition to this, the overnight work is also part of a requirement that came from the City of Toronto when we applied for permits to do the work, in order to reduce municipal traffic impacts. For work of this nature, Metrolinx along with our contractors, work with the City of Toronto's Transportation Services to seek an appropriate permit. Following submission of a work plan, the City of Toronto conducts multiple site visits with the contractors, and approves how and when the work will be carried out, including whether it should be completed during daytime or nighttime to minimize disruptions to traffic and area residents and businesses.

Please let me know if you have any further questions.

Thank you,

Bismah

The noise is so disruptive that I can't sleep. The reason you have given, to work overnight, is to not

disrupt traffic. I have never seen city employees care about disrupting traffic. This is not urgent/emergency work and you are disturbing the peace.

You are in violation of Toronto Municipal code 591, noise violation. https://www.toronto.ca/legdocs/municode/1184_591.pdf

THIS WORK IS BEING CONDUCTED BETWEEN 10 PM AND 5 AM!!!

YES, I'M WRITING TO YOU AT 2:50 IN THE MORNING.

I WAKE AT 6:30 AM, EVERY WEEKDAY AND THIS IS TOTALLY UNACCEPTABLE.

WHAT DO YOU PLAN TO DO?

Hi

Thanks for speaking with me today and being flexible with the time.

I am sending along some info including the page on the Metrolinx microsite that outlines the project details and has lots of content from our engagements to date. In particular, you will find the two publicly available materials I referenced earlier including a letter in response to the SaveTPark proposal and a technical analysis of the material provided by SaveTPark to Metrolinx.

<https://www.metrolinxengage.com/en/content/ontario-line-neighbourhood-updates-north>

Select >Thornccliffe Park & Maintenance and Storage Facility and scroll down to the Engaging with the Community section.

Sincerely,
Franca Di Giovanni

Subject: RE: Construction Diversions
Date: Tuesday, August 24, 2021 9:36:00 AM
Attachments: [image003.png](#)

Hi [REDACTED],

Thank you for reaching out. Please note that we do not expect the Queen Street closure or streetcar diversion to impact our work on Osgoode Station or the construction of its entrance buildings. We do not anticipate any further full closures or significant streetcar diversions in this area due to Ontario Line construction on Osgoode Station beyond what has been proposed for the adjacent Queen Station area.

Regarding the King-Bathurst and Queen-Spadina Stations, we are mining the Ontario Line tunnel in this area between keyholes where the station buildings will be constructed. Constructing the keyholes needed to get underground and the work on the station entrance buildings will take place primarily within the areas identified in yellow on the 2D maps on our [website](#) ("Permanent Property Requirements"). We do not anticipate any full road closures or streetcar diversions in this area at this time.

Please note that once a Project Company (PCo) is selected to deliver the project in this area, they will also finalize the designs and construction methods based on our specifications, including a Traffic Management Plan.

Thank you again for writing,

Caitlin

Good afternoon:

Your recently published article on the construction diversions for Queen Station is silent on what will be happening over at Osgoode. How do you plan to build the new lower Osgoode Station especially considering that Queen and University is shown as part of the route for the Queen Station project?

While we're on the subject, will you be publishing details of construction and proposed road closures for other stations such as Queen/Spadina and King/Bathurst, and if so when?

Thanks

Subject: Letter - Transit Land Corridor
Date: Thursday, August 19, 2021 5:25:00 PM
Attachments: [Letter to](#) [August 19 2021-v1.pdf](#)

Hi [REDACTED]

Please see attached with the letter you requested.

Good luck with the big move!

Daryl

August 19, 2021

To _____,

Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information at [Metrolinx.com/Property](https://www.metrolinx.com/Property).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us for a no cost permit prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. You can find more information at [Metrolinx.com/Permits](https://www.metrolinx.com/Permits).

The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. **The language going on the property title is not a lien.** The language is purely for informational purposes, similar to properties located in certain subdivisions or properties near an airport, and it will be removed from the title after construction of the Ontario Line is complete. **At this point in design, there is no property requirement of _____.**

As you may know, careful planning has ensured Ontario Line and GO Expansion plans stay mostly within the existing rail corridor. We will be accessing the rail corridor off the main streets (Eastern, Queen, Dundas and Gerrard). You can [find more information in our June 24 presentation here](#). You will also note that Bruce Mackey Park will be larger after construction of the Ontario Line and GO Expansion are complete.

The future Ontario Line station serving Leslieville and Riverside will be located at Queen Street East, close to De Grassi Street. Our projections tell us in 2041, there will be 9,500 residents and 6,900 jobs within a 10-minute walk of this station. We can also say 4,000 people will use the station during the busiest travel hour.

Feel free to reach out should you have any further questions,

Hi

Thank you for reaching out and sharing your concerns with us. Please accept my apology for the delay in responding.

I recognize that the work of building transit can be disruptive, and I would like to share that Metrolinx is committed to minimizing and managing the effects of noise and vibration of the Ontario Line on its neighbours – during both construction and operations.

As a part of the Environmental Impact Assessment Report (forthcoming early 2022), a detailed noise and vibration assessment will be completed for the Ontario Line to ensure that potential impacts are identified and appropriate site-specific mitigation measures are in place. These commitments will be carried forward into constructor contracts. You can learn more about our environmental assessment process for the Ontario Line [here](#) on our website, and we will send out a notice to our e-newsletter distribution list as soon as it's released.

Construction noise mitigation measures may include but won't be limited to: performing construction during daytime hours where possible, using equipment compliant with noise level specifications from the Ministry of Environment, Conservation and Parks, and siting construction vehicles and construction laydown and staging areas away from sensitive locations where possible. Other practical steps that we take to reduce noise and vibration in residential areas include fitting equipment with muffling devices and coordinating construction schedules so that noisy operations do not occur simultaneously. These mitigation measures will be refined and updated as project planning progresses.

Please do not hesitate to follow up if you have any further questions. Thank you again for writing.

Kind regards,

Caitlin

Metrolinx releases detour plans to keep people moving on Queen Street

This week, Metrolinx shared plans to manage construction impacts around a new Ontario Line subway station at Toronto's Yonge and Queen intersection. This future station will be within a short 10-minute walk for more than 18,400 residents and connect people to 150,000 jobs in an area of the city where 5,100 households don't currently own a car.

Through extensive planning with our partners at the City of Toronto, Metrolinx created a plan which includes detours – for both streetcar lines and car traffic – around two small stretches of Queen Street on either side of Yonge, while maintaining important pedestrian connections.

The detours are expected to start in early 2023 and last for about four and a half years. Learn more about our plans [here](#).

Investigative Drilling and Rail Corridor Surveying

Geotechnical drilling and surveying continues at several points along the Ontario Line route to gather information on ground conditions.

A recent notice informed residents of work taking place on:

- Investigative drilling work in the parking lot at 11 Sunlight Park Road starting August 23 (notice will be live on our website shortly)

You can find all current community notices [on our website](#).

Metrolinx announces mandatory COVID-19 vaccination for employees

Anne Marie Aikins proudly shows proof of her COVID 'jab'. (Metrolinx photo)

Since the COVID-19 pandemic began in March 2020, Metrolinx invested in a multi-layered approach to safety to lower the risk and control the spread. This strategy included implementing over [40 safety measures](#) – like mandatory masks, protective barriers between seats, daily health screening, rapid testing and other workplace safety protocols, as well as supporting staff to get fully vaccinated to keep everyone safe.

To date, these actions have helped keep cases low (approximately three per cent of the total Metrolinx workforce has tested positive) and prevented outbreaks on trains and buses.

Now, the more contagious Delta variant requires even stronger measures to ensure as many people as possible get fully vaccinated and are protected. At the direction of Caroline Mulroney, Ontario Minister of Transportation, Metrolinx is in the process of developing a detailed mandatory vaccination policy and implementation plan to be shared with all employees and released in the coming days. Learn more [here](#).

Hi

Thank you for following up. I certainly understand and appreciate that you want to know more about the property acquisition process and impact on tenants, such as yourself, who call [REDACTED] home.

Our teams at Metrolinx continue to be in negotiations with the property owner and, as these are ongoing, we have not had any direct conversations with commercial or residential tenants regarding the acquisition and the implications of such tenancies.

We have had some conversations with commercial tenants about investigative work that has taken place in the vicinity, as it may have had an impact on their operations. We have also needed to conduct some site inspections of commercial properties in the area. However, these conversations with our teams did not include discussion of the property acquisition.

As these negotiations are ongoing between Metrolinx and the property owner, we still kindly encourage you to connect with your landlord to discuss any questions or concerns at this time. Thank you again for reaching out.

Hi [REDACTED],

Thanks for taking the time to chat earlier.

As discussed, I wanted to follow up to provide some more information about Moss Park station:
[Further information about Moss Park Station](#)
[Recording of our Downtown Segment Virtual Open House in April 2021](#) (in the [presentation materials](#) which are posted on the event page under the recording, please refer to slide 13 for the graphic depicting the depth of the tunnels)
[Recording of our Downtown Segment Virtual Open House in June 2021](#)

In regards to your question about developing your property, you should have received a letter about the Ontario Line transit corridor lands. Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. Essentially, the transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. More information [here](#). As discussed, you can reach out to my colleague Daniel (CC'd) to discuss your future plans for your property and see if we need further information before next steps.

Please don't hesitate to let our team know if you have any further questions,

Bismah

Subject: Queen Street
Date: Thursday, September 2, 2021 10:20:00 AM
Attachments: [image001.png](#)

Hi ,

The density of this built-up urban area and the existing underground infrastructure – particularly Line 1 and its existing Queen subway station – requires Metrolinx to occupy the whole roadway to safely and efficiently carry out construction work for the new Ontario Line station. The station at Queen Street will be built using a combination of sequential excavation mining and cut-and-cover method.

The sequential excavation method will be used in the bedrock deep underneath the existing Line 1 station and the cut-and-cover method will be used to the east and west of the existing station to make it easier to work around existing underground infrastructure, including the Line 1 subway.

Our teams looked at both partial and full diversion options and, weighing the impacts and benefits of each, recommended that all vehicle and streetcar traffic be diverted off of Queen Street for four-and-a-half years (2023-2027) between James Street to Yonge Street and Yonge Street to Victoria Street. Diverting traffic means that we can complete construction at this vital transfer point at Queen Station means construction can be completed over a year sooner, the Ontario Line can open more than nine months earlier, and we can minimize disruptions to residents, businesses and visitors. This plan was also chosen because it would provide people with clearer, more consistent wayfinding for the duration of construction, rather than asking people to adapt to on-and-off diversions along this section of Queen Street for an extended period of construction.

Thanks for reaching out,

Daryl Gonsalves

Metrolinx:

I totally agree with community concerns that it is unreasonable to leave Queen Street, Toronto in an "Open-cut" situation for five years in relation to the above noted Project.

Metrolinx needs to hire some Engineers with heavy construction experience. Just my opinion!

Please place this email/letter on the public record for the above noted Project.

Kindly,

retired Civil Engineer

Hi [REDACTED]

Thanks for your email and question.

We are excited about the opportunities this station will bring to the Moss Park neighbourhood. Due to the location of the station within the park, we have been carefully minimizing our footprint as much as possible during construction and beyond as well. For this reason, there is no transit oriented community planned in this area. We want to ensure we build as quickly as possible so local residents can continue to enjoy the park and once built, use the Ontario Line to connect to other parts of the city.

Feel free to reach out should you have any further questions,

Subject: Moss Park Designated transit community

Message:

Hello - please advise on reason why Moss Park the 6th busiest station on this future line is not designated as a transit community and therefore does not receive the benefits as other less busy stations that have been designated will receive. The expedited new vertical home build and job creation is an extremely important part of this project for the Moss Park.

Hi [REDACTED],

Thank you very much for your patience while we looked into this request. I've connected with our project teams, who confirmed that the use of the fill removed from tunnelling falls under the Project Company's scope.

Essentially, once a successful Project Company is selected for the South Civil, Stations and Tunnel procurement package (which covers the line from Exhibition Station to the Don Yard/River), we would recommend reaching out to them to negotiate an agreement to use the materials (fill) if possible. We anticipate selecting a Project Company around fall 2022. We can help connect you with the Project Company once they are on board.

Part of the reason this scope falls under the Project Company is that their geotechnical engineer will assess the suitability of the material for its intended use, such as for the break wall. As understood from our technical team, for example, tunnel boring machine (TBM) excavated fill could be suitable, provided that the shale material is pulverized to the appropriate granularity or blended with other suitably sized excavated soil. Mechanically excavated bedrock excavated using the sequential excavation method (SEM) directly from the tunnel may be too coarse graded and open-graded for reuse as compacted fill without modification. However, these are examples assumed by our technical teams and cannot be confirmed until the geotechnical engineer assesses the material.

I hope this information is helpful. Please accept my apology again for the delay in getting back to you on this request. As always, please do not hesitate to reach out with any questions.

We look forward to staying in touch and wish you and your team a very Happy Holidays and New Year!

All the best,

Caitlin

Hi Caitlin,

Thank you for the reply. No need to apologize.

I appreciate you looking into connecting with the project team for more details on the handling of the fill. As mentioned in our last discussion, I think a link to the Humber Bay Naturalization & Recreation Plan would represent a massive cost savings for Metrolinx.

The City of Toronto's Infrastructure and Environment Committee has recently been directed to provide a status update on the Western Waterfront Masterplan for City Council. The Humber Bay Naturalization & Recreation Plan will be a key aspect of the Masterplan as it will provide resilient shoreline protection.

I have attached a copy of our slide deck that was recently presented to the TRCA board of Directors who voted unanimously to support the project.

Hopefully, the Project Company's that are bidding on the contracts can be made aware of the possibility of utilizing the fill for a project such as the Humber Bay Naturalization & Recreation Plan.

Thank you again for all your help with this. Have a wonderful holiday season!

Hi Caitlin,

I hope that you are well. We have been receiving the Metrolinx newsletters which have helped us

stay up to date with the Ontario Line project.

We had productive meetings with both Councillor Perks and MP Arif Virani last week.

Part of our discussion was about transit in our area, which reminded me that I wanted to circle back to you to get an update from Metrolinx Ontario Line project team.

We met with some of our contacts at the TRCA on October 13th and they told us that they felt that most of the RFP's for dealing with fill from the Ontario Line have gone out for tender, so we are anxious to know how Metrolinx is going to proceed and what your existing plan is to deal with the fill.

We know that there are other opportunities to find aggregate and fill for the Humber Bay project, but we would like to find out if there is any possibility of finding some synergies with Metrolinx.

Please let me know if you can connect us with someone on the project team so we can get some feedback. Thanks.

Hi Caitlin,

Thank you for taking the time to speak with me today.

As mentioned we met with Michael Paolucci from your Metrolinx Community Relations Team in 2018 when he and his colleagues made a presentation to our community group, The West End Beaches Stakeholders Association (WEBSA), concerning reparations to bridges along western rail corridor. At that time we had a great discussion about the future of integrated transit in the West end of the city.

Fast forward to 2021 and we have been working with the TRCA, Weston Foundation and local politicians among others to find a solution for replacement of the aging breakwall structure that runs from Ontario Place to the Humber River.

A new break wall would be a massive boost to community recreation, ecology, habitat and the creation of green space in the west end and we think there may be an intelligent link between breakwall construction and the work that Metrolinx will be undertaking as part of the Ontario Line subway construction. Our project would require an enormous amount of fill and the repurposing of excavated material from the Ontario Line project could be of great benefit to all.

I have included a copy of our presentation deck and would love to get some feedback.

Your assistance with this would be greatly appreciated. Please let me know when you have time to review the deck and we can set up a follow up conversation.

Hi Sivahami,

Thank you for your reply. Unfortunately I do not find your response satisfactory.

You write that you understand the people observing Yom Kippur may not be able to attend the virtual open house, but due to conflicting schedules, Metrolinx chose this date.

I perceive this as indicating that the Jewish community does not matter to Metrolinx and it is fine to exclude and discriminate against this community.

I find that offensive.

If you care about community relations you should not schedule a public open house on the holiest day of the year for a community. If you couldn't change the date, you could have started the open house at 8:30 pm, which while not the most convenient for those who observe Yom Kippur, it is at least after the holiday is officially over. In that case I would have felt annoyed instead of feeling offended.

Please note that I only speak on behalf of myself.

Please consider the environment before printing this email

I got your email newsletter and was taken aback to see that you are holding an Ontario Line open house on the holiest day of the Jewish year.

Your second open house is on Thursday Sept 16 at 6:30. The Jewish Day of Attonment (Yom Kippur) ends after sunset on the 16th, which will be after 7:30 pm. In fact, during the time the open house takes place, many Jews will be attending either in person or virtually the Neilah service that closes the holiday, followed by the first meal you can have after fasting for 25 hours. Attending the open house will not be possible.

It is grossly insensitive that have this open house that will not be able to be attended by Jews who choose to observe this once a year event. Was a rabbi or Jewish leader consulted about the timing of this event?

Yours in disappointment,

[REDACTED]

Hi [REDACTED],

Thank you for reaching out. Our plan is to maintain streetcar service during construction, and we are working closely with the City and TTC to keep Toronto moving. This is a work in progress, and we will share more on these plans once they are finalized.

Please know that any temporary or planned disruptions to existing transit service will be communicated as early as possible using a number of communications channels to ensure everyone gets the information they need to keep moving.

Regarding excavation, our priority is to keep our construction footprints slim, property impacts to a minimum, and construction sites safe. We are exploring a number of techniques to construct the Ontario Line, including tunnel boring, sequential excavation or mining, and cut and cover methods. Current plans in this area envision using the sequential excavation method (SEM) to tunnel through this area.

Techniques will vary based on the safest, most effective approach for the type of ground we're working in and how much space is available to carry out the work. In this area of the city, we plan to tunnel through deep, sturdy layers of shale, which will help significantly reduce noise and vibration during construction and operations and allow us to use the SEM/mining construction technique. Any approach we take will be respectful of surrounding community spaces.

Our project teams addressed questions about construction methods in this area during our virtual open house last night, which you can watch [here](#).

Thank you again for writing. Please do not hesitate to reach out if you have further questions and consider [signing up for our newsletter](#).

Kind regards,

Caitlin

Nearest Ontario Line Station (Optional): Exhibition

Subject: Plans for OL Queen-Spadina and King-Bathurst Station Construction

Message: How will street car service on the Queen, King, and Bathurst routes be maintained during construction? Will the construction of these stations require the same deep excavations as we saw along Eglinton? Will excavation necessitate rerouting or cancellation of streetcar service due to tracks being dug up?

Thank you so much Caitlin for this info. I will review and try to follow upcoming reports as you indicate below. Also, I'd like to say that I've shared some of this helpful info with other concerned tenants.

I'll be in touch as further questions arise!

Kind regards,

[REDACTED]

Hi [REDACTED]

Thanks for following up! I believe the Noise and Vibration report you're referring to that includes [REDACTED] was for the [Corktown Early Works Report](#). This report focuses solely on what we call 'early works' construction activities that are planned for the Corktown Station area. These are preliminary construction activities that happen before the main construction of the project. The Corktown Station's early works will include archaeological investigation of the First Parliament site, demolition of certain buildings within the project footprint area, utility relocations, and more.

The tunnel construction for the Ontario Line will come later under the main body of works, which fall under the 'Southern Civil, Stations and Tunnel' procurement package. You can learn more about the procurement packages for the project [here](#) on our website. Since the tunnel construction is not part of the early works activities, studies on noise and vibration concerning tunnelling are not part of the Corktown Station Early Works Report.

Studies on the construction work under the bigger procurement packages, such as the Southern Civil, Stations and Tunnel package, will be part of the full EIAR. The EIAR will also include a section on Traffic and Transportation, which speaks to your question about the trucks that will remove the dirt (what we call 'spoils') and what routes they might take.

I know this is a lot of information I'm sending your way, so please don't hesitate to let me know if you have any questions or need clarity on anything I've noted above.

Best regards,

Caitlin

Hello Caitlin,

Appreciate your response very much!

I had already reviewed the Noise and Vibration reports but appreciate you pointing me to it in case I'd missed it.

Upon review of vibration, I found myself curious as they mention vibration would not affect [REDACTED], only construct noise — even as the tunnel will be dug out here too, not just at Front st?

Also, as my yard is on Parliament, I'm expecting a lot of big trucks will be using that street to remove the dirt dug up for the tunnel and take it south?

Many thanks,

[REDACTED]

Hello Caitlin,

Thank you for your reply and information.

Once again, I live on the ground floor at the very East end of the building along Parliament where the tunnel will be constructed. See the red circle in the image below, so my concerns seem valid.

I would like to personally receive communications, and a copy of your investigation reports for noise and vibration. I'm a senior, and though I manage ok online, and am signed up to your newsletters, I was never able to find this detail myself. I will definitely be affected by construction noise and vibration being on the ground floor. There are only 2 ground floor apartments in my building, and very few ground floor tenants in this tunnel area, so there are very few who will be this close to your work in this area. I will be directly impacted.

Thank you for this consideration.

Kind regards,

[REDACTED]

Hi [REDACTED]

Thank you very much for following up, and please accept our apology for the delay in getting back to you.

You can find the most up-to-date maps/plans for the Ontario Line in this area under the [Downtown Segment Neighbourhood Update](#), specifically the [Corktown Station](#) page.

Please also note that the Ontario Line tunnels will be deep underground at approximately 20-30-metres beneath the surface in this area, helping to mitigate any noise or vibration. We are also preparing a full Environmental Impact Assessment Report (EIAR), which will include studies and proposed mitigations for noise and vibration impacts during both construction and operation of the line. The EIAR will be released early next year in 2022. We will release the report first in draft form so the public has an opportunity to review the report and provide feedback. The feedback we receive during the consultation period is then factored into the final report.

We kindly invite you to [sign up for our newsletter](#) if you haven't already to stay updated on the project as the design and plans progress. We will also send notice to our newsletter subscribers as soon as the draft EIAR is released.

Thank you again for reaching out. Please do not hesitate to contact us if you have any other questions.

Best regards,

Caitlin

Hello,

I was forwarded by Toronto East to your department for a question regarding the Ontario Line tunnel. Unlike James the community liaison for Toronto East, you have not yet replied in good time, so I'm trying again:

Question:

My building is [REDACTED], my yard and apartment runs along [REDACTED] street, where it appears the Ontario Line tunnel will be built. Metrolinx has appropriated some city land for this purpose, at the East side stairs of my building.

I would like to see a construction plan or design that has enough detail so I can see it in reference to my end of my building, the East side along [REDACTED].

Many thanks,
[REDACTED]

Hi Sivahami,

Hope that you had a great weekend. Nothing too exciting happened on my end, nice and relaxing for once!

I ran an idea by Kathleen Wynne's office this morning that they were supportive of, and I wanted to ask you if it was okay before taking the next steps.

For tomorrow's residents' table meeting at 2 pm, I would like to invite one of the [board members of TNO](#) to attend as an observer, preferably the Chair, Shelina Shivji, depending upon her availability.

As I am no longer involved with TNO as of June 2021, my thought is that this particular meeting; where Metrolinx reviews both proposals, Save TPark / Beth Nealson and Overlea shift to Banigan, can provide the Board with the most up-to-date, complete overview possible of the Ontario Line, helping to inform the strategic planning of TNO in the Thorncliffe Park and Flemingdon Park communities.

Would this be okay with you?

Best Regards,

[REDACTED]

Hello:

Late last night / very early this morning, I could hear what sounded like heavy machinery and related project noise (construction? destruction? maintenance?) It was after midnight and ongoing and was very loud. I could hear it through my window over on [REDACTED] Avenue. It sounded like it was coming from north east of here. Needless to say it greatly disrupted my sleep.

Can you tell me if this was anything that Metrolinx was doing in connection with the planned Ontario Line or any other transit project? I did not receive any notice of overnight work being done. If it was Metrolinx and there is a plan to do anymore overnight work, what are you doing to mitigate the noise that this is creating?

Yours,

[REDACTED]

Hi [REDACTED]

Great question! The Ontario Line won't feature the same trains and track systems as the TTC subway but will make use of more modern subway trains and technology. The exact vehicles will be chosen through the procurement process once we have a constructor on board, but we know the line will feature electric, automated trains. You may have already reviewed this page, but you can find more information about trains and technology [here](#) on our website.

Thanks for following up, and feel free to reach out if you have any further questions.

Hi Caitlin,

Thank you for your reply and the link to the blog. I'm certainly glad that the team recognized and decided to utilize the abandoned roughed in station. I obviously haven't been paying as close attention as I thought. That said, I do have one other question if you don't mind. I think I know the answer, and I'm sure I could find it out with a little search. It seems the Ontario Line is a traditional subway (line 1, 2 and 4) as opposed to the more recent moved to the LRT model. Am I correct here?

Please keep up the good work.

Best regards,

To Whom it May Concern,

First, I have been a long time fan of public transit in and around the GTA for a very long time. Second, due to Covid, I've had the opportunity to more closely watch the progress of the new transit throughout the GTA because of the virtual presentations on YouTube. I just watched "The Ontario Line (Downtown)" presentation which streamed on June 17 of this year.

Earlier this week, I happened to watch other YouTube videos, that made watching this particular presentation that much more interesting. The videos talked about the early days of the TTC and the planned Queen Street subway or subterranean streetcar line. From that previous plan, there was a "station" located under the current Line 1 Queen Street subway station. So my question is: Will that station be incorporated into the current Ontario Line at Queen and Yonge? If not, how will that "station" affect the planned station at that location?

Thank you and keep streaming these very informative meeting/presentations on YouTube.

Regards,

[REDACTED]

[image001.png](#)

Hello,

Please see attached for a community notice regarding investigative drilling that Metrolinx will be conducting at 1 Thorncliffe Park Drive for two days starting October 4. Metrolinx will be using a small drill rig and truck in order to gather information and evaluate underground conditions. Using this information, Metrolinx can begin to determine the construction approach for the Ontario Line project.

This notice will be posted online and we will distribute paper copies to businesses and services within earshot of the work. Crew members will also have notices on hand. Please let us know if you have any questions.

Thanks,

Subject: RE: Station design and public washrooms

Good morning [REDACTED],

Thank you very much for reaching out and sharing your and your partner's story with us. We are still in the early design stages for the Ontario Line and its stations, but we have reached out to our design teams to ask whether these details are available yet. We will be back in touch as soon as possible with more information.

Nonetheless, we have also passed on this feedback and these important considerations to our teams. Please do not hesitate to reach out in the meantime with any further questions.

Best regards,

Caitlin

Hello,

I missed the opportunity to ask this question during consultations, but I wanted to reach out to inquire about the inclusion of public washrooms in Ontario Line stations. I live close to where the new King/Bathurst station will be on the Ontario Line.

I came across [this study](#) regarding the lack of access to public washrooms in spaces, as well as the recent book [No Place to Go: How Public Toilets Fail our Private Needs](#) by Lezlie Lowe. These topics have become front of mind for me as my partner lives with a chronic illness, for which one of the ways it manifests as a need to use the washroom more often and with limited notice. This has made commutes, in particular using a streetcar, more challenging or higher risk, and we've had to get off and buy a coffee more than once when going somewhere when taking a streetcar. Though this is ultimately a minor inconvenience for us because of our privileges, it is a hassle and a barrier that would be a much bigger challenge if he was unable to work and the impact that would have on our income.

To that end, I wanted to inquire whether any of the stations being built along the Ontario line would have public washrooms, to what extent they would have access to gender-neutral facilities, and to what extent the washrooms would be accessible.

I would strongly encourage consideration be given to include public washrooms in at least some of the stations along the Ontario Line, particularly where there are major interchanges.

Best regards,

[REDACTED]

Date: Tuesday, October 5, 2021 5:07:00 PM

Hi [REDACTED],

Thanks so much for emailing.

We haven't had a follow-up meeting because the meetings seemed to have run their course and we are moving to a new format of working groups focused on design options for a) the public areas underneath the elevated guideway, and b) for the public-facing walls surrounding the MSF. I will send more details to everyone as soon as we have them. Would you be interested in participating in one of these working groups?

We also hope that you continue engaging directly with the property team or with Sandy Griggs, and we are always available to answer questions.

Thanks,
Sivahami

Hi [REDACTED]

Thank you for your email.

We expect construction of the Ontario Line tunnel underneath Pape Avenue to begin in 2024 or 2025. We do not yet have an exact schedule because the timing will be set by the third party constructor that is chosen to do this portion of the project. They will be chosen through a procurement process in 2023. More about the different Ontario Line procurement packages [here](#). (Note that the downtown section of the Ontario Line will begin construction earlier than the Pape section because it is part of a different, earlier package of work.) Some advanced work along Pape, like utility relocation, may take place earlier than 2024, and we will share information about that with the community as soon as we know more.

If you haven't already, please consider signing up for our e-newsletter [here](#) to stay up to date on the project, and please let us know if you have any further questions.

Thanks,
Sivahami

Hi

You are correct that we are starting with the other side of the corridor first. That being said, it is too early to determine a schedule for the site preparation (demo) of the storage facility. We anticipate this to take place in early 2023 but that could change.

We have an [animation here](#) to show you the sequencing of construction in this area.

Daryl

Hi Daryl,

Thanks for the follow up. I've done some of my own research in the mean time, and I don't think you are getting the building quite as fast as you think. Regardless however I now have some certainty about what I need to do.

Thanks, and have a great holiday.

Hi

Apologies for taking so long to get back to you. This email slipped in the inbox.

The self storage facility will be required and will not be available. This is needed because we are avoiding access through the parks as requested by the community and have looked at creative solutions to access the rail corridor, in a safe manner.

Early Works construction in the area is anticipated to begin mid-next year. I'll give you a call to chat further.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Hi [REDACTED]

Thank you for your email and for your call. The Ontario Line will be about 30 metres underground in the Pape & Danforth area. For context, Line 2 is about 11 metres underground, and most basements/foundations are around 3 metres deep.

The story on the radio may have been referring to other segments of the line, which include above-ground portions where it makes sense based on the geography of the area and other technical considerations.

You can see maps and more information about the project at [Metrolinx.com/OntarioLine](https://metrolinx.com/OntarioLine), where you can also subscribe to our e-newsletter to stay up-to-date on the project.

I will also give you a call shortly to go over any other questions you may have about the project.

Thanks again for reaching out,
Sivahami

Hi [REDACTED]

No problem – in simpler terms Metrolinx does not need to purchase the whole building, instead we require a portion of the underground area below your building.

Once the design team has a more finalized design we can set up a zoom to explain how it works if that would help.

For now, [REDACTED] will be able to explain more on the phone with you but please let me know if you have any more questions.

Thanks,

Robin

Hi Robin,

Thank you for the information. Can you please explain in layman's terms what exactly this means? What is a stratified permanent subsurface easement? Does this require the purchase of the whole building?

Any further information would be much appreciated. If it is easier to book a Zoom meeting with all owners of the building and yourself and Silvano so that we can gain a better understanding of what's required I'm happy to do so.

Please let me know if you are open to a meeting.

Thank you

Hello [REDACTED]

Thank you for your email to the team. To follow up on your questions, the current design for the Ontario Line requires a stratified permanent subsurface easement below your property. Once the final details are confirmed we'll be reaching out to discuss purchasing the stratified interest. We require this by Sept 2024 and plan to follow up by this August with more details. I've copied Sil Spera on this email who represents Metrolinx on the negotiations for this property and can answer any further questions about the process.

Thanks,

Robin

--

Hi Nabeel,

Hope you had a great week.

We received a letter dated January 28, 2022 from Metrolinx with regards to a potential protection zone requirement around [REDACTED] Pape Ave for the construction of the Ontario Line. Can you please provide clarification on what this means? Is Metrolinx looking at a temporary use of the land at [REDACTED] Pape Ave for the purposes of construction without purchasing the property or is Metrolinx still considering the need to acquire the property as mentioned in previous letters?

I understand from the letter that plans and the need for [REDACTED] Pape is not confirmed yet. It would be helpful to know when we can expect a definitive decision as this project has left us in somewhat of limbo with plans that we had for the property.

Any information you can provide would be much appreciated.

I look forward to hearing back.

Hello,

I'm contacting you on behalf of the owners of [REDACTED] Pape Ave as we received the attached letter in September of 2020 stating that the expansion of the Ontario Line would require the expropriation of [REDACTED] Pape Ave. At the time, I spoke with Sandra who confirmed that this was indeed the case based on the plans that were drawn out at that time.

I have since heard from other building owners in the community that the requirement of [REDACTED] Pape Ave is no longer needed based on today's plans.

Can you please confirm if [REDACTED] Pape Ave is still scheduled to be expropriated as part of the Ontario Line expansion?

Thank you

Subject: RE: Ontario Line Stop At Cherry Street
Date: Friday, October 8, 2021 6:48:00 PM
Attachments: [image001.png](#)

Hi [REDACTED],

Thank you for reaching out and sharing your support for a station at Cherry Street. We would like to share that our teams did look at this area when determining station locations.

When looking at the possibility of a station on Cherry Street, one of the important factors we considered was the distance between stations. If we located a station in this area, it would be very close to both Corktown and East Harbour Stations. As a result, the trains may not have enough time or distance to fully accelerate, impacting the overall time savings for travellers.

Within a six-minute walk from the Distillery District, the Ontario Line Corktown Station is intended to serve this area, Corktown, St. Lawrence Market and the West Don Lands neighbourhoods, as well as provide relief to the busy 504 King streetcar. By 2041, we project that 26,400 people will be within a comfortable 10-minute walk from Corktown Station, and about 4,100 people will use the station during the peak morning hour.

Please know that we are working closely with the City, TTC and Waterfront Toronto to develop complementary plans for future transit expansion such as the Waterfront East LRT and a streetcar extension down Cherry Street, with the goal of creating the best possible customer experience.

Thank you again for writing. Please do not hesitate to reach out if you have any further questions.

All the best,

Caitlin

Good morning!

I would like to submit my request for an additional stop on the Ontario Line.

I live in the West Don Lands and plan to move to the Portlands once construction is complete. There is a current and growing concentration of population in the West Don Lands and Distillery District. An entire neighbourhood is coming via Villiers Island and the Portlands which will be accessed by Cherry Street.

Please inform me of the best way I can submit my request to add a stop on the Ontario line to where the line will cross on the Cherry St area, as close to the Portlands as possible.

Thank you I hope you are having a wonderful day.

Hi [REDACTED],

Thank you for your email.

Consultation is absolutely planned once we have new significant updates to share for Osgoode. During the virtual open house, we welcomed questions related to all Downtown stations and will post responses for any questions we did not get to answer during the live event in the coming weeks.

I want to be very direct with the second half of your email. Metrolinx **does not** manipulate the votes in any way on Metrolinx Engage. We use the votes to gauge community interest and determine which questions we will have time to answer.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Is there any consultation planned for this station? It is a matter of some contention and it's not as if nobody cares about it. Because of the format of your sessions, there was no way for anyone to pursue questions about this station even though it was (and still is) listed as part of the agenda.

Also there is a question about whether the voting for important questions was rigged. The question about the trees at Osgoode Hall had been highly ranked until a large number of thumbs down votes were cast. Is Metrolinx ballot-stuffing?

Subject: RE: Osgoode Station Status

Hi [REDACTED],

Thank you for reaching out. The Ontario Line virtual open house on October 7 did focus on the Downtown segment, which includes Osgoode, Queen, Moss Park and Corktown Stations. However, similar to other open houses we have hosted across the alignment, we did not feature an update on all stations in the segment.

As you noted, we did not include new information about Osgoode Station in the October 7 presentation. There are a few reasons we did not cover Osgoode in the presentation. First and foremost, we did not have significant updates to share about the station. Additionally, we aim to keep the presentations to 30-minutes to allow ample time for questions. Given that we had substantial updates to cover for all of the three other stations but not for Osgoode, we did not explicitly highlight this station during the presentation. Nonetheless, we welcomed questions related to all Downtown stations and will post responses for any questions we did not get to answer during the live event in the coming weeks.

We look forward to bringing new updates and more information to the community about all stations across the Ontario Line as they are available. We also always welcome questions and feedback via email, phone, and social media. Anyone interested in learning more about any station can also [visit our website](#) or [book a meeting](#) with a community relations team member.

Please feel free to reach out if you have any further questions. Thank you again for writing.

All the best,

Caitlin

Greetings:

The agenda for tonight's meeting includes Osgoode Station, but it is not included in the presentation.

Will there be a separate session for this?

Thanks

Hi [REDACTED]

It was a pleasure to meet you today. I was talking to my Senior Manager (Mark, copied) and we wanted to offer you a meeting to answer your questions + provide the latest information to help you make an informed decision for the future of Bonjour Brioche and your property.

If that is something you are interested in, we can set a time up in the next two weeks.

I know you wanted a better understanding of the construction sequencing you can expect. We created a [short video here](#) that outlines what activities will take place as we begin construction mid-2022. Happy to chat about this in detail.

Have a great long weekend,

Hi [REDACTED]

Thanks for writing to us through Metrolinx Engage and via email.

You are correct that we are moving forward with above ground plans because we have an opportunity to streamline construction with the already planned GO Expansion. In addition, above ground construction will be less disruptive and result in fewer property impacts.

I appreciate your creative idea and I believe some highways in Alberta incorporate that design feature. While I cannot promise it is possible from a technical and cost perspective, we do have a design questionnaire which is open until October 14 so the community can provide ideas on the design elements of the retaining walls, noise barriers and vegetative elements. Please submit your feedback and idea [here](#).

Again, thank you for writing to us and we appreciate your feedback,

Feel free to reach out should you have any further questions,

Subject: Ontario Line Through Leslieville

Message:

Hello,

I just watched all the the meetings with regards to the Ontario Line going through Leslieville.

Though I believe the community would prefer it to go underground. It does not look likely at this point due to the extra cost associated and the duration of construction.

They have proposed sound barrier walls though I think that would be unsightly and a short term solution as trains get older and tracks age and the volume of traffic significantly increases. I don't think that that is the best option. It will be unsightly, divisive and create a through neighbourhood as opposed to one where folks want to stop.

In saying that there is an opportunity to enhance community that I have not heard being explored. Why not build a tunnel around the lines above ground in certain areas (parks) and have it encased in green space so that it looks like a natural hill. This could connect Jimmie and Mackey park as well as other areas of the community as you would not need to use the main roadways to traverse the track system. We could have pedestrian walk and bike way going north south above the lines and stations (Pape-Lakeshore) to the dock, corktown park and don trails. It would be better for sound, sight, green space, pedestrian pathways... of course certain areas this may be too intrusive for residential and a sound or privacy wall may more appropriate.

I do not know where to express this opinion without having it fall on deaf ears. This would be less expensive then going underground and help to unify the community and bike paths around Toronto. Happy compromise. Furthermore, rails in the city are being covered by development and dock space, long term this could lead all the way downtown and all the day up across the where the current go rail line it. Just need to get metrolinx on board. Which they might do because it saves them going underground.

Has this option been weighed at all? The way the conversations are going and the way the website and survey are set up so sounds like the barrier walls are a forgone conclusion.

Thanks!

Cheers,

Hi

I received your contact from my colleague regarding the tree normal at Jimmie Simpson Park. My name is Daryl and I focus on engaging Riverside and Leslieville residents.

First of all, thank you for your feedback about the shade the current trees provide and the lack of shade in the north end of the park. We are currently completing a comprehensive tree impact analysis and any trees impacted outside of the rail corridor will be detailed in a forthcoming Arborist report by early next year. The removal of these trees will take place in the second half of 2022, when constructions starts. The removals starting at the end of fall this year are within the rail corridor (within the existing fence).

That said, we do have a comprehensive tree compensation program we are following which compensates at a 3:1 basis. We are also actively engaging the community on landscaping treatments and tree replanting ideas [through this questionnaire here](#).

At our latest open house, we showed some representative and approximate renderings after the Ontario Line and GO Expansion is complete:

Subject: RE: Concern: Is Gerrard Tunnel Portal location a Superfund site?

Hi [Redacted]

We apologise for the delayed response. Our environmental team has gone through your questions and provided the answers below:

- How do we know what lies beneath the Riverdale isn't a Superfund site?

A Superfund site is an American term for a heavily contaminated site that is being cleaned up under the supervision of the federal government. In Ontario, the cleanup of contaminated sites is mainly regulated by the Ministry of Environment, Conservation and Parks (MECP).

In Ontario, we complete Phase I & II Environmental Site Assessments (ESAs) to determine the existing condition of a site prior to construction, including whether the underlying soils contain hazardous materials or other contaminants. A Phase I ESA is a non-intrusive study that looks for clues suggesting potential contamination. If the Phase I ESA concludes there is a possibility the property may be contaminated, then a Phase II ESA is conducted to test soil and groundwater. Based on the Phase II ESA results, if the soils and/or groundwater are classified as contaminated then the contaminated materials will be disposed of appropriately during construction.

A Phase I ESA is in progress for the Gerrard Portal site and, based on the preliminary results, a Phase II ESA will be conducted. The Phase I and Phase II ESA will be finalized prior to construction in order to inform the disposal requirements of excavated materials, as well as any remediation that may be required. Based on studies conducted to-date, there is no evidence to suggest that conditions at the Gerrard Portal site are comparable to Superfund sites.

- Have you done any chemical testing of the earth beneath that blacktop?

A Phase II ESA will be completed prior to construction of the Gerrard Portal, which will test the underlying soil and groundwater for the potential contaminants.

- How much testing have you done?

Testing has not yet been completed; however, testing will be conducted as part of the upcoming

Phase II ESA.

- What kind of testing, if any, has been done? What chemicals were you testing for?

The Phase II ESA will test for chemicals including but not limited to: heavy metals, cyanide, petroleum hydrocarbons (PHCs), volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), organochlorine pesticide (OCPs), and polychlorinated biphenyl (PCBs).

- Which company did the testing?

Metrolinx's consultant, Ontario Line Technical Advisor (OLTA) will conduct the testing.

- If you do find toxic or carcinogenic chemicals what will happen?

If contaminated materials are identified on site, the Constructor will be responsible for the proper management, disposal and, if necessary, site remediation during construction.

- How will the public know if you've found chemicals?

The project will be registered on the Resource Productivity and Recovery Authority (RPR) Excess Soil Registry (<https://rprr.ca/excess-soil-registry/>). The public can view the Excess Soil Registry to see the volume of soil expected to be shipped off-site, where soil is transported and general information on soil environmental quality. All contaminated soils will be properly managed during the construction process.

- What are your proposed mitigation methods, if you do find the chemicals

If contaminated materials are identified on site, the Constructor will be responsible for the proper management, disposal and remediation during construction. Furthermore, detailed management plans pertaining to soils and excavated materials, air quality, erosion and sediment controls, and dewatering and groundwater will be developed and implemented by the Contractor during construction to avoid adverse effects to the surrounding community. Monitoring will be carried out during construction to ensure that all mitigation measures and management plans are effectively implemented. For example, real-time air quality monitoring will send alerts to the Contractor and Metrolinx so that if action levels for dust are exceeded, then the Contractor will implement mitigation measures to avoid impacts on nearby residences and businesses, including potential sensitive receptors (e.g. schools, senior centres, etc.).

We appreciate your patience and again apologise for the duration of time it took to get your answers.

Thank You!

Regards,

Norando Brown

Hello.

I've been emailing with you since Oct. 21, and still no real information on my concerns.

Do you have a copy of the Environmental assessment you can share?

Is there someone at Metrolinx who I can speak with who actually has information on the what lies beneath the blacktop?

Best,

[REDACTED]

Hello.

I am circling back on this.

From my understanding, the Ontario line project is about to be greenlit as currently planned - and yet - the environmental report is not complete. And the concerns I've expressed have not been addressed. Do you have no information on the history of the land you plan to dig a TBM tunnel portal through? Have there been any tests of the soil in this area? Is there a plan for how to mitigate all the particulates in the air near the school, retirement community and homes?

I find this all very concerning. If you are not the person to speak, please advise who might be.

Best,

[REDACTED]

On Wed, Nov 17, 2021 at 1:08 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Sorry for the delay getting back to you. There has not yet been an Early Works environmental assessment for this site (in your area, our published reports have focused on the rail corridor and East Harbour station because that construction is beginning on earlier timelines; the area you're asking about is not starting on the same early timelines).

Instead, the site would be covered in the upcoming Environmental Impact Assessment Report. I am working to see if I can get some of that information in advance to be able to share with you.

Thank you very much for your patience.

Hello.

I am following up again on my email from October 15th. Do you know any information from the Environment team. I've been doing my own research - and nothing I have uncovered is making me feel any better about the soil conditions. Is there someone at Metrolinx I can speak with?

Best,

[REDACTED]

On Fri, Oct 15, 2021 at 10:05 AM [REDACTED]

Hello.

I am a father of [REDACTED] children attending Pape Elementary School and daycare, as well as a homeowner, nearby the Ontario Line Gerrard station.

As I am sure you are aware, where the Riverdale Mall, and the proposed tunnel portal for the Gerrard Station, now sits was once the site of the International Varnish Company from 1904 until around the 1940s (<https://i0.wp.com/scenesto.com/wp-content/uploads/2013/08/international-varnish-gerrard-and-carlaw.jpg>). One source that I found says they manufactured varnishes as well as insecticides including DDT. This manufacturing would have taken place prior to any modern environmental regulations or mitigation. I was shocked to see none of this mentioned in your Early Works Environmental Assessment for the proposed Gerrard Station tunnel portal as well as what I assume will be

the future development by Choice Properties REIT.

My wife and I are proponents of development as well as subways - however this omission is very concerning. I spent over a decade producing tv series about engineering projects the world over. I've been inside more TBMs, their tunnels and portals than I'd assume most of the people at Metrolinx. It is an extremely dusty and dirty affair. Removal of the tailings via conveyer and trucks is an extremely dirty operation - no matter what mitigation is used or proposed. My concern as well as I know many of the families attending Pape is that you are building this portal and TBM entrance just yards from a school full of children. And any particulates from Metrolinx construction will be dredging up dirt as well 100 year old chemicals which will then be blowing towards our children as well as Frances Beavis Manor, a retirement home, which is literally overlooking the construction.

And so I have several questions:

- How do we know what lies beneath the Riverdale isn't a Superfund site?
- Have you done any chemical testing of the earth beneath that blacktop?
- How much testing have you done?
- What kind of testing, if any, has been done? What chemicals were you testing for?
- Which company did the testing?
- If you do find toxic or carcinogenic chemicals what will happen?
- How will the public know if you've found chemicals?
- What are your proposed mitigation methods, if you do find the chemicals?

Looking forward to hearing the answers.

Regards,

Subject: Following up: Ontario Line + Billy Bishop Airport
Date: Tuesday, October 19, 2021 4:04:00 PM
Attachments: [image003.png](#)

Hi

Thank you for stopping by our community office on Saturday. My colleague passed on your contact information and question regarding the Ontario Line's western route and why it does not directly connect to the Billy Bishop Airport. I want to take this opportunity to say hello and explain the rationale behind selecting Exhibition Station as the Ontario Line's western terminus.

During the planning process, we studied station locations with a focus on bringing several benefits to our customers, including increasing access to transit, maximizing ridership, achieving travel time savings, reducing overcrowding on existing transit services and creating better access to jobs. We chose Exhibition Station to be the western terminus for the Ontario Line because it provides the best connection to the GO network in addition to TTC's surface transit options. You can find more details about planning considerations in this area on page 42 of the [Ontario Line's Preliminary Design Business Case](#).

While the Ontario Line will not directly connect with Billy Bishop Airport, the Ontario Line will connect with the TTC's 509 streetcar route at Exhibition Station. The 509 streetcar stop at Queens Quay West at Bathurst Street Eastside brings passengers close to both the ferry and pedestrian tunnel that connect directly to the airport. This is an example of the connectivity that Exhibition Station provides to other networks to get passengers where they need to go, and why it was selected as the Ontario Line's terminus station.

Please rest assured that we have been working with the TTC to make sure the Ontario Line best serves Toronto residents and provides the necessary relief to existing transit networks, such as existing subway lines, streetcar routes and busses, as well as plans for future services. We will continue to work closely with the TTC and City of Toronto as the project moves forward.

Thank you for your time and attention. Feel free to reach out if you have any further questions.

All the best,

Caitlin

Hi

Thank you for reaching out. We hear your concern about construction impacts during the Ontario Line around the future King/Bathurst Station.

Please know that we do not anticipate any further full closures or significant streetcar diversions in the downtown area beyond the [planned closure on Queen Street between Bay Street and Victoria Street](#) needed to construct the Queen Station. There will be lane restrictions at times, but we are planning these with the City of Toronto and TTC to minimize impacts.

The planned construction methods will help minimize impacts to the surface network. We are mining the Ontario Line tunnel underground in the King-Bathurst Station area between openings called 'keyholes', which will be located within the footprint of the station entrance buildings (you can find a map of the station area and the location of the station buildings on the northeast and southeast corners [here](#) on our website).

For additional context, the cut and cover construction method was used on the Eglinton LRT. We need to use the cut and cover method for the Queen Station due to technical limitations constructing under Line 1, which is why a full road closure is required. By contract, we are able to use the mining technique described above in the King/Bathurst area.

We hope this information is helpful. Please don't hesitate to reach out if you have any questions and consider signing up for our newsletter to stay updated on the Ontario Line.

All the best,

Caitlin

Subject: King/Bathurst subway station construction

Message:

In terms of road closures for the king/Bathurst station future station, would that whole intersection need to be closed off for work to pedestrians and cars ? and for how long?

I am interested in purchasing a retail store front on the North West side [REDACTED] of that intersection but I am hesitant due to the uncertainty of the future road closures in that intersection. Judging how the Eglington LRT subway station construction forced some stores out of business due to the construction, how do you see this being any different?

Thanks

Hello,

I am a Leslieville resident close to the Leslie/Gerrard Street intersection.

GO trains run immediately behind my property- all day.

The noise and vibrations are disruptive and have an adverse impact on our lives.

Our plates rattle on the dining table at meal times, our children wake up every time a train passes at night.

I have seen and heard a lot about noise walls in Riverside, but have not been able to find any clear information about your plans, if any, regarding noise walls east of Jones Avenue and north of Gerrard Street.

Those of us who live in this area deserve the same noise abatement as our neighbours on DeGrassi Street.

I would appreciate some information on your plans to install noise walls in my immediate community.

I look forward to hearing from you.

Hi Daryl,

Thank you for the response, and the informational material.

Unfortunately, the Leslieville community office appears to be closed, and the telephone number disconnected. As such, residents have no way to communicate with GO/Metrolinx, but by email.

I would appreciate an opportunity for a quick chat. I have availability this afternoon, if you do.

Many thanks,
[REDACTED]

Hi [REDACTED],

Thanks for reaching out to Metrolinx with your questions. The full Environmental Impact Assessment Report draft is available on our [website](#) for your consideration. It should entail most, if not all the answers to the questions asked in your email.

Hello,

So just to be clear, the environmental report will outline the noises levels of ALL potential construction? It is my understanding that the temporary tracks installed under Eglinton were used overnight and caused high levels of noise and vibrations for the local residents. Will this plan I outline this level of detail?

Also, I see you have a detailed animated timeline for the plan in Leslieville and Riverside.

[REDACTED]

Will this environmental report include a detailed timeline for the Pape Ave. corridor, including any early works? I.e. the moving of utilities?

Thank you,

[REDACTED]

Hi [REDACTED],

Thank you for following up with our team about these outstanding questions . Please accept our apology for the delay in our response.

Our teams have been studying the expected noise levels during both construction and operation of the Ontario Line, and the results of these studies will be detailed in our upcoming Environmental Impact Assessment Report (EIAR). The EIAR will also outline the things that Metrolinx and our contractor can do to reduce noise and vibration impacts wherever possible. We expect the EIAR to be released on February 7, 2022.

You will be able to find the EIAR on our [website](#). As with all our environmental assessment reports, the EIAR will be released in draft form on February 7 and followed by a 30-day feedback period. During this period, you will be able to submit feedback and ask questions about the report on our website.

We will also be hosting a series of virtual open houses on the EIAR in late February and early March. We will be releasing more details soon about the dates and setting up registration pages, which you will find [here](#) on our website once they're live.

You may wish to consider [signing up for our newsletter](#) to stay updated on the project and the report's release. Once the report is released and the virtual open house registration pages open, we will notify our newsletter distribution list. You can unsubscribe at any time.

We hope the information above is helpful. Please do not hesitate to reach out with any other questions.

Hello,

I haven't heard back from you regarding my questions from last October. Do you have an ETA?

I really need this info in order to decide if I should sell my townhouse or not. I have to find a new job in the very near future and knowing where I'll be living is essential to that decision.

Much appreciated,

[REDACTED]

Hi [REDACTED]

It was nice speaking with you this morning. Sorry for the technical issue with your meeting booking, and thank you for offering to send us your confirmation email so that we can look into the issue.

I will reach out to our environment and engineering teams to learn more about:

- track noises or other underground construction noise that might be heard after tunnel boring is complete and before the line is in operation, similar to what you have learned about track noises along Eglinton, and

- the maximum allowable noise overnight, and whether the limit is different than what is allowed in the daytime.

Please let us know if you have any other questions, and feel free to call again at 416-202-5100. If you haven't already, please also consider signing up for our e-newsletter [here](#).

Thanks,
Sivahami

Hi [REDACTED]

Thank you for reaching out and sharing your feedback with us. During the planning process, we studied station locations with a focus on bringing several benefits to our customers, including increasing access to transit, maximizing ridership, achieving travel time savings, reducing overcrowding on existing transit services and creating better access to jobs.

We chose Exhibition Station to be the western terminus for the Ontario Line because it provides the best connection to the GO network in addition to TTC's surface transit options. According to our modelling projections, this will also be the third-busiest station on the Ontario Line, serving over 12,000 people during the peak morning hour.

The King/Bathurst Station will also serve more than 27,000 residents within a 10-minute walk and connect people to the 24,200 jobs in the area by 2041. In an area where 8,700 households currently don't own a car, this station will offer vital connections between the Ontario Line and the existing streetcar services. You can find more details about planning considerations in this area on page 42 of the [Ontario Line's Preliminary Design Business Case](#).

While the Ontario Line will not directly connect with Billy Bishop Airport, the Ontario Line will connect with the TTC's 509 streetcar route at Exhibition Station. The 509 streetcar stop at Queens Quay West at Bathurst Street Eastside brings passengers close to both the ferry and pedestrian tunnel that connect directly to the airport. This is an example of the connectivity that Exhibition Station provides to other networks to get passengers where they need to go and why it was selected as the Ontario Line's terminus station.

Please rest assured that we have been working with the TTC to make sure the Ontario Line best serves Toronto residents and provides the necessary relief to existing transit networks, such as existing subway lines, streetcar routes and busses, as well as plans for future services. We will continue to work closely with the TTC and City of Toronto as the project moves forward.

Thank you for your time and attention. Feel free to reach out if you have any further questions.

All the best,

Caitlin

Hi .. I was just wondering why the Ontario Line is bypassing the Island Airport as well as the new development at Ontario Place.

Also, seems like having it end at the GO station at Exhibition is unnecessary duplication of service. Also, King/Bathurst Station seems unnecessary as it duplicates the King streetcar now that King Street has been closed to everyone else for the streetcar service.

Would it not make more sense since we are building something new for it to go places people would actually want to go?

Hi [REDACTED]

Thank you for reaching out. We understand how important the First Parliament Site is to the community and to our history, and we are committed to honouring the significance of this site as we deliver the Ontario Line.

With the Ontario Line station being located on the site north of Front Street, where the Staples is currently located, the site just south of Front Street, commonly known as the First Parliament site, will be used to support the construction of Corktown Station and tunnelling activities in order to reduce community impacts.

Metrolinx is carrying out a thorough and complete assessment of the entire site, which will ensure that all archaeological artifacts and features are documented and conserved. All artifacts and features will be cataloged and documented by qualified licensed archaeologists. Archaeological teams will draw from their professional knowledge and experience to determine the best way forward for any archaeological materials uncovered, while following all relevant legislation, standards, and guidelines. Archaeological work began on the site on October 1, and you can find more details [here](#).

Monitors from Indigenous Nations have also been invited to participate in all archaeological work to ensure any Indigenous archaeological resources present are treated in a culturally sensitive manner. Where possible, Metrolinx will endeavour to protect archaeological features in-situ. All plans have been reviewed and approved by the Ministry of Heritage, Sport, Tourism and Culture Industries before any work began. You can learn more about this [here](#).

The City of Toronto along with its partners and stakeholders have already built out a robust Heritage and Interpretation Strategy for this site. Metrolinx will use this work as the foundation for the overall Interpretation and Commemoration Plan for this site. We will also be asking for community feedback on the Interpretation and Commemoration Plan and look forward to sharing more information about this engagement soon.

Please do not hesitate to reach out if you have any further questions. Thank you again for writing.

All the best,

Caitlin

Good afternoon [REDACTED],

Thank you for booking an appointment with the Ontario Line Community Relations team.

We note in the description that you are looking to discuss a possible food drive box at the Weston UP Express Station. UP Express falls under Metrolinx's Toronto West team's purview, so we have copied them here to assist with your inquiry.

We are more than happy to still call you tomorrow at 2 p.m. if you have any questions or feedback about the Ontario Line. Would you please let us know if you wish to keep the appointment?

Thank you again for booking, and we look forward to hearing from you.

All the best,

Caitlin

[image007.png](#)

Hi

Pleasure to respond since this is my area.

You are correct that all three tracks have been used in the past. Metrolinx is using a staged approach to ensure minimal service disruptions and impacts to the surrounding community. The staged approach means that at any given time there are two tracks available for train services and one out of service so that construction (Ontario Line stations at East Harbour & Riverside + GO Expansion) can continue without disruption. We wrote a [blog about this change here](#).

There are many omissions or errors made in the document commissioned by the community group. I admit I am not fully briefed on the GO Expansion as it relates to Bowmanville or Oshawa. I do know that four out of the six future tracks will service GO trains.

The community cross section is completely wrong as it lacks proper scale. You are correct that the existing GO tracks (three) will be lifted and shifted to make room for the six track configuration as demonstrated by the cross section and roll plan we have released. This allows us to mostly stay within the property limits which are defined by the existing fence or berm in the area.

Happy to answer more questions or look into them for you!

Daryl

Hi Ontario Line Team

I just have a few questions. No rush to respond because I know there is a high volume of correspondence. For the "OL_LSE Phasing_Design File For Animation_DRAFT_20210920" video found [here](#) the existing conditions only shows two green tracks and says "Active GO Rail" (screenshot below). I was under the impression that GO sometimes uses all three tracks. Is this not the case? Just curious.

Also I see that the community has released their version of a Health Impact Study. I don't think their interpretation of the proposed is correct. The "GO Expansion" to Oshawa over just two tracks implies that just those two tracks will be used to go to Oshawa. It doesn't mention the Bowmanville Extension and it doesn't recognize that all four tracks could be used for GO Expansion/electrification. Is my understanding correct? I also realize the community's cross-section is unofficial and not to scale. I think it also implies that the existing three tracks will stay where they are but I believe there will be some shifting of the existing three tracks per the graphic even the group provides [from](#) Metrolinx (see the yellow lines). Better view on the [roll plan](#) available [here](#).

Thank you

Hi

Thank you for sharing these resources and your advocacy for this senior home. We are working to set up an engagement with the folks who live in this building.

Enclosing the rail corridor is not feasible from a cost and visual impact perspective. Doing so would be very expensive, have technical restraints with the overhead electrification wires and cast a visually impactful shadow to the neighbourhood parks that many folks in the community enjoy.

We are working to look at options for these senior homes as defined in the Lakeshore East Joint Corridor Early Works Report.

Feel free to reach out should you have any further questions,

Thank you. I would be glad to see the Ontario Line connect to the Richmond Hill GO train line which runs through the Don Valley. It would be nice if you had a staircase or elevator to connect the Richmond Hill GO line to the Ontario line.

Hello,

I ask that washrooms be added to each and every subway transfer station on the Ontario Line. Doing this will prevent public urinating which I've personally seen happen too many times. Don't tell me that you don't have room. You can dig down deeper or build washrooms on the second floor.

Thank you,

Hi

Yes, it appears location is at [REDACTED] where the train line crosses the road.

It was continuous banging which woke my family up. So loud in fact we had to shut our windows to continue to try and sleep

As this is in the middle of a residential area, how is this fair?

Regards

Hi [REDACTED]

Thank you for your question about the Ontario Line Corktown Station location. The Corktown Station entrance building will be located south of King Street East and north of Front Street East between Parliament and Berkeley Streets. You can find a map of the location [here](#) on our website on our Corktown Station page.

There used to be a Staples building at 250 Front Street East where Corktown Station will be located, but Staples has since relocated north to 517 Richmond Street East.

Thank you again for writing. Please do not hesitate to reach out with any other questions and consider [signing up for our newsletter](#) to stay updated on the project.

Hi [REDACTED],

I am writing to provide you with an update on our investigation thus far. I have checked with our teams, and this work does not appear to be related to the Ontario Line or a Metrolinx project. I have followed up with 311 to ask them to look into ongoing City works again.

I sincerely apologize for the back and forth and understand how frustrating the disruption is to you and your family. I will continue to track this issue with 311 and let you know as soon as we receive more information. Thank you very much for your patience, and I hope to be back in touch soon.

Hello Daniel and Caitlin,

Thank you for your email.

The construction noise is coming from Queen West, we live right at the corner of Richmond and Spadina. We can hear it clearly.

I believe it's between Spadina and Macdougall lane.

The noise starts as early as 8:00am (some days very) and ends around 9:00pm or shortly after.

Thank you for taking the time to get back to me. I look forward to hearing from you.

With kind regards

[REDACTED]

Hi [REDACTED],

I am connecting you with our community relations team for the Ontario Line, copied here. They will be able to assist with confirming any construction we may have occurring in this area. It may be helpful for them to know which part of Queen St. West is affected (between which exact streets, for example), so they can investigate and provide you with as complete a response as possible. You can also reach them at 416.202.5100.

You are welcome to contact this email, development.coordinator@metrolinx.com, should you have any questions about new development and approvals for building near Metrolinx transit infrastructure. Stay well.

Best,

Daniel

Good evening, [REDACTED].

I hope you're well.

I received your email directly from 3-1-1.

Are you able to confirm your hours of operation for this ongoing late-night construction project with Metrolinx?

I think it would be fair to the downtown residences that the construction stops around or shortly after 7:00pm, anything after 9:00pm isn't reasonable at all.

Many thanks,

Hi [REDACTED]

Thank you for reaching out and sharing your feedback with us. We hear your concerns and understand that residents rely on a variety of different transportation modes, including cars, to get around the city.

We understand that traffic and parking use increases significantly in the area during the Distillery District Winter Village. Please know that we have worked with the Distillery District and our crews to avoid or minimize the use of well-trafficked roads in the neighbourhood during the Winter Village event.

Regarding the classification of city streets, such as one-ways, these decisions are made by the City of Toronto. Toronto's 311 service may be able to assist you with any questions or concerns regarding street classifications.

Thank you again for writing. Please do not hesitate to contact us in the future and consider [signing up for our newsletter](#) to stay updated on the project.

All the best,

Caitlin

Subject: Please have mercy on my neighbourhood

Message: I've lived here since 1990 and hate the changes being made. I've seen what Metrolinx has done to Harbourfront and Eglinton. All I'm asking is to please have mercy on my neighbourhood. Remember, many of us still drive. Cars need to have a place in this community. The blind destruction of parking, the making of one-way streets and no-way streets is not the solution. In fact, it's delusional. Right now, the Distillery Market is on and for the next six weeks, this area is going to be a nightmare. Please consider those who cannot use a bicycle and need a car to get around.

Hi [REDACTED],

Thank you for reaching out and sharing your feedback with us. We appreciate your participation in the survey and input about how to interpret and commemorate the First Parliament Site and its historical significance.

We hear you and agree that all of the themes that were identified in the City of Toronto's First Parliament Heritage Interpretation Strategy are important. This is why we are using the great work done by the City to inform our First Parliament Heritage Interpretation and Commemoration Plan (ICP). The survey we released is meant to identify areas of importance to the local community to inform the ICP. Please know that the ICP for the First Parliament Site at Corktown Station is not finalized and will be informed by the feedback we receive through the survey. We will also take back the input you shared with us via email.

We would also like to assure you that our Ontario Line plans for Corktown Station do not impact Parliament Square Park to the south of the First Parliament Site. The transit oriented community (TOC) proposed for the site by Infrastructure Ontario also does not impact this commemorative park.

If you are interested, Infrastructure Ontario is hosting a community consultation on their proposed TOC at the future Ontario Line Corktown Station, as they are leading this program in partnership with the Province. You can find more information about the TOC at [engageIO.ca](#) or register for the Corktown TOC consultation meeting on Monday, December 6 [here](#). Please note that Metrolinx is responsible for delivering the transit infrastructure. Anything above and beyond constructing the Ontario Line, such as the proposed TOC, falls under Infrastructure Ontario.

Thank you again for writing. Please do not hesitate to reach out in the future.

All the best,

Subject: First Parliament Site Commemoration Survey

Message:

I just finished your First Parliament Site Commemoration Survey. Am I right, you will have to go into the subway station for an Interpretive Centre ?

I can't believe you would think this was worthy of such a significant Canadian historical site, if that is the case. I did the survey, and I do not understand why I would have to choose what is most important, since all of it is equally important, and all should be included. Why wouldn't it ALL be included? Obviously, you are going to proceed in putting multiple condos on the south parcel of land, that should be respected as the beginnings of Upper Canada, and treated as such. This would never happen in the U.S. or England. An interpretive centre should be on the site with a significant park. Not full of apartment buildings. I am so disappointed. I can't believe a country would have so little regard for its history. Very sad, I find it mind boggling.

Hello ,

Thank you for your email.

The reason that the Ontario Line is above-ground through Thorncliffe Park and Flemingdon Park is that the geography of the area, i.e. the three ravines that the line needs to cross here, would make constructing underground tunnels very challenging, and would result in very deep stations with much longer connection times for commuters transferring from buses. Both Overlea and Don Mills are wide enough that they can accommodate an elevated guideway, and Metrolinx will be looking to example elevated transit lines in cities like Vancouver, London, Shanghai, Singapore, and Copenhagen to create an elegant structure that complements the character of the neighbourhood.

The public spaces underneath the guideway (tracks) will be designed with community input so that they can function as community assets. We recently had an initial online survey focusing on community priorities for these spaces, and we will continue to reach out to the community as designs progress. We have also been meeting regularly with the condo boards of [REDACTED] to share project information.

Please let us know if you have any further questions, and if you haven't already, please consider signing up for our e-newsletter [here](#). Hope you can also join us tonight for a [virtual open house](#) at 6:30pm. If you can't make it, the recording will be available on the event page by tomorrow. Previous virtual open houses are also available for viewing at the same link.

Thank you,
Sivahami

A question from a homeowner on Leaside Park Drive: Who is the genius that thought putting an elevated rail line along Overlea Blvd. would be a good idea? Obviously Toronto's urban planners have failed to learn anything from the experience of other large North American cities.

I don't really expect an answer

Register now: Ontario Line Open Houses Tuesday and Thursday

As we approach the end of the year, Metrolinx is excited to host the next round of Ontario Line virtual open houses this **Tuesday** and **Thursday** at 6:30 p.m.

These engagements will be slightly different as we will look at the project as a whole from Exhibition to the Science Centre. We will briefly recap past

project milestones while detailing what communities can expect in 2022.

Both the Tuesday and Thursday virtual open houses this week will have similar presentation materials so feel free to participate in whichever one works best for your schedule. Each virtual open house will also feature a question and answer period so you can better connect with the Ontario Line project team.

Register now to save your spot and start submitting questions in advance by [clicking here](#).

Hi Sivahami,

Thank you for responding to my letter.

However it does not give me much confidence that the elevated line will not be 6 feet away from the wall of our building.

If you had said it would be located on the west side of Don Mills Rd, run past the the Science Centre stop, and curve elegantly over to the side of the new bus depot I would have been some what happier. And that this line will also be encased in a structure in its elevated state so that there would little if any sound.

A tunnel in the air if you will. This is what I heard about what might be happening in the Queen Street area with the GO trains. The difference there is there are low rise buildings along the route. Sound always goes up never down. So the high rise dwellers here present and future will be very affected by the sound of these trains unless they are encased in a tunnel

in the air. Much cheaper than a tunnel in the ground which seems, although a far preferable solution for the long term, to be difficult (?) You could save alot of money indeed if it were an elevated train downtown. Why not? All those office buildings have windows that don't open anyway.

I am not assured by your comments that there are elevated trains in Vancouver, London, Shanghai, Singapore, and Copenhagen,. These places are places where the civil authorities are for the most part enlightened. I am well aware of where the Vancouver line goes having ridden it many many times. From my memory there is no place where it has the proximity to buildings that seems to be proposed for our corner. This will be downtown for all intents when all the construction which is planned around this corner is completed.

As for London I don't recall any elevated trains. I have spent a lot of time there in subways and British Rail (on the surface) And one LRT near Greenwich.....

However I invite you to come to our corner and describe for me what is planned. Have you ever visited this corner? You must have a good idea as it is clearly detailed on the map.

I think the first speaker who read out a sort of manifesto had it right. The disadvantaged of our neighbour hood will just have to accept the crumbs left over when the line gets this far. I had forgotten that there is a mosque which will be torn down. 10,000 signatures?! And all those little shops gone. There is no other place for them in our community to my knowledge. Unless Metrolinks is going to buy some land and rebuild this community on the parking lot of the supermarket. I notice Costco will not be inconvenienced.

I am already on your news letter.

I am not opposed to this line being built. It is long over due. There is no doubt that the people who live here will benefit from it being here. However if they can build a station under an existing one downtown they can easily tunnel from the Don Valley crossing to Eglinton. Also the promise of 200 new jobs from the yard which will be built is rather insulting and pandering without merit. Is this a promise from Metrolinks?? Should people line up?

I await your call to say you will come and visit our wind swept corner and describe to me the elegant solution which I am sure you have in mind.

Best regards

Hi [REDACTED],

Thank you for your email.

You are correct that the Ontario Line elevated guideway (tracks) will cross Don Mills, and then Eglinton. We will share more detailed maps of the route as designs progress, but I can confirm that the guideway will not impact your building or the City of Toronto's development, and we are committed to creating a structure that is elegant and complements the character of the neighbourhood. Metrolinx is working closely with the City of Toronto to coordinate the design and construction of the Ontario Line with the City's development so that the public spaces underneath the guideway can be used as a community asset; these public spaces will be designed with community input as well.

The reason that the line is above-ground through Thorncliffe Park and Flemingdon Park is that the geography of the area, i.e. the three ravines that the line needs to cross here, would make constructing underground tunnels very challenging, and would result in very deep stations with much longer connection times for commuters transferring from buses. Elevated transit lines are in place in cities around the world, including Vancouver, London, Shanghai, Singapore, and Copenhagen, and the Ontario Line will build upon lessons learned by those cities to create state of the art designs for this project.

Please let us know if you have any further questions, and if you haven't already, please consider signing up for our e-newsletter [here](#). Hope you can also join us tonight for a [virtual open house](#) at 6:30pm. If you can't make it, the recording will be available on the event page by tomorrow. Previous virtual open houses are also available for viewing at the same link.

Thanks, and have a good afternoon,
Sivahami

Your e-mail address:

Nearest Ontario Line Station (Optional): Science Centre

Subject: elevated track from don valley to eglinton

Message:

I live in a condo at [REDACTED]. The current map about how the line ends seems to cut across the very busy road intersection of Don Mills and Eglinton. Actually every map I have seen also seems to cut through our building or at the very least a three building development (each 48 stories) slated to be built directly in front of our building (SE corner of Don Mills and Eglinton). I question why the line is going to be elevated from the Don Valley crossing to the Science Centre station and not underground. If tunneling were started soon at both ends of the line time constraints would not be a problem. It is a very messy and inelegant end to such an important transportation project indeed. Kind of third world.

I have put this ending down to some hasty thinking to get the thing off the ground. Not only will this corner be populated by the three 48 story buildings on the SE corner

but on the NW corner there will three new building the tallest one 52 stories with the others in the 40 story range. Also on the NW corner the new 60 acre redevelopment of the old Celestica site to be the corporate world head quarters of the Onex corporation and housing in high rises and town houses for what seems like about 15,000 new residents. This ugly buckshe end to this major project seems slipshod to say the least. Time to rethink the portion of the line from the Don Valley to Science Centre station and put it underground as the line runs downtown and from the railway cut from the CN rail line to the Don Valley.

Hi [REDACTED],

Thank you for your email. This section of the Ontario Line route is on a later construction timeline than the downtown section, and will only begin construction closer to 2024 or 2025. That means that the Cosburn station area is still in the design phases, and plans have not been finalized. As soon as we know more about the location of the station building, we will share that information on our website, through public events, and in our e-newsletter.

If you aren't already receiving our e-newsletter, consider signing up [here](#) to stay up to date on the project, and please let us know if you have any further questions.

Thank you,
Sivahami

Dear Sir or Madam,

I am a resident of Pape Village (North segment).

This is a map of the proposed Cosburn station:

<https://www.metrolinxengage.com/en/content/ontario-line-neighbourhood-updates-north-cosburn>

The map shows the proposed location of the platform, but doesn't show the above-ground station building.

Could you please indicate on the map where the station building is planned to be located?

Thank you,

Hi [REDACTED]

Thank you for reaching out and bringing this to our attention. We understand there were some delivery issues with the notices we sent out to community members across the project inviting them to the two virtual open houses this week on Tuesday, November 23, and [tonight](#). We truly apologize for any inconvenience caused by the late arrival.

Our goal with distributing the notices was truly to engage as many people as possible who live near the future Ontario Line. We understand the delayed arrival in mailboxes means that not all who are interested will be able to participate on short notice. We will work to improve our process in the future to minimize the chance of this happening again.

We will have the video recordings of the virtual open houses available on the [event webpages](#) after the event, so anyone who is interested can watch them at their convenience. The opportunity to submit questions also remains open for some time after the open house, so residents can continue to submit questions. We will respond to questions on the event page in the coming weeks following the open houses.

We also have a [Book a Meeting](#) feature on our website, where residents can book a one-on-one meeting with a member of our Community Relations team at a date and time that works for them.

Thank you again for contacting us. Please do not hesitate to reach out if you have any questions.

All the best,

Caitlin

To the receiver of this email,

I hope this email finds you well. I am curious, and would like to know beyond curiosity why my building, which may very well find itself adjacent to the illustrious Ontario Line, did not receive the Q&A pamphlet until today - Wednesday, November 24, 2021, one day AFTER the first Q&A presentation, and after questions can be submitted.

I find it disingenuous that any information was disseminated at all given the history of misinformation provided by both the Provincial Governemtn and the Ontario Line's offices.

I look forward to hearing your thoughts about the timeline of the pamphlet distribution to

Sincerely,

A solid black rectangular box used to redact the sender's signature.

A disabled taxpayer who will in all likelihood, not be able to utilize the Ontario Line in any meaningful capacity, as is with the TTC

Metrolinx

The attached notice arrived in my post box yesterday, November 24, 2021. I noticed that the first session was scheduled for the day before the notice arrived and the 2nd session is today. I can only assume that this was done to limit participation. I think it is completely unreasonable to send notices out in the middle of a tight window. You talk about community involvement and then do things like this to limit community involvement.

I know that we are in uncertain times with the pandemic still influencing our lives. You must believe that we are sitting at home with nothing to do that we can change our plans to take part in such events with little or no notice. Most of us work hard and have busy lives, especially during this time. I would think that if you truly wanted community involvement, you would give us at least a week's notice so that we can plan for such events that are going to change our community so drastically. Instead, I am left to believe that you are only going through the motions of community involvement, so that you can say "at least we tried". As an organization that appears to be just an extension of the provincial government, I would have expected better.

Regards

Good morning:

Page 24: The map showing the proposed Queen car diversion trackage includes Adelaide Street west of York. This is not required for the Metrolinx diversion, but the TTC has contemplated reactivation of this trackage for many years for diversions around events, notably TIFF. The track between Spadina and York has not been passable for years thanks to a series of construction projects and pavement cuts. Does this proposal include reactivation of the track on Adelaide between Spadina and York eastbound? The summary on page 34 only speaks of track on York Street.

Page 33: In the discussions of the Corktown Station area, much has focussed on the station site, but there are no details of the transitional section between the station and the portal and surface running section west of the Don River. Obviously some part of this will have to be built as cut-and-cover with much greater effect on the neighbourhood than bored tunnel. Where will this transition to cut-and-cover occur, or to put it another way, what will be the extent of surface disruption at the portal and some point west of it where the bored tunnel begins?

The situation is different from that at the Crosstown portals at Black Creek and Brentcliffe where the TBM staging sites were at the points where the line emerges to the surface as the surrounding land drops into valleys. At Corktown, as I understand things, the station itself will be the site for TBM launch and spoil removal, but that mainly addresses the drive west toward Yonge. There is also the small section south and east from the station to the portal, and that's the segment I am interested in.

Thanks

Hi

Thank you for reaching out and sharing your questions. The tunnel depth in this area will be about 30 metres deep and into the bedrock, which helps reduce the potential for vibration and noise. Most of the tunnel in this area is in bedrock, which is a rigid, strong material. There is also another approximately 10 metres of glacial till above the bedrock layer, which helps isolate noise and vibration.

The timing of construction work will be dependent on other work taking place in the area. If overnight work needs to take place in this area, all City of Toronto standards for overnight work will be followed. Impacts of construction work will also be mitigated through the development and implementation of site-specific noise, dust and vibration mitigation plans in compliance with provincial standards.

We are also preparing a full Environmental Impact Assessment Report (EIAR), which will include studies and proposed mitigations for noise and vibration impacts during both construction and operation of the line. The EIAR is tracking to be released in January 2022. We will release the report first in draft form so the public has an opportunity to review the report and provide feedback. The feedback we receive during the consultation period is then factored into the final report.

If you haven't already, we kindly invite you to [sign up for our newsletter](#) to stay updated on the project as the design and plans progress. We will also send notice out to our newsletter subscribers as soon as the draft EIAR is released.

Thank you again for writing. Please do not hesitate to reach out if you have further questions.

All the best,

Caitlin

Hi [REDACTED]

Thank you for reaching out and sharing your questions. The tunnel will be about 20-30 metres deep underneath Pape Avenue (for context, most home basements and foundations are about 3 metres deep), and it will be constructed using tunnel borers deep underground. We expect that the significant depth of the tunnel will reduce impacts to homes.

Our aim is to make sure there will be no significant difference in noise and vibration levels compared to what people are experiencing today. The whole line will feature continuously welded rail with no joints, resulting in a smoother, quieter ride as trains pass over the tracks. We'll also be using modern, electric, automated trains which will help avoid the sounds that arise from human error, like hard breaking.

A more detailed understanding of impacts and proposed solutions will be part of the Environmental Impact Assessment Report, which we anticipate releasing for review and comment in January 2022. This builds off the findings of the [Environmental Conditions Report](#), which we consulted on and finalized in November 2020.

If you haven't already, we kindly invite you to [sign up for our newsletter](#) to stay updated on the project as the design and plans progress. We will also send notice out to our newsletter subscribers as soon as the draft EIAR is released.

Thank you again for writing. Please do not hesitate to reach out if you have further questions.

All the best,

Caitlin

Hi [REDACTED]

Thank you for reaching out and sharing your questions with us. The reason that the line is above-ground through Thorncliffe Park and Flemingdon Park is the geography of the area. The three ravines that the line needs to cross here would make constructing underground tunnels very challenging, and would result in very deep stations with much longer connection times for commuters transferring from buses. Elevated transit lines are in place in cities around the world, including Vancouver, London, Shanghai, Singapore, and Copenhagen, and the Ontario Line will build upon lessons learned by those cities to create state of the art designs for this project.

You can find the projections for the Ontario Line's Science Centre Station [here](#) on our website, and we are also sharing them below:

- 8,000 people within walking distance to station
- 5,800 customers will use the station during the busiest travel hour (3,600 getting on and 2,200 getting off the Ontario Line)
- 3,600 transfers to/from the Eglinton Crosstown LRT during the busiest travel hour, and 1,400 from local buses
- 9,200 jobs in the area

The projections applied in the modelling adhere to the province's Growth Plan for the Greater Golden Horseshow and are based on market trends. The land use does assume growth in the Science Centre zones, but may not capture exact developments (unless they have been made part of the official plan).

While the line does not currently extend north of the Science Centre Station, our plans protect for the possibility of expanding the line in the future to improve transit access and meet demand. Tail tracks, north of the Science Centre Station, will provide space for the storage of vehicles and protect for future expansion.

Thank you again for writing. Please do not hesitate to contact us in the future and consider [signing up for our newsletter](#) to stay updated on the project.

All the best,

Caitlin

I was one of the participants st last nights presentation . As with all Zoom meetings, the voice portion fades in and out. Plus the session was terminated after an hour plus . Therefore I was unable to ask my questions which you may have already covered . However I would appreciated a reply.

My questions are as follows:

1. Why is the north section from the Leaside Bridge to the Ontario Science Centre not underground ?
2. What are the projected volumes at the Ontario Science Centre ?
3. Did these totals include all the new developments at Don Mills and Eglinton, plus the other developments to the east and west of this station ?
4. Why doesn't the line extend further up Don Mills Rd to at least the Sheppard Line with stops at the Shops of Don Mills. Etc.? . This route would then complete the circuit and eliminate a number of car trips from Don Mills and Victoria Village area to North York.

Thanks for getting back to me so quickly Daryl! It is much appreciated.

I was asking because I live directly south of the park at [REDACTED] The train tracks are just east of us.

Wasn't sure if my property would need to be appropriated to make way for the Ontario Line.

Would appreciate any insights you might have.

Many thanks

Hi [REDACTED]

Thanks for reaching out. We added Tiverton Park in the table to communicate that there will be no impact to the park during construction and beyond.

All parks in your neighbourhood will continue to be open during our work with the exception of Gerrard Carlaw Dog Parkette. We are currently working with the City to find an alternative program space for this specific park.

Feel free to reach out should you have any further questions,

Hi there

I attended the Virtual Open House and had a question about the East Corridor.

Can you tell me what is happening to Tiverton Park? There was no data in the fields beside it.

I posted the question in the Chat, but it wasn't addressed.

Please let me know

Thanks

Hi [REDACTED]

Thank you for reaching out and bringing this to our attention. We understand there were some delivery issues with the notices we sent out to community members across the project inviting them to the two virtual open houses this week on Tuesday, November 23, and [tonight](#). We truly apologize for any inconvenience caused by the late arrival.

Our goal with distributing the notices was truly to engage as many people as possible who live near the future Ontario Line. We understand the delayed arrival in mailboxes means that not all who are interested will be able to participate on short notice. We will work to improve our process in the future to minimize the chance of this happening again.

We will have the video recordings of the virtual open houses available on the [event webpages](#) after the event, so anyone who is interested can watch them at their convenience. The opportunity to submit questions also remains open for some time after the open house, so residents can continue to submit questions. We will respond to questions on the event page in the coming weeks following the open houses.

We also have a [Book a Meeting](#) feature on our website, where residents can book a one-on-one meeting with a member of our Community Relations team at a date and time that works for them.

Thank you again for contacting us. Please do not hesitate to reach out if you have any questions.

All the best,

Caitlin

Hi [REDACTED]

Plans have been adjusted so right now we are advancing an Ontario Line station at Gerrard E. and Carlaw integrated with the bridge to service the area.

GO trains would proceed to East Harbour which is a station that will serve Ontario Line and GO customers together.

Hope this helps,

Daryl

Hi, Is there a plan to include a GO train stop at Gerrard E. and Carlaw ?

It would be a great connection point for TTC and GO.  
(train, bus, streetcar, GO).

Dec 5, 2021

Hi Caitlan:

Thanks for letting me know the reasons why there cannot be any TTC stops at Cherry St. and between the Exhibition and King/Bathurst.

That being said,

I may have to transfer from working at my companies Head Office in the Yonge & Bloor area to 90 Wildcat in January, 2022.

I checked with the TTC and this would mean a 1 hour & 11 minute TTC ride.

1 hour & 11 minutes within the City of Toronto that is crazy.

I can go by Go-Train to my Mom's in Whitby faster than that.

I live downtown at Sherbourne & Dundas.

I do not own a Vehicle.

Apparently I have to get the Dundas St. Streetcar West to the TTC University Line and go North to the Finch West Station.

Get off, cross the street and get a Bus that runs to the top of the Wildcat St. and walk down Wildcat to get to the office.

All this takes 1 hour & 11 minutes if you catch all the connections and if the TTC does not have any Signal Issues etc.

I cannot guarantee my Boss that I would be in work on time.

To do so I would have to get up early to catch the Dundas St. West Streetcar to the University Subway Line when it opens at 6am to make sure there are no Subway Issues and that I catch the bus across the street from the Finch West Subway Station to get to Wildcat.

If I miss the bus connection I have to wait (how long) for the next bus.

Then when I do leave work I will have to go through another 1 hour & 11 minutes just to get home and having the possibility that there could be TTC Issues on the way home and I get in at a late time with just enough time to eat something and go to bed to start the above all over again.

\*Can you imagine if it's snowing, sleeting etc and having to miss the Bus connection plus walk in to the Wildcat office with no guarantees that the Wildcat St. will be Snow Plowed or Sanded.

Why is nothing being done to have quick TTC connections to the North ends of Toronto?

**Subject:** RE: Ontario Line Stations - Questions

Hi

Thank you for reaching out and sharing your questions. [Queen Station](#) is projected to be the busiest Ontario Line station and provides a critical connection to TTC's Line 1, and [Moss Park](#) Station will connect a dense and fast-growing area of the city to the subway network.

When looking at the possibility of a station on Cherry Street, one of the important factors we considered was the distance between stations. If we located a station in this area, it would be very close to both Corktown and East Harbour Stations. As a result, the trains may not have enough time or distance to fully accelerate, impacting the overall time savings for travellers. This is also the reason that there is not an additional station located between Exhibition and King/Bathurst, as the trains would not have enough distance to accelerate while travelling on a curved path.

To provide some more details on the planning process, we studied station locations with a focus on increasing access to transit, maximizing ridership, achieving travel time savings, reducing overcrowding on existing transit services and creating better access to jobs. If you want to learn more, you can read the [Preliminary Design Business Case](#) (pages 40-42 provide the overview and rationale for west stations and pages 43-45 provide an overview and rationale for downtown stations).

Thank you again for writing. Please do not hesitate to contact us in the future and consider [signing up for our newsletter](#) to stay updated on the project.

All the best,

Caitlin

Nov 27, 2021

Dear Ontario Line:

I see you have Station Stops at Queen St. E & Moss.

Why so close together?

Also, between Corktown & East Harbour there are not Stops for the people who work in the Cherry St. /Polson Park area.

Also, there are no Stops between Bathurst & the Exhibition.

Why is that so?

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Hello Caitlin,

The Principal of St. Michael's College at the U of T, [REDACTED], has written extensively on the migration of Irish to Upper Canada.

The following works might prove useful in informing the Heritage Interpretation and Commemoration Plan for the Ontario Line's Corktown Station:

Migration, Arrival, and Settlement before the Great Famine  
The Encyclopedia of Canada's Peoples / Irish Catholics

McGowan, Mark George

<http://multiculturalcanada.ca/Encyclopedia/A-Z/i8/8>

Death or Canada : the Irish famine migration to Toronto, 1847

McGowan, Mark George, Toronto : Novalis, 2009

Creating Canadian historical memory : the case of the famine migration of 1847

McGowan, Mark George, Ottawa : Canadian Historical Association, 2006

Best,

On Dec 13, 2021, at 2:36 PM, Ontario Line <[ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)> wrote:

Hi

Thank you for reaching out and sharing your feedback with us regarding the interpretation and commemoration of the First Parliament Site.

We know that the site has a diverse history and holds significance for many different communities who came to call Toronto home. This is why we are engaging the community to understand how to commemorate the site's history in the new subway station through our online survey. This commemoration project provides an opportunity to explore the extensive history of this site and builds on the work done by City of Toronto for their [First Parliament Heritage Interpretation](#) Strategy, which was informed with feedback from Indigenous Nations, public consultation and research.

The site's commemoration will be informed not only by the survey results, but also by historical research and results of the archaeological assessments (i.e. artifact interpretation) so there is an opportunity to explore histories beyond what has been identified thus far. Regarding the history of Irish immigrant communities at the First Parliament Site, would you kindly suggest any sources you are aware of which provide more insight? We would be more than happy to share these with our consultants. We will also be bringing on an interpretation and commemoration specialist who will be analyzing the history via the City's existing plan and also will be looking at survey results

and other feedback from the community.

We also acknowledge that it is important to recognize that Indigenous Peoples were present on the lands where the First Parliament site was built long before settlers arrived. The site is located on the traditional territory of many Nations, including the Anishnabeg, the Haudenosaunee and the Wendat Peoples. It is on lands covered by Treaty 13 with the Mississaugas of the Credit First Nation.

Thank you very much again for reaching out and sharing your feedback with us.

All the best,

Caitlin

Please forward to Ms Meaghan Rivard, Senior Heritage Consultant for Metrolinx.

Dear Ms Rivard,

I am writing to inquire if there is any intention to incorporate any representations or narratives of Toronto's Irish Immigrant communities in the Corktown Station of the Ontario Line?

While Anishnabeg, Haudenosaunee and Wendat peoples are all included in the Heritage Interpretation and Commemoration Plan for the Ontario Line's Corktown Station., I am

unable to locate any mention of Irish settler communities — either Catholic or Protestant.

Please let me know how this oversight might appropriately be addressed?

HI [REDACTED]

Mark, copied, will be your contact going forward.

We are still working through the design implications due to the request from City staff. Once these are finalized, we will share it with yourself and the [REDACTED] via an updated rollplot that will also provide the elevation of each bridge.

I checked in with [REDACTED] and all the bridges in this corridor will meet the 5 metre clearance requirement from the City.

Daryl

Daryl,

I am following up on this inquiry.

Please tell me whom I should forward this to on your team given you are leaving Metrolinx at the end of 2021.

I have added an addition below about the Eastern Ave. bridge.

You have also stated that the City wants the rail bed to be raised more than is in the current Metrolinx plans and that the City also is talking about a "clear span" design for the Degrassi and Logan Ave. bridges.

What are the implications of these 2 potential changes?

Thanks.

**Subject:** RE: Transit Corridor Lands Inquiry  
**Date:** Tuesday, November 30, 2021 6:41:00 PM  
**Attachments:** [image001.png](#)

---

Hi [REDACTED],

Thank you very much for reaching out. We can confirm that your property at [REDACTED] does appear to fall within the transit corridor lands for the Ontario Line. You can also see the boundary of the transit corridor lands on our online interactive map [here](#) and look up your specific address. The boundary is labelled as the “Transit Corridor Lands + 30-metre buffer area” shown in blue.

The size of the transit corridor lands vary along the Ontario Line and are not limited to the location of the tracks. Transit corridor lands represent the areas where we may need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information [here](#) on our website.

Thank you again for writing, and please do not hesitate to reach out with any further questions.

All the best,

Caitlin

Hi [REDACTED],

Thank you for following up. There will be lane closures and sidewalk impacts in the area, but the road will not be fully closed as part of Ontario Line construction. Vehicles and streetcars will still be able to access and travel through the King/Bathurst area, and all business accesses will be maintained during construction.

Our teams worked closely with our City of Toronto counterparts on detailed planning and coordination for Ontario Line construction through the downtown area. This work has culminated in a report to the City Council's Executive Committee, which the City released yesterday and posted [here](#) on their website (pages 2-3 and 11-17 focus on King/Bathurst Station). You can also find more details about the traffic lane and road impacts [here](#) in Appendix A.

I hope this information is helpful and, as always, please do not hesitate to reach out if you have any questions.

All the best,

Caitlin

Hi Caitlin

Thanks for the response back. New details for the Ontario line construction for king and Bathurst show full roadway closure along Bathurst from king street till 38 meters north for seven years . Is that correct ? So street cars and vehicles will be diverted ?

Hi [REDACTED],

Thank you for reaching out and asking about the Ontario Line trains. The Ontario Line will feature GOA-4 trains. These trains will be electric and driverless and are different from those currently used on the TTC's subway system. The train cars are currently being designed and priced in a worldwide competition as part of the [procurement](#) process. Next year, we expect to select a company to deliver the trains under the Rolling Stock, Systems, Operations and Maintenance package.

You may have already seen this, but you can find general information under our website's [trains and technology](#) page. Please do not hesitate to reach out in the future with any further questions.

All the best,

Caitlin

Hello,

Will the trains for the Ontario Line be the same size as the current subway trains, the Scarborough RT, or the LRT trains?

I couldn't seem to find the information on your website about the line

Thank you,

Hi Dillon (and Caitlin),

Caitlin, thank you for your assistance and for connecting me to the Property Team.

Dillon, my apologies for the delay in responding. I was hoping to include my husband in our meeting/call, but his schedule is making that difficult so we've decided that I should go ahead without him.

I have the following availability:

- today (Thursday) any time after 2 pm
- Friday (Dec 10) any time except 12-1pm
- Monday (Dec 13) any time after 2pm
- Tuesday (Dec 14) any time

Let me know if something in there works at your end.

Thanks so much,  
[REDACTED]

Hi [REDACTED],

Thank you for reaching out, it is much appreciated. In reading the thread below, it may be best if we setup a time to connect and I hopefully can answer any questions you may have with respect to the project requirement and timelines. While we are in confidential discussions with the owner of the property, we also recognize the benefits and importance of speaking with tenants as well. Again, thank you for reaching out to allow this to happen.

Are you able to provide your availability over the next few days, and I am happy to setup a call for us to connect. I look fairly flexible over the next few days – with Friday being somewhat full already.

Let me know what works best for you, and I look forward to connecting in the near future.

Thank you,

Hi [REDACTED],

Thank you for getting back to me. Our acquisition timeline for [REDACTED] is coming up sooner than mentioned in your most recent email. If I'm not mistaken, Metrolinx will take possession of the building to begin construction on the Ontario Line around the end of July 2022.

While negotiations are still ongoing with the property owner, and we cannot share the details of those negotiations for legal reasons, our Property Acquisitions team has offered to connect and confirm the acquisition timeline and answer questions about this process. I have copied my colleague, Dillon Gencarelli, from our Property team to continue the conversation.

Please do not hesitate to follow up with any questions in the meantime.

All the best,

Caitlin

Hi Ontario Line Team,

Hope you're well. I heard at yesterday's Board meeting that Metrolinx has responded in detail to SaveTPARK's alternative idea for the MSF. Is there a copy of the response available on the Metrolinx website? Also, is the deck available that shown on page 4 here: [https://www.metrolinx.com/en/docs/pdf/board\\_agenda/20211202/Letter%20from%20SaveTPARK%20received%20October%2019%202021%20re%20Train%20Yard%20Site%20Selection.pdf](https://www.metrolinx.com/en/docs/pdf/board_agenda/20211202/Letter%20from%20SaveTPARK%20received%20October%2019%202021%20re%20Train%20Yard%20Site%20Selection.pdf)

I fully support the Metrolinx proposed location for the OL MSF and I know it was selected based on an extensive review and a detailed criteria.

Thank you,

Hi [REDACTED]

Thank you for reaching out. You can find more information about Pape Station and a map of the station area [here](#) on our website.

This section of the Ontario Line route is on a later construction timeline than the South/downtown section and will likely begin construction closer to 2024 or 2025. That means that the Pape Station is still in the design phases, and plans have not been finalized. As planning progresses, we will share that information on our [website](#), through public events, and in our [e-newsletter](#). We look forward to sharing more details as soon as they're available.

Please do not hesitate to reach out with any further questions. Thank you again for writing.

All the best,

Caitlin

**Subject:** RE: Information Request | Ontario Line

Hi [REDACTED],

Thank you very much for following up. I have been looking into your follow-up questions, but I should have confirmed receipt of your email. Please accept my apology for not providing an update on our response.

Regarding your question about parking impacts on Stewart Street, street parking will need to be reduced. The report provides more details on page 15 in the report:

“The partial lane closure on Stewart Street, between Bathurst Street and a point 32 meters east, will result in an eastbound lane at least 3.3 metres wide. Approximately four on-street parking spaces and permit parking spaces within the closure limit will require removal. The Project Co. will coordinate with Toronto Parking Authority to pay the lost revenue of the removed pay and display on-street parking spaces. The removed four permit parking spaces are part of the permit parking area 6E, which currently operates at capacity. The Project Co. will be responsible for providing temporary offstreet replacement parking spaces in a nearby private underground or at-grade parking facility.”

As you noted in your email, the routes will be finalized after we have a Project Company (a.k.a. Project Co.) selected to deliver the work. A Project Co. will be selected through the procurement process, and the procurement package for this area of the project is currently in-market for prospective builders to bid on. We expect that a successful bidder will be selected in fall 2022.

We will work with the Project Co. to establish a plan for services such as window washing as one of our actions to help alleviate impacts as best as possible during construction. This commitment is also detailed in the report on page 66:

“Metrolinx will address these concerns through the project agreement and the Project Co. will be required to mitigate these impacts, including:

- Having experienced communications and community relations staff to support Metrolinx’s communication and stakeholder engagement programs.
- Providing notification of construction activities in advanced of starting works.
- Ensuring all business, government and hospital accesses, including loading/delivery zones are maintained.
- Requiring frequent window washing and cleaning.
- Requiring safe, visually appealing and well-lit construction hoarding, while safeguarding mobility access.
- Requiring the successful Proponent to develop, implement and assess a ‘Business Supports Plan’ for the area which includes marketing and advertising initiatives, and;
- Ensuring construction staging areas minimize disruption to the area.”

Thank you again for reaching out and following up on your inquiry. My sincere apologies again for the delay in getting back to you. Please do not hesitate to follow up with any further questions.

All the best,

Caitlin

Hi Caitlin,

Thanks for your reply. I live on [REDACTED] and my main concerns with the project are the haul routes. The PDF you linked to describes up to 20 excavation truck trips/day and up to 20 delivery truck trips/day on Stewart St.

Currently [REDACTED] is not wide enough to safely accommodate parking on both the North and South sides AND wide construction trucks. The doc you linked mentions: "These routes will be confirmed and refined when the Project Co. joins the project." When will these routes be finalized? Will street parking be reduced?

There are primarily residential condos on [REDACTED] How will the surrounding condo corporations be compensated for the additional window cleaning required as a result of this work?

Thank you,

**Sent:** Thursday, December 16, 2021 2:36 PM  
**To:** [REDACTED]  
**Subject:** RE: inquiries about Ontario Line

Hi [REDACTED],

Thank you for reaching out, and please accept our apology for the delay in responding. We have responded to your questions below with as much information available at this stage in the project.

Please note that this section of the Ontario Line route is on a later timeline than the downtown section and will likely begin construction closer to 2024 or 2025. That means that the Pape Station area is still in the design phase, and plans have not been finalized, which is why fewer details are available at this time. This work will fall under our North Civil, Stations and Tunnel [procurement](#) package.

1. Is the proposed line going exactly under Pape Avenue (that is, not to the east or west) between Withrow and Wroxeter?

Please find a map of the North segment's current route (from the Gerrard tunnel portal to the Ontario Science Centre Station) [here](#) on our website. Under current plans, the route does divert slightly out of the roadway (underground) as it approaches and leaves Pape Station.

2. What depth will the line be at?

The tunnel will be about 30-metres deep underneath Pape Avenue and will be constructed using tunnel borers deep underground. For context, the average basement is about 3-4 metres deep, with an additional 2 metres of foundation underneath. We expect that the significant depth of the tunnel will reduce impacts to homes.

3. Will the line be bored? And, if so, what are the end points of the bored tunnel? Will there be disruption to Pape Avenue between Withrow and Wroxeter?

The tunnel will be bored between the Gerrard tunnel portal (south of Pape Avenue and Riverdale Avenue) and the Minton Place tunnel portal (you can find a map of the Minton Place portal [here](#)).

4. Will the houses along Dingwall experience vibrations during the boring? Will they experience noise?

While we expect that the significant depth of the tunnel will reduce impacts to homes, the project's Environmental Impact Assessment Report will include a more detailed understanding of impacts like noise and vibration. The report will also include proposed solutions that Metrolinx and the Project Company can use to minimize possible impacts. Studies are underway, and we anticipate releasing the report for review and comment in late January 2022.

5. When is the boring under Pape scheduled to start? And to end?

We do not yet have this level of detail in the construction schedule for this area. We will have a better sense of the timeline closer to 2024 when we expect to select a successful Project Company to deliver the project through the procurement process.

6. When is that stretch of the Ontario Line scheduled to be open for service?

The entire line will open simultaneously, with the same in-service date. The exact timeline will be determined through the procurement process, but recent estimates have the opening date in 2029.

7. Will houses along Dingwall experience vibrations or noise once the trains are running?

The Environmental Impact Assessment Report will include a more detailed understanding of impacts like noise and vibration during both construction and operations.

We hope the information above is helpful. We look forward to releasing more details about the project in this area as soon as they are available. Please consider [signing up for our newsletter](#) if you wish to receive notice as soon as the Environmental Impact Assessment Report is released. You can unsubscribe at any time.

Thank you again for writing, and please do not hesitate to reach out in the future.

All the best,

Caitlin

Hello,

We are thinking of buying a house on [REDACTED], and we had a few questions about the proposed Ontario Line and possible disruptions. We have seen several of the Zoom information sessions that you and your team have conducted, but we notice much less was said about the part of the line between Gerrard and Pape than either south of Gerrard or north of Pape. So we hope you can answer some particular questions. Thank you very much in advance.

1. Is the proposed line going exactly under Pape Avenue (that is, not to the east or west) between Withrow and Wroxeter?

2. What depth will the line be at?

3. Will the line be bored? And, if so, what are the end points of the bored tunnel? Will there be disruption to Pape Avenue between Withrow and Wroxeter?

4. Will the houses along Dingwall experience vibrations during the boring? Will they experience noise?

5. When is the boring under Pape scheduled to start? And to end?

6. When is that stretch of the Ontario Line scheduled to be open for service?

7. Will houses along Dingwall experience vibrations or noise once the trains are running?

Thank you for your prompt attention,

Hi [REDACTED]

Thank you for reaching out and sharing your concerns regarding traffic and road changes during the construction of the Ontario Line. We appreciate Councillor Bradford's office connecting you with our team. Please accept our apology for the delay in responding.

We hear your concerns about traffic and road impacts in the downtown and understand how these changes and impacts on travel times can be frustrating for commuters and the community. Please know that we have worked closely with our municipal partners to coordinate several years of planned construction and maintenance work.

The plan outlined in the [report to the City's Executive Council](#) is the result of Metrolinx, City of Toronto, TTC, utility companies and other builders coming together for the first time to work as a team to coordinate construction for multiple different projects over several years. This was the first of its kind of such a significant, coordinated effort here in Toronto.

Our strategy included looking at how existing plans for diversions around the construction of new office and condo towers along the Ontario Line route could affect other nearby construction. We also considered the order in which construction and maintenance work should happen to help reduce timelines and minimize impacts. Not all of these will coincide, and the coordinated construction plan aims to minimize the amount of time any individual area will be affected. We will continue to work to reduce traffic impacts with our partners, including the City of Toronto, the TTC, and the future Project Company selected to deliver this package of work.

We will also work with our municipal partners to introduce safe, effective detours and wayfinding to ensure that people living in, working in, or visiting the area can move around quickly, easily and safely. We will communicate about any changes early and often using a variety of communications channels.

Thank you again for writing and sharing your feedback with us. If you have any further questions, please do not hesitate to reach out.

All the best,

Caitlin

Hi [REDACTED]

Thanks for clarifying. While these projects are located outside of Ward 19, Councillor Bradford will seek more information from his colleagues at Executive Committee in advance of the next Council meeting. It's vital to minimize construction impacts wherever possible as the province moves forward with the Ontario Line. I've copied the Ontario Line team on this email so they can provide further information.

If you're interested, Councillor Bradford will be co-hosting an information session on Wednesday to discuss the construction of the Gardiner and other projects in the east end waterfront. More information [here](#).

**To:** Councillor Bradford <[Councillor\\_Bradford@toronto.ca](mailto:Councillor_Bradford@toronto.ca)>  
**Subject:** Re: From [REDACTED] and [REDACTED]

Hello Diana,

This is the article published Dec. 1st 2021 which is describing the project.

Downtown gridlock is set to “significantly worsen” for the better part of the next decade as the construction of Ontario Line stations coincides with a number of major city-led infrastructure projects, a new staff report warns.

The **report**, which will go before Mayor John Tory’s executive committee next week, estimates that commute times along several downtown arteries could increase by as much as 29 minutes between 2022 and 2029 while construction on six new Ontario Line stations takes place.

Drivers along Richmond Street would see the biggest delays with the average journey time from Parliament to Bathurst streets going from 22 to 51 minutes during the afternoon peak.

## PHOTOS

Drivers, however, will also face significant delays on several other major east to west routes during the afternoon hours, including Adelaide Street (plus 24 minutes), Wellington Street (plus 23 minutes), Dundas Street (plus 14 minutes eastbound, plus 11 minutes westbound) and Front Street (plus five minutes).

Morning commute times will be impacted as well but to a lesser degree with delays of one to six minutes expected.

“While impacts will be seen, in general the network should operate satisfactorily in the a.m. peak period with both the city-led works and the Ontario Line closures. The greatest impact will be seen in the already congested p.m. peak period where congestion will increase further and vehicle journey times will be significantly impacted,” the staff report notes.

The biggest impact from the construction of the southern portion of the 15.6 kilometre Ontario Line will be at Queen Station, where there will need to be a full closure of Queen Street between Victoria and Bay streets to vehicular traffic from May 2023 to November 2027.

But there will also be a number of other lane and sidewalk closures in the vicinity of the other downtown stations - King-Bathurst, Queen-Spadina, Osgoode, Moss Park and Corktown – that could snarl traffic and making getting around the city a little more trying.

The list includes a reduction of University Avenue to one lane in each direction between Queen Street West and Armoury Street, starting in May, in order to accommodate work on a new platform underneath Osgoode Station.

Starting in September, the eastbound curb lane on King Street will be closed between Berkley Street and Parliament Street and the southbound curb lane on Parliament Street will be closed between King and Front streets to accommodate work on Corktown Station. Those closures are slated to be in effect until November 2029.

## Modelling meant to provide worst case scenario

The staff report says that the modelling is intended to provide a “worst case” estimate in which various city-led projects, including sewer rehabilitation work along Richmond Street and watermain replacement work along Dundas, Front and Adelaide streets, are conducted “concurrently” with the work on the Ontario Line.

It says that the delays related to the construction of the new subway stations specifically will only have an “incremental impact” on travel times, ranging from one to five minutes during the afternoon commute and as little as a minute on most routes during the morning commute.

“I think what the report was talking about is that we are looking holistically at all of the construction that could be underway during this time, whether it is the Gardner construction, whether it’s Ontario line, whether it’s other condos that are being built, and in totality there is a potential for up to 30 minutes delay because of all of those construction projects,” Metrolinx spokesperson Anne Marie Aikins told CP24 on Wednesday afternoon. “So that is you know, that’s the maximum potential for

drivers. But we also have to think about pedestrians, making sure they have good safe, accessible access at all times. If you're a cyclist, we have to make sure that we meet all of those need and one of the most important groups is of course transit riders that are going through the Queen Street area so we're going to build a diversion for the Queen Street car ahead of time (on York Street)."

City staff are asking council to approve all of the road closures required for the construction of the first phase of the Ontario Line but they note that it is "expected" that some of the closures can be shorted or eliminated altogether due to a procurement process that incentivizes developers to "reduce the number and duration of road closures."

Hello Brad,

We are learning about new projects in downtown area that will significantly worsen traffic connection between east part of Toronto with downtown and west part of the city. Even though we understand the need for upgrading the city infrastructure but what we don't understand is the management of it and timing. Before the construction would start there must be alternative routes in place that can accommodate the volume of cars etc. We would like to ask you to rise the objection and suggest postponing the project after the lakeshore will be finished and fully operational. Please express our dissatisfaction and concerns.

Did you have a chance to drive car from Beaches and downtown after 3:30 PM? It's a nightmare. The same situation is when you are going east and try to exit Gardiner at Jarvis or any other exit when going to Beaches. Did Mr. Tory try that? It's a disaster. We are paying carbon tax but this construction management is just ignoring the situation and emission are going up. What sense does it make? We want Mr. Tory to resign.

Thanks

Hi [REDACTED],

Thank you for taking the time to speak with me today. It was a pleasure talking to you, and I appreciate you sharing your questions about the Ontario Line.

As discussed, I am sharing a few resources:

- [City of Toronto Executive Committee Report on Ontario Line Temporary Road Closures and Impacts in the Downtown](#)
  - [Appendix A](#) of the report is a summary/breakdown of the impacts
- Queen Street closure (east of Bay Street to Victoria Street):
  - [Queen Station Overview](#) (includes maps and description of closure)
  - [Blog post on Queen Street closure](#)
- [Environmental Assessment](#):
  - We're releasing our full and final Environmental Impact Assessment Report (EIAR) in January 2022 – this report will detail studies on anticipated impacts (noise and vibration, traffic and transportation, etc.) during construction and operations and measures Metrolinx and the project company can use to minimize impacts where possible
  - The report will be released first in draft form, followed by a 30-day review period, so the public can review it and ask questions or provide feedback, which is then factored into the final EIAR
  - As soon as the draft EIAR is released, we will notify our distribution list (I have added you to our distribution list; we send weekly newsletters)
- [Queen/Spadina Station Overview](#) (includes maps)
- [Osgoode Station Overview](#) (includes maps)

Thank you again for connecting with us. Please don't hesitate to reach out with any further questions.

All the best,

Caitlin

Hi [REDACTED]

Please see attached. This image was used to describe the traffic management plan during construction for the station serving Corktown. Keep in mind, this is the current iteration and this will likely change through more input from the City, our future contractors and feedback from the community.

Please note I will be leaving Metrolinx at the end of the year. That said, I live in Corktown so looking forward to all the great events the CRBA puts on and your advocacy. I am copying our Senior Manager, Mark Clancy, who will be your contact until a new Specialist is onboarded for the Ontario Line Downtown Segment.

Have a great weekend,

Daryl

Hi Mark!

Thanks for listening to our concerns - specifically, the proposed 46-storey heights/massing of the Corktown site.

As we discussed, there is an "Amended King-Parliament Secondary Plan" that the City of Toronto passed and put in place very recently. It stipulates height maximums for our neighbourhood and, specifically, those along King Street East. Infrastructure Ontario's proposal exceeds all of these.

Surely, the proposed heights could be lowered and Infrastructure Ontario could still achieve its goal of bringing transit, jobs, and great places to live to our neighbourhood.

Currently, there are many, many citizen/owners who live and work in this neighborhood, who are not happy at all with the proposed development. We have expressed this to our councilor, our provincial MP., and to the members of the Open Houses for Corktown Station.

I do trust that you sincerely and wholeheartedly passed on our concerns to the key people at Infrastructure Ontario. Should any of them want to discuss these further, I would be more than happy to do so.

Many thanks,

[REDACTED]

, on behalf of our neighbours

Hi

Thank you very much for reaching out. For inquiries about possible opportunities, we kindly encourage you to check out the following resources:

- [Metrolinx Job Portal](#)
- [Local 793 International Union of Operating Engineers](#)
- As we understand, job opportunities are frequently posted via the union

You may also wish to contact the successful Project Company for the Ontario Line once they are selected to inquire about opportunities. The South Civil, Stations and Tunnel procurement package, which includes Queen Station, is currently in-market. We anticipate selecting a successful Project Company in fall 2022. You can find a list of the prequalified prospective companies here: <https://www.infrastructureontario.ca/Requests-for-Proposals-Ontario-line/>

Thank you again for writing. Please do not hesitate to reach out in the future with any questions.

All the best,

Hi [REDACTED]

Thank you for reaching out and I'm glad you're able to share this news with your family. My name is Katiana and I just started on the OL team as a new Community Relations and Issues Specialist. I look forward to connecting with you in the new year!

Stay safe and happy holidays!

Thank you,
Katiana Moussa

Hi OL Team,

Great to see this news. I've shared it with my in-laws and a few other contacts.

I'm sure they will also be interested in the update in the future for Iqbal Foods so I'll share that as well when it's available.

All the best,

----- Forwarded message -----

Received. Thank you

Will circulate with the technical team and get back to you if they have any questions.

I am also touching base with them to see if the January 17th timeframe is doable given the ongoing discussions with the City.

Daryl

Hi Daryl,

I'm circling back to your email from last week. I will get back to you with some dates early next week for a call during the week of Jan. 17th. In the meantime, please find attached the floor plans for [REDACTED] Queen St. East. We are also working on the wish list and will send that to you in advance of the call.

Please let me know if you have any questions.

Best Regards,

Hi [REDACTED]

Thank you for reaching out to our team. The fence at Moss Park was recently removed, as the initial tree surveys and archaeological assessments have concluded. Station construction for the Ontario Line at Moss Park will begin in summer 2023.

We do not have an upcoming public meeting scheduled, but we regularly host these sessions and look forward to holding more of these engagements in the new year. We also always welcome questions and feedback via email and phone (416-202-5100), or you can book a meeting with a Community Relations team member on our website: <https://www.metrolinxengage.com/en/content/book-meeting-community-relations>.

If you're interested, you can also [sign up for our newsletter](#) to receive weekly project updates, including notices about upcoming community meetings and construction work.

Thank you again for writing. Please do not hesitate to reach out in the future.

All the best,

Caitlin

Date: Thursday, January 6, 2022 2:37:00 PM
Attachments: [image002.png](#)

Hi [REDACTED]

Thank you for your letter regarding tree removals underway in the Metrolinx corridor. As you mentioned, these tree removals were studied and approved under the GO Expansion electrification Transit Project Assessment Process (TPAP) in 2017, and through an addendum in 2021. The [2021 environmental assessment](#) (EA) identified all trees within the Metrolinx corridor that are within seven meters from the outside track would be removed – this is the work that is taking place now. These trees would need to be removed for GO Expansion regardless of the Ontario Line.

For these GO Expansion tree removals, we provided notice to the public using a variety of media. This includes a notice to the affected neighbourhoods sent by Canada Post on December 9, an [online notice](#) on the Metrolinx website, digital advertisements on Twitter, and through our community e-newsletters.

As part of the mitigation program in response to the original 2017 EA, Metrolinx developed a comprehensive vegetation management program. Overall, we plant more trees than we remove. Metrolinx's Vegetation Guideline is based on the Toronto Region Conservation Authority's own highly regarded guidelines. Both are firmly rooted in ecological science to ensure the city and the region stay green as we deliver more sustainable travel alternatives. To date, Metrolinx has funded and coordinated the planting of more than [24,000 native trees](#).

Metrolinx is open to working with municipalities and community groups to plant trees in municipal parks and green areas directly in neighbourhoods affected by tree removals, or providing trees and shrubs directly to residents for planting. Our team is meeting with the City of Toronto to identify how and where to plant more trees close to where they will be removed. We also look for opportunities to make the best possible use of any trees we need to remove, including working with the Toronto Region Conservation Authority to repurpose non-invasive trees (e.g., for wetland restoration, trail furniture), partnering with colleges to mill the wood for other purposes, and offering firewood to communities.

The Ontario Line environmental assessment is also complete and [posted online](#). Any Ontario Line-related tree removals, over and above those needed for GO electrification, will happen as early as Fall 2022. Metrolinx will inform the community prior to that work starting.

Thank you for providing us the opportunity to respond to your concerns. We appreciate your engagement and advocacy.

Sincerely,

Caitlin

Dear Premier Ford & Metrolinx,

I demand an immediate halt to the tree removal currently underway between Pape and Eastern Ave. The full Environmental Impact Assessment Report which will examine the cumulative impact has been released and reviewed. Our neighbourhood was not included in the 2021 GO Study area. The 2017 EA could not have authorised extensive tree removal because the Ontario Line didn't exist until 2019 and the OL will require significant changes to the width and height of the rail bed.

Metrolinx has refused to consider the findings of the community funded Health Impact Assessment. This report is neighbourhood specific but builds on considerable research showing the importance of trees and the tree canopy to both our mental and physical health. Starting this work just as we enter another lockdown and will rely more on our local parks, is particularly egregious.

This is another example of Metrolinx's deceitful tactics that confuse and mislead the public.

Good morning [REDACTED]

Thank you very much for reaching out, and wishing you a Happy New Year!

I do not believe the properties you listed are required for the Ontario Line project, but I am following up with our Property Acquisitions team to confirm. I will get back to you as soon as possible.

We have released the full, permanent property impacts in this area for the King/Bathurst Station, which you can see [here](#) on our website. In the event that your property would be required, Metrolinx would contact you well in advance to begin discussions and walk you through the acquisition process.

Thank you,

Caitlin

Hi [REDACTED]

Thank you for following up. The GO Expansion vegetation removals study was reported under the Natural Environment Impact Assessment section of the [2021 environmental assessment](#) (EA). The report covers all of the Lakeshore East Corridor, including the tracks west of the Don River (Don Yard) to Oshawa GO. Once you click on the link to the report, page 23 outlines the Study Area.

Please do not hesitate to reach out with any further questions.

Thank you,

Caitlin

Dear Premier Ford and Metrolinx,

I urge you to halt the tree removal that Metrolinx has commenced between Pape and Eastern Avenues in Toronto before the full Environmental Impact Assessment Report (EIAR) examining the cumulative impact of both the GO expansion and the Ontario Line projects is released and reviewed.

Reliance on certain previous environmental assessments in 2017 and 2021 is insufficient given the cumulative impact of both projects which was not contemplated in 2017. Furthermore, the section of the corridor from the Don River to Carlaw Avenue was excluded in the 2021 GO study.

The sheer scale of the combined projects and the various ongoing changes made to the Ontario Line plan through 2021 mandates a full and proper environmental assessment before proceeding. The 2017 and 2021 assessments are now dated and limited.

Metrolinx is open to working with municipalities and community groups to plant trees in municipal parks and green areas directly in neighbourhoods affected by tree removals, or providing trees and shrubs directly to residents for planting. Our team is meeting with the City of Toronto to identify how and where to plant more trees close to where they will be removed. We also look for opportunities to make the best possible use of any trees we need to remove, including working with the Toronto Region Conservation Authority to repurpose non-invasive trees (e.g., for wetland restoration, trail furniture), partnering with colleges to mill the wood for other purposes, and offering firewood to communities.

The Ontario Line environmental assessment is also complete and [posted online](#). Any Ontario Line-related tree removals, over and above those needed for GO electrification, will happen as early as Fall 2022. Metrolinx will inform the community prior to that work starting.

Thank you for providing us the opportunity to respond to your concerns. We appreciate your engagement and advocacy.

Sincerely,

Caitlin

To you – as you are the ones responsible:

SHAME on you. Cutting down trees is bad enough.

But, it is particularly shameful for doing so without the appropriate approvals.

Honestly, plainly and ethically – shame on you.

I demand an immediate halt to tree removal between Pape and Eastern Ave before the full Environmental Impact Assessment Report (EIAR) is completed (and hopefully not even then !).

Hi [REDACTED]

Thank you for your letter regarding tree removals underway in the Metrolinx corridor. These tree removals were studied and approved under the GO Expansion electrification Transit Project Assessment Process (TPAP) in 2017, and through an addendum in 2021. The [2021 environmental assessment](#) (EA) identified all trees within the Metrolinx corridor that are within seven meters from the outside track would be removed – this is the work that is taking place now.

For these GO Expansion tree removals, we provided notice to the public using a variety of media. This includes a notice to the affected neighbourhoods sent by Canada Post on December 9, an [online notice](#) on the Metrolinx website, digital advertisements on Twitter, and through our community e-newsletters.

As part of the mitigation program in response to the original 2017 EA, Metrolinx developed a comprehensive vegetation management program. Overall, we plant more trees than we remove. Metrolinx's Vegetation Guideline is based on the Toronto Region Conservation Authority's own highly regarded guidelines. Both are firmly rooted in ecological science to ensure the city and the region stay green as we deliver more sustainable travel alternatives. To date, Metrolinx has funded and coordinated the planting of more than [24,000 native trees](#).

Metrolinx is open to working with municipalities and community groups to plant trees in municipal parks and green areas directly in neighbourhoods affected by tree removals, or providing trees and shrubs directly to residents for planting. Our team is meeting with the City of Toronto to identify how and where to plant more trees close to where they will be removed. January 4, 2022

Good afternoon, Mr. Ford and Metrolinx staff,

I have just learned that Metrolinx has started cutting down trees in and around Jimmie Simpson park. How can this go ahead, without taking the proper steps of an environmental assessment? I understand that an EA has not been done for the corridor between Eastern Ave and Pape in this current construction project. This is outrageous. I am angry that this is happening when Metrolinx has ignored the findings of our community-funded Health Impact Assessment!

Together with my husband and daughter, I have lived in this neighbourhood--on West Avenue near Dundas Avenue, for 21 years, and I enjoy and need every shade tree in our vicinity during my walks--especially in the summer months. For example, the beautiful large trees that line Bruce Mackey park provide needed shade for our community.

Trees--our greenspace in our beloved neighbourhood, are priceless for our mental and physical health. There have been studies done on the importance of tree canopies for our health, and for our environment. In

fact, the City of Toronto has a goal of maintaining 30% canopy cover to maintain our existing watershed, to mitigate flooding and protect watersheds. Existing canopies need protection from any further development. Our neighbourhood already falls short of the 30% canopy requirement! Furthermore, there has already been significant loss to tree canopy cover in Toronto due to the emerald ash borer.

As a long-time resident of this historic and vital Toronto neighbourhood, I demand that Metrolinx cease the cutting down of trees around Jimmie Simpson immediately! It is my understanding that no cutting of trees shall be permitted without the proper Environmental Assessment and proper consideration of our local community's self-funded Health Impact Assessment.

Subject: Tree Removal - Ontario Line

EXTERNAL SENDER: Do not click any links or open any attachments unless you trust the sender and know the content is safe.
EXPÉDITEUR EXTERNE: Ne cliquez sur aucun lien et n'ouvrez aucune pièce jointe à moins qu'ils ne proviennent d'un expéditeur fiable, ou que vous ayez l'assurance que le contenu provient d'une source sûre.

I understand that tree removals were being done earlier today along the GO tracks between Pape and Eastern, where the Ontario Line is supposed to go under the current plan.

It is my further understanding that Metrolinx has no authority at this stage to be removing trees in this area.

I am tired of Metrolinx and the current provincial government running roughshod over our neighbourhood. It is bad enough that the Downtown Relief Line was scrapped and replaced with the Ontario Line, without any consultation I might add. Moving forward without proper assessments of the damage that the lines will do to our neighbourhood and to those of us who live in it risks doing irreparable harm to the physical environment and to the integrity of the process.

If Metrolinx has indeed started this tree removal, I am asking each of you to act within the bounds of your legal authority to stop any further tree removal in the rail corridor between Pape and Eastern Ave until the full Environmental Impact Assessment Report (EIAR) which examines the cumulative impact of all the GO and

Ontario Line projects is released & reviewed.

I note that Federal funding was contingent on a thorough environmental review being conducted and I trust that the federal government will act to ensure that any funding is halted unless and until all required environmental assessments are completed and any related recommendations are met.

Yours,

Dear Premier Ford,

I was disturbed to find out that Metrolinx has started tree cutting in and around Jimmie Simpson park for the proposed Ontario line despite not having any studies or GO EA's that provide approval for these tree removals.

Metrolinx is claiming to have authorization from 2017 when plans for the Ontario Line did not exist. This tree removal will have a huge impact on our air quality and community. Tree removal needs to stop until appropriate plans and approvals have been made.

The lack of engagement and these current actions from Metrolinx feel like a snide affront to our community. Stop cutting these trees immediately if you want our community to believe there is any integrity to your process.

Thanks,

I am writing to demand an immediate halt to tree removal between Pape and Eastern Ave before the full Environmental Impact Assessment Report (EIAR) which examines the cumulative impact of all these projects is released & reviewed.

Also..

Metrolinx has begun cutting down trees in and around Jimmie Simpson Park without a proper EA or consultation. The timing of this action is particularly egregious as we are entering the lockdown where parks and playgrounds provide the necessary respite.

I have just heard that Metrolinx is removing trees in and around Jimmie Simpson Park, even though the Environmental Impact Assessment Report has not been reviewed. This shows an absolute disregard for the needs of this community, especially during a lockdown, when outdoor spaces are more important to us than ever.

There are many upsetting aspects to Metrolinx's dealings in our community around the Ontario Line, from the lack of transparency in plans and rushed and unconsidered decisions, to the refusal to factor in environmental assessment and borderline disdain for this community. Parks, trees, and green infrastructure make neighbourhoods, and the people who live in them, healthier.

Stop the destruction of our park's natural features before all the information is in. Metrolinx appears to be acting as a direct agent of a government that is intent on punishing a community for not voting Conservative. I can think of no other reason the desires of our community have been, and continue to be, so callously ignored.

I wish to request an immediate halt to the tree removal between Pape and Eastern Ave in preparation of Metrolinx's Ontario Line. While Metrolinx claims justification for this serious escalation, it is quite clear that they do not have appropriate approvals to clear trees anywhere west of Pape Ave. The neighbourhood in question was excluded from the 2021 GO study area that Metrolinx is using in defence of their actions.

It's just not fair to the residents of this community or any voter in this province to have destructive work like this commenced before this important matter can be evaluated and settled with everyone at the table.

I appeal to your sense of duty and request you honour due process. Please suspend this operation until the full Environmental Impact Assessment Report has been released and reviewed.

Yours respectfully,

For these GO Expansion tree removals, we provided notice to the public using a variety of media. This includes a notice to the affected neighbourhoods sent by Canada Post on December 9, an [online notice](#) on the Metrolinx website, digital advertisements on Twitter, and through our community e-newsletters.

As part of the mitigation program in response to the original 2017 EA, Metrolinx developed a comprehensive vegetation management program. Overall, we plant more trees than we remove. Metrolinx's Vegetation Guideline is based on the Toronto Region Conservation Authority's own highly regarded guidelines. Both are firmly rooted in ecological science to ensure the city and the region stay green as we deliver more sustainable travel alternatives. To date, Metrolinx has funded and coordinated the planting of more than [24,000 native trees](#).

Metrolinx is open to working with municipalities and community groups to plant trees in municipal parks and green areas directly in neighbourhoods affected by tree removals, or providing trees and shrubs directly to residents for planting. Our team is meeting with the City of Toronto to identify how and where to plant more trees close to where they will be removed. We also look for opportunities to make the best possible use of any trees we need to remove, including working with the Toronto Region Conservation Authority to repurpose non-invasive trees (e.g., for wetland restoration, trail furniture), partnering with colleges to mill the wood for other purposes, and offering firewood to communities.

The Ontario Line environmental assessment is also complete and [posted online](#). Any Ontario Line-related tree removals, over and above those needed for GO electrification, will happen as early as Fall 2022. Metrolinx will inform the community prior to that work starting.

Thank you for providing us the opportunity to respond to your concerns. We appreciate your engagement and advocacy.

Sincerely,

Caitlin

Good Evening,

It has recently come to my attention that metrolinx have started to remove trees on the lakeshore east line between Pape and Eastern in preparation for the Ontario Line and Go Expansion. It is my understanding that they do not have the authority to do so.

I demand an immediate halt to the tree removal before the full Environmental Impact Assessment Report, which examines the cumulative impact of all these projects, is released and reviewed.

Regards

To the Honourable Doug Ford, Metrolinx, and elected representatives,

I am writing to demand an immediate to tree removal between Pape and Eastern Ave before the full Environmental Impact Assessment Report (EIAR) which examines the cumulative impact of all these projects is released & reviewed.

Metrolinx has begun cutting down trees in and around Jimmie Simpson Park without a proper EA or consultation. The timing of this action is particularly egregious as we are entering the lockdown where parks and playgrounds provide the necessary respite.

Metrolinx claims they have approvals from the GO EA to remove trees inside the corridor, citing 2017 and 2021 EA documents. Their claim is without merit. Consider:

- Metrolinx deliberately excluded our neighbourhood from their 2021 GO study area. As their EA explains “results of the noise modelling are not presented in this report for the western section of the corridor from Don River to Carlaw Avenue. The reason is that future noise impacts for this section of the Corridor will include those from Metrolinx operations as well as from operations of the Ontario Line subway, which will run above ground through this section.” Hence, there could not have been any approvals for our section of the corridor which were not studied.
- The 2017 EA could not have authorized the extensive tree removal for the Ontario Line, because OL didn't exist until 2019. In order to accommodate the above ground Ontario Line, Metrolinx needs to reconfigure the existing rail corridor: lift up an in-use GO track, raise the entire track bed by up to 1.6m and replace/build anew 6 bridges. All of this information came to light only in 2021. This significant rail corridor expansion will have a major impact on tree canopy, and none of these changes were known or considered in 2017.

- Metrolinx has also refused to consider the findings of the community funded Health Impact Assessment. We firmly believe no public transit should come at the expense of public health. Metrolinx needs to urgently clarify which public health officials it consulted when deciding to put thousands of South Riverdale residents' health and safety at risk.

Metrolinx does not have appropriate approvals to clear trees anywhere west of Pape Ave. We strongly condemn Metrolinx's deceitful tactics that confuse and mislead the public.

Remember also that the federal government is paying for much of the Ontario Line. One of key federal funding conditions is a thorough environmental review. No such review has taken place. This tree removal (which presumes the above ground OL) necessarily breaches their standard. The federal government must take responsibility for failing to meet its own [funding criteria](#).

Thank you for your time,

- Toronto, ON

Dear Premier Ford, Metrolinx, and Honourable Ms. Dabrusin

I'm writing with regards to the cutting down of trees in the Degrassi/Queen St East area and around Jimmie Simpson Park today, January 4th. I'm concerned that a proper and full Environmental Impact Assessment Report (EIAR) examining the cumulative impact of the Ontario Line has not been completed prior to the tree removal. The actions today seem to be the very definition of putting the cart before the horse. I understand the Metrolinx is citing a 2017 EA assessment from GO that "ok's" tree removal in this area. However, the Don River to Carlaw corridor was excluded from noise modeling in the 2017 report. Trees play an important role in buffering noise especially in this area where homes and buildings are already close to the tracks. As a significant funder of this project, the Federal Government has a responsibility to use your leverage and demand that a condition of funding is a completed and reviewed EIAR prior to the removal of trees. I'm dismayed at how little the Federal Government has done to protect green space in this corridor.

I look forward to hearing from you all on this matter,
Faithfully,

AN URGENT CALL TO ACTION; PLEASE WRITE NOW IN DEFENCE OF OUR TREES

Metrolinx has begun cutting down trees in and around Jimmie Simpson Park without a proper EA or consultation. The timing of this action is particularly egregious as we are entering the lockdown where parks and playgrounds provide the necessary respite.

Metrolinx claims they have approvals from the GO EA to remove trees inside the corridor, citing 2017 and 2021 EA documents. Their claim is without merit. Consider:

- Metrolinx deliberately excluded our neighbourhood from their 2021 GO study area. As their EA explains “results of the noise modelling are not presented in this report for the western section of the corridor from Don River to Carlaw Avenue. The reason is that future noise impacts for this section of the Corridor will include those from Metrolinx operations as well as from operations of the Ontario Line subway, which will run above ground through this section.” Hence, there could not have been any approvals for our section of the corridor which were not studied.
- Their 2017 EA could not have authorized the extensive tree removal for the Ontario Line, because OL didn't exist until 2019. In order to accommodate the above ground Ontario Line, Metrolinx needs to reconfigure the existing rail corridor: lift up an in-use GO track, raise the entire track bed by up to 1.6m and replace/build anew 6 bridges. All of this information came to light only in 2021. This significant rail corridor expansion will have a major impact on tree canopy, and none of these changes were known or considered in 2017.
- Metrolinx has also refused to consider the findings of the community funded Health Impact Assessment. We firmly believe no public transit should come at the expense of public health. Metrolinx needs to urgently clarify which public health officials it consulted when deciding to put thousands of South Riverdale residents' health and safety at risk.

Metrolinx does not have appropriate approvals to clear trees anywhere west of Pape Ave. We strongly condemn Metrolinx's deceitful tactics that confuse and

mislead the public.

Remember also that the federal government is paying for much of the Ontario Line. One of key federal funding conditions is a thorough environmental review. No such review has taken place. This tree removal (which presumes the above ground OL) necessarily breaches their standard. The federal government must take responsibility for failing to meet its own [funding criteria](#).

CALL TO ACTION:

Write to Premier Ford (premier@ontario.ca) and Metrolinx (ontarioline@metrolinx.com) and copy our elected representatives (councillor_fletcher@toronto.ca; tabunsp-co@ndp.on.ca; Julie.Dabrusin@parl.gc.ca;))

to demand an immediate halt to tree removal between Pape and Eastern Ave before the full Environmental Impact Assessment Report (EIAR) which examines the cumulative impact of all these projects is released & reviewed.

Image: Shaded in blue represents the area studied. Metrolinx's GO Environmental Assessment excluded our neighbourhood (Eastern to Pape) from the study area. Metrolinx, how can you cut down trees outside your study area?

Visit our website to learn more about our advocacy & donate to support our grassroots community fight to bury

the Ontario Line.

Dear Premier Ford,

It has come to my attention that Metrolinx is proceeding with the felling of trees in and around Jimmie Simpson Park without a proper EA or public consultation. As we enter our fourth lockdown since the pandemic began early in 2020, it is crucial that Metrolinx ensure our parks and playgrounds offer a restful escape for families, especially those with children, from the pressures and constraints that are imposed on them. Protecting Metrolinx staff against the rampant Omicron variant should be a first priority of your government.

Metrolinx does not have appropriate approvals to clear trees anywhere west of Pape Avenue. In addition, one of the key federal funding conditions is a complete environmental review, which has not yet taken place for this section of the corridor, nor has the full EA been made public. The tree removal for the above-ground 'subway' contravenes federal standards implicit in the funding criteria.

I wish to demand an immediate halt to tree removal between Pape and Eastern Ave before the full Environmental Impact Assessment Report (EIAR), which examines the cumulative impacts, is released and reviewed.

Yours sincerely,

Dear Premier Ford and Metrolinx

I have noticed today that some trees were cut down near the train tracks at Jimmie Simpson Community Centre without a proper Environmental Assessment and consultation.

As a home owner, who lives near the tracks and beautiful Jimmie Simpson Park I demand an immediate halt to tree removal between Pape and Eastern Ave before the full Environmental Impact Assessment Report (EIAR) which examines the cumulative impact of all these projects is released & reviewed.

The timing of this action is particularly egregious as we are entering the lockdown where parks and playgrounds provide the necessary respite.

Best regards,

Dear Premier & Metrolinx

I know we all have a lot on our plates at this time with the current pandemic, however I ask that you immediately stop the current tree removal between PaPe and Eastern Ave that MetroLinxs has started. I was just at the park with my 4 year old daughter and saw them there even though the full Environmental Impact Assessment Report (EIAR) which examines the cumulative impact of all these projects has not been released & reviewed.

This pandemic has shown us that much of what we believe we have control of, or certainty in - we don't. One of the gifts we have that has been certain forever is nature, and the ability to get outside, sit under a tree, and exhale. By running this Ontario Line above ground through our neighbourhood you are taking that from us, and our future generations. I believe in expanding transit, however I do not believe this new line should be going above ground through our beautiful neighbourhood, especially without a proper Environmental Assessment.

I have attached a map below that shows that this area should not yet be having trees cut down for the Ontario Line.

Thank you for your time. I hope you choose to help our community rather than ruin it.

Hi [REDACTED]

Thank you for your letter regarding tree removals underway in the Metrolinx corridor. These tree removals were studied and approved under the GO Expansion electrification Transit Project Assessment Process (TPAP) in 2017, and through an addendum in 2021. The [2021 environmental assessment](#) (EA) identified all trees within the Metrolinx corridor that are within seven meters from the outside track would be removed – this is the work that is taking place now.

For these GO Expansion tree removals, we provided notice to the public using a variety of media. This includes a notice to the affected neighbourhoods sent by Canada Post on December 9, an [online notice](#) on the Metrolinx website, digital advertisements on Twitter, and through our community e-newsletters.

As part of the mitigation program in response to the original 2017 EA, Metrolinx developed a comprehensive vegetation management program. Overall, we plant more trees than we remove. Metrolinx's Vegetation Guideline is based on the Toronto Region Conservation Authority's own highly regarded guidelines. Both are firmly rooted in ecological science to ensure the city and the region stay green as we deliver more sustainable travel alternatives. To date, Metrolinx has funded and coordinated the planting of more than [24,000 native trees](#).

Metrolinx is open to working with municipalities and community groups to plant trees in municipal parks and green areas directly in neighbourhoods affected by tree removals, or providing trees and shrubs directly to residents for planting. Our team is meeting with the City of Toronto to identify how and where to plant more trees close to where they will be removed. We also look for opportunities to make the best possible use of any trees we need to remove, including working with the Toronto Region Conservation Authority to repurpose non-invasive trees (e.g., for wetland restoration, trail furniture), partnering with colleges to mill the wood for other purposes, and offering firewood to communities.

The Ontario Line environmental assessment is also complete and [posted online](#). Any Ontario Line-related tree removals, over and above those needed for GO electrification, will happen as early as Fall 2022. Metrolinx will inform the community prior to that work starting.

Thank you for providing us the opportunity to respond to your concerns. We appreciate your engagement and advocacy.

Sincerely,

Caitlin

Hi there,

It was brought to my attention that Metrolinx has begun cutting down trees in and around Jimmie Simpson Park **without a proper EA or consultation.**

Please halt the tree removal before the full Environmental Impact Assessment Report (EIAR) which examines the cumulative impact of all these projects is released & reviewed.

There's already a considerable amount of smoke coming from trains which can be increasingly sensed during the winter months.

Thank you,

Premier Ford,

I am writing to express my profound disappointment and frustration regarding the tree removal that has been initiated in and around Jimmie Simpson Park without any environmental assessment or community consultation.

It is so obviously clear to everyone who lives here (and I mean literally EVERYONE) that the Ontario Line should be put underground through our community. I am astounded by the complete unwillingness of the provincial government and Metrolinx to listen to our constituents on this critical issue. The plans for above ground rail will completely ruin the integrity of all the neighborhoods affected by the line. It is disturbing that proposed plans to move the project underground have never even been seriously assessed by anyone running this project, especially when a serious assessment may actually reveal that an underground solution saves costs over the long term.

I am sincerely hopeful that the tree removal is immediately halted until a full EIAR has been released and reviewed by our community. There is still time to make the right decisions here - the East End of Toronto is a beautiful part of our City. Please don't ruin it so brazenly. It's time to pause and listen to the community now before mistakes are made that can't be undone.

Sincerely,

Metrolinx has begun cutting down trees in and around Jimmie Simpson Park without a proper EA or consultation. The timing of this action is particularly egregious as we are entering the lockdown where parks and playgrounds provide the necessary respite.

Metrolinx claims they have approvals from the GO EA to remove trees inside the corridor, citing 2017 and 2021 EA documents. Their claim is without merit. Consider:

- Metrolinx deliberately excluded the South Riverdale neighbourhood from their 2021 GO study area. As their EA explains “results of the noise modelling are not presented in this report for the western section of the corridor from Don River to Carlaw Avenue. The reason is that future noise impacts for this section of the Corridor will include those from Metrolinx operations as well as from operations of the Ontario Line subway, which will run above ground through this section.” Hence, there could not have been any approvals for our section of the corridor which were not studied.
- Their 2017 EA could not have authorized the extensive tree removal for the Ontario Line, because OL didn't exist until 2019. In order to accommodate the above ground Ontario Line, Metrolinx needs to reconfigure the existing rail corridor: lift up an in-use GO track, raise the entire track bed by up to 1.6m and replace/build anew 6 bridges. All of this information came to light only in 2021. This significant rail corridor expansion will have a major impact on tree canopy, and none of these changes were known or considered in 2017.
- Metrolinx has also refused to consider the findings of the community funded

Health Impact Assessment. We firmly believe no public transit should come at the expense of public health. Metrolinx needs to urgently clarify which public health officials it consulted when deciding to put thousands of South Riverdale residents' health and safety at risk.

Metrolinx does not have appropriate approvals to clear trees anywhere west of Pape Ave. We strongly condemn Metrolinx's deceitful tactics that confuse and mislead the public.

Remember also that the federal government is paying for much of the Ontario Line. One of key federal funding conditions is a thorough environmental review. No such review has taken place. This tree removal (which presumes the above ground OL) necessarily breaches their standard. The federal government must take responsibility for failing to meet its own [funding criteria](#).

As a resident of this neighbourhood and user of these park facilities, I demand an immediate halt to tree removal between Pape and Eastern Ave before the full Environmental Impact Assessment Report (EIAR) which examines the cumulative impact of all these projects is released & reviewed.

Image: Shaded in blue represents the area studied. Metrolinx's GO Environmental Assessment excluded our neighbourhood (Eastern to Pape) from the study area. Metrolinx, how can you cut down trees outside your study area?

Hello there,

Hope you are enjoying the holidays and staying safe.

Writing to share two community notices: **geotechnical overnight drilling** (starting Jan 10, 2022) and **vegetation clearing** (starting Jan 3, 2022) in the LSE rail corridor.

In regards to the vegetation clearing, this notice was sent via Canada Post to residents and businesses directly. Due to feedback from our contractors, a reminder to not enter the active

rail corridor as it presents an immediate safety risk and COVID risk with workers nearby.

Happy to answer any questions,

Daryl Gonsalves

Thanks for the canned response. Some additional questions,

1. why is the supposed community office on Queen East ALWAYS closed??? You guys don't staff it and NOBODY IS LISTENING.
2. Why hasn't Metrolinx restated the cost to having to demolish and replace all the bridges in riverside? This was NEVER part of the business case that alleged \$\$\$ savings. I would estimate that this oversight alone would more than make up the \$800M "in savings" that Mx has pretended exists with on ground rail.
3. What is the cost of the continuous noise barrier that was also not costed as part of the alleged \$800M in savings? This wall won't be free and the servicing and daily graffiti removal will be downloaded not the city. Why hasn't this been costed and presented?
4. How can anybody at Mx purport that noise will be quieter when there will be a 900% increase in train movements? Think about this logically. Is Metrolinx okay?

Bury the line. It's the right thing to do. Stop gaslighting the community!!! We want transit but want the respect they Etobicoke and Thornhill have both received.

I would like a response to these 3 questions responded too. Thank you

Hi [REDACTED]

Thank you for your letter regarding tree removals underway in the Metrolinx corridor. These tree removals were studied and approved under the GO Expansion electrification Transit Project Assessment Process (TPAP) in 2017, and through an addendum in 2021. The [2021 environmental assessment](#) (EA) identified all trees within the Metrolinx corridor that are within seven meters from the outside track would be removed – this is the work that is taking place now. The trees being removed in Metrolinx's right of way in this section of the corridor would have been removed as part of the GO Expansion program, regardless of whether or not the Ontario Line was above or below ground.

For these GO Expansion tree removals, we provided notice to the public using a variety of media. This includes a notice to the affected neighbourhoods sent by Canada Post on December 9, an [online notice](#) on the Metrolinx website, digital advertisements on Twitter, and through our community e-newsletters.

As part of the mitigation program in response to the original 2017 EA, Metrolinx developed a comprehensive vegetation management program. Overall, we plant more trees than we remove. Metrolinx's Vegetation Guideline is based on the Toronto Region Conservation Authority's own highly regarded guidelines. Both are firmly rooted in ecological science to ensure the city and the region stay green as we deliver more sustainable travel alternatives. To date, Metrolinx has funded and coordinated the planting of more than [24 000 native trees](#).

Metrolinx is open to working with municipalities and community groups to plant trees in municipal parks and green areas directly in neighbourhoods affected by tree removals, or providing trees and shrubs directly to residents for planting. Our team is meeting with the City of Toronto to identify how and where to plant more trees close to where they will be removed. We also look for opportunities to make the best possible use of any trees we need to remove, including working with the Toronto Region Conservation Authority to repurpose non-invasive trees (e.g., for wetland restoration, trail furniture), partnering with colleges to mill the wood for other purposes, and offering firewood to communities, like we have already done a couple of times.

Regarding the Ontario Line environmental assessment, the Lakeshore East Joint Corridor Early Works Report is now complete and [posted online](#), including the noise modelling assessment between Don River to Carlaw Avenue referenced below (which is specific to cumulative operational noise for both GO Expansion and Ontario Line, and not vegetation). Any Ontario Line-related tree removals, over and above those needed for GO electrification, will happen as early as Fall 2022. Metrolinx will inform the community prior to that work starting.

Read more about our [re-forestation](#) plans and [free firewood](#) giveaways and an [explainer video](#) as to why this removal is important.

Learn more about the environmental assessment process for the Ontario Line [here](#).

Thank you for providing us the opportunity to respond to your concerns. We appreciate your engagement and advocacy.

Sincerely,

Caitlin

Today's tree cutting by Metrolinx is both premature and unscrupulous. The timing is particularly egregious as we're just entering another lockdown when parks and greenspaces will play a critical role in keeping all of us mentally and physically sane.

The community's position is that there must not be any vegetation removal nor construction work that presumes an above-ground OL in the joint corridor (between Pape and Eastern Ave.) carried out until Environmental Impact Assessment Report (EIAR) and Board of Health response have been made public and the community has been properly consulted.

- The environmental impact assessment report that examines the cumulative impact of GO, VIA, freight and OL has yet to be published or reviewed.
- The public has not been consulted on ANY alternatives that mitigate impacts on host communities.
- Metrolinx has not costed out the hybrid underground option as requested by the City of Toronto.
- Metrolinx has ignored the potential health impacts for thousands of South Riverdale residents. Our community paid for our own Health Impact Assessment because Metrolinx's flawed EA will not look at health impacts.
- The Board of Health is reviewing the above vs underground OL Health Impact Assessment. Since Metrolinx itself will not engage any public health experts, the assessment of Board of Health should be carefully considered before any further actions are taken.

Please take notice that there remain far too many outstanding concerns that have gone without response and yet Metrolinx has reverted decisions to bury the line in both Etobicoke and Royal Orchard/Thornhill - both of which had far lesser impacts to surrounding homes and businesses and both prove out that Metrolinx is capable of doing the right thing when it matters.

With on ground rail and an increase of + 1500 train movements in riverside per day, The city of Toronto will have unending costs including unreliable delays to transit as surface trains will struggle in snow and sleet as well as mental and physical health matters - additional suicide along the line, graffiti

removal and other costs such as failed businesses that will be the result of this short sighted decision that failed to include several details - beginning with the cost of tearing down and rebuilding the 5 main bridges along the Go line, to the cost of the "noise barrier" along with unclear unexplained budget that will need to be set aside for the unending graffiti that will invariably begin to surface with the introduction of several kilometres of horrendous "walls" that will need to be erected. This project is so far from best in class in so many ways - most notably in how lacking of detail and transparency it is! We still don't even have station drawings but Mx is cutting down trees!? Completely unacceptable.

A concerned resident who is considering leaving Toronto for good,

Hello- I am writing as an extremely offended and concerned resident of the Leslieville area.

I have seen Metrolinx illegally clear cutting trees around and in Jimmy Simpson park. This is simply illegal and disgusting to see. Please stop removing trees illegally. I'm confident this wouldn't be happening in Rosedale.

As a tax payer I demand answers and a response.

I write to you to demand an immediate halt to Metrolinx's unapproved tree removal between Pape and Eastern Avenue. Metrolinx is claiming the tree removal is related to GO expansion. However, Metrolinx does not have appropriate approvals to clear trees anywhere west of Pape Ave.

A full Environmental Impact Assessment Report (EIAR), which examines the cumulative impact of GO expansion and the Ontario Line, needs to be released and reviewed before any activity related to the tree canopy can begin.

I also ask Ms. Dabrusin to act with respect to a proper EIAR, for which the federal funding of the Ontario Line is contingent. The federal government must take responsibility for failing to meet its own funding criteria.

Sincerely,

[REDACTED]

Dear Premier,

I would like to call your attention to the actions of Metrolinx cutting trees west of Pape in the City of Toronto. Metrolinx has no authority to cut trees in this area. Metrolinx claims authority from GO EA citing 2017 and 2019 documents. Their 2017 EA could not have authorized the extensive tree removal for the Ontario Line, because OL didn't exist until 2019. In order to accommodate the above ground Ontario Line, Metrolinx needs to reconfigure the existing rail corridor: lift up an in-use GO track, raise the entire track bed by up to 1.6m and replace/build anew 6 bridges. **All of this information came to light only in 2021.** This significant rail corridor expansion will have a major impact on tree canopy, and **none of these changes were known or considered in 2017.**

Metrolinx has also refused to consider the findings of the community funded Health Impact Assessment. I believe no public transit should come at the expense of public health. Metrolinx needs to urgently clarify which public health officials it consulted when deciding to put thousands of South Riverdale residents' health and safety at risk.

I understand this environmental assessment is a condition of the Federal funding of the Ontario Line. **As a result, I am calling on the federal government to stop funding the OL until their own criteria are met. I also call on the provincial government to halt Metrolinx's actions until the full EA is completed.**

Metrolinx does not have appropriate approvals to clear trees anywhere west of Pape Ave. I strongly condemn Metrolinx's deceitful tactics that confuse and mislead the public.

The Federal Government is paying for much of the Ontario Line. One of key federal funding conditions is a thorough environmental review. No such review has taken place. This tree removal (which presumes the above ground OL) necessarily breaches their standard. The federal government must take responsibility for failing to meet its own [funding criteria](#).

There should be an immediate halt to tree removal between Pape and Eastern Ave before the full Environmental Impact Assessment Report (EIAR) which examines the cumulative impact of all these projects is released & reviewed.

Things never end well when publicly funded institutions doesn't feel accountable to the people they serve.

We all know that metrolinx is gaslighting the issue of burying the line in Leslieville because above ground is more easily aligned with your plans for development in east harbour. It's developers over people. Shame. The rationales are just balled faced lies, you say it will be quieter, but fail to note that a noise that occurred ever five to ten minutes will become perpetual, a train every 10 seconds. That will be like putting a highway through the community and severely diminish our quality of life, even for people like me who live blocks away. You will destroy thousands of trees and park cover, you can't replace a 100 year old tree with 3, two year old trees. You seem to think this community is stupid or maybe you have become delusional in your commitment to current plans. Plans can always change and they do.

What happening is wrong and you need to fully consider the options presented and embraced by the community during the relief line planning (which went through a genuine consultation process).

We don't want you to just bury your current plan which you like to do to restrict the options, we want a plan that effectively buries the line through a vibrant and important Toronto community. We accept there are different trade offs, but they are worth saving the community from this abomination. So just stop with the childish gaslighting. Work for the community not the developers.

In the meantime the destruction of trees well in advance of construction is an insult to this community - the message that you don't care about us is coming through loud and clear. The timing is particularly egregious as we're just entering another lockdown when parks and greenspaces will play a critical role in keeping all of us mentally and physically sane.

There must not be any vegetation removal nor construction work that presumes an above-ground OL in the joint corridor (between Pape and Eastern Ave.) carried out until Environmental Impact Assessment Report (EIAR) and Board of Health response have been made public and the community has been properly consulted.

- The environmental impact assessment report that examines the cumulative impact of GO, VIA, freight and OL has yet to be published or reviewed.
- The public has not been consulted on ANY alternatives that mitigate impacts on host communities.
- There is a viable alternate plan endorsed by the City and supported by the community.
- Metrolinx has not costed out the hybrid underground option as requested by the City of Toronto.
- Metrolinx has ignored the potential health impacts for thousands of South Riverdale residents. Our community paid for our own Health Impact Assessment because Metrolinx's flawed EA will not look at health impacts.
- The Board of Health is reviewing the above vs underground OL Health Impact Assessment. Since Metrolinx itself will not engage any public health experts, the assessment of Board of Health should be carefully considered before any further actions are taken.

We will not stand by silently and this community cannot be gaslighted. You work for us not for developers, act like it.

Dear Mr. Ford,

I'm writing to call for an immediate stop to the removal of trees by Metrolinx along the rail corridor in South Riverdale, in Jimmie Simpson Park. A proper environmental assessment has **not** been completed for this stretch of development. **Metrolinx does not have appropriate approvals to clear trees anywhere west of Pape Ave. They must stop until an environment review has been done and this work is actually approved.**

Thank you for your attention to this matter.

Hi [REDACTED]

Thank you for your letter regarding tree removals underway in the Metrolinx corridor. As you noted, These tree removals were studied and approved under the GO Expansion electrification Transit Project Assessment Process (TPAP) in 2017, and also through an addendum in 2021. The [2021 environmental assessment](#) (EA) identified that all trees within the Metrolinx corridor that are within seven meters from the outside track would be removed – this is the work that is taking place now. The report covers all of the Lakeshore East Corridor, including tracks west of the Don River (Don Yard) to Oshawa GO. Once you click on the link to the report, page 23 outlines the Study Area.

For these GO Expansion tree removals, we provided notice to the public using a variety of media. This includes a notice to the affected neighbourhoods sent by Canada Post on December 9, an [online notice](#) on the Metrolinx website, digital advertisements on Twitter, and through our community e-newsletters.

As part of the mitigation program in response to the original 2017 EA, Metrolinx developed a comprehensive vegetation management program. Overall, we plant more trees than we remove. Metrolinx's Vegetation Guideline is based on the Toronto Region Conservation Authority's own highly regarded guidelines. Both are firmly rooted in ecological science to ensure the city and the region stay green as we deliver more sustainable travel alternatives. To date, Metrolinx has funded and coordinated the planting of more than [24,000 native trees](#).

Metrolinx is open to working with municipalities and community groups to plant trees in municipal parks and green areas directly in neighbourhoods affected by tree removals, or providing trees and shrubs directly to residents for planting. Our team is meeting with the City of Toronto to identify how and where to plant more trees close to where they will be removed. We also look for opportunities to make the best possible use of any trees we need to remove, including working with the Toronto Region Conservation Authority to repurpose non-invasive trees (e.g., for wetland restoration, trail furniture), partnering with colleges to mill the wood for other purposes, and offering firewood to communities, like we have already done a couple of times.

Regarding the Ontario Line environmental assessment, the Lakeshore East Joint Corridor Early Works Report is now complete and [posted online](#), including the noise modelling assessment between Don River to Carlaw Avenue referenced below (which is specific to cumulative operational noise for both GO Expansion and Ontario Line, and not vegetation). Any Ontario Line-related tree removals, over and above those needed for GO electrification, will happen as early as Fall 2022. Metrolinx will inform the community prior to that work starting.

Read more about our [re-forestation](#) plans and [free firewood](#) giveaways and an [explainer video](#) as to

why this removal is important.

Learn more about the environmental assessment process for the Ontario Line [here](#).

Thank you for providing us the opportunity to respond to your concerns. We appreciate your engagement and advocacy.

Sincerely,

Caitlin

To all concerned:

I am writing to respectfully demand that the tree removals in and around Jimmie Simpson Park be halted until a proper – and disinterested – mental health review, environmental assessment (EA) and public consultations take place for the Ontario Line project.

Metrolinx has made numerous claims about already having approvals to forge ahead with these reckless tree removals – those claims are disingenuous and insulting. I won't present an extensive list of its faulty reasoning here, but I find it laughable that Metrolinx claims the 2017 EA authorized extensive tree removal for the Ontario Line (OL), as the OL wasn't parachuted into existence until 2019. In order to accommodate the above-ground OL, Metrolinx needs to reconfigure the existing rail corridor, which involves lifting up an in-use GO track, raising the entire track bed by up to 1.6 metres and replacing/building anew six bridges. All of this information came to light a very short time ago, in 2021 – and none of the above-stated changes were known or considered in the 2017 EA. This

significant rail corridor expansion will have a major impact on the area's tree canopy, which requires a due-diligence process that respects the input of all stakeholders. But Metrolinx is just forging ahead while stating that the 2017 EA actually has merit. **It doesn't.**

Even worse, Metrolinx deliberately excluded the western section of the corridor (Don River to Carlaw Avenue) from its 2021 GO study, so it's impossible for Metrolinx to say it has legitimate approvals on tree removals coming out of that work.

As has been noted elsewhere, public health is a crucial and still-overlooked aspect of any assessment that has taken place to date. Metrolinx needs to come forward now and declare which public health officials it consulted when deciding to forge ahead with mass tree removals. Once that tree canopy is gone, it's gone for the lifetimes of thousands of residents across this greater neighbourhood who rely heavily on the precious few green spaces available downtown.

The Ontario Line project is being spearheaded by the provincial government, *but* the federal government is paying for a large portion of the OL. One of the key funding conditions the feds are supposed to be insisting on is that a robust and thorough environmental review take place before we have shovels in the ground and bulldozers uprooting a centuries-old canopy. **No such review has taken place.**

So *I demand* – as a citizen living in the vicinity of Jimmie Simpson and its surroundings – that proper, rigorous environmental and mental health reviews take place before vested interests have at it and wreak havoc in a beloved neighbourhood used by a large and diverse population of voters. Voters who remember on election day when bad faith actors rubber-stamp egregious boondoggles that harm the public interest.

Please do the right thing and get the proper assessments done before any further work takes place. That means a thorough mental health review of the project's impacts and also the full Environmental Impact Assessment Report.

Thank you.

Hi [REDACTED]

Same to you! It was a pleasure speaking with you on Friday.

We don't yet have this level of detail about utility works but as discussed, we will send out a construction/community notice before work begins. I have also added you to our e-distribution list for notices in the King/Bathurst area, so you will receive these whenever work is upcoming.

You may also wish to subscribe to our weekly e-newsletter for project updates [here](#) (you can unsubscribe at any time). Please do not hesitate to reach out in the future if you have any questions.

Thank you,

Caitlin

Hi Caitlin happy New Year!!

Thank you for getting back to me in a speedy fashion !!

yes if you can follow up and find out about more if there will be any utilities relocation on those properties would be great.

Have a great day

Best Regards

Good morning ,

Thank you very much for reaching out, and wishing you a Happy New Year!

I do not believe the properties you listed are required for the Ontario Line project, but I am following up with our Property Acquisitions team to confirm. I will get back to you as soon as possible.

We have released the full, permanent property impacts in this area for the King/Bathurst Station, which you can see [here](#) on our website. In the event that your property would be required, Metrolinx would contact you well in advance to begin discussions and walk you through the acquisition process.

Thank you,

Caitlin

On Jan 7, 2022, at 3:28 PM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hello,

Please find attached a notice about surveying along the Ontario Line: Millwood Drive to Eglinton/Science Centre area, starting as early as January 10.

Crews will use monitoring and measuring equipment to locate utilities in the field. Utilities are located within the public right of way. The limits of the road or sidewalk do not always match up with the limits of the public right of way. At times, utility location markings will be visible on sidewalks, driveways and front lawns. Crews will avoid entering private property to the extent possible and will work from municipal plans. Access to properties will be maintained at all times through at least one driveway.

This is part of initial work to support planning for the Ontario Line. Further details can be found in the attached notice. Please share this information with your staff and tenants.

Construction projects that will provide added transit capacity are recognized as an essential service in the most recent provincial orders

related to COVID-19. Contractors and staff are instructed to follow all health and safety requirements.

If you haven't already, you may also wish to visit our website and sign up for our newsletter, where we will share updated information as it becomes available. Should you have any questions, please do not hesitate to reach out.

Thank you,

Caitlin

Hi Richard,

Thank you for reaching out. We have confirmed with our Property Acquisitions team that your property at [REDACTED] is not required, and no expected direct impact on your property due to the Ontario Line. [REDACTED]

You may already have this information, but if you're located on transit corridor lands and wish to obtain a (no cost) Metrolinx permit for work on your property, you can contact [REDACTED] development.coordinator@metrolinx.com. They will assist you with the permit process. Approval from Metrolinx will be required prior to obtaining a permit from Toronto Building. You can find the form needed for the pre-application, along with other information on the process, online [here](#). There are no application fees, and the material we require is largely the same as what Toronto Building will require.

Thank you again for writing, and please do not hesitate to contact us in the future.

All the best,

Caitlin

Hi [REDACTED]

Thank you for reaching out. Daryl has moved on to a new role outside of Metrolinx, but I am happy to assist. My name is Caitlin; I worked closely with Daryl and am a member of our Ontario Line Community Relations team. It's a pleasure to e-meet you!

I'm afraid the First Parliament Site Heritage Interpretation and Commemoration Plan survey is now closed. However, we would be more than happy to pass on any feedback you wish to share with our colleagues preparing the commemoration plan for the site. We are bringing on an interpretation and commemoration specialist who will analyze the survey results, as well as other feedback from the community and research on the site's history.

While the survey has closed, we still have a video presentation on the site's history and the themes we are considering for commemoration, which were drawn from the City's First Parliament Plan. You can find the video posted [here](#) on our website, and additional background on the site's history and commemoration themes, which I hope is helpful for any feedback you wish to share.

Thank you again for writing, and please don't hesitate to reach out with any questions.

All the best,

Caitlin

Hi [REDACTED]

Thank you for reaching out to Metrolinx with your questions. Please accept our apologies for the delayed response. The Preliminary Design Business Case lists 2030 as the completion for the Ontario Line. This target completion date is informed by the updated analysis outlined in the PDBC, and is what teams are working toward. The specific completion date will be informed by the responses we receive from the construction market during procurement. Infrastructure Ontario and Metrolinx are continuing to advance the procurement and construction of these priority transit projects on behalf of the province, the schedule will be finalized once the winning bids are determined.

You can find available information about Cosburn Station and a map of the station area [here](#) on our website. This section of the Ontario Line route is on a later construction timeline than the south/downtown section and will likely begin construction closer to 2024 or 2025. That means that Cosburn Station is still in the design phases, and plans have not been finalized yet.

As planning progresses, we look forward to sharing more information on our [website](#), through public open houses, and in our [e-newsletter](#) as soon as they're available.

Hi Susan Lin,

Happy new year ! I just left you a voicemail. We last spoke on the phone in Oct 2020. Just a reminder - My name is Dr [REDACTED] I am the daughter of Dr [REDACTED],

owner of [REDACTED]

When we last spoke you mentioned that you would be reaching out to us by end of year 2021 with updates. We didn't hear back from you. [REDACTED]

As a medical building with multiple health care professionals and services we would like to learn more details ASAP as this directly affects thousands of patients and their health care.

I am available on my cell at [REDACTED] or by this email. [REDACTED]

I look forward to hearing from you quickly. Of note I also left you a voicemail as well. As you can imagine we are anxious to find out details and timeline as soon as possible.

Thank you,

Dr [REDACTED]

---

Hi [REDACTED]

Thank you for reaching out with your project details. Further to our phone discussion just now, the intent of the land designation shouldn't prevent your home alterations from going ahead. Instead, the designation is intended to ensure coordination between the transit project and the plans you have for your home. Approval from Metrolinx will be required prior to obtaining a permit from Toronto Building. You can find the form needed for the pre-application, along with other information on the process, online [here](#). There are no application fees, and the material we require is largely the same as what Toronto Building will require. Once the pre-application is received ([this form](#)), along with a project drawing, I will need to have our technical team review your proposal so I can advise whether any alterations to your proposal are required, or if we are in a position to issue our permit. If an engineer or agent will be submitting the material, the pre-application form has fields allowing you to authorize them to communicate with us on your behalf.

I will be your point of contact for all things permit related, and recommend submitting the above information to me as soon as you can. Should you have any questions about the process or the requirements, please let me know.

Thanks,

Daniel

Hi there,

Please see my note below on a garage replacement project we are working on here at [REDACTED]. We can share details and would like to meet with someone to discuss what approvals are required from Metrolinx due to the stamp on our property.

If you could let us know and put us in contact with someone that would be great.

Thanks very much,

Hi [REDACTED]

Thanks for booking a chat with the Ontario Line Community Relations team! We are more than happy to connect with you via phone on Monday, January 17 at 11:30 a.m. However, we want to let you know that our Community Relations team does not provide employment advice. If you are interested in job opportunities with Metrolinx, we kindly encourage you to look for open opportunities here on our website:

[https://www.metrolinx.com/en/aboutus/careers/current\\_opportunities.aspx](https://www.metrolinx.com/en/aboutus/careers/current_opportunities.aspx)

Would you please let us know if you wish to keep this appointment and if you have any questions or want to discuss the [Ontario Line](#) subway project?

Thank you again for reaching out. We look forward to hearing from you.

All the best,

Caitlin

Hi [REDACTED]

Thank you for reaching out to our team, and please accept our apology for the delay in responding. A copy of your original message is enclosed below.

There are ongoing removals for trees along the Lakeshore East Joint Corridor as part of GO Expansion work. For background, these tree removals were studied under the GO Expansion electrification Transit Project Assessment Process (TPAP) in 2017 and also through an addendum in 2021. The [2021 environmental assessment](#) (EA) identified that all trees within the Metrolinx corridor that are within seven meters from the outside track would need to be removed. This is the work that is taking place now.

You can find a copy of the notice about this work [here](#) on the Metrolinx website. This notice was sent to the affected neighbourhoods by Canada Post on December 9 and distributed through digital advertisements on social media and our community e-newsletters.

Thank you again for writing. Please do not hesitate to contact us if you have any other questions.

All the best,

Caitlin

**Original message – Metrolinx.com Contact Us:**

Hi I live on Egan Ave, Toronto and I see workers removing trees right at the end of the street. Curious - what's all this for?

Hi [REDACTED]

Thank you for reaching out to Metrolinx with your questions. Please accept our apologies for the delayed response. You can find available information about Cosburn Station and a map of the station area [here](#) on our website. This section of the Ontario Line route is on a later construction timeline than the south/downtown section and will likely begin construction closer to 2024 or 2025. That means that Cosburn Station is still in the design phases, and plans have not been finalized yet. As planning progresses, we look forward to sharing more information on our [website](#), through public open houses, and in our [e-newsletter](#) as soon as they're available.

Regards,

Hello [REDACTED]

My name is Katiana Moussa and I am the replacement for Daryl. Construction for GO- Train track electrification is expected to start in late 2022 or early 2023, subject to the successful proponent's construction schedule.

Here is an article you might enjoy; <https://blog.metrolinx.com/2021/12/21/go-expansion-set-to-electrify-the-region-with-rapid-all-day-service-and-new-electric-trains/>

Looking forward to speaking to you in the coming months!

Thank you,

Dear Metrolinx,

I have been reviewing the proposal regarding the Ontario Line and I had assumed that the line would be a street level. After reviewing the literature on the project I understand that this line will be elevated. Is it possible to share an artist concept at the **Science Centre** and **Flemingdon Park** stops? I believe this would alleviate any of my concerns on this project.

Many thanks

Hi [REDACTED]

Thank you very much for following up, and please accept my apology for the delay in responding. We have connected with our colleagues in our Property Acquisitions team to follow up on your inquiry about relocation assistance. Please note, our teams have been receiving a high volume of inquiries, so it may take some time to follow up. We look forward to getting back in touch as soon as possible.

In the meantime, please do not hesitate to reach out with any questions.

All the best,

Caitlin

Hi [REDACTED]

Thank you for reaching out! You can find the Ontario Line projected timeline [here](#) on our website. We expect work on the Ontario Line for the West segment (Exhibition, King/Bathurst and Queen/Spadina Stations) will begin in 2023. However, the overall delivery timeline for the Ontario Line will be confirmed through the [procurement](#) process by the project company that will be delivering the work.

We anticipate that a project company will be selected around Fall 2022 for the Southern Civil, Stations and Tunnel procurement contract, which includes the portion of the line from Exhibition to the Don River. Once the project company is on-board, they will determine construction means, methods, and work plans to inform a more detailed timeline.

Some advanced works may take place before the main construction, such as utility relocations. We do not have further details or timelines about advanced works yet, but we post all Ontario Line construction notices [here](#) on our website and send them out in our weekly e-newsletter. If you are interested, you can sign up for our newsletter [here](#). You can unsubscribe at any time.

Thank you again for reaching out, Lorraine. Please do not hesitate to contact us in the future with any other questions.

All the best,

Caitlin

Hi [REDACTED],

Apologies if my previous email caused any confusion. The Environmental Impact Assessment Report will be available on our [website](#) on Monday, February 7, 2022. It should provide clarity on the Ontario Line footprint and the impacts to communities. As with all our environmental assessment reports, the EIAR will be released in draft form on February 7 and followed by a 30-day feedback period. During this period, you will be able to submit feedback and ask questions about the report on our website.

We will also be hosting a series of virtual open houses on the EIAR in late February and early March. We will be releasing more details soon about the dates and setting up registration pages, which you will find [here](#) on our website once they're live.

You may wish to consider [signing up for our newsletter](#) to stay updated on the project and the report's release. Once the report is released and the virtual open house registration pages open, we will notify our newsletter distribution list. You can unsubscribe at any time.

Regards,  
Norando

Hey Norando, thank you for the response! Although I'm not sure I understand.

You mention that the line will be slightly West of Pape and that it falls between Pape and Eaton, however Eaton is East of Pape and north of Danforth.

Can you clarify what you mean?

Also, considering the work is all underground, can you elaborate on the type of construction activity we might expect on Pape Ave between Gerrard and Danforth?

[REDACTED]

Hi [REDACTED]

Based on my assessment of the maps provided, further north of the area between Gerard and Danforth will be slightly to the left falling between Eaton Ave and Pape Ave. The map indicates that the line will be slightly to the west of Pape Ave in the Gerard and Carlaw area as well.

Regards,

Hey Norando, this map doesn't quite show me in detail whether the Tunnel will be on the Right Side, Left Side, or right in the Middle of Pape at Dingwall Ave.

Do you happen to know?

On Jan 24, 2022, at 1:18 PM, Ontario Line <[ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)> wrote:

Hi [REDACTED]

Please see map of the Ontario Line [here](#). As per your request, the north segment of the Ontario Line which spans between Pape and Science Centre can be found [here](#). Our priority is to keep our construction footprints slim and keep property impacts to a minimum.

Our preferred approach is to enter into direct negotiations with property owners, with the goal of reaching amicable agreements. Whether we have to acquire a portion of a property or the entire property, the owner will be compensated.

Metrolinx is committed to providing as much time as possible. The acquisition process can take up to 18 months but can also be completed earlier, depending on the specific case. In all cases, owners are compensated for their property at a price they could expect through a sale at fair market value.

In cases where property can be handed back to an owner after construction, Metrolinx ensures it is restored to its pre-construction state or better. Whenever Metrolinx needs to acquire property to support a new transit project, our commitment is to ensure that owners and tenants do not experience a financial loss.

Can you elaborate on what types of properties may be acquired? And when would I hear about this?

I don't see a map of the proposed line between Gerrard and Carlaw and Pape Station at Danforth. Do you have one?

I live south of Danforth, and north of Gerrard, on Pape Ave.

Hi

Thanks for reaching out to Metrolinx with your questions. We apologise for the delayed response. We understand that residents and businesses want those details and we will reach out to impacted property owners at the earliest opportunity. If Metrolinx confirms that a property is needed to support construction or operation of the project, the property owner will receive written notification from us informing them that this is case.

After that, Metrolinx will arrange to meet with the property owner to answer any questions they may have, including how much property is needed and why, how the acquisition process works, and expected timelines. Multiple meetings will take place throughout the property acquisition process to ensure property owner has the information and support they need.

We will know more about precise environmental and community impacts as the project moves through further design stages, which are currently underway.

Hi,

Thank you for the explanation. I live at [REDACTED] in Toronto thus to access the Richmond Hill GO line I have to go to Union or at Orile. These are far away from me. If you had a station in the Don Valley I could get on that would be helpful.

Thank you.

Hi [REDACTED]

Thanks for reaching out to Metrolinx with your question. We apologise for the delayed response. While design plans are still in development, we can confirm that the OL will connect with the Lakeshore West GO line at Exhibition and the Lakeshore East GO line at East Harbour. It would be challenging to accommodate a connection between the Ontario Line and the Richmond Hill GO line, realigning the Ontario Line to use this corridor would eliminate several key interchanges, most notably at the future East Harbour station, reducing the potential relief the Ontario Line will bring to the existing subway and surface transit network in Toronto. Passengers, however can transfer between GO lines at Union station.

Hello [REDACTED]

As you know, Metrolinx will be installing new noise and retaining walls along the rail corridor between Eastern Avenue and Pape Avenue as we work to expand the existing GO rail corridor to accommodate the GO Expansion and Ontario Line projects. You may recall, Metrolinx invited the community to participate in a survey about the future retaining, noise walls, landscape design, and vegetation plans along the joint rail corridor. The results from those who participated in the community survey, which will be shared shortly, will help shape plans for the design elements of the walls, landscape, trees, and vegetation solutions. As we work to ensure plans are well integrated into the community, we are organizing a working group to further discuss the design and vegetation elements in the joint corridor.

Given your interest and advocacy within the community, we would to invite you to the working group discussion on Monday January 24th at 4pm to 5:30 pm. At this meeting we will provide you with an overview on the results of the community survey, seek your input and thoughts on the future design elements and share next steps with you.

Please RSVP by responding to this email by EOD Friday, January 21st to advise of your participation.

I appreciate how busy everyone is and do hope you will be able to join the discussion.

Thank you,

Mark Clancy (*he, him*)  
Senior Manager, Community Engagement (Subway Program)

Hi Ontario Line team,

I rsvp'd for today's consultation just before 5 pm on Friday, (due to needing to juggle my work/childcare schedule) and did not get any information on how to participate.

Will there be another session in future?

Sent from a phone - please forgive typos & brevity.

Hi [REDACTED]

Thank you very much for following up, and please accept our apology for the delay in responding.

We have also received your request to meet with our Ontario Line Community Relations team to discuss property impacts for [REDACTED] Pape Avenue. We are following up with our property acquisitions division to request an update and look forward to connecting with you tomorrow, Tuesday, January 25, at 1:00 p.m. via Microsoft Teams. Please see below for a Teams link:

Please do not hesitate to reach out if you have any questions.

Thank you,

Caitlin

**Subject:** [REDACTED] Pape Ave, Toronto, ON,

Hi,

We were given a written notice last year saying our house and property could potentially be needed / be expropriated for the Ontario Line. Has there been any further updates on that? We are looking to sell our house, so if it is known that the Metrolinx will want to buy the property, could we move up the process, or if we know that it won't be needed, is it possible to get that in writing so that we do not need to list the fact that Metrolinx could need the property at some point?

Thank you,

Hi [REDACTED]

Thank you very much for reaching out and bringing this to our attention. First and foremost, we apologize for the sidewalk condition in front of the worksite.

We have spoken with our work crew and reminded them about the critical need to be good neighbours and maintain the sidewalks around the site for everyone's safety. We have confirmed that the sidewalk will be cleared today.

Please do not hesitate to reach out with any questions. Thank you again for contacting us.

Kind regards,

Caitlin

Thanks for this information - very helpful. Is there a timeline on when design stages will be completed and, in turn, when we will have a clearer idea of all "environmental and community impacts"?

On Mon, Jan 24, 2022 at 5:28 PM Ontario Line <[ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)> wrote:

Hi [REDACTED]

Thanks for reaching out to Metrolinx with your queries. Our preferred approach is to enter into direct negotiations with property owners, with the goal of reaching amicable agreements. Whether we have to acquire a portion of a property or the entire property, the owner will be compensated.

Metrolinx is committed to providing as much time as possible. The acquisition process can take up to 18 months but can also be completed earlier, depending on the specific case. In all cases,

owners are compensated for their property at a price they could expect through a sale at fair market value.

In cases where property can be handed back to an owner after construction, Metrolinx ensures it is restored to its pre-construction state or better. Whenever Metrolinx needs to acquire property to support a new transit project, our commitment is to ensure that owners and tenants do not experience a financial loss.

Thanks for the response. Can you please elaborate on "how the acquisition process works"? How does Metrolinx 'acquire' property from residents and landowners?

On Mon, Jan 24, 2022 at 11:50 AM Ontario Line <[ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)> wrote:

Hi [REDACTED]

Thanks for reaching out to Metrolinx with your questions. Apologies for the delayed response. We understand that residents and businesses want those details and we will reach out to impacted property owners at the earliest opportunity. If Metrolinx confirms that a property is needed to support construction or operation of the project, the property owner will receive written notification from us informing them that this is case.

After that, Metrolinx will arrange to meet with the property owner to answer any questions they may have, including how much property is needed and why, how the acquisition process works, and expected timelines. Multiple meetings will take place throughout the property acquisition process to ensure property owner has the information and support they need.

We will know more about precise environmental and community impacts as the project moves through further design stages, which are currently underway.

Hi [REDACTED]

Thanks for reaching out to Metrolinx with your concerns. We apologise for the delayed response. Metrolinx has supports in place to ensure renters of business spaces are taken care of. Each case is considered independently and lease terms are always taken into consideration. Supports are tailored to a tenant's specific needs and are determined through discussions during the acquisition process. Whenever Metrolinx needs to acquire property to support a new transit project, our commitment is to ensure that owners and tenants do not experience a financial loss.

Hi ,

Thanks very much for this; this extra detail is very helpful. I have followed up with our contractor and asked them to confirm when the sidewalk is cleared.

We sincerely apologize for the sidewalk condition in front of the worksite and appreciate you bringing this to our attention.

All the best,

Caitlin

Hi ,

Thank you for reaching out and bringing this to our attention. Snow clearing around the Corktown early works site is the responsibility of our contractor through Metrolinx, and we know there were some issues with this duty not being met recently. We have reminded them about the critical need to be good neighbours and maintain the sidewalks around the site for everyone's safety.

We were first alerted to the issue on Monday and spoke with the work crew. Our understanding from the contractor is that the sidewalk around the work zone perimeter (enclosed below for reference) was cleared.

Corktown early works site:

Was this not the case in your experience, and was there still snow/ice on the sidewalk that needs clearing? If so, please let us know, and we will follow up promptly with our contractor. If you happen to have photos, they would be helpful, although not necessary. We will follow up regardless.

Thank you very much for reaching out,

Caitlin

Good afternoon,

Thank you for this email and bringing it to the attention of the Toronto East Community Relations. I have included the Ontario Line office here, as I suspect they may be best suited to respond.

Either way, someone will get back to you. Until then,

Stay safe, stay well, stay warm.

Kind regards,

James

Hello,

It was my understanding that IO will look after the Staples site and wonder if that includes the sidewalk?

Just had to place a call to 311 for snow removal as the King St sidewalk, closest to Berkely, has not been cleared. Not sure why because most of the sidewalk half-way between Berkeley and Parliament, on the south side, is cleared.

Helped a woman struggling to get her baby stroller through and I can tell you that it's going to be 'impossible' for wheelchairs. The same thing happened during the last snow fall where the King E sidewalk, opposite Staples was not cleared.

If this happens now what can our community expect when construction starts?

Hi [REDACTED]

It was a pleasure speaking with you now! As discussed, I am sharing a couple of resources with more information about the Ontario Line's future Queen/Spadina Station and the traffic/road impacts:

- Main Ontario Line website: <https://www.metrolinxengage.com/en/engagement-initiatives/ontario-line>
 - Queen/Spadina Station page:
<https://www.metrolinxengage.com/en/content/ontario-line-neighbourhood-updates-west-queenspadina>
- City of Toronto Council Report, prepared by City of Toronto and Metrolinx staff:
<https://www.toronto.ca/legdocs/mmis/2021/ex/bgrd/backgroundfile-173823.pdf>
 - Appendix A (this section of the report provides a summarized breakdown of impacts): <https://www.toronto.ca/legdocs/mmis/2021/ex/bgrd/backgroundfile-173824.pdf>

You will see broad windows of time in the City Report for certain construction activities. These general timelines were included because the report needed approval from City Council before working out more detailed construction schedules. Our teams are still planning and working out these schedules, and we look forward to sharing more details once available.

You may be interested in [signing up for our weekly e-newsletter](#) to stay updated on the project. We also include construction notices each week for upcoming work. You can unsubscribe at any time.

Thank you very much for reaching out. Please do not hesitate to contact us in the future with any other questions.

Hi ,

A subsurface tunnel area property requirement is a type of property interest that is centred on the tunneling area that is situated far below but may be under your property. The impacts above ground are usually minimal. More detailed information on the impacts be available in the draft of the Environmental Impact Assessment Report which is scheduled to be published on our [website](#) on Monday, February 7, 2022.

Regards,
Norando

Hi ,

Thanks for reaching out to Metrolinx with your questions. Apologies for the delayed response. We do not need the property on which you reside. There will however be a subsurface 'impact' (due to the tunnel running underneath). Negotiations with the property owner are ongoing.

Regards,

Norando

Hello ,

As a tenant at this noted address, I'm following up with an inquiry as to whether we as tenants may be affected by your future project in the near future.

If so, how? Will parking on Pape be affected? Will we possibly need to relocate?

For future planning purposes, Is there a chance that this property may be expropriated?

I would kindly appreciate a response to my email.

Thank you.

Hi Norando and Mark,

Just got the letter in the mail. It all lines up with what we said although it does indicate compensation would be paid out for any sort of easement if I am reading it correctly. Please let me know if you are able to answer some of the items below....and if we are able to get a better idea or some sort of diagram as mentioned as to where the impact on the property would be.

We are still wanting to list our house in March and were hoping to do it potentially the first week but need to get these things squared away so we can do it. Thanks!

Hi Mark and Norando,

Thanks for the call last week.

A few questions I had:

Can we refuse or object to the easement? If so what would that look like?

As mentioned, is there any avenue to getting compensated for the easement? Knowing it could very well affect our property value and prevent us from selling the house?

For the easement, would Metrolinx be willing to put into writing something to the effect of what I have written below so that we can include it in our listing?

"This easement will not cause any changes to the property at surface or basement level, and this easement will not create any additional noise, vibrations, disruptions etc as this work is being done 200 metres below ground."

And provide a contact name, number and email so that prospective buyers could contact Metrolinx directly with any questions?

Do we have any ideas on when we may get further information so that we nail down when we may list the house?

Subject: RE: Ontario Line Subway Property Address: [REDACTED] Wellington St W

Hi [REDACTED]

Thank you for reaching out. We are happy to provide further details.

Construction timelines for the Ontario Line are staggered based on geography, which our [procurement](#) packages reflect. The package of work that covers your area is the Southern Civil, Stations and Tunnel procurement package, which covers the line from Exhibition Station to the Don River. Work under this package will begin in 2023.

The procurement packages for the Ontario Line are still in-market, which means that prospective constructors are still bidding on the opportunity to win the contract. Once Metrolinx selects a successful bidder, further design and planning work will commence. Once that work gets underway, we'll have a better sense of more detailed construction schedules and timelines. We expect to select a successful bidder later this year in Fall 2022.

The general Ontario Line route mapped from Exhibition Place to the Ontario Science Centre is finalized. Our teams may refine the finer route details in certain areas during the planning process.

We do expect that the tunnel depth in this area, the mining construction technique we are using, and the geological material we are boring through will help minimize impacts to the surface. Tunnelling deep into the bedrock below the surface and reducing the curvature of the route allows us to deliver the Ontario Line in a way that provides faster service while minimizing or avoiding impacts to the built environment. The tunnel depth in this area will be approximately 30-36 feet underneath the surface, and we have attached a graphic to illustrate the depth with references to other common underground structures.

We hope this information is helpful and welcome the opportunity to connect if you have other questions. Thank you again for reaching out.

Kind regards,

Caitlin

Hello Mark,

My name is [REDACTED] and I am one of the property owners at the [REDACTED] Wellington St. West.

I am writing to you regarding the Notice dated January 28th, 2022, which we recently received from you.

Even though the project dates are vaguely mentioned in the letter, I wanted to get more information related the project dates.

Also, are there any alternative options that you are exploring, other than going through our property?

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Hi Katiana - thank you for your response. I appreciate the answer to my first question - very helpful.

Unfortunately you haven't answered my first question. I'm happy to rephrase: why have the properties at [REDACTED] been designated as in the "project footprint"? What is the intention or need for this area in relation to the project?

Please let me know as soon as possible.

Kind regards,
[REDACTED]

In regards to the questions on the animation, the animation was made available as an example of the Early Works construction sequence in the Joint Corridor beginning in 2022. Construction on the Dundas St bridge will be conducted in phases and is expected to begin in Fall 2022. The Carlaw Ave bridge is not being replaced, but minor reconstruction of the wing walls is anticipated to begin after 2025.

Hi Katiana - one more question. According to this map, Metrolinx is "actively working with the building tenants on relocation options" for [REDACTED] Carlaw Avenue, on the West side between Gerrard and Dickens as it has been designated as in the "project footprint."

https://www.metrolinxengage.com/sites/default/files/ontario_line_draft_environmental_impact_assessment_report_eiar.pdf#page=133

Does that mean that Metrolinx intends to purchase the property? And if so, what are Metrolinx's intentions with respect to the property?

Many thanks,

[REDACTED]

Good afternoon:

In browsing through the EA documents, I noticed that there are only drawings showing the surface extent of works on the Ontario Line, but there are no drawings showing the layout of underground, surface or elevated structures, notably those at interchange stations. You have published drawings showing Queen/Yonge station, but I have not seen anything for other locations.

It is hard to believe that such drawings do not exist considering the level of detail about surface effects during construction in the EA.

Are they available, and if so where?

Thanks

Hello Mr. Clancy,

I received your letter today advising that subway infrastructure is required to be located underground within my property limits and that it may be necessary for Metrolinx to obtain an underground easement on my property located at [REDACTED] Muriel Ave. in Toronto.

In your letter, you invited me to reach out so that we may have a meeting to discuss the details of the construction. I am particularly interested in finding out which area under my property Metrolinx intends to carry out construction.

I can be reached at [REDACTED] or at this email address. If we are able to arrange a time to meet for a video or telephone call, my ideal time would be 10:30-11:30am Monday to Friday. I am also available on weeknights, if your office will be meeting after hours.

I look forward to our discussion.

Kind regards,

From: [Ontario Line](#)
To: [REDACTED]
Subject: RE: [REDACTED] Muriel Avenue - Ontario Line
Date: Wednesday, February 9, 2022 12:42:00 PM

Hello [REDACTED]

So as a bit of background information I will note that construction timelines for the Ontario Line are staggered based on geography, which our [procurement](#) packages reflect. The package of work that covers your area is the North which wouldn't be slated for work until 2024.

We do expect that the tunnel depth in this area, the mining construction technique we are using, and the geological material we are boring through will help minimize impacts to the surface. Tunnelling deep into the bedrock below the surface and reducing the curvature of the route allows us to deliver the Ontario Line in a way that provides faster service while minimizing or avoiding impacts to the built environment.

We would provide ample notice before drilling were to occur in your communities, but please feel free to reach out to our office again with additional questions or to set up a time to discuss.

Regards
Lancefield

Hi Lancefield,

Thanks for getting back to me. I'd like to take some time to put questions together and consult a lawyer before I sit down to chat with you folks. Again, I feel as if the communication is fairly vague, I understand that it's case by case. There are no dates anywhere, when is this slated to begin? Will we have ample warning before you guys start drilling?

I will get back to you on a time to speak. Thanks

Hello [REDACTED]

Thanks for the email, as noted in the letter we required the rights underneath your property, approximately 20 to 30 meters below ground. There is compensation for this inconvenience and that would be negotiated on a case by case basis.

But to put you mind at ease you will ne be required to sell your property. If you wish to discuss some more please provide a phone number and the best time we can reach you.

Hi,

I am one of the residents on Muriel Avenue in the East End of the project. I have tried calling your number multiple times and no one ever picks up.

I am trying to get some additional information from you folks and have tried to find the answers in the 500 page document you published today.

The letters we are receiving from metrolinx are now personally addressed to us but are still extremely vague in nature.

Can someone please explain what needs to be done with my property? My understanding is the tunneling system is far under ground and will have minimal impacts to day to day life. The document I received today talks about land entitlements, compensation, fair market value and assessments. Am I to understand that we are going to be forced to sell our property for this project? My address is [REDACTED] Muriel Ave. In the satellite imagery, it looks like a portion of the line will be underneath our house.

Is it possible to get some clarity on what Metrolinx is requesting with respect to my property specifically? Please let me know.

Thanks and regards,

Hello,

I live at [REDACTED] Pape Ave, Toronto. I received your letter in the mail today regarding the Ontario Line which will impact my home and living conditions. Could you please advise on the following:

- If I want to finish my basement which requires me to dig down a few feet; will I still be able to underpin and lower my basement?
- This easement benefits Metrolinx but will it impose any special restrictions on my use, investment into and enjoyment of my property?
- What amount of notice will be required should Metrolinx staff need access to the easement over my lands
- Will Metrolinx be paying the landowners to establish these easements over privately owned properties?
- Will monitoring continue post-construction to evaluate the impacts of operating the new subway line?
- Can I have a copy of the monitoring pre-construction conditions report peer-reviewed?

Thank you,

Hi [REDACTED]

We apologise for the delayed response. You can book a meeting with a member of our Community Relations team [here](#). We can also try and find an available timeslot for Friday afternoon. Please let us know which option works best. Also, for the Book a Meeting option on the website the meetings generally last longer than 15mins.

We look forward to hearing from you

Hello,

I'm writing to follow up - it's been three weeks since I originally wrote, and I still have not heard back.

Can we please set up time to discuss?

Hello,

I'm writing to set up a conversation based on a letter we received today about our home at [REDACTED] Pape Avenue. I want to set up a time to discuss the property interest acquisition process and follow up on the next steps outlined in the letter.

Could you provide a few options for dates and times to discuss via video chat or phone call?

Best regards,

[REDACTED]

Hi [REDACTED],

Absolutely; I have attached a copy of the letter. For context to the introductory letter, this underground easement is how Metrolinx secures the right to protect this land for a specified purpose and is a right of use, not ownership.

Some underground easements do not have any infrastructure within them and are merely a protection zone intended to ensure that the interface between two land uses are designed, built and used in a safe and compatible manner. We are more than happy to meet if you have questions. If not, we will contact you in the coming months to discuss compensation for the easement.

If you wish to set up a meeting, we kindly request that you provide a few date/time options. We can work with your availability.

Thank you,

Caitlin

Hi [REDACTED]

Thank you very much for reaching out. Our records show that we did send a letter regarding a subsurface easement for [REDACTED] Berkeley Street for the underground Ontario Line subway tunnel near the future [Corktown Station](#).

It appears we had a different owner address on file at [REDACTED] Spadina Avenue, so the letter may have been sent to that address. Is this correct, or would you prefer we change the mailing address on file to [REDACTED] Berkeley Street?

We welcome the opportunity to respond to any questions you may have about the subsurface easement identified for [REDACTED] Berkeley Street and Ontario Line project plans. Thank you again for reaching out.

Kind regards,

Caitlin

Hello,

My neighbour on Berkeley Street received the attached letter and I am uncertain as to whether this issue pertains to our property as well and we didn't receive a similar letter (we recently solved a mail delivery issue where things were going to an old address), or perhaps this issue does not relate to our property (despite being one of the row houses associated with [REDACTED] Berkeley Street).

Please advise of the above.

Thank you in advance.

Hi Bradley, Metrolinx,

No one has gotten back to me yet. As a member of the community, I have been left off distribution notices by Metrolinx, had promises broken by Lancefield Morgan to schedule a meeting, and now no response from Bradley Naismith. This is not level of Community Relations that I have been led to expect by Metrolinx.

Again, our house is being listed for sale March 1st, and I need to speak with someone from Metrolinx by Monday to get information on this request for a potential easement.

Hopefully you are able to facilitate this by Monday, but if not please provide contact information for Metrolinx legal counsel so my lawyer can engage them regarding the potential impact of this easement letter on the ability to protect my property rights for the pending sale.

I look forward to a timely response.

Subject: Notice of Ontario Line Draft Environmental Impact Assessment Report and Virtual Open Houses
Date: Tuesday, February 8, 2022 11:15:00 AM
Attachments: [image001.png](#)

Good morning [REDACTED],

I hope this message finds you well. I am writing to inform you that Metrolinx has released the draft Environmental Impact Assessment Report (EIAR) for public consultation. This is the next step in the environmental assessment process for the Ontario Line.

The [draft Environmental Impact Assessment Report](#), prepared in accordance with Ontario [Regulation 341/20](#): Ontario Line Project, Section 15, provides a description of local environmental conditions, potential impacts, proposed mitigation and monitoring measures, a record of consultation, and a description of future permits and approvals that may be required.

The release of the draft EIAR initiates a consultation in which the public are invited to share their feedback on its findings and recommendations. Feedback is requested by March 9, 2022.

Along with the release of the draft EIAR, registration is now open for upcoming virtual open houses where you can hear from project experts and ask your questions about the EIAR. You are invited to one of four events, with two each focused on different geographical segments of the Ontario Line route.

Hello,

My name is [REDACTED] and I am writing to you in order to schedule a phone appointment regarding the Ontario Line Subway. My parents, who live on Pape Avenue, received a letter from your company indicating '...that Subway Infrastructure and/or protection area is required to be located underground in an area within your property limits...to support the construction and delivery of the Ontario Line. '

We would appreciate it if you would provide us with some options for this phone meeting, preferably on a Thursday or Friday.

We look forward to hearing back from you.

Thank you,

[REDACTED]

Dear Mark Clancy (Senior Manager, Community Engagement),

We are following up to the letter we received pertaining to our property at [REDACTED] Queen Street East (attached for your reference).

First and foremost, to clarify, our property is at [REDACTED] Queen St E, [REDACTED]. The letter you sent references [REDACTED] Queen Street W. I am assuming this is a typographical error, but want to clarify we are on Queen St E and not Queen St W, to confirm your enquiry is directed to the correct party.

Next Steps and Meeting Request

The letter suggests a meeting with us to share more specific information on where and why planned subway infrastructure and/or protection zones will need to be located underground within our property boundaries, what property rights Metrolinx must acquire for this intended purpose, how such rights may be obtained and how Metrolinx would ensure that you are fairly and appropriately compensated as part of obtaining these rights.

We are open to this and are happy to schedule a zoom call to this effect. Please confirm your availability to discuss the matters.

Thank you.

To whom it may concern:

I am receipt of your letter (attached) dated January 28, 2022 and provide a copy of your Figure ES-3.

We are the owner/developer of [REDACTED] Richmond Street West – a condominium building currently under construction – located at the south/west corner of Richmond Street West and Portland Street.

The lands immediately east of Portland Street and south of Richmond Street include a public park (that will be built by the developer and conveyed and owner by the City of Toronto).

I have provided two attachments noting the general layout of the project.

It appears that the “Project Footprint” may be beneath both the City park and a private laneway at the south end of this park.

Please email me times you are free to discuss this planned infrastructure works.

I suggest you reach out to the City parks department for separate discussions.

Hi [REDACTED],

Thank you for reaching out. The Noise and Vibration Report (Appendix 6) appears to be working on our end; does this URL work for you:

https://www.metrolinxengage.com/sites/default/files/appendix_a6_-_noise_and_vibration_report.pdf

If not, please let us know. The file is quite large, but we are happy to find an alternative way to get it to you if the link above and the website are still not working.

Kind regards,

Caitlin

Date: Wednesday, February 9, 2022 12:15:00 PM

Hello [REDACTED]

Thanks for reaching out to us. As noted in the intro letter this underground easement is how Metrolinx secures the right to protect for this greater land area for a specified purpose and is a right of use, not ownership. Some underground easements do not have any infrastructure within them; they are merely a protection zone intended to ensure that the interface between two land uses are designed, built and used in a safe and compatible manner. At this point we offer you a meeting if you have additional questions, if not we will be contacting you in the coming months to talk about the easements and compensation that would be offered.

If you would like to have a video chat or phone call/ please suggest 3 dates/time and we'll coordinate a larger discussions

To: [REDACTED]

Subject: RE: Query about possible errata in the Ontario Line Draft EA

Good morning [REDACTED]

Thank you for the detailed review of the Draft Environmental Impact Assessment Report (EIAR) and for providing the comments below. The necessary updates were made to the EIAR text, and the Final EIAR report will be made available on April 8, 2022. We are writing to share our responses below in blue:

Page 50: "The laydown and staging areas are proposed along Queen Street West between Bay Street and Victoria Street. Along the eastern side of Victoria Street and on James Street from Queen Street East to Albert Street." (emphasis added). The map for this segment clearly shows that the project footprint is on the west side of Victoria not the east. Which is correct?

The Project Footprint and Project Components figure is correct, the laydown and staging areas are located on the western side of Victoria St. The text in the Draft EIAR will be revised and the updated version of the report will be made available April 2022.

Page 52: "The station entrance will be located on the northeast corner of Queen Street East and Yonge Street and will be incorporated into existing buildings." (emphasis added). There is already a station entrance on the NE corner of Queen and Yonge. The map shows new entrances west of Yonge on both sides of Queen. Is the text on page 52 wrong? The text in the Draft EIAR will be revised and the updated version of the report will be made available April 2022.

Also east of Queen Station there will be a crossover in the block in front of St. Michael's Hospital, although this area is shown as tunnelled. Will the links between the tunnels for the crossover be mined to avoid the need for C&C construction at the hospital?

As stated in Table 3-4. OLS Section Key Component, the Queen Station Crossover will be excavated using Sequential Excavation Method.

Page 52: "The station entrance will be located on the east side of Berkeley Street at King Street East. The station platforms will be located approximately 25 metres underground. An EEB connected to the station will be located on the east side of Berkeley Street at Front Street."

At Corktown station, the text describes the south entrance as an emergency exit, but the map

shows it in blue indicating a regular (albeit secondary) entrance. Which is correct?

The Project Footprint and Project Components figure is correct, however this is a secondary exit only. The text in the Draft EIAR will be revised and the updated version of the report will be made available April 2022.

In the West Don Lands, the text speaks only of an emergency exit west of Cherry, but the map shows an additional EEB at the foot of Tannery Road. Is that EEB really in the plan given how close it would be to the one at Cherry? The Project Footprint and Project Components figure is correct, a second emergency exit is proposed at the foot of Tannery Rd. The EEB at the foot of Tannery Road provides for emergency access to Ontario Line within the Don Yard for Toronto Fire Service, provides public emergency egress from Ontario Line trains and allows for the Project to be in compliance with the requirements of the National Fire Protection Association (NFPA 130), which requires that emergency exits be no more than 762m apart. The distance between the Cherry St EEB and East Harbour Station exceeded 762m. The text in the Draft EIAR will be updated to make this clear.

Page 53: The text claims that cross-platform transfers will be possible between GO and the Ontario Line at East Harbour. However, this was dropped with the redesign of the station to shift the Ontario Line to the north side of the corridor. Is this text a holdover from the earlier design in error? Correct, this is an error in text. Transfer between Ontario Lines and GO Transit will be supported through a concourse. The text in the Draft EIAR will be revised.

Page 51: “The laydown and staging areas are proposed adjacent to Riverside/Leslieville Station.” However during community meetings, Metrolinx stated that all work would be done from within the corridor notably from the large staging area north of Dundas. The map does not show (via shading) any laydown/staging area at Riverside. Is this an error in the text? Correct, this is an error in text. The Project Footprint and Project Components figure is correct. The text in the Draft EIAR will be revised and the updated version of the report will be made available April 2022.

Page 55: The text says: “The laydown and staging areas are proposed west of Overlea Boulevard on the north and south sides of Thorncliffe Park Drive.”. This does not make sense because Overlea runs east-west while Thorncliffe Park Drive is north-south. It also does not match with the footprint shown on the map. Is the text wrong? The Project Footprint and Project Components figure is correct, staging/laydown areas are proposed on the north side of Overlea on both the east and west sides of Thorncliffe Park Drive. The text in the Draft EIAR will be revised and the final version of the report will be made available April 2022.

On the map of Science Centre Station, there is no end of line crossover shown. Given that this is a side platform station, I assume that the crossover will be north of the station and the terminal will run with separate northbound and southbound stations. Is this correct? The platforms at Science Centre will be located on the east and west sides of the elevated guideway. A crossover is planned

for north of the Science Centre Station, the Draft EIAR will be revised and the updated version will be made available in April 2022.

Thank you again for your engagement in the environmental assessment process for the Ontario Line.

Sincerely,

Caitlin

Greetings:

I have just posted an article at

based on material in the main report of the draft EA. In the course of going through the report, I encountered a number of errata (or what appear to be) that I thought I should pass on.

Page 50: "The laydown and staging areas are proposed along Queen Street West between Bay Street and Victoria Street. Along the **eastern side of Victoria Street** and on James Street from Queen Street East to Albert Street." (emphasis added)

The map for this segment clearly shows that the project footprint is on the west side of Victoria not the east. Which is correct?

Page 52: "The station entrance will be located on the **northeast corner** of Queen Street East and

Yonge Street and will be incorporated into existing buildings.” (emphasis added)

There is already a station entrance on the NE corner of Queen and Yonge. The map shows new entrances west of Yonge on both sides of Queen. Is the text on page 52 wrong?

Also east of Queen Station there will be a crossover in the block in front of St. Michael’s Hospital, although this area is shown as tunnelled. Will the links between the tunnels for the crossover be mined to avoid the need for C&C construction at the hospital?

Page 52: “The station entrance will be located on the east side of Berkeley Street at King Street East. The station platforms will be located approximately 25 metres underground. An EEB connected to the station will be located on the east side of Berkeley Street at Front Street.”

At Corktown station, the text describes the south entrance as an emergency exit, but the map shows it in blue indicating a regular (albeit secondary) entrance. Which is correct?

In the West Don Lands, the text speaks only of an emergency exit west of Cherry, but the map shows an additional EEB at the foot of Tannery Road. Is that EEB really in the plan given how close it would be to the one at Cherry?

Page 53: The text claims that cross-platform transfers will be possible between GO and the Ontario Line at East Harbour. However, this was dropped with the redesign of the station to shift the Ontario Line to the north side of the corridor. Is this text a holdover from the earlier design in error?

Page 51: “The laydown and staging areas are proposed adjacent to Riverside/Leslieville Station.” However during community meetings, Metrolinx stated that all work would be done from within the corridor notably from the large staging area north of Dundas. The map does not show (via shading) any laydown/staging area at Riverside. Is this an error in the text?

Page 55: The text says: “The laydown and staging areas are proposed west of Overlea Boulevard on the north and south sides of Thorncliffe Park Drive.”. This does not make sense because Overlea runs east-west while Thorncliffe Park Drive is north-south. It also does not match with the footprint shown on the map. Is the text wrong?

On the map of Science Centre Station, there is no end of line crossover shown. Given that this is a side platform station, I assume that the crossover will be north of the station and the terminal will run with separate northbound and southbound stations. Is this correct?

I have not been through the appendices in detail, but wanted to send you these items for clarification and fixes to the documents if need be.

Regards

Hello,

I'm writing in regards to a letter my husband, [REDACTED] and I received regarding Metrolinx's request to discuss obtaining an easement within our property limits at [REDACTED]

Please let us know how to proceed with setting up a time to speak with you. We're both available during the day, and our preference would be to have a video call.

Thank you,

[REDACTED]

Good morning [REDACTED]

Thank you for reaching out and bringing this to our attention. Please accept our profuse apology; we did instruct our colleagues to send out a hard copy. Unfortunately, it appears it may have gotten missed, but we will have a team member deliver it directly to your mailbox this afternoon.

Thank you very much again for following up,

Caitlin

Hi [REDACTED]

If you prefer a hard copy of the report, we are happy to mail one to you. For those with online access, we typically offer the web copy as a way to access the report immediately, as the consultation period closes on March 9, as well as the summaries of each component studied and the appendices.

We will mail a copy to the address enclosed below:

Gee. Silly me. I thought "To obtain a copy of the draft EIAR, please contact" you guys. But all you really mean was go on-line for a copy. You already said this and gave details of the virtual seminars in the circular, so the "contact" bit and stuff about the seminars in your email were redundant!

Waste of your time and mine. Poor communications on behalf of Metrolinx. No wonder your reputation is so poor.

I bet this email doesn't get seen by your senior executives?

Hi Katiana,

We are at [REDACTED] In the Riverdale (No Frills) plaza. We are directly beneath the middle green tunnel portion of your proposed line. Someone needs to provide us some answers immediately as to where you're proposing to relocate the retailers in this plaza since it's clear we are being expropriated. Our customers are beginning to ask questions.

Hello,

Just wondering what the update is for tenants in the Riverdale Plaza?
Metrolinx is now blasting out information that shows we are in location that is to be expropriated. Customers are beginning to ask questions that we don't have answers too. Very difficult for business that have to honor long term warranties and commitments.

Where and when is metrolinx planning to relocate these affected businesses?

Subject: RE: Ontario Line EIA report - re: mountain bike trails
Date: Wednesday, February 23, 2022 2:07:00 PM
Attachments: [image003.png](#)

Hi [REDACTED]

Thank you for reaching out and sharing your concern about preserving existing trails and access during construction. Please accept our apology for the delay in responding.

We want to assure you that even if something falls within the project footprint in the draft Environmental Impact Assessment Report (EIAR), it does not mean it will be a construction area. You can see in the legend for ES-15, ES-17 and ES-18 that confirmed construction staging and laydown areas are denoted with brown speckling.

Pedestrian and cycling access to the trail system will be maintained during construction to the extent possible by appropriate staging/sequencing and clear delineation of work zones. The construction staging and sequencing for this area will be confirmed during the detailed design phase of the project.

Any potential impacts to the trail system will be mitigated (i.e. temporary trail widening) and restored to existing conditions as best possible, or alternative routing will be provided once construction is complete. This approach is outlined within the [draft EIAR](#) (see Table ES-2: Socio-economic and Traffic sections, pages 64 and 75 in the report, respectively) and the [Transportation and Traffic Analysis Report](#) (see Appendix A7: Section 5.4.1.2, page 75 in the report).

We appreciate your advocacy for access to natural environments and trail systems here in the city. If you have any other questions or concerns, please do not hesitate to reach out, [submit your feedback on the draft EIAR](#) or [join us at an upcoming virtual open house](#).

Thank you,

Subject: Ontario Line EIA report - re: mountain bike trails

Figures ES-15, ES-17, ES-18

These maps all show construction in the location of multiple existing mountain bike trails, and no information or discussion is provided as to how these trails will be accommodated during construction, and/or restored after construction.

This is a serious oversight and must be addressed. These trails are used daily, year round, by thousands of cyclists (and also hikers).

More information about these trails can be found below:

<https://www.trailforks.com/region/crothers-woods-18708/>

<https://www.trailforks.com/region/don-valley/>

Hi [REDACTED],

I hope this message finds you well! It was a pleasure speaking with you the other day.

I am writing to provide you with a quick update. I am still awaiting more information regarding the questions you shared with me:

- More details on allowable decibel levels for noise during construction (daytime and nighttime)
- How many months, years, etc. for construction, particularly the emergency exit building
- More details on noise mitigation options
- Do utilities in the area need to be relocated
- Where will the station ventilation be located

Please let me know if I missed anything. We might not have all of these details available, but we will endeavour to get you as much information as we have at this time.

We have been receiving a high volume of inquiries due to the Environmental Impact Assessment Report (EIAR) release, so it may take some time to get these answers. However, I will continue to follow up on these questions and keep you updated. Please also do not hesitate to reach out in the meantime with any other questions.

Thank you, and have a great weekend,

Your name: [REDACTED]

Your e-mail address: [REDACTED]

Nearest Ontario Line Station (Optional): Pape

Subject: Impact on my property

Message: Hello. My neighbours and I are on Harcourt Avenue, near Pape and have all received your letter telling us that we are in the area that will be impacted by the

building of the Ontario Line, North Section. Some of my neighbours are wondering if their houses will be expropriated. Some of the more elderly Greek residents are concerned that they will "lose their house" to make way for the subway. They were likely living here when the Danforth line opened knowing that houses had to be torn down to accommodate the line. We understand that the plan is to tunnel under properties, but can you advise us on the impact to our houses/property and in particular, allay fears of any tear-downs planned? Thank you.

Hello Mark,

My husband and I received a letter from you notifying us that a Subway Infrastructure and/or protection area is required to be located underground in an area within our property at [REDACTED] Harcourt Avenue to support the construction and delivery of the Ontario Line.

Can you please let us know if land must be acquired or will this project only require an easement to be obtained? From what I understand after reading the letter, subway infrastructure and/or protection zones will need to be located underground within our property boundaries. Are you able to let us know which area(s) of our property will be impacted?

Your letter also stated that you would like to meet with us to share more specific information regarding this matter. We would like to set up that meeting. Please contact me at your earliest convenience so that we can discuss this further.

Thank you and I look forward to hearing from you. I can also be reached by phone at [REDACTED]

Good afternoon,

I recent received a letter from your office that included a request to meet with me to discuss the impact of the panned Subway construction on my property. I have a flexible schedule most days and would be open to a meeting in person or video; hopefully soon.

I found the letter hard to understand and I look forward to hearing from you.

Thank you.

Hi [REDACTED]

I see my colleague has provided some details to your earliest email to the Ontario Line team.

I think the best approach to respond to your additional questions is to divide and conquer the topics.

I would like to set up a meeting with you and our environmental lead, next week, to discuss your questions/concerns regarding soil toxicity. Would you mind sending me a few dates and times that work best for you and I will set up the call.

I will set up another call with you and our technical advisor to discuss your TBM and sewer relocation questions.

I hope this works for you and I do appreciate your patience.

Thank you, Mark

Hi [REDACTED]

All the questions you provided to us will be captured in the Environmental Impact Assessment Report with responses. All public comments on the EIAR that Metrolinx has received over the past four weeks will be captured and addressed in the final report. The team is working through your questions and I have followed up with them to ensure they have the appropriate information to connect with you. I will get back to you on Friday with a status update and next steps. Thank you for your patience, Mark

Good evening Mark.

As I understand it, tomorrow is the last day for public review and comment on the Ontario Line Environmental Assessment. In spite of the Metrolinx's desire to move on to construction quickly, I'm writing because I still have not received a single answer to any of my questions and concerns regarding the proposed construction of the Ontario Line and it's significant impacts on Pape Jr Public School and surrounding community.

In the meanwhile, I've been talking with the Pape Parent Council as well as many community members. They now share my serious concerns and are anxiously awaiting answers.

When last you responded a week ago, you were setting up a meeting. When will we be having this zoom with appropriate experts?

Best regards,

[REDACTED]

Hello Mr. Clancy,

Thank you for the update. As I've been trying to get answers for nearly six months, I look forward to hearing back at your earliest convenience. Again, my great preference would be to speak with someone with engineering and construction expertise as opposed to a communications officer but in any event, a zoom call is a fine idea.

Best,

[REDACTED]

On Tue, Mar 1, 2022 at 6:17 PM Mark Clancy <Mark.Clancy@metrolinx.com> wrote:

Good evening [REDACTED],

Thank you very much for your great questions.

I am working with our team to gather the responses to your questions.

Based on our questions and some of the complexities in the construction details, we will need some time to work on this.

We may actually need to set up a virtual meeting with you to go through our responses with you.

I will have an update for you by the end of this week.

Thank you, Mark

Hello Mr. Clancey,

I got your email address from Pape Jr Parents council. As I mentioned during last week's zoom with [REDACTED], I've been trying to get answers on the construction portion of the Ontario Line from Metrolinx for several months, my concerns are very specifically about the construction of the tunnel portal, because of its proximity to the school/ daycare, as well as our homes. Everything is happening so quickly I don't believe neighbors really understand the complexities and risks of what you are proposing. I should mention that when the Pape Parent Council first spoke about the Tunnel back a couple years ago. We were assured the tunnel would NOT go under school property. Now, not only is the TBM running under the schoolyard but there are additional works directly under the school.

Since I first emailed Metrolinx in October 2021, your associates have been extremely slow to respond. After months, they told me to wait for the Environmental Assessment and then I would have answers. But now that your agency has posted the EA and I've read through it, not only do I feel that it doesn't answer my initial questions, I have many new ones. For example, in the new report, you've added construction under one of the oldest schools in the city with the moving of the sewer AND it seems from the new maps, you may be expropriating homes directly across the street from the daycare playground along Pape Avenue. This would put the playgrounds that my children play on every day - directly across the street from an open pit construction project - and also one of the biggest construction projects in Toronto history. Yikes!

I've spent much of my career in and around construction sites, as well as having lived through parts of the Big Dig in Boston and the 2nd Avenue Tunnel in NYC. While I share some of the neighborhood's concerns with the above ground train and the noise and disruption in the future, in my experience, the more immediate concerns lie around the earth into which you are digging, your construction techniques, air and soil monitoring, air quality and soil removal mitigation methods, and how all that will affect our kids, our homes and one of the oldest school buildings in the city.

Here are the questions I would love your help in answering

1. SOIL TOXICITY AT PROPOSED TUNNEL SITE: I'm not sure if you are aware, but where the Riverdale Mall, and the proposed tunnel portal for the Gerrard Station, now sits was once the site of the International Varnish Company from 1904 until around the 1940s (<https://i0.wp.com/scenesto.com/wp-content/uploads/2013/08/international-varnish-gerrard-and-carlaw.jpg>). One source that I found says they manufactured varnishes as well as insecticides including DDT. This manufacturing would have taken place prior to any modern environmental regulations or mitigation. I was shocked to see none of this mentioned in your Early Works Environmental Assessment for the proposed Gerrard Station tunnel portal as well as what I assume will be the future development by Choice Properties REIT. And unless I am missing something I am not seeing anything in your most current EA you released this month. Please correct me, if I am wrong. From what I can tell you are planning to dig into the earth, and if you find something then you will formulate a mitigation or removal strategy. This is concerning for a number of reasons but Metrolinx I would assume is aware that removal of contaminants is extremely costly and can be a massive slowdown for any size project. So my questions related to this:

- Have you tested the soil? If not, will you test the soil before you start to dig? If so, how many samples will you take and from where?
- If you test the soil, will you be transparent with your findings? Can the community have these findings independently verified?
- Should you find any toxic material, what exact mitigation or removal strategies will you use?
- From your current EA, you say you will be monitoring the air quality in the area? What methods will you be using? How will the public be able to see these daily readings? What chemicals will you be monitoring for? What levels of VOCs and air

quality are considered acceptable by Metrolinx?

2. THE TUNNEL BORING MACHINE And PORTAL CONSTRUCTION LOCATION: You've chosen to run the tunnel boring machine south to north starting from the aforementioned Riverdale Mall. My experience with TBMs is that the starting point is also the worst spot to be (dust, debris, mud, trucks, equipment not to mention noise) This is because ALL of the spoils come out of that end - and then need to be hauled somewhere. In addition to the school and homes on Langley Ave, Frances Beavis Manor, a city retirement home literally overlooks what will be the Tunnel Portal. I have further concerns about the tbm going under school property. For reference, this corner of the schoolyard is where my 1-3 year old children, including my son, plays every day at the daycare. My questions are:

- At what depth will the tunnel boring machine go under school property?
- What size TBM will you be using?
- Are you shoring up the walls with pre-built concrete segments or sprayed concrete? Where will that equipment be stored?
- What size will the portal be? What digging methods are you using?
- Where will the spoils be piled in relation to the school?
- What mitigation steps will be taken to keep the air quality safe?
- How will you minimize construction noise?
- What direction will the trucks filled with spoils be driving?
- From the looks of the new map, the construction site now includes an area now occupied by homes at the end of Pape. (400-388 Pape). Am I reading that right? Have you expropriated these homes?
- If so, this would put construction meters away from the school so what mitigation techniques would be used to protect the children?
- While TBMs have been built and deployed in urban areas before, this is one of the densest areas in the city with schools and retirement facilities literally on top of it. Have you considered moving the TBM entrance to the north end of the tunnel?
- How many workers will be at this site? Where will they enter the construction site? Where will they park?

3. SEWER RELOCATION: It came up in the meeting that you now need to move the sewer under what is one of the oldest school buildings in the city. You made assurances that construction would not be happening on school property - and only if necessary on nights and weekends.

- How deep beneath the school is the sewer?
- What kinds of tunneling techniques will you be using? What equipment will be used?
- From where will the microtunneling begin?
- In what way will you be protecting the school and yard from being structurally compromised?
- What assurances can you make to my fellow parents that construction crews will not be on school grounds and/ or block the operations of the daycare?
- Is there another option not directly under the school to move the sewer? Is it

conceivable, for example, to run a new sewer down Riverdale and Carlaw for example rather than underneath children?

I'm sure I will think of more questions, but in the meantime I look forward to hearing from you. As you are only in the communications department, I would be more than happy to speak to the designers and engineers behind this project to get the answers. And if it's easier to set up a zoom, please let me know.

Regards,

[REDACTED]

[image002.png](#)

Hi [REDACTED]

We apologise for the delayed response. Having reached out to the various subject matter experts, we've gotten the answers for the questions you sent us a few days ago.

1) Authenticity - In both my phone call and the email you provided with all due and utmost respect I am feeling there is no authenticity, and I am getting scripted and/or very well scripted answers back that really don't help much. As a person who strongly supports Metrolinx and wants the Ontario Line ASAP this is how I feel. I am sharing this with you in the hopes that your team can show more empathy and sincerity and at the end of the day being more direct rather than be vague. This will help the image of the controversial Ontario line and get more folks on board.

Ans: We are sorry you feel that way and will take your suggestions into consideration as we seek to deliver not only much needed transit but also great service to community members and those concerned.

2) Timeline - In relation to my first comment, your response really does not help at all. Can Metrolinx commit to updating the Ontario Line on a monthly basis? This will allow us as residents and taxpayers to keep you folks more accountable and to ensure the project is on track. Also it will keep us more engaged and see where in the planning stage the Ontario Line is at. From my understanding the timeline hasn't been updated in about a years time which is just unacceptable.

Ans: Our goal is to deliver updates as they become available and do so in the most efficient and effective ways possible. We have employed the use of several communications media to ensure the updates reach community members. Most notably, our e-newsletter which is published on a weekly basis is a more practical avenue.

3) EPR

- Roughly speaking when would we get the notice of updated epr addendum? As per my understanding this would go to the Minister's desk, and she would have up to 35 days to make a decision. Is this correct? Would there be any town halls to discuss the notice of updated epr addendum? What is the maximum time we would get a decision back from the Minister?
Date/Month

Ans: Currently, Metrolinx is working toward addressing public comments on the draft Environmental Impact Assessment Report (i.e. the main EIAR, not an addendum at this point) and will incorporate public feedback into the final EIAR for submission to the Minister of the Environment, Conservation and Parks. Metrolinx will be providing a notice of the final EIAR to local

communities and the Minister in early April 2022 to align with submission of the final report, which will be like the notice of the draft EIAR sent out in February 2022. Yes, this is correct - the timeline for the Minister's decision on the EIAR is up to 35 days after receiving notice of the final report. Once the Minister either gives notice, confirms that no notice will be given, or the 35-day Minister's review period is complete, Metrolinx will submit a statement of completion to the Ministry and post the statement of completion on the project webpage. At this point, Metrolinx does not have a town hall planned to discuss the notice of final EIAR or the statement of completion. Given the current timeline for providing the notice of final EIAR in early April 2022, we anticipate a decision from the Minister by early May 2022 at the latest.

For the Ontario Line Environment Impact Assessment Report, Metrolinx is following the process outlined under O. Reg. 341/20 which includes further details on the EIAR process (accessed online here: <https://www.ontario.ca/laws/regulation/r20341>).

4) Townhalls

- Do you have a schedule of townhalls following the ones in late February and early March?

Ans: Townhalls are scheduled as the project progresses and new information is made available. The purpose of these meetings is to relay information to the community and enable an avenue for community feedback. As such, we do not have a set number of townhall meetings stipulated ahead of the year. Instead, we decide on and promote as deemed necessary as updates or milestones on the Ontario Line are reached.

5) Science Centre Station

- What benefits is this community getting as part of the Metrolinx initiatives. i.e. there are parks, community centres, new mosques being built along the line but what is Science Centre area residents getting?

Ans: Due to finite resources unfortunately not every neighbourhood along the Ontario Line will receive additional large-scale infrastructure, like a new park or community centre. That said, Metrolinx will continue to identify and consider opportunities for community improvements of varying sizes and scopes.

Thanks again for reaching out to Metrolinx and as always, we appreciate your interest in the project.

Hi 

Thank you for reaching out and sharing your questions and excitement for the project. Please accept our apology for the delayed response.

We are currently in the process of creating an updated version of the timeline. We appreciate you sharing your feedback via email and during the recent call, and we will work on updating the timeline more frequently going forward.

We are continuing to host our townhalls virtually at this time, but we look forward to hosting in-person meetings again as public health measures are re-evaluated. We are hosting four upcoming virtual open houses on the dates below (each date is dedicated to a specific geographic area):

- [February 22, 2022](#) - Science Centre to Gerrard
- [February 24, 2022](#) - Science Centre to Gerrard
- [March 1, 2022](#) - Gerrard to Exhibition
- [March 3, 2022](#) - Gerrard to Exhibition

You can find the draft [Environmental Impact Assessment Report](#) (EIAR) on our website and submit questions or feedback, which is then factored into the final report. The report was released on February 7, and the feedback period is open until March 9.

Regarding project plans in the North segment, you can find updated maps on our [website](#) that were released alongside the draft EIAR. We will continue to share updated plans as more details become available.

If you have not already done so, you may wish to sign up for our [newsletter](#) for weekly updates on the Ontario Line. You can unsubscribe at any time.

Thank you again for writing. Please do not hesitate to contact us in the future.

Hi

I am the owner of [REDACTED] Muriel Avenue, right next to Pape Station, [REDACTED]

A number of our neighbours received personal letters sharing that the new underground subway would be built underneath their property lines. We did not receive a letter and are wondering whether it was not delivered or whether we should have received one - could you please share?

A neighbour shared an overview of where the line was being constructed and it appears that it goes partially across a portion of our property. Can you confirm?

We had previously received a form letter that a note would be placed against our property that construction was taking place underneath and this would be held on file with the housing authority. Can you please let me know if this is the case, or whether something changed from the time we first saw that notice around 6 months ago?

I appreciate any help and clarity you can provide. Thank you. You can also reach me on [REDACTED]

Attachments: [image001.png](#)

Hi [REDACTED]

Thank you for reaching out. Please note that the purpose of [tonight's virtual open house](#) is to review the [draft Environmental Impact Assessment Report](#) released for the Ontario Line. Tonight's session will feature an overview of the project from the Science Centre to Gerrard Stations and the environmental assessment report's findings.

While we touch on the property acquisition process, the presentation and Q&A are not tailored to this topic as each case is unique. Nonetheless, we welcome you to join tonight's open house to learn more about the project, and you can find the Zoom details here (if you registered, you will also receive a reminder email with the Zoom details):

[REDACTED]
[REDACTED]
[REDACTED]

Regarding the letter you received, we identified that a subsurface easement for your property is required for the Ontario Line subway project. This underground easement is how Metrolinx secures the right to protect this land for a specified purpose and is a right of use, **not ownership**. Some underground easements do not have any infrastructure within them. Some easements are merely a protection zone intended to ensure that the interface between two land uses are designed, built and used in a safe and compatible manner.

We are more than happy to meet with you if you have further questions. If not, we will contact you in the coming months to discuss compensation for the easement.

Kind regards,

Caitlin

Hi there,

I am the owner of the property at [REDACTED]. We have received your letter dated Jan. 28 and the meeting request with us. We will be pleased to set up a call with you to understand your request.

Since we are [REDACTED] and we are [REDACTED], an appropriate time for both sides will be Toronto time 8am, and our 9pm. (if you prefer your night time that also works for us!) We are available on Feb. 23, 24 or 25th this week, with 25th your morning 8am and our 9pm preferred.

Please let us know what time works.

Regards,

[REDACTED]

Hi Mark;

I am writing in response to your letter dated January 28th, 2022 that was received by me regarding the potential underground easement required for the new Ontario Line being built.

I would like to connect to find out a bit more about how that will affect my property; namely:

- 1) Guarantee of stability on the structures above the Ontario Line given the age and historic state of the houses; I have concerns around the vibration that will occur during construction and the operation of the future subway and those vibrations causing instability to my home.
- 2) Confirming that the decades old green canopy that spans multiple properties in this part of the neighbourhood won't be affected.

If you could please get back to me with some times to discuss via Zoom after 4 PM that would be much appreciated.

Thanks.

Hi there,

I am a resident and owner of a condominium at [REDACTED] Richmond Street West.

I received a letter regarding the new Ontario Line and how [REDACTED] Richmond is/has a "Subsurface Requirement".

Without sounding like I'm trying to give you a hard time, I have to be honest and say I found the letter I received extremely long, confusing and hard to follow.

I am hoping someone could explain to me, in plain English devoid of legalise and engineering-speak, what is happening and what it has to do with me as a property owner at [REDACTED] Richmond (I know we're building a new subway line that runs under the building, I got that part).

Specifically, I am seeking answers to questions including:

A) Is this letter saying that Metrolinx is potentially looking to buy the entire building, owner by owner, until the whole building is bought out so the subway line can be built? If so, what is the timeline for that? (I have many more questions if so, but let's start there).

OR

B) If Metrolinx is NOT looking to outright purchase this building / units, what is a "subsurface requirement", and how does this impact me?

Thanks in advance for your help in understanding this matter.

Best,

[REDACTED]

Hi Mr. Bradley Naismith,
Communications Division

I have listed my house for sale and interested agents have some concerns and I was wondering if you would please address them. We would like to know how much space you would require and where? Is the space above ground or below? When will this happen and how long will it take? Will the Ontario Line take away some of the property or just for a period of time.

Thank you,

[REDACTED]

I am in the midst of listing my house and I have just read this letter. Am I still allowed to sell my house if I can find a buyer now that this acquisition process is happening? What are the next steps? I do not want my house appraised in eighteen months as it won't be worth as much at that time or is that the plan?

Subject: Potential impacts of staging area immediately behind our home

Message:

We live in the zone [REDACTED], for which the border traces a line around our property at [REDACTED]. We see that the parking lot immediately behind our home (lot address is [REDACTED]) will be used as a construction staging area, which compels us to ask:

- 1) Do you anticipate that the laneway running [REDACTED] will be blocked at any point and what are the plans to accommodate right of access for the residents who use the laneway to access our parking garages and property? This is our only access to our parking, as it is for all residents on the east side of Gough Ave.
- 2) Will there be any digging on the lot site?
- 3) What will the approximate timing be of the move-in/move-out for the construction staging area in this lot at [REDACTED]?
- 4) The parking lot has been encircled in a purple line in the report, which indicates "Built Heritage Resource / Cultural Heritage Landscape." Does this mean that a park will be built in this area upon completion of the transit line? What are the future use plans for this lot after construction?
- 5) What will be the security features on the lot? How high will the hoarding be, and will there be security measures to address lowered visibility of properties like ours that back onto the site (which could attract theft and vandalism)?

6) What noise can we anticipate on the site? Will there be a daily noise cut-off, for instance between the hours of 7 pm - 7 am? We note that there is also a nursing home adjacent to the lot.

7) We would like to join the Construction Liaison Committee for our neighbourhood. How do we go about this?

This was ask over and over again last year. When can we see what transit oriented development will be on top of the operations maintenance and storage facility? Who is responsible for this? Does the current design include structural components to build buildings on top of the OMSF?

Dear Ontario Line Project Team,

[REDACTED] and I recently received a letter (dated Jan 28th) regarding potential impacts of the Ontario Line on our property at [REDACTED] Pape Ave. I watched last night's online community meeting, where another Pape Ave resident asked for further details and was directed to write in since any impacts are case-by-case. Could you please let us know about the expected impact on our property under the current project plan?

Thank you,

Hello Norando:)

Thank you for getting back to me so quickly.

Underground easements are how Metrolinx secures the right to protect land for a specified purpose and is a right of use, **not ownership**. Some underground easements do not have any infrastructure within them. Some easements are merely a protection zone intended to ensure that the interface between two land uses are designed, built and used in a safe and compatible manner.

I am not 100% sure about what this means above.

Regarding construction timelines in this area, work on this section of the Ontario Line will likely begin closer to 2024 or 2025. The exact timeline will be determined through the procurement process.

Okay but in my case I am a business and my building is my storage unit / warehouse so I cannot wait till 2 months before your work taking place to find out we have to move or whatever it is ...

We are more than happy to meet with you if you have further questions. If not, we will contact you in the coming months to discuss compensation for the subsurface easement. Thank you again for writing. **I would like to ask if someone can look at my property and its location to tell me what to expect please the address is [Redacted] and the [Redacted] since it is in the laneway behind the house at [Redacted]**

Would this be possible please?

Hi [REDACTED]

Thanks for reaching out to our team. You can watch last night's virtual open house on our [website](#), or register for Thursday night's session [here](#), which will cover the same portion of the alignment from Science Centre to Gerrard Stations.

Please note that the virtual open houses are focused on the Ontario Line's [draft Environmental Impact Assessment Report](#) and not property impacts. While we touch on the property acquisition process, the presentation and Q&A are not tailored to this topic as each case is unique.

Regarding questions about impacts to your property, Metrolinx recently sent letters to owners along the project that outline the requirements for each property. According to our records, you would have received a letter for [REDACTED]. We identified that a subsurface easement for this property is required for the Ontario Line subway project. Please note that this letter does not mean we need to acquire your property.

Underground easements are how Metrolinx secures the right to protect land for a specified purpose and is a right of use, **not ownership**. Some underground easements do not have any infrastructure within them. Some easements are merely a protection zone intended to ensure that the interface between two land uses are designed, built and used in a safe and compatible manner.

Hello, I, unfortunately, missed the meeting last night pertaining to my property area and how and when it will be affected.

I am located in the [REDACTED] that runs parallel to Pape at Cosburn and have received a letter but unfortunately, I was working last night and missed the online meeting. Is there a recording of the meeting that you can send me please?

Regardless, I would like to speak to a representative of your firm about all the details such as:

- * My property and if it will really be needed
- * When will this take effect, as in how many years are we looking at here before it hits my neighborhood?
- * Can we say no to this and if so, how?
- * Please send any information that pertains to me.

With thanks,

[REDACTED]

Hi [REDACTED]

Thank you very much to you and [REDACTED] for connecting with me this morning. It was a pleasure speaking with you both!

As discussed, I have attached a copy of the letter regarding the subsurface easement for [REDACTED]
[REDACTED]

I am also sharing some links to our project's draft Environmental Impact Assessment Report (EIAR); you can review the summaries, full report and appendices and/or submit questions or feedback:

- Draft EIAR Overview Page (includes links to individual summary pages for each component studied, such as noise and vibration, at the bottom of the page):
<https://www.metrolinxengage.com/en/content/ontario-line-draft-environmental-impact-assessment-report>
- Draft EIAR and Appendices: <https://www.metrolinxengage.com/en/content/full-report-draft-environmental-impact-assessment-report>
 - Appendix 6: Noise and Vibration:
https://www.metrolinxengage.com/sites/default/files/appendix_6_-_noise_and_vibration_report.pdf

We also have two virtual open houses next week. Each will feature a presentation on the draft EIAR and a Q&A period (you can pre-submit written questions on the registration page or join live via Zoom to ask your question to the panel verbally):

- Tuesday, March 1: <https://www.metrolinxengage.com/en/content/ontario-line-live-march-1-2022>
- Thursday, March 3: <https://www.metrolinxengage.com/en/content/ontario-line-live-march-3-2022>

Thank you again for reaching out. As mentioned, our Property Acquisitions team will reach out in the coming months to discuss compensation for the easement. However, please do not hesitate to reach out in the meantime with any questions.

Kind regards,

Caitlin

Hello Ontario Line Metrolinx ,

I attended your Zoom meeting last night Tuesday February 22nd 6:30PM to 8:00PM.
My questions is for Mr. James Francis or Malcom Mackay.

I am a condo owner at [REDACTED]
I have put an "X" on [REDACTED] building on the attached photo.
My unit faces West on to Don Mills Road.

According to the attached photo, the elevated train tracks will be crossing Don Mills right in front of my building and only a few meters away.
Mr. Francis ensured last night that noise and vibration will not be an issue for trains running below the ground.
However I don't believe Mr. Francis clearly answered the question for noise and vibration concerns for elevated tracks next to a condo a building.

Can Mr. Francis confirm what will be the decibel levels with the elevated train tracks only a few meters from my building?

I listened to your audio recording for the Science Centre and the noise level is definitely louder with the train compared to the regular day traffic.
My concern is the noise and vibration will bounce off my building as the noise has nowhere to go but upwards.
Can you please respond to my email and advise if my noise and vibration concerns are accurate or am I wrong?

Good Day

Thank you for the opportunity to input, and come together publicly to discuss these significant changes in my neighbourhood - Ontario Line.

Station 7 - Corktown

multi-use trail bridge

The area around the Don River, Corktown Station is home to and the corridor for turtles, birds, otters, fish and much more wildlife.

I have seen many different species in this area and with such little natural environment left in city of Toronto it would be great to recognize and share this space with wildlife.

I look forward to the transportation and future development of our city. Please do include all *things* that live in this great city!

thank you again,

Hi Metrolinx,

I wanted to share a note of frustration/concern/complaint. I was on the community meeting tonight (Feb 24). I knew about the meeting because I've signed up for the newsletter and am part of the [REDACTED]. For people not as connected, I don't think there is any way they would have:

1. Know about the report
2. Known about tonight's meeting

My frustration is that the paper notice (Canada Post) for tonight's meeting arrived at our house today. Just a few hours before the meeting. That makes it impossible for people less informed to be engaged and involved in the process.

It leaves me feeling that this was purposeful. You have known about the timeline for this report, and therefore the community meeting, for months. How is it that the newsletter informing residents about the meeting has just arrived?

Hello Metrolinx/Ontario Line,

I attended the virtual open house this evening and had a question not yet answered. My house is located at [REDACTED], just south of Danforth close to Pape. Is it possible that I could lose my house due to the construction work on the line running through the ground underneath my property?

I did ask this during a phone call to Metrolinx, the clerk assured me that since the line will be tunnelled remotely about 100 feet below ground, that the houses under the line would not be affected, and they would also be avoiding any disruption of the utilities (hydro, cable, water lines) I was concerned if anything has changed, or would I be able to keep living in my house during and after the project is completed?

Thanks,

[REDACTED]

I've signed up to watch this meeting, however, when I signed up none of the notices mentioned this is a zoom meeting.

I don't do zoom for many reasons.

Is there another web based link where I can watch it rather than zoom? If not, please consider creating one for future meetings. There are a lot of us that don't want to sign onto zoom but want to keep informed. Thank you.

Also, is there a link (other than zoom) to see past meetings?

Thank you.

Subject: RE: EIAR question

Hi [Redacted]

Thank you for your question. The Environmental Impact Assessment Report (EIAR) assessed potential impacts to wildlife habitat, including birds, deer and other mammals. The report also identified mitigation measures to avoid any direct impacts to wildlife, such as establishing buffers around work zones and installing protective fencing to keep wildlife from entering these areas. Additional mitigation measures to protect wildlife can be found on Table ES-1 of the [Appendix A1 – Natural Environment Report](#). During construction, we will have qualified experts to regularly assess existing mitigation measures and adaptively manage onsite works to further avoid impacts on local wildlife as required. Once construction is complete, areas around newly installed infrastructure will be restored to ensure local wildlife can continue to use these areas in the future.

The area of potential impact for the construction of the Ontario Line within the Don Valley area will be further refined and reduced to the extent possible throughout the design phase, and Metrolinx will work to protect forests and only remove trees when absolutely necessary. As designs advance, Metrolinx will also complete detailed tree inventories that will identify trees to be protected and the appropriate mitigation measures to prevent injury to these trees during construction. Tree protection measures will follow City of Toronto Urban Forestry guidelines and use a combination of barriers around the trunk of the tree and its roots where necessary, as well as using setbacks from construction activities.

Regarding the dog park mentioned during the Virtual Open House on February 24, the presenter was answering a question about the Gerrard Carlaw Parkette Dog Park located at the intersection of Gerrard St E and Carlaw Ave. This dog park will be used as a laydown area during the Ontario Line construction and Metrolinx is working closely with Toronto Parks and Forestry to identify an alternative off leash areas for dogs. Metrolinx is also acquiring some lands in this region, so once the Ontario Line Project is complete the Gerrard Carlaw Parkette Dog Park will be larger than it is today. Metrolinx will work closely with the community and the City of Toronto to restore these areas, so they are well suited to meet the community needs once the project is complete.

We apologise for the delay in getting back to you and hope the information provided will alleviate some of your concerns.

Regards,
Norando Brown

Hi Metrolinx,

I have a question that I wasn't able to address in your Zoom meeting that was earlier tonight (Feb. 24). You kept saying 'greenspace' throughout the meeting as a way to relocate the spaces of land you are planning on demolishing, for me 'greenspace' is a word used to describe a mass land used for recreational purposes and supporting wildlife.

The Don was one of those greenspaces before highways and bridges were installed, even after that and continuous pollution in the forests and rivers it continued to be a greenspace for people and wildlife. I'm worried that the Don is being destroyed slowly and brutally by humans putting in highways, and now a subway.

This greenspace that happens to be a part of my backyard is home to deer, rabbits, raccoons, foxes, coyotes, groundhogs, possums, birds and fish. Are you planning to destroy their homes and then

build a greenspace kilometers away?

Assuming it's nearby, are you building a doggy park for deer in the middle of the street? Which, by the way, is not an area big enough for animals to roam free of humans and other disturbances.

As my house is in the subway's route, and being destroyed, I want to be able to leave my property knowing the forests and rivers me and my family, and so many others, have enjoyed hours in is safe and unharmed.

What **exactly** are you planning for the wildlife in the forests and rivers?

Hello Mr. Clancy,

Thank you for the update. As I've been trying to get answers for nearly six months, I look forward to hearing back at your earliest convenience. Again, my great preference would be to speak with someone with engineering and construction expertise as opposed to a communications officer but in any event, a zoom call is a fine idea.

Best,

Hello Mr. Cicero,

We spoke last week at the Pape Parent Council virtual meeting. I got your email address from them. As I mentioned in that zoom, I've been trying to get answers on the construction portion of the Ontario Line from Metrolinx for several months, my concerns are very specifically about the construction of the tunnel portal, because of its proximity to the school/ daycare, as well as our homes. Everything is happening so quickly I don't believe neighbors really understand the complexities and risks of what you are proposing. I should mention when the Parent Council first spoke about the Tunnel back a couple years ago. We were assured the tunnel would NOT go under school property. Now, not only is the TBM running under the schoolyard but there are additional works directly under the school.

Since I first emailed Metrolinx in October 2021, your associates have been extremely slow to

respond. After months, they told me to wait for the Environmental Assessment and then I would have answers. But now that your agency has posted the EA and I've read through it, not only do I feel that it doesn't answer my initial questions, I have many new ones. For example, in the new report, you've added construction under one of the oldest schools in the city with the moving of the sewer AND it seems from the new maps, you may be expropriating homes directly across the street from the daycare playground along Pape Avenue. This would put the playgrounds that my children play on every day - directly across the street from an open pit construction project - and also one of the biggest construction projects in Toronto history. Yikes!

I've spent much of my career in and around construction sites, as well as having lived through parts of the Big Dig in Boston and the 2nd Avenue Tunnel in NYC. While I share some of the neighborhood's concerns with the above ground train and the noise and disruption in the future, in my experience, the more immediate concerns lie around the earth into which you are digging, your construction techniques, air and soil monitoring, air quality and soil removal mitigation methods, and how all that will affect our kids, our homes and one of the oldest school buildings in the city.

Here are the questions I would love your help in answering

1. SOIL TOXICITY AT PROPOSED TUNNEL SITE: It did not seem that you were aware on our meeting, but where the Riverdale Mall, and the proposed tunnel portal for the Gerrard Station, now sits was once the site of the International Varnish Company from 1904 until around the 1940s (<https://i0.wp.com/scenesto.com/wp-content/uploads/2013/08/international-varnish-gerrard-and-carlaw.jpg>). One source that I found says they manufactured varnishes as well as insecticides including DDT. This manufacturing would have taken place prior to any modern environmental regulations or mitigation. I was shocked to see none of this mentioned in your Early Works Environmental Assessment for the proposed Gerrard Station tunnel portal as well as what I assume will be the future development by Choice Properties REIT. And unless I am missing something I am not seeing anything in your most current EA you released this month. Please correct me, if I am wrong. From what I can tell you are planning to dig into the earth, and if you find something then you will formulate a mitigation or removal strategy. This is concerning for a number of reasons but Metrolinx I would assume is aware that removal of contaminants is extremely costly and can be a massive slowdown for any size project. So my questions related to this:

- Have you tested the soil? If not, will you test the soil before you start to dig? If so, how many samples will you take and from where?
- If you test the soil, will you be transparent with your findings? Can the community have these findings independently verified?
- Should you find any toxic material, what exact mitigation or removal strategies will you use?
- From your current EA, you say you will be monitoring the air quality in the area? What methods will you be using? How will the public be able to see these daily readings? What chemicals will you be monitoring for? What levels of VOCs and air quality are considered acceptable by Metrolinx?

2. THE TUNNEL BORING MACHINE And PORTAL CONSTRUCTION LOCATION: You've chosen to run the tunnel boring machine south to north starting from the aforementioned Riverdale Mall. My

experience with TBMs is that the starting point is also the worst spot to be (dust, debris, mud, trucks, equipment not to mention noise) This is because ALL of the spoils come out of that end - and then need to be hauled somewhere. In addition to the school and homes on Langley Ave, Frances Beavis Manor, a city retirement home literally overlooks what will be the Tunnel Portal. I have further concerns about the tbm going under school property. For reference, this corner of the schoolyard is where my 1-3 year old children, including my son, plays every day at the daycare. My questions are:

- At what depth will the tunnel boring machine go under school property?
- What size TBM will you be using?
- Are you shoring up the walls with pre-built concrete segments or sprayed concrete? Where will that equipment be stored?
- What size will the portal be? What digging methods are you using?
- Where will the spoils be piled in relation to the school?
- What mitigation steps will be taken to keep the air quality safe?
- How will you minimize construction noise?
- What direction will the trucks filled with spoils be driving?
- From the looks of the new map, the construction site now includes an area now occupied by homes at the end of Pape. [REDACTED]. Am I reading that right? Have you expropriated these homes?
- If so, this would put construction meters away from the school so what mitigation techniques would be used to protect the children?
- While TBMs have been built and deployed in urban areas before, this is one of the densest areas in the city with schools and retirement facilities literally on top of it. Have you considered moving the TBM entrance to the north end of the tunnel?
- How many workers will be at this site? Where will they enter the construction site? Where will they park?

3. SEWER RELOCATION: It came up in the meeting that you now need to move the sewer under what is one of the oldest school buildings in the city. You made assurances that construction would not be happening on school property - and only if necessary on nights and weekends.

- How deep beneath the school is the sewer?
- What kinds of tunneling techniques will you be using? What equipment will be used?
- From where will the microtunneling begin?
- In what way will you be protecting the school and yard from being structurally compromised?
- What assurances can you make to my fellow parents that construction crews will not be on school grounds and/ or block the operations of the daycare?
- Is there another option not directly under the school to move the sewer? Is it conceivable, for example, to run a new sewer down Riverdale and Carlaw for example rather than underneath children?

I'm sure I will think of more questions, but in the meantime I look forward to hearing from you. If it's easier to set up a zoom, please let me know.

Regards,

[REDACTED]

Metrolinx,

Yesterday I found in my mailbox a letter intended to inform me about a 'community' meeting later that day, as well as one that had taken place days prior on the 22nd.

I hope you can agree that this type of information needed to be mailed out much earlier if the true intention was to inform us of the meetings. People are busy, we need to set time aside from our families and responsibilities to attend two hour long meetings. Not to mention it's quite hard to attend and participate in a meeting that has already taken place.

I've already shared this type of feedback with you several times now. As someone who is being expropriated. As someone whose home is being taken from them. Whose family has been undergoing stress and uncertainty for years now because of the planned expropriation. This type of unprofessionalism, with something as simple as a mailer, does little to instill confidence that you're going to handle our families wellbeing during the expropriation process. In fact it exacerbates it. It's the opposite of what we need. You are creating additional harm.

Metrolinx you need to take your responsibilities seriously. You need to be accountable. We are expecting more from you than this.

Thanks,

[REDACTED]

Hi,

I'm a resident of East York, and I live nearby the location of the MInton Portal [REDACTED]
[REDACTED]

I am going to be severely affected by the construction in our area, in terms of noise, dust, vibration, road closures, construction traffic, etc. My property is not being expropriated nor is there an easement (at the moment anyways) proposed.

Will you be compensating people in my situation who are going to be severely disrupted by this construction for many years?

There are some clear issues here:

- I cannot sell my property until the construction is over, since there will be a large net negative effect on the sale price of the property due to the construction.
- We face risks that our property will be damaged by the works.
- We use the area on Minton Pl as a place for our children to play and ride their bikes. It is a popular area for kids since there is very little traffic since it's a dead end
- We will likely have to deal with disruptions in terms of sleeping due to construction works,
- We will likely have to be pro-active about keeping our children away from the traffic and the construction works since it will be extremely dangerous

Thanks,

Hi [REDACTED]

Thanks for reaching out to Metrolinx with your questions. We apologise for the delayed response.

Regarding questions about impacts to your property, Metrolinx recently sent letters to owners along the project that outline the requirements for each property. According to our records, you would have received a letter for [REDACTED]. We identified that a subsurface easement for this property is required for the Ontario Line subway project. Please note that this letter does not mean we need to acquire your property.

Underground easements are how Metrolinx secures the right to protect land for a specified purpose and is a right of use, **not ownership**. Impacts to the surface of the property are usually minimal, if any at all, as most work along this area of the alignment will be between 20-30 metres below the surface. We have outlined several mitigation measures in the draft [Environmental Impact Assessment Report](#) on our approach to construction noise and vibration. There's also an immersive sound demonstration posted on our [website](#) to provide property owners and tenants with an idea of what the possible sound impacts will be.

We hope this alleviated your concerns and please feel free to reach out to us should any other questions arise.

hello, we live at [REDACTED] (Pape & Mortimer) on the south west corner of Pape & Mortimer where the townhomes are built.

could you tell us where will the subway pass by. According to the plan, this will be underground. Will the

subway go under the street or under our townhomes or on the east side of the street? A few years ago, they did some drilling and i'm not sure if this was for this project and we could feel our basement shaking in a significant way and **even on the [REDACTED] we couldn't sleep when they did overnight work.** Is our address among those expropriated or not? If not, will we be inconvenienced in a major way?

can you please confirm.

i joined the meeting last night for the east but a lot of questions were unanswered.

thanks in advance,

[REDACTED]

Thanks Norando..

Are there satellite maps that show where the existing TTC tunnels run? (much like the ones that show where the Ontario line will run)

On Fri., Feb. 25, 2022, 15:29 Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

I hope this email finds you well. Further to our discussion yesterday, we have received details on the comparisons between Ontario Line and TTC's tunnels. The average depth a TTC tunnel is 10m with its deepest tunnel being at Lawrence station at approximately 24m whereas the average depth for Ontario Line in the Pape-Cosburn area is 20-25m. Having said this, it can be established that the Ontario Line tunnels in your area are much deeper than the TTC's.

Regards,

Norando

Hello,

I am one of the homeowners of [REDACTED] Richmond St E - [REDACTED]. Our property management team relayed the details to us that Metrolinx would like to have a meeting with the homeowners regarding the planned subway infrastructure project and how it'll impact us and what is required to proceed.

I can't say I am entirely thrilled about this project given that my unit faces the north side and would be directly impacted by the Ontario line construction. The proposed condo development above of the station would obstruct my current view which is beautiful as it allows lots of indirect light to come in. In addition to the construction noises that will occur and will be very disruptive.

Given all of that, I do understand the importance of building more subway lines in Toronto so I am open to discussing the above and obtaining more information on how the homeowners will receive fair compensation for the rights to build on our property. I am back in town on March 14th so I am free to jump on a virtual call after that date.

Thanks,
[REDACTED]

Hi [REDACTED]

Thanks for reaching out to Metrolinx. The Book A Meeting option was suggested because it is based on your convenience and generally pops up on the calendar of the Specialist you'll be talking with. The meetings are in fact via Microsoft Teams and generally last longer than 15minutes.

Nonetheless, we understand your frustration and can schedule a meeting for you on Tuesday March 8, 2022 beginning at 12noon if that works for you.

Norando -

[REDACTED]

I have to say that being told to go to a generic website to book a 15min slot between 9:30am-4pm on weekdays (I do work) after getting a specific letter telling me Metrolinx wants to meet me because they intend to initiate work that will likely affect the home I've lived in for 20 years and invested hundreds of thousands of dollars into.... does not sit well with me.

Feel free to share this email with your team so they know that I am already underwhelmed with the effort, tact and general organization of Metrolinx. If I acted like this with the home owners I routinely encounter in my job in the film industry, there would be no film industry.

Can you at least tell me if this will be a zoom meeting such that my wife can join? We work in separate locations so if this meeting has to happen during work hours I would need her to be included from a separate geographical plac

To Whom It May Concern -

I am writing this email in hopes of connecting with Mark Clancy, Senior Manager, Community Engagement to arrange a meeting to discuss the impact of the Ontario Line construction plans on my property at [REDACTED] Pape Avenue.

I received a letter in the mail describing the basics of the plans and I have been actively attending community meetings with respect to the project but I gather from the letter that the specifics of the impact on myself and my family (including our home) are becoming more clear from Metrolinx's perspective.

I am hoping that email is a better way to arrange this meeting as the two phone calls I have made over the course of the past two weeks have gone unanswered despite the message indicating that all calls are returned with 48 hours. In addition, every time I am around the office located on Queen

Street East it appears that it is closed.

Best regards,

Hi [REDACTED]

Thank you very much for reaching out and sharing your feedback and questions on the Environmental Impact Assessment Report (EIAR). Our Environmental Assessment team will respond to your feedback and questions submitted online through the formal engagement process. We have also passed on your emailed message to ensure they have all of your feedback on record and to prepare a response.

Thank you again for writing, and please do not hesitate to reach out in the future.

Kind regards,

Caitlin

Hello Metrolinx team,

I have reviewed the draft environmental impact assessment report in detail and have a number of questions and concerns that were not addressed.

Below, the page numbers correspond to pages of PDF, not pages denoted in footer. I would be happy to discuss by phone or email etc., whichever option would be best for your team.

Note, I submitted via the feedback form as well.

Thank you,

Air Quality

Risk is noted to be high; I didn't see mitigation activities. Please provide.

A small blue square icon containing a white question mark, centered within a rectangular text input box.

Cars/Traffic

Please confirm if there will be no lane reductions or parking impacts on Pape Avenue (re: Page 80 – Automobiles, Pape Ave. not listed), however, is listed in the appendix. If so, what/where will alternative parking be?

A small blue square icon containing a white question mark, centered within a large rectangular text input box.

Biking

Page 75 – Cyclists: Concerned that there are no construction or operations monitoring plans or intent to create a plan listed. Will Pape and Millwood still be accessible to cars and bikes? I bike to work at Sunnybrook Hospital almost daily in good weather along Pape/Millwood/Laird. Appendix also states that impact has not yet been confirmed which is contradictory to saying that there are no plans.

Construction, Noise and Vibrations

Referring to construction on Pape Avenue (north of Gerrard, south of Cosburn)

1. Will construction on this area all be underground?
2. How long will this tunnel take i.e., how long will the TBM be operational in this segment?
3. When the TBM is under your house, will you hear or feel it? This is not addressed in the photos in the appendices where the vibrational radius from TBMs are indicated.
4. What are noise impacts from TBMs?
5. Most homes on Pape Ave. are over 100 years old. Will structures/foundation quality be measured in advance of construction? If damage is later found by residents, how will Metrolinx be held accountable?
6. As indicated in the recent virtual meeting, the train will be “imperceptible” once operational when underground.
 - a. What if once operational, sounds are heard i.e., what available compensation for soundproofing measures etc. will be provided to residents/home owners?
 - b. Can Metrolinx add additional noise/vibration mitigation strategies after construction?
 - c. Monitoring only for 5 years doesn’t seem sufficient – staff on the webinar indicated the sounds if heard would likely be due to poor maintenance i.e., wheel flat which I imagine is more likely to occur after the trains/tracks are requiring maintenance after 5 years.

- d. Are these vibration limits what are considered acceptable or what is considered imperceptible? Even with the mitigation strategies, vibrations will be above “highly sensitive building” limits and I would therefore imagine would be perceptible, particularly to residents in basement apartments or bedrooms which adequate testing has not been performed.

e. Immersive sound demonstration/activities need to be conducted IN A BASEMENT, not on the first floor. As stated in the report the concern is about low-rise houses with basement apartments. Testing on the first floor does not address this concern as obviously basements are closer to where the trains will be running.

f. Why wouldn't the best mitigation strategies be utilized? i.e., floating slabs along the Pape corridor. Given that basement dwellings have not been tested and levels of vibration would be higher than on the first floor, all available measures need to be implemented to allow these areas to remain available for more affordable living options. Levels with only the light mass-spring system are still quite high i.e., 0.140, 0.1, 0.089 which I am guessing would also get worse over time when the system is no longer new.

g. Will the tracks/trains actually be 5-10 m from building foundation and 15 m from OL tracks in all areas as assumed/utilized for the demonstration? These tests do not provide conservative/"worst case scenarios" based on 7.2.2. I am concerned that not using all available mitigation strategies when the worst-case scenario wasn't taken into account i.e., basement dwellings, 25m depth when soil-based tunnels will have more impact from vibrations.

7. How do you know it is not a significant noise source?

For your consideration:

- Acronyms OLW, OLS, OLN are not defined until page 99
- Please move the table of contents to the top of the document after the executive summary, a table of contents shouldn't be 88 pages into a document. This meant that the summary tables and information provided prior to the table of contents didn't have any context.
- Report is not user friendly, very limited relevant information is available in the draft report, so the user must refer to the convoluted appendices for any meaningful information. It would be helpful if a guide i.e., if you live X, refer to Y for sections relevant to your immediate community.

Thank you in advance for your time and I look forward to hearing from you.

Subject: Easements

Message:

Hi, We live at [REDACTED] Hazelwood Ave possibly on top or nearly on top of the proposed Ontario line. What is the nature of the easements you are considering for our property? Underground? Above ground? Are you Taking our property?

Similar to the above, are you removing homes directly above the line? So even if we aren't removed, some of our neighbors might be?

I ask this question noting the parquette/parking lot strip running parallel to Danforth that might be related to the 2 line and wondering if the same is planned here.

Hi [REDACTED]

Thank you for reaching out to our team. That is correct; our virtual open houses this week both cover the Ontario Line from Gerrard to Exhibition Stations and will feature the same presentation followed by a Q&A period. We have offered both evenings so that interested participants may choose what date works best.

Thank you again for writing. Please do not hesitate to reach out with any other questions.

Kind regards,

Caitlin

Thank you for your kind feedback.

Can you kindly advise as well on the road closures for Queen/ Spadina as well since the school bus stops at Spadina & McPherson passes by Queen Street.

Once I receive the feedback on the above I might accordingly book a chat with one of the team members for further clarification

Awaiting your response

Thank you

On Wed, Mar 2, 2022, 11:36 AM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thank you for reaching out to us regarding construction in your area.

As a result of the Ontario Line construction for King-Bathurst Station, there will be road closures in the area. These road closures will be temporary and are scheduled to begin in late 2022 and remain in place until late 2029, approximately a seven-year period, until construction for the station is completed.

The following road closures will be in effect:

- The right lane northbound on Bathurst St, from Stewart St north to King St W, and again from King St W to approx. 40 metres north, approaching Browns Lane
- The right lane eastbound on King St W, from King St to approx. 40 metres east of the intersection
- The right lane westbound on King St W, from approximately the public parking entrance to Bathurst St

Please note the corresponding sidewalks for these stretches of road will also be closed for the same duration due to the station construction.

If you wish to discuss the matter further, or you have any additional questions or concerns about the upcoming construction, I recommend booking a meeting with the Ontario Line team. A 15-minute chat with one of our team members can be booked here: <https://www.metrolinxengage.com/en/content/ontario-line-contact-us>. We would be more than happy to address any additional concerns or questions about upcoming construction in your community and speak in greater depth about the impact to the area.

Hello,

I tried calling on the number provided but unfortunately no response.

I am reaching out as I live in King - Bathurst intersection and would like to ask how the Ontario Line project will impact us in terms of private cars, public transportation and school buses, ultimately since this is a 7 year project which will affect the area. I would highly appreciate if someone can call me on [REDACTED] anytime or we can agree on a preferred time so that we can have the time to discuss all our concerns.

Please advise

Thank you for your cooperation

Kind Regards

Hi,

I'm a resident who lives across the proposed Ontario Line's Gerrard Station. What is the current design for the Gerrard station and what are the anticipated increased sound levels? Will the project plant more trees in the southeast parkette and have sound walls to provide a buffer to adjacent residents?

you

Hi,

I have some concerns about the impact on privacy and sunlight that the two 20-storey condo towers built on top of the Exhibition Station terminus will have on [REDACTED] residents ([REDACTED]).

[REDACTED] is a relatively low rise 8-storey condo building that has a substantial amount of south-facing units that have 17-foot floor to ceiling glass windows. Most units are 2-storey lofts with the bedroom on the 2nd floor open to space below. The two new planned condo towers built within 50m of [REDACTED] would greatly reduce privacy and sunlight on our units.

I would like for these towers to be considered to be oriented to the west of [REDACTED] where the other 2 condo towers are being built on the Atlantic site so as not to obstruct and impact current residents. The shadows cast from two 20-storey condo towers will likely mean that there will be very little sunlight reaching [REDACTED] units. These units are very long and deep (around 70 feet) and already do not get enough sunlight on a regular day. This means that the 17 feet windows in each unit must be kept uncovered to maximize the amount of natural light. However, with the new condos in front of [REDACTED], that would mean very little privacy. Bedrooms would be able to be seen from the 2nd floor loft.

Liberty Village is in need of open space for parks or for retail, not for more residential units in the form of condos. This neighbourhood is already saturated with condos with no community centre, library or schools to service it. Please consider using the space on top of the Exhibition Station for these purposes but not for condos.

Please let me know how [REDACTED] residents will be impacted, particularly the south-facing units.

I would like to petition for the removal of the plans to build these two condo towers in front of [REDACTED]. The separation distance is too not far enough to our existing building to preserve privacy, sunlight and views.

Regards,
[REDACTED]

Hi [REDACTED]

Thank you for reaching out and taking the time to speak with us today. It was a pleasure to connect with you.

As discussed, we have attached a copy of a graphic that illustrates the average Ontario Line tunnel depth in this area in reference to other common underground structures found in Toronto. We have also confirmed that the Eglinton Crosstown tunnel depth varies along the line, but the average depth is about 28-32 metres underground.

If you have any further questions, please do not hesitate to reach out.

Kind regards,

Caitlin and Bradley

Hi [REDACTED],

Thanks for reaching out to Metrolinx with your concerns. We apologise for the delayed response. The property indicated will be affected by a sub-surface easement.

Details on the location of the line in relation to [REDACTED] Pape can be viewed on the Interactive Portal on our [website](#).

Simply select the section of the alignment property is located (north) then type address next to the search bar above map. The property will NOT be expropriated and the easement will only be below part of the property. Metrolinx is anticipating minimal impacts above the surface, if any at all.

We hope these answers would've alleviated some of your concerns.

Good afternoon, I am a realtor representing the owner of [REDACTED] Pape Ave in selling his house.

We need urgent information on the proposed work for this property as we have interested buyers but they need more information as soon as possible.

The owner [REDACTED] cone emailed you last week and called a couple of days ago requesting information and he has not heard back from anyone.

Can you please provide me with details at your earliest convenience as to what is going to be involved with this process? Will his property be expropriated? Will it be part of his property or all of it? Will his property be affected at all or will you just be doing some work below his property? I would like as much information as possible so I can pass it on to any interested buyers.

I thank you in advance for your assistance in this matter.

Kind Regards,

Hello,

I've left a few voice-mails about the letter we received pertaining to the above noted address but without success in speaking with someone. We are curious to know more about what "... Subway Infrastructure and/or protection area is required to be located underground in an area within your property limits ..." means from a practical perspective.

I look forward to hearing from someone at Metrolinx.

Hi [REDACTED]

Thank you for reaching out to us.

To book a meeting with one of our Ontario Line team members to address any specific queries about the project, we would recommend filling out the meeting request form located [here](#). One of our team members will be happy to speak with you and address any specific questions or concerns you may have as they relate to your property.

We are also holding a virtual open house (VOH) scheduled for March 3 at 6:30 PM EST which will be covering the west end of the Ontario Line, from Gerrard Station west to Exhibition. More information and registration steps can be found [here](#).

Thanks,

Good morning:

I was just watching the video of last night's session, and a few points struck me where either you could have given a clearer answer, or in one case where I believe you gave incorrect information.

Mitigation measures for construction:

A question was raised about how you selected the areas outlined in yellow for construction mitigation, and specifically why the area along Wardell was not included. Looking at the maps overall, it is clear that you expect the major effects to occur at heavy construction sites including stations, emergency exits, bridge replacements and the TBM launch / spoils removal site. The areas in between would have comparatively little heavy construction.

Am I correct in assuming that the in between areas are not flagged because you do not expect them to have the same exposure at the sites listed above?

If so, it would be useful to include this info in how you answer this question.

Noise levels in the joint corridor:

The claim was made that noise levels will fall because of electrification of GO service. Unless there has been a change in the service plan used for the N&V study, this statement is not correct.

My understanding of the operating plan is that there will be three GO services operating through this area:

- The Stouffville corridor: All trains will be electrified because this line is entirely owned by Metrolinx.
- The Lake Shore East corridor: Unless there has been a change, tracks will be electrified only to Oshawa because the proposed Bowmanville extension is on CP and will remain diesel.
- About half of the LSE service will terminate at Oshawa and will be electric. The Bowmanville trains will be diesel. That is the split in consists shown in the N&V study.

The net effect is that although there are more trains in total in the corridor, the number of diesel trains stays about the same as today because the Bowmanville service remains diesel.

If there is a net reduction in noise, it would be through the effect of the barriers, not a change in the number of diesel trains.

Can you confirm that the operating plan for LSE still contains about 50% diesel operation for the trains running through to Bowmanville, and that the N&V numbers are based on that mix?

Gerrard Station track layout:

A question arose about the apparent change in the tracks at Gerrard station so that they no longer “flare” on their approach to the station. That flare in earlier drawings was needed because of the central platform. If you have changed to side platforms, then the station box is not drawn correctly because there would be no room for a westbound platform.

Is this an error in drawing the map on page 7 of the deck showing the two tracks running together through the station box?

Construction timeframes:

In response to questions about timelines, Richard used as a generic answer the 2023-27-ish timeline for Queen Station. I know it may be early days in planning, but would it not be reasonable to assume that stations such as King/Bathurst and Queen/Spadina will not take as long to build, at least to the point where the surface disruption is minimized? Or are you not yet at a stage where you want to commit to shorter construction windows and then have to go back on them?

On a related note, there is a set of dates from an earlier presentation showing the timing of various works in the Joint Corridor, notably for bridge replacements. Are these dates still valid? If so it might be worthwhile to reiterate this info in your presentation, or to provide an update if they have changed.

Photo caption nit:

The photo on page 28 of the deck is captioned as being at King and Bathurst. It is actually at King and Berkeley looking southwest.

Hi Bradley Naismith,

Hi Mr. Bradley Naismith,
Communications Division

In your last email you mentioned that you would reply in a couple of days. That was over a week ago. I have listed my house for sale and interested agents have some concerns and I was wondering if you would please address them. We would like to know how much space you would require and where? Is the space above ground or below? When will this happen and how long will it take? Will the Ontario Line take away some of the property or just for a period of time.

I would be happy with knowing how much space you would require and where or how much I could potentially receive. Please consider telling me that you're working on it and that it may take X days to get back to me. Something. Anything. If I don't hear back from you, I will find another name and ask them, citing my frequent requests for information.

Thank you,

[REDACTED]

Good Morning,

I was formerly in touch with

SIVAHAMI VIJENTHIRA(*she/her*)

Community Relations & Issues Specialist – Ontario Line

416-202-5100

ontarioline@metrolinx.com

But she was going on maternity leave and I apologize as I can't find the name of the person who took her place.

I just wanted to add something to the emails (and notes from my conversations I am sure you have) to the location of the Ontario Line station at the corner of Don Mills and Eglinton.

At the moment it seems the plan is for the elevated line to carry across the intersection of these two major road ways at 45 degrees and end up at the bus depot on the north east corner.

I live at the condo at [REDACTED].
I pointed out in a previous email that there is a major development planned directly in front of our building on the South East corner of Don Mills and Eglinton the footprint of which goes right to the lot line of Don Mills.

In any event if the bus depot location is the final station on the line I will point out several ideas.

If a main point is to connect the Crosstown to the Ontario Line the best transfer point is directly at the current Science Centre station so riders have the fastest connection from one line to another.

If the bus depot is the transfer point riders transferring from the Ontario line to the Crosstown have to alight and walk through the tunnel connecting the bus depot and the Crosstown. And visa versa.
It seems counter intuitive to not have the most direct connection between the two lines.

I know it is very early in the process so I want to inject this idea into the planning of this connection.

My most desired answer is to have the Ontario line dive underground and have the Science centre connection be underground. It also begs the question about what will happen when it comes time to build out the Ontario line north to the Sheppard line in the future: ie where will track go?

Thanks

Hi [REDACTED]

Metrolinx is still awaiting the procurement package which will give more specifics on the type of work to be done and when. This will be published on the [website](#) once completed. Based on other areas of the alignment, the excavation process lasts 2years and construction of the station itself 2years. Until the package is completed, we wont be able to say what the estimated work progress will be.

Thank you for replying. But to be clear, I'm wondering if each individual area - in my case, specifically Pape and Danforth - will be under construction the entire time. Or will construction be moving elsewhere as the work progresses? Should I actually expect 5-6 years of construction by my home, or, say, a year of construction then it'll move on as the rest of the Ontario Line is worked on? I'm not inquiring about the scope of the whole project, just how long construction is expected to be occurring directly in the Pape-Danforth neighborhood.

Sorry if I wasn't clear!

Hello!

I read (to the best of my understanding - it's pretty long and technical!) the report, particularly the "noise and vibration" aspect, as I live quite close to Pape station. One thing I wasn't able to find (or missed) is the estimated duration of work in the areas, specifically mine. Not daily, but overall - how long is construction around Pape Station expected to take? As in, how long will residents in my area experience the construction-related noise and vibration?

Thank you for any info you can provide! I do support improving public transit, and recognize that living in a city includes living with infrastructure work, improvements, and so on, so I'm not looking to complain.

Just wanting to know what to expect.

Hi [REDACTED],

Thank you for reaching out. We can confirm that bird-friendly design has been considered in the Ontario Line Design Guide and includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines.

This includes facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen doors glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade.

Please do not hesitate to reach out if you have other questions. Thank you again for writing.

Kind regards,

Caitlin

Subject: Glass Buildings - Bird Strike Avoidance

Message: Dear Metrolinx team, what are your plans to make your glass structures safe for birds who may be attracted to them while they migrate and may not see them leading to harmful impacts?

Subject: RE: [REDACTED] Aldwych Ave - Protection Zone - Ontario Line Subway
Date: Tuesday, March 15, 2022 12:16:00 PM

Hi [REDACTED],

Thanks for reaching out to Metrolinx with your concerns. We apologise for the delayed response.

Our records indicate that [REDACTED] Aldwych Ave is in the vicinity of the projected Sammon crossover (where the train switches lines) and therefore the possibility stands that your property may be impacted. This will be subsurface and we are anticipating minimal impacts to the surface of properties in your area, if any at all.

As the commencement of the project draws closer, more information will be provided to you.

You can also get a visual depiction of what the line will look like in your area and proximity here:
<https://caportal.ca/metrolinx/ontario-line>.

Please feel free to reach out to us should you have any further concerns.

Regards,
Norando Brown

Good morning,

We received a notice regarding a possible protection that may affect our property at [REDACTED] Aldwych Avenue. Are you able to provide us with more information regarding this?

Best regards,
[REDACTED]

Hi [REDACTED]

Thanks for reaching out to Metrolinx. We apologise for the delayed response.

Based on our records, there will be an easement constructed beneath [REDACTED] Pape Ave. A visual depiction can be viewed [here](#) by simply inserting the address in the search bar above the map.

Considering the tunnels along Pape are expected to be between 20-30m deep, we are anticipating minimal impact to the surface of the property, if any at all. Nonetheless, we've conducted our studies which outline possible noise and vibration impacts as well mitigation measures. A draft report can be viewed on the Metrolinx [website](#).

There is also an [Immersive Sound Demonstration](#) which provides an idea of what it will sound like in a typical basement along Pape once trains are in operation.

We hope these resources will aid in any way possible.

Regards,

Norando Brown

We have been contacted by the Estate Trustee of the property at [REDACTED] Pape Ave. Toronto to list this property for sale.

To provide full disclosure to any prospective buyer, it is imperative that we provide any information that would effect a buyer's decision to purchase the property. To this end, could you please send us any information that is currently available regarding how the construction of the Ontario Line could affect this property.

Thank you in advance for your assistance.

Hi [REDACTED],

Thank you for reaching out. We can confirm that bird-friendly design has been considered in the Ontario Line Design Guide and includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines.

This includes facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen doors glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade.

Please do not hesitate to reach out if you have other questions. Thank you again for writing.

Kind regards,

Caitlin

Hi [REDACTED]

Thank you for submitting your feedback on the Ontario Line Draft Environmental Impact Assessment Report. We are following up to respond to your submission.

Bird-friendly design has been considered in the Ontario Line Design Guide which is an architectural guide that shows types of acceptable design solutions to proponents. The guide includes glass facades that are designed to meet the City of Toronto Bird Friendly Development Guidelines. Facade glass with a graphic interlayer as a gradient frit that will tie into the Bird Frit pattern as per the Toronto Bird Frit Standards, and platform screen door glazing that complies with the bird friendly performance measures set out in the Toronto Green Standard when located at-grade or above grade will also be implemented.

Thank you again for your engagement in the environmental assessment process. Please do not hesitate to reach out with any further questions about the Ontario Line.

Kind regards,

Caitlin

Good morning,

We are following up on your letter dated January 28, 2022 regarding our property at [REDACTED] Berkeley St, jointly owned by [REDACTED]

We would like to set up an initial call or video chat to better understand the property interest Metrolinx is seeking to acquire.

Our availability is as follows:

- Afternoon of March 18th
- Morning of March 22nd
- March 25th

In advance of the conversation, would you kindly circulate as much information as possible in order for our team to better understand the process and scope.

Kind regards,

[REDACTED]

Hello,

We received an email requesting a meeting on the topic of subway infrastructure and/or protection area within the property limits of [REDACTED] Pape. We have read the letter and attached documents as well as attended the Environmental Impact Assessment Report Virtual Open House.

Please let us know when it would be possible to meet. A video chat on a weekday after 4pm or on the weekend is preferred.

Hi [REDACTED]

Absolutely! Thanks very much for confirming and no need to apologize. We are working on improving our booking system and completely understand.

You and your partner can join us on video via Microsoft Teams on Friday:

Please do not hesitate to reach out in the meantime with any questions. We look forward to connecting with you on Friday!

Kind regards,

Caitlin

Thanks for writing. I was trying to change my Wednesday booking for Friday, so my partner

could also take part. And in regard to this, it is possible to video us in from two separate locations at 3:00 on Friday?

We have a house at [REDACTED] Pape Avenue, and our little street is just before the tracks which the Ontario Line will be joining to proceed above ground.

Thanks,

[REDACTED]

Good afternoon [REDACTED]

Thank you for booking a meeting with the Ontario Line Community Relations team. We are writing to follow up on two items:

1. [REDACTED] it appears you have booked a meeting with us tomorrow at 1:15 p.m. and Friday at 3:00 p.m. Which booking do you wish to keep?
2. Can you please provide us with the street name you would like to discuss? This detail will help us determine which team member is best positioned to speak to your questions.

We look forward to hearing from you. Thank you again for reaching out.

Kind regards,

Caitlin

To Whom It May Concern:

Re: Ontario Line Environmental Impact Assessment Consultation
Exhibition Station – impact on 

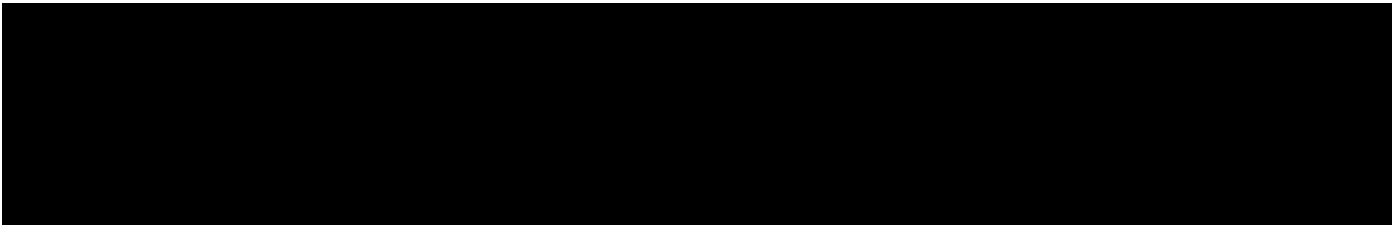

he “**Subject Properties**”), will be required for the development of Exhibition Station of the Ontario Line and/or the construction of Liberty New Street. Having reviewed Metrolinx’s Environmental Impact Assessment Report (“**EIAR**”), the Owners wish to provide the following comments and seek further information.

The Owners ask that they be treated as a stakeholder in this process and be involved in any consultations with stakeholders undertaken by Metrolinx regarding the construction of Works in Liberty Village.

Comments Regarding EIAR

The EIAR states that unofficial pedestrian connections such as the parking lots in Liberty Village north of the railway corridor will be removed.¹ While Metrolinx has stated that Liberty New Street will create new sidewalks for pedestrian traffic, this new pedestrian path will be open to the public months or years after the unofficial pedestrian connections through parking lots will have closed.

The Owners inquire how Metrolinx intends to provide accommodations for pedestrians during this interim period? The Owners further disagree with OLW’s conclusion that there are no notable gaps in the pedestrian network in this area.² The Owners are concerned and would like assurances that safe and efficient pedestrian flow throughout Liberty Village will be preserved

during the Works and thereafter. The Owners are aware that some of their tenants' employees use the South Liberty Trail to access their place of employment.

Requests for Further Information

The Project Footprint for Exhibition Station, found at page 5 of the PDF of the EIAR, reflects a taking of the south property line of [REDACTED]. The Owners seek further information on the design for Exhibition Station and the rationale for why the south property line of [REDACTED] is required for the Work. This request by the Owners has been brought to the attention of Metrolinx previously.

The Owners also seek clarification on how Metrolinx intends to retain the western portion of [REDACTED] but demolish the remainder of the building. Will this simply be a building façade or will it remain a functional space that will be retained by the Owners? Similarly, the Owners seek clarification on whether Metrolinx intends to make permanent or temporary expropriations of [REDACTED].

With regards to the impact of the Work on Heritage Resources, the Heritage Detailed Design Report, Appendix A2, identifies potential adverse impacts on commemorative signs, silos, and plaques in Liberty Village, including on the Subject Properties, caused by the Ontario Line.³ However, Table 5.4 of the EIAR projects that the "operations" will have no impact on Built Heritage Resources and Cultural Heritage Landscapes on the Subject Properties and in the surrounding area.⁴ Please clarify how these heritage features will be treated and how negative impacts will be avoided during the construction and operation of the Ontario Line. The EIAR appears to imply that these resources will be entirely removed during construction and will not be reinstated post-construction, such that the operation of the Ontario Line will not impact these resources because they will no longer be present.

Air Quality Report Appendix A5 notes that construction of Exhibition Station and the Liberty New Street alignment may involve grading, sloping, sub-base preparation, and asphalt paving.⁵ The Owners request further information on these plans and whether any grading or sloping will affect neighbouring properties.

The Owners also seek clarification on how Metrolinx will mitigate the loss of approximately 590 public parking spaces in Liberty Village and provide sufficient public parking in the neighbourhood.⁶

We thank you in advance for your attention to the concerns and inquiries set out above. If we are able to clarify any inquiries or contribute to this process, please let us know.

Review Comments Spreadsheet			
Project Name: Environmental Impact Assessment Report (EIAR) - Ontario Line		Revised By: [REDACTED]	
Item No.	Reviewer Name	Review Comment	Response (Authors OLTA/Metrolinx)
1	[REDACTED]	<p>We represent [REDACTED] will be required for the development of Exhibition Station of the Ontario Line and/or the construction of Liberty New Street. Having reviewed Metrolinx's Environmental Impact Assessment Report ("EIAR"), the Owners wish to provide the following comments and seek further information.</p> <p>The Owners ask that they be treated as a stakeholder in this process and be involved in any consultations with stakeholders undertaken by Metrolinx regarding the construction of Works in Liberty Village.</p>	<p>Thank-you for reviewing the EIAR and providing your comments on the report. We will continue to engage with the community. As the project progresses, Metrolinx will establish Construction Liaison Committees to share project update and solicit community/stakeholder feedback.</p>
3	[REDACTED]	<p>The EIAR states that unofficial pedestrian connections such as the parking lots in Liberty Village north of the railway corridor will be removed. While Metrolinx has stated that Liberty New Street will create new sidewalks for pedestrian traffic, this new pedestrian path will be open to the public months or years after the unofficial pedestrian connections through parking lots will have closed. The Owners inquire how Metrolinx intends to provide accommodations for pedestrians during this interim period?</p>	<p>As these are not official pedestrian connections, accommodations will not be provided by the contractor during construction and pedestrians will be expected to use other connections to the north such as the sidewalks along Liberty Street.</p>
4	[REDACTED]	<p>The Owners further disagree with OLW's conclusion that there are no notable gaps in the pedestrian network in this area. The Owners are concerned and would like assurances that safe and efficient pedestrian flow throughout Liberty Village will be preserved during the Works and thereafter. The Owners are aware that some of their tenants' employees use the South Liberty Trail to access their place of employment.</p>	<p>The Ontario Line construction works at Exhibition Station will be limited to the southern edge of Liberty Village just north of the railway corridor and will not affect the pedestrian network within Liberty Village beyond detouring pedestrians that currently use the South Liberty Trail. The current facilities within Liberty Village will be maintained. Pedestrians currently using the South Liberty Trail will be expected to use other connections to the north such as the sidewalks along Liberty Street.</p> <p>Once the Exhibition Station construction works are completed, Liberty New Street will be opened to the public, providing new pedestrian and cycling connections between Dufferin Street and Strachan Avenue. The South Liberty Trail will be reinstated via a new multi-use path on the south side of Liberty New Street.</p>
5	[REDACTED]	<p>The Project Footprint for Exhibition Station, found at page 5 of the PDF of the EIAR, reflects a taking of the south property line of [REDACTED] Fraser Avenue. The Owners seek further information on the design for Exhibition Station and the rationale for why the south property line of [REDACTED] Fraser Avenue is required for the Work. This request by the Owners has been brought to the attention of Metrolinx previously.</p>	<p>The property is required for construction staging and access during construction of the Ontario Line. There is a laneway between [REDACTED] Fraser and [REDACTED] Fraser, the construction hoarding is planned to be installed in the laneway divide.</p>
6	[REDACTED]	<p>The Owners also seek clarification on how Metrolinx intends to retain the western portion of [REDACTED] Fraser Avenue but demolish the remainder of the building. Will this simply be a building façade or will it remain a functional space that will be retained by the Owners? Similarly, the Owners seek clarification on whether Metrolinx intends to make permanent or temporary expropriations of [REDACTED] Atlantic Avenue and [REDACTED] Fraser Avenue.</p>	<p>As stated in the entry for OLW-008 in Table 5-3 of the Heritage Detailed Design Report, the extent of avoidance at [REDACTED] Fraser Avenue will span the front facade facing Fraser Avenue including the first two bays or a depth of approximately 8-9 m. Additional information regarding mitigation measures planned for this property can also be found in Table 5-3 of the EIAR.</p> <p>Both properties at [REDACTED] Fraser Ave and [REDACTED] Atlantic Ave are required in partial and full fee simple interest, respectively, for the purpose of constructing the Exhibition Station. Metrolinx is currently in active negotiations with the owner(s) of these properties, and expropriation for said properties have commenced in parallel with negotiations. Metrolinx continues to work towards amicable agreements with the owner(s) that would be mutually beneficial for both parties.</p>
7	[REDACTED]	<p>With regards to the impact of the Work on Heritage Resources, the Heritage Detailed Design Report, Appendix A2, identifies potential adverse impacts on commemorative signs, silos, and plaques in Liberty Village, including on the Subject Properties, caused by the Ontario Line.³ However, Table 5.4 of the EIAR projects that the "operations" will have no impact on Built Heritage Resources and Cultural Heritage Landscapes on the Subject Properties and in the surrounding area.⁴ Please clarify how these heritage features will be treated and how negative impacts will be avoided during the construction and operation of the Ontario Line. The EIAR appears to imply that these resources will be entirely removed during construction and will not be reinstated post-construction, such that the operation of the Ontario Line will not impact these resources because they will no longer be present.</p>	<p>The detailed strategy for mitigating impacts to these resources is still under discussion. Current options being discussed include relocating these resources during construction for their protection and reinstating them, either in their original locations or nearby if returning them to their original locations is no longer feasible. Other topics that are being considered as part of this ongoing discussion are the extent of impacts, potential for avoidance, the structural integrity of the resources, appropriate settings for reinstatement, and alternative options. Impacts to heritage resources as a result of operations activities are not anticipated for any of the heritage resources identified across the Project, including those retained in-situ, due to the nature of the operations activities. There are no anticipated Project interactions during operation with built heritage resources or cultural heritage landscapes.</p>

8		<p>Air Quality Report Appendix A5 notes that construction of Exhibition Station and the Liberty New Street alignment may involve grading, sloping, sub-base preparation, and asphalt paving.⁵ The Owners request further information on these plans and whether any grading or sloping will affect neighbouring properties.</p>	<p>At the time of the assessment, plans and detailed information regarding grading and sloping are not yet available. Details regarding grading and sloping at the Exhibition Station and Liberty New Street area will be communicated to [REDACTED] Group when available.</p> <p>Emissions from construction activities will be controlled through the implementation of mitigation methods proven to control emissions. These mitigation methods are details in Table 6-2 of Appendix A5 Air Quality Report of the EIAR</p>
9		<p>The Owners also seek clarification on how Metrolinx will mitigate the loss of approximately 590 public parking spaces in Liberty Village and provide sufficient public parking in the neighbourhood.</p>	<p>Replacement of parking spaces in the privately owned parking lots in the area is not proposed. The Ontario Line will enhance public transit options for people accessing Liberty Village and will strengthen connections between people and jobs within Toronto.</p>

Good afternoon,

I am writing regarding the 83 conflicts you've identified in your Draft Impact Assessment (section 4.11.2, 4.11.3 and 4.11.4). I'm curious to know if each of these conflicts have been mapped out and assessed in terms of what kind of conflict we may be facing (eg. Pole, Underground Cable, Over-head Cable, Manhole, Duct Structure etc).

I am also curious if Metrolinx has been in contact with Bell Canada regarding these conflicts as of yet.

Thanks in advance,

[REDACTED]

Hello

As we wait for answers from Ontario, a more immediate question comes to mind.

See attached video: Is this Metrolinx digging and drilling a couple feet away from three year old this morning? It's extremely loud for a school that is in session, not to mention physically too close to the children to be safe. It must be north of 85db.

[REDACTED]

Thanks,

Subject: RE: West End Relief also needs a rethink/pause....

Hi [REDACTED]

Thank you for sharing this additional feedback on the Ontario Line. Please accept our apology for the delay in responding.

As with your email dated March 8, we appreciate your input on the project and can confirm that it has been shared with our teams and will be included in the records of the final Environmental Impact Assessment Report, as feedback received during the consultation period.

Kind regards,

Caitlin

Greetings, some thanks

So the 1957 plan had Relief W out to Islington, with Queen St as an axis. Via Ed Levy's book....

While GO has been really wonderful through the decades, and was a much better investment than the Front St. Extension, absolutely there is some need for a degree of Relief/option, and yet, this proposal is not it, nor will it be.

What's needed is something much further out at the base of High Park, or in Etobicoke as the pinch point at the base of High Park to the core is the main travel corridor, and why not map the numbers of people that come (or have come in) to the City from that point to the core?

Aah, facts are dangerous.

It might induce logic.

So what tends to be needed is not a milk run, ie. most TTC streetcars, and not necessarily a subway, but robust transit, as it too can be a bit of a milk run, and it's not devolving the regional carrier, GO, to a milk run, already somewhat done. Bringing a sub-regional but robust surface option might be the best, oh look, plans!!

This being from 1985 I think, buried in the 1992 WWLRT EA, which actually timed out a faster direct route by streetcar/TTC from Etobicoke to core via a Front St. transitway, somewhat marked officially in dashed lines, but not - for some reason - thinking of the Etobicoke-origin demand. A faster trip was indeed very possible on this route, largely built shut, because we may as well be run by the oil, gas, car, and construction interests.

So we've built our options shut, mostly, because it's short-term private profit over public interest/good, and even the City has opted to sell out the future for taxes on evermore buildings because it's easy vs. raising taxes on the rich/votorists.

There may still be an option to have the rough route mapped in yellow done; but the domination of the core by the suburbs means it's really uphill to have core needs/projects emerge. We might think of having a one-way loop depending on time of day/commute using Front St. and return the LRTs on either/or King/Queen.

But yes, rail corridor space is rare space, and TTC/Parkdale etc. will tend to lose out, again, because. As for money, we have to squander billions in Etobicoke, RH, SSE and the OL and money's tight, so don't think of needed options/investments.

Which includes double decking, or burying a TTC service, and maybe using the remnant strip of Lands and Garden Trust between Bathurst and Spadina for transit, plus other options, because we like ignoring transit options for billions of dubious spends.

And just today, as heavy rail is at times useful/popular, even though the lowering of the rail corridor at Strachan was a costly foul-up, it's made worse in that we could have thought of crossing over the corridor easily with transit, sorry being obsessed with simple paint on Bloor/Danforth atop subway, being best from merely 1992, and 15 years of somewhat focussed effort for cheap subway relief

The new idea today is that the outermost/northern rail line - now being a bit lower - maybe could be run underground, perhaps with a cleaner tech along Wellington to help with at least some Union Relief.

Mr. Levy mentioned once in his book that once there was some official interest in that. Too bad we didn't keep Front St. just north of Union Station on the 'clear' side when it was dug out, revealing an incredible spaghetti of utilities etc., so shallow may be near-impossible given all the shituff therein.

Meanwhile, how down is the GO train ridership?

The proposals for costly stations on the NW Weston line for Liberty Village are less-OK, given how we've ignored doing cheaper options through the years/decades. And similarly, the proposed transfer at the Ex Station is pretty costly for the relative benefit. Maybe buy a really large fleet of e-bikes and make them totally free would save a few billion? Though that might mean providing safe passages and maintenance, including in winter....

It'd be a smart investment to have Euro experts brought in for real planning/advice, with an open process and inputs from local, and maybe there are goodpeople working within what's left of the City/TTC, and within GO, but....

Hopefully the extra cost of higher energy will mean another billion on the OL at least, and maybe a new regime will have thoughts of doing surface transit on the cheaper side, with political will, including yes, the Gardiner.

Did I mention double decking the rail corridor for direct transit, speaking of elevated transit. And to be clear, could we think of having rapid transit ON THE GARDINER as well?

So for the more robust, second priority relief project that needs more planning vs. triage from Eglinton south, I'm favouring something akin to the top image, but maybe more at King, or Adelaide (VERY close to King), and going further east across the Don, (likely best to rise above both water traps of Don/High Park/Humber) but going to the NE east of the Don, via c. Donlands to Garron Hospital to intersect with Gatineau corridor.

E-nough, and haven't been able to send yesterday's first-half email around enough yet either.

Carmudgeonly, easier in the core....
