Corktown Station Early Works Report**

- **Public Mailout**

Notice of Publication of Draft Corktown Station Early Works Report

Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

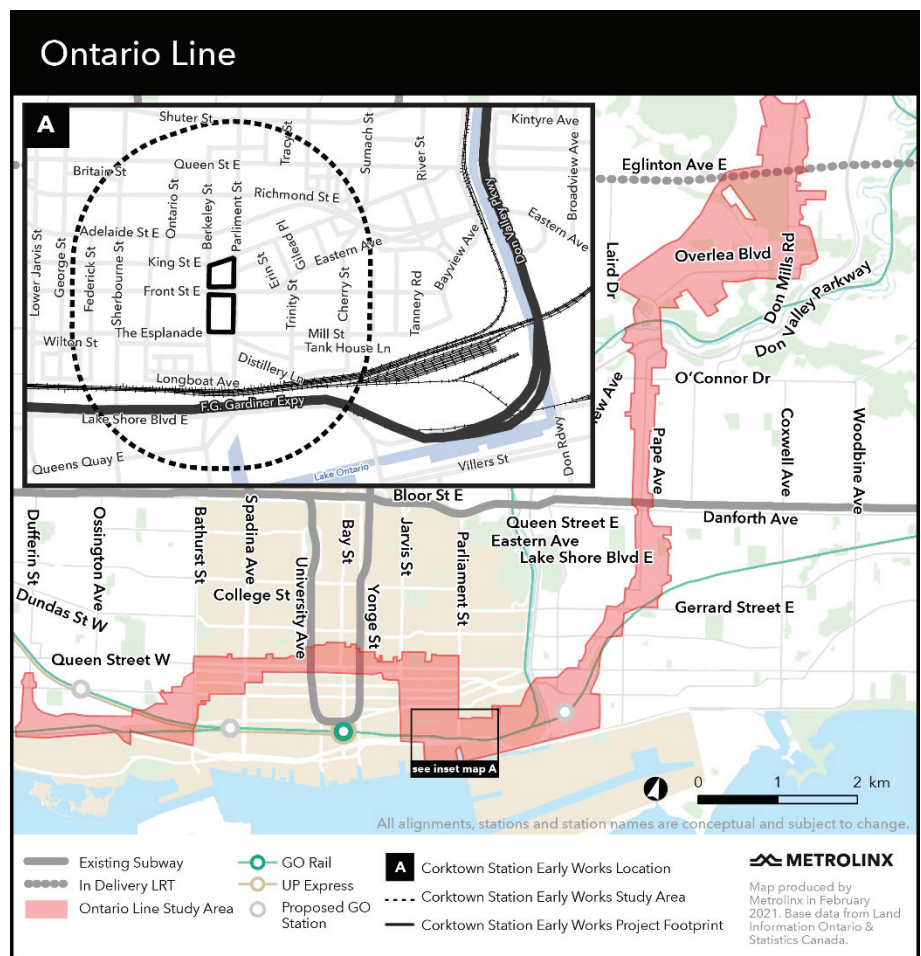

Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage (www.metrolinx.com/ontarioline).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

Josh Vandezande (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Metrolinx 130 Adelaide Street West, Toronto, Ontario M5H 3P5

All personal information included in a submission – such as name, address, telephone number and property location – is collected, maintained and disclosed by Metrolinx for the purpose of transparency and consultation. The information is collected under the authority of O. Reg. 341/20 under the Environmental Assessment Act or is collected and maintained for the purpose of creating a record that is available to the general public as described in s. 37 of the Freedom of Information and Protection of Privacy Act. Personal information you submit will become part of a public record that is available to the general public unless you request that your personal information remain confidential. For more information, please contact ontarioline@metrolinx.com or 416-874-5900.

This Notice was first published on **May 12, 2021**.

Avis de publication de l'ébauche de rapport sur les travaux préliminaires de la station Corktown Projet de ligne Ontario

Le projet

La ligne Ontario donnera 15,6 kilomètres de nouvelles voies de métro à Toronto pour accélérer et faciliter les déplacements quotidiens des gens. La ligne s'étendra du Centre des sciences de l'Ontario (au nord-est) jusqu'à la Place de l'Ontario/gare Exhibition (au sud-ouest). La ligne Ontario devrait comprendre 15 nouvelles stations, y compris 6 stations de correspondance et de nouvelles correspondances avec les trois lignes ferroviaires GO, deux lignes de métro existantes, le nouveau TLR Eglinton Crosstown et des lignes de tramway à 10 de ses stations. Le projet comprendra des tunnels, des passages en surface ainsi que des passages surélevés et sera complètement séparé de la circulation automobile afin d'offrir des déplacements rapides et fiables.

Travaux préliminaires de la station Corktown

Les travaux préliminaires de la station Corktown comprennent la démolition de bâtiments existants, l'enlèvement d'autres structures et de l'asphalte si nécessaire, la mise hors service des services publics et l'enlèvement ou l'assainissement des sols si nécessaire. Ces travaux préliminaires ont pour but de préparer le site pour les futures étapes de la construction, pour les activités de construction souterraine et de tunnels, ainsi que pour les travaux associés à la future station Corktown. Le site des premiers édifices parlementaires, situé dans l'emprise du projet des travaux préliminaires de la station Corktown, est un site archéologique connu qui nécessite des études archéologiques supplémentaires avant d'entreprendre toute activité impliquant une perturbation des sols. On peut y trouver des artefacts des Premières Nations, des vestiges des premier et deuxième édifices du Parlement du Haut-Canada, de la Home District Gaol (prison), ainsi que des premières industries de Toronto. Metrolinx désire ardemment mettre en valeur le potentiel du site et travailler avec la ville de Toronto, les Premières Nations et la collectivité pour découvrir les possibilités de commémoration. Les premières évaluations archéologiques et environnementales sont en cours. Les répercussions environnementales des travaux préliminaires de la station Corktown sont en cours d'évaluation conformément au *Règlement de l'Ontario 341/20*, *Projet de ligne Ontario* (Règl. de l'Ont. 341/20) (disponible uniquement en anglais) en vertu de la *Loi sur les évaluations environnementales*. Conformément à l'article 8 du Règl. de l'Ont. 341/20, Metrolinx a préparé une ébauche de rapport sur les travaux préliminaires de la station Corktown qui peut maintenant être consultée par le public. L'ébauche de rapport sur les travaux préliminaires contient l'évaluation des travaux préliminaires de la station Corktown. Le rapport définit l'objectif des travaux préliminaires et décrit les conditions de l'environnement local, les répercussions potentielles ainsi que les mesures d'atténuation proposées et contient un journal des consultations.

Processus d'examen et de consultation dans le cadre de l'ébauche de rapport sur les travaux préliminaires

À compter du **12 mai 2021**, l'ébauche de rapport sur les travaux préliminaires de la station Corktown se trouvera sur la page Web du projet (www.metrolinx.com/ligneontario). Participez à nos journées portes ouvertes virtuelles temporaires, du **12 mai** au **11 juin 2021**, pour en apprendre davantage sur l'ébauche du rapport sur les travaux préliminaires de la station Corktown et nous donner votre avis à son sujet au moyen du formulaire se trouvant sur la page Web. Les personnes qui souhaitent envoyer des commentaires sur l'ébauche du rapport sur les travaux préliminaires de la station Corktown doivent le faire d'ici le **11 juin 2021** et les transmettre au moyen du formulaire se trouvant sur la page Web ou par courriel à l'adresse ontarioline@metrolinx.com. L'article 10 du *Règlement 341/20 de l'Ontario* exige que Metrolinx établisse un processus de résolution des problèmes afin de tenter de résoudre toute préoccupation soulevée par le public ou les Premières Nations au cours de la période d'examen. À la fin de cette période, Metrolinx mettra à jour l'ébauche du rapport sur les travaux préliminaires de la station Corktown en y ajoutant une description du processus de résolution des problèmes, les mesures prises par Metrolinx pour répondre aux préoccupations et l'incidence du traitement des préoccupations sur le calendrier de mise en œuvre des travaux préliminaires, le cas échéant. Metrolinx publiera le rapport définitif sur les travaux préliminaires de la station Corktown sur la page Web du projet (www.metrolinx.com/ligneontario) et émettra un avis de publication à cet effet. Pour obtenir un exemplaire de l'ébauche de rapport sur les travaux préliminaires de la station Corktown, veuillez écrire à l'adresse courriel indiquée ci-dessus.

Vous pouvez communiquer avec Josh Vandezande (tél. : 416 202-5100, courriel : ontarioline@metrolinx.com), représentant de Metrolinx.

Une première confrontation en séries depuis 1979

(R.C.) Les séries éliminatoires de la Coupe Stanley sont en branle dans la Ligne nationale de hockey (LNH) et pour la première fois depuis 1979, les Maple Leafs de Toronto affronteront les Canadiens de Montréal en première ronde. Dans l'histoire des deux franchises, les deux clubs se sont retrouvés 15 fois en séries entre 1918 et 1979 et Montréal est sorti vainqueur dans 8 de celles-ci.

La première partie de cette série quatre de sept est présentée le 20 mai dans la Ville reine, les Maple Leafs étant favoris par la majorité des experts et journalistes parce qu'ils ont terminé premiers dans la section Nord et du fait qu'ils possèdent une puissante offensive avec des joueurs vedettes tels que John Tavares, Mitch Marner, William Nylander et Auston Matthews. Ce dernier a mené son équipe avec 14 points (7 buts, 7 passes) en 10 matchs contre Montréal cette saison.

Le gardien des Maple Leafs Jack Campbell a obtenu six dépôts contre Montréal, conservant une fiche de 4-1-1 avec une moyenne de buts alloués de 2,16 et un pourcentage d'arrêts de 0,918. Il a été préféré à Frederik Andersen pour débiter cette série devant le filet.

Du côté du bleu-blanc-rouge, tous les blessés qui ont manqué plusieurs parties en fin de saison seront de retour dans l'alignement. Carey Price reprendra son filet après avoir passé plusieurs semaines sur la touche à cause d'une commotion cérébrale.

Depuis l'arrivée de Toronto dans la LNH en 1917, la rivalité entre les deux équipes canadiennes ne s'est jamais essouffée prenant vraiment son envol au milieu des années 1950. De 1956 à 1960, les Canadiens ont dominé la LNH et établi un record avec cinq coupes Stanley consécutives. Entre 1956 et 1969, les deux franchises se sont partagées 12 des 13 coupes Stanley. Toronto n'a pas participé à une finale depuis 1967, la plus longue disette du genre dans le circuit. Est-ce finalement l'année des Maple Leafs? Ou est-ce que les fantômes du vieux Forum reviendront hanter Toronto?

Le Collège Boréal maintient sa place au tableau d'honneur

Le président du Collège Boréal, Daniel Giroux.

Le Collège Boréal est le seul des 24 collèges communautaires (postsecondaires) ontariens à atteindre la première place du podium pour trois des quatre indicateurs de rendement dans l'évaluation 2021 du gouvernement provincial.

Le Collège Boréal, dont le campus principal est à Sudbury et qui a d'autres campus et centres d'accès à Toronto et ailleurs en province, est en première place pour la satisfaction des diplômés, le taux d'obtention de diplôme et satisfaction des employeurs (ex aequo avec six autres collèges).

Le quatrième indicateur est le taux d'obtention d'emploi (première place: Cambrian College).

Depuis près de 20 ans

Le ministère des Collèges et Universités mène cet exercice annuel depuis 1998. Le Collège Boréal s'y distingue depuis près de 20 ans :

- pour la 19^e fois, le taux d'obtention de diplôme le plus élevé en province;

En 2019 : des agents de liaison du Collège Boréal à Toronto avec des étudiants.

- pour la 15^e fois en 20 ans, le 1^{er} rang pour le taux de satisfaction des diplômés;
- les taux pour trois des quatre indicateurs de 2019-2020 sont en augmentation comparativement aux taux de 2018-2019: le taux de satisfaction des diplômés (+4,0%), le taux d'obtention d'emploi (+1,4%, 8^e rang comparativement à 17^e l'an dernier), et

le taux de satisfaction des employeurs (+6,2%);

● en 2019-2020, les résultats du Collège Boréal dépassent la moyenne provinciale pour chacun des quatre indicateurs évalués.

Amélioration continue au Collège Boréal

« Ces résultats démontrent que le Collège Boréal continue de s'améliorer même si nos résultats sont excellents depuis un moment », affirme le président Daniel Giroux. « Cela nourrit le climat d'amélioration continue qui, manifestement, porte fruit. »

Les diplômés et les employeurs se disent prêts à recommander le collège à des proches ou à d'autres employeurs, à des taux respectifs de 94 % et 86 %.

« Cette preuve de confiance est une grande fierté pour nous et c'est aussi une responsabilité de maintenir et développer cette réputation grâce aux efforts de notre personnel exceptionnel », ajoute M. Giroux.

Éducateurs en petite enfance: pivots de la fierté francophone des tout-petits

Inès Lombardo · Francopresse

Les professionnels de l'éducation en petite enfance jouent un rôle primordial dans la construction identitaire et linguistique des tout-petits.

C'est l'une des conclusions qui ressort du premier Symposium national sur la petite enfance présenté les 12 et 13 mai par l'Association des collèges et universités de la francophonie canadienne.

Pénurie d'éducateurs en petite enfance

Cependant, la pénurie d'éducateurs qualifiés ou l'absence de formation pose problème dans plusieurs régions du pays.

La pénurie d'éducatrices et d'éducateurs francophones ainsi que l'absence de formation en petite enfance dans plusieurs régions du Canada ont, entre autres, poussé l'ACUFC et ses partenaires à tenir ce symposium national virtuel. Une manière de mettre en lumière les enjeux liés à la petite enfance dans les communautés francophones en situation minoritaire.

L'un des constats principaux dressés dans plusieurs ateliers a sonné comme un rappel. Le niveau de confiance en français de l'éducateur ou de l'éducatrice a un impact sur l'enfant.

Apprendre aux éducateurs la diversité multiculturelle francophone

Estelle Ethier, doyenne à l'enseignement au Collège La Cité à Ottawa, donne le ton. Pour elle, il est nécessaire de sensibiliser les éducatrices et éducateurs à ce qu'est la vie en contexte minoritaire. « Il ne faut pas tenir pour acquis que les gens savent de quoi il s'agit », a-t-elle assuré.

Dans cet esprit, Marie-Pier Bouchard, coordonnatrice de projets à la Fédération des parents francophones de Terre-Neuve et du Labrador (FPFTNL) observe qu'il faut faire davantage de place aux éducateurs, car « ce sont les premiers repères, ils servent de transition au système scolaire. Ils servent aussi de liens pour les parents, notamment au sein des communautés rurales éloignées. »

Pour pallier le manque de formation postsecondaire en français en petite enfance dans cette province, la FPFTNL travaille à l'élaboration d'une formation de 45 heures. Une première tant pour la province que pour la FPFTNL.

Familles mixtes et petite enfance

En Nouvelle-Écosse, Lise Parent, professeure collégiale en éducation à l'Université Sainte-Anne explique que le programme Éducation à la petite-enfance [existant depuis 2012] prévoit un cours de francophonie canadienne et diversité culturelle pour, justement, sensibiliser les étudiants à la diversité au sein de la francophonie.

« Parmi les thèmes traités dans ce cours, il y a la définition de la construction identitaire et les principes directeurs qui sont de la documentation développée par l'Association canadienne d'éducation de langue française (ACELF). »

On présente aussi le livret *Voir grand petit à petit*, qui permet aux étudiants de réaliser qu'ils auront à travailler avec des familles exogames. On voit le rôle de l'éducateur comme un passeur culturel », explique la professeure.

Transmettre la fierté de faire partie d'une minorité

Selon Estelle Ethier, enseigner la francophonie multiculturelle, c'est aussi préparer les éducateurs à transmettre une fierté d'être francophone et de faire partie de la minorité.

« Plusieurs de nos étudiants [internationaux] sont déjà en adaptation, à savoir "comment est-ce je m'identifie comme nouveau Canadien ou nouvelle Canadienne?". On leur demande de renchérir ou faire vivre cette fierté francophone en situation minoritaire. »

Originarie du Québec, la doyenne à l'enseignement au Collège La Cité se rappelle: « Ça m'a pris une bonne dizaine d'années avant de vivre et d'être fière en tant que Franco-Ontarienne. D'entendre mes filles me dire: "J'ai la chance d'aller à l'école en français et de parler les deux langues", je trouve ça beau. »

« Ça part de la petite-enfance pour gagner cette confiance-là, afin de poursuivre des études en français au primaire, au secondaire et au postsecondaire avec confiance, pour venir jouer un rôle dans la communauté francophone. »

Solidifier la sécurité linguistique
Cette fierté et la confiance de parler français transparaissent aussi en filigrane dans cet atelier du symposium qui abordait le thème *Accroître la sécurité linguistique des éducatrices et des éducateurs et celle des tout-petits*.

Karine Pineault, gestionnaire de projet en francisation préscolaire au District scolaire francophone Sud (DSFS) au Nouveau-Brunswick rappelle que l'insécurité linguistique se vit quand les éducatrices et éducateurs pensent que « [leur] langue ne correspond pas à la norme, qu'elle est moins prestigieuse. Même chose par rapport à l'accent. De fait, une personne peut choisir de parler la langue majoritaire plutôt que le français. »

Elle poursuit: « Malheureusement, cette insécurité linguistique nuit à l'épanouissement autant langagier que culturel et identitaire, tant chez nos éducateurs et éducatrices que chez nos petits. »

Lorsque les éducatrices de la petite enfance se comparent avec les enseignants

Line Thibodeau, directrice du développement culturel et communautaire au Carrefour Communautaire Beausoleil-Miramichi, au Nouveau-Brunswick, observe que l'insécurité

linguistique intervient aussi lorsque les éducatrices se comparent avec les enseignants de l'école francophone, notant leur différence de formation.

« On a l'impression que si on a un français plus soutenu, c'est plus acceptable. Mais ce ne l'est pas vraiment », assure la directrice qui fait valoir que plus l'éducatrice va se sentir en sécurité au niveau de son français, plus elle va avoir un effet positif sur les enfants dont elle a la charge.

« Elles sont des modèles pour les enfants qui veulent souvent faire comme elles », rapporte Line Thibodeau.

Vivre des expériences culturelles en français

Pour sécuriser la langue, cette dernière favorise l'approche selon laquelle la langue et la culture ne vont pas l'une sans l'autre.

« Vivre des expériences culturelles en français aide à développer la sécurité linguistique. Parler français ne devient pas une obligation, mais un sentiment de fierté, souligne-t-elle. Ça ne va pas avec la tête, ça va directement au cœur. »

Le service de garde profite, entre autres, du passage d'artistes à Miramichi, pour offrir des formations aux éducatrices.

Chansons et comptines pour la petite enfance

Cette vision est également soutenue par Lise Parent en Nouvelle-Écosse qui participait à un autre atelier du symposium.

Dans le cours « Musique et mouvement » que suivent les futurs éducateurs, on pose la question "Quelle est la chanson préférée de l'enfant?" aux étudiants. Dans leurs réponses, on peut voir que certains ont été formés par des enseignants passionnés et que ça s'est maintenu dans le temps. »

Pour Lise Parent, les chansons et comptines dans la transmission de la langue et de la culture correspondent à un moment où l'on prend conscience de l'importance de ces éléments dans le vécu d'une éducatrice dans un service de garde. « Et cela permet de conserver une certaine vitalité [de la communauté francophone] », précise-t-elle.

Microcours pour adultes

La Coalition ontarienne de formation aux adultes (COFA), combattre l'insécurité linguistique passe entre autres par 19 microcours, axés sur différentes notions permettant aux étudiants de choisir celles dont ils ont besoin, explique la gestionnaire de programme Sylvie Gauthier.

Karine Pineault évoque quant à elle la création d'un espace de discussion et de réflexion autour de l'insécurité linguistique au sein de la formation.

Cette dernière explique que, si chez les petits l'insécurité linguistique n'est pas aussi accrue que chez les éducatrices/éducateurs, elle peut s'illustrer par le fait qu'un enfant a l'impression que sa langue n'est pas reconnue ou qu'elle n'a pas sa place dans le milieu où il se trouve.

Impliquer les parents, premiers repères culturels

De fait, impliquer les parents est, entre autres, ce que recommandent la plupart des intervenantes. « Ils sont les premiers repères culturels de leurs enfants, eux aussi, rappelle Karine Pineault. La relation affective que l'enfant va avoir, pour qu'il se sente appartenir à son groupe, à sa communauté. »

Line Thibodeau abonde dans le même sens: « Si les parents ne développent pas d'autres occasions de parler français en dehors de la garderie ou de l'école, il sera plus compliqué pour l'enfant de s'épanouir dans cette langue. »

Alors que le besoin de recruter des éducatrices et éducateurs francophones en milieu minoritaire est criant dans certaines régions du Canada, les discussions et pratiques échangées ont montré à quel point les constructions identitaire et linguistique de ces professionnels jouent un rôle pivot dans l'épanouissement des tout-petits. METROLINX

Avis de publication de l'ébauche de rapport sur les travaux préliminaires de la station Corktown

Projet de ligne Ontario

Le projet

La ligne Ontario donnera 15,6 kilomètres de nouvelles voies de métro à Toronto pour accélérer et faciliter les déplacements quotidiens des gens. La ligne s'étendra du Centre des sciences de l'Ontario (au nord-est) jusqu'à la Place de l'Ontario/gare Exhibition (au sud-ouest). La ligne Ontario devrait comprendre 15 nouvelles stations, y compris 6 stations de correspondance et de nouvelles correspondances avec les trois lignes ferroviaires GO, deux lignes de métro existantes, le nouveau TLR Eglinton Crosstown et des lignes de tramway à 10 de ses stations. Le projet comprendra des tunnels, des passages en surface ainsi que des passages surélevés et sera complètement séparé de la circulation automobile afin d'offrir des déplacements rapides et fiables.

Travaux préliminaires de la station Corktown

Les travaux préliminaires de la station Corktown comprennent la démolition de bâtiments existants, l'enlèvement d'autres structures et de l'asphalte si nécessaire, la mise hors service des services publics et l'enlèvement ou l'assainissement des sols si nécessaire. Ces travaux préliminaires ont pour but de préparer le site pour les futures étapes de la construction, pour les activités de construction souterraine et de tunnels, ainsi que pour les travaux associés à la future station Corktown.

Le site des premiers édifices parlementaires, situé dans l'empreinte du projet des travaux préliminaires de la station Corktown, est un site archéologique connu qui nécessite des études archéologiques supplémentaires avant d'entreprendre toute activité impliquant une perturbation des sols. On peut y trouver des artefacts des Premières Nations, des vestiges des premier et deuxième édifices du Parlement du Haut-Canada, de la Home District Gaol (prison), ainsi que des premières industries de Toronto. Metrolinx désire ardemment mettre en valeur le potentiel du site et travailler avec la ville de Toronto, les Premières Nations et la collectivité pour découvrir les possibilités de commémoration. Les premières évaluations archéologiques et environnementales sont en cours.

Les répercussions environnementales des travaux préliminaires de la station Corktown sont en cours d'évaluation conformément au *Règlement de l'Ontario 341/20*, *Projet de ligne Ontario* (Règl. de l'Ont. 341/20) (disponible uniquement en anglais) en vertu de la *Loi sur les évaluations environnementales*. Conformément à l'article 8 du Règl. de l'Ont. 341/20, Metrolinx a préparé une ébauche de rapport sur les travaux préliminaires de la station Corktown qui peut maintenant être consultée par le public.

L'ébauche de rapport sur les travaux préliminaires contient l'évaluation des travaux préliminaires de la station Corktown. Le rapport définit l'objectif des travaux préliminaires et décrit les conditions de l'environnement local, les répercussions potentielles ainsi que les mesures d'atténuation proposées et contient un journal des consultations.

Processus d'examen et de consultation dans le cadre de l'ébauche de rapport sur les travaux préliminaires

À compter du **12 mai 2021**, l'ébauche de rapport sur les travaux préliminaires de la station Corktown se trouvera sur la page Web du projet (www.metrolinx.com/ligneontario). Participez à nos journées portes ouvertes virtuelles temporaires, du **12 mai au 11 juin 2021**, pour en apprendre davantage sur l'ébauche du rapport sur les travaux préliminaires de la station Corktown et nous donner votre avis à son sujet au moyen du formulaire se trouvant sur la page Web. Les personnes qui souhaitent envoyer des commentaires sur l'ébauche du rapport sur les travaux préliminaires de la station Corktown doivent le faire d'ici le **11 juin 2021** et les transmettre au moyen du formulaire se trouvant sur la page Web ou par courriel à l'adresse ontarioline@metrolinx.com.

L'article 10 du *Règlement 341/20 de l'Ontario* exige que Metrolinx établisse un processus de résolution des problèmes afin de tenter de résoudre toute préoccupation soulevée par le public ou les Premières Nations au cours de la période d'examen. À la fin de cette période, Metrolinx mettra à jour l'ébauche du rapport sur les travaux préliminaires de la station Corktown en y ajoutant une description du processus de résolution des problèmes, les mesures prises par Metrolinx pour répondre aux préoccupations et l'incidence du traitement des préoccupations sur le calendrier de mise en œuvre des travaux préliminaires, le cas échéant. Metrolinx publiera le rapport définitif sur les travaux préliminaires de la station Corktown sur la page Web du projet (www.metrolinx.com/ligneontario) et émettra un avis de publication à cet effet. Pour obtenir un exemplaire de l'ébauche de rapport sur les travaux préliminaires de la station Corktown, veuillez écrire à l'adresse courriel indiquée ci-dessus.

Vous pouvez communiquer avec Josh Vandezande (tél. : 416 202-5100, courriel : ontarioline@metrolinx.com), représentant de Metrolinx.

Ottawa steps into Line 5 legal dispute

Government argues shutdown poses ‘grave concerns’ for Canada

ALEX BALLINGALL
OTTAWA BUREAU

OTTAWA—In a bid to keep a crucial oil pipeline flowing into Ontario, the federal government has stepped into the legal battle over Enbridge’s Line 5 to argue the threatened shutdown raises “grave concerns” about Canada’s relationship with the United States.

Natural Resources Minister Seamus O’Regan announced the move on Tuesday, one day before Michigan Gov. Gretchen Whitmer’s deadline to shut down the portion of the pipeline that runs under the Straits of Mackinac between Lake Michigan and Lake Huron.

Enbridge, the Calgary-based company that runs the pipeline, says it won’t shut it down unless a court or energy regulator orders it to do so.

In an interview with the Star, O’Regan said he doesn’t expect to see such an order while Enbridge and Michigan are in court-ordered mediation in the U.S., which is currently the case. But he made clear that Ottawa believes the state should not be able to “unilaterally” close a vital oil pipeline that crosses the Canada-U.S. border.

“This is in Canada’s national interest,” he said. “It is a part of our energy security, and we will make sure that it is upheld.”

In an effort to do so, Ottawa submitted a legal argument in U.S. federal court on Tuesday to support Enbridge’s effort to keep Line 5 open. Through the 20-page submission, the federal government argues the threatened shutdown “poses grave concerns” for Canada’s economy and energy supplies, as well as its ability to rely on

JOHN FLESHER THE ASSOCIATED PRESS FILE PHOTO

An above-ground section of Enbridge’s Line 5 at the Mackinaw City, Mich., pump station. Michigan Gov. Gretchen Whitmer has ordered the pipeline shut down because of concerns about a potential spill in the channel that connects Lake Huron and Lake Michigan.

treaties with the U.S. The government points to a treaty signed in 1977, under which the countries agreed not to interfere with cross-border oil pipelines like Line 5. Ottawa argues Michigan should not be allowed to shut down Line 5 while discussions continue between the Canadian and U.S. federal governments. Prime Minister Justin Trudeau said Tuesday he has raised the issue directly with U.S. President Joe Biden.

“It is essential to the continued success of the relationship that both countries can trust that their reciprocal legal commitments will be fully honoured and implemented,” the submission says.

In a statement to the Star, Enbridge welcomed support from Ottawa and said the 1977 treaty was designed to ensure pipelines like Line 5 are “free of this type of interference from public authorities.”

The company said it hopes the U.S. and Canada can work to keep the pipeline open until it is upgraded with Enbridge’s proposed \$620-million project to

encase it in a tunnel built into the lake bed.

In Washington, U.S. Energy Secretary Jennifer Granholm declined to state the Biden administration’s position on Line 5. “It will be decided in court,” she told reporters at the White House. Whitmer’s office did not respond to questions from the Star on Tuesday.

She was elected governor with a promise to shut down Line 5 because of the risk of an oil spill from the 68-year-old pipeline, which splits into a two pipelines to cross under the straits for more than seven kilometres. In November, Whitmer revoked authorization for the line that was granted in 1953 and ordered Enbridge to shut it down by May 12.

Line 5 carries 540,000 barrels of Canadian oil and natural gas liquids per day and runs from Wisconsin, through Michigan to Sarnia, Ont. It is the only pipeline that supplies propane to southern Ontario, according to a parliamentary committee report in April.

Tuesday’s court submission says Line 5 supplies about 66

per cent of Quebec’s crude oil needs, and accounts for about half of the oil used by refineries in Ontario, where more than 4,900 people work to make fuel.

Bob Larocque is president and chief executive officer of the Canadian Fuels Association, which represents oil refineries in Sarnia and Quebec that rely on Line 5. He called it an “absolutely critical piece of infrastructure” and said alternative pipelines could only account for 60 per cent of what they get from Line 5.

That means those refineries would need to ship oil by boat through the Great Lakes, or by rail and truck from oil suppliers in the United States or Western Canada, he said.

Larocque said the association estimates this would increase annual greenhouse gas emissions by two to three megatonnes, the equivalent of adding roughly 400,000 to 600,000 gas-burning cars on the road.

B.C. pitches permanent paid sick leave days

ALEX MCKEEN
VANCOUVER BUREAU

VICTORIA—Building on legislation introduced by Ontario’s Progressive Conservative government last month, B.C.’s NDP government Tuesday introduced paid sick day legislation for the first time.

It came with a Canadian pandemic first: The promise of a permanent program that outlasts the COVID-19 crisis, as workers across the country have demanded since the pandemic began.

Like the Ontario program, B.C. will offer workers three paid sick days during the pandemic. But it’s the post-pandemic promises workers’ advocates and businesses are watching most closely — as the NDP government promises a permanent paid sick leave program after the pandemic with details still entirely up in the air.

It could be a model for provinces extending a hard-won lesson of the pandemic that workers need support to stay home into the aftertime.

But even the government proposing the first COVID-era permanent paid sick plan doesn’t know what it will look like yet.

“Unfortunately, the federal program has been difficult to access for workers,” B.C. Premier John Horgan said of Canada’s sickness benefit, of which he was an early proponent, but which ultimately fell flat. “As a result, the province is going to step up and fill that gap.”

Under the temporary COVID-19 program, workers will get three days off for illness, paid at their usual rate by their employer.

METROLINX

Notice of Publication of Draft Corktown Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada’s First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage (www.metrolinx.com/ontarioline). As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form. Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

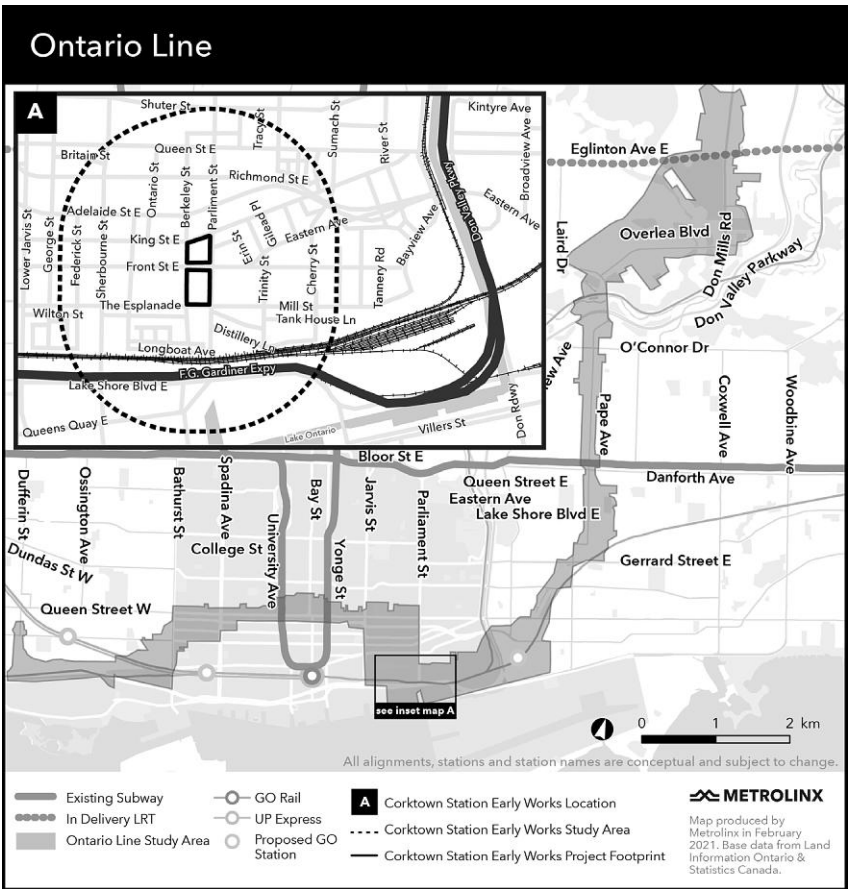

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

Josh Vandezande (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.
Metrolinx, 130 Adelaide Street West Toronto, Ontario M5H 3P5

All personal information included in a submission – such as name, address, telephone number and property location – is collected, maintained and disclosed by Metrolinx for the purpose of transparency and consultation. The information is collected under the authority of O. Reg. 341/20 under the Environmental Assessment Act or is collected and maintained for the purpose of creating a record that is available to the general public as described in s. 37 of the Freedom of Information and Protection of Privacy Act. Personal information you submit will become part of a public record that is available to the general public unless you request that your personal information remain confidential. Corktown Station Early Works Report brings Ontario Line another step closer to reality

Metrolinx is looking for community feedback on a new environmental assessment, released today, for the early works required at Ontario Line's future Corktown Station.

The Corktown Station Early Works Report will guide important environmental and archaeological work that's needed before construction begins at the site, and is an important step in keeping the project on track.

Ontario Line's Corktown Station will provide convenient transit connections east of the downtown core, integrated with a vibrant mix of housing, commercial, retail and community space, all while commemorating the important history and culture connected to the [First Parliament site](#).

[Read more](#) about the report, check out the [Draft Corktown Station Early Works Report](#) and [provide your feedback](#) by June 11, 2021.

Ask-A-Question – January 1, 2021 to June 11, 2021		
Comment Title	Comment Body	Response
Stations	<p>Any possibility that Cosburn can be called East York Station instead?</p> <p>Also, Corktown seems like it might be in St. Lawrence, sort of?</p>	<p>Thank you for your feedback about station names for Cosburn and Corktown Stations. The current station names are working names only and we are looking forward to a community engagement process to select final station names for the Ontario Line. Stay tuned!</p>
Ontario Line/ Corktown Station/ East Harbour Transit Hub	<p>Just curious, does Metrolinx plan to engage in public “consultations” about this Corktown Stop / East Harbour Transit Hub before or after it signs contracts with developers? Will there be any real engagement with the surrounding communities over these plans or will Metrolinx follow its past practice of presenting plans as a fait accompli and refusing to consider any alternatives?</p>	<p>Infrastructure Ontario is exploring opportunities to create transit-oriented communities at future station locations throughout our subway program. The only proposed Ontario Line stations that are excluded from consideration as transit-oriented communities sites at this time are Osgoode, Queen, Moss Par and Leslieville.</p> <p>As part of Ontario Line plans, Metrolinx is making progress on stations to serve Corktown and East Harbour. The Government of Ontario through infrastructure Ontario will be leading the Transit Oriented Communities for these areas and will host public consultations with local communities, Indigenous partners and stakeholders starting in the Summer and Fall of 2021.</p> <p>Transit Oriented Communities will involve collaboration between communities, municipalities and developers in order to deliver benefits for all individual, families and businesses in the GTA. To learn more, please read the Province of Ontario’s news release here.</p>
Corktown Station Early Works Report - Noise/Vibration	<p>The report includes Table ES-1: Relevant Baseline Noise Measurement Data, setting out baseline noise measurements from Erin Street (which runs along my building) -- but proceeds to compare apples and oranges by following it with Table 5-1:</p> <p>Construction Noise Prediction Results, in which Erin Street is not mentioned. Why have you not identified "baseline" and "prediction" noise measurements for the same specific locations?</p> <p>Second, the report makes no mention of 90 Trinity Street by name, despite it being closer to the Corktown Station site than many of the other residential addresses specifically cited. Did Metrolinx neglect to include 90 Trinity in an oversight? Or, if it was deliberate, why was that decision made?</p>	<p>The closest noise sensitive receptor to 90 Trinity is 393 King Street East. Seeing as it is closer to the project footprint than 90 Trinity, it is anticipated that the construction noise levels experienced at 90 Trinity are anticipated to be lower than at 393 King Street East. It is important to note that the demolition noise prediction results in the Draft Early Works Report do not account for mitigation measures that will be considered.</p> <p>The baseline noise level measurement results at Erin Street are provided in the Corktown Station Early Works Noise and Vibration Report to characterise the existing conditions within the study area; these measurements were obtained as part of the Ontario Line Existing Conditions Report development. Corktown Station early works construction noise impacts were assessed by predicting noise levels and comparing predicted levels against construction noise criteria adopted for the assessment. The Erin Street location where noise level measurements were completed is located further away from the early works site and is expected to have lower noise levels than the locations closest to the works site shown in Figure #5-1 of the Report. It was thus not part of the assessment. The construction noise assessment criteria are shown in Table 2-6 of the Report. These criteria were developed based on review of guidelines from the Ministry of the Environment, Conservation and Parks, City of Toronto and the United States Federal Transit Administration. As early works planning progresses, project-specific noise limits will be established. Noise levels will be monitored during early works completion, and mitigation measures will be implemented to reduce noise impacts. To learn more about noise and vibration, please see the Ontario Line Noise and Vibration Info Sheet as well as the Ontario Line Final Noise and Vibration Environmental Conditions Report (Section 2 and 3 of the report describe how the baseline noise and vibration conditions were determined).</p> <p>Construction noise mitigation measures may include, but won’t be limited to performing construction during daytime hours where possible, using equipment compliant with noise level specifications from the Ministry of Environment, Conservation and Parks, and siting construction vehicles and construction laydown and staging areas away from sensitive receptors where possible. Other practical steps we take to reduce noise and vibration in residential areas include fitting equipment with muffling devices, using equipment and coordinating construction schedules so that noisy operations do not occur simultaneously. These mitigation measures will be refined and updated as project planning progresses.</p> <p>It is important to note that the Corktown Station early works only include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation of soil where required. These early works are being</p>

Ask-A-Question – January 1, 2021 to June 11, 2021		
		advanced to prepare the site for archaeological assessments and future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station. The assessment of project operations and construction of Corktown Station and other project components will be outlined in the Ontario Line Environmental Impact Assessment Report planned to be released in early 2022 and will include further assessment of and mitigation measures for noise and vibration impacts.
Corktown Station	<p>Bit confused with the footprint of Corktown Station overall. Initial Draft drawings seem to show a significant discrepancy in the above and below ground impacts. The current Draft shows the underground platform spanning 100m on the EB side of Berkeley from King St. to about the middle of Front St. according to the photo on Page 10 of the below:</p> <p>https://www.metrolinxengage.com/sites/default/files/appendix_b2-project_webpage-corktown_station_2021-04-29_lock.pdf</p> <p>Yet above ground, there are indications of both North and South Sites east of Berkeley on either side of Front, with the South Site (including the First Parliament Site where there is no transit platform) spanning approximately 2x the distance further above ground (an additional 200m+ going South) according to the below:</p> <p>(Early Works Components)</p> <p>https://www.metrolinxengage.com/en/content/ontario-line-early-works-corktown-station</p> <p>There is mention of: "A section of Corktown that is mostly paved over will become a place for the people, with a mix of housing, commercial, retail and community space around the station" in your blog below:</p> <p>Advancing plans for the Ontario Line station in Corktown: Commemorating history while building for the future Metrolinx News</p> <p>Given the South Site would be butting up against a neighborhood/school park and a much-traversed park through-way - can you please elaborate and help us understand what the above ground structural needs for both a North and South site are? How will this span either side of Front St. along Berkeley above ground?</p>	<p>Thanks for your questions about the Ontario Line station serving Corktown. The station itself will be located north of Front street, where the Staples is currently located. This site will also be used to launch the tunnel boring machines to construct the tunnels across the downtown segment. The site just south of Front street, between Berkeley Street and Parliament Street, commonly known as the First Parliament site, will be used to support the construction of Corktown Station and tunnelling activities in order to reduce community impacts and keep construction off the street.</p> <p>As you may know, Corktown Station early works include the demolition of existing, removal of structures and asphalt, decommissioning of utilities and soil removal and/or remediation where required. These early works are being advanced to prepare the site for archaeological assessments and future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station. Demolition for Corktown Station early works is planned to begin as early as September 2021 and will be followed by environmental due diligence activities including archaeological assessments. The main contract work – tunneling/underground construction activities followed by Corktown Station construction - will start in approximately 2023.</p> <p>As far as the long term development vision for the site, the province is pursuing a transit-oriented community proposal for the site for which you can find more details here.</p>

Date	1. What are your thoughts on the results of the Corktown Station early works environmental studies?	2. Which Corktown Station early works environmental study is most important to you and why?	3. Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft Corktown Station Early Works Report.	Response
13-May-21	Shocking to me with the quick timeline of the bridge build over the lower Don alongside Corktown Common park that details about the bridge are not part of these early works and feedback. Worse, for a document that ultimately is simply about demolishing four buildings, it gives zero detail about when those businesses would close, when the buildings would come down, what alternatives to those businesses might be available nearby, etc. It reads instead simply as a mini EA, and a poorly rushed one at that.	Heritage and Socio-Economic. The Heritage aspect should include details of the work that the City of Toronto did to acquire the First Parliament site, consultations they had with the public, and details of their proposals for the site's heritage interpretation and future use. There is little connection to Corktown, with no reference to it's makeup, heritage character, special status within the new secondary plan, etc., (so include a report on Corktown as you've done for StLawrence, Distillery, and West Don Lands) ... and what is there about Corktown includes errors! (i.e., southwest corner of Eastern-Cherry is not a park, it's a long-term care site waiting for development finalization.)	Include a neighbourhood section for Corktown, especially the Little Trinity/Enoch Turner Schoolhouse heritage block less than 100m from your site. Tell us about the portal dig in the south part of Corktown and whether early works there may need to include the Richmond Hill GO line shifting slightly or not -- that's our park alongside and we want to know your plans there a.s.a.p., along with confirmations of the design details of the new bridge (your April presentation suggested it would start this year and be done by the end of next summer -- that MUST qualify as an "early work" since it will precede the contract awarding for "South Civil" or "RSSOM"). Give more details in the Early Works report about why you feel you need to clear the First Parliament block south of Front so quickly, why you feel you need to acquire it fully from the city rather than just working out a plan to use it while they retain ownership, and most importantly explain why a site as large as the north block of Parliament-King-Berkeley-Front (as large as it is already) is not big enough on its own for the construction staging you're planning around there. This report is severely lacking in the details that MATTER -- hugely disappointing in how it fails to tell anything substantial. Do better, Metrolinx.	<p>Thank you for the thorough review and detailed comments. Metrolinx has made updates to the Corktown Station Early Works Report in response to your feedback as follows.</p> <p>- Section 5.6.1.3.4 was added to include the Corktown Neighbourhood profile.</p> <p>- Figure 5-14, the community amenities map, was updated to revise the southwest corner of Eastern Avenue-Cherry Street to reflect the long-term care site. Additionally, the site was added to the Air Quality Report as a sensitive receptor.</p> <p>- Rationale for proceeding with Corktown Station early works has been included in Section 1.3.1 of the report.</p> <p>Planned works at the Lower Don Bridge are assessed in the Lower Don Bridge and Don Yard Early Works Report which was released for public review and comment on June 22nd 2021.</p>
7-Jun-21		<p>Appendix A4. Heritage Detailed Design Report</p> <p>This area has one of the densest Heritage Protected group of structures in Toronto with an actual distinct design language. I think a large public works project like this has the opportunity to incorporate many of these design elements into the station design where in smaller scale projects it would not be feasible. To that end, I hope that the result of the Heritage Detailed Design Report is a recommendation to perhaps echo heritage structures in these new buildings. I think that would be a statement piece for the area like a Union Station. I think while a contemporary structures might be interesting, it would not create as much of an anchor / marketplace value as a heritage-like structure with proper mixed use incorporated.</p>		<p>Ontario Line stations will be designed with the community in mind and using a set of guidelines that make sure stations are attractive and fit into the areas they will serve. We look forward to working with community and the City of Toronto on design of Ontario Line stations that the community will be proud of.</p>

Public Feedback

 - **Archaeological Resources Study**

Date	What are your thoughts on the Archaeological Resources study key findings and identified potential impacts and mitigation measures?	Response
25-May-21	First Parliament was a rather small log cabin. Why not rebuild it so it's a destination, it honors history, and then build huge towers above it to pay for everything? Can't we have it all? Our family wants more than a plaque. Rebuilding the log cabin and building around it will not cost much and will please everyone... Gregg Terrence	<p>The station itself will be located north of Front street, where the Staples is currently located. The site just south of Front street, between Berkeley Street and Parliament Street, commonly known as the First Parliament site, will be used to support the construction of Corktown Station and tunnelling activities in order to reduce community impacts and keep construction off the street.</p> <p>Early works including the demolition of existing buildings followed by environmental due diligence activities such as archaeological assessments are planned to begin as early as September 2021. The main contract work – tunneling/underground construction activities followed by Corktown Station construction - will start in approximately 2023. As far as the long term development vision for the site, the province is pursuing a transit-oriented community proposal for the site for which you can find more details here.</p> <p>Metrolinx and the Province plan to work with the City of Toronto, Indigenous Nations and the local community to raise the profile of the site in downtown Toronto where Upper Canada's first parliament buildings used to stand. While the site is now mostly occupied by a parking lot, a car rental dealership, and a car wash, we want to make sure that any history hidden under the surface is interpreted and commemorated.</p>
27-May-21	Given that we already have evidence of the architecture and historical significance of the First and Second Parliament Buildings, Metrolinx should commit, in agreement with the City, to reconstruct at least one of these buildings on site. The proposed station and other development should be designed and located to respect the scale and location of the reconstruction. Both Metrolinx and the developers should contribute significantly to the cost of the reconstruction. Alan Waterhouse	Stations will be designed with the community in mind and using a set of guidelines that make sure stations are attractive and fit into the areas they will serve. We look forward to working with community and the City of Toronto on how to design Ontario Line stations that the community will be proud of. In order to unlock the history of the First Parliament site, Metrolinx and Infrastructure Ontario will be working with representatives of the City, the Ministry of Heritage, Sport, Tourism and Culture Industries, Indigenous Nations including the Mississauagas of the Credit First Nation as treaty holder, and the Ontario Heritage Trust to develop a robust Heritage Interpretation and Commemoration Plan for this site which builds on the Heritage Interpretation Strategy and the Master Plan work led by the City and reflects the community's input. Metrolinx anticipates sharing the draft Interpretation and Commemoration Plan for public review and comment later this year.
11-Jun-21	How will Metrolinx engage with the community in the development of the Heritage Interpretation for the design of the station in Phase 1 (North Site) and the actual heritage site in Phase 2 (South Site)?	Metrolinx and Infrastructure Ontario will be working with representatives of the City, the Ministry of Heritage, Sport, Tourism and Culture Industries, Indigenous Nations including the Mississauagas of the Credit First Nation as treaty holder, and the Ontario Heritage Trust to develop a robust Heritage Interpretation and Commemoration Plan for this site which builds on the Heritage Interpretation Strategy and the Master Plan work led by the City and reflects the community's input. Metrolinx anticipates sharing the draft Interpretation and Commemoration Plan for public review and comment later this year.

Date	What are your thoughts on the Cultural Heritage Report key findings and identified potential impacts and mitigation measures?	Response
12-May-21	<p>Hello everyone,</p> <p>I am concerned that the group of identified heritage buildings in the above report does not include 70 Berkeley Street (the Alumnae Theatre). The northern boundary of the area you survey appears to be Adelaide Street as is evidenced by the inclusion of the row houses on the east side of Berkeley (north of King) and the former Nienkamper building at King and Berkeley. 70 Berkeley is on the south west corner of Berkeley and Adelaide and so should be included in your list of heritage buildings.</p> <p>Here is a link to the entry for 70 Berkeley Street in TO Built, a database of heritage buildings posted by the Architectural Conservancy of Ontario. This entry includes the text for a plaque from Heritage Toronto (on the building since 2010). https://www.acotoronto.ca/show_building.php?BuildingID=2712</p> <p>I would appreciate hearing from you about this matter.</p>	<p>Hi [REDACTED],</p> <p>Hope you are well.</p> <p>Thank-you for providing your feedback on the Draft Corktown Station Early Works Report.</p> <p>The Corktown Station Early Works Built Heritage Resources and Cultural Heritage Landscapes Study Area consists of the Corktown Station Early Works Project Footprint and properties adjacent to the footprint. The Corktown Station Early Works Built Heritage Resources and Cultural Heritage Landscapes Study Area is shown in Figure 5-16 of the Draft Corktown Station Early Works Report. The definition of “adjacency” in the City of Toronto Official Plan has been used for the purpose of identifying properties adjacent to the Corktown Station Early Works Project Footprint and is as follows: “those lands adjoining a property of the heritage register or lands that are directly across from and near to a property on the heritage register and separated by land used as a private or public road, highway street, lane, trail, right-of-way, walkway, green space, park and/or easement, or an intersection of any of these; whose location has the potential to have an impact on a property on the heritage register; or as otherwise defined in a Heritage Conservation District Plan adopted by by-law”.</p> <p>As 70 Berkeley Street does not adjoin with a property located within the project footprint and is not located directly across from and near the project footprint, it is not applicable to the Corktown Station Early Works Report. However, 70 Berkeley Street is documented in the Ontario Line Cultural Heritage Report: Existing Conditions and Preliminary Impact Assessment, which was issued on November 30, 2020.</p> <p>I’d like to take this opportunity to let you know that we are holding another virtual open house for the downtown segment tomorrow, in case you haven’t heard. You can register for the event here.</p> <p>I hope this information is helpful, and please do let me know if you have any further questions,</p>
11-Jun-21	When will the Distillery District National Historic Site and Heritage Conservation District (HCD) Plan be available online?	The Distillery District National Historic Site and Heritage Conservation District Plan is being prepared by the City of Toronto.

 - **Noise & Vibration Study**

Date	What are your thoughts on the Noise & Vibration study key findings and identified potential impacts and mitigation measures?	Response
12-May-21	Why do you not refer to the eight-storey condo building at 90 Trinity Street (corner of Eastern Ave) in any of your discussion of vibration/noise exposure? Will we not be affected?	As part of the Draft Corktown Station Noise & Vibration Early Works Report preparation, a noise screening was conducted to identify noise sensitive receivers located within the study area. The study area was determined by identifying the area where the daytime and nighttime noise assessment criteria are predicted to be met during construction, using a conservative approach. Representative noise sensitive receptors were selected based on their location in the study area and their proximity to the Corktown Station Early Works Project Footprint, and are those closest to the Project Footprint. Although 90 Trinity Street is located in the study area, it is further from the project footprint than other receptors. As shown in Figure 5-1 of the report, 393 King Street East is the closest representative noise sensitive receptor to 90 Trinity Street. However, since 90 Trinity Street is farther from the project footprint than 393 King Street East, the construction noise levels experienced at 90 Trinity Street are anticipated to be lower.
3-Jun-21	You may want to consider the sound stages, film sets, and recording studios in the area, as they have much more stringent noise requirements	These types of receptors were considered during the assessment. As they are only noise sensitive during performances and recordings, the commitment to coordinate with these locations to avoid disturbance during performances was included in the mitigation measures.
11-Jun-21	<p>What is the communication protocol with residents which includes the timely resolution of resident complaints? What is the mechanism for complaints about noise and vibration?</p> <p>As the current work is exempt from City of Toronto Noise Bylaws, what structures are in place to hold Metrolinx to account for exceeding the limits on noise and vibration particularly during the nighttime hours of 2300 to 0700?</p> <p>Section 6.1.1 of the Noise and Vibration report states "If construction will occur outside of normal daytime hours, inform local residents of the type of construction and expected duration outside of daytime hours prior to commencing work". What forms of communication will Metrolinx use with the residents of the nearest representative noise-sensitive receptors listed on page 24?</p> <p>What are the locations of the noise monitoring equipment?</p> <p>How has Metrolinx catalogued the existing cracks in walls, floors, and exterior cladding of the first two storeys above grade and interior finishes of all storeys below grade in sufficient detail to facilitate comparison of pre-construction and post-construction condition including statements of the efforts made to gain access where not possible?</p> <p>What alternative means of construction might be used within 5.8m and 11.1m of structures where vibration levels exceed the guidelines?</p> <p>What are the locations of the vibration monitoring equipment?</p>	<p>We provide advance notice to communities about work taking place in their neighbourhood through a variety of methods. Community notices are currently being shared digitally with area elected officials and community groups where work will be taking place. Physical copies may also be provided to residents and businesses near work areas, at minimum 48 hours ahead of work beginning. The Ontario Line Community Relations team will be available for the duration of the project to address questions, complaints and concerns via email and phone (416-202-5100 and ontarioline@metrolinx.com). The team is also available through a virtual appointment booking system on the Metrolinx Engage website and our social media channels. When possible, in person meetings will also resume.</p> <p>Residents and businesses can also stay connected with the latest Ontario Line updates and upcoming work through the Ontario Line website (metrolinx.com/ontarioline). These same updates and details of upcoming work are also shared through the weekly Ontario Line e-newsletter.</p> <p>Metrolinx will work with the contractor during early works to ensure that the applicable noise and vibration limits are met. Noise and vibration monitoring will be conducted to ensure compliance with applicable limits, including at locations where persistent complaints are made. Locations of noise and vibration monitoring equipment, pre-construction and post-construction survey requirements and alternative construction methods will be determined as planning progresses and more project specific details become available.</p>

 - **Socio-Economic & Land Use Characteristics Study**

Date	What are your thoughts on the Socio-Economic Environment study key findings and identified potential impacts and mitigation measures?	Response
12-May-21	The mapping analysis does not reflect the future planned neighbourhoods along the waterfront . The recently released Parks and Public Realm Plan (TO core) and the Downtown mobility strategy must be considered when considering the future state of Parliament Street and a Great Street, a Retail Main Street and as a gateway to the East downtown from the waterfront.	Information on the Downtown Parks and Public Realm Strategy and the Downtown Mobility Strategy were added to the Corktown Station Early Works Report in Section 2.2.3.9 and 2.2.3.10. Information regarding future planned neighborhoods along the waterfront with active development applications is included in Section 5.6.4.
25-May-21	First Parliament was a rather small log cabin. Why not rebuild it so it's a destination, it honors history, and then build huge towers above it to pay for everything? Can't we have it all? Our family wants more than a plaque. Rebuilding the log cabin and building around it will not cost much and will please everyone...	<p>Hello [REDACTED],</p> <p>Thank you for reaching out about the Ontario Line station serving Corktown.</p> <p>The station itself will be located north of Front Street, where the Staples is currently located. The site just south of Front Street, between Berkeley Street and Parliament Street, commonly known as the First Parliament site, will be used to support the construction of Corktown Station and tunnelling activities in order to reduce community impacts and keep construction off the street.</p> <p>Early works including the demolition of existing buildings followed by environmental due diligence activities such as archaeological assessments are planned to begin as early as September 2021. The main contract work – tunneling/underground construction activities followed by Corktown Station construction - will start in approximately 2023. As far as the long term development vision for the site, the province is pursuing a transit-oriented community proposal for the site for which you can find more details here.</p> <p>Metrolinx and the Province plan to work with the City of Toronto, Indigenous Nations and the local community to raise the profile of the site in downtown Toronto where Upper Canada’s first parliament buildings used to stand. While the site is now mostly occupied by a parking lot, a car rental dealership, and a car wash, we want to make sure that any history hidden under the surface is interpreted and commemorated.</p> <p>I'll take this opportunity to let you know that we are hosting a Virtual Open House for the Downtown Segment of the Ontario Line, which includes Corktown station, this Thursday June 17th at 6:30pm. You can register for the event here.</p> <p>I hope this helps, and please don't hesitate to let me know if you have any other questions.</p>
11-Jun-21	How will Metrolinx ensure that the walkways around the sites are kept free from obstructions, like garbage, snow and ice, so that people with mobility issues can freely traverse the area? What is Metrolinx's plan to ensure that AODA requirements are enforced in areas around the construction site?	The contract will mandate that the contractor maintains sidewalks and areas at and adjacent to the site in a clean and safe condition and that they promptly remove ice and snow. Access to existing elements around the construction site will be maintained. The final design and constructed facilities will meet all AODA requirements.
11-Jun-21	<p>Thank you in advance for reading this.</p> <p>I can't believe I'm actually writing to say that we should retain public ownership, because I usually 'lean right', and on the side of private ownership. But I definitely DO NOT AGREE with letting the Corktown/First Parliament property go to the private sector.</p> <p>This is an exceptional property. It should stay in public hands.</p> <p>There is huge potential for the City of Toronto and the Province to realize benefits well into the future.</p> <p>Please follow the Master Plan lead by Toronto. As a resident of the St. Lawrence neighbourhood, I truly believe that the Master Plan reflects the requirements of the neighbourhood in a forward-looking fashion. And no discussion of this property would be complete without noting it's potential value, especially what could be derived from being adjacent to the ever-popular Distillery District.</p> <p>I'd like to emphasize that I live here and I'm always keen to show visitors around my part of town. I truly love it! And so do my guests.</p> <p>By profession, I'm in finance. I have a difficult time understanding the financial aspects of letting such a valuable property go. Unless, we're only looking at the short term.</p> <p>I certainly hope that's not the case.</p> <p>Thanks so much for considering my submission.</p>	<p>Thank you for your feedback. With the Ontario Line station being located on the site north of Front street, where the Staples is currently located, the site just south of Front street, commonly known as the First Parliament site, will be used to support the construction of Corktown Station and tunnelling activities in order to reduce community impacts and keep construction off the street.</p> <p>The province is pursuing a transit-oriented community proposal that builds from the City of Toronto’s First Parliament master plan work for the site. It would create a dynamic community with housing, jobs, commercial uses, and community spaces, such as a library – all connected to the Ontario Line subway and TTC bus and streetcar services. In recognition of the historical significance of the land, the province will work closely with the City of Toronto, stakeholders, the community, and Indigenous Nations to collaborate on a meaningful plan to commemorate the rich heritage of the First Parliament site. This will have the benefit of delivering much-needed infrastructure at a lower cost to taxpayers. You can learn more about the transit-oriented community proposal for the site here and further details will be shared for community consultation starting this fall.</p>

 - **Traffic & Transportation Study**

Date	What are your thoughts on the Traffic & Transportation study key findings and identified potential impacts and mitigation measures?	Response
12-May-21	<p>There will be a significant increase in traffic at the intersection of Parliament Street and Front street as a result of the proposed conversion of Mill street to one way westbound (the esplanade bike lanes)</p> <p>If this was to be reversed to one way Eastbound, the impact on the traffic demand in this area would be significantly reduced. Cherry Street can address Westbound traffic demands utilizing Lakeshore. Note there is no access from Lakeshore Northbound onto Cherry (which is the root case of the problem) all planned transportation plans need to be coordinated and not planned in isolation</p>	As noted in the Early Works Report, Metrolinx will co-ordinate with the City of Toronto regarding other ongoing construction projects when scheduling early works activities to maintain the mobility of all road users (e.g. avoid closure of parallel corridors).
16-May-21	<p>1. Priority should always be the flow and movement of regular traffic. Never should construction related vehicles or traffic be given priority over the free and easy movement of the public (inclusive of public transit, bicycles, pedestrians and commercial business traffic - on delivery etc). Pay Duty Police should be engaged to ensure that construction related vehicles do not park and block thoroughfares and respect the priority of the general public.</p> <p>2. Construction related personnel - ALL construction related personnel - should be encouraged/instructed to use public transport to her to and from work. Public parking is at a premium In this area and should be prioritized for residents and individuals using local businesses, retail and services. No construction personnel should be allowed to park in any way that disrupts the general public.</p>	<p>The Early Works Report includes mitigation measures to minimize the potential traffic and transportation impacts during early works construction. Examples of potential mitigation measures include developing a traffic and transportation management plan, traffic signal timing optimization and implementing flagging where construction vehicles are present.</p> <p>Construction vehicles are expected to be accommodated at construction laydown areas within the Corktown Station Early Works Project Footprint, and therefore it is not anticipated that these vehicles will occupy curb lanes of roads within the Corktown Station Study Area. Metrolinx will consult with the City of Toronto and the Toronto Parking Authority should public parking be affected.</p>
11-Jun-21	<p>How will residents report on their negative transportation experiences with a view to mitigation measures that need to be changed?</p> <p>What forms of communication will Metrolinx use with the area residents to identify changes in traffic patterns for pedestrians, cyclists, motorists, and transit users?</p>	We provide advance notice to communities about work taking place in their neighbourhood through a variety of methods. This includes work that would have an impact on public transit, auto, pedestrian or cyclist transport. Community notices are currently being shared digitally with area elected officials and community groups where work will be taking place. Physical copies may also be provided to residents and businesses near work areas, at minimum 48 hours ahead of work beginning. The Ontario Line Community Relations team will be available for the duration of the project to address questions, complaints and concerns via email and phone (416-202-5100 and ontarioline@metrolinx.com).The team is also available through a virtual appointment booking system on the Metrolinx Engage website and our social media channels. When possible, in person meetings will also resume. Residents are encouraged to reach out to the team at any point with their feedback or questions.

Subject: Re: Form submission from: Socio-Economic & Land Use Characteristics - Corktown Station

Hello [REDACTED]

Thank you for your feedback. With the Ontario Line station being located on the site north of Front street, where the Staples is currently located, the site just south of Front street commonly known as the First Parliament site, will be used to support the construction of Corktown Station and tunnelling activities in order to reduce community impacts and keep construction off the street. You can learn more about these plans [here](#).

The province is pursuing a transit-oriented community proposal that builds from the City of Toronto's First Parliament master plan work for the site. It would create a dynamic community with housing, jobs, commercial uses, and community spaces, such as a library – all connected to the Ontario Line subway and TTC bus and streetcar services. In recognition of the historical significance of the land, the province will work closely with the City of Toronto, stakeholders, the community, and Indigenous Nations to collaborate on a meaningful plan to commemorate the rich heritage of the First Parliament site. This will have the benefit of delivering much-needed infrastructure at a lower cost to taxpayers. You can learn more about the transit-oriented community proposal for the site [here](#) and further details will be shared for community consultation starting this fall.

I hope this helps, and please don't hesitate to let our team know if you have any further questions or concerns,

Bismah

Submitted values are:

What are your thoughts on the Socio-Economic Environment study key findings and identified potential impacts and mitigation measures?

Thank you in advance for reading this.

I can't believe I'm actually writing to say that we should retain public ownership, because I usually 'lean right', and on the side of private ownership. But I definitely DO NOT AGREE with letting the Corktown/First Parliament property go to the private sector.

This is an exceptional property. It should stay in public hands.

There is huge potential for the City of Toronto and the Province to realize benefits well into the future.

Please follow the Master Plan lead by Toronto. As a resident of the St. Lawrence neighbourhood, I truly believe that the Master Plan reflects the requirements of the neighbourhood in a forward-looking fashion. And no discussion of this property would be complete without noting its potential value, especially what could be derived from being adjacent to the ever-popular Distillery District.

I'd like to emphasize that I live here and I'm always keen to show visitors around my part of town. I truly love it! And so do my guests.

By profession, I'm in finance. I have a difficult time understanding the financial aspects of letting such a valuable property go. Unless, we're only looking at the short term.

I certainly hope that's not the case.

Thanks so much for considering my submission.

Subject: RE: Metrolinx Notice

Hi [REDACTED],

Thank you for your email, and sorry for the delay getting back to you! We have had a high volume of emails over the past couple of weeks and we are working our way through them.

I want to start by sharing that we have a [virtual open house for your area tonight](#), June 17, at 6:30pm. If you aren't able to make it, the recording will be available on the event page.

To answer your questions:

1. Early works (preliminary construction) for this station is expected to begin as early as this fall. We recently released a [draft environmental report](#) for these early works, and will incorporate public feedback into the final report prior to construction. The environmental report includes a [noise and vibration study](#) that looked at construction impacts on nearby residential buildings, including 318 King St E, and mitigation measures to reduce those impacts.
2. Construction for the full Ontario Line project is expected to be complete in 2029.
3. We expect station construction to take place during typical daytime construction hours (between 7am and 7pm) on weekdays.
4. Yes, the station will be located in the block between King, Parliament, Front, and Berkeley. See maps [here](#). The station will be part of a larger plan for the block, outlined [here](#). The station would open along with the rest of the Ontario Line after construction of the project is complete.

Please let us know if you have any further questions, and consider signing up for our e-newsletter [here](#). Hope you can attend the virtual open house tonight.

Thanks,
Sivahami

Hi Franca,

I am the owner of [REDACTED] and I just got this PDF from my management office. My unit is right across from Porsche dealer and very much worry about the noise from this.

Kindly let me know

1. when this is going to start
2. how long this will last
3. from what time to what time each day cause I work from home. (with or without COVID, [REDACTED])
4. is there going to be a station right at the intersection of King and Parliament? If so, when do you think it will open?

If the duration is for a long time, I guess I have to sell my unit before all this starts. Your prompt reply will be very much appreciated.

Thanks in advance

Subject: Re: Contact Ontario Line Submission

Hello 

Thanks for your question!

As you may be aware, the Ontario Line will bring 15.6 kilometres of much-needed subway service to Toronto. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition Place in the southwest.

The Ontario Line station serving Corktown will be located to the east side of Berkeley Street between King Street East and Front Street East. You can find more details about Corktown station [here](#).

Starting as early as this September, [Corktown Station early works](#) will include the demolition of existing buildings (including the ones you have mentioned), removal of structures and asphalt, decommissioning of utilities and soil removal and/or remediation where required. These early works are being advanced to prepare the site for archaeological assessments and future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station. The demolition for Corktown Station early works is planned to begin as early as September and will be followed by environmental due diligence activities including archaeological assessments. The main contract work – tunneling/underground construction activities followed by Corktown Station construction - will start in approximately 2023.

I'll take this opportunity to let you know that we are hosting a Virtual Open House for the Downtown Segment of the Ontario Line, which includes Corktown station, next Thursday June 17th at 6:30pm. You can register for the event [here](#).

I hope this helps, and please don't hesitate to let me know if you have any other questions.

Subject: Re: Underground Track Depth

Hello 

Thank you for your question!

As mentioned over the phone, it is anticipated that the Ontario Line platforms will be approximately 25-30 meters beneath the surface at Corktown station. However the exact depths will be confirmed by the winning bidder of the South Stations, Tunnels and Civils contract.

Please don't hesitate to let me know if you have any further questions.

Best,

Subject: Re: Corktown station construction question - 393 King East

Hi [REDACTED]

Thank you for your email about Corktown station on the Ontario Line.

Corktown Station will be constructed on the site where the Staples is located, just north of Front street. The site just south of Front street, between Berkeley Street and Parliament Street, commonly known as the First Parliament site, will be used to support the construction of Corktown Station and tunnelling activities associated with the Ontario Line project in order to reduce community impacts and keep construction off the street.

[Corktown Station early works](#) include the demolition of existing buildings (including the ones you have mentioned), removal of structures and asphalt, decommissioning of utilities and soil removal and/or remediation where required. These early works are being advanced to prepare the site for archaeological assessments and future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station. Demolition for Corktown Station early works is planned to begin as early as September 2021 and will be followed by environmental due diligence activities including archaeological assessments. The main contract work – tunneling/underground construction activities and Corktown Station construction – is anticipated to start in 2023.

Removal of the buildings currently on site is covered in the [Draft Corktown Station Early Works Report](#), which provides details on the purpose of these works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a record of consultation. The Draft Corktown Station Early Works Report is currently available for review on the project webpage (<http://www.metrolinx.com/ontarioline>) and feedback on the Draft Early Works Report can be provided via the webpage form or by writing to the project email address ontarioline@metrolinx.com until June 11, 2021. The assessment of project operations and construction of Corktown Station and other project components will be outlined in the Ontario Line Environmental Impact Assessment Report planned to be released in early 2022.

Metrolinx is committed to minimizing and managing the effects of noise and vibration of the Ontario Line on its neighbours – during both construction and operations. As noted in the Draft [Corktown Station Early Works Noise & Vibration Report](#), construction noise mitigation measures may include, but won't be limited to performing construction during daytime hours where possible, using equipment compliant with noise level specifications from the Ministry of Environment, Conservation and Parks, and siting construction vehicles and construction laydown and staging areas away from sensitive receptors where possible. Other practical steps we take to reduce noise and vibration in residential areas include fitting equipment with muffling devices, using equipment and coordinating construction schedules so that noisy operations do not occur simultaneously. These mitigation measures will be refined and updated as project planning progresses. Metrolinx will also monitor noise and vibration during construction to see if more mitigation measures are necessary.

I hope this helps address your questions, but please don't hesitate to let me know if you need any further information.

Best,

Bismah

Hello,

I live at 393 King street East and I'd like to know the planned scope of works for Corktown station construction across the road.

Specifically, where are you planning to locate the station exactly? Are you planning to demolish the Porsche dealership at 68 Parliament street or is it just Staples at 250 Front East?

When will the demolishing and construction start?

Any additional info is appreciated, if available.

Subject: Re: Form submission from: Socio-Economic & Land Use Characteristics - Corktown Station

Hello [REDACTED]

Thank you for reaching out about the [Ontario Line station serving Corktown](#).

The station itself will be located north of Front street, where the Staples is currently located. The site just south of Front street, between Berkeley Street and Parliament Street, commonly known as the First Parliament site, will be used to support the construction of Corktown Station and tunnelling activities in order to reduce community impacts and keep construction off the street.

[Early works](#) including the demolition of existing buildings followed by environmental due diligence activities such as archaeological assessments are planned to begin as early as September 2021. The main contract work – tunneling/underground construction activities followed by Corktown Station construction - will start in approximately 2023. As far as the long term development vision for the site, the province is pursuing a transit-oriented community proposal for the site for which you can find more details [here](#).

Metrolinx and the Province plan to work with the City of Toronto, Indigenous Nations and the local community to raise the profile of the site in downtown Toronto where Upper Canada's first parliament buildings used to stand. While the site is now mostly occupied by a parking lot, a car rental dealership, and a car wash, we want to make sure that any history hidden under the surface is interpreted and commemorated:-

I'll take this opportunity to let you know that we are hosting a Virtual Open House for the Downtown Segment of the Ontario Line, which includes Corktown station, this Thursday June 17th at 6:30pm. You can register for the event [here](#).

I hope this helps, and please don't hesitate to let me know if you have any other questions.

What are your thoughts on the Socio-Economic Environment study key findings and identified potential impacts and mitigation measures?

First Parliament was a rather small log cabin. Why not rebuild it so it's a destination, it honors history, and then build huge towers above it to pay for everything? Can't we have it all? Our family wants more than a plaque. Rebuilding the log cabin and building around it will not cost much and will please everyone... [REDACTED]

Subject: RE: Corktown Station Early Works Report - impact on 90 Trinity Street condos unaddressed

Hello 

Thank you for your email about Corktown station.

We understand your concerns. We know that building a large transit project like this one can be disruptive by nature and we will be working closely with the community to mitigate impacts and disruptions.

To answer your first question about measurements, as part of the Draft Corktown Station Noise & Vibration Early Works Report preparation, a noise screening was conducted to identify noise sensitive receivers located within the study area. The study area was determined by identifying the area where the daytime and nighttime noise assessment criteria are predicted to be met during construction, using a conservative approach. Representative noise sensitive receptors were selected based on their location in the study area and their proximity to the Corktown Station Early Works Project Footprint, and are those closest to the Project Footprint. Although 90 Trinity Street is located in the study area, it is further from the project footprint than other receptors. As shown in Figure 5-1 of the report, 393 King Street East is the closest representative noise sensitive receptor to 90 Trinity Street. However, since 90 Trinity Street is farther from the project footprint than 393 King Street East, the construction noise levels experienced at 90 Trinity Street are anticipated to be lower.

As for your second question about measurements in the Draft Early Works Report, construction noise impacts are assessed using construction noise assessment criteria rather than existing noise levels because construction noise is a temporary occurrence that will cease at the end of the work. As a result, existing noise level measurements collected at MO_04S Erin Street were not used in this assessment. Criteria adopted for the Corktown Station early works noise impact assessment are outlined in Table 2-6 of the Corktown Station Early Works Noise & Vibration Report and were based on the review of guidelines from the Ministry of the Environment, Conservation and Parks, City of Toronto and the United States Federal Transit Administration. As early works planning progresses, project-specific noise limits will be established, noise levels will be monitored during construction and mitigation measures will be implemented to reduce noise impacts.

It is important to note that the Corktown Station early works only include demolition of existing

buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation of soil where required. These early works are being advanced to prepare the site for archaeological assessments and future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station. The assessment of project operations and construction of Corktown Station and other project components will be outlined in the Ontario Line Environmental Impact Assessment Report planned to be released in early 2022 and will include further assessment of and mitigation measures for noise and vibration impacts.

To learn more about noise and vibration, please see the [Ontario Line Noise and Vibration Info Sheet](#) as well as the [Ontario Line Final Noise and Vibration Environmental Conditions Report](#) (Section 2 and 3 of the report describe how the baseline noise and vibration conditions were determined). As noted in the Draft Corktown Station noise and vibration report, mitigation measures will be implemented to reduce early works noise and vibration impacts. Any noise and vibration impacts during construction will be temporary. The noise and vibration study for the operations phase of the Ontario Line project is currently ongoing and results pertaining to Corktown Station and area will be shared as part of the forthcoming Environmental Impact Assessment Report. In accordance with provincial guidance, noise and vibration mitigation will be investigated if a project is predicted to exceed any applicable noise and vibration limits (see Noise and Vibration Info Sheet for details).

If you have not already, we encourage you to sign-up for our [online newsletter](#) so you receive the latest information on the project as it becomes available.

I hope this helps address your concerns. Please don't hesitate to let me know if you have any further questions,

Dear Metrolinx representative,

Dear Councillor Wong-Tam,

As a resident of the eight-storey condo building at 90 Trinity Street in Corktown, I have reviewed Metrolinx's newly released Corktown Station Report and particularly the appendix on "Draft Noise and Vibration". Unfortunately, Metrolinx's report leaves me none the wiser about what to do with the most significant investment of my life -- my condominium -- at the very time that I have left the private sector in Toronto for at least two years in the federal public service in Ottawa, taking a significant pay cut. I require clarification to determine whether my property is going to face significant noise and/or vibration over the next decade and, on that basis, make an informed decision about what to do with it.

I made the financial sacrifice associated with going from private to public sector based partly on careful assumptions, including (in consultation with a realtor) that I will be able retain and rent out my Trinity Street condo for above the average Toronto monthly rental amount at any given time. Is that assumption sound following yesterday's news that vibratory rollers and tunnel boring machines will initially be concentrated one and a half blocks from me? In particular, is my condo going to face perceptible noise and vibration around the clock for several years starting this fall? If so, how significant is that noise and vibration going to be?

The Metrolinx report does not provide concrete information that could guide me at a time of sensitive financial, professional and geographical transition. In particular:

- The report repeatedly indicates noise and vibration predictions for several specific condo buildings by name, describing them as "the nearest representative noise sensitive receptors". Some of these, such as 5 Mill St, are further than 90 Trinity from the Corktown Station site, yet you never once mention 90 Trinity Street with its 77 owners. Why? Which of the representative receptors represents the noise/vibration effects on us? If none do, please provide equivalent data for 90 Trinity Street.
- The report includes Table ES-1: Relevant Baseline Noise Measurement Data, in which the measurements are from "MO_04S" Erin Street (in effect, the west side of 90 Trinity), yet does not include that same location in Table 5-1: Construction Noise Prediction Results. Why have you compared apples (baseline) with oranges (prediction)? Please provide noise prediction figures for the MO_04S Erin Street location to allow comparison.

Finally, as I am a lay person not versed in decibel or vibration measurements, please provide or refer me to an audio file or other resource that will allow me to meaningfully assess the predicted noise and vibration effects on my property and make an informed decision about how to handle the single largest investment of my life at a delicate time of transition.

Subject: RE: Contact Ontario Line Submission

Hello [REDACTED]

Thank you for your email.

I am understanding your questions to be about the First Parliament site and Corktown station, and am happy to provide some information on this, but please let me know if your questions are about another Ontario Line station.

The First Parliament site is required for subway construction of the Ontario Line and is also the site of a proposed transit-oriented communities (TOC) development that will support local transit needs. While the site is now mostly occupied by a parking lot, a car dealership, and a car wash, we want to make sure that any history hidden under the surface is interpreted and commemorated as part of the Ontario Line design. To this end, archaeologists will investigate the site beginning in the Fall of 2021 before construction begins so that important features and artifacts can be documented and conserved.

As archaeological work gets underway and we begin to understand what type of features and archaeological resources exist, the First Parliament Working Group will advise the Province on appropriate commemoration for the history and artifacts that may be uncovered at the site. The Working Group consists of representatives from Metrolinx, Infrastructure Ontario, the Ministry of Heritage, Sport, Tourism and Culture Industries, as well as nine different City of Toronto departments and the Mississaugas of the Credit First Nation. This includes the development of a robust Heritage Interpretation and Commemoration Plan for this site which builds on the Heritage Interpretation Strategy and the Master Plan work led by the City and reflects the community's input. There will be further opportunities for community consultation and engagement as the environmental and archaeological process related to the Corktown station and First Parliament site advances.

On the long-term development vision for the site, following review by the City of Toronto the Province will be engaging with the local community to gather feedback on the proposed plans to ensure they meet the needs of the community they will serve. The Province will also engage with Indigenous partners to better understand their interest in the project and plan to launch engagement in Fall 2021. The specific details around station entrance design will be determined based on criteria set for the constructor by Metrolinx. This will ensure consistency for customers along the entire Ontario Line route while still allowing for exterior elements at each station entrance to reflect the unique character of the neighbourhood.

I hope this is helpful, but please don't hesitate to let me know if you have any further questions.

Best,

Bismah

Subject: Architectural Design Elements

Message:

Hi Metrolinx,

I am excited about the Ontario Line, the recognition of the site and the neighbourhood enhancement that Metrolinx will bring. However, from the initial drawings of the site, it appears that the architectural design doesn't match the heritage designated buildings in the immediate area, could you confirm whether or not that there is language in place for the exterior station elements and street level frontage of the new developments within the study area are to match the historical buildings or if this decision will be left to the developers?

Regards,

Subject: Re: Form submission from: Built Heritage Resources & Cultural Heritage Landscapes - Corktown Station

Hi [REDACTED]

Hope you are well.

Thank-you for providing your feedback on the Draft Corktown Station Early Works Report.

The Corktown Station Early Works Built Heritage Resources and Cultural Heritage Landscapes Study Area consists of the Corktown Station Early Works Project Footprint and properties adjacent to the footprint. The Corktown Station Early Works Built Heritage Resources and Cultural Heritage Landscapes Study Area is shown in Figure 5-16 of the [Draft Corktown Station Early Works Report](#). The definition of “adjacency” in the City of Toronto Official Plan has been used for the purpose of identifying properties adjacent to the Corktown Station Early Works Project Footprint and is as follows: “those lands adjoining a property of the heritage register or lands that are directly across from and near to a property on the heritage register and separated by land used as a private or public road, highway street, lane, trail, right-of-way, walkway, green space, park and/or easement, or an intersection of any of these; whose location has the potential to have an impact on a property on the heritage register; or as otherwise defined in a Heritage Conservation District Plan adopted by by-law”.

As 70 Berkeley Street does not adjoin with a property located within the project footprint and is not located directly across from and near the project footprint, it is not applicable to the Corktown Station Early Works Report. However, 70 Berkeley Street is documented in the [Ontario Line Cultural Heritage Report: Existing Conditions and Preliminary Impact Assessment](#), which was issued on November 30, 2020.

I’d like to take this opportunity to let you know that we are holding another virtual open house for the downtown segment tomorrow, in case you haven’t heard. You can register for the event [here](#).

I hope this information is helpful, and please do let me know if you have any further questions,

What are your thoughts on the Cultural Heritage Report key findings and identified potential impacts and mitigation measures?

Hello everyone,

I am concerned that the group of identified heritage buildings in the above report does not include 70 Berkeley Street (the Alumnae Theatre). The northern boundary of the area you survey appears to be Adelaide Street as is evidenced by the inclusion of the row houses on the east side of Berkeley (north of King) and the former Nienkamper building at King and Berkeley. 70 Berkeley is on the south west corner of Berkeley and Adelaide and so should be included in your list of heritage buildings.

Here is a link to the entry for 70 Berkeley Street in TO Built, a database of heritage buildings posted by the Architectural Conservancy of Ontario. This entry includes the text for a plaque from Heritage Toronto (on the building since 2010).

https://www.acotoronto.ca/show_building.php?BuildingID=2712

I would appreciate hearing from you about this matter.

Many thanks,

Subject: RE: Contact Ontario Line Submission

Hello 

I understand your concerns about noise and vibration impacts at your property and hope the below information provides some clarity.

The closest noise sensitive receptor to 90 Trinity is 393 King Street East. Seeing as it is closer to the project footprint than 90 Trinity, it is anticipated that the construction noise levels experienced at 90 Trinity are anticipated to be lower than at 393 King Street East. It is important to note that the demolition noise prediction results in the Draft Early Works Report do not account for mitigation measures that will be considered.

The baseline noise level measurement results at Erin Street are provided in the Corktown Station Early Works Noise and Vibration Report to characterise the existing conditions within the study area; these measurements were obtained as part of the Ontario Line Existing Conditions Report development. Corktown Station early works construction noise impacts were assessed by predicting noise levels and comparing predicted levels against construction noise criteria adopted for the assessment. The Erin Street location where noise level measurements were completed is located further away from the early works site and is expected to have lower noise levels than the locations closest to the works site shown in Figure #5-1 of the Report. It was thus not part of the assessment. The construction noise assessment criteria are shown in Table 2-6 of the Report. These criteria were developed based on review of guidelines from the Ministry of the Environment, Conservation and Parks, City of Toronto and the United States Federal Transit Administration. As early works planning progresses, project-specific noise limits will be established. Noise levels will be monitored during early works completion, and mitigation measures will be implemented to reduce noise impacts. To learn more about noise and vibration, please see the [Ontario Line Noise and Vibration Info Sheet](#) as well as the [Ontario Line Final Noise and Vibration Environmental Conditions Report](#) (Section 2 and 3 of the report describe how the baseline noise and vibration conditions were determined).

Construction noise mitigation measures may include, but won't be limited to performing construction during daytime hours where possible, using equipment compliant with noise level specifications from the Ministry of Environment, Conservation and Parks, and siting construction vehicles and construction laydown and staging areas away from sensitive receptors where possible. Other practical steps we take to reduce noise and vibration in residential areas include fitting equipment with muffling devices, using equipment and coordinating construction schedules so that noisy operations do not occur simultaneously. These mitigation measures will be refined and updated as project planning progresses.

It is important to note that the Corktown Station early works only include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation of soil where required. These early works are being advanced to prepare the site for archaeological assessments and future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station. The assessment of project operations and construction of Corktown Station and other project components will be outlined in the Ontario Line Environmental Impact Assessment Report planned to be released in early 2022 and will include further assessment of and mitigation measures for noise and vibration impacts.

Please don't hesitate to reach out to our team if you have any further questions,

Subject: Corktown Station Early Works report - inconsistent baseline and predictive noise tables

Message:

The Corktown Early Works Report includes Table ES-1: Relevant Baseline Noise Measurement Data, setting out baseline noise measurements from Erin Street

(which runs along my building) -- but proceeds to compare apples and oranges by following it with Table 5-1: Construction Noise Prediction Results, in which Erin Street is not even mentioned. How can local residents assess the expected noise impacts of Metrolinx's plans if you provide "baseline" and "prediction" noise measurements for different locations? Please provide predicted noise numbers for Erin Street.

Second, the report makes no mention of 90 Trinity Street -- and eight-storey residential building -- by name, despite it being closer to the Corktown Station site than many of the other residential addresses specifically cited. Did Metrolinx neglect to include 90 Trinity in an oversight? Or, if it was deliberate, why was that decision made?

Subject: RE: New Station

Hi [REDACTED]

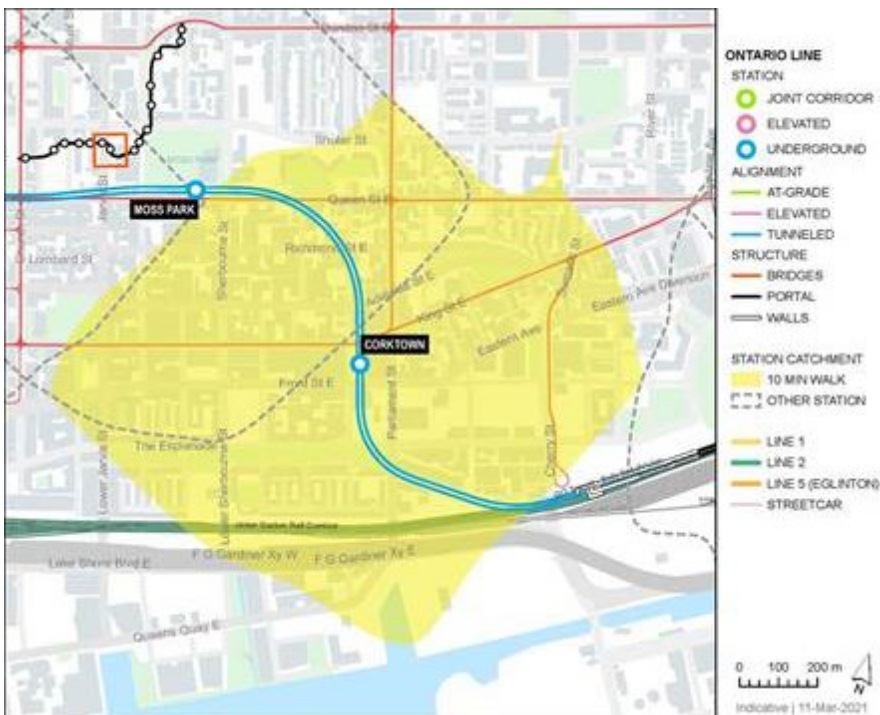

Thanks for your questions!

Yes, the planning process for the Ontario Line considers future population growth and the associated increased demand for transit.

On serving the Portlands, we are working with the City of Toronto and their Waterfront East LRT initiative to explore opportunities to integrate both transit projects.

To provide some more details on the planning process, Ontario Line station locations were studied with a goal of increasing access to transit, maximizing ridership, achieving travel time savings, reducing overcrowding on existing transit services and creating better access to jobs. These criteria are balanced by cost and other community considerations. If you want to learn more, you may wish to read the [Preliminary Design Business Case](#) (page 41 provides an overview of every Ontario Line station with a rationale for the location and proposed transit connections).

Here is the walkability map for Corktown station which shows in yellow the area that is within a comfortable 10 minute walk:

Please let me know if you have any further questions.

Stay safe,

Hi.

Thank you for your response. Was the Portland's redevelopment and the ridership generated from that considered in the planning rationale between skipping the cherry street station?

Also. Is there a walk ability or pedestrian connectivity map for cork town /east harbour? So that I can see how close these will be?

Also how will the waterfront east lrt be integrated ?

On Tue, May 4, 2021 at 10:20 AM Ontario Line <ontarioline@metrolinx.com> wrote:

Hello [REDACTED]

Thank you for your questions, and I hope this finds you well.

The alignment of 15 stations between Exhibition and Ontario Science Centre is the one that Metrolinx is advancing.

Within a 6-minute walk from the Distillery District, the Ontario Line Corktown station is intended to serve this area, Corktown, St. Lawrence Market and the West Don Lands as well as provide relief to the busy 504 King Streetcar. We anticipate that 26,400 people to be within a comfortable 10-minute walk from Corktown station, and at peak hours we anticipate a ridership of 4100 people. When looking at the possibility of a station on Cherry street, one of the important considerations was spacing between stations. If we put a station in this area then then we are very close to both Corktown and East Harbour Stations, and this can have an impact on overall time savings for travellers.

We are working closely with the City, TTC and Waterfront Toronto to develop complementary plans for future transit expansion such as the Waterfront East LRT and a streetcar extension down Cherry Street, with the goal of creating the best possible customer experience.

I hope this helps answer your questions, but please do let me know if you have any further questions. To stay up to date with the latest information, I hope you will consider signing up for the Ontario Line [online newsletter](#) if you are not already subscribed.

To Whom It May Concern,

I'm wondering why there has not been a station planned at Cherry Street. This new connection to the portlands/distillary district/East Bayfront as well as to the StreetCars planned for this area just makes sense.

Is there a plan to have future stations added along the line in this area? There is also the heritage feature of the old Cherry Street Station building that could be incorporated into the design.

Subject: follow up regarding Corktown station

Hi [REDACTED],

Thanks again for participating in last night's virtual open house for the Ontario Line downtown segment. I followed up with Infrastructure Ontario regarding your question about MZO's and got a bit more information about the next steps for development at Corktown station:

The Province's aim is to work with the City through a streamlined review process for our proposed transit-oriented communities development concepts while maintaining stated project timelines. Infrastructure Ontario noted they are looking forward to beginning that review process with the City of Toronto but also said that independent of the approval process necessary to advance transit-oriented communities development, the Province was committed to engage and consult with both the City of Toronto and the public around all transit-oriented communities development proposals.

The public consultation for development at Corktown is expected to begin this fall and Metrolinx will post/share more information as soon as we receive it.

I hope this is helpful. Talk soon.

Hello [REDACTED],

Thank you for your email about the Ontario Line plans for the future Corktown station, and the goal of commemorating the history within the First Parliament site.

While the First Parliament site will be used during construction of the nearby Ontario Line station serving Corktown, we will be making every effort to minimize impacts on cultural and heritage sites. We work with experts before, during, and after construction to ensure cultural and heritage spaces are treated with care. Any ground disturbing activities on the First Parliament Site will only begin once robust archaeological assessments are completed. These archaeological plans are currently being developed in collaboration with the City of Toronto, representatives of the Mississaugas of the Credit as treaty holder, the Ontario Heritage Trust, Infrastructure Ontario and archaeological experts, as part of the First Parliament Working Group. You can learn more about this ongoing work in this [recent article on Metrolinx News](#). Metrolinx will also work in consultation with these partners to establish a Heritage Interpretation and Commemoration Plan which builds on the robust Heritage Interpretation Strategy for this site, as well as opportunities for further public engagement.

In terms of the long term vision for the site, the Province is working with the City of Toronto to develop a public engagement process for this Fall and the details will be communicated in the near future.

I would like to take this opportunity to share with you that Metrolinx is hosting virtual open houses for the Ontario Line starting this Thursday. There will be an open house on the downtown segment which includes Corktown station on April 26th at 6:30pm. You can find the registration details here: <https://www.metrolinxengage.com/en/OLliveApril26>

If you have not yet, you may wish to sign up for the Ontario Line newsletter to receive further updates by email. You can do so on the [Ontario Line website](#).

Subject: new hubs at Corktown and East Harbour announced today.

Message:

The newsletter I received today says "the Province will work closely with the City of Toronto, stakeholders and Indigenous Nations - in particular the Treaty 13 signatory, the Mississaugas of the Credit - to collaborate on a meaningful plan to commemorate the rich heritage of Canada's First Parliament site." Our past experience working with you as "stakeholders" has not been very productive. We have not felt our concerns have been seriously addressed. Will the process be different with the Corktown hub? Will you be willing to change plans if significant archeological finds are encountered and/or if there are serious objections from First Nations, the city or other stakeholders? Or do we get to decide no more than, say, the murals painted on the walls?

Bismah - i was just looking at the announcement and site plans. So it appears that the province is going to destroy the very foundations of the democracy of this province. What is left of the First Parliament Site should be protected and preserved in situ. Instead the province wants to build a huge condo on it and destroy it. What a shame. How sad. The government you work for has no pride in this province or its history. I am opposed to these plans.

Subject: **Province of Ontario Announcement - Corktown Station**

Hello [REDACTED],

I hope this email finds you well.

Considering your previous interest in the plans for the future station serving Corktown, I wanted to share with you that the [Province of Ontario announced today](#) it is working with the City of Toronto on preliminary plans to build a transit-oriented community at the future Corktown station along the Ontario Line subway. This is part of the government's Transit-Oriented Communities (TOC) program, which incorporates collaboration with municipalities and third-parties to bring more jobs and housing closer to transit along the routes of the province's subway projects. The Province is committed to working with the city, community groups and Indigenous Peoples to commemorate and celebrate the rich history of the First Parliament site, while also meeting the future growth potential for the area. Following City review, the province will engage with the community and Indigenous Peoples to gather feedback on the plans for the proposed Corktown site. It is anticipated this will occur starting in the summer of 2021.

As you may know, [plans for the Ontario Line](#) include a station at Berkeley and Front Streets and some adjacent land south of Front (the First Parliament site) for temporary construction and laydown. Any ground disturbing activities on the First Parliament site will only begin once robust archaeological assessments are completed. This work is set to begin in the summer of 2021. The Ontario Line project team is working with Indigenous Nations - in particular the Treaty 13 signatory, the Mississaugas of the Credit - and heritage experts to plan the necessary archeological work and we will have an update to

share in the next few weeks. You can learn more from today's update on Metrolinx News [here](#).

As always, if you have any questions, please do not hesitate to contact us here at OntarioLine@Metrolinx.com.

Best,

Bismah Haq

Subject: First Parliament Site - Ontario Line

Hi [REDACTED]

Thank you for sharing your feedback about the First Parliament Site.

As part of the Ontario Line project, Metrolinx will be working with the City, the Ministry of Heritage Sport Tourism and Culture Industries and the Ontario Heritage Trust to ensure an outcome for this site that everyone can be proud of.

While the First Parliament site will be used during construction of the nearby Ontario Line station serving Corktown, Metrolinx will be making every effort to minimize impacts on cultural and heritage sites. We work with experts before, during, and after construction to ensure cultural and heritage spaces are treated with care. Any ground disturbing activities on the First Parliament Site will only begin once robust archaeological assessments are completed. Metrolinx will ensure any archaeological findings or historical features will be properly documented or conserved and, where possible, made accessible for the public to learn more about. All of this work will be completed by professional archaeologists licensed under Section 48 of the Ontario Heritage Act. To learn more, you can read the [Downtown Neighbourhood Update](#) on Metrolinx Engage and select 'Corktown' from the drop down category. We also published a [blog post](#) about how Ontario Line plans will protect and pay tribute to the legacy of the First Parliament Site. If you have not already, consider signing up for our [online newsletter](#) where updates on the First Parliament Site will be shared with the community.

Please do not hesitate to reach out if you have any further questions,

Comments: Mr. Ford - I just read in the paper that Metrolinx wants to use the First Parliament site in Toronto for a subway station. I am totally opposed to this. It is bad enough that you are demolishing heritage buildings in the east end now you want to destroy the site of the First Parliament in Toronto? This is a site of provincial and national importance. There are remnants underground that survived the burning of the site by the Americans in the War of 1812 and you want to totally destroy it for a transit station? Unacceptable. This is really going too far. A properly interpreted site would be a major tourist attraction to this city. This site is the cradle of our democracy. Why would you want to destroy it? Please think about this. This is the wrong thing to do. This is a mistake. This can't happen. Look at another site for your transit stop. Please provide me the assurance that you will work with the city and the heritage community to properly protect and commemorate this site fitting its provincial and national significance. Do you want to be the Premier who is remembered for destroying this highly significant heritage site? [REDACTED]

Hello [REDACTED]

Thank you for your response and for sharing your concerns.

While the First Parliament site will be used during construction of the nearby Ontario Line station serving Corktown, we will be making every effort to minimize impacts on cultural and heritage sites. Archaeological plans for the site are currently being developed in collaboration with the City of Toronto, representatives of the Mississaugas of the Credit as treaty holder, the Ontario Heritage Trust, Infrastructure Ontario and archaeological experts, as part of the First Parliament Working Group. Metrolinx will also work in consultation with these partners to establish a Heritage Interpretation and Commemoration Plan which builds on the robust Heritage Interpretation Strategy for this site, as well as opportunities for further public engagement.

I'll take this opportunity to share with you that Metrolinx is hosting virtual open houses for the Ontario Line starting this Thursday. There will be an open house on the downtown segment which includes Corktown station on April 26th at 6:30pm. You can find the registration details here: <https://www.metrolinxengage.com/en/OLliveApril26>

Lastly, if you have not yet done so, I'd encourage you to sign up for our e-newsletter on the [Ontario Line website](#) to stay in the loop for further updates.

Please do let us know if you have any questions.

Best,

Thank you for keeping me informed. I am totally against putting condos and a community centre on a significant piece of this country's history. Of all places to do it. Will Ft. York's lands be next. It wouldn't surprise me or maybe Queen's Park.

The First Parliament site**

Message:

I am writing to reinforce the importance of the First Parliament Site and the need to preserve it. And not have the Ontario Line ruin the plans for it.

The First Parliament site is such an important part of our history, not only to Ontario but to the country. Not only is it so important in the history of the war of 1812, but it was also the place where the first act in the British Empire to abolish slavery, was signed in 1793. To honour this site is honouring the men who fought to keep Canada in Canada and to freeing people from slavery.

This important site also needs to be preserved due to it being our first Parliament, as well as its history following. A lot of work has already been put in place in order to honour this significant part of our history with plans to commemorate it. If this was America it would have been done long ago.

This site should not be used for anything other than as an historical site. So little of our history remains and this is a VERY significant one.

This should have consultation with the city and with other involved parties.

Received March 24, 2021

February 14th 2021 Metrolinx
Communication Officer Van der Valk,

we all know that without History there is no future, only money greed power being repeated through history in the ever presence of now seen in the Ford government 'Booze Alley Politics' where Money is The value of Human Worth and Nature's gifts from which the hope promise of a better future never comes. Metrolinx does it's job for a government needing votes as our past is erased for a smart city.

The Ontario Government applied an expropriation order for the historic property site of our First Parliament of 1798. Has the City Council dsignated that property as an Historical Cultural Heritage property accordingly to the Ontario Heritage Act Part 4 Section 29 and listed on the Munciple Register as such kept by the Munciple Clerk?

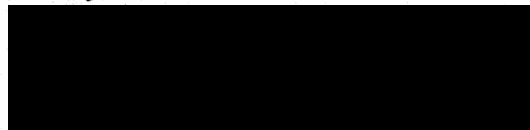

The Act is to ensure the preservation of threaten historical properties for the benefit of present and futre generations. Doesn't the government need to legislature changing the Act to expropriate these Heritage properties or can they just run shotgun over anything they want to do?

A City that allows it's History to be destroyed is a city that strives for a future that reaches for something it's not, becoming Beggars to Sidewalk Labs instead of Innovators with Fab Lab of Barcelona Spain. The Youth without History wanders, looking for their Identity elsewhere for their imagination hopes and dreams are in America, not here. The Heritage Act is as much a farce as 'We the North' is a farce needing Americans to be our heroes e.g. Rapters Hollywood, Rap Songs etc., to feel our worthiness is acknowledged as something more than just a bunch of Wanna-be's from not knowing our Heritage. If Councillors don't care enough to confront the government on protecting our Birthright than we are not much more than Wanna-be's and Beggars.

We live in an undiscovered country, that is not in schools, not in Movies, not on Screens, not anywhere, just politicians bargaining us away for money, convience and votes for our hopes and dreams. Sad.. so sad.. to be what could be... EH!

Not

Sincerely,

And sending my regards to Metrolinx all the best in Their bean counting. After all there are other Historic sites for the government to rail over. I'm sure eh!

Subject: RE: Questions

Hi [REDACTED]

Thank you for your question.

According to current plans, the Ontario Line tunnels will run below 39 Parliament Street however there are no anticipated impacts to the condo building itself. In terms of flood protection, we are working with the Toronto Region Conservation Authority to ensure Ontario Line plans are coordinated with flood protection plans in the area. As we move forward with the design of the Ontario Line, flood protection is a key consideration and priority.

If you have not yet, consider reading our [website](#) for more information on the Ontario Line and to sign up for our e-newsletter. Since you live in the Distillery District, scroll down and click the 'Downtown Neighbourhood Profile'. From this page, you can read more about all the Ontario Line stations close to your neighbourhood.

Feel free to reach out should you have any further questions,

Can you tell me if the subway line is going right under the condo building at 39 Parliament Street? Surely there is going to be an issue with regard to this being in a flood protection area. Will that not

be a problem when it comes to going so deep? Its my understanding that we couldn't have a second level of parking because of this very issue.

Hi [REDACTED],

Thank you for your patience.

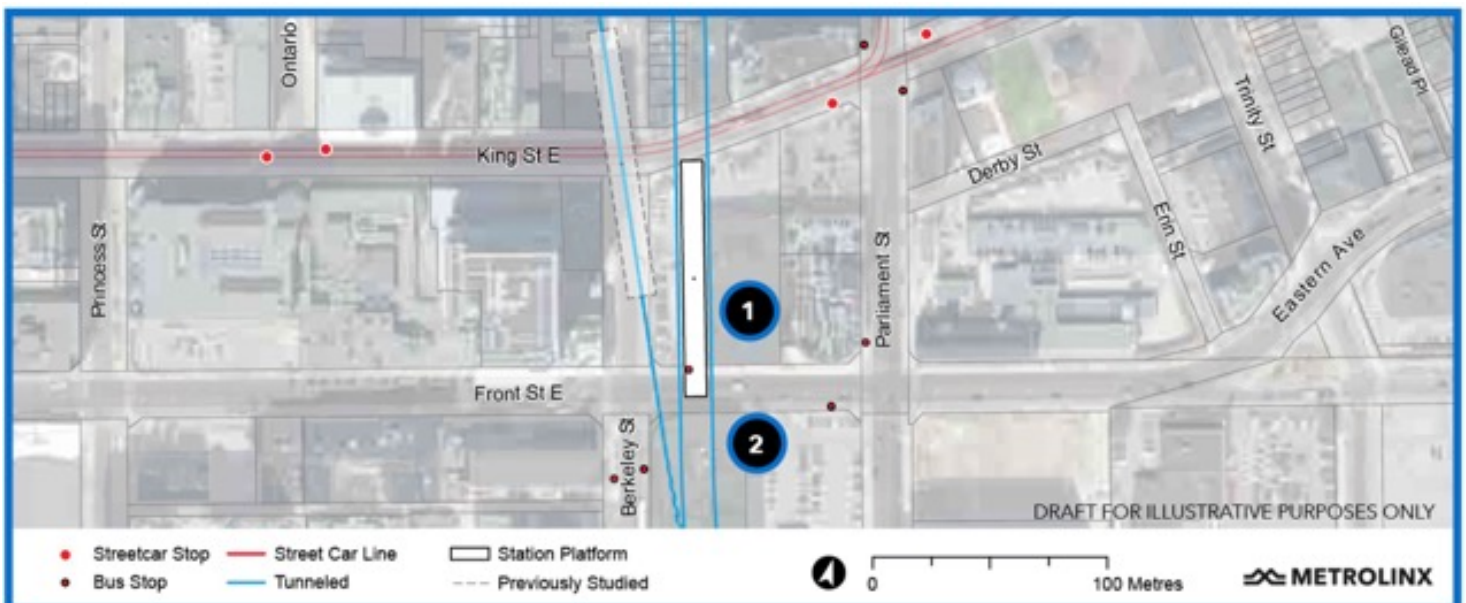

I was able to confirm with our Community Relations group that the station serving Corktown will be located where the Staples currently is, on the east side of Berkeley between King and Front. To reduce community impacts and keep construction off the street, the First Parliament Site will be used to support construction of the Ontario Line.

In the attached image, the first bubble refers to the location of the station while the second bubble refers to land which will be used for construction activities also known as the First Parliament Site.

If you have not already, please sign up for the Ontario Line [e-newsletter](#). This is a great way to receive all the latest updates about the project.

Dear Marcia Elie,

Thanks for your prompt reply, but unfortunately you really didn't address my questions, so your clarification really didn't clarify.

Below is a copy of my initial inquiry, and I've highlighted the matter that interests me most — the planned location of the future Corktown station.

Re the Downtown portion of the Ontario Line, there appears to be confusion regarding what may happen on/around the so-called First Parliament site, which is a stone's throw from where I live. I've read numerous media reports saying that the "site" will be expropriated and be the location of the future Corktown station. However, the Metrolinx website indicates that the Corktown station will be located on the east side of Berkeley between King and Front, and not on the heritage "site" which is south of Front. The Metrolinx website doesn't actually specify what will be developed on the heritage "site", only that its archaeological and historical significance will be a factor. I've already noticed that core drilling is currently underway at various locations on the "site" -- when I spoke with workers they informed me that their drilling was related to eventual tunnelling for the Ontario Line. Can you please briefly clarify the confusion regarding where the Corktown station will be located, and what is currently proposed for the actual First Parliament heritage site?

In your reply you state that the First Parliament site is needed for the future Corktown station. However, the following image and information taken from the Metrolinx website indicate that "The station

serving Corktown will be located to the east side of Berkeley Street at King Street East." That would place the station north of Front Street and the First Parliament site.

So, leaving aside whatever may happen to the First Parliament site, is the information posted on the Metrolinx website correct? Will the Corktown station be "on the east side of Berkeley at King Street East"?

Regards,

[REDACTED]

<customerrelations@metrolinx.com> wrote:

Dear [REDACTED]

Thank you for contacting Metrolinx.

We appreciate your feedback regarding the Ontario line and the future location of the Corktown station. I apologize that there is confusion where this station will be built. Please let me clarify.

The First Parliament site is needed for the future Corktown subway station of the Ontario Line. While the land is needed to support the Ontario Line, our aim is to discuss our shared needs with the City to reach a mutually beneficial agreement on a path forward.

We've always envisioned this as a partnership. Communities are at the heart of our project and we heard from a lot of you last fall and we are excited to continue community engagement on the Ontario Line in March.

Subject: Ontario Line Update: Early Works Report - Corktown Station

Hello,

On behalf of Metrolinx, we are writing to share some information about the Ontario Line project.

As you may know, the proposed Ontario Line will bring 15.6 kilometres of much-needed rapid transit service to our city to make it faster and easier for hundreds of thousands of people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition Station/Ontario Place in the southwest with 15 potential stations, including six interchange stations, and 17 new connections to GO train lines and existing subway and streetcar lines.

As the next step in the environmental assessment process for the Ontario Line, we are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report for public consultation](#).

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint. These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.** Please take time to review the draft report and provide your feedback through the webform or by email: ontarioline@metrolinx.com.

The Ontario Line Environmental Impact Assessment Report to be released in early 2022 will include an assessment of project operations and construction of Corktown Station and other project components.

Subject: Ontario Line Update: Early Works Report - Corktown Station

Hello,

On behalf of Metrolinx, we are writing to share some information about the Ontario Line project.

As you may know, the proposed Ontario Line will bring 15.6 kilometres of much-needed rapid transit service to our city to make it faster and easier for hundreds of thousands of people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition Station/Ontario Place in the southwest with 15 potential stations, including six interchange stations, and 17 new connections to GO train lines and existing subway and streetcar lines.

As the next step in the environmental assessment process for the Ontario Line, we are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report for public consultation](#).

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint. These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.** Please take time to review the draft report and provide your feedback through the webform or by email: ontarioline@metrolinx.com.

Subject: Re: Metrolinx - Appendix A4 - Heritage Detailed Design Report - Corktown EWR.pdf

Hello [REDACTED]

Thank you for bringing this to our attention.

I passed your message on to the team leading the Early Works Report and they noted that updates to boundaries and the heritage register sometimes do take some time to become available from the City of Toronto. The revised St. Lawrence HCD boundary was uploaded to the City of Toronto dataset in late April 2021, not long before the Draft Early Works Report was published on May 12.

Rest assured, the updated St. Lawrence HCD boundaries will be included in the Final Corktown Station Early Works Report to be released in July 2021.

Again, thank you very much for your note, and please don't hesitate to let me know if you have any further questions or feedback.

Hope you have a great weekend,

Bismah

To whom it may concern.

I'd like to bring to your attention that **Metrolinx - Appendix A4 - Heritage Detailed Design Report** - is incorrect in respects to the *St. Lawrence HCD* boundaries.

The report illustrate maps and mentions, in several areas, the St. Lawrence HCD boundaries prior to LPAT's decision dated July 27, 2020 (MM160020).

I'm somewhat surprised as AECOM's report is dated a year following the Ontario Tribunal decision. In my opinion, it's important that this be brought to your attention.

# Corktown Station Early Works Report brings Ontario Line another step closer to reality

Metrolinx is looking for community feedback on a new environmental assessment, released today, for the early works required at Ontario Line's future Corktown Station.

The Corktown Station Early Works Report will guide important environmental and archaeological work that's needed before construction begins at the site, and is an important step in keeping the project on track.

Ontario Line's Corktown Station will provide convenient transit connections east of the downtown core, integrated with a vibrant mix of housing, commercial, retail and community space, all while commemorating the important history and culture connected to the [First Parliament site](#).

[Read](#) more about the report, check out the [Draft Corktown Station Early](#)

[Works Report](#) and [provide your feedback](#) by June 11, 2021.

**Subject:** Ontario Line Update: Early Works Report - Corktown Station

Hello,

We are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report](#) for public consultation. This is the next step in the environmental assessment process for the Ontario Line.

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint.

These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.**

The Ontario Line Environmental Impact Assessment Report to be released in early 2022 will include an assessment of project operations and construction of Corktown Station and other project components.

Please take time to review the draft report and provide your feedback through the webform or by email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Stay safe!

**Subject:** Province of Ontario Announcement - Corktown Station

Hello,

Hope this email finds you well.

We are writing to share that the [Province of Ontario announced today](#) it is working with the City of Toronto on preliminary plans to build a transit-oriented community at the future Corktown station along the Ontario Line subway. This is part of the government's Transit-Oriented Communities (TOC) program, which incorporates collaboration with municipalities and third-parties to bring more jobs and housing closer to transit along the routes of the province's subway projects. The Province is committed to working with the city, community groups and Indigenous Peoples to commemorate and celebrate the rich history of the First Parliament site, while also meeting the future growth potential for the area. Following City review, the province will engage with the community and Indigenous Peoples to gather feedback on the plans for the proposed Corktown site. It is anticipated this will occur starting in the summer of 2021.

As you know, [plans for the Ontario Line](#) include a station at Berkeley and Front Streets and some adjacent land south of Front (the First Parliament site) for temporary construction and laydown. Any ground disturbing activities on the First Parliament site will only begin once robust archaeological assessments are completed. This work is set to begin in the summer of 2021. The Ontario Line project team is working with Indigenous Nations - in particular the Treaty 13 signatory, the Mississaugas of the Credit - and heritage experts to plan the necessary archeological work and we will have an update to share in the next few weeks.

As always, if you have any questions, please do not hesitate to contact us here at [OntarioLine@Metrolinx.com](mailto:OntarioLine@Metrolinx.com).

Best,

The Ontario Line Community Relations Team

**Subject:** Province of Ontario Announcement - Corktown Station

Hello,

Hope this email finds you well.

We are writing to share that the [Province of Ontario announced today](#) it is working with the City of Toronto on preliminary plans to build a transit-oriented community at the future Corktown station along the Ontario Line subway. This is part of the government's Transit-Oriented Communities (TOC) program, which incorporates collaboration with municipalities and third-parties to bring more jobs and housing closer to transit along the routes of the province's subway projects. The Province is committed to working with the city, community groups and Indigenous Peoples to commemorate and celebrate the rich history of the First Parliament site, while also meeting the future growth potential for the area. Following City review, the province will engage with the community and Indigenous Peoples to gather feedback on the plans for the proposed Corktown site. It is anticipated this will occur starting in the summer of 2021.

As you know, [plans for the Ontario Line](#) include a station at Berkeley and Front Streets and some adjacent land south of Front (the First Parliament site) for temporary construction and laydown. Any ground disturbing activities on the First Parliament site will only begin once robust archaeological assessments are completed. This work is set to begin in the summer of 2021. The Ontario Line project team is working with Indigenous Nations - in particular the Treaty 13 signatory, the Mississaugas of the Credit - and heritage experts to plan the necessary archeological work and we will have an update to share in the next few weeks.

As always, if you have any questions, please do not hesitate to contact us here at [OntarioLine@Metrolinx.com](mailto:OntarioLine@Metrolinx.com).

Subject: Ontario Line Update

Hello [REDACTED]

I hope you are doing well and enjoying the warmer weather.

I am connecting with you today to share an Ontario Line [blog post](#) which details the progress made and what communities can expect this year. For residents in Corktown, we expect to provide an update in the near future with concept renderings and proposed station entrance locations of the Ontario Line station which will serve Corktown and what this all means for the First Parliament site.

While health and safety restrictions continue to be in place, I can share we will be hosting a round of virtual open houses this spring so residents can understand the look and feel of the Ontario Line in their neighbourhood. As always, the Ontario Line Community Relations team is available by phone or email to listen to community feedback, provide the latest updates and answer questions. I know we never had a chance to chat with the CRBA board so happy to offer a phone call if you have any questions.

Here are some helpful links:

- Our [blog post](#) detailing our commitment to protecting and paying tribute to the First Parliament Site.
- Our [e-newsletter](#) where folks can receive the latest updates on the project.
- Click [here](#) for different ways to contact us either by phone, email or set up a meeting.
- The [Downtown Neighbourhood Update](#) which includes more information about planned stations serving Osgoode, Queen, Moss Park and Corktown.

Please reach out if you have any further questions,

Hello,

We are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report](#) for public consultation. This is the next step in the environmental assessment process for the Ontario Line.

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint.

These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.**

The Ontario Line Environmental Impact Assessment Report to be released in early 2022 will include an assessment of project operations and construction of Corktown Station and other project components.

Please take time to review the draft report and provide your feedback through the webform or by email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Hello,

On behalf of Metrolinx, we are writing to share some information about the Ontario Line project.

As you may know, the proposed Ontario Line will bring 15.6 kilometres of much-needed rapid transit service to our city to make it faster and easier for hundreds of thousands of people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition Station/Ontario Place in the southwest with 15 potential stations, including six interchange stations, and 17 new connections to GO train lines and existing subway and streetcar lines.

As the next step in the environmental assessment process for the Ontario Line, we are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report for public consultation](#).

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint. These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

Hello,

We are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report](#) for public consultation. This is the next step in the environmental assessment process for the Ontario Line.

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint.

These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.**

**Subject:** Province of Ontario Announcement - Corktown Station

Hello,

Hope this email finds you well.

We are writing to share that the [Province of Ontario announced today](#) it is working with the City of Toronto on preliminary plans to build a transit-oriented community at the future Corktown station along the Ontario Line subway. This is part of the government's Transit-Oriented Communities (TOC) program, which incorporates collaboration with municipalities and third-parties to bring more jobs and housing closer to transit along the routes of the province's subway projects. The Province is committed to working with the city, community groups and Indigenous Peoples to commemorate and celebrate the rich history of the First Parliament site, while also meeting the future growth potential for the area. Following City review, the province will engage with the community and Indigenous Peoples to gather feedback on the plans for the proposed Corktown site. It is anticipated this will occur starting in the summer of 2021.

As you know, [plans for the Ontario Line](#) include a station at Berkeley and Front Streets and some adjacent land south of Front (the First Parliament site) for temporary construction and laydown. Any ground disturbing activities on the First Parliament site will only begin once robust archaeological assessments are completed. This work is set to begin in the summer of 2021. The Ontario Line project team is working with Indigenous Nations - in particular the Treaty 13 signatory, the Mississaugas of the Credit - and heritage experts to plan the necessary archeological work and we will have an update to share in the next few weeks.

As always, if you have any questions, please do not hesitate to contact us here at [OntarioLine@Metrolinx.com](mailto:OntarioLine@Metrolinx.com).

Best,

The Ontario Line Community Relations Team

Hello,

On behalf of Metrolinx, we are writing to share some information about the Ontario Line project.

As you may know, the proposed Ontario Line will bring 15.6 kilometres of much-needed rapid transit service to our city to make it faster and easier for hundreds of thousands of people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition Station/Ontario Place in the southwest with 15 potential stations, including six interchange stations, and 17 new connections to GO train lines and existing subway and streetcar lines.

As the next step in the environmental assessment process for the Ontario Line, we are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report for public consultation](#).

On behalf of Metrolinx, we are writing to share some information about the Ontario Line project.

As you may know, the proposed Ontario Line will bring 15.6 kilometres of much-needed rapid transit service to our city to make it faster and easier for hundreds of thousands of people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition Station/Ontario Place in the southwest with 15 potential stations, including six interchange stations, and 17 new connections to GO train lines and existing subway and streetcar lines.

As the next step in the environmental assessment process for the Ontario Line, we are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report for public consultation](#).

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint. These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.** Please take time to review the draft report and provide your feedback through the webform or by email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

The Ontario Line Environmental Impact Assessment Report to be released in early 2022 will include an assessment of project operations and construction of Corktown Station and other project components.

Please do not hesitate to let us know if you have any questions or would like to set up some time to learn more about the Ontario Line. You may also wish to learn more through our [project website](#) or subscribe to our e-newsletter there to stay updated on the latest Ontario Line developments.

Stay safe!

**Subject:** Province of Ontario Announcement - Corktown Station

Hello,

Hope this email finds you well.

We are writing to share that the [Province of Ontario announced today](#) it is working with the City of Toronto on preliminary plans to build a transit-oriented community at the future Corktown station along the Ontario Line subway. This is part of the government's Transit-Oriented Communities (TOC) program, which incorporates collaboration with municipalities and third-parties to bring more jobs and housing closer to transit along the routes of the province's subway projects. The Province is committed to working with the city, community groups and Indigenous Peoples to commemorate and celebrate the rich history of the First Parliament site, while also meeting the future growth potential for the area. Following City review, the province will engage with the community and Indigenous Peoples to gather feedback on the plans for the proposed Corktown site. It is anticipated this will occur starting in the summer of 2021.

As you know, [plans for the Ontario Line](#) include a station at Berkeley and Front Streets and some adjacent land south of Front (the First Parliament site) for temporary construction and laydown. Any ground disturbing activities on the First Parliament site will only begin once robust archaeological assessments are completed. This work is set to begin in the summer of 2021. The Ontario Line project team is working with Indigenous Nations - in particular the Treaty 13 signatory, the Mississaugas of the Credit - and heritage experts to plan the necessary archeological work and we will have an update to share in the next few weeks.

As always, if you have any questions, please do not hesitate to contact us here at [OntarioLine@Metrolinx.com](mailto:OntarioLine@Metrolinx.com).

Best,

The Ontario Line Community Relations Team

Hello [REDACTED]

I hope you are doing well and enjoying the warmer weather.

I am connecting with you today to share an Ontario Line [blog post](#) which details the progress on the project so far and what communities and businesses can expect this year. For businesses and residents in the St. Lawrence Community, we expect to provide an update soon with concept renderings and proposed station entrances for the planned station at King and Berkeley and what this all means for the First Parliament site.

While health and safety restrictions continue to be in place, I can share we will be hosting a round of virtual open houses this spring so St. Lawrence residents and businesses can understand the look and feel of the Ontario Line in their neighbourhood. As always, the Ontario Line Community Relations team is available by phone or email to listen to community feedback, provide the latest updates and answer questions.

Here are some helpful links:

- Here is a link to our [e-newsletter](#) where folks can receive the latest updates on the project.
- Click [here](#) for different ways to contact us either by phone, email or set up a meeting.
- The [Downtown Neighbourhood Update](#) which includes more information about planned stations serving Osgoode, Queen, Moss Park and Corktown.

Please reach out if you have any further questions,

Subject: RE: Updated Agenda - SLNA Community Meeting - November 25; New Local History Highlight

Hello [REDACTED]

Thanks for your question about the First Parliament site. At the recent West Don Lands Committee meeting, we had a chance to hear from [REDACTED] who provided great feedback on this topic.

Metrolinx will be working with the Ontario Heritage Trust, the City of Toronto, Infrastructure Ontario and the community to collaboratively develop a detailed plan to recognize, conserve and commemorate the sites historical and cultural legacy and assets during transit construction. These ideas will inform future station design, the long term vision for the site, educational opportunities and how any findings will be preserved during and after construction. We're working with the city to determine how we pickup where the Master Plan conversations left off. I'll reach out as soon as we have a further update.

In terms of direct community engagement for the broader project, we are also working with Councillor Wong-Tam to establish local community tables. I need to check on the specific timelines for getting these setup but I know the goal was to have groups assembled by this summer. While health and safety restrictions continue to be in place, I can share we will be hosting a round of virtual open houses this spring so communities can understand the look and feel of the Ontario Line in their neighbourhood. As always, the Ontario Line Community Relations team is available by phone or email to listen to community feedback, provide the latest updates and answer questions.

I also want to take this opportunity to share an Ontario Line [blog post](#) which details the progress on the project so far and what communities can expect this year. For residents in the St. Lawrence community, we expect to provide an update soon with concept renderings and planned station entrance locations for the station at King and Berkeley.

Hi Daryl

Thanks for your email. I'm wondering about the community consultation and liaison committees for this work - particularly the First Parliament Site. This is something that we feel quite strongly about joining and the important role the board can play in community consultation.

Thanks

Hi [redacted]

I am well, thanks for asking. I hope your 2021 is going well so far.

Since we last spoke at the SLNA community meeting in November, there have been some updates we can share. As we shared via email on December 1, 2020, we released the Ontario Line [Final Environmental Conditions Report](#) which incorporates feedback we received during the engagement period. Just a reminder that this report presents a series of studies that explores the existing environmental conditions along the entire route of the Ontario Line and its surrounding areas, along with an initial understanding of potential impacts and possible solutions. The Environmental Conditions Report will be followed by an Environmental Impact Assessment Report that will provide a full analysis of impacts and mitigation measures. Due to current design progress, we expect to share this report with the SLNA at the start of 2022. On our online engagement hub, we released the [Preliminary Design Business Case](#) which builds on the initial business case we released in 2019. Thanks to feedback from the community, this report provides a clearer picture how the Ontario Line will benefit riders, communities and the region as a whole.

I also wanted to touch base on the First Parliament Site and reaffirm our commitment to protecting and paying tribute to the legacy of this land. As we mentioned in our previous community update to the SLNA, while the First Parliament site will be used during construction of the nearby Ontario Line station serving Corktown, Metrolinx will be making every effort to minimize impacts on cultural and heritage sites. We work with experts before, during, and after construction to ensure cultural and heritage spaces are treated with care. Metrolinx will ensure any archaeological findings or historical features will be properly documented or conserved and, where possible, made accessible for the public to learn more about. We also published a [blog post](#) about our commitment to the First Parliament Site. We will reach out to organize a meeting with the SLNA Heritage Committee [redacted] to hear some feedback from the community on the First Parliament Site.

I hope this update is helpful and feel free to forward any questions about the Ontario Line that comes out of your upcoming meeting on February 24th.

Best regards,

Hi Daryl,

I hope you're well. I wanted to check in with you to see if there have been any updates on the Ontario Line that you could share with us. I know last we spoke, Metrolinx was working on the environmental impact assessments and other review and prep work. Any updates to share?

Looking forward to hearing from you.

Best,

[REDACTED]

Hi [REDACTED]

It was great to see the new SLNA board and a pleasure to connect with the residents yesterday. I have attached the presentation we used to this email.

Regarding the Sherbourne bike lane closures, I've copied our colleagues on the Toronto East team who will be able to share more details.

Please let me know if there are any other questions I can help with.

Thanks,

Daryl

Hi Daryl,

Thanks so much for attending today's meeting. As requested if you could kindly share the presentation, we would like to distribute it to the community.

After you left a conversation came up about bike lanes and the closure of the Sherbourne North/South lanes. I understand this is happening because of a Metrolinx project. Would you be able to send more information about what disruption/changes we can expect and what considerations were taken for this? We may ask that someone come back to a future meeting to discuss further.

Thanks for your help,

Hi [REDACTED]

Hope you had a great weekend. Thank you for the updated agenda. We look forward to presenting at 7:40pm. We will join the meeting five minutes before our presentation.

The representatives from Metrolinx will be as follows:

Carrie Sheaffer or James Francis from our Environment team

Josh Vandezande, Lancefield Morgan and Daryl Gonsalves from Community Relations

Best,  
Daryl

## **Gardiner Rehabilitation Update**

[REDACTED]

As of November 13, regularly scheduled night work and the majority of weekend work is complete and the contractor will now be working on completing the remainder of the work during the day shift ( 6 a.m. – 6 p.m.). There is a possibility that night work will be required on occasion, and we will continue to provide prior notification, where possible.

Installations of the deck have also been completed and the remainder of the work throughout the winter will include:

- Concrete work on the deck

- Pouring traffic barrier walls

- Installing drainage

- Finishing activities such as lighting, painting, and signage

- Waterproofing

- Paving

- Substructure work, including removing access platforms

While the work is still ongoing as crews work towards the project's completion, residents can still expect to experience noise coming from the Gardiner from time to time. However, since the most disruptive type of work and overnight work is now complete, we are expecting minimal impact leading up to project completion.

The Gardiner Rehabilitation Community Liaison Committee, which the SLNA was instrumental in starting, will not meet until the new year.

## **Local History Highlight The Bank of Upper Canada**

***By Bruce Bell, Local Historian and Tour Guide***

The Bank of Upper Canada building on the NE corner of George and Adelaide completed in 1827 by Dr. W.W. Baldwin with the help of engineer Thomas Hall is the oldest building still standing in the original boundaries of the Town of York and is the oldest bank building standing in Canada today (the original boundaries of York are Adelaide to the north, Front to the south, Berkeley to the east and George to the west).

The bank was built by the influential elite of early York known as the Family Compact, a group of men whose authority and influence in the time before democratic rule was unstoppable.

In 1851, architect Fredrick Cumberland (St. James Cathedral 1853) added a three story wing on the north side of the original bank with an entrance on George St. and lived there with his family in the spacious apartments above.

In 1861, after 35 plus years the Bank of Upper Canada moved out to be closer to the new burgeoning financial district a few blocks westward. However in 1866 the once all powerful bank collapsed after ill advised mortgages granted on worthless land deals.

In 1870, the Christian Brothers bought the old bank building and turned it into De La Salle College.

In 1876, the Brothers hired architect Henry Langley to build a centre wing connecting the bank

with Toronto's former first Post Office (1833) next door then constructed a huge mansard roof that would attach the post office to the bank thus giving the appearance of one large building.

As the years rolled on and businesses and schools came and went, on June 30, 1978 a fire broke out that gutted the top floors and even though it was designated under the Ontario Heritage Act in 1975 the building was on the verge of being demolished.

It sat there an empty shell boarded up and forgotten even though it was now declared a National Historic site in 1979.

In 1980, the bank building with its great stone portico that encompassed two centuries of the political, economic and social history of Toronto plus the work of the city's greatest architects was rescued by developers Sheldon and Judy Godfrey and is back in use today as a desirable and much sought after business address.

## King Parliament Consultations

### Fall Consultation Materials Now Available

Between October 22 and November 3, 2020, City Planning held a series of online consultation events to provide an update and collect feedback on the [King-Parliament Secondary Plan Review](#). Thank you to everyone who participated in our four sessions:

**Thursday, October 22** - Virtual Open House (Project Overview)

**Monday, October 26** - Queen Street East and Corktown Areas

**Thursday, October 29** - Heritage, Parks and Public Realm

**Tuesday, November 3** - Jarvis Parliament Area

Planning staff reported on our work in progress to refine the proposed Secondary Plan policies and update the zoning by-law for the area, took comments and answered questions.

If you were not able to join our live events, meeting materials will be posted at: [www.toronto.ca/king-parliament](http://www.toronto.ca/king-parliament). There you can also access a copy of the current revised Secondary Plan, red-lined to show revisions from the October 2019 draft. Meeting recordings are available upon request.

We invite you to review the materials and submit any comments you may have **by November 30, 2020**. Meeting this deadline allows us to continue moving forward with our work, consider the feedback and bring a recommended Secondary Plan and Area-Specific Zoning By-law Amendment to Council for consideration early next year.

If you would like to provide input to the Planning team, or if you have any questions about the study, please get in touch!

Hello,

We are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report](#) for public consultation. This is the next step in the environmental assessment process for the Ontario Line.

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint.

These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.**

The Ontario Line Environmental Impact Assessment Report to be released in early 2022 will include an assessment of project operations and construction of Corktown Station and other project components.

Please take time to review the draft report and provide your feedback through the webform or by email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint.

These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.**

The Ontario Line Environmental Impact Assessment Report to be released in early 2022 will include an assessment of project operations and construction of Corktown Station and other project components.

Please take time to review the draft report and provide your feedback through the webform or by email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Stay safe!

Hello,

On behalf of Metrolinx, we are writing to share some information about the Ontario Line project.

As you may know, the proposed Ontario Line will bring 15.6 kilometres of much-needed rapid transit service to our city to make it faster and easier for hundreds of thousands of people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition Station/Ontario Place in the southwest with 15 potential stations, including six interchange stations, and 17 new connections to GO train lines and existing subway and streetcar lines.

As the next step in the environmental assessment process for the Ontario Line, we are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report for public consultation](#).

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

**Subject:** RE: WDLC submission to Corktown Stn Early Works Report

[REDACTED]

Thank you very much for taking the time to review and provide comments on the Draft Corktown Early Works Report on behalf of the West Don Lands Committee.

Similar to your comments, I've categorized the responses in themes below for ease in reviewing:

#### Reviewing and Commenting on the Report

The Ontario Line reports, including this one, have been drafted in compliance with O. Reg. 341/20 and the requirements outlined through the regulation have been satisfied through the contents of this report. Metrolinx recognizes that these reports can often be lengthy and technical in nature, and we have made an effort to present information in a succinct manner, including by providing a summary and grouping by the various disciplines/areas. If there are areas of this or future reports you would like clarity on while reviewing, we would encourage you or other members of the WDLC to pose questions through the forum on Metrolinx Engage or to email the Ontario Line Community Relations team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com) so that we can assist you in your review.

#### Species at Risk

Species at Risk surveys were conducted at the buildings planned to be demolished within the Corktown Station early works project footprint. It was determined that the buildings do not support any habitat for Species at Risk including bat Species at Risk. However, should there be any impacts to Species at Risk as a result of early works, all requirements of the Endangered Species Act will be met.

#### Communication about Soil and Groundwater

We plan to share this type of information to the public through a Construction Liaison Committee (CLC), which we look forward to establishing in the coming months.

#### Air Quality

Prior to the early works beginning, the contractor will develop a plan to manage any potential air quality impacts as a result of Corktown Station early works. Real-time air quality monitoring will be required so that additional mitigation can be implemented in a timely manner, as needed, to manage potential impacts.

#### Communications and Notifications

The Ontario Line Community Relations Team is available to the community and public and will continue to be throughout construction. As you know, our team can be reached at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com) or 416-202-5100.

Metrolinx will also work to stand up a Construction Liaison Committee (CLC) which will consist of community representatives and meet regularly as we advance towards work beginning in order to resolve complaints and concerns. The team will work closely with the project delivery team and the contractors and constructor to address community concerns such as noise and vibration.

#### Built Heritage Resources, Cultural Heritage Landscapes, and Archaeological Resources

Metrolinx has retained several cultural heritage consultants included in its technical advisory team. In addition, Metrolinx is working with the City of Toronto Heritage Planning, Infrastructure Ontario, the Ministry of Heritage, Sport, Tourism, and Cultural Industries, and Indigenous Nations including the Mississaugas of the Credit First Nation as treaty holder, elected officials and numerous community representatives to advance an Interpretation and Commemoration Plan for First Parliament that builds on the Heritage Interpretation Strategy and the Master Plan work led by the City of Toronto. Metrolinx is looking forward to future engagement with the public and Indigenous Nations on the Interpretation and Commemoration Plan.

#### Transportation and Traffic

As noted in the Corktown Station Early Works Report, a traffic management and control plan will be developed to mitigate any traffic-related impacts as a result of early works. Metrolinx will also consult with the City of Toronto regarding other ongoing construction projects when scheduling early works activities and to minimize potential impacts. As no large-scale construction is anticipated at this site as part of early works, most early works activities will be executed within the property with minor and temporary lane closures immediately adjacent to the structure to be demolished. Access will be maintained throughout the work taking place. If temporary closures to pedestrian, road or cyclist routes are required, notice will be sent to residents in advance of work detailing alternative routes, signage will be available for wayfinding and Traffic Control personnel will be present to assist traffic. Bus routes and stops will remain accessible to the public throughout construction.

Thank you once again for providing your feedback on the Draft Corktown Early Works Report, and please don't hesitate to reach out should you have any further questions or comments.

Talk to you soon,

Bismah

Hello,

We are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report](#) for public consultation. This is the next step in the environmental assessment process for the Ontario Line.

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint.

These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.**

The Ontario Line Environmental Impact Assessment Report to be released in early 2022 will include an assessment of project operations and construction of Corktown Station and other project components.

Please take time to review the draft report and provide your feedback through the webform or by email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Stay safe!

Regarding the hoarding, we understand plans for this are still in development but will be available to be shared in advance of environmental works beginning on the site. We are open to taking back any perspectives shared by you or the other group attendees on the call.

As for the city-led stakeholder process, we are waiting to receive more details from the city and likely won't be able to comment on any implications at tomorrow's meeting.

Thank you,

Bismah

Josh and Bismah,

One issue that the group will be asking about at the stakeholder meeting is the timing and location of hoarding around the FPS. Is that something that your team will be able to address?

Also, we obviously will need to discuss the implications of the stakeholder process that City Council has directed and which is no scheduled to start on May 17th.

Thanks very much.

Hi [REDACTED]

Josh and I have worked with our colleagues on the Environmental team to identify the following dates and times for a meeting next week. Could you please let us know which one works best for the community groups?

- Wednesday, May 12 at 1pm or 4pm
- Thursday, May 13 at 4pm
- Friday, May 15 at 9am or 1pm

As a reminder, next week's discussion will focus on:

- the draft early works report for Corktown station (early works will include the removal of existing buildings, other structures and asphalt, decommissioning of utilities, and soil removal

- and/or remediation where required)
- plans for environmental due diligence and archeology investigations
- next steps on community engagement

Looking forward to hearing from you,

Bismah

Hi Josh,

Following up on our discussion on Friday, it seems that daytime meetings will work for the WDLC members would be especially preferred for City staff.

Eddie LaRusic in Cllr Wong-Tam's office is working on staff availability during the week of May 10th.

If you have information about Metrolinx availability, it would be good to share with us and Eddie so we can start working towards some possible times.

Thanks,

[REDACTED]

On Tue, Apr 27, 2021 at 5:53 PM [REDACTED] wrote:

Hi Josh,

Why don't we set up a call later this week. I haven't checked with John, but my best day to meet would be tomorrow, if you have any availability or Friday between 10:30 and 2:00.

It would be great to have these meeting opportunities you have suggested. BTW, the May WDLC meeting will be on May 25th, as the 24th is the Victoria Day holiday. We would be happy to have you present at that meeting.

What we are looking for is the establishment of a stakeholder group with delegates from neighbourhood groups + the local Councillors that would have regular meetings with Metrolinx staff (including technical staff) and City staff who are working on the OL from the River to the Corktown Station. What is important for useful engagement is the opportunity for those delegates, who can then report back to their constituencies, to develop a deep understanding of the proposed work plan and technical issues through an iterative and ongoing process.

I can elaborate more when we speak.

Thanks very much for following up.

**Subject:** Province of Ontario Announcement - Corktown Station

Hello,

Hope this email finds you well.

We are writing to share that the [Province of Ontario announced today](#) it is working with the City of Toronto on preliminary plans to build a transit-oriented community at the future Corktown station along the Ontario Line subway. This is part of the government's Transit-Oriented Communities (TOC) program, which incorporates collaboration with municipalities and third-parties to bring more jobs and housing closer to transit along the routes of the province's subway projects. The Province is committed to working with the city, community groups and Indigenous Peoples to commemorate and celebrate the rich history of the First Parliament site, while also meeting the future growth potential for the area. Following City review, the province will engage with the community and Indigenous Peoples to gather feedback on the plans for the proposed Corktown site. It is anticipated this will occur starting in the summer of 2021.

As you know, [plans for the Ontario Line](#) include a station at Berkeley and Front Streets and some adjacent land south of Front (the First Parliament site) for temporary construction and laydown. Any ground disturbing activities on the First Parliament site will only begin once robust archaeological assessments are completed. This work is set to begin in the summer of 2021. The Ontario Line project team is working with Indigenous Nations - in particular the Treaty 13 signatory, the Mississaugas of the Credit - and heritage experts to plan the necessary archeological work and we will have an update to share in the next few weeks.

As always, if you have any questions, please do not hesitate to contact us here at [OntarioLine@Metrolinx.com](mailto:OntarioLine@Metrolinx.com).

Best,

The Ontario Line Community Relations Team

**Subject:** RE: Metrolinx update to WDLC - Ontario Line April 13 - 11 am

Hi [REDACTED],

Thanks for taking the time to connect about Corktown station and the First Parliament site yesterday, and nice to virtually meet you.

As Malcolm explained, Metrolinx is currently developing plans for archaeological investigations in collaboration with the City of Toronto, representatives of the Mississaugas of the Credit as treaty holder, the Ontario Heritage Trust, Infrastructure Ontario and archaeological advisors. Metrolinx representatives will be participating in Thursday's town hall hosted by Councillor Wong-Tam and we will be working with her office on a plan for more formal engagement with the community regarding plans for use of the site for the Ontario Line project.

As Josh shared, we are launching a round of virtual open houses and the registration for them each of them is [now live](#). We are starting with the north segment one which will be taking place this Thursday, and moving along the alignment. The open house for the downtown segment will take place on April 22<sup>nd</sup> at 6:30pm and will focus on the stations at Osgoode, Queen, Moss Park and Corktown. We will be promoting these in our newsletter later today (which you can [sign up for on our website](#) if you have not yet done so), as well as social media and hopefully with the support of groups like yourselves. If you are open to sharing it on social media, we have included some sample posts in case they're helpful:

**Sample message for email/Facebook:** Join Metrolinx on Monday, April 26 2021 at 6:30pm for an Ontario Line presentation and Q&A about the stations at Osgoode, Queen, Moss Park and Corktown. Learn more, register, and submit questions at <https://www.metrolinxengage.com/en/OLliveApril26>

**Sample tweet:** Join @Metrolinx on Monday, April 26, 2021 at 6:30pm for an @OntarioLine presentation and Q&A about the downtown stations. Learn more, register, and submit questions at <https://www.metrolinxengage.com/en/OLliveApril26>

Please don't hesitate to reach out if you have any questions.

Best,

Bismah

Hi Josh,

Our thoughts on the conversation were not limited to you providing new information to us, but also on us discussing our issues and concerns to you. That said, if there is new information imminent, we would be interested in hearing it as soon as possible. For me, both times you propose would be OK.

Hi [REDACTED],

Hope you had a great weekend. Happy to respond on behalf of Josh.

In advance of your meeting next week, we can share some updated timelines for early works and environmental assessment in the West Don Lands area. The draft Early Works report for the Lower Don Bridges and Don Yard is anticipated to be available for public consultation in Summer 2021 with no construction expected before Spring 2022. We are taking some additional time for detailed design in this area given the multiple overlapping projects.

I want to reaffirm Metrolinx' commitment to paying tribute to the legacy of the First Parliament site. As we mentioned in our previous community update to the WDLC, while the First Parliament site will be used during construction of the nearby Ontario Line station serving Corktown, Metrolinx will be working with experts to minimize impacts on cultural and heritage aspects of the site. Metrolinx will ensure any archaeological findings or historical features will be properly documented or conserved and, where possible, made accessible for the public to learn more about. We also published a [blog post](#) about our commitment to commemorate the First Parliament Site's importance to Toronto, and the country. This will be the first of many updates as we prioritize keeping the community informed.

Since we last met with the West Don Lands Committee on September 28, there are a few updates about the Ontario Line we want to make sure your members are aware of:

- As we shared via email with the WDLC on December 1, 2020, we released the [Ontario Line Final Environmental Conditions Report](#) which incorporates community feedback we heard during the engagement period. The Environmental Conditions Report will be followed by public consultation on the Ontario Line Environmental Impact Assessment Report in late 2021/early 2022 that will provide a complete understanding of impacts and mitigation strategies.
- Late last year, we released the [Preliminary Design Business Case](#) which builds on the initial business case we released in 2019. Thanks to feedback from the community, this report outlines the latest in Ontario Line benefits.

We have reached out to our colleagues who are responsible for the East Harbour development for any updates and will pass along anything we receive.

As always, we are here to answer any questions that come out of your Monday evening WDLC meeting. Feel free to reach out.

Have a great day,

Hello Josh,

The February meeting of the West Don Lands Committee is approaching on Monday evening, February 22. I am reaching out to determine if there is any update on matters of interest to our Committee.

We have noted with interest the conceptual schematics for the East Harbour station. With greater interest, we have noted the moves to begin the expropriation process at the First Parliament site. We, as well as the executive of our constituent groups, have weighed in with concern to the EBR posting on that matter.

This is to determine how and when you are prepared to engage with our communities on the updated plans for the Ontario Line between East Harbour and the downtown.

We look forward to that engagement.

[REDACTED]

Hi Josh,

I am the WDLC Co-chair along with [REDACTED]. We are looking forward to having Metrolinx bring us up to date on the Ontario Line work.

Two points in preparation for tomorrow:

1) I wanted to give you a heads up about a question that we hope your team can address.

Over many years the WDLC has been directly involved in the TRCA's EA studies dealing with flood protection of the Don River flood plan. Below is an image from the Broadview Eastern Floodplain EA that raises the question.

The image shows flood modelling done by the TRCA for the purpose of demonstrating the impact of the EA preferred alternative. The residual spill zone after the flood protection intervention includes the triangular area between the main tracks and Bala line. This is the area where the north-side Ontario Line portal is expected to be located. We are very interested in understanding how the design for this portal will deal with the flood risk in this area and whether that will have any potential effect on the existing flood protection for the WDL.

2) [REDACTED] will be chairing tomorrow night's meeting. My role will be managing the logistics of a virtual meeting.

- The platform we are using is Zoom. The link was in the meeting notice, but here it is again for the benefit of your team:

[REDACTED]

Passcode: [REDACTED]

- screen sharing will be enabled so your team members can present materials
- I will manage the speakers during the Q&A.
 - We will likely ask people to wait until the end of the Metrolinx presentation to ask questions - at which point I may ask your team to stop screen sharing so I can see who has a hand up. (Participants are still getting used to the virtual environment and actual hands up, versus virtual signals, seems to be working best so far)

Please let me know if you or any members of your team have any questions. I am available tomorrow, if there is any need for a dry run.

Thanks very much and looking forward to meeting your team.

Hello Susan,

It has been 10 months since you first joined us as guests at a West Don Lands Committee meeting. I'd like to invite you to update our committee on Ontario Line plans on Monday, September 28, 7 pm. The meeting will be virtual on Zoom. Tyler Mayhew and Duncan Law or other Metrolinx representatives would also be welcome and encouraged to join us.

We have seen some new information released about the South section, which is our main interest, and we understand from Councillor Cressy that you have a degree of more detailed information on the CNE to Don section. We would very much appreciate a presentation that would focus on any more detailed information you can share on the South Section (also including whatever plans can be shared east to Gerrard). With the South section directly impacting and serving our community from East Harbour to King/Parliament and Moss Park we remain very interested in construction and service plans.

Looking forward to hearing from you.

Great. A PowerPoint presentation will be easy to run. You may either bring a data stick or your own laptop.

I mentioned the time slot - 7:45-8:30 (more or less, including Q&A). If you could provide the name(s) of who will be speaking, I would include that in the agenda I circulate.

I will be chairing the meeting, which runs from 7-9. A presentation from the developer of an indigenous hub in the precinct will precede you. You may come for as much, or little, of the balance of the meeting as you wish.

Hello Susan,

I letting Tom off this thread until we work out our details.

I would like to invite Metrolinx to come to the West Don Lands Committee meeting on Monday evening to update us on the current state of work on the Ontario Line, the appropriate avenues for addressing future community questions and input, and any more detailed information on the proposed routing of the Ontario Line through the West Don Lands area. Our meeting is held at the YMCA at Cherry and Front Streets. The timing would be 7:45-8:30. Usually the attendance is around 20, including representatives of our member groups.

The West Don Lands Committee is a coalition of residents', business and civil society organizations in, or nearby, the West Don Lands -- an area defined in the Central Waterfront Plan, but generally between Parliament Street, Eastern Ave., the Don River and the Lakeshore GO tracks. As such, we are very interested in how the Ontario Line is proposed to bridge the Don River, how it will be routed through our community (both above and below ground), and any ideas as to timelines.

If you can manage to have representative(s) of Metrolinx attend our meeting to update us on these matters, we would be very appreciative. Our meetings are once a month, but we break in December, so would not otherwise be able to welcome you until the new year.

Thank you for considering this request.

**Subject:** Ontario Line Update: Early Works Report - Corktown Station

Hello,

We are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report](#) for public consultation. This is the next step in the environmental assessment process for the Ontario Line.

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint.

These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.**

The Ontario Line Environmental Impact Assessment Report to be released in early 2022 will include an assessment of project operations and construction of Corktown Station and other project components.

Please take time to review the draft report and provide your feedback through the webform or by email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Stay safe!

**Subject:** Ontario Line Update: Early Works Report - Corktown Station

Hello,

On behalf of Metrolinx, we are writing to share some information about the Ontario Line project.

As you may know, the proposed Ontario Line will bring 15.6 kilometres of much-needed rapid transit service to our city to make it faster and easier for hundreds of thousands of people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition Station/Ontario Place in the southwest with 15 potential stations, including six interchange stations, and 17 new connections to GO train lines and existing subway and streetcar lines.

As the next step in the environmental assessment process for the Ontario Line, we are writing to inform you that today [Metrolinx has released the draft Corktown Station Early Works Report for public consultation](#).

The [Draft Corktown Station Early Works Report](#) provides details on the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures.

Corktown Station early works will include **only demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required**, within the Corktown Station early works project footprint. These early works are being advanced to prepare the site for archeological investigations in advance of future construction staging and laydown to support tunneling and work associated with the future Corktown Station.

The release of the draft Early Works report initiates a consultation period in which the public are invited to share their feedback on its findings and recommendations. **Feedback is requested by June 11, 2021.** Please take time to review the draft report and provide your feedback through the webform or by email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

The Ontario Line Environmental Impact Assessment Report to be released in early 2022 will include an assessment of project operations and construction of Corktown Station and other project components.

Please do not hesitate to let us know if you have any questions or would like to set up some time to learn more about the Ontario Line. You may also wish to learn more through our [project website](#) or subscribe to our e-newsletter there to stay updated on the latest Ontario Line developments.

Stay safe!

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Sir/Madam,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

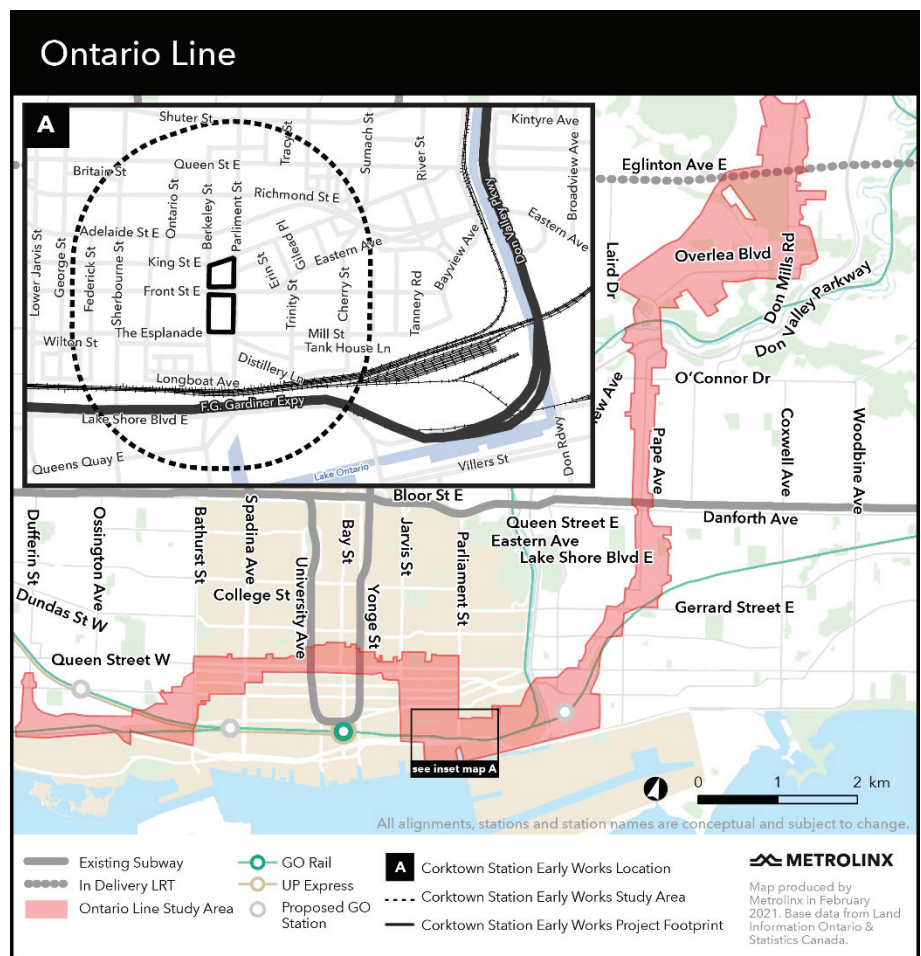

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

Hello Crystal

Thank you for the notification of Corktown Station Early Works. The Department reviews projects (works, undertakings, or activities) being conducted in or near waterbodies that support fish. We also review project proposals for impacts to Species at Risk. We do not review notifications for administrative processes. Please visit our website at: <https://www.dfo-mpo.gc.ca/pnw-ppe/index-eng.html> to determine whether your project requires a review by the Department. If you determine that your project needs a review please complete and submit a Request for Review Form to: [FisheriesProtection@dfo-mpo.gc.ca](mailto:FisheriesProtection@dfo-mpo.gc.ca). If you have any questions feel free to contact us at: 1-855-852-8320.

Yours sincerely,

Triage and Planning  
Fish and Fish Habitat Protection Program  
Fisheries and Oceans Canada

Subject: Corktown Station Early Works Report

Good afternoon,

As part of the Ontario Line Project, the Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard alignment segments for the Ontario Line, as well as the location of the Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Further information on Corktown Station early works and an update on the Ontario Line environmental process is provided in the letter attached and in the Corktown Station Early Works Report linked below.

Please find the initial drafts of the Corktown Station Early Works Report and corresponding comment tracking sheet uploaded to the following link for your review: [REDACTED]

The link includes the following reports:  
Corktown Station Early Works Report;  
Corktown Station Natural Environment Report;  
Corktown Station Air Quality Report;  
Corktown Station Heritage Detailed Design Report; and  
Corktown Station Traffic and Transportation Report.

As noted in the letter, we would appreciate if you could provide your comments using the comment tracking sheet by April 9, 2021.

If you have any questions or concerns, please do not hesitate to contact us.

Greetings,

Thank you for your correspondence.

Please note Transport Canada **does not** require receipt of all individual or Class EA related notifications. We are requesting project proponents self-assess if their project:

1. Will interact with a federal property and/or waterway by reviewing the Directory of Federal Real Property, available at [www.tbs-sct.gc.ca/dfrp-rbif/](http://www.tbs-sct.gc.ca/dfrp-rbif/); **and**
2. Will require approval and/or authorization under any Acts administered by Transport Canada\* available at <http://www.tc.gc.ca/eng/acts-regulations/menu.htm>.

Projects that will occur on federal property prior to exercising a power, performing a function or duty in relation to that project, will be subject to a determination of the likelihood of significant adverse environmental effects, per Section 82 of the *Impact Assessment Act, 2019*.

If the aforementioned does not apply, the Environmental Assessment program should not be included in any further correspondence and future notifications will not receive a response. If there is a role under the program, correspondence should be forwarded *electronically* to:

[EnviroOnt@tc.gc.ca](mailto:EnviroOnt@tc.gc.ca) with a **brief description of Transport Canada's expected role**.

\*Below is a summary of the most common Acts that have applied to projects in an Environmental Assessment context:

- **Canadian Navigable Waters Act (CNWA)** – the Act applies primarily to works constructed or placed in, on, over, under, through, or across navigable waters set out under the Act. The Navigation Protection Program administers the CNWA through the review and authorization of works affecting navigable waters. Information about the Program, CNWA and approval process is available at: <http://www.tc.gc.ca/eng/programs-621.html>. Enquiries can be directed to [NPPONT-PPNONT@tc.gc.ca](mailto:NPPONT-PPNONT@tc.gc.ca) or by calling (519) 383-1863.
- **Railway Safety Act (RSA)** – the Act provides the regulatory framework for railway safety, security, and some of the environmental impacts of railway operations in Canada. The Rail Safety Program develops and enforces regulations, rules, standards and procedures governing safe railway operations. Additional information about the Program is available at: <https://www.tc.gc.ca/eng/railsafety/menu.htm>. Enquiries can be directed to [RailSafety@tc.gc.ca](mailto:RailSafety@tc.gc.ca) or by calling (613) 998-2985.

- **Transportation of Dangerous Goods Act (TDGA)** – the transportation of dangerous goods by air, marine, rail and road is regulated under the TDGA. Transport Canada, based on risks, develops safety standards and regulations, provides oversight and gives expert advice on dangerous goods to promote public safety. Additional information about the transportation of dangerous goods is available at: <https://www.tc.gc.ca/eng/tdg/safety-menu.htm>. Enquiries can be directed to [TDG-TMDOntario@tc.gc.ca](mailto:TDG-TMDOntario@tc.gc.ca) or by calling (416) 973-1868.
- **Aeronautics Act** – Transport Canada has sole jurisdiction over aeronautics, which includes aerodromes and all related buildings or services used for aviation purposes. Aviation safety in Canada is regulated under this Act and the Canadian Aviation Regulations (CARs). Elevated Structures, such as wind turbines and communication towers, would be examples of projects that must be assessed for lighting and marking requirements in accordance with the CARs. Transport Canada also has an interest in projects that have the potential to cause interference between wildlife and aviation activities. One example would be waste facilities, which may attract birds into commercial and recreational flight paths. The *Land Use In The Vicinity of Aerodromes* publication recommends guidelines for and uses in the vicinity of aerodromes, available at: <https://www.tc.gc.ca/eng/civilaviation/publications/tp1247-menu-1418.htm>. Enquires can be directed to [tc.aviationservicesont-servicesaviationont.tc@tc.gc.ca](mailto:tc.aviationservicesont-servicesaviationont.tc@tc.gc.ca) or by calling 1 (800) 305-2059 / (416) 952-0230.

Please advise if additional information is needed.

Thank you,

**Environmental Assessment Program, Ontario Region**

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Sir/Madam,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

**Subject:** Corktown Station Early Works Report

Good afternoon,

As part of the Ontario Line Project, the Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard alignment segments for the Ontario Line, as well as the location of the Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Further information on Corktown Station early works and an update on the Ontario Line environmental process is provided in the letter attached and in the Corktown Station Early Works Report linked below.

## Notice of Publication of Draft Corktown Station Early Works Report Ontario Line Project

### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

Good afternoon,

Please note that the public review period for the Draft Corktown Station Early Works Report (EWR) for the Ontario Line Project ends on Friday, June 11, 2021. We ask that any comments on the Draft Corktown Station EWR be provided no later than this date. Please do not hesitate to contact us if you have any questions.

Thanks,

**Bren Daner Lapuz**

**Subject:** Ontario Line - Notice of Draft Corktown Station EWR

Good morning,

The Notice of Draft Corktown Station Early Works Report (EWR) for the Ontario Line Project has been published on May 12, 2021. The Draft EWR is available on the project website at [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline). The public review period begins May 12, 2021 and will continue until June 11, 2021. Attached for your reference is the Notice of Publication of Draft Corktown Station EWR, as well as a covering letter. Please do not hesitate to contact us if you have any questions.

Thanks,

**Crystal Ho**

**Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Shireen Mohammed,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

**Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

### **Metrolinx 130 Adelaide Street West, Toronto, Ontario M5H 3P5**

*All personal information included in a submission – such as name, address, telephone number and property location – is collected, maintained and disclosed by Metrolinx for the purpose of transparency and consultation. The information is collected under the authority of O. Reg. 341/20 under the Environmental Assessment Act or is collected and maintained for the purpose of creating a record that is available to the general public as described in s. 37 of the Freedom of Information and Protection of Privacy Act. Personal information you submit will become part of a public record that is available to the general public unless you request that your personal information remain confidential. For more information, please contact [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com) or 416-874-5900.*

Thank you for your response Michael. In addition to the Corktown Station Early Works Report and associated technical discipline reports circulated to yourself and Shireen on March 10, 2021, we've just passed along the Corktown Station Early Works Noise and Vibration Report for your review via EATS. At this time, we're looking for any comments you may have by April 9, 2021.

Please let me know if any issues accessing the document or if any additional questions.

Thanks and have a great weekend.

Hi Merlin:

Thank you for sharing the Corktown Station Early Works Report and letter providing an update on the Ontario Line Project with the Ministry of Economic Development, Job Creation and Trade and inviting the Ministry to comment.

MEDJCT strongly supports the Ontario Line project as it is expected to significantly alleviate costly congestion within the City of Toronto and expedite the movement of goods and people. We are pleased to be informed that the planning process is moving ahead.

As the Early Works Report focuses on technical and scientific topics that are beyond the expertise of our Ministry, we have no further comments to offer at this time.

Best regards,

Michael Helfinger

Good afternoon Michael and Shireen,

This is a follow-up email to the correspondence sent just now through EATS, which included the Corktown Station Early Works Report and letter providing an update on the Ontario Line Project. At this time we are requesting the Ministry's review and comments by April 9, 2021 in the attached comment tracking spreadsheet (included through EATS in the ZIP file).

Please let me know if any issues accessing the files and I can resend as necessary.

Regards,

**Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Paul Bloye,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

**Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

**Metrolinx 130 Adelaide Street West, Toronto, Ontario M5H 3P5**

*All personal information included in a submission – such as name, address, telephone number and property location – is collected, maintained and disclosed by Metrolinx for the purpose of transparency and consultation. The information is collected under the authority of O. Reg. 341/20 under the Environmental Assessment Act or is collected and maintained for the purpose of creating a record that is available to the general public as described in s. 37 of the Freedom of Information and Protection of Privacy Act. Personal information you submit will become part of a public record that is available to the general public unless you request that your personal information remain confidential. For more information, please contact [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com) or 416-874-5900.*

Good morning Paul,

As part of our distribution lists, we pass along our reports to both the TDSB and TCDSB for review. Specifically, our contact for TDSB is Anita Cook, and for TCDSB it is Tomasz Oltarzewski.

Let me know if anything else, and looking forward to the Ministry's comments.

Good afternoon Paul – this is a follow-up email to the correspondence passed along yesterday through EATS which included the Corktown Station Early Works Noise and Vibration Report. As noted in that correspondence, we are currently looking at a turnaround date of April 9, 2021 for the Ministry's comments.

Please let me know if any issues accessing the files or if any questions.

Regards,

**MERLIN YUEN**

Good afternoon Paul,

This is a follow-up email to the correspondence sent just now through EATS, which included the Corktown Station Early Works Report and letter providing an update on the Ontario Line Project. At this time we are requesting the Ministry's review and comments by April 9, 2021 in the attached comment tracking spreadsheet (included through EATS in the ZIP file).

Please let me know if any issues accessing the files and I can resend as necessary.

Regards,

**MERLIN YUEN**

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear James Hamilton,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600 416.874.5900  
Toronto, ON M5J 2W3 metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

Good afternoon

Thank you for providing MHSTCI with Notice of on-line publication of the Draft Corktown Station Early Works Report (EWR) (May 2021) posted on May 12, 2021. We reviewed the revised EWR and the corresponding Heritage Detail Design Report (HDDR) (May 2021) and can confirm that the May 2021 reports satisfactorily address MHSTCI's comments and recommendations send to Metrolinx on April 1, 2021. Accordingly we have no further comments.

Please advise us when the final versions of the Early Works reports are posted, so we can download them for our records.

Sincerely  
Rosi

Good afternoon,

The Notice of Draft Corktown Station Early Works Report (EWR) for the Ontario Line Project has been published on May 12, 2021. The Draft EWR is available on the project website at [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline). The public review period begins May 12, 2021

and will continue until June 11, 2021. Attached for your reference is the Notice of Publication of Draft Corktown Station EWR, as well as a covering letter. Please do not hesitate to contact us if you have any questions.

Thanks,

**Crystal Ho**

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Rosi Zirger,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

Good morning Crystal, et al

Sorry I missed the additional tab on the Excel table.

The table includes Metrolinx's responses to MHSTCI's comments provided by email on April 1<sup>st</sup>, 2021 for report titled **Draft Early Works Report: Ontario Line Corktown Station Early Works dated March 2021 prepared by AECOM Canada Ltd.** As with the HDDR each of Metrolinx's responses appear to accept our comments and acknowledge that revisions to the Early Works Report have been or will be made. That being said, we may have further comments upon reviewing the full revised EWR report to read the revisions in context.

As always, let me know if you have any questions or if further discussion is needed.

Best regards

Rosi

Good morning Rosi,

Our responses to MHSTCI's comments on the draft Early Works Report are located in the first tab of

the excel spreadsheet attached. For ease of review, we separated the comments into two different tabs (one for the HDDR and one for the EWR) in the excel spreadsheet. Let me know if you have any further questions or comments.

Thank-you,

**Crystal Ho**

| 1                           | MHSTCI – Heritage Planning Unit |             | Executive Summary<br>Built Heritage Resources and Cultural Heritage Landscapes (page viii)                                                                            | This section lists the number of resources by type e.g. One designated . . . One National Historic Site . . . etc.<br>We suggest adding in brackets that corresponding address or reference number (OLS-xx). Refer to the EWR for Exhibition Station and use a consistent approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Thank you for your comment, the text has been revised to include the resource reference numbers.                                                                                                               |
| 2                           | MHSTCI – Heritage Planning Unit |             | Executive Summary<br>Table ES-2 Potential Impacts, Mitigation Measures . . .<br>Discipline: Built Heritage Resources and Cultural Heritage Landscapes (page xxi-xxii) | As with the Exhibition Station Early Works Report this EW Report for Corktown Station also includes a row for each general type of impact listed in Appendix I of the Cultural Heritage Report e.g. encroachment, modification etc. even though none of these impacts are anticipated for the early works at Corktown Station. Our preference continues to be that the table in the Executive Summary align with the corresponding Table 6-7 (see Item #12 below) in the body of the report.<br>Including multiple entries for generic impacts that will not occur obscures the impacts that will occur. Similarly, using generic language to describe impacts that are known is unnecessarily confusing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Changes have been made to the revised report to ensure the Executive Summary alignments with corresponding Table 6-7. The entries will be revised such that generic impacts are not listed to avoid confusion. |
| 3                           | MHSTCI – Heritage Planning Unit |             | Table ES-2<br>6th row (page xxi)                                                                                                                                      | The 6th row states:<br>Potential Impact*: Demolition of all or part of any buildings within a built heritage resource/cultural heritage landscape not anticipated.<br>Mitigation Measure: Continued avoidance of properties.<br><br>Please revise entry to align with Table 6-7 which describes impacts to OLS-034 (First Parliament Site?) as Removal/Demolition of a building or structure on the property and/or any ground disturbance that has the potential to remove or demolish deeply buried archaeological remains.<br><br>Additionally, the text should be edited to align with the <b>Minister's decision and acknowledge that the Minister's consent was granted and what the conditions were.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Text has been revised in Table ES-2.                                                                                                                                                                           |

| 12 | MHSTCI – Heritage Planning Unit | Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities– Built Heritage Resources and Cultural Heritage Landscapes (pages 164-171)                                                                                      | <p>Column: Type and Description of Potential Impacts – should be edited as follows:</p> <p>OLS-034 is entirely within the Corktown Station Early Works Project Footprint. All structures within the property will be <del>demolished as part of experience a direct impact from</del> early works, as shown on the Corktown Station Early Works Conceptual Design (Figure 1-1). Early works are limited to the demolition of the two buildings on this property, including removal of the building foundations. While the buildings are not heritage attributes of the property, <del>their removal required MHSTCI Minister's Consent due to being located on a provincial heritage property of provincial significance. Therefore, the proposed demolition of these two buildings is not considered an adverse impact.</del> As per Policy 6.2.1 of the St. Lawrence Neighbourhood Heritage Conservation District Plan, the demolition of buildings on non-contributing properties is permitted.</p> <p>In addition, the deeply buried archaeological resources related to the property are heritage attributes of the property and are within the Corktown Station Early Works Project Footprint. OLS-034 may experience a direct adverse impact by the proposed removal of the buildings, specifically the removal of the foundations, as a part of early works. <del>Comment: the meaning of this is unclear. Please clarify based on what is currently know about this property.</del></p> <p>Mitigation Measures column should be edited to reflect the current status of Minister's Consent:</p> <p>Mitigation measures documented in Appendix H of the Ontario Line Cultural Heritage Report have been refined based on the early works impact assessment. MHSTCI – Heritage Planning Unit The following mitigation measures should be implemented regarding any physical impact to the property:</p> <ul style="list-style-type: none"> <li>- Consult with City of Toronto's Heritage Preservation Services as planning progresses regarding any physical impact to the property in order to determine and obtain any approval or permits required.</li> <li>- Consult with Ontario Heritage Trust as current owners of part of the property as planning progresses and if required, obtain approval/consent. <del>Comment: This has occurred as part of obtaining Ministers' Consent. Please review and edit of delete as necessary.</del></li> <li>- <del>Obtain MHSTCI Minister's Consent as planning progresses—</del></li> <li>- Fulfill all conditions contained of Minister's consent <del>dated March 18, 2021.</del></li> <li>- Complete archaeological requirements as recommended in Section 6.8 of the Ontario Line Draft Corktown Station Early Works Report <del>and in fulfillment of the Archaeology Conditions included in MHSTCI's Minister's Consent Agreement dated March 18th, 2021.</del> Archaeological requirements should be completed surrounding the building footprints prior to demolition of the buildings in OLS-034.</li> </ul>                                                                                                                                                                                | Text revisions to Table 6-7 have been made.                                                                                                                                                                                                                                                                         |
| 13 | MHSTCI – Heritage Planning Unit | 6.8 Archaeological Resources (page 172)                                                                                                                                                                                                     | <p>The text should be edited to reflect that MHSTCI' Minister's Consent has been granted with conditions related to archaeology. We also suggest removing generic language, and instead address potential impacts clearly and concisely. See edits below:</p> <p>Early works are anticipated to result in a combination of surface/above and below grade impacts. <del>Any early works components that have the potential to impact archaeological resources will require further—archaeological assessment. All required</del> The archaeological assessments <del>will be undertaken as part of the early works. All archaeology on the First Parliament site on 265 Front, 271 Front and 25 Berkeley will be in accordance with the following conditions of the MHSTCI's Minister's Consent:</del></p> <p>a) All archaeological assessments are undertaken in accordance with the Ontario Heritage Act, the 2011 Standards and Guidelines for Consultant Archaeologists, and in accordance with the recommendations of previously completed archaeological assessment reports.</p> <p>b) Prior to commencing any archaeological fieldwork, the licensed consultant archaeologist will submit a detailed strategy for review and approval by the MHSTCI Archaeology Program Unit. Additionally, where new conditions or situations are encountered that are not covered by an approved strategy, a revised strategy will be submitted to the MHSTCI Archaeology Program Unit for approval prior to proceeding with fieldwork.</p> <p>c) Any construction excavation must be preceded by archaeological fieldwork according to a strategy approved by the MHSTCI Archaeology Program Unit or must be accompanied by an excavation and monitoring strategy.</p> <p>d) Excavation by a licensed consultant archaeologist or under the direction of a licensed consultant archaeologist will proceed to a point that is to the satisfaction of the MHSTCI Archaeology Program Unit. In the event that the project will not require total excavation of the site, an avoidance and protection strategy must be implemented for the remainder of the archaeological site to the satisfaction of the ministry.</p> <p><del>Archaeological assessments on other areas within the Corktown Station Early Works Footprint (e.g. on the north side of Front Street) strategy will be determined through consultation between the consultant—archaeologist and the Ministry of Heritage, Sport, Tourism and Culture Industries will be undertaken in accordance with the Ontario Heritage Act, the 2011 Standards and Guidelines for Consultant Archaeologists, and in accordance with the recommendations of previously completed archaeological assessment reports and commence in advance of ground disturbance activities. The archaeological assessment strategy. This may include: Stage 2 and 3 excavation, Stage 4 mitigation. of the registered archaeological sites, mechanical excavation for deeply buried contexts and/or archaeological monitoring during construction. The subsequent—archaeological assessments will identify detailed mitigation measures and monitoring activities, as required, and will be adhered to by Metrolinx.—</del></p> | Text revisions to Section 6.8 have been made.                                                                                                                                                                                                                                                                       |

|    |                                 |  |                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                               |

| 14 | MHSTCI – Heritage Planning Unit |  | 6.8 Archaeological Resources (page 172)                                                                           | <p>The last paragraph states:<br/>It should be noted that the Corktown Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas with anticipated ground disturbing activities will require further archaeological assessment.</p> <p>The intent and meaning of this paragraph is unclear. Please edit to clearly identify the specific areas that will not be subject to "ground disturbing" activity. Based on this EWR, we understood that full archaeological assessments would be completed for the Corktown Station Early Works Footprint as show on the corresponding maps. Please confirm whether this is correct.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Additional archaeology field programs are being planned for the Corktown Station Early Works Project footprint, beginning Fall 2021. This paragraph will be clarified in the revised report to indicate that. |
| 15 | MHSTCI – Heritage Planning Unit |  | Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities – Archaeological Resources (page 173) | <p>Mitigation Measures should be edited to reflect known information, as follows:</p> <ul style="list-style-type: none"> <li>- Areas identified as retaining archaeological potential in the Corktown Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 2020c), are shown in Figure 5-17, <del>and include the following. Should ground disturbing activities be planned within these areas, further</del> All archaeological assessment(s) must be completed prior to any ground disturbing activities.</li> <li>- The majority of the Corktown Station Early Works Project Footprint on either side of Front Street retains moderate to high archaeological potential where deeply buried archaeological potential remains, such as for discovering pre-contact Indigenous materials and/or materials related to the early development and expansion of the City of Toronto, including the First and Second Parliament Buildings, the Home District Gaol, and the Consumers' Gas company buildings.</li> </ul> <p>All archaeology on the First Parliament site on 265 Front, 271 Front and 25 Berkeley will be in accordance with the following conditions of the MHSTCI's Minister's Consent:</p> <ul style="list-style-type: none"> <li>a) All archaeological assessments are undertaken in accordance with the Ontario Heritage Act, the 2011 Standards and Guidelines for Consultant Archaeologists, and in accordance with the recommendations of previously completed archaeological assessment reports.</li> <li>b) Prior to commencing any archaeological fieldwork, the licensed consultant archaeologist will submit a detailed strategy for review and approval by the MHSTCI Archaeology Program Unit. Additionally, where new conditions or situations are encountered that are not covered by an approved strategy, a revised strategy will be submitted to the MHSTCI Archaeology Program Unit for approval prior to proceeding with fieldwork.</li> <li>c) Any construction excavation must be preceded by archaeological fieldwork according to a strategy approved by the MHSTCI Archaeology Program Unit or must be accompanied by an excavation and monitoring strategy.</li> <li>d) Excavation by a licensed consultant archaeologist or under the direction of a licensed consultant archaeologist will proceed to a point that is to the satisfaction of the MHSTCI Archaeology Program Unit. In the event that the project will not require total excavation of the site, an avoidance and protection strategy must be implemented for the remainder of the archaeological site to the satisfaction of the ministry.</li> </ul> <p>Archaeological assessments on other areas within the Corktown Station Early Works Footprint will be undertaken in accordance with the Ontario Heritage Act, the 2011 Standards and Guidelines for Consultant Archaeologists, and in accordance with the recommendations of previously completed archaeological assessment reports and commence in advance of ground disturbance activities.</p> <p><del>- Given the significance of the First Parliament Site, all previous site specific archaeological assessments should be reviewed to determine what additional archaeological work is required. —</del><br/> <del>- Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to any ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. —</del><br/> <del>- The Mississaugas of the Credit First Nations, and other Indigenous Nations will be invited to participate in monitoring requirements for any subsequent archaeological fieldwork is recommended. All future archaeological assessment findings will be shared with the Mississaugas of the Credit First Nations, and other Indigenous Nations that were engaged during the Stage 1 archaeological assessment.</del></p> <p>Please note, this edit to specifically name the MCFN is consistent with the First Parliament Archaeology working group meeting on March 30th, 2021.</p> | Text has been revised in Table 6-8.                                                                                                                                                                           |
| 16 | MHSTCI – Heritage Planning Unit |  | Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities – Archaeological Resources            | <p>Under Monitoring Activities, please revise the bullet as follows:</p> <ul style="list-style-type: none"> <li>- None identified at this time.</li> <li>- Metrolinx will adhere to all recommendations in any subsequent all archaeological assessments, including monitoring activities, as required.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Text has been revised in Table 6-8.                                                                                                                                                                           |

Good morning Crystal, et al

Thank you sending the attached Excel table.

The table provides Metrolinx's responses to MHSTCI's five comments provided by email on April 1<sup>st</sup>, 2021 for report titled: **Draft Heritage Detailed Design Report: Ontario Line Corktown Station Early Works dated March 2021 prepared by AECOM Canada Ltd.** Each of Metrolinx's responses appear to accept our comments and acknowledge that revisions to the HDDR have been or will be made. That being said, we may have further comments upon reviewing the full revised HDDR report to read the revisions in context.

Additionally, could you please advise if or when you anticipate responding to our comments and recommendations for report title: **Draft Early Works Report: Ontario Line Corktown Station Early Works dated March 2021 prepared by AECOM Canada Ltd?** Our comments (see attached) were included in the same table attached to our April 1, 2021 email.

As always, let me know if you have any questions or if further discussion is needed.

Best regards  
Rosi

Good afternoon Rosi, James and Karla,

Thank-you for providing your comments on the initial draft of the Corktown Station Early Works Report. Please see attached for our responses to your comments. Let me know if there are any outstanding comments following this circulation, otherwise, we'd appreciate if your team could document this as closed off.

Thank-you,

**Crystal Ho**

Good afternoon Merlin, et al,

Thank you sending the DRAFT Corktown Station Early Works Report (March 2021 AECOM) for our review and comment. We have review the Early Works Report and the appended corresponding Heritage Detail Design Report (HDDR). Our detailed comments are in the attached Tables: Early Works Report pages 1-11 and HDDDR pages 11-13.

Both the reports follow the general layout and formatting of the previous Early Works Report and HDDR for Exhibition Station. That being side, the majority of the comments and required edits are to reflect the updated status of Metrolinx having received MHSTCI Ministers Consent and the Minister's conditions.

As always, let me know if you have any questions or if further discussion is needed.

Happy Easter and enjoy the long weekend.  
Rosi

Refer to the EWR for Exhibition Station and use a consistent approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                 |                                                                                                                    |  |
| 2                           | MHSTCI – Heritage Planning Unit |             | Executive Summary<br>Table ES-2 Potential Impacts, Mitigation Measures . . .<br>Discipline: Built Heritage Resources and Cultural Heritage Landscapes (page xxi-xxii) | <ul style="list-style-type: none"> <li>As with the Exhibition Station Early Works Report this EW Report for Corktown Station also includes a row for each general type of impact listed in Appendix I of the Cultural Heritage Report e.g. encroachment, modification etc. even though none of these impacts are anticipated for the early works at Corktown Station. Our preference continues to be that the table in the Executive Summary align with the corresponding Table 6-7 (see Item #12 below) in the body of the report. Including multiple entries for generic impacts that will not occur obscures the impacts that will occur. Similarly, using generic language to describe impacts that are known is unnecessarily confusing.</li> </ul> |                                 |                                                                                                                    |  |

Hi Merlin

I wanted to let you know that I am wrapping up my comments on the Corktown Early Works Report. I know you had requested comment by today. However, since comments have to received a second review before being sent it seems more likely you'll receive them tomorrow. Apologies for the delay and thank you in advance for your understanding.

Best regards

Rosi

Good afternoon MHSTCI team – this is a follow-up email to the correspondence passed along just now through EATS which included the Corktown Station Early Works Noise and Vibration Report. As noted in that correspondence, we are currently looking at a turnaround date of April 9, 2021 for the Ministry's comments.

Please let me know if any issues accessing the files or if any questions.

Regards,

**MERLIN YUEN**

Good afternoon James, Karla, and Rosi,

This is a follow-up email to the correspondence sent just now through EATS, which included the Corktown Station Early Works Report and letter providing an update on the Ontario Line Project. At this time we are requesting the Ministry's review and comments by March 31, 2021 in the attached comment tracking spreadsheet (included through EATS in the ZIP file).

Please let me know if any issues accessing the files and I can resend as necessary.

Regards,

**MERLIN YUEN**

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Stewart Chisholm,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

Attachment: Notice of Publication of Draft Corktown Station Early Works Report

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Matthew MacLean,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Subject:** Ontario Line - Notice of Draft Corktown Station EWR

Good afternoon,

The Notice of Draft Corktown Station Early Works Report (EWR) for the Ontario Line Project has been published on May 12, 2021. The Draft EWR is available on the project website at [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline). The public review period begins May 12, 2021 and will continue until June 11, 2021. Attached for your reference is the Notice of Publication of Draft Corktown Station EWR, as well as a covering letter. Please do not hesitate to contact us if you have any questions.

Thanks,

**Crystal Ho**

Metrolinx

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Michael Collens,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish extending to the right.

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

---

Good afternoon Michael,

Thank you for your comment and for reviewing the initial draft of the Corktown Station Early Works Report. The reference to A Place to Grow: Growth Plan for the Greater Golden Horseshoe 2020 has been updated in Section 2.2.1.2 of the Early Works Report. Let me know if you have any further questions or comments. We look forward to continuing to work with the MMAH as the project progresses.

Regards,

**Crystal Ho**

**Subject:** RE: Ontario Line - Corktown Station Early Works Report

Hi Merlin,

On behalf of the Ontario Growth Secretariat, I want to thank you and your Metrolinx team for giving us an opportunity to review the documents supporting the Corktown Station Early Works Report.

We have reviewed the material and, at this time, we do not have concerns to highlight. We appreciate the recognition of A Place to Grow: Growth Plan for the Greater Golden Horseshoe 2019, and noting the appropriate policy directions for transportation, cultural and natural heritage issues. We would note that the plan was amended in 2020 so you may consider updating your references.

We recognize this is an early works project and we may have comments as the station, and the Ontario Line project generally, continues to advance.

If you have any questions, feel free to contact us at any time. We appreciate the opportunities to provide input and look forward to future engagements.

Best,

Good afternoon Michael - this is a follow-up email to the correspondence passed along just now through EATS which included the Corktown Station Early Works Noise and Vibration Report. As noted in that correspondence, we are currently looking at a turnaround date of April 9, 2021 for the Ministry's comments.

Please let me know if any issues accessing the files or if any questions.

Regards,

**MERLIN YUEN**

Good afternoon Eleni,

As part of the Ontario Line Project, the Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard alignment segments for the Ontario Line, as well as the location of the Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Further information on Corktown Station early works and an update on the Ontario Line environmental process is provided in the letter attached and in the Corktown Station Early Works Report, attached.

- The attached file includes the following report:
- Corktown Station Early Works Report;
  - Corktown Station Natural Environment Report;
  - Corktown Station Air Quality Report;
  - Corktown Station Heritage Detailed Design Report; and
  - Corktown Station Traffic and Transportation Report.

As noted in the accompanying letter, we would appreciate if you could provide your comments using the comment tracking sheet by April 9, 2021.

If you have any questions or concerns, please do not hesitate to contact me.

Regards,  
Merlin

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Maria Jawaid,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

## Notice of Publication of Draft Corktown Station Early Works Report Ontario Line Project

### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

**Metrolinx 130 Adelaide Street West, Toronto, Ontario M5H 3P5**

*All personal information included in a submission – such as name, address, telephone number and property location – is collected, maintained and disclosed by Metrolinx for the purpose of transparency and consultation. The information is collected under the authority of O. Reg. 341/20 under the Environmental Assessment Act or is collected and maintained for the purpose of creating a record that is available to the general public as described in s. 37 of the Freedom of Information and Protection of Privacy Act. Personal information you submit will become part of a public record that is available to the general public unless you request that your personal information remain confidential. For more information, please contact [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com) or 416-874-5900.*

---

Good afternoon,

The Notice of Draft Corktown Station Early Works Report (EWR) for the Ontario Line Project has been published on May 12, 2021. The Draft EWR is available on the project website at [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline). The public review period begins May 12, 2021 and will continue until June 11, 2021. Attached for your reference is the Notice of Publication of Draft Corktown Station EWR, as well as a covering letter. Please do not hesitate to contact us if you have any questions.

Thanks,

**Crystal Ho**

Junior Project Coordinator, Environmental Programs and Assessment

Metrolinx

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Ruth Lindenburg,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

Good afternoon Ruth and Maria – this is a follow-up email to the correspondence passed along just now through EATS which included the Corktown Station Early Works Noise and Vibration Report. As noted in that correspondence, we are currently looking at a turnaround date of April 9, 2021 for the Ministry’s comments.

Please let me know if any issues accessing the files or if any questions.

Regards,

Good afternoon Ruth and Maria,

This is a follow-up email to the correspondence sent just now through EATS, which included the Corktown Station Early Works Report and letter providing an update on the Ontario Line Project. At this time we are requesting the Ministry's review and comments by April 9, 2021 in the attached comment tracking spreadsheet (included through EATS in the ZIP file).

Please let me know if any issues accessing the files and I can resend as necessary.

Regards,

**MERLIN YUEN**

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Lisa Trevisan,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

## Notice of Publication of Draft Corktown Station Early Works Report Ontario Line Project

### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

Attachment: Notice of Publication of Draft Corktown Station Early Works Report

## Notice of Publication of Draft Corktown Station Early Works Report Ontario Line Project

### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

**Metrolinx 130 Adelaide Street West, Toronto, Ontario M5H 3P5**

*All personal information included in a submission – such as name, address, telephone number and property location – is collected, maintained and disclosed by Metrolinx for the purpose of transparency and consultation. The information is collected under the authority of O. Reg. 341/20 under the Environmental Assessment Act or is collected and maintained for the purpose of creating a record that is available to the general public as described in s. 37 of the Freedom of Information and Protection of Privacy Act. Personal information you submit will become part of a public record that is available to the general public unless you request that your personal information remain confidential. For more information, please contact [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com) or 416-874-5900.*

Good afternoon,

The Notice of Draft Corktown Station Early Works Report (EWR) for the Ontario Line Project has been published on May 12, 2021. The Draft EWR is available on the project website at [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline). The public review period begins May 12, 2021 and will continue until June 11, 2021. Attached for your reference is the Notice of Publication of Draft Corktown Station EWR, as well as a covering letter. Please do not hesitate to contact us if you have any questions.

Thanks,

**Crystal Ho**

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Cindy Batista,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

Good afternoon Cindy – just checking in on the one remaining Ministry comment on the MECP set of comments for the Corktown Station early works. Could you confirm if the team could consider this comment closed out, or if the Ministry has additional feedback on our response?

Thanks,

**MERLIN YUEN**

Good afternoon Cindy,

Thank you for providing the additional feedback on that comment. Please see attached a revised spreadsheet containing our response. Let us know if it would be beneficial to set-up a quick call to resolve, should the Ministry require any additional detail or if we can consider this comment as closed-off.

Thanks,

| 1                                                       | Kevin A Smith    | NPC-104 Sound Level Adjustments                          | Table 3-2                              | Please include MECP sound level adjustments as per NPC-104 for applicable equipment, such as tonality for Concrete Saw, Chainsaw, quasi-steady impulsive sound for Jack Hammer in Table 3-2 and noise calculations.                                                                                                                                 | The noise level adjustments in NPC-104 are applied during the assessment of the long term noise impact for the operation of stationary noise sources in Ontario. This assessment is for temporary potential impacts to noise due to Corktown Station early works activities, and the adjustments have not been applied to temporary construction noise as per industry standard practice in Ontario. As Ontario does not have receptor based noise level limits, international construction noise level criteria from the Federal Transit Administration's Transit Noise and Vibration Impact Assessment Manual have been adopted to account for the variability of construction noise, and the various types of noises from typical construction activities, including equipment that have quasi-steady impulsive sound or tonal characteristics. Additional adjustments are not applicable at this time. | OK, no further comments                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2                                                       | Kevin A Smith    | FTA Guide's construction vibration propagation equations | Section 3.3.2 Vibration                | Please provide example calculation using FTA Guide's construction vibration propagation equations.                                                                                                                                                                                                                                                  | Please see sample calculation in Appendix B of the Noise and Vibration Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Why is the zone of influence the same for a backhoe, excavator, front end loader and grader? Excavator, front end loader, and grader are much heavier than backhoe therefore are likely equivalent to large bulldozer in FTA table 12-2 | The excavator, front end loader, and grader were assumed similar to a small dozer, due to the amount of material that these equipment are expected to be moving, and expected energy imparted into the ground. Backhoes, although potentially smaller than the other equipment, was assumed to cause similar vibration. Note that the assessment was centred around the vibratory roller, which has much greater vibration emissions. | The excavator, front end load and grader should be considered as heavy excavation equipment with reference vibration the same as dump truck; 0.076 in/sec PPV @ 25 feet. This is supported by Vibration Analysis and Empirical Law Definition for Different Equipment in a Civil Construction, Appl. Sci 2020, 10, 4689:doi:10.3390/app10144689, and by Construction Vibrations and Their Impact on Vibration Sensitive Facilities, Paper Presented at American Society of Civil Engineers, Feb 2000, by Hal Amick and Michael Gendreau | The assessment was based upon the worst case piece of equipment which was the vibratory roller; which has vibration emissions much higher than trucks, and other excavation equipment anticipated to be used during the early works. Assessment based upon the vibratory roller dominates the potential impact from the other equipment. The vibration zone of influence presented in the report has been established based on operation of the vibratory roller at the outer most edge of the project footprint.<br><br>Appl. Sci 2020, 10, 4689:doi:10.3390/app10144689 indicates that excavators would have vibration emission approximately 1/4-1/3 of the bull dozers. Correcting for surface differences(The paper was based upon equipment operating directly on bedrock and thus higher vibration levels expected), using the FTA reference data, (a large dozer with a vibration emission 2.261 mm/s) an excavator would be expected to have vibration emissions between 0.065 mm/s and 0.087 mm/s. This is inline with the assumption in the Corktown Station early works construction noise and vibration report.<br><br>Construction Vibrations and Their Impact on Vibration Sensitive Facilities, Paper Presented at American Society of Civil Engineers, Feb 2000, by Hal Amick and Michael Gendreau only provides data such that trucks can be compared to jack hammers, small and large dozers, however, equipment such as excavators, front end loaders, and graders are not presented, and thus cannot be compared. |
| 3                                                       | Kevin A Smith    | Representative receiver locations                        | Table 5-1                              | Please provide a figure showing representative receiver locations and noise impact.                                                                                                                                                                                                                                                                 | Figure 5-1 has been added to the Noise and Vibration Report to show representative receiver locations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | OK, no further comments                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 4                                                       | Kevin A Smith    | Proposed monitor locations                               | Table 6-1                              | Please provide a figure showing proposed noise and vibration monitor locations.                                                                                                                                                                                                                                                                     | Specific monitoring locations are dependant on the refinement of construction plans and schedules as project planning progresses.<br>-The Project has committed to conduct noise monitoring where adopted construction noise criteria (as MECP does not have receptor specific construction noise limits) may be exceeded. Noise levels could be controlled/mitigated to be below criteria, based upon refined construction schedules, and plans as project planning progresses. Construction noise monitoring may not be required; however, if required, specific locations of monitoring will be determined as planning progresses.<br>-Current assessments show that vibration monitoring is not required. This is subject to design refinements/updates, if required, as project planning progresses.                                                                                                  | OK, no further comments                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 6                                                       | Rui Zeng         | Air Quality                                              | Table 4-1                              | For the proposed real-time particulate monitoring, it is recommended to monitor baseline conditions for at least one week in order to capture representative particulate matter concentrations under varying meteorological conditions.                                                                                                             | The Air Quality Management Plan is a commitment to be developed as project planning progresses. The mitigation table of the Air Quality Report includes monitoring activities which note that baseline air quality conditions should be established prior to construction for longer than one week to capture representative concentrations under varying meterological conditions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 7                                                       | Rui Zeng         | Air Quality                                              | Table 4-1                              | Please clarify if the proposed particulate monitoring includes both PM10 and PM2.5. In addition to PM, are there other contaminants of concern that would be monitored?                                                                                                                                                                             | The Air Quality Management Plan is a commitment in the Corktown Station Early Works Report, to be developed as project planning progresses. Both PM10 and PM2.5 will be considered. Any additional contaminants of concern to be monitored will be documented and refined through the Air Quality Management Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 8                                                       | Rui Zeng         | Air Quality                                              | Table 4-1                              | Please note that the ministry recommends that non-chloride dust suppressants be applied.                                                                                                                                                                                                                                                            | Thank you for advising us that the Ministry recommends the use of non-chloride dust suppressants. This will be added to the mitigation table in the Air Quality Report/EWR.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 9                                                       | Rui Zeng         | Air Quality                                              | Table 4-1                              | As mentioned in Table 4, the disruption of contaminated soils may release harmful and/or volatile contaminants. If any soil contamination issues arise, the proponent should consult with the Ministry's Central Region Office to discuss the requirements in dealing with contamination issues and ambient monitoring requirements, if applicable. | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

Andersen | Species At Risk Branch                                   | n/a                                    | MECP Permissions and Compliance staff generally concur with the findings of the reports. As they have already received a 17(2)(d) permit; therefore, nothing further is required from MECP Permissions and Compliance.                                                                                                                              | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 13                                                      | Lisai Shen       | Surface Water                                            |                                        | There are no surface water features close by. In terms of stormwater and surface runoff management, the draft Early Works Report did a reasonable assessment of potential impacts and proposed mitigation measures on a higher level. Ministry has no issues at this stage, if the proposed measures will be followed through.                      | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 14 | Vincent Bulman | Groundwater / Hydrogeology |                                              | A detailed description of the hydrogeology and stratigraphy will be required to satisfy the requirements of the Permit To Take Water (PTTW) or Construction Dewatering EASR. Site specific data may be required. The level of detail required for a PTTW and EASR is much more detailed than the desk top study included in this EA. Possible ground settlement from dewatering will also need to be addressed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Noted. The level of detail provided in the early works report is considered to be suitable for the environmental assessment phase of the Corktown Station early works. Detailed stratigraphy information will be confirmed as Corktown Station early works planning progresses to meet PTTW/EASR requirements at the time of application preparation, if PTTW/EASR is required.                                                                                                                                                                                                                                                                                                                         |                      |  |  |  |
| 15 | Vincent Bulman | Groundwater / Hydrogeology |                                              | Knowledge of contaminated sites along the alignment if they occur will enable the preparation of contingency and mitigation measures for excess soil and construction dewatering. To obtain information on locations of contaminated sites along the alignment, the proponent may consider accessing ministry records (possibly through FOI).<br><br>City of Toronto Archives can also be consulted to locate areas of past industrial activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Noted. A Limited Phase I was completed independent of this Early Works assessment. A comprehensive environmental due diligence program is being planned and will be completed as part of the project in areas where there is known or potential contamination, based on the results of the Limited Phase I Report.                                                                                                                                                                                                                                                                                                                                                                                      |                      |  |  |  |
| 16 | Vincent Bulman | Groundwater / Hydrogeology |                                              | Discharge from construction dewatering to the natural environment or storm sewers may require an ECA, depending on the quality of the discharge water and treatment needs to meet the Ministry's and/ or City of Toronto's requirements.<br><br>Characterization of groundwater along the alignment will be required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Noted. This commitment is in Table 6-2 of the Early Works Report. Characterization of local environmental conditions pertaining to groundwater and soil along the entire Ontario Line alignment will be provided in the forthcoming Environmental Impact Assessment Report.                                                                                                                                                                                                                                                                                                                                                                                                                             |                      |  |  |  |
| 17 | Vincent Bulman | Groundwater / Hydrogeology |                                              | The ministry's new excess soil will need to be incorporated into the project's soil management.<br>a. This commitment is in Table 6-2 of the Early Works Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                      |  |  |  |
| 18 | Vincent Bulman | Groundwater / Hydrogeology |                                              | The stratigraphy along the alignment should be described in much greater detail. Locations, depths and thicknesses of aquifers and aquitards should be determined to inform a PTTW but also construction options. It is imperative that pressurized aquifers be identified if present. Consideration should be given to micro-seismic surveys and boreholes to accomplish this. The objective is to minimize "surprises!"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Noted. The level of detail provided in the early works report is considered to be suitable for the environmental assessment phase of the Corktown Station early works. Detailed stratigraphy information will be confirmed as Corktown Station early works planning progresses to meet PTTW/EASR requirements at the time of application preparation, if PTTW/EASR is required. Characterization of local environmental conditions pertaining to groundwater and soil along the entire Ontario Line alignment will be provided in the forthcoming Environmental Impact Assessment Report. Detailed stratigraphy information will be obtained to inform PTTW(s), as required.                            |                      |  |  |  |
| 19 | Cindy Batista  | General                    | ES. 1, ES. 3, Section 1.3.1, 1.3.2 Section 3 | Prior to reading the draft early works report, it was assumed that the early works activities included the construction of the Corktown Station. From reading the report, it is now understood that the early works activities does not involve the construction of the station, but rather the demolition of existing buildings, site preparation, and undertaking environmental investigations and archaeological assessments in order to have the site ready for future tunnelling.<br><br>Can Metrolinx provide additional information as to why environmental investigations are required for the site? Can a few examples be provided in the description of the early works activities or refer the reader to where this are described in more detail in the report?<br><br>Moreover, it should be made more clear in the report that early works activities proposed for this site does not include the construction of the future Corktown Station or tunnelling. It appears that only one reference to this was made in Section 1.3.2 of the report. It is recommended that this be made clear up front in the executive summary, as well. | Additional text has been added to the Executive Summary and Section 1.3.1 to clarify that project operations and construction of Corktown Station and other project components will be documented in the Ontario Line Environmental Impact Assessment Report in accordance with Section 15 of Ontario Regulation 341/20.<br><br>The project description includes early works activities outlined in Table 3-1 and in the Executive Summary.                                                                                                                                                                                                                                                             | No further comments. |  |  |  |
| 20 | Cindy Batista  | General                    | Section 1.3.2                                | This section refers to the Ontario Line Preliminary Design Business Case that was prepared for the project. It is recommended that this report be added as an appendix or provide a link to where the public may access the report online.<br><br>This section states the construction of the station at this location reduces construction impacts . . . because it will double as a work site and tunnel construction work. It is recommended here that it is made clear to the readers that construction of the station and tunnelling work will be assessed in the future in the environmental impact assessment report that will be prepared for the entire Ontario Line project. Providing additional clarity will be helpful to the reader to understand that the early works activities proposed in this draft report does not include tunnelling work or construction of the Corktown Station.                                                                                                                                                                                                                                             | A link to the Preliminary Design Business Case was added to the references list of the Early Works Report. Additional text has been added to the Executive Summary and Section 1.3.1 to clarify that the future Corktown Station is being assessed as part of the overall impact assessment for the Ontario Line Project and is not included in the Early Works Report.<br><br>Additional text has been added to the Executive Summary and Section 1.3.1 to clarify that project operations and construction of Corktown Station and other project components will be documented in the Ontario Line Environmental Impact Assessment Report in accordance with Section 15 of Ontario Regulation 341/20. | No further comments. |  |  |  |
| 21 | Cindy Batista  | General                    | Page 11, Table 2-1                           | This table refers to 'Section 0' several times. It is assumed this is an error. Please clarify and update to reflect the appropriate sections of the report that meets the requirements of the regulation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Thank you for noting this, these references were made in error. Links have been updated and will be checked again prior to finalizing the report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | No further comments. |  |  |  |
| 22 | Cindy Batista  | General                    |                                              | The draft report submitted for ministry review includes several placeholders (e.g. noise and vibration). It is assumed that when Metrolinx posts its Notice of Publication of Draft Early Works Report for formal public review, the placeholders will be removed and replaced with missing project information. The ministry will complete its review of these sections when the publicly available draft is posted on the Metrolinx's website.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | All placeholders will be replaced with appropriate technical content or dates prior to the Notice of Publication of Draft Early Works Report for formal public review.<br><br>The comments provided by the MECP on the Noise and Vibration Report (Appendix A3) will be applied to the portions of that report that are included in the EWR.                                                                                                                                                                                                                                                                                                                                                            | No further comments. |  |  |  |
| 23 | Cindy Batista  | Climate Change             |                                              | Of the activities proposed at the Corktown Station site, are potential climate change issues being considered?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Climate change considerations will be documented in the forthcoming Environmental Impact Assessment Report.<br><br>It is anticipated that the Project could reduce automobile vehicle kilometers traveled by 266,000 km per day. Therefore, it is expected that there will be a substantial net overall decrease in greenhouse gas emissions as a result of the Project.                                                                                                                                                                                                                                                                                                                                | No further comments. |  |  |  |
| 24 | Cindy Batista  | General                    |                                              | Prior to finalizing the report, it is expected that Metrolinx will address all comments from this ministry and any other agency that commented during the draft review stage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | That is correct, all agency comments that are received during the draft review stage will be addressed prior to finalizing the report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | No further comments. |  |  |  |

Good Afternoon Crystal,

Metrolinx's response does not address the ministry's comment and so it remains outstanding. Unsure if there is time to still address it given that Metrolinx is looking to post the final EWR this Thursday. If time has expired, the comment will form part of the record for this project.

Regards,

Cindy

**Subject:** RE: MECP review of the draft Early Works Report for Corktown Station

Thanks Crystal. The response has now been shared with our noise expert for review. I will let you know if the response is satisfactory or whether there is additional follow-up comments.

Thanks,

Cindy

Subsec, page, DWG# | Review Comment                                                                                                                                                                                                                                                                                                                                      | Response & Details (Authors - )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Review Comment                                                                                                                                                                                                                          | Response                                                                                                                                                                                                                                                                                                                                                                                                                              | Review Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1                           | Kevin A Smith | NPC-104 Sound Level Adjustments                          | Table 3-2                              | Please include MECP sound level adjustments as per NPC-104 for applicable equipment, such as tonality for Concrete Saw, Chainsaw, quasi-steady impulsive sound for Jack Hammer in Table 3-2 and noise calculations.                                                                                                                                 | The noise level adjustments in NPC-104 are applied during the assessment of the long term noise impact for the operation of stationary noise sources in Ontario. This assessment is for temporary potential impacts to noise due to Corktown Station early works activities, and the adjustments have not been applied to temporary construction noise as per industry standard practice in Ontario. As Ontario does not have receptor based noise level limits, international construction noise level criteria from the Federal Transit Administration's Transit Noise and Vibration Impact Assessment Manual have been adopted to account for the variability of construction noise, and the various types of noises from typical construction activities, including equipment that have quasi-steady impulsive sound or tonal characteristics. Additional adjustments are not applicable at this time. | OK, no further comments                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

Excavator, front end loader, and grader are much heavier than backhoe therefore are likely equivalent to large bulldozer in FTA table 12-2 | The excavator, front end loader, and grader were assumed similar to a small dozer, due to the amount of material that these equipment are expected to be moving, and expected energy imparted into the ground. Backhoes, although potentially smaller than the other equipment, was assumed to cause similar vibration. Note that the assessment was centred around the vibratory roller, which has much greater vibration emissions. | The excavator, front end load and grader should be considered as heavy excavation equipment with reference vibration the same as dump truck; 0.076 in/sec PPV @ 25 feet. | 3                           | Kevin A Smith | Representative receiver locations                        | Table 5-1                              | Please provide a figure showing representative receiver locations and noise impact.                                                                                                                                                                                                                                                                 | Figure 5-1 has been added to the Noise and Vibration Report to show representative receiver locations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | OK, no further comments                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 4                           | Kevin A Smith | Proposed monitor locations                               | Table 6-1                              | Please provide a figure showing proposed noise and vibration monitor locations.                                                                                                                                                                                                                                                                     | Specific monitoring locations are dependant on the refinement of construction plans and schedules as project planning progresses. -The Project has committed to conduct noise monitoring where adopted construction noise criteria (as MECP does not have receptor specific construction noise limits) may be exceeded. Noise levels could be controlled/mitigated to be below criteria, based upon refined construction schedules, and plans as project planning progresses. Construction noise monitoring may not be required; however, if required, specific locations of monitoring will be determined as planning progresses. -Current assessments show that vibration monitoring is not required. This is subject to design refinements/updates, if required, as project planning progresses.                                                                                                        | OK, no further comments                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 6                           | Rui Zeng      | Air Quality                                              | Table 4-1                              | For the proposed real-time particulate monitoring, it is recommended to monitor baseline conditions for at least one week in order to capture representative particulate matter concentrations under varying meteorological conditions.                                                                                                             | The Air Quality Management Plan is a commitment to be developed as project planning progresses. The mitigation table of the Air Quality Report includes monitoring activities which note that baseline air quality conditions should be established prior to construction for longer than one week to capture representative concentrations under varying meterological conditions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 7                           | Rui Zeng      | Air Quality                                              | Table 4-1                              | Please clarify if the proposed particulate monitoring includes both PM10 and PM2.5. In addition to PM, are there other contaminants of concern that would be monitored?                                                                                                                                                                             | The Air Quality Management Plan is a commitment in the Corktown Station Early Works Report, to be developed as project planning progresses. Both PM10 and PM2.5 will be considered. Any additional contaminants of concern to be monitored will be documented and refined through the Air Quality Management Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 8                           | Rui Zeng      | Air Quality                                              | Table 4-1                              | Please note that the ministry recommends that non-chloride dust suppressants be applied.                                                                                                                                                                                                                                                            | Thank you for advising us that the Ministry recommends the use of non-chloride dust suppressants. This will be added to the mitigation table in the Air Quality Report/EWR.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 9                           | Rui Zeng      | Air Quality                                              | Table 4-1                              | As mentioned in Table 4, the disruption of contaminated soils may release harmful and/or volatile contaminants. If any soil contamination issues arise, the proponent should consult with the Ministry's Central Region Office to discuss the requirements in dealing with contamination issues and ambient monitoring requirements, if applicable. | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 11 | Rui Zeng         | Air Quality                | Table 3-1                                    | In Table 3-1, the referenced SO2 Ambient Air Quality Criteria (180ug/m3) is for 10-minute averaging period rather than 30-minute. Please confirm the average background SO2 concentrations were converted from 1-hour to 10-minute averaging period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | AECOM has updated the average background SO2 concentration to the 10-minute averaging period in the Air Quality Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | No further comments. |  |  |
| 12 | Jeff J. Andersen | Species At Risk Branch     | n/a                                          | MECP Permissions and Compliance staff generally concur with the findings of the reports. As they have already received a 17(2)(d) permit; therefore, nothing further is required from MECP Permissions and Compliance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                      |  |  |
| 13 | Lisai Shen       | Surface Water              |                                              | There are no surface water features close by. In terms of stormwater and surface runoff management, the draft Early Works Report did a reasonable assessment of potential impacts and proposed mitigation measures on a higher level. Ministry has no issues at this stage, if the proposed measures will be followed through.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                      |  |  |
| 14 | Vincent Bulman   | Groundwater / Hydrogeology |                                              | A detailed description of the hydrogeology and stratigraphy will be required to satisfy the requirements of the Permit To Take Water (PTTW) or Construction Dewatering EASR. Site specific data may be required. The level of detail required for a PTTW and EASR is much more detailed than the desk top study included in this EA. Possible ground settlement from dewatering will also need to be addressed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Noted. The level of detail provided in the early works report is considered to be suitable for the environmental assessment phase of the Corktown Station early works. Detailed stratigraphy information will be confirmed as Corktown Station early works planning progresses to meet PTTW/EASR requirements at the time of application preparation, if PTTW/EASR is required.                                                                                                                                                                                                                                                                                              |                      |  |  |
| 15 | Vincent Bulman   | Groundwater / Hydrogeology |                                              | Knowledge of contaminated sites along the alignment if they occur will enable the preparation of contingency and mitigation measures for excess soil and construction dewatering. To obtain information on locations of contaminated sites along the alignment, the proponent may consider accessing ministry records (possibly through FOI).<br><br>City of Toronto Archives can also be consulted to locate areas of past industrial activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Noted. A Limited Phase I was completed independent of this Early Works assessment. A comprehensive environmental due diligence program is being planned and will be completed as part of the project in areas where there is known or potential contamination, based on the results of the Limited Phase I Report.                                                                                                                                                                                                                                                                                                                                                           |                      |  |  |
| 16 | Vincent Bulman   | Groundwater / Hydrogeology |                                              | Discharge from construction dewatering to the natural environment or storm sewers may require an ECA, depending on the quality of the discharge water and treatment needs to meet the Ministry's and/ or City of Toronto's requirements.<br><br>Characterization of groundwater along the alignment will be required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Noted. This commitment is in Table 6-2 of the Early Works Report. Characterization of local environmental conditions pertaining to groundwater and soil along the entire Ontario Line alignment will be provided in the forthcoming Environmental Impact Assessment Report.                                                                                                                                                                                                                                                                                                                                                                                                  |                      |  |  |
| 17 | Vincent Bulman   | Groundwater / Hydrogeology |                                              | The ministry's new excess soil will need to be incorporated into the project's soil management.<br>a.Handling excess soil <a href="https://www.ontario.ca/page/handling-excess-soil">https://www.ontario.ca/page/handling-excess-soil</a> ,<br>b.O. This commitment is in Table 6-2 of the Early Works Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                      |  |  |
| 18 | Vincent Bulman   | Groundwater / Hydrogeology |                                              | The stratigraphy along the alignment should be described in much greater detail. Locations, depths and thicknesses of aquifers and aquitards should be determined to inform a PTTW but also construction options. It is imperative that pressurized aquifers be identified if present. Consideration should be given to micro-seismic surveys and boreholes to accomplish this. The objective is to minimize "surprises!"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Noted. The level of detail provided in the early works report is considered to be suitable for the environmental assessment phase of the Corktown Station early works. Detailed stratigraphy information will be confirmed as Corktown Station early works planning progresses to meet PTTW/EASR requirements at the time of application preparation, if PTTW/EASR is required. Characterization of local environmental conditions pertaining to groundwater and soil along the entire Ontario Line alignment will be provided in the forthcoming Environmental Impact Assessment Report. Detailed stratigraphy information will be obtained to inform PTTW(s), as required. |                      |  |  |
| 19 | Cindy Batista    | General                    | ES. 1, ES. 3, Section 1.3.1, 1.3.2 Section 3 | Prior to reading the draft early works report, it was assumed that the early works activities included the construction of the Corktown Station. From reading the report, it is now understood that the early works activities does not involve the construction of the station, but rather the demolition of existing buildings, site preparation, and undertaking environmental investigations and archaeological assessments in order to have the site ready for future tunnelling.<br><br>Can Metrolinx provide additional information as to why environmental investigations are required for the site? Can a few examples be provided in the description of the early works activities or refer the reader to where this are described in more detail in the report?<br><br>Moreover, it should be made more clear in the report that early works activities proposed for this site does not include the construction of the future Corktown Station or tunnelling. It appears that only one reference to this was made in Section 1.3.2 of the report. It is recommended that this be made clear up front in the executive summary, as well. | Additional text has been added to the Executive Summary and Section 1.3.1 to clarify that project operations and construction of Corktown Station and other project components will be documented in the Ontario Line Environmental Impact Assessment Report in accordance with Section 15 of Ontario Regulation 341/20.<br><br>The project description includes early works activities outlined in Table 3-1 and in the Executive Summary.                                                                                                                                                                                                                                  | No further comments. |  |  |

|    |               |                |                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                      |  |  |

Hello Crystal,

Thanks for sending us the comment response table. Ministry staff have reviewed and there is one outstanding comment from our noise reviewer. Please see comment # 2. Please let me know if you wish to discuss this comment.

Also, can you or Maria kindly remind me when Metrolinx intends on posting the final EWR for Corktown Station.

Thank you,

Cindy

| 1                                                       | Kevin A Smith | NPC-104 Sound Level Adjustments                          | Table 3-2                              | Please include MECP sound level adjustments as per NPC-104 for applicable equipment, such as tonality for Concrete Saw, Chainsaw, quasi-steady impulsive sound for Jack Hammer in Table 3-2 and noise calculations.                     | The noise level adjustments in NPC-104 are applied during the assessment of the long term noise impact for the operation of stationary noise sources in Ontario. This assessment is for temporary potential impacts to noise due to Corktown Station early works activities, and the adjustments have not been applied to temporary construction noise as per industry standard practice in Ontario. As Ontario does not have receptor based noise level limits, international construction noise level criteria from the Federal Transit Administration's Transit Noise and Vibration Impact Assessment Manual have been adopted to account for the variability of construction noise, and the various types of noises from typical construction activities, including equipment that have quasi-steady impulsive sound or tonal characteristics. Additional adjustments are not applicable at this time. | OK, no further comments                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2                                                       | Kevin A Smith | FTA Guide's construction vibration propagation equations | Section 3.3.2 Vibration                | Please provide example calculation using FTA Guide's construction vibration propagation equations.                                                                                                                                      | Please see sample calculation in Appendix B of the Noise and Vibration Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Why is the zone of influence the same for a backhoe, excavator, front end loader and grader? Excavator, front end loader, and grader are much heavier than backhoe therefore are likely equivalent to large bulldozer in FTA table 12-2 | The excavator, front end loader, and grader were assumed similar to a small dozer, due to the amount of material that these equipment are expected to be moving, and expected energy imparted into the ground. Backhoes, although potentially smaller than the other equipment, was assumed to cause similar vibration. Note that the assessment was centred around the vibratory roller, which has much greater vibration emissions. |

| 6                                                       | Rui Zeng      | Air Quality                                              | Table 4-1                              | For the proposed real-time particulate monitoring, it is recommended to monitor baseline conditions for at least one week in order to capture representative particulate matter concentrations under varying meteorological conditions. | The Air Quality Management Plan is a commitment to be developed as project planning progresses. The mitigation table of the Air Quality Report includes monitoring activities which note that baseline air quality conditions should be established prior to construction for longer than one week to capture representative concentrations under varying meteorological conditions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 7                                                       | Rui Zeng      | Air Quality                                              | Table 4-1                              | Please clarify if the proposed particulate monitoring includes both PM10 and PM2.5. In addition to PM, are there other contaminants of concern that would be monitored?                                                                 | The Air Quality Management Plan is a commitment in the Corktown Station Early Works Report, to be developed as project planning progresses. Both PM10 and PM2.5 will be considered. Any additional contaminants of concern to be monitored will be documented and refined through the Air Quality Management Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 8                                                       | Rui Zeng      | Air Quality                                              | Table 4-1                              | Please note that the ministry recommends that non-chloride dust suppressants be applied.                                                                                                                                                | Thank you for advising us that the Ministry recommends the use of non-chloride dust suppressants. This will be added to the mitigation table in the Air Quality Report/EWR.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | No further comments.                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|    |                  |                            |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                      |  |

| 9  | Rui Zeng         | Air Quality                | Table 4-1 | As mentioned in Table 4, the disruption of contaminated soils may release harmful and/or volatile contaminants. If any soil contamination issues arise, the proponent should consult with the Ministry's Central Region Office to discuss the requirements in dealing with contamination issues and ambient monitoring requirements, if applicable.                                                                                                                                                                                                                                                                                                                                           | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | No further comments. |  |
| 10 | Rui Zeng         | Air Quality                | Table 4-1 | Please clarify if an air quality management plan will be provided in the future, as it was mentioned in the mitigation measures section of the Table 4-1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The Air Quality Management Plan will be provided to MECP once available as project planning progresses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | No further comments. |  |
| 11 | Rui Zeng         | Air Quality                | Table 3-1 | In Table 3-1, the referenced SO2 Ambient Air Quality Criteria (180ug/m3) is for 10-minute averaging period rather than 30-minute. Please confirm the average background SO2 concentrations were converted from 1-hour to 10-minute averaging period.                                                                                                                                                                                                                                                                                                                                                                                                                                          | AECOM has updated the average background SO2 concentration to the 10-minute averaging period in the Air Quality Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | No further comments. |  |
| 12 | Jeff J. Andersen | Species At Risk Branch     | n/a       | MECP Permissions and Compliance staff generally concur with the findings of the reports. As they have already received a 17(2)(d) permit; therefore, nothing further is required from MECP Permissions and Compliance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                      |  |
| 13 | Lisai Shen       | Surface Water              |           | There are no surface water features close by. In terms of stormwater and surface runoff management, the draft Early Works Report did a reasonable assessment of potential impacts and proposed mitigation measures on a higher level. Ministry has no issues at this stage, if the proposed measures will be followed through.                                                                                                                                                                                                                                                                                                                                                                | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                      |  |
| 14 | Vincent Bulman   | Groundwater / Hydrogeology |           | A detailed description of the hydrogeology and stratigraphy will be required to satisfy the requirements of the Permit To Take Water (PTTW) or Construction Dewatering EASR. Site specific data may be required. The level of detail required for a PTTW and EASR is much more detailed than the desk top study included in this EA. Possible ground settlement from dewatering will also need to be addressed.                                                                                                                                                                                                                                                                               | Noted. The level of detail provided in the early works report is considered to be suitable for the environmental assessment phase of the Corktown Station early works. Detailed stratigraphy information will be confirmed as Corktown Station early works planning progresses to meet PTTW/EASR requirements at the time of application preparation, if PTTW/EASR is required.                                                                                                                                                                                                                                                                                              |                      |  |
| 15 | Vincent Bulman   | Groundwater / Hydrogeology |           | Knowledge of contaminated sites along the alignment if they occur will enable the preparation of contingency and mitigation measures for excess soil and construction dewatering. To obtain information on locations of contaminated sites along the alignment, the proponent may consider accessing ministry records (possibly through FOI).<br><br>City of Toronto Archives can also be consulted to locate areas of past industrial activities.                                                                                                                                                                                                                                            | Noted. A Limited Phase I was completed independent of this Early Works assessment. A comprehensive environmental due diligence program is being planned and will be completed as part of the project in areas where there is known or potential contamination, based on the results of the Limited Phase I Report.                                                                                                                                                                                                                                                                                                                                                           |                      |  |
| 16 | Vincent Bulman   | Groundwater / Hydrogeology |           | Discharge from construction dewatering to the natural environment or storm sewers may require an ECA, depending on the quality of the discharge water and treatment needs to meet the Ministry's and/ or City of Toronto's requirements.<br><br>Characterization of groundwater along the alignment will be required.                                                                                                                                                                                                                                                                                                                                                                         | Noted. This commitment is in Table 6-2 of the Early Works Report. Characterization of local environmental conditions pertaining to groundwater and soil along the entire Ontario Line alignment will be provided in the forthcoming Environmental Impact Assessment Report.                                                                                                                                                                                                                                                                                                                                                                                                  |                      |  |
| 17 | Vincent Bulman   | Groundwater / Hydrogeology |           | The ministry's new excess soil will need to be incorporated into the project's soil management.<br>a. Handling excess soil <a href="https://www.ontario.ca/page/handling-excess-soil">https://www.ontario.ca/page/handling-excess-soil</a> ,<br>b. O. Reg. 406/19 On-Site and Excess Soil Management Regulation <a href="https://www.ontario.ca/laws/regulation/r19406">https://www.ontario.ca/laws/regulation/r19406</a> , and<br>c. Management of Excess Soil - A Guide for Best Management Practices <a href="https://www.ontario.ca/page/management-excess-soil-guide-best-management-practices">https://www.ontario.ca/page/management-excess-soil-guide-best-management-practices</a> . | Noted. This commitment is in Table 6-2 of the Early Works Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                      |  |
| 18 | Vincent Bulman   | Groundwater / Hydrogeology |           | The stratigraphy along the alignment should be described in much greater detail. Locations, depths and thicknesses of aquifers and aquitards should be determined to inform a PTTW but also construction options. It is imperative that pressurized aquifers be identified if present. Consideration should be given to micro-seismic surveys and boreholes to accomplish this. The objective is to minimize "surprises!"                                                                                                                                                                                                                                                                     | Noted. The level of detail provided in the early works report is considered to be suitable for the environmental assessment phase of the Corktown Station early works. Detailed stratigraphy information will be confirmed as Corktown Station early works planning progresses to meet PTTW/EASR requirements at the time of application preparation, if PTTW/EASR is required. Characterization of local environmental conditions pertaining to groundwater and soil along the entire Ontario Line alignment will be provided in the forthcoming Environmental Impact Assessment Report. Detailed stratigraphy information will be obtained to inform PTTW(s), as required. |                      |  |

|    |               |                |                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                      |  |

| 19 | Cindy Batista | General        | ES, 1, ES, 3, Section 1.3.1, 1.3.2 Section 3 | <p>Prior to reading the draft early works report, it was assumed that the early works activities included the construction of the Corktown Station. From reading the report, it is now understood that the early works activities does not involve the construction of the station, but rather the demolition of existing buildings, site preparation, and undertaking environmental investigations and archaeological assessments in order to have the site ready for future tunnelling.</p> <p>Can Metrolinx provide additional information as to why environmental investigations are required for the site? Can a few examples be provided in the description of the early works activities or refer the reader to where this are described in more detail in the report?</p> <p>Moreover, it should be made more clear in the report that early works activities proposed for this site does not include the construction of the future Corktown Station or tunnelling. It appears that only one reference to this was made in Section 1.3.2 of the report. It is recommended that this be made clear up front in the executive summary, as well.</p> | <p>Additional text has been added to the Executive Summary and Section 1.3.1 to clarify that project operations and construction of Corktown Station and other project components will be documented in the Ontario Line Environmental Impact Assessment Report in accordance with Section 15 of Ontario Regulation 341/20.</p> <p>The project description includes early works activities outlined in Table 3-1 and in the Executive Summary.</p>                                                                                                                                                                                                                                                             | No further comments. |  |
| 20 | Cindy Batista | General        | Section 1.3.2                                | <p>This section refers to the Ontario Line Preliminary Design Business Case that was prepared for the project. It is recommended that this report be added as an appendix or provide a link to where the public may access the report online.</p> <p>This section states the construction of the station at this location reduces construction impacts . . . because it will double as a work site and tunnel construction work. It is recommended here that it is made clear to the readers that construction of the station and tunnelling work will be assessed in the future in the environmental impact assessment report that will be prepared for the entire Ontario Line project. Providing additional clarity will be helpful to the reader to understand that the early works activities proposed in this draft report does not include tunnelling work or construction of the Corktown Station.</p>                                                                                                                                                                                                                                             | <p>A link to the Preliminary Design Business Case was added to the references list of the Early Works Report. Additional text has been added to the Executive Summary and Section 1.3.1 to clarify that the future Corktown Station is being assessed as part of the overall impact assessment for the Ontario Line Project and is not included in the Early Works Report.</p> <p>Additional text has been added to the Executive Summary and Section 1.3.1 to clarify that project operations and construction of Corktown Station and other project components will be documented in the Ontario Line Environmental Impact Assessment Report in accordance with Section 15 of Ontario Regulation 341/20.</p> | No further comments. |  |
| 21 | Cindy Batista | General        | Page 11, Table 2.1                           | This table refers to 'Section 0' several times. It is assumed this is an error. Please clarify and update to reflect the appropriate sections of the report that meets the requirements of the regulation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Thank you for noting this, these references were made in error. Links have been updated and will be checked again prior to finalizing the report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | No further comments. |  |
| 22 | Cindy Batista | General        |                                              | The draft report submitted for ministry review includes several placeholders (e.g. noise and vibration). It is assumed that when Metrolinx posts its Notice of Publication of Draft Early Works Report for formal public review, the placeholders will be removed and replaced with missing project information. The ministry will complete its review of these sections when the publicly available draft is posted on the Metrolinx's website.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>All placeholders will be replaced with appropriate technical content or dates prior to the Notice of Publication of Draft Early Works Report for formal public review.</p> <p>The comments provided by the MECP on the Noise and Vibration Report (Appendix A3) will be applied to the portions of that report that are included in the EWR.</p>                                                                                                                                                                                                                                                                                                                                                            | No further comments. |  |
| 23 | Cindy Batista | Climate Change |                                              | Of the activities proposed at the Corktown Station site, are potential climate change issues being considered?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Climate change considerations will be documented in the forthcoming Environmental Impact Assessment Report.</p> <p>It is anticipated that the Project could reduce automobile vehicle kilometers traveled by 266,000 km per day. Therefore, it is expected that there will be a substantial net overall decrease in greenhouse gas emissions as a result of the Project.</p>                                                                                                                                                                                                                                                                                                                                | No further comments. |  |
| 24 | Cindy Batista | General        |                                              | Prior to finalizing the report, it is expected that Metrolinx will address all comments from this ministry and any other agency that commented during the draft review stage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | That is correct, all agency comments that are received during the draft review stage will be addressed prior to finalizing the report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | No further comments. |  |

Good afternoon Cindy,

Thank-you for providing your comments on the initial draft of the Corktown Station Early Works Report. Please see attached for our responses to your comments and the requested CadnaA file. Let me know if there are any outstanding comments following this circulation, otherwise we'd appreciate if your team could document this set as closed off.

Thanks,

**Crystal Ho**

|                                                                |               |                                                          |                                        | Date Out:                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Item No.                                                       | Reviewer Name | Description                                              | Part, Chapter, Sec, Subsec, page, DWG# | Review Comment                                                                                                                                                                                                                          | Response & Details (Authors - )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1                                                              | Kevin A Smith | NPC-104 Sound Level Adjustments                          | Table 3-2                              | Please include MECP sound level adjustments as per NPC-104 for applicable equipment, such as tonality for Concrete Saw, Chainsaw, quasi-steady impulsive sound for Jack Hammer in Table 3-2 and noise calculations.                     | The noise level adjustments in NPC-104 are applied during the assessment of the long term noise impact for the operation of stationary noise sources in Ontario. This assessment is for temporary potential impacts to noise due to Corktown Station early works activities, and the adjustments have not been applied to temporary construction noise as per industry standard practice in Ontario. As Ontario does not have receptor based noise level limits, international construction noise level criteria from the Federal Transit Administration's Transit Noise and Vibration Impact Assessment Manual have been adopted to account for the variability of construction noise, and the various types of noises from typical construction activities, including equipment that have quasi-steady impulsive sound or tonal characteristics. Additional adjustments are not applicable at this time. |
| 2                                                              | Kevin A Smith | FTA Guide's construction vibration propagation equations | Section 3.3.2 Vibration                | Please provide example calculation using FTA Guide's construction vibration propagation equations.                                                                                                                                      | Please see sample calculation in Appendix B of the Noise and Vibration Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 3                                                              | Kevin A Smith | Representative receiver locations                        | Table 5-1                              | Please provide a figure showing representative receiver locations and noise impact.                                                                                                                                                     | Figure 5-1 has been added to the Noise and Vibration Report to show representative receiver locations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 4                                                              | Kevin A Smith | Proposed monitor locations                               | Table 6-1                              | Please provide a figure showing proposed noise and vibration monitor locations.                                                                                                                                                         | Specific monitoring locations are dependant on the refinement of construction plans and schedules as project planning progresses.<br>-The Project has committed to conduct noise monitoring where adopted construction noise criteria (as MECP does not have receptor specific construction noise limits) may be exceeded. Noise levels could be controlled/mitigated to be below criteria, based upon refined construction schedules, and plans as project planning progresses. Construction noise monitoring may not be required; however, if required, specific locations of monitoring will be determined as planning progresses.<br>-Current assessments show that vibration monitoring is not required. This is subject to design refinements/updates, if required, as project planning progresses.                                                                                                  |

| 9  | Rui Zeng         | Air Quality                | Table 4-1 | As mentioned in Table 4, the disruption of contaminated soils may release harmful and/or volatile contaminants. If any soil contamination issues arise, the proponent should consult with the Ministry's Central Region Office to discuss the requirements in dealing with contamination issues and ambient monitoring requirements, if applicable.                                                                                                                                                                                                                                                                                                                                           | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 10 | Rui Zeng         | Air Quality                | Table 4-1 | Please clarify if an air quality management plan will be provided in the future, as it was mentioned in the mitigation measures section of the Table 4-1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The Air Quality Management Plan will be provided to MECP once available as project planning progresses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 11 | Rui Zeng         | Air Quality                | Table 3-1 | In Table 3-1, the referenced SO2 Ambient Air Quality Criteria (180ug/m3) is for 10-minute averaging period rather than 30-minute. Please confirm the average background SO2 concentrations were converted from 1-hour to 10-minute averaging period.                                                                                                                                                                                                                                                                                                                                                                                                                                          | AECOM has updated the average background SO2 concentration to the 10-minute averaging period in the Air Quality Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 12 | Jeff J. Andersen | Species At Risk Branch     | n/a       | MECP Permissions and Compliance staff generally concur with the findings of the reports. As they have already received a 17(2)(d) permit; therefore, nothing further is required from MECP Permissions and Compliance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 13 | Lisai Shen       | Surface Water              |           | There are no surface water features close by. In terms of stormwater and surface runoff management, the draft Early Works Report did a reasonable assessment of potential impacts and proposed mitigation measures on a higher level. Ministry has no issues at this stage, if the proposed measures will be followed through.                                                                                                                                                                                                                                                                                                                                                                | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 14 | Vincent Bulman   | Groundwater / Hydrogeology |           | A detailed description of the hydrogeology and stratigraphy will be required to satisfy the requirements of the Permit To Take Water (PTTW) or Construction Dewatering EASR. Site specific data may be required. The level of detail required for a PTTW and EASR is much more detailed than the desk top study included in this EA. Possible ground settlement from dewatering will also need to be addressed.                                                                                                                                                                                                                                                                               | Noted. The level of detail provided in the early works report is considered to be suitable for the environmental assessment phase of the Corktown Station early works. Detailed stratigraphy information will be confirmed as Corktown Station early works planning progresses to meet PTTW/EASR requirements at the time of application preparation, if PTTW/EASR is required.                                                                                                                                                                                                                                                                                              |
| 15 | Vincent Bulman   | Groundwater / Hydrogeology |           | Knowledge of contaminated sites along the alignment if they occur will enable the preparation of contingency and mitigation measures for excess soil and construction dewatering. To obtain information on locations of contaminated sites along the alignment, the proponent may consider accessing ministry records (possibly through FOI).<br><br>City of Toronto Archives can also be consulted to locate areas of past industrial activities.                                                                                                                                                                                                                                            | Noted. A Limited Phase I was completed independent of this Early Works assessment. A comprehensive environmental due diligence program is being planned and will be completed as part of the project in areas where there is known or potential contamination, based on the results of the Limited Phase I Report.                                                                                                                                                                                                                                                                                                                                                           |
| 16 | Vincent Bulman   | Groundwater / Hydrogeology |           | Discharge from construction dewatering to the natural environment or storm sewers may require an ECA, depending on the quality of the discharge water and treatment needs to meet the Ministry's and/ or City of Toronto's requirements.<br><br>Characterization of groundwater along the alignment will be required.                                                                                                                                                                                                                                                                                                                                                                         | Noted. This commitment is in Table 6-2 of the Early Works Report. Characterization of local environmental conditions pertaining to groundwater and soil along the entire Ontario Line alignment will be provided in the forthcoming Environmental Impact Assessment Report.                                                                                                                                                                                                                                                                                                                                                                                                  |
| 17 | Vincent Bulman   | Groundwater / Hydrogeology |           | The ministry's new excess soil will need to be incorporated into the project's soil management.<br>a. This commitment is in Table 6-2 of the Early Works Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 18 | Vincent Bulman   | Groundwater / Hydrogeology |           | The stratigraphy along the alignment should be described in much greater detail. Locations, depths and thicknesses of aquifers and aquitards should be determined to inform a PTTW but also construction options. It is imperative that pressurized aquifers be identified if present. Consideration should be given to micro-seismic surveys and boreholes to accomplish this. The objective is to minimize "surprises!"                                                                                                                                                                                                                                                                     | Noted. The level of detail provided in the early works report is considered to be suitable for the environmental assessment phase of the Corktown Station early works. Detailed stratigraphy information will be confirmed as Corktown Station early works planning progresses to meet PTTW/EASR requirements at the time of application preparation, if PTTW/EASR is required. Characterization of local environmental conditions pertaining to groundwater and soil along the entire Ontario Line alignment will be provided in the forthcoming Environmental Impact Assessment Report. Detailed stratigraphy information will be obtained to inform PTTW(s), as required. |

|    |               |                |                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 19 | Cindy Batista | General        | ES. 1, ES. 3, Section 1.3.1, 1.3.2 Section 3 | <p>Prior to reading the draft early works report, it was assumed that the early works activities included the construction of the Corktown Station. From reading the report, it is now understood that the early works activities does not involve the construction of the station, but rather the demolition of existing buildings, site preparation, and undertaking environmental investigations and archaeological assessments in order to have the site ready for future tunnelling.</p> <p>Can Metrolinx provide additional information as to why environmental investigations are required for the site? Can a few examples be provided in the description of the early works activities or refer the reader to where this are described in more detail in the report?</p> <p>Moreover, it should be made more clear in the report that early works activities proposed for this site does not include the construction of the future Corktown Station or tunnelling. It appears that only one reference to this was made in Section 1.3.2 of the report. It is recommended that this be made clear up front in the executive summary, as well.</p> | <p>Additional text has been added to the Executive Summary and Section 1.3.1 to clarify that project operations and construction of Corktown Station and other project components will be documented in the Ontario Line Environmental Impact Assessment Report in accordance with Section 15 of Ontario Regulation 341/20.</p> <p>The project description includes early works activities outlined in Table 3-1 and in the Executive Summary.</p>                                                                                                                                                                                                                                                             |
| 20 | Cindy Batista | General        | Section 1.3.2                                | <p>This section refers to the Ontario Line Preliminary Design Business Case that was prepared for the project. It is recommended that this report be added as an appendix or provide a link to where the public may access the report online.</p> <p>This section states the construction of the station at this location reduces construction impacts . . . because it will double as a work site and tunnel construction work. It is recommended here that it is made clear to the readers that construction of the station and tunnelling work will be assessed in the future in the environmental impact assessment report that will be prepared for the entire Ontario Line project. Providing additional clarity will be helpful to the reader to understand that the early works activities proposed in this draft report does not include tunnelling work or construction of the Corktown Station.</p>                                                                                                                                                                                                                                             | <p>A link to the Preliminary Design Business Case was added to the references list of the Early Works Report. Additional text has been added to the Executive Summary and Section 1.3.1 to clarify that the future Corktown Station is being assessed as part of the overall impact assessment for the Ontario Line Project and is not included in the Early Works Report.</p> <p>Additional text has been added to the Executive Summary and Section 1.3.1 to clarify that project operations and construction of Corktown Station and other project components will be documented in the Ontario Line Environmental Impact Assessment Report in accordance with Section 15 of Ontario Regulation 341/20.</p> |
| 21 | Cindy Batista | General        | Page 11, Table 2-1                           | This table refers to 'Section 0' several times. It is assumed this is an error. Please clarify and update to reflect the appropriate sections of the report that meets the requirements of the regulation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Thank you for noting this, these references were made in error. Links have been updated and will be checked again prior to finalizing the report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 22 | Cindy Batista | General        |                                              | The draft report submitted for ministry review includes several placeholders (e.g. noise and vibration). It is assumed that when Metrolinx posts its Notice of Publication of Draft Early Works Report for formal public review, the placeholders will be removed and replaced with missing project information. The ministry will complete its review of these sections when the publicly available draft is posted on the Metrolinx's website.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>All placeholders will be replaced with appropriate technical content or dates prior to the Notice of Publication of Draft Early Works Report for formal public review.</p> <p>The comments provided by the MECP on the Noise and Vibration Report (Appendix A3) will be applied to the portions of that report that are included in the EWR.</p>                                                                                                                                                                                                                                                                                                                                                            |
| 23 | Cindy Batista | Climate Change |                                              | Of the activities proposed at the Corktown Station site, are potential climate change issues being considered?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Climate change considerations will be documented in the forthcoming Environmental Impact Assessment Report.</p> <p>It is anticipated that the Project could reduce automobile vehicle kilometers traveled by 266,000 km per day. Therefore, it is expected that there will be a substantial net overall decrease in greenhouse gas emissions as a result of the Project.</p>                                                                                                                                                                                                                                                                                                                                |
| 24 | Cindy Batista | General        |                                              | Prior to finalizing the report, it is expected that Metrolinx will address all comments from this ministry and any other agency that commented during the draft review stage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | That is correct, all agency comments that are received during the draft review stage will be addressed prior to finalizing the report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

**RE: Draft Early Works Report – Ontario Line Corktown Station Early Works**

---

The Ministry of the Environment, Conservation and Parks (ministry) has completed its review of Metrolinx's Draft Early Works Report – Ontario Line Corktown Station Early Works, March 2021 (draft report). The review was carried out to determine whether the draft report meets the requirements set forth in Ontario Regulation 341/20, Ontario Line Project.

Below is one general comment and specific comments on noise and vibration, air quality, surface water, species at risk and groundwater, are in the attached table. The ministry's comments are being provided to Metrolinx for consideration when finalizing its early works report for the Corktown Station.

**General Comments**

The draft report submitted for ministry review includes several placeholders (e.g. noise and vibration). It is assumed that when Metrolinx posts its Notice of Publication of Draft Early Works Report for formal public review, the placeholders will be removed and

replaced with missing project information. The ministry will complete its review of these sections when the publicly available draft is posted on the Metrolinx's website.

### **Climate Change**

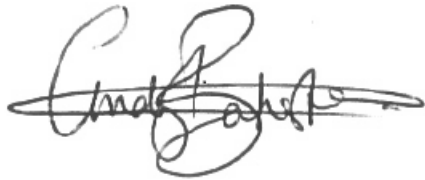

Of the activities proposed at the Corktown Station site, are potential climate change issues being considered?

### **Concluding Remarks**

Prior to finalizing the report, it is expected that Metrolinx will address all comments from this ministry and any other agency that commented during the draft review stage.

In closing, please feel free to reach out to me to arrange a meeting with ministry staff to discuss the comments on the draft report and the next steps. Should you have any questions or concerns, or to set up a meeting, please feel free to contact me by e-mail at [cindy.batista@ontario.ca](mailto:cindy.batista@ontario.ca).

Yours sincerely,

| 6                           | Rui Zeng         | Air Quality                                              | Table 4-1                              | For the proposed real-time particulate monitoring, it is recommended to monitor baseline conditions for at least one week in order to capture representative particulate matter concentrations under varying meteorological conditions.                                                                                                                                                                         |                                                                                                                    |
| 7                           | Rui Zeng         | Air Quality                                              | Table 4-1                              | Please clarify if the proposed particulate monitoring includes both PM10 and PM2.5. In addition to PM, are there other contaminants of concern that would be monitored?                                                                                                                                                                                                                                         |                                                                                                                    |
| 8                           | Rui Zeng         | Air Quality                                              | Table 4-1                              | Please note that the ministry recommends that non-chloride dust suppressants be applied.                                                                                                                                                                                                                                                                                                                        |                                                                                                                    |
| 9                           | Rui Zeng         | Air Quality                                              | Table 4-1                              | As mentioned in Table 4, the disruption of contaminated soils may release harmful and/or volatile contaminants. If any soil contamination issues arise, the proponent should consult with the Ministry's Central Region Office to discuss the requirements in dealing with contamination issues and ambient monitoring requirements, if applicable.                                                             |                                                                                                                    |
| 10                          | Rui Zeng         | Air Quality                                              | Table 4-1                              | Please clarify if an air quality management plan will be provided in the future, as it was mentioned in the mitigation measures section of the Table 4-1.                                                                                                                                                                                                                                                       |                                                                                                                    |
| 11                          | Rui Zeng         | Air Quality                                              | Table 3-1                              | In Table 3-1, the referenced SO2 Ambient Air Quality Criteria (180ug/m3) is for 10-minute averaging period rather than 30-minute. Please confirm the average background SO2 concentrations were converted from 1-hour to 10-minute averaging period.                                                                                                                                                            |                                                                                                                    |
| 12                          | Jeff J. Andersen | Species At Risk Branch                                   | n/a                                    | MECP Permissions and Compliance staff generally concur with the findings of the reports. As they have already received a 17(2)(d) permit; therefore, nothing further is required from MECP Permissions and Compliance.                                                                                                                                                                                          |                                                                                                                    |
| 13                          | Lisai Shen       | Surface Water                                            |                                        | There are no surface water features close by. In terms of stormwater and surface runoff management, the draft Early Works Report did a reasonable assessment of potential impacts and proposed mitigation measures on a higher level. Ministry has no issues at this stage, if the proposed measures will be followed through.                                                                                  |                                                                                                                    |
| 14                          | Vincent Bulman   | Groundwater / Hydrogeology                               |                                        | A detailed description of the hydrogeology and stratigraphy will be required to satisfy the requirements of the Permit To Take Water (PTTW) or Construction Dewatering EASR. Site specific data may be required. The level of detail required for a PTTW and EASR is much more detailed than the desk top study included in this EA. Possible ground settlement from dewatering will also need to be addressed. |                                                                                                                    |

|    |                |                            |                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |

| 18 | Vincent Bulman | Groundwater / Hydrogeology |                                                     | <p>The stratigraphy along the alignment should be described in much greater detail. Locations, depths and thicknesses of aquifers and aquitards should be determined to inform a PTTW but also construction options. It is imperative that pressurized aquifers be identified if present. Consideration should be given to micro-seismic surveys and boreholes to accomplish this. The objective is to minimize "surprises!"</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 19 | Cindy Batista  | General                    | <p>ES. 1, ES. 3, Section 1.3.1, 1.3.2 Section 3</p> | <p>Prior to reading the draft early works report, it was assumed that the early works activities included the construction of the Corktown Station. From reading the report, it is now understood that the early works activities does not involve the construction of the station, but rather the demolition of existing buildings, site preparation, and undertaking environmental investigations and archaeological assessments in order to have the site ready for future tunnelling.</p> <p>Can Metrolinx provide additional information as to why environmental investigations are required for the site? Can a few examples be provided in the description of the early works activities or refer the reader to where this are described in more detail in the report?</p> <p>Moreover, it should be made more clear in the report that early works activities proposed for this site does not include the construction of the future Corktown Station or tunnelling. It appears that only one reference to this was made in Section 1.3.2 of the report. It is recommended that this be made clear up front in the executive summary, as well.</p> |  |

|    |               |         |                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
|----|---------------|---------|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 20 | Cindy Batista | General | Section 1.3.2      | <p>This section refers to the Ontario Line Preliminary Design Business Case that was prepared for the project. It is recommended that this report be added as an appendix or provide a link to where the public may access the report online.</p> <p>This section states the construction of the station at this location reduces construction impacts . . . because it will double as a work site and tunnel construction work. It is recommended here that it is made clear to the readers that construction of the station and tunnelling work will be assessed in the future in the environmental impact assessment report that will be prepared for the entire Ontario Line project. Providing additional clarity will be helpful to the reader to understand that the early works activities proposed in this draft report does not include tunnelling work or construction of the Corktown Station.</p> |  |
| 21 | Cindy Batista | General | Page 11, Table 2-1 | <p>This table refers to 'Section 0' several times. It is assumed this is an error. Please clarify and update to reflect the appropriate sections of the report that meets the requirements of the regulation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |

Subject: Corktown Station Early Works Report - Noise and Vibration

Good afternoon Cindy – this is a follow-up email to the correspondence passed along just now through EATS which included the Corktown Station Early Works Noise and Vibration Report. As noted in that correspondence, we are currently looking at a turnaround date of April 9, 2021 for the Ministry’s comments.

Please let me know if any issues accessing the files or if any questions.

Regards,

**MERLIN YUEN**

**Date:** Friday, March 12, 2021 1:12:29 PM  
**Attachments:** [REDACTED]

---

Thanks Cindy – we will include Kevin in the circulation for the noise report later this month.

Let us know if any questions or if the team needs any additional information to commence its review.

## MERLIN YUEN

Thanks Merlin for your email below. I was able to download the documents. I have informed ministry reviewers that Metrolinx is requesting comments back by the end of month. Ministry staff will try its best to meet that deadline, but some comments may come after that date.

I understand that the noise and vibration report is expected for the 19<sup>th</sup>. When Metrolinx is prepared to share the report, I ask that you send the report to Kevin Smith, he is copied on this email. Kevin is the noise expert assigned to review the report.

Thanks,

Cindy

Good afternoon Cindy,

As part of the Ontario Line Project, the Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard alignment segments for the Ontario Line, as well as the location of the Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Further information on Corktown Station early works and an update on the Ontario Line environmental process is provided in the letter attached and in the Corktown Station Early Works Report, attached.

The attached file includes the following report:

- Corktown Station Early Works Report;
- Corktown Station Natural Environment Report;
- Corktown Station Air Quality Report;
- Corktown Station Heritage Detailed Design Report; and
- Corktown Station Traffic and Transportation Report.

As noted in the accompanying letter, we would appreciate if you could provide your comments using the comment tracking sheet by March 31, 2021.

If you have any questions or concerns, please do not hesitate to contact me.

Regards,  
Merlin

**Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Robert Greene,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

**Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

## Notice of Publication of Draft Corktown Station Early Works Report Ontario Line Project

### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

### **Metrolinx 130 Adelaide Street West, Toronto, Ontario M5H 3P5**

*All personal information included in a submission – such as name, address, telephone number and property location – is collected, maintained and disclosed by Metrolinx for the purpose of transparency and consultation. The information is collected under the authority of O. Reg. 341/20 under the Environmental Assessment Act or is collected and maintained for the purpose of creating a record that is available to the general public as described in s. 37 of the Freedom of Information and Protection of Privacy Act. ## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

**Metrolinx 130 Adelaide Street West, Toronto, Ontario M5H 3P5**

*All personal information included in a submission – such as name, address, telephone number and property location – is collected, maintained and disclosed by Metrolinx for the purpose of transparency and consultation. The information is collected under the authority of O. Reg. 341/20 under the Environmental Assessment Act or is collected and maintained for the purpose of creating a record that is available to the general public as described in s. 37 of the Freedom of Information and Protection of Privacy Act. Personal information you submit will become part of a public record that is available to the general public unless you request that your personal information remain confidential. Good afternoon,

Please note that the public review period for the Draft Corktown Station Early Works Report (EWR) for the Ontario Line Project ends on Friday, June 11, 2021. We ask that any comments on the Draft Corktown Station EWR be provided no later than this date. Please do not hesitate to contact us if you have any questions.

Thanks,

**Subject:** Ontario Line - Notice of Draft Corktown Station EWR

Good afternoon,

The Notice of Draft Corktown Station Early Works Report (EWR) for the Ontario Line Project has been published on May 12, 2021. The Draft EWR is available on the project website at [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline). The public review period begins May 12, 2021 and will continue until June 11, 2021. Attached for your reference is the Notice of Publication of Draft Corktown Station EWR, as well as a covering letter. Please do not hesitate to contact us if you have any questions.

Thanks,

**Crystal Ho**

**Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Jennifer Davey,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

**Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Sincerely,

## Notice of Publication of Draft Corktown Station Early Works Report Ontario Line Project

### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

Subject: Corktown Station Early Works Report

Good afternoon,

As part of the Ontario Line Project, the Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard alignment segments for the Ontario Line, as well as the location of the Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Further information on Corktown Station early works and an update on the Ontario Line environmental process is provided in the letter attached and in the Corktown Station Early Works Report linked below.

Please find the initial drafts of the Corktown Station Early Works Report and corresponding comment tracking sheet uploaded to the following link for your review: [REDACTED]

The link includes the following reports:

- Corktown Station Early Works Report;
- Corktown Station Natural Environment Report;
- Corktown Station Air Quality Report;
- Corktown Station Heritage Detailed Design Report; and
- Corktown Station Traffic and Transportation Report.

As noted in the letter, we would appreciate if you could provide your comments using the comment tracking sheet by April 9, 2021.

If you have any questions or concerns, please do not hesitate to contact us.

## **Subject: Ontario Line - Notice of Publication of Draft Corktown Station Early Works Report**

Dear Richard Borbridge,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the Eglinton Crosstown LRT, and streetcar lines. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

### **Draft Corktown Station Early Works Report**

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in O. Reg. 341/20 as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report in February 2021 and is now proceeding with an Early Works Report for the early works at Corktown Station. Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail) and remnants of early Toronto industry may be found here. Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the

20 Bay St, Suite 600      416.874.5900  
Toronto, ON M5J 2W3      metrolinx.com

Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the Corktown Station EWR into the Draft EWR. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the Project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)). Those who wish to provide comments on the Draft EWR must do so by **June 11, 2021**.

Please find attached the **Notice of Publication of Draft Corktown Station EWR** which provides further information, including a description of the process for submitting comments.

## Notice of Publication of Draft Corktown Station Early Works Report

### Ontario Line Project

#### The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto to make it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line is proposed to include 15 potential stations, including six interchange stations, and connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 of its stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable commutes.

#### Corktown Station Early Works

Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

**Josh Vandezande (T: 416-202-5100, E: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com)) may be contacted on behalf of Metrolinx.**

**Metrolinx 130 Adelaide Street West, Toronto, Ontario M5H 3P5**

*All personal information included in a submission – such as name, address, telephone number and property location – is collected, maintained and disclosed by Metrolinx for the purpose of transparency and consultation. The information is collected under the authority of O. Reg. 341/20 under the Environmental Assessment Act or is collected and maintained for the purpose of creating a record that is available to the general public as described in s. 37 of the Freedom of Information and Protection of Privacy Act. These early works are being advanced to prepare the site for future construction staging and laydown to support tunneling and below ground construction activities, and work associated with the future Corktown Station.

The First Parliament site, located within the Corktown Station early works project footprint, is a known archaeological site which requires additional archaeological studies ahead of any ground disturbance activities. Artifacts from Indigenous Nations, remains of Upper Canada's First and Second Parliament Buildings and the Home District Gaol (Jail), and remnants of early Toronto industry may be found here.

Metrolinx is eager to unlock the potential of the site and work with the City of Toronto, Indigenous Nations and the community to identify opportunities for commemoration. Initial archaeological and environmental investigations are underway.

Environmental impacts of Corktown Station early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Corktown Station Early Works Report (EWR) that is now available for public review.

The Draft EWR documents the assessment of Corktown Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

### **The Draft Early Works Report Review and Consultation Process**

Effective **May 12, 2021**, the Draft Corktown Station EWR will be available for review on the project webpage ([www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline)).

As we temporarily shift to virtual open houses, please join us online from **May 12 to June 11, 2021** to find out more about and provide your feedback on the Draft Corktown Station EWR via the webpage form.

Those who wish to provide comments on the Draft Corktown Station EWR must do so by **June 11, 2021** and submit them using the webpage form or address them to the following email: [ontarioline@metrolinx.com](mailto:ontarioline@metrolinx.com).

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Corktown Station EWR by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Corktown Station EWR on the project webpage: [www.metrolinx.com/ontarioline](http://www.metrolinx.com/ontarioline) and issue a Notice of Publication of Final Corktown Station EWR.

To obtain a copy of the Draft Corktown Station EWR, please contact the project email listed above.

---

Good morning Julia,

Please see attached our responses to the City's outstanding comments on the Corktown Station Early Works Report. Let me know if there are any questions or further comments.

Thank-you,

**Crystal Ho**

| 1                           | Heritage Planning - Archaeology | Archaeological Resources          | Early Works Report (EWR) - p. ix: Archaeological Resources                      | This revised property boundary includes three archaeological sites: The Parliament Site (AjGu-41), the Toronto Lime Kiln Works Site (AjGu-61), and the Lime Kiln Works Site (AjGu-64). Each of these sites are identified as Archaeologically Sensitive Areas on the City of Toronto's Archaeological Management Plan and require mitigation or in-situ preservation prior to any soil disturbance. Additionally, the property at 250 Front Street East has further archaeological conditions which require Stage 2 archaeological assessment after demolition of the building. Revise to include this information. | Both AjGu-61 and AjGu-64 refer to the same property 64-70 Parliament Street, the site has two borden numbers. The EWR will be updated to include reference to both numbers. Additional archaeological investigations at the First Parliament site are being planned, and all required archaeological assessments will be undertaken as part of the early works in accordance with the Ontario Heritage Act, the 2011 Standards and Guidelines for Consultant Archaeologists (Ontario Government, 2011) and in accordance with the recommendations of previously completed archaeological asseessment reports and in advance of any ground disturbance. | 1                                   | Acknowledged with respect to the Lime Kiln Works Site. Reference to 250 Front Street West archaeological assessment is unobserved.                                                                                                                               | P                  | Reference to archaeological conditions on these sites as been added into Section 5.8:<br><br><i>A number of previous archaeological assessments have been completed within the Corktown Station Study Area including on the Parliament Site (AjGu-41) by ASI (2001) and on the Lime Kiln/Toronto Lime Kiln site (AjGu-61 &amp; AjGu-64) by Archeoworks Inc (2009). Further archaeological assessment is required within the Corktown Station Study Area prior to any ground disturbing activities. Some archaeological features may remain intact beneath paved surfaces. Consultation with the Ministry of Heritage, Sport, Tourism and Culture Industries will be required.</i>                     |
| 3                           | Heritage Planning - Archaeology | Vibrational impacts - Archaeology | EWR/HDDR - Table ES-2; EWR - Table 6-7, Section 5.8; Section 6.8                | This report does not address any vibrational impacts to known or potential archaeological resources as part of Early Works. In particular, the First Parliament Site (AjGu-41) is known to contain extremely fragile archaeological resources, such as the burnt floorboards and soil from the First Parliament buildings. These may be adversely impacted as part of this work. Include discussion of this issue with the statement that archaeological resources may be impacted by vibration within 11.1 metres of the Early Works area, unless fully mitigated.                                                 | Required archaeological investigations and completion of early works activities such as building foundation removal or activities that have the potential for vibration effects will be coordinated and completed such that buried archaeological resources are appropriately considered.                                                                                                                                                                                                                                                                                                                                                              | 1                                   | Reference to vibrational impacts to archaeological resources is unobserved in the revised draft.                                                                                                                                                                 | P                  | Reference to vibration has been included as the following statement in Section 6.8:<br><br><i>Required archaeological investigations and completion of early works activities such as building foundation removal or activities that have the potential for vibration effects will be coordinated and completed such that buried archaeological resources are appropriately considered.</i>                                                                                                                                                                                                                                                                                                           |
| 4                           | Heritage Planning - Archaeology | Archaeological Impacts            | EWR/HDDR - Table ES-2; Archaeological Resources; EWR - Section 5.8; Section 6.8 | This description of Archaeological Resources shall also include a description of the Toronto Lime Kilns Works Site (AjGu-61/AjGu-64) as well as outstanding archaeological conditions for the property at 250-260 Front Street East, 39 Berkeley Street and 383 King Street East.                                                                                                                                                                                                                                                                                                                                   | See response to comment #1 above regarding the Borden numbers. The Early Works Report will be revised to include both Borden numbers for the Lime Kiln Works Site. Regarding the inclusion of addresses, the Early Works Report was intentionally high level to avoid pinpointing specific locations of archaeological sites, as per standard practice to minimize potential for looting.                                                                                                                                                                                                                                                              | 1, 3                                | Acknowledged with respect to the Lime Kiln Works Site. Reference to 250 Front Street West, 39 Berkeley Street and 383 King Street archaeological conditions are unobserved. City requests recognition of archaeological conditions on these sites in the report. | O                  | Reference to archaeological conditions on these sites as been added into Section 5.8:<br><br><i>A number of previous archaeological assessments have been completed within the Corktown Station Study Area including on the Parliament Site (AjGu-41) by ASI (2001) and on the Lime Kiln/Toronto Lime Kiln site (AjGu-61 &amp; AjGu-64) by Archeoworks Inc (2009). Further archaeological assessment is required within the Corktown Station Study Area prior to any ground disturbing activities. Some archaeological features may remain intact beneath paved surfaces. Consultation with the Ministry of Heritage, Sport, Tourism and Culture Industries will be required.</i>                     |
| 5                           | Heritage Planning - Archaeology | Archaeological Impacts            | EWR/HDDR - Table ES-2; Archaeological Resources; EWR - Section 5.8; Section 6.8 | Include language that any future archaeological assessments must be conducted in accordance to the City of Toronto's Official Plan and the Terms of Reference for Archaeological Assessments.<br><br>Also include language that any archaeological assessments, including the formulation of Stage 3 and Stage 4 mitigation programs and Construction Monitoring programs shall be subject to review and approval by the City of Toronto Heritage Planning.                                                                                                                                                         | The Stage 1 archaeological assessment report is written to meet the requirements set out in the Standards and Guidelines for Consultant Archaeologists (Ontario Government, 2011).<br><br>Metrolinx has committed to working with the City to review workplans for any additional archaeological assessments for the First Parliament site and will continue to work with the City to address comments that may arise from review of these workplans.                                                                                                                                                                                                  | 1                                   | Response does not directly address the City's request to make reference to the Official Plan and Terms of Reference. Assume that response classification of #1 means the report is intended to be revised to include this.                                       | P                  | Metrolinx archaeology assessments are subject to the Standards and Guidelines for Consultant Archaeologists (Ontario Government, 2011), which is Metrolinx practice for works in all municipalities. The City's Official Plan and Terms of Reference do not cover any additional requirements for archaeological work as documented through the Standards and Guidelines for Consultant Archaeologists (Ontario Government, 2011). Metrolinx is committed to working closely with the City to review workplans for any additional archaeological assessments for the First Parliament site and will continue to work with the City to address comments that may arise from review of these workplans. |

| 7  | Heritage Planning - Archaeology | Municipal Permits        | EWR p. xxvii<br>HDDR - Section ES.5 | Under the Municipal Permits section, include that these works may be subject to Heritage Easement agreements, as required.                                                                                                                                                                                                                                                                                                                      | As documented in the Ontario Line CHR, there are no heritage easements within the Project Footprint.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 3 | To clarify, the original comment was not intended to be about existing heritage easement agreements, but rather that the report should recognize that future heritage easements may be required.                                       | O | At this time, it is not anticipated that any additional Heritage Easements will be established for the Corktown Station Early Works. Metrolinx is committed to continuing discussions with City of Toronto Heritage Planning as project planning progresses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 8  | Heritage Planning - Archaeology | Municipal Permits        | EWR p. xxvii<br>HDDR - Section ES.5 | Under the Municipal Permits section, revise to include the properties at 54 Parliament Street, 68-70 Parliament Street and 250-260 Front Street East, 39 Berkeley Street and 383 King Street East.                                                                                                                                                                                                                                              | A commitment will be added to Section 7.4 of the Early Works Report for consultation between Metrolinx and the City of Toronto Heritage Planning regarding the Lime Kiln Works Site.                                                                                                                                                                                                                                                                                                                                                                                                  | 1 | Acknowledged that the Lime Kiln Works Site has been included in Section 7.4. Response does not address the remaining properties identified in the original comment.                                                                    | O | Reference to archaeological conditions on these sites as been added into Section 5.8:<br><br><i>A number of previous archaeological assessments have been completed within the Corktown Station Study Area including on the Parliament Site (AjGu-41) by ASI (2001) and on the Lime Kiln/Toronto Lime Kiln site (AjGu-61 &amp; AjGu-64) by Archeoworks Inc (2009). Further archaeological assessment is required within the Corktown Station Study Area prior to any ground disturbing activities. Some archaeological features may remain intact beneath paved surfaces. Consultation with the Ministry of Heritage, Sport, Tourism and Culture Industries will be required.</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 14 | Heritage Planning - Archaeology | Archaeological Resources | Section 6.8; Table 6-8              | Revise this section and table to include preservation in-situ of significant archaeological resources as a potential mitigation measure. This is the preference of Heritage Planning and the Ministry of Heritage, Sport, Tourism and Culture Industries, as outlined in the City of Toronto's Official Plan and the Standards and Guidelines for Consultant Archaeologists.                                                                    | As agreed upon in discussions between the City and Metrolinx, Metrolinx will endeavour to preserve in-situ arch resources associated with First Parliament and Home District Gaol where feasible. Metrolinx has also worked with the Minisry of Heritage, Sport, Tourism, and Cultural Industries to obtain Minister's Consent which provides conditions which Metrolinx is committed to following. Metrolinx will continue to consult and engage with the City to ensure the City's comments are addressed with regards to ongoing archaeological work at the First Parliament site. | 1 | Mitigation measures should include substantive measures in addition to process matters. Report should acknowledge the potential for in-situ preservation of archaeological resources as a conservation strategy or mitigation measure. | O | Corktown Station early works include demolition of existing buildings, removal of other structures and asphalt, decommissioning of utilities, soil removal and/or remediation where required, within the Corktown Station early works project footprint. These activities will allow for the completion of environmental due diligence investigations, including archaeological assessments.<br><br>To be conservative in the assessment approach, Metrolinx has included potential disturbance to archaeological resources and associated mitigation measures in the Corktown Station early works report in the event that any such disturbance might occur. Metrolinx is committed to working closely with the City to review workplans for any additional archaeological assessments for the First Parliament site and will continue to work with the City to address comments that may arise from review of these workplans.<br><br>As discussed with the City of Toronto, mitigation measures for the project will be refined as additional archaeological assessments are completed in support of the Corktown Station early works and Metrolinx will endeavour to preserve in-situ archaeological resources associated with First Parliament and Home District Gaol where feasible. |
| 15 | Heritage Planning - Archaeology | Archaeological Resources | Section 6.8; Table 6-8              | This section shall also include a description of the Toronto Lime Kilns Works Site (AjGu-61/AjGu-64) and ongoing archaeological conditions on the properties north of Front Street East (see earlier comment).                                                                                                                                                                                                                                  | Please see response #1 above. All archaeological mitigation will take place prior to ground disturbing activities in accordance with the Ontario Heritage Act.                                                                                                                                                                                                                                                                                                                                                                                                                        | 1 | Response does not address the comment which was a request for a description of archaeological conditions on the properties north of Front Street East in Table 6-8.                                                                    | O | Reference to archaeological conditions on these sites as been added into Section 5.8:<br><br><i>A number of previous archaeological assessments have been completed within the Corktown Station Study Area including on the Parliament Site (AjGu-41) by ASI (2001) and on the Lime Kiln/Toronto Lime Kiln site (AjGu-61 &amp; AjGu-64) by Archeoworks Inc (2009). Further archaeological assessment is required within the Corktown Station Study Area prior to any ground disturbing activities. Some archaeological features may remain intact beneath paved surfaces. Consultation with the Ministry of Heritage, Sport, Tourism and Culture Industries will be required.</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 16 | Heritage Planning - Archaeology | Archaeological Resources | EWR - Table 6-8, p. 173             | Include references to the City of Toronto's Official Plan and the Terms of Reference for Archaeological Assessments as relevant policy in addition to the Standards and Guidelines.<br><br>Include a statement that any archaeological assessments, including the formulation of Stage 3 and Stage 4 mitigation programs and Construction Monitoring programs shall be subject to review and approval by the City of Toronto Heritage Planning. | Please refer to response #5.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 1 | Response does not directly address the City's request to make reference to the Official Plan and Terms of Reference. Assume that response classification of #1 means the report is intended to be revised to include this.             | P | As previously stated, Metrolinx archaeology assessments are subject to the Standards and Guidelines for Consultant Archaeologists (Ontario Government, 2011), which is Metrolinx practice for works in all municipalities. The City's Official Plan and Terms of Reference do not cover any additional requirements for archaeological work as documented through the Standards and Guidelines for Consultant Archaeologists (Ontario Government, 2011). Metrolinx is committed to working closely with the City to review workplans for any additional archaeological assessments for the First Parliament site and will continue to work with the City to address comments that may arise from review of these workplans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 26 | City Planning | Early Works Report | EW, Table 6-9 | For active transportation impacts, a Vision Zero perspective should be applied to protect vulnerable road users from injuries and fatalities during construction. Table 5-5 identified several pedestrian and cycling facilities that already provide low levels of service in the existing condition (without considering pedestrian and cyclist volumes, which the Ottawa MMLOS does not account for). Poor levels of service may be exacerbated with construction occurring immediately adjacent to the facility. Identify mitigation measures - e.g. provision of minimum sidewalk widths, minimum pedestrian levels of service. | Table 6-9 will be revised to indicate that the necessary mitigation measures will be considered (e.g., maintaining a minimum sidewalk width) in order to maintain pre-construction pedestrian levels of service. | 1 | City Planning would prefer a stronger commitment than "consideration" for accommodations such as minimum sidewalk widths to maintain pedestrian levels of service. Suggested wording is "will be implemented". | O | Design of the Corktown Station early works is still being progressed and will consider maintaining existing pedestrian and cyclist level of service. Implementation will depend on conditions on site and wording has been left as 'consideration' to allow for flexibility in design. Metrolinx intends to maintain pre-construction pedestrian levels of service where possible. |

| 5                                                | TEO-TS        | Utilities   | 2021-03-10_OL_EW3_CS_Early Works Report_Draft, Table 6-10 | For the City's internal coordination purposes, please advise on the anticipated timeframe that the in-depth utility-related investigations such as subsurface utility engineering investigation, master servicing, Stormwater Management Report, and hydrogeological studies will be completed for the City's consultation and review. | No in-depth utility-related investigations are anticipated for this early works project. Therefore, there are no deep excavation or utilities work are planned for this project.<br><br>A detailed assessment for the construction of the future Corktown Station will be completed as part of the Ontario Line Environmental Impact Assessment Report and in-depth utility investigations will be conducted, as required. | 1                                                                                                                         | Closed                                                                                                                                                                                                                                             | C                  |                                                                                                                                                                                                                                                                                                                                                                      |
| 6                                                | TW WIM-TR     | Utilities   | General Comments                                          | Since the proposed station is located in TRCA floodplain area, TRCA shall review the design report as well.                                                                                                                                                                                                                            | Metrolinx is continuing to consult with TRCA for the Ontario Line and Early Works. It should be noted that the Early Works do not include the construction of Corktown Station or related tunneling. A detailed assessment for the construction of the future Corktown Station will be completed as part of the Ontario Line Environmental Impact Assessment Report.                                                       | 1                                                                                                                         | Waiting for MX' further consultation with TRCA                                                                                                                                                                                                     | P                  | Metrolinx has received confirmation from TRCA on June 7, 2021 that all TRCA comments provided on the Corktown Station Early Works Report had been adequately addressed and that TRCA staff have no further comments regarding the Corktown Station Early Works Report at this time. TRCA response will be included in the Final Corktown Station Early Works Report. |
| 7                                                | TW WIM-TR     | Utilities   | Page XV                                                   | 1.Permanent groundwater discharge to municipal sewer shall be avoided and water-proof structure shall be designed.<br>2.In this area, the high groundwater table shall be confirmed<br>3.The lake water backup to storm sewer system shall be considered in the area.                                                                  | Refer to response to Comment #5                                                                                                                                                                                                                                                                                                                                                                                            | 1                                                                                                                         | In this area, the high groundwater table shall be confirmed no matter how deep the excavation would be carried.                                                                                                                                    | O                  | There are no deep excavation or utilities work planned for early works, which will involve surface demolition of structures only. Groundwater information is included in the geotechnical borehole data which Metrolinx has provided to the City.                                                                                                                    |
| 12                                               | TW WIM-TR     | Utilities   | Page 155, Table6-3                                        | For Stormwater management, water balance , water quality and quantity targets according to the City's WWFM Guidelines shall be met during site design.                                                                                                                                                                                 | Comment noted. As Corktown Station early works will be mainly limited to disconnection of the feeding utilities and demolition of existing structures, impacts to the stormwater management, water balance, water quality and quantity targets are not anticipated.                                                                                                                                                        | 1                                                                                                                         | Stormwater management report shall be prepared to address the targets required by WWFMG. And drainage plan and hydraulic analysis for water or sewer system shall be prepared for the earlier works for both pre- and post-development conditions. | O                  | A stormwater management report will be completed to support the Corktown Station early works as part of project planning and prior to works commencement.                                                                                                                                                                                                            |
| 13                                               | TW WIM-TR     | Utilities   | Page 180                                                  | Design Criteria for Sewer and Watermain and WWFMG are two major documents to be used for TW asset design and construction.                                                                                                                                                                                                             | Comment noted. No deep excavation or utilities work are anticipated for this project and as a result, it is not anticipated that the Design Criteria for Sewer and Watermain and the WWFMG will apply to this project.                                                                                                                                                                                                     | 1                                                                                                                         | Based on the response to item #12, drainage plan or a site plan shall be prepared, even for disconnection or demolition of the existing utilities. Hydraulic analysis might be required to ensure no impact on the exisiting services.             | O                  | Comment noted. Metrolinx looks forward continuing to work with the City for this project including through the submission of the demolition permit.                                                                                                                                                                                                                  |

| 26 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Appendix F, Pages 132-141                                                                  | Specify what is crowding Pedestrian LOS, how it was calculated and what is the source of this criteria. Crowding PLoS is shown in this Appendix for segment analysis. Please also clarify how the number of pedestrians were obtained for this analysis. This description should be included in section 2.1.2.2 - Pedestrian Level of Service and criteria should be included in Appendix C                                                                                                                                                                                                                                                                                                                                                               | Crowding PLOS was disregarded in the assessment of pedestrian level of service due to the absence of accurate pedestrian volumes along the midblock segments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 3 | Please clarify how the pedestrian volume (250 ped/hr or 1000 ped/hr) was obtained for the segments on these pages?<br>How the <b>Crowding PLoS</b> (B or C) was obtained for the same segments?<br>Comment remain Open.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | O | The pedestrian volumes were not estimated/obtained as "Crowding PLOS" was not included in the assessment of pedestrian level of service due to the absence of accurate pedestrian volumes along the midblock segments. A statement was added to the methodology section (Section 2.1.2.2) to document this. The Crowding PLOS (which includes pedestrian volumes) will be removed from Appendix F to avoid any confusion. | 1 |
| 29 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Executive Summary-Page 9 of 141                                                            | "The Ontario Line Final Environmental Conditions Report (AECOM, 2020) notes that turning movement counts and signal timing plans were not available at some intersections within the Ontario Line Study Area, and were not collected through new traffic surveys considering the uncharacteristic traffic conditions as a result of the COVID-19 pandemic. As a result of the noted data limitations, a quantitative traffic assessment of some intersections within the Corktown Station Study Area could not be undertaken."<br><br>If the most current data are not available, the traffic study can be undertaken using older traffic data( turning movement counts and signal timing plans) and do the related adjustments as per COVID19 condition. | Intersections with historical TMC data were assessed using a conservative annual growth rate of 1%. The intersections that were not assessed are those where no traffic data was available.<br><br>A quantitative traffic impact assessment will be completed, as required, as project planning progresses to consider vehicular traffic impacts as a result of the Corktown Station Early Works, and develop and implement a Transit and Traffic Management Plan(s), which could include temporary changes to intersection lane configurations, traffic signal timing optimization, modifications to existing signal timing plans, etc. The Transit and Traffic Management Plan(s) will also address specific emergency services requirements in consultation with the City of Toronto. | 1 | TMC data can be retrieved from Traffic Impact Assessment Reports of Active Development Applications. Active Development Applications are mentioned in section 4.0 of "The Ontario Line Final Environmental Conditions Report (AECOM, 2020)".<br><br>Traffic Impact Study of 333 King Street East and 250 Front Street East includes TMCs of the following signalized intersections.<br>- King/Parliament.<br>- King St & Sherbourne St<br>- Front/Sherbourne<br>- Front & Princess.<br>- Front & Berkeley.<br><br>TS is recommending that Mx. retrieve TMCs of the above mentioned intersection and include the analysis in the report.<br><br>Comment will be closed once TS comment will be addressed. | P | Out of the identified intersections, only the following three intersections had complete traffic data and were assessed as part of the Traffic and Transportation Early Work Report:<br>- King/Parliament<br>- King/Sherbourne<br>- Front/Berkeley                                                                                                                                                                        | 1 |
| 33 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Figure 3-5: Cyclist Level of Service Within the Corktown Station Study Area-Page 50 of 141 | The use of a 8-10 meters of the parking lot just north of Parliament Square Park is required to facilitate a bi-directional bikeway connection between Esplanade and Mill (between Berkeley and Parliament). More information regarding this comment has been provided in the previous packages related to Cork town station.                                                                                                                                                                                                                                                                                                                                                                                                                             | The planned facilities will be added to Section 5.6.2.2 of the Early Works Report, Planned Services and Facilities. Metrolinx will continue consultation and coordination with the City in regards to the bikeway connection implementation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 1 | Open for further discussion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | O | Metrolinx will continue to engage with the City with regards to cycling connections and implementation associated with the Corktown Station early works.                                                                                                                                                                                                                                                                  |   |

| 2                           | Urban Forestry | Natural Environment early works report         | 7.3                                    | Bylaws 813, article II & III should be specifically included in this section as a municipal permit since tree removal/injury may be required. Tree permits for bylaw protected trees must be obtained from UF beforehand.                                                                                            | Metrolinx will continue to engage with the City of Toronto as project planning and design progress, including with regard to tree injury/removal permits as required.                                                                                                                                                                                                    | 3        | Response does not address comment. Please include language in report                                                                                                                                                                                           | O                  | Metrolinx will follow permitting and compensation requirements in accordance with the Metrolinx Vegetation Guideline (Metrolinx, 2020) which states that for tree removals on municipal or private land, applicable City of Toronto bylaws will be followed.                                                                                                                                                                                                                                                 |
| 3                           | Urban Forestry | Draft early works report                       | ES. 6 - Permits and approvals          | Bylaws 813, article II & III should be specifically included in this section as a municipal permit since tree removal/injury may be required. Tree permits for bylaw protected trees must be obtained from UF beforehand.                                                                                            | See response to Comment #2 above.                                                                                                                                                                                                                                                                                                                                        | 3        | Response does not address comment. Please include language in report                                                                                                                                                                                           | O                  | Metrolinx will follow permitting and compensation requirements in accordance with the Metrolinx Vegetation Guideline (Metrolinx, 2020) which states that for tree removals on municipal or private land, applicable City of Toronto bylaws will be followed.                                                                                                                                                                                                                                                 |
| 4                           | PFR - PDCP LAU | Corktown Station Early Works Project Footprint | General                                | PFR supports Transportation Services' ask for the Esplanade-Mill bikeway through the existing parking lot just north of Parliament Square Park within the Corktown Station EWP footprint to provide a separate space for people walking and cycling. The footprint should reflect the bikeway area provided by CREM. | Information on the Esplanade-Mill bikeway will be added to Section 5.6.2.2 of the Early Works Report, Planned Services and Facilities. Metrolinx will continue to consult with the City of Toronto on the Esplanade and Mill Street bikeway.                                                                                                                             | 1        | 5.6.2.2. is incorrect as the cycle track is proposed within the Corktown Station EWP footprint, directly North of Parliament Square Park. It is our understanding that a request has been made to exclude these lands from the Corktown Station EWP footprint. | O                  | Metrolinx is looking forward to working with the City on coordinated planning and implementation of Corktown Station and the Esplanade-Mill bikeway. The project footprint identified in the Corktown Station early works report is intended to capture the maximum potential area required to support Corktown Station early works. Metrolinx is committed to working closely with the City to support realizing both organizations' ambitions for the area, including the proposed Esplanade-Mill bikeway. |

| 12           | PFR - PDCP LAU | Traffic and Transportation                   | Transportation Services bikeway                  | Current TPA lands are planned for TS bikeway. PFR supports Transportation Services' ask for a bikeway through the existing parking lot just north of Parliament Square Park within the Corktown Station EWP footprint to provide a separate space for people walking and cycling. The footprint should reflect the bikeway area provided by CREM.               | Information on the Esplanade-Mill bikeway will be added to Section 5.6.2.2 of the Early Works Report, Planned Services and Facilities. Metrolinx will continue to consult with the City of Toronto on the Esplanade and Mill Street bikeway.                                                                                                                                                                    | 1 | 5.6.2.2. is incorrect as the cycle track is proposed within the Corktown Station EWP footprint, directly North of Parliament Square Park. It is our understanding that a request has been made to exclude these lands from the Corktown Station EWP footprint. | O | Metrolinx is looking forward to working with the City on coordinated planning and implementation of Corktown Station and the Esplanade-Mill bikeway. The project footprint identified in the Corktown Station early works report is intended to capture the maximum potential area required to support Corktown Station early works. Metrolinx is committed to working closely with the City to support realizing both organizations' ambitions for the area, including the proposed Esplanade-Mill bikeway. |

| 16           | Urban Forestry | Heritage Report                              | general                                          | All bylaw protected trees, including all heritage trees shall be identified in the tree inventory. All options shall be explored to mitigate any impacts to the trees and vegetation located within a property with a heritage designation. Any requests for injuries or removals may require approval from other divisions/provincial agencies as well as PF&R | Comment noted. An Arborist Report will be prepared, as required, as project planning progresses, which will assess potential impacts to trees. As stated, Metrolinx will continue to engage with the City of Toronto as project planning and design progress, including with regard to tree injury/removal permits as required. Specific permit requirements will be determined as project planning progresses. |   |                                                                                                                                                                                                                                                                |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 17           | Urban Forestry | work submittals - arb report                 | general                                          | When can PF&R expect an arborist report and full tree inventory for this site? All trees within 6m of project footprint shall be included in reports (12m if in a ravine regulated area).                                                                                                                                                                       | Comment noted. An Arborist Report will be prepared, as required, a project planning progresses, which will assess potential impacts to trees. As stated, Metrolinx will continue to engage with the City of Toronto as project planning and design progress. Arborist Report will be shared with the City prior to works commencement.                                                                          |   |                                                                                                                                                                                                                                                                |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 18           | Urban Forestry | Natural environment early works report -     | 7.3 - municipal permits                          | Please include the following municipal tree permits that may be required: Bylaw 813, Article II (street trees), Bylaw 813, Article III (private trees), Bylaw 658 RNFP & Bylaw 608 Parks                                                                                                                                                                        | Metrolinx will follow permitting and compensation requirements in accordance with the Metrolinx Vegetation Guideline (Metrolinx, 2020) which states that for tree removals on municipal or private land, applicable City of Toronto bylaws will be followed.                                                                                                                                                    |   |                                                                                                                                                                                                                                                                |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 1                           | Heritage Planning - Archaeology | Archaeological Resources          | Early Works Report (EWR) - p. ix: Archaeological Resources                      | This revised property boundary includes three archaeological sites: The Parliament Site (AjGu-41), the Toronto Lime Kiln Works Site (AjGu-61), and the Lime Kiln Works Site (AjGu-64). Each of these sites are identified as Archaeologically Sensitive Areas on the City of Toronto's Archaeological Management Plan and require mitigation or in-situ preservation prior to any soil disturbance. Additionally, the property at 250 Front Street East has further archaeological conditions which require Stage 2 archaeological assessment after demolition of the building. Revise to include this information. | Both AjGu-61 and AjGu-64 refer to the same property 64-70 Parliament Street, the site has two borden numbers. The EWR will be updated to include reference to both numbers. Additional archaeological investigations at the First Parliament site are being planned, and all required archaeological assessments will be undertaken as part of the early works in accordance with the Ontario Heritage Act, the 2011 Standards and Guidelines for Consultant Archaeologists (Ontario Government, 2011) and in accordance with the recommendations of previously completed archaeological asseessment reports and in advance of any ground disturbance. | 1                                                                                                                         | Acknowledged with respect to the Lime Kiln Works Site. Reference to 250 Front Street West archaeological assessment is unobserved.                                                                                                                               | P                  |

| 3                           | Heritage Planning - Archaeology | Vibrational impacts - Archaeology | EWR/HDDR - Table ES-2; EWR - Table 6-7, Section 5.8; Section 6.8                | This report does not address any vibrational impacts to known or potential archaeological resources as part of Early Works. In particular, the First Parliament Site (AjGu-41) is known to contain extremely fragile archaeological resources, such as the burnt floorboards and soil from the First Parliament buildings. These may be adversely impacted as part of this work. Include discussion of this issue with the statement that archaeological resources may be impacted by vibration within 11.1 metres of the Early Works area, unless fully mitigated.                                                 | Required archaeological investigations and completion of early works activities such as building foundation removal or activities that have the potential for vibration effects will be coordinated and completed such that buried archaeological resources are appropriately considered.                                                                                                                                                                                                                                                                                                                                                              | 1                                                                                                                         | Reference to vibrational impacts to archaeological resources is unobserved in the revised draft.                                                                                                                                                                 | P                  |
| 4                           | Heritage Planning - Archaeology | Archaeological Impacts            | EWR/HDDR - Table ES-2; Archaeological Resources; EWR - Section 5.8; Section 6.8 | This description of Archaeological Resources shall also include a description of the Toronto Lime Kilns Works Site (AjGu-61/AjGu-64) as well as outstanding archaeological conditions for the property at 250-260 Front Street East, 39 Berkeley Street and 383 King Street East.                                                                                                                                                                                                                                                                                                                                   | See response to comment #1 above regarding the Borden numbers. The Early Works Report will be revised to include both Borden numbers for the Lime Kiln Works Site. Regarding the inclusion of addresses, the Early Works Report was intentionally high level to avoid pinpointing specific locations of archaeological sites, as per standard practice to minimize potential for looting.                                                                                                                                                                                                                                                              | 1, 3                                                                                                                      | Acknowledged with respect to the Lime Kiln Works Site. Reference to 250 Front Street West, 39 Berkeley Street and 383 King Street archaeological conditions are unobserved. City requests recognition of archaeological conditions on these sites in the report. | O                  |
| 5                           | Heritage Planning - Archaeology | Archaeological Impacts            | EWR/HDDR - Table ES-2; Archaeological Resources; EWR - Section 5.8; Section 6.8 | Include language that any future archaeological assessments must be conducted in accordance to the City of Toronto's Official Plan and the Terms of Reference for Archaeological Assessments.<br><br>Also include language that any archaeological assessments, including the formulation of Stage 3 and Stage 4 mitigation programs and Construction Monitoring programs shall be subject to review and approval by the City of Toronto Heritage Planning.                                                                                                                                                         | The Stage 1 archaeological assessment report is written to meet the requirements set out in the Standards and Guidelines for Consultant Archaeologists (Ontario Government, 2011).<br><br>Metrolinx has committed to working with the City to review workplans for any additional archaeological assessments for the First Parliament site and will continue to work with the City to address comments that may arise from review of these workplans.                                                                                                                                                                                                  | 1                                                                                                                         | Response does not directly address the City's request to make reference to the Official Plan and Terms of Reference. Assume that response classification of #1 means the report is intended to be revised to include this.                                       | P                  |

| 6 | Heritage Planning - Archaeology | Archaeological Impacts | EWR/HDDR Table ES-2 (EWR p. xxi-xxii) | <p>Under the description of "Direct Impacts to Built Heritage Resources and Cultural Heritage Landscapes" the table notes that there is the "Potential to remove or demolish deeply buried archaeological remains as a result of removal/Demolition of a building or structure on the property and/or any ground disturbance is anticipated at OLS-034 (First Parliament Site - 265 and 271 Front Street East and 25 Berkeley Street)."</p> <p>1. Revise to include the properties north of Front Street (250-260 Front Street East, 383 King Street East, 68-70 Parliament Street).</p> <p>2. Include in Mitigation Measures that the work shall be subject to review and approval from City of Toronto Heritage Planning as well as ongoing consultation with the City of Toronto and other stakeholders and Indigenous Communities.</p> <p>3. Revise to include that archaeological assessment must also be conducted within any appropriate structures prior to demolition. The properties at 265-271 Front Street East are built on grade and previous archaeological assessments have recommended further work <u>inside</u> these structures.</p> | <p>1. See #4 above.</p> <p>2. MHSTCI Minister's Consent has been obtained, which includes commitments for consultation with the City of Toronto and Indigenous communities for the preparation of the Interpretation and Commemoration Plan.</p> <p>3. Metrolinx has committed to working with the City to develop workplans for the next stages of archaeological work on this site and as such, specific comments as to where the archaeological assessments will be occurring (i.e. at 265-271 Front Street East) will be carried forth to these workplans.</p>                                                                                   | 1 | Acknowledged.                                                                                                                                                                                    | C |
| 7 | Heritage Planning - Archaeology | Municipal Permits      | EWR p. xxvii<br>HDDR - Section ES.5   | Under the Municipal Permits section, include that these works may be subject to Heritage Easement agreements, as required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | As documented in the Ontario Line CHR, there are no heritage easements within the Project Footprint.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 3 | To clarify, the original comment was not intended to be about existing heritage easement agreements, but rather that the report should recognize that future heritage easements may be required. | O |
| 8 | Heritage Planning - Archaeology | Municipal Permits      | EWR p. xxvii<br>HDDR - Section ES.5   | Under the Municipal Permits section, revise to include the properties at 54 Parliament Street, 68-70 Parliament Street and 250-260 Front Street East, 39 Berkeley Street and 383 King Street East.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | A commitment will be added to Section 7.4 of the Early Works Report for consultation between Metrolinx and the City of Toronto Heritage Planning regarding the Lime Kiln Works Site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 1 | Acknowledged that the Lime Kiln Works Site has been included in Section 7.4. Response does not address the remaining properties identified in the original comment.                              | O |
| 9 | Heritage Planning - Archaeology | Archaeological reports | EWR - Section 4.8.1, p. 40            | <p>This report references the Stage 1 Archaeological Assessment of the Ontario Line South, dated July 24, 2020. The City have only received an earlier version of this report (May 29, 2020). We request that this report be provided to Heritage Planning as well as the concurrence letter from the MHSTCI stating that this report is compliant with the Standards and Guidelines for Consultant Archaeologists and has been entered into the Public Register.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>Metrolinx had circulated the Ontario Line South Stage 1 Archaeology Report on June 4, 2020 to the City based on the May 29, 2020 draft submitted to the Ministry (which is why the City only has the May 29, 2020 draft on file). This version was the same version submitted to the MHSTCI. We had received an approval letter (attached with this comment response) from the Ministry that this report was entered into the register on July 24, 2020, hence the July 24, 2020 reference in our Corktown Station Early Works Report.</p> <p>The July 2020 Stage 1 AA report can be found on our Mx Engage website for the City's reference.</p> | 1 | Acknowledged.                                                                                                                                                                                    | C |

|    |                                 |                          |                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |                                                                                                                                                                                                                                        |   |

| 10 | Heritage Planning - Archaeology | Archaeological reports   | EW R - Section. 5.8, p. 123 | <p>The City of Toronto notes that the Stage 1 Archaeological Assessment Report (AECOM 2020) is missing reference to the Stage 1 Archaeological Assessment of 250-260 Front Street East and 383 King Street East. (Archeoworks 2017 - P029-0961-2017). Include this report in this section and acknowledge outstanding archaeological concerns.</p>                                                                                                                                                                             | <p>The Ontario Line Stage 1 Archaeological Assessment was conducted using reports available in the MHSTCI database. however, it should be noted that the MHSTCI does not maintain a database of all properties that have had past archaeological investigations and searches of the MHSTCI public register do not always result in a complete listing of all archaeological work conducted in a given area. A request to the City of Toronto to provide any reports within the study area was made in the early stages of the project, and no additional reports were sent at the time of the Stage 1 report preparation.</p> <p>As planning progresses, further research will be done on a property specific basis. The Stage 1 Archaeological Assessment of 250-260 Front Street East and 383 King Street East. (Archeoworks 2017 - P029-0961-2017) will be reviewed as part of the archaeological assessment in the Ontario Line Environmental Impact Assessment Report.</p> | 3 | Acknowledge deferral to future process.                                                                                                                                                                                                | D |
| 11 | Heritage Planning - Archaeology | Archaeological Resources | EW R - Table 6-7, p. 165    | <p>In Table 2-1 of the Ontario Line Corktown Station Early Works – Heritage Detailed Design Report, several other activities are identified as part of the Early Works which could impact the archaeological resources at OLS-034 beyond building demolition. This includes site preparation, staging, re-grading, tree removal, removal of contaminated soil, utilities decommissioning, and erection of fences. These issues need to be addressed as it relates to the impacts to archaeological resources on this site.</p> | <p>The activities listed in Table 2-1 of the Heritage Detail Design Report and the Early Works report are the same. The archaeology sections of the Early Works Report address all equipment/activities listed in Table 3-1 of the Early Works Report, not just demolition</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 1 | Acknowledged.                                                                                                                                                                                                                          | C |
| 12 | Heritage Planning - Archaeology | Archaeological Resources | EW R - Table 6-7, p. 165    | <p>Under Potential Impact, it is noted that Options 2A and 2B from the Ontario Line Cultural Heritage Report (AECOM 2020) were reviewed and eliminated. Heritage Planning requests further information about why options 2A and 2B were eliminated during project design. These options gave preference to avoidance and protection of heritage attributes, which is also the preference of Heritage Planning.</p>                                                                                                             | <p>Based on the design and use of the First Parliament Site for the Ontario Line project, Options 2A (Encroachment) and 2B (Introduction of New Elements) were eliminated as neither are feasible based on the scope of work planned for the First Parliament Site. Demolition and removal of all structures on the properties as well as asphalt and soil removal where required, was determined to be the only option. Alternative sites were considered but ultimately ruled out for the launch of the tunnel boring machines, as described in Section 1.3.3 of the Early Works Report.</p>                                                                                                                                                                                                                                                                                                                                                                                  | 1 | Acknowledged.                                                                                                                                                                                                                          | C |
| 13 | Heritage Planning - Archaeology | Archaeological Resources | EW R - Table 6-7, p. 165    | <p>Under Mitigation Measures, revise to include consultation with Heritage Planning and other stakeholders as to the appropriate approach to archaeological assessment in advance of Early Works</p>                                                                                                                                                                                                                                                                                                                           | <p>Consultation with the City of Toronto's Heritage Planning is included in Table 6-7 under the Heritage section of the Early Works report for the First Parliament Site and is also a commitment of the Minister's Consent. A commitment will be added to Table 6-8 to include consultation with the City of Toronto Heritage Planning regarding archaeological assessments specific to the First Parliament Site and the Lime Kiln Works Site.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 1 | Acknowledged.                                                                                                                                                                                                                          | C |
| 14 | Heritage Planning - Archaeology | Archaeological Resources | Section 6.8; Table 6-8      | <p>Revise this section and table to include preservation in-situ of significant archaeological resources as a potential mitigation measure. This is the preference of Heritage Planning and the Ministry of Heritage, Sport, Tourism and Culture Industries, as outlined in the City of Toronto's Official Plan and the Standards and Guidelines for Consultant Archaeologists.</p>                                                                                                                                            | <p>As agreed upon in discussions between the City and Metrolinx, Metrolinx will endeavour to preserve in-situ arch resources associated with First Parliament and Home District Gaol where feasible. Metrolinx has also worked with the Minisry of Heritage, Sport, Tourism, and Cultural Industries to obtain Minister's Consent which provides conditions which Metrolinx is committed to following. Metrolinx will continue to consult and engage with the City to ensure the City's comments are addressed with regards to ongoing archaeological work at the First Parliament site.</p>                                                                                                                                                                                                                                                                                                                                                                                    | 1 | Mitigation measures should include substantive measures in addition to process matters. Report should acknowledge the potential for in-situ preservation of archaeological resources as a conservation strategy or mitigation measure. | O |

| 15 | Heritage Planning - Archaeology | Archaeological Resources           | Section 6.8; Table 6-8                                    | This section shall also include a description of the Toronto Lime Kilns Works Site (AjGu-61/AjGu-64) and ongoing archaeological conditions on the properties north of Front Street East (see earlier comment).                                                                                                                                                                                                                                                                                                                                                                                                                                            | Please see response #1 above. All archaeological mitigation will take place prior to ground disturbing activities in accordance with the Ontario Heritage Act.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 1 | Response does not address the comment which was a request for a description of archaeological conditions on the properties north of Front Street East in Table 6-8.                                                        | O |
| 16 | Heritage Planning - Archaeology | Archaeological Resources           | EW - Table 6-8, p. 173                                    | <p>Include references to the City of Toronto's Official Plan and the Terms of Reference for Archaeological Assessments as relevant policy in addition to the Standards and Guidelines.</p> <p>Include a statement that any archaeological assessments, including the formulation of Stage 3 and Stage 4 mitigation programs and Construction Monitoring programs shall be subject to review and approval by the City of Toronto Heritage Planning.</p>                                                                                                                                                                                                    | Please refer to response #5.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 1 | Response does not directly address the City's request to make reference to the Official Plan and Terms of Reference. Assume that response classification of #1 means the report is intended to be revised to include this. | P |
| 17 | Heritage Planning               | HDDR Report                        | HDDR Report, general                                      | Provide additional detail on cultural heritage resources impacted as per the standard scope and methodology of CHER/HIA reports completed during EA processes. If we understand correctly, the Heritage Detailed Design Report (HDDR) document is intended to replace the individual Cultural Heritage Evaluation Reports (CHER) and Heritage Impact Assessments (HIAs) that would typically be completed for each cultural heritage resource that may be impacted: as such the level of detail provided in the document is insufficient to determine the cultural heritage value of these identified resources, and to understand the potential impacts. | Refer to the Ontario Line Cultural Heritage Report (CHR) completed under O. Reg. 341/20. Methodology for CHR was developed through consultation with MHSTCI. The CHR provides sufficient information about and provides a description of a property's Cultural Heritage Value or Interest (See Section 2 for methodology). Given the sufficient level of information in the CHR, it was not necessary to recommend individual CHERs. Furthermore, in consultation with MHSTCI, the preliminary impact assessment provides sufficient discussion of potential impacts to inform project planning and to avoid, to the greatest extent possible, the undertaking of HIAs. Therefore, the purpose of the Heritage Detail Design Report, as described in Section 1.1.1, is to identify any changes in impacts from the CHR, refine the impacts proposed in the CHR, and identify any new project-specific impacts that were not described in the CHR. | 3 | Acknowledged.                                                                                                                                                                                                              | C |
| 18 | Heritage Planning               | HDDR Report and Early Works Report | HDDR Report, Table ES-2 and Early Works Report, Table 6-7 | The HDDR and Early Works Reports both identify the property at "2 Berkeley Street, 248, 250, 252, 25, 258, 260, 262, 264 The Esplanade" as a built heritage resource that is Designated under Part IV and V of the Ontario Heritage Act and covered by a Heritage Easement Agreement (HEA) within the study area. This resource is missing from the Impact and Description Tables in both the HDDR Report (Table ES-2) and Early Works Report (Table 6-7) and must be included to evaluate potential impacts and mitigation measures.                                                                                                                     | This resource, referred to as OLS-36, will be added to the impact table in both the Heritage Detail Design Report and the Early Works Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 1 | Updates observed in revised report.                                                                                                                                                                                        | C |
| 19 | Heritage Planning               | HDDR Report and Early Works Report | HDDR Report, Table 3-1 and Early Works Report, Table 5-13 | The bullet-point information provided in the tables with Description of Known or Potential Cultural Heritage Value or Interest and Heritage Attributes provided in both the HDDR (Table 3-1) and Early Works Report (Table 5-13) do not provide an adequate evaluation of the properties under Ontario Regulations 9/06 or 10/6 as required of a CHER (for which, along with an HIA, the HDDR is said to serve in their place), nor does it cite sources for any of the research in these descriptions.                                                                                                                                                   | Please see response in Item #17                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 3 | Acknowledged.                                                                                                                                                                                                              | C |
| 20 | Heritage Planning               | HDDR Report and Early Works Report | HDDR Report, Table 3-1 and Early Works Report, Table 5-14 | Three built heritage resources were determined to potentially meet Ontario Regulation 10/06 criteria: however, their evaluation using the 10/06 criteria is not documented for any of the resources within these Reports.                                                                                                                                                                                                                                                                                                                                                                                                                                 | See response in Item #17. In addition, Section 2 of the Ontario Line Cultural Heritage Report states that the CHR provides sufficient information to demonstrate and identify the built heritage resources and cultural heritage landscapes that meet or have potential to meet O. Reg. 10/06. Methodology for the CHR was developed in consultation with MHSTCI.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 3 | Acknowledged.                                                                                                                                                                                                              | C |

|    |               |                    |                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                              |   |                                                                                                                                                                                                                |   |
|----|---------------|--------------------|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| 21 | City Planning | Early Works Report | EW, Section 5.6.2.2 | Clarify how it was determined that "there are no planned community services or facilities" in the Corktown Station area. We note that the First Parliament site, for example, includes plans for a new district library and heritage interpretation centre (contact: SoMei Quan, CreateTO). We further note that improvements to parks and recreation facilities include the reconstruction of David Crombie Park along The Esplanade (contact: Nancy Chater, Parks Forestry & Recreation). The data sources used to populate this section of the EW appear to be insufficient to capture planned community services and facilities.                                     | Section 5.6.2.2 will be updated to include these planned community services. Applicable Environmental Assessments and Planning studies are included in Section 2.2.3, which include the First Parliament Project and the David Crombie Park Revitalization. Metrolinx will continue to work with the City of Toronto as we advance plans for Corktown Station and the First Parliament Site. | 1 | Acknowledged.                                                                                                                                                                                                  | C |
| 22 | City Planning | Early Works Report | EW, Table 5-19      | Update service headways for transit routes to reflect the planned service provision. The 504 King streetcar, for example, operates at 2-3 minute headways during peak hours. The source for this data should be the TTC service summaries before Covid-19, which can be requested from the TTC.                                                                                                                                                                                                                                                                                                                                                                          | The headways were revised to reflect the service headways from between May and June 2019.                                                                                                                                                                                                                                                                                                    | 1 | Acknowledged.                                                                                                                                                                                                  | C |
| 23 | City Planning | Early Works Report | EW, Figure 5-20     | Include planned cycling facilities that will be in place when construction on the Ontario Line is anticipated to begin. For example, a cycle track is planned for the Esplanade and Mill Street, which will be constructed in 2021 and 2022. Transportation Services (Adam Popper) and Engineering & Construction Services (Owen McGaughey) should be consulted to provide additional information on the implementation of this facility.                                                                                                                                                                                                                                | This section is meant to address the existing transportation network. The planned facilities will be added to Section 5.6.2.2 of the Early Works Report, Planned Services and Facilities. Metrolinx will continue to consult with the City of Toronto on the Esplanade and Mill Street bikeway.                                                                                              | 1 | Acknowledged.                                                                                                                                                                                                  | C |
| 24 | City Planning | Early Works Report | EW, Table 6-6       | Regarding land uses and adjacent lands, confirm whether there are potential impacts to adjacent land development projects, or impacts to the early works from development on adjacent lands. We note, for example, that a data centre with zoning approval may be constructed at 43 Parliament Street, which may involve work zone lane closures. Other development applications that may be under construction during the Corktown early works is documented in Section 5.6.4. Coordination is required with Transportation Services to understand the full extent of planned and approved lane closures.                                                               | Noted. A commitment is made in the Traffic and Transportation section of the Early Works Report to coordinate with the City of Toronto regarding other ongoing construction projects when scheduling the early works activities to maintain the mobility of all road users.                                                                                                                  | 1 | Acknowledged.                                                                                                                                                                                                  | C |
| 25 | City Planning | Early Works Report | EW, Table 6-6       | Regarding visual effects from construction activities, provide additional detail about screened enclosures (such as hoarding) that Metrolinx is committed to using at construction sites. Improvements to screening should be included compared to the fencing that was provided on the ECLRT, which did little to mitigate the visual impacts of construction. With regard to private development projects (e.g. condominium or office tower construction), the City has achieved higher standards for the quality of hoarding provided at these sites. Lessons learned from projects like ECLRT should be applied to the Ontario Line to improve temporary conditions. | As Corktown Station early works planning is still in progress, details about screened enclosures such as hoarding and fencing are not yet available. These details will be included in early works activities project specifications and the lessons learned from the ECLRT project will be applied as appropriate.                                                                          | 1 | Acknowledged.                                                                                                                                                                                                  | C |
| 26 | City Planning | Early Works Report | EW, Table 6-9       | For active transportation impacts, a Vision Zero perspective should be applied to protect vulnerable road users from injuries and fatalities during construction. Table 5-5 identified several pedestrian and cycling facilities that already provide low levels of service in the existing condition (without considering pedestrian and cyclist volumes, which the Ottawa MMLOS does not account for). Poor levels of service may be exacerbated with construction occurring immediately adjacent to the facility. Identify mitigation measures - e.g. provision of minimum sidewalk widths, minimum pedestrian levels of service.                                     | Table 6-9 will be revised to indicate that the necessary mitigation measures will be considered (e.g., maintaining a minimum sidewalk width) in order to maintain pre-construction pedestrian levels of service.                                                                                                                                                                             | 1 | City Planning would prefer a stronger commitment than "consideration" for accommodations such as minimum sidewalk widths to maintain pedestrian levels of service. Suggested wording is "will be implemented". | O |
| 27 | City Planning | Early Works Report | EW, Section 8.8     | Commitments to future consultation should include the City on matters (among other things) related to impacts on development and transportation within the area of the project's influence, and the detailed design of restoration of impacted areas to the current City standard. We note that government review agencies and technical stakeholders are included in the list of stakeholders consulted in Section 8.1.                                                                                                                                                                                                                                                 | The City of Toronto is listed under Engagement with Technical Stakeholders in Section 8.4. Commitments to engage the City on specific technical aspects of the Early Works are included in the discipline specific sections of the report.                                                                                                                                                   | 1 | Acknowledged.                                                                                                                                                                                                  | C |

|    |               |                                                         |                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |               |   |

| 28 | City Planning | Early Works Report, Traffic and Transportation Appendix | Traffic and Transportation EWR, Section 2.1.2.2 | <p>We note that the City of Ottawa's Multi-Modal Level of Service tool used in this analysis does not include pedestrian volumes in determining a pedestrian level of service, relying instead on qualitative characteristics of a pedestrian facility and its adjacency to other facilities. This may provide a misleading indicator of the quality of a pedestrian facility where pedestrian volumes are high, which is the case at times around the Corktown Station area especially during special events at the Distillery District.</p> | <p>To identify the impact of the early works on pedestrians, the assessment of the multi-modal level of service under existing conditions will serve as a baseline for comparison with the multi-modal levels of service under the early works (note that the multi-modal level of service assessment under early works will be assessed once the detailed construction staging schemes become available). When comparing both scenarios, the pedestrian volumes will be assumed to be the same but pedestrian facilities could be different due to adjustments (i.e., realignments, closures, etc.) to pedestrian facilities that might be required under early works. Accordingly, and given the comparative nature of the analysis, we believe the omission of the pedestrian volumes is not critical to this assessment. The EWR and Traffic Report include a commitment to monitor the effectiveness of the Transit and Traffic Management Plan(s) throughout the construction period and to make adjustments on actual field observations if required.</p> <p>Metrolinx is aware that there may be special events held in proximity to the Corktown Station Early Works, including the Distillery District, and does not want to compromise the pedestrian level of service during those events. Metrolinx will add a commitment to the Early Works Report and the Traffic Report to consult with the City of Toronto to minimize potential impacts during those events should closures or long-term impacts be required.</p> | 3 | Acknowledged. | C |

| 11 | TW WIM-TR | Utilities | Page 153           | If groundwater would be discharged to municipal sewer system, the water quality test results and downstream sewer capacity analysis and hydraulic grade line analysis will be included in the permit application and submitted to TW-EMP.                                                                                                                                                                                                                                                                 | Noted, a measure to conduct regular groundwater quality testing of discharge water if dewatering is required has been added to Table 6-2 of the Early Works Report.                                                                                                 | 1 | Closed                                                                                                                                                                                                                                             | C |
| 12 | TW WIM-TR | Utilities | Page 155, Table6-3 | For Stormwater management, water balance , water quality and quantity targets according to the City's WWFM Guidelines shall be met during site design.                                                                                                                                                                                                                                                                                                                                                    | Comment noted. As Corktown Station early works will be mainly limited to disconnection of the feeding utilities and demolition of existing structures, impacts to the stormwater management, water balance, water quality and quantity targets are not anticipated. | 1 | Stormwater management report shall be prepared to address the targets required by WWFMG. And drainage plan and hydraulic analysis for water or sewer system shall be prepared for the earlier works for both pre- and post-development conditions. | O |
| 13 | TW WIM-TR | Utilities | Page 180           | Design Criteria for Sewer and Watermain and WWFMG are two major documents to be used for TW asset design and construction.                                                                                                                                                                                                                                                                                                                                                                                | Comment noted. No deep excavation or utilities work are anticipated for this project and as a result, it is not anticipated that the Design Criteria for Sewer and Watermain and the WWFMG will apply to this project.                                              | 1 | Based on the response to item #12, drainage plan or a site plan shall be prepared, even for disconnection or demolition of the existing utilities. Hydraulic analysis might be required to ensure no impact on the exisiting services.             | O |

| 2                           | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Pages 9 & 28.                                | " <i>The Ontario Line Final Environmental Conditions Report (AECOM, 2020) notes that turning movement counts and signal timing plans were not available at some intersections within the Ontario Line Study Area, and were not collected through new traffic surveys considering the uncharacteristic traffic conditions as a result of the COVID-19 pandemic. As a result of the noted data limitations, a quantitative traffic assessment of some intersections within the Corktown Station Study Area could not be undertaken.</i> "<br><br>- All signalized intersections should be assessed and analysis should be included in this report.<br>- TMC data can be retrieved from Traffic Impact Assessment Reports of Active Development Applications.<br>- Traffic Impact Study of 333 King Street East and 250 Front Street East includes TMCs of the following signalized intersections.<br>- King/Parliament.<br>- King St & Sherbourne St<br>- Front/Sherbourne<br>- Front & Princess.<br>- Front & Berkeley.<br>These are the intersections within Corktown station study area.<br><br>- Active Development Applications are mentioned in section 4.0 of "The Ontario Line Final Environmental Conditions Report (AECOM, 2020)". | Intersections with historical Turnning Moving Count (TMC) data were assessed using a conservative annual growth rate of 1%. The intersections that were not assessed are those where no traffic data was provided.<br><br>A quantitative traffic impact assessment will be completed, as required, as project planning progresses to consider vehicular traffic impacts as a result of the Corktown Station Early Works, and develop and implement a Transit and Traffic Management Plan(s), which could include temporary changes to intersection lane configurations, traffic signal timing optimization, modifications to existing signal timing plans, etc. The Transit and Traffic Management Plan(s) will also address specific emergency services requirements in consultation with the City of Toronto. | 1                                                                                                                         | Traffic Impact Study of 333 King Street East and 250 Front Street East includes TMCs of the following signalized intersections.<br>- King/Parliament.<br>- King St & Sherbourne St<br>- Front/Sherbourne<br>- Front & Princess.<br>- Front & Berkeley.<br><br>Active Development Applications are mentioned in section 4.0 of "The Ontario Line Final Environmental Conditions Report (AECOM, 2020)".<br><br>These are the intersections within Corktown station study area. TS is recommending that Mx retrieve TMCs of the above mentioned intersection and include the analysis in the report.<br><br>Comment will be closed once TS comment will be addressed. | P                  |
| 3                           | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | 2.1.2.1 Automobile Level of Service, Page 28 | Please specify why the Intersection capacity analysis wasn't done using the most recent version of the Highway Capacity Manual (HCM 6th) as per instructions in the City of Toronto "Guidelines for the Preparation of Transportation Impact Studies" for utilizing the most recent version of HCM.<br>The results from a more recent HCM version is considered to be more reliable.<br><br>Only those intersections where the configurations are not supported by HCM 6th/2010, the HCM 2000 based results should be used following the instructions from City of Toronto's "Guidelines for Using Synchro 9 (Including SimTraffic 9)". The Guideline mentions using HCM 2000 for the intersections where there are specific limitations to HCM2010 (HCM 6th has the same limitation).                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The majority of the intersections have a configuration that is not supported by HCM 2010. In addition, HCM 2010 does not support speed limits less than or equal to 40 km/h which is the case along the majority of the roads within the Corktown Station Study Area. Hence, for consistency purposes, HCM 2000 was selected as the version of choice.                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 3                                                                                                                         | Noted.<br>Comment can be closed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | C                  |

| 20 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Appendix F, Page 128, King/Berkeley                                  | As per Google image, eastbound and westbound left turning cyclists need to cross one lane. Please confirm and revise the appendix page.                                                                                                                                                                                                                                                     | A distinction was made between "changing lanes" and "crossing lanes". Cyclists travelling on the curb lanes of King Street would have to change lanes to get to the median lane and complete a left-turn movement at the intersection of King Street and Berkeley Street. At intersection with an auxiliary left-turn lane, cyclists were considered to "cross" the median through lane to get to the left-turn lane.                                                                                                                                                                                                                                                                                           | 3 | Please clarify why this assumption was not considered for the following intersections:<br>- Adelaide Street / Parliament Street, for north leg on page#128.<br>- Mill Street / Parliament Street, for north leg on page#129.<br><br>"One lane crossed" was considered for the cyclist at above intersections, however there is no auxiliary left-turn lane for the left turn movement.<br><br>Comment remain pending. | P |
| 21 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Appendix F, Cherry & Front, Page 129                                 | The south leg of Cherry has pocket bike lane. As per MMLOS Ottawa Guidelines (exhibit 12), pocket bike lanes are defined as bike lanes that develop near intersections between vehicular right turn lanes on the right side and vehicular through or left lane on the left side. Please confirm and advise the BLOS of south leg?                                                           | Noted, "pocket bike lane" will be used instead of "curb bike lane". BLOS would remain unchanged.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 1 | Noted.<br>For purpose of review, no further comments.                                                                                                                                                                                                                                                                                                                                                                 | C |
| 22 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Appendix F, The Esplanade/Lower Sherbourne, Page 129                 | As per Google image, northbound and southbound left turning cyclists need to cross two lanes. Please confirm and revise the appendix page.                                                                                                                                                                                                                                                  | Cyclists were assumed to use the crossrides across the east and west legs and then cross using the crosswalks to complete the left turn movement. That's the reason no lanes would be crossed at the approach to the intersection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 3 | Noted.<br>Comment closed.                                                                                                                                                                                                                                                                                                                                                                                             | C |
| 23 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Appendix F, Lower Sherbourne/Lake Shore, Page 129                    | As per Exhibit 12 of MMLOS Ottawa Guidelines, for the speed limit >= 60km/h with no lane crossed, BLOS of east/west legs are "D" in mixed traffic. Please confirm and revise the appendix page.                                                                                                                                                                                             | Noted. No change was required to overall BLOS as the intersection of Lake Shore Boulevard and Lower Sherbourne Street as overall BLOS is D. Appendix F will be revised to update the BLOS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 1 | Noted.<br>For purpose of review, no further comments.                                                                                                                                                                                                                                                                                                                                                                 | C |

| 25 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Appendix F                                                           | All signalized intersections within the site should be assessed for PLOS, BLOS & TLOS. Analysis should be included in this appendix.                                                                                                                                                                                                                                                        | All signalized intersections where traffic data was received from the City were assessed for PLOS, BLOS, and TLOS.<br><br>A quantitative traffic impact assessment will be completed, as required, as project planning progresses to consider vehicular traffic impacts as a result of the Corktown Station Early Works, and develop and implement a Transit and Traffic Management Plan(s), which could include temporary changes to intersection lane configurations, traffic signal timing optimization, modifications to existing signal timing plans, etc. The Transit and Traffic Management Plan(s) will also address specific emergency services requirements in consultation with the City of Toronto. | 1 | Please see comment#2.                                                                                                                                                                                                                                                                                                                                                                                                 | P |
| 26 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Appendix F, Pages 132-141                                            | Specify what is crowding Pedestrian LOS, how it was calculated and what is the source of this criteria. Crowding PLoS is shown in this Appendix for segment analysis. Please also clarify how the number of pedestrians were obtained for this analysis. This description should be included in section 2.1.2.2 - Pedestrian Level of Service and criteria should be included in Appendix C | Crowding PLOS was disregarded in the assessment of pedestrian level of service due to the absence of accurate pedestrian volumes along the midblock segments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 3 | Please clarify how the pedestrian volume (250 ped/hr or 1000 ped/hr) was obtained for the segments on these pages?<br>How the <b>Crowding PLoS</b> (B or C) was obtained for the same segments?<br>Comment remain Open.                                                                                                                                                                                               | O |
| 27 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | Segment Form, BLOS, Cherry St, btwn LakeShore and Adelaide, Page 141 | Please indicate what (bike lane+parking lane) width was considered for finding BLOS. Clarify how the bike lane+parking lane width >= 1.8m is justifying BLOS "A" for this segment, however bike lane is adjacent to parking lane (see Appendix C Exhibit 11)                                                                                                                                | The type of facility considered in the assessment was "curbside bike lane" as it is a better representation of the bike lanes along Cherry Street than "bike lanes adjacent to curbside parking lane". The width used is basically the estimated width of the bike lane.                                                                                                                                                                                                                                                                                                                                                                                                                                        | 1 | Noted.<br>No further comment.                                                                                                                                                                                                                                                                                                                                                                                         | C |
| 28 | Transit Infrastructure Projects/Transportation Services | A5_2021-03-10_OL_EW3_CS_Traffic_60611173_DRAFT | General                                                              | Why MX did not consider assessing Truck level of service along truck routes, arterial roads and key delivery access routes within Corktown Site, as per City of Ottawa's Multi- Modal Level of Service Guidelines ?                                                                                                                                                                         | The assessment of trucks level of service was not included as it is not a typical requirement in such studies where the focus is on impacts to general traffic, active transportation users, and transit. Given that truck percentages were input into the Synchro models, then the findings of the traffic operations assessment can be considered a good representation of the actual operations experienced by the existing vehicle mix (including trucks) within the Corktown Station Study Area.                                                                                                                                                                                                           | 3 | Noted.<br>For purpose of review, no further comments.                                                                                                                                                                                                                                                                                                                                                                 | C |

|    |                                                         |                                                |                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |

The schedule has been revised and currently Segment 6 is from Cherry to Don Roadway from 2026 to 2029. Waterfront Toronto is completing the work from Don roadway to Logan in 2021 and 2022. Please ensure that the Gardiner Expressway Strategic Rehabilitation Plan segments and the respective construction timeline information is up to date prior to the issuance of the Report.</p> <p>2.2.3.2 Gardiner Expressway Strategic Rehabilitation Plan</p> <p>The City of Toronto developed the Gardiner Expressway Strategic Rehabilitation Plan to establish the immediate and long-term rehabilitation needs of the Gardiner Expressway, improve transportation corridors within the area, and provide more efficient public transit connections (City of Toronto, n.d.c). The rehabilitation is being completed in seven sections, two of which are within the Corktown Station Study Area:</p> <ul style="list-style-type: none"><li>Segment 1 between Jarvis Street and Cherry Street with a projected timeline of planned construction <b>between 2018 and 2021</b> (City of Toronto, n.d.c); and</li><li>Segment 6 between Lower Jarvis Street and east of the Don Valley Parkway at Logan Avenue with a projected timeline of planned construction <b>between 2024 and 2027</b> (City of Toronto, n.d.c).</li></ul> <p>The City of Toronto's website notes that the planned construction timelines are subject to change (City of Toronto, n.d.c).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>Thank you for providing the revised schedule information. The Early Works Report has been updated with the dates provided (2026-2029). Please note that the City of Toronto Gardiner Expressway Rehabilitation Strategy website currently states that the area east of Cherry Street, referred to as the Gardiner East EA, is scheduled from 2026 to 2030.</p>                                                                                               | 1           | Please follow closely with any schedule updates as published on the website to ensure that the information as presented is current.                                                                                                                                       | C                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                          |                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                          |   |                                                                                                                                                                                                                                                                           |   |
| 2                                    | ECS-BSE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Gardiner Rehabilitation Timeline                                                                                                                                                                                                                                                                                                                         | Section 3.2, Page 20.                  | <p>The dash red line (footprint as defined under Section 3.2 above) and shown in Figure 3-2 includes a segment of the Gardiner Expressway. Please elaborate what impacts are anticipated on the Gardiner Expressway and how they are affecting the structure and its operations as a result of the Corktown Early Works?</p> <p><b>3.2 Early Works Project Footprint and Study Area</b></p> <p>The Corktown Station Early Works Project Footprint, shown in <b>Figure 3-1</b>, is defined as the area of direct disturbance associated with the early works activities. The site is bound by King Street East to the north, Parliament Street to the East, Berkeley Street to the West and Parliament Square Park to the south.</p> <p>The Corktown Station Study Area, shown in <b>Figure 3-2</b>, includes the Corktown Station Early Works Project Footprint and a 500 metre buffer which was identified for assessment of potential impacts of the Corktown Station early works. As shown in <b>Table 4-1</b>, select discipline-specific study areas were identified for assessment of the discipline-specific potential impacts of the Corktown Station early works.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>Although the Gardiner Expressway is within the 500m buffer of the study area, as stated in Section 5.9 of the Early Works Report, the Gardiner Expressway between Cherry Street and Sherborne Street was not considered part of the road network as it is not anticipated to be directly impacted by the Corktown Station Early Works within the Corktown Station Early Works Project Footprint or be part of the route for heavy construction vehicles.</p> | 1           | As the Gardiner Expressway is within the footprint of the Corktown Station construction area, please ensure that forth coming tunneling or any construction activities do not impact the operations and the on-going rehabilitation contracts of the Gardiner Expressway. | P                  | | 4                           | PFR - PDCP LAU | Corktown Station Early Works Project Footprint    | General                                | PFR supports Transportation Services' ask for the Esplanade-Mill bikeway through the existing parking lot just north of Parliament Square Park within the Corktown Station EWP footprint to provide a separate space for people walking and cycling. The footprint should reflect the bikeway area provided by CREM. | Information on the Esplanade-Mill bikeway will be added to Section 5.6.2.2 of the Early Works Report, Planned Services and Facilities. Metrolinx will continue to consult with the City of Toronto on the Esplanade and Mill Street bikeway.                                                                                | 1        | 5.6.2.2. is incorrect as the cycle track is proposed within the Corktown Station EWP footprint, directly North of Parliament Square Park. It is our understanding that a request has been made to exclude these lands from the Corktown Station EWP footprint. Mx to revise and confirm. | O                  |
