Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks, replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue and construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line infrastructure; construction of a fourth GO track and the foundations for GO Overhead Catenary System poles between Eastern Avenue and Carlaw Avenue; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

The environmental impacts of East Harbour Station and Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report and the Draft Lakeshore East Joint Corridor Early Works Report (Draft Early Works Reports) that are now available for review.

The Draft Early Works Reports document the assessment of East Harbour Station and Lakeshore East Joint Corridor early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Early Works Reports will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Early Works Reports must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Early Works Reports by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timelines will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report and the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report and the Final Lakeshore East Joint Corridor Early Works Report.

Avis de publication de l'ébauche de rapport sur les travaux préliminaires à la gare East Harbour et de l'ébauche de rapport sur les travaux préliminaires du corridor commun de Lakeshore East

Projet de ligne Ontario

Le projet

La ligne Ontario donnera 15,6 kilomètres de nouvelles voies de métro à Toronto, ce qui accélérera et facilitera les déplacements quotidiens des gens. La ligne s'étendra du Centre des sciences de l'Ontario (au nord-est) jusqu'à la Place de l'Ontario/gare Exhibition (au sud-ouest). La ligne Ontario comprendra 15 nouvelles stations, y compris 6 stations de correspondance et des correspondances avec les trois lignes ferroviaires GO, deux lignes de métro existantes, le nouveau TLR Eglinton Crosstown et des lignes de tramway à 10 de ses stations. Le projet comprendra des tunnels, des passages en surface ainsi que des passages surélevés et sera complètement séparé de la circulation automobile afin d'offrir un service rapide et fiable.

Travaux préliminaires à la gare East Harbour

Des travaux préliminaires auront lieu à la gare East Harbour, où la ligne Ontario rejoint le service ferroviaire GO. L'achèvement des travaux préliminaires avant le début des principaux contrats de construction aidera à simplifier la réalisation des projets de ligne Ontario et d'expansion du réseau GO et à éviter les retards dans le calendrier des deux projets. À la gare East Harbour, les travaux préliminaires consistent à reconfigurer les voies existantes de la ligne GO de Lakeshore East pour accueillir les installations de la gare et les futures voies de la ligne Ontario; à construire les installations de la gare, notamment les quais et les entrées; à remplacer et élargir l'actuel viaduc ferroviaire de l'avenue Eastern pour faire place à quatre voies de la ligne GO de Lakeshore East et à deux voies de la future ligne Ontario; et à effectuer les activités de préparation du site, notamment le nivellement, la démolition des structures existantes si nécessaire et le déplacement ou la protection des services publics.

Travaux préliminaires du corridor commun de Lakeshore East

Les travaux préliminaires du corridor commun de Lakeshore East auront lieu le long du corridor ferroviaire de Lakeshore East, environ entre l'avenue Eastern et l'avenue Pape. L'avancement des travaux préliminaires dans ce secteur facilitera l'exécution rapide du projet de la ligne Ontario et aidera à réaliser des économies dans la planification, la conception et la mise en œuvre du programme d'expansion du réseau GO. Les travaux préliminaires du corridor commun de Lakeshore East comportent des modifications à l'actuel corridor ferroviaire de Lakeshore East, notamment : la reconfiguration des voies GO existantes pour faire place à la future infrastructure de la ligne Ontario; le remplacement des viaducs ferroviaires existants de la rue Queen Est, de la rue Dundas Est et de l'avenue Logan; la construction de deux nouveaux viaducs sur la rue Dundas Est et l'avenue Logan pour accueillir les voies de la ligne Ontario; la construction des fondations des poteaux du système de suspension caténaire de la ligne GO et de l'infrastructure de soutien pour la quatrième voie GO; la construction de murs de soutènement; et la construction d'écrans acoustiques, notamment à l'est de l'avenue Pape.

Les répercussions environnementales des travaux préliminaires à la gare East Harbour et dans le corridor commun de Lakeshore East sont en cours d'évaluation conformément au Règlement de l'Ontario 341/20, Projet de ligne Ontario (Règl. de l'Ont. 341/20) en vertu de la Loi sur les évaluations environnementales. Conformément à l'article 8 du Règl. de l'Ont. 341/20, Metrolinx a rédigé l'ébauche de rapport sur les travaux préliminaires à la gare East Harbour et l'ébauche de rapport sur les travaux préliminaires du corridor commun de Lakeshore East (les ébauches de rapport sur les travaux préliminaires) qui peuvent maintenant être consultées par le public.

Les ébauches de rapport sur les travaux préliminaires documentent l'évaluation des travaux préliminaires réalisés à la gare East Harbour et dans le corridor commun de Lakeshore East. Les rapports définissent l'objectif des travaux préliminaires, décrivent les conditions de l'environnement local, les répercussions potentielles ainsi que les mesures d'atténuation proposées et contiennent un journal des consultations.

Processus d'examen et de consultation dans le cadre de l'ébauche de rapport sur les travaux préliminaires

À compter du **23 septembre 2021**, les ébauches de rapport sur les travaux préliminaires se trouveront sur la page Web du projet (www.metrolinx.com/ligneontario).

Vous pourrez consulter les rapports du **23 septembre au 24 octobre 2021** et les commenter en ligne à l'aide du formulaire fourni.

Les personnes qui souhaitent envoyer des commentaires sur les ébauches de rapport sur les travaux préliminaires doivent le faire d'ici le **24 octobre 2021** et les transmettre au moyen du formulaire se trouvant sur la page Web ou par courriel à l'adresse ontarioline@metrolinx.com.

L'article 10 du Règl. de l'Ont. 341/20 exige que Metrolinx établisse un processus de résolution des problèmes afin de tenter de résoudre toute préoccupation soulevée par le public ou les Premières Nations au cours de la période d'examen. À la fin de cette période, Metrolinx mettra à jour les ébauches de rapport sur les travaux préliminaires en y ajoutant une description du processus de résolution des problèmes, les mesures prises par Metrolinx pour répondre aux préoccupations, et l'incidence du traitement des préoccupations sur les calendriers de mise en œuvre des travaux préliminaires, le cas échéant. Metrolinx publiera ensuite le rapport définitif sur les travaux préliminaires à la gare East Harbour et le rapport définitif sur les travaux préliminaires du corridor commun de Lakeshore East sur la page Web du projet, www.metrolinx.com/ligneontario, et émettra un avis de publication du rapport définitif sur les travaux préliminaires à la gare East Harbour et du rapport définitif sur les travaux préliminaires du corridor commun de Lakeshore East.

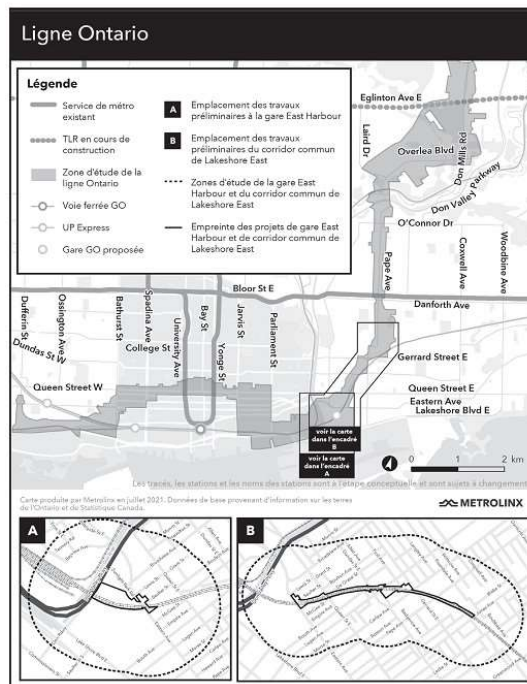

Pour obtenir une copie des ébauches de rapport sur les travaux préliminaires, veuillez écrire à l'adresse courriel indiquée ci-dessous.

Franca Di Giovanni (tél. : 416-202-5100, courriel : ontarioline@metrolinx.com), représentante de Metrolinx.

CY 藉姦殺案諷英 羅冠聰接招

「中國都有一籬問題 只是人民被蒙鼓裏」

近日英國傳出唔少負面消息，好似英警姦殺夜歸女案，被告上周被判終身監禁。全國政協副主席、前特首梁振英(CY)前日喺facebook發文，向流亡英國嘅立法會前議員羅冠聰「挑機」，叫對方講吓「英國民主制度下的優質生活」。阿聰隔日隔空接招，話醜聞反映民主國家嘅市民擁有知情權，令權力得到制衡。

話港人移民非為優質生活

阿聰話CY睇到英國出現問題，就好似「如獲至寶」咁反諷港人移民潮，但

佢話似乎CY忘記咗，中國都肯定有一籬問題，「只是人民被蒙在鼓裏，無法得知國家真正現況……只能沉醉在『中國強大』的春秋大夢中」。

阿聰話今次的姦殺案，反映了民主國家有言論自由，政治人物受大眾監察，而當整個社會無異議聲音時，先會令人心寒。

香港移民潮再起，阿聰認為大部分人唔係為「優質生活」而遠走他鄉，而係逃避常被扭曲、充斥政治暴力嘅城市，當去到英國之後，佢哋至少可以公開批評英國、香港政府，「然後當個有尊嚴、有獨立思考，並且可以付諸行動的人」。

尊子漫畫

李家超同學生講古 學堂操到阿媽唔認得

兩個中四學生Laser同Jobelle暑假時跟政務司長李家超做「工作影子」，Laser話佢見到司長友善親切一面。李家超同兩個學生茶敘，話自己細個時係孬仔，做警察訓練咗大約兩個月，返屋企連阿媽都唔認得佢，「碎」埋門問佢邊位，李家超答「我係你個仔囉」，阿媽聽到佢把聲先敢確認。

「工作影子」學生 當佢人生導師

暑假時40個學生參加咗「與香港同行」計劃，分別做咗

20個政府官員嘅「工作影子」一日。

Jobelle話李家超係一個可以昇到佢人生忠告嘅人，而李家超就鼓勵同學生堅信自己有能力應付問題，唔好低估自己，「最重要當你有問題真係解決唔到，真係要同人傾下」。

Laser話李家超提點咗佢「人生唔係一個死胡同」，應該嘗試多啲唔同嘅嘢，佢參加今次計劃，令佢更了解自己志願。李家超讚揚眼前嘅新一代充滿活力、希望、能量，「等我退休時可以安享晚年喇」。

我答她我係你的兒子 I replied "I'm your son"

政務司長李家超(中)同兩個做佢「工作影子」嘅中學生分享成長故事，話自己細個係「孬仔」，入完學堂訓練兩個月後，連阿媽都認佢唔到。(政務司長fb片段截圖)

公民黨陳珮明 辭沙田區議員

新界東(北區、沙田、大埔、西貢)4個區議會區議員今日宣誓。繼陳諾恒後，公民黨陳珮明亦辭任沙田區議員，前日(2日)生效。陳珮明喺facebook回顧任內工作，話早已決定喺宣誓前一兩日辭職，「只是港共連月放風，未有行動，當然八風不動」。佢又話：「港共橫加宣誓要求，乃輸打贏要，旨在推翻二零一九年區議會選舉結果，順道找些借口把議員刁難一番再DQ，唔睬佢。」佢話多謝助理、同事、義工、親友、街坊一直襄助，自己一直未租到寫字樓，區內唯一嘅商場索租甚高，屋邨又有位，雖然有幸得街坊包容體諒，但可惜好多活動如電影會等都難以舉行，唯一好處係離任後唔使處理太多物資同雜務。佢話議會係一個工具，尚手中應當善用，所以佢從未缺席區議會大大小小嘅會議。但最後寄語：「港共對各個民間團體文武嚇，想把社會割成碎片，我們就更更要與家人、朋友、社會上每一個人建立和維持關係。」

▲香港警察以甘地嘅名言製圖，翻譯成中文即係「非暴力是人類可以使用的最強大力量。它比人類憑借心靈手巧所設計的最強大毀滅性武器還要強大」。(香港警察Twitter)

▲警方前日嘅Twitter出post話今年涉及暴力嘅罪案較去年同期上升3.2%，呼籲大家摒棄暴力。(香港警察Twitter)

警隊拋書包講甘地 梁柏堅：放咗戴耀廷先講啦

聯合國將印度聖雄甘地嘅生日，即係每年嘅10月2日訂為「國際非暴力日」。香港警察前日都有嘅Twitter發文響應，引述甘地所言「非暴力係最強嘅武器」，呼籲大眾摒棄暴力。前區議員梁柏堅喺facebook就話，如果今時今日香港學甘地搞「不合作運動」，應該一早會畀警方以「顛覆國家政權」拉咗啦。梁柏堅嘲諷話，警方以甘地講和平非暴力真係「好×好笑」，叫當局讀吓

書先啦，反問邊個教識市民「和平遊行係冇用？」估中發起人、一直主張和平抗爭嘅民主派初選統籌戴耀廷因初選案仍然還押，梁柏堅就叫政府「放咗戴耀廷先講啦！無恥政權」。

「搞不合作運動畀人拉咗啦」

另一個前區議員黃文萱就質疑警方講甘地「係你係煽動我地(咗)，仲要用外國勢力嘅例子」。

METROLINX

東港站 (East Harbour Station) 前期作業報告草案和湖濱東接合走廊 (Lakeshore East Joint Corridor) 前期作業報告草案之發布公告 安大略線 (Ontario Line) 工程項目

安大略線將為多倫多提供長達近15.6公里的新地鐵服務，民眾及旅客每天都能輕鬆快捷地抵達目的地。該線路將由東北方的安大略科學中心 (Ontario Science Centre) 到西南方的加拿大國家展覽場/安省遊樂宮 (Exhibition/Ontario Place)，貫穿整個城市。安大略線包括具6個轉乘點的15個車站，並連接3條GO通勤火車線、2條即有地鐵線、新艾靈頓跨城輕鐵 (Eglinton Crosstown LRT)、以及10個電車車站。該計劃將結合隧道、地面、和架空路段，並將與道路交通完全分隔，讓通勤更為快捷可靠。

東港站前期作業

東港站的前期作業區域計劃讓安大略線與GO通勤火車同時運營。在進行主要工程項目合同之前完成前期作業，可讓安大略線和GO擴建項目的工作流程更加順暢，並如期執行。東港站前期作業將包括重新規劃既有GO湖濱東軌道，進而配合車站設施和未來的安大略線軌道；建設站台、出入口等車站設施；更新和擴建既有的東大道鐵路橋，以容納四條GO湖濱東軌道和兩條安大略線軌道；完成工地準備作業，例如整地、必要時拆除現有結構、以及搬遷或保護公用設施。

湖濱東接合走廊前期作業

湖濱東接合走廊的前期作業計劃介於東大道 (Eastern Avenue) 和彼普道 (Pape Avenue) 之間，將沿著湖濱東軌道走廊執行。推動該區的前期作業將有助於安大略線工程及時執行，並為GO擴建計劃提供規劃、設計、和施工效率。湖濱東接合走廊前期作業將包括對

既有湖濱東軌道走廊之改建，包括：重新規劃既有GO湖濱東軌道，以配合未來安大略線之基礎設施；更換皇后東街 (Queen Street East)、登打士東街 (Dundas Street East)、和洛根道 (Logan Avenue) 之現有鐵路橋；於登打士東街和洛根道建造兩座新橋，以支援未來安大略線軌道；建造GO架空線供電系統電線桿和輔助基礎設施之基礎，以支援未來的第四條GO軌道；構築擋土牆；以及建造隔音牆，包括佩普道以東。

東港站和湖濱東接合走廊前期作業的環境影響現在正根據安大略省法規341/20 (O. Reg. 341/20) 進行評估中：環境評估法 (Environmental Assessment Act) 下之安大略線工程項目 (O. Reg. 341/20)。根據安大略省法規341/20第8節規定，Metrolinx已完成東港站前期作業報告草案和湖濱東接合走廊前期作業報告草案 (“前期作業報告草案”)，現在可供審查。

前期作業報告草案記錄了東港站和湖濱東接合走廊前期作業之評估。報告中概述了前期作業之目的、當地環境條件之描述、潛在影響、擬議的緩和措施和諮詢記錄。

前期作業報告草案審查和諮詢過程

前期作業報告草案將於2021年9月23日，發布於工程項目網頁 (www.metrolinx.com/ontarioline) 上供審查。

您可以在2021年9月23日至10月24日之間，查看該報告，並使用線上提供之表格給予評論。

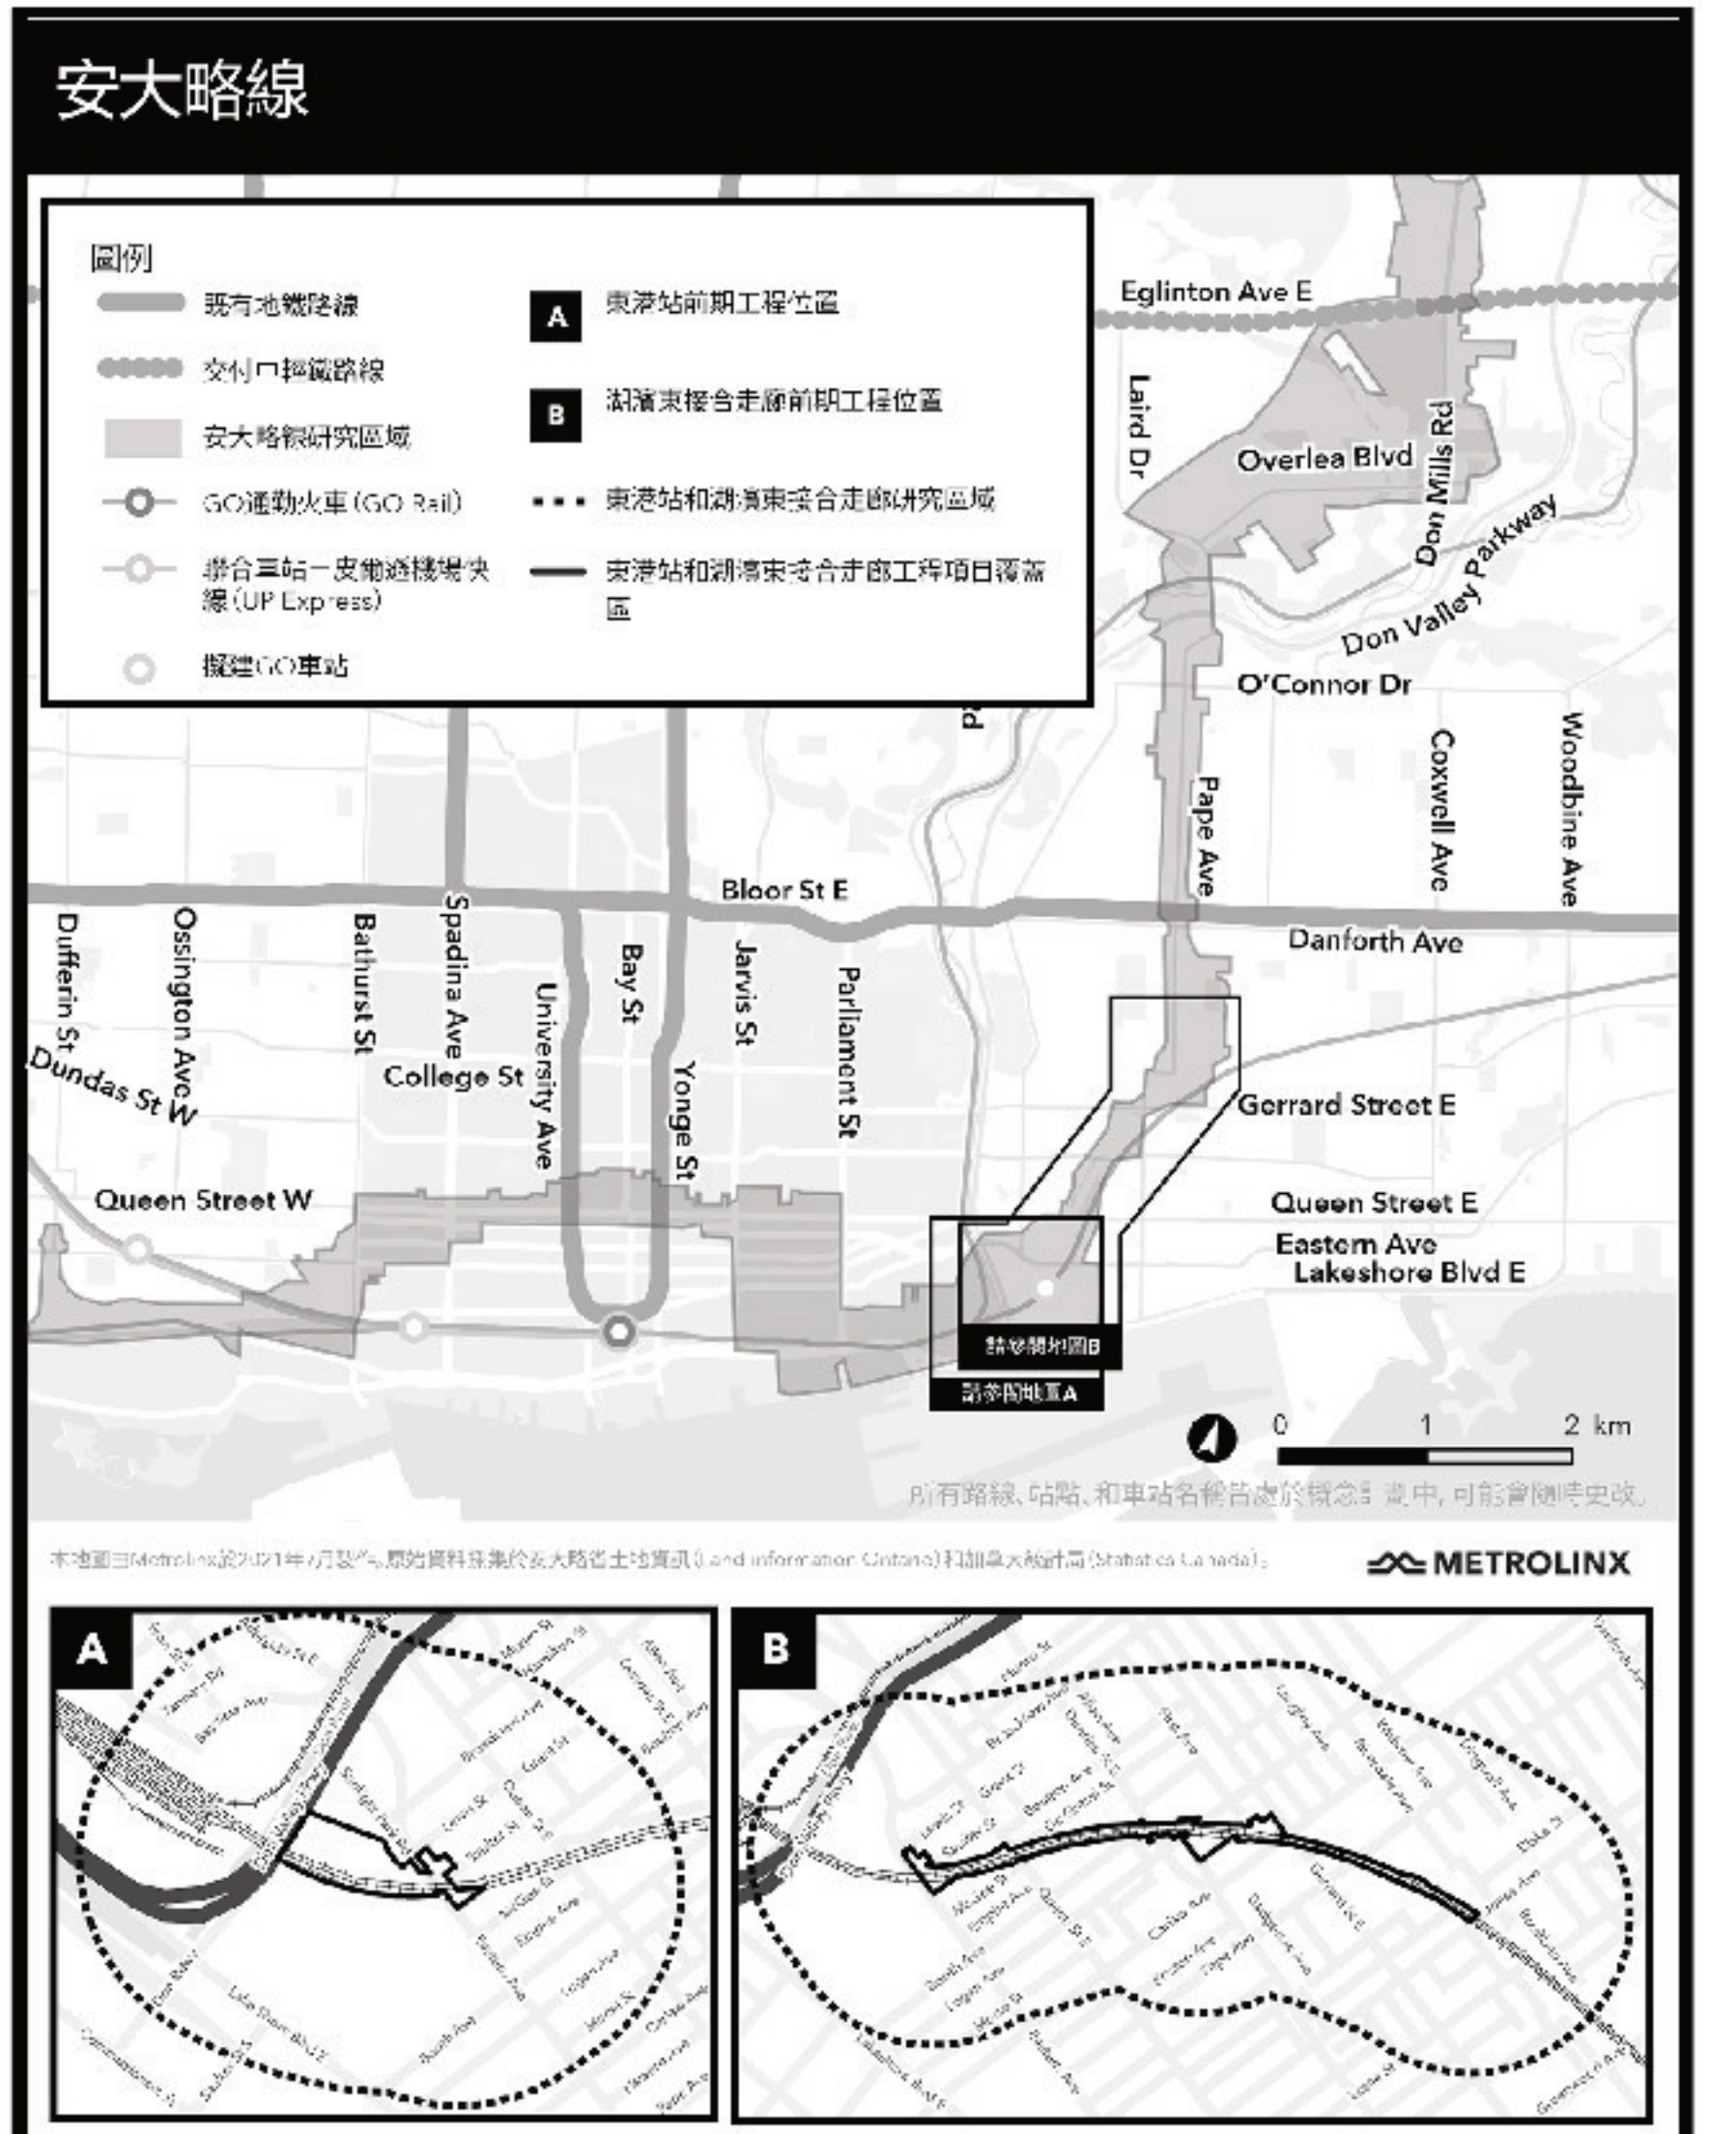

任何對前期作業報告草案之意見必須在2021年10月24日之前提出，並使用其網頁表格提交評論，或發送以下電子郵件地址：ontarioline@metrolinx.com。

根據安大略省法規341/20第10節規定，Metrolinx必須制定問題解決流程，試圖解決於審查期間公眾或原住民提出之任何問題。在審查期結束時，Metrolinx將對前期作業報告草案進行更新，添加對問題解決過程的描述、Metrolinx為解決任何問題所採取之行動、以及前期作業實施時間表是否會因解決問題而有所變更。Metrolinx隨後將發布東港站前期作業最終報告和湖濱東接合走廊前期作業最終報告之公告，並發布於工程項目網頁中：www.metrolinx.com/ontarioline。

若想獲取前期作業報告草案副本，請聯繫上面列出該工程項目的電子郵件地址。

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) 為Metrolinx的聯繫代表。Metrolinx, 130 Adelaide Street West Toronto, Ontario M5H 3P5

Metrolinx將蒐集、處理、和公開於提交意見中所包含的個人資料 - 例如姓名、地址、電話號碼和房地產位置，以進行透明化審核和諮詢服務。所有個人資料於安大略省法規341/20之環境評估法的授權下進行蒐集，或是於信息自由和隱私保護法 (Freedom of Information and Protection of Privacy Act) 第37條所述，對所有個人資料進行蒐集及保留，以建立公共記錄。除非您要求保密個人資料，否則您提交的個人資料將成為公共記錄的一部分。欲瞭解更多相關訊息，請聯繫ontarioline@metrolinx.com或416-874-5900。本公告於2021年9月23日首次發布。請聯繫ontarioline@metrolinx.com瞭解更多相關信息。

Ανακοίνωση Δημοσίευσης Σχεδίου Έκθεσης Αρχικών Εργασιών στον Σταθμό East Harbour και Σχεδίου Έκθεσης Αρχικών Εργασιών στον Κοινό Διάδρομο Lakeshore East Έργο της Γραμμής Οντάριο

Το Έργο

Η Γραμμή Οντάριο θα προσφέρει 15,6 χιλιόμετρα νέων υπηρεσιών μετρό στο Τορόντο, καθιστώντας πιο γρήγορη και πιο εύκολη την καθημερινή μετακίνηση των πολιτών. Η γραμμή θα εκτείνεται σε όλη την πόλη, από το Κέντρο Επιστημών του Οντάριο στα βορειοανατολικά έως την Τοποθεσία Οντάριο / Εκθεσιακός Σταθμός στα νοτιοδυτικά. Η Γραμμή Οντάριο θα περιλαμβάνει 15 νέους σταθμούς, μεταξύ αυτών έξι σταθμούς ανταλλαγής, συνδέσεις με τρεις γραμμές του τρένου GO, δύο υφιστάμενες γραμμές μετρό, το νέο Eglinton Crosstown Tram και γραμμές τραμ σε δέκα σταθμούς. Το έργο θα συνδυάζει υπόγεια, επιφανειακά και υπερυψωμένα τμήματα και θα είναι πλήρως διαχωρισμένο από την κίνηση ώστε να παρέχει γρήγορη και αξιόπιστη μετακίνηση.

Αρχικές Εργασίες στον Σταθμό East Harbour

Οι αρχικές εργασίες στον Σταθμό East Harbour θα πραγματοποιηθούν στην τοποθεσία όπου η Γραμμή Οντάριο θα λειτουργεί παράλληλα με την λειτουργία του τρένου GO. Η ολοκλήρωση των αρχικών εργασιών πριν την έναρξη κατασκευαστικών έργων μεγάλης κλίμακας θα διευκολύνει την παράδοση των έργων της Γραμμής Οντάριο και της Επέκτασης τρένου GO και θα διασφαλίσει την τήρηση του χρονοδιαγράμματος αυτών. Οι αρχικές εργασίες στον Σταθμό East Harbour θα περιλαμβάνουν αναδιάρθρωση των υφιστάμενων σιδηροδρομικών γραμμών του τρένου Lakeshore East GO για την καλύτερη εξυπηρέτηση των εγκαταστάσεων του σταθμού και των μελλοντικών σιδηροδρομικών γραμμών της Γραμμής Οντάριο, κατασκευή εγκαταστάσεων του σταθμού όπως πλατφόρμες και εισοδοί, αντικατάσταση και επέκταση της υφιστάμενης σιδηροδρομικής γέφυρας Eastern Avenue για την καλύτερη εξυπηρέτηση τεσσάρων σιδηροδρομικών γραμμών του τρένου Lakeshore East GO και δύο σιδηροδρομικών γραμμών της Γραμμής Οντάριο και ολοκλήρωση των προπαρασκευαστικών εργασιών των εγκαταστάσεων όπως ισοπέδωση εδάφους, κατεδάφιση υφιστάμενων δομών όπου απαιτείται και μετεγκατάσταση ή προστασία έργων κοινής ωφελείας.

Αρχικές Εργασίες στον Κοινό Διάδρομο Lakeshore East

Οι αρχικές εργασίες στον Κοινό Διάδρομο Lakeshore East θα πραγματοποιηθούν κατά μήκος του σιδηροδρομικού διαδρόμου Lakeshore East μεταξύ περίπου των οδών Eastern Avenue και Pape Avenue. Η προώθηση των αρχικών εργασιών θα διευκολύνει την έγκαιρη υλοποίηση της Γραμμής Οντάριο και θα παρέχει αποδοτικότητα προγραμματισμού, σχεδιασμού και υλοποίησης για την Επέκταση του τρένου GO. Οι αρχικές εργασίες στον Κοινό Διάδρομο Lakeshore East θα περιλαμβάνουν τροποποιήσεις στον υφιστάμενο σιδηροδρομικό διάδρομο Lakeshore East, μεταξύ αυτών: αναδιάρθρωση των υφιστάμενων σιδηροδρομικών γραμμών του τρένου GO για την υποστήριξη των μελλοντικών υποδομών της Γραμμής Οντάριο, αντικατάσταση των υφιστάμενων σιδηροδρομικών γεφυρών στις οδούς Queen Street East, Dundas Street East και Logan Avenue, κατασκευή δύο νέων γεφυρών στις οδούς Dundas Street East και Logan Avenue για την υποστήριξη των μελλοντικών σιδηροδρομικών γραμμών της Γραμμής Οντάριο, κατασκευή θεμελίων για τους πόλους εναέριας αλυσοειδούς γραμμής του τρένου GO, κατασκευή τοίχων αντιστήριξης και κατασκευή φραγμάτων ηχοπροστασίας συμπεριλαμβανόμενης της περιοχής ανατολικά της οδού Pape Avenue.

Οι περιβαλλοντικές επιπτώσεις των αρχικών εργασιών στον Σταθμό East Harbour και στον Κοινό Διάδρομο Lakeshore East αξιολογούνται σύμφωνα με τον Κανονισμό του Οντάριο 341/20: Έργο της Γραμμής Οντάριο (Κανονισμός Οντάριο 341/20), βάσει του Νόμου Περί Περιβαλλοντικής Αξιολόγησης. Σύμφωνα με την Ενότητα 8 του Κανονισμού του Οντάριο 341/20, η εταιρία Metrolinx ετοίμασε το Σχέδιο Έκθεσης Αρχικών Εργασιών στον Σταθμό East Harbour και το Σχέδιο Έκθεσης Αρχικών Εργασιών στον Κοινό Διάδρομο Lakeshore East (Σχέδια Εκθέσεων Αρχικών Εργασιών) τα οποία είναι τώρα διαθέσιμα προς αξιολόγηση.

Τα Σχέδια Εκθέσεων Αρχικών Εργασιών καταγράφουν την αξιολόγηση των αρχικών εργασιών στον Σταθμό East Harbour και στον Κοινό Διάδρομο Lakeshore East. Οι εκθέσεις διατυπώνουν τον σκοπό των αρχικών εργασιών, περιλαμβάνουν περιγραφή των τοπικών περιβαλλοντικών συνθηκών, πιθανές επιπτώσεις, προτεινόμενα μέτρα μετριασμού καθώς και αρχείο διαβουλεύσεων.

Αξιολόγηση Σχεδίων Εκθέσεων Αρχικών Έργων και Διαδικασία Διαβουλεύσεων.

Με ισχύ από τις **23 Σεπτεμβρίου 2021** τα Σχέδια Εκθέσεων Αρχικών Εργασιών θα είναι διαθέσιμα προς αξιολόγηση στην ιστοσελίδα του έργου (www.metrolinx.com/ontarioline).

Μπορείτε να δείτε και να σχολιάσετε τα Σχέδια Εκθέσεων από τις **23 Σεπτεμβρίου έως τις 24 Οκτωβρίου 2021** μέσω της διαδικτυακής φόρμας που παρέχεται.

Όσοι επιθυμούν να παρέχουν σχόλια επί των Σχεδίων Εκθέσεων Αρχικών Εργασιών πρέπει να το πράξουν έως τις **24 Οκτωβρίου 2021** και να τα υποβάλλουν χρησιμοποιώντας την φόρμα της ιστοσελίδας ή να τα στείλουν στην ακόλουθη διεύθυνση ηλεκτρονικού ταχυδρομείου ontarioline@metrolinx.com.

Η Ενότητα 10 του Κανονισμού του Οντάριο 341/20 υποχρεώνει την εταιρία Metrolinx να καθορίσει μία διαδικασία επίλυσης προβλημάτων σε μια προσπάθεια επίλυσης οποιασδήποτε ανησυχίας που εκφράζει το κοινό ή οι Αυτόχθονες κατά την διάρκεια της περιόδου αξιολόγησης. Στο τέλος της περιόδου αξιολόγησης, η εταιρία Metrolinx θα αναστραρμόσει τα Σχέδια Εκθέσεων Αρχικών Εργασιών προσθέτοντας σε αυτά περιγραφή της διαδικασίας επίλυσης προβλημάτων, τον τρόπο που αντιμετώπισε η εταιρία Metrolinx αυτές τις ανησυχίες και το κατά πόσο τα χρονοδιαγράμματα υλοποίησης των αρχικών εργασιών θα επηρεαστούν ως αποτέλεσμα της αντιμετώπισης ανησυχιών. Τότε η εταιρία Metrolinx θα δημοσιεύσει την Τελική Έκθεση Αρχικών Εργασιών στον Σταθμό East Harbour και την Τελική Έκθεση Αρχικών Εργασιών στον Κοινό Διάδρομο Lakeshore East στην ιστοσελίδα του έργου: www.metrolinx.com/ontarioline και θα εκδώσει την Ανακοίνωση Δημοσίευσης της Τελικής Έκθεσης Αρχικών Εργασιών στον Σταθμό East Harbour και της Τελικής Έκθεσης Αρχικών Εργασιών στον Κοινό Διάδρομο Lakeshore East.

Για να λάβετε αντίγραφο των Σχεδίων Εκθέσεων Αρχικών Εργασιών, παρακαλώ επικοινωνήστε με την διεύθυνση ηλεκτρονικού ταχυδρομείου του έργου που αναφέρεται παραπάνω.

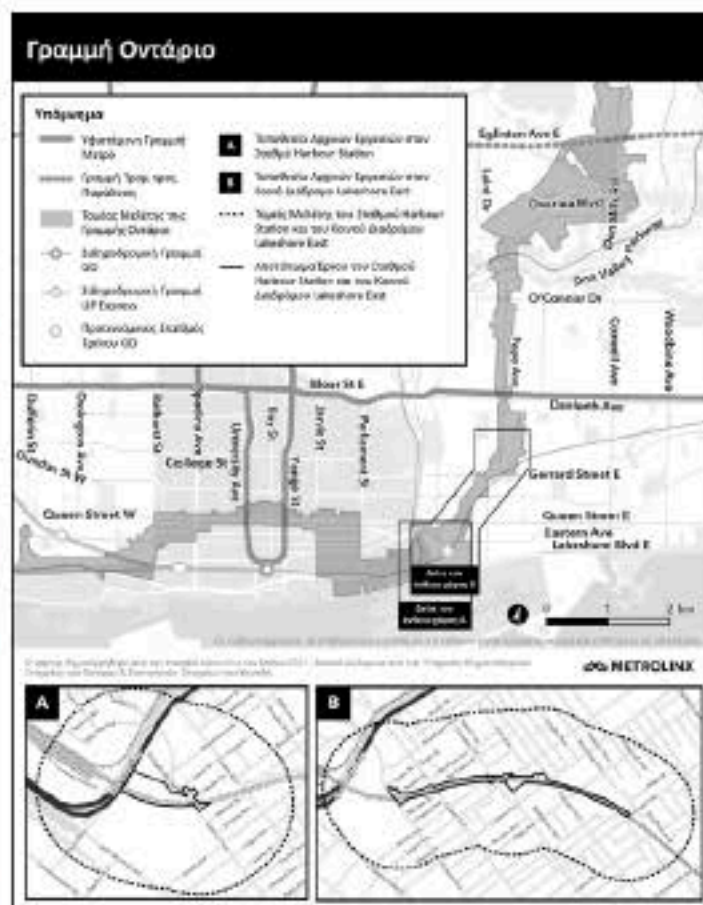

H Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) είναι διαθέσιμη για επικοινωνία εξ ονόματος της Metrolinx.

Rentrée à l'Université de l'Ontario français : des défis pour Pierre Ouellette

CLÉMENT LECHAT

Les 151 étudiants de la première promotion de l'Université de l'Ontario français (UOF) ont fait leur rentrée en ligne le 9 septembre dernier. Un jour historique signifiant l'aboutissement d'un projet de longue haleine, qui aura suscité des débats houleux au sein même de la communauté.

La rentrée a eu lieu à quelques semaines du Jour des Franco-Ontariens, le 25 septembre. Une coïncidence plus que symbolique pour Pierre Ouellette, recteur de l'Université.

« J'ai travaillé toute ma vie en Ontario français. Je suis né ici. J'ai étudié ici. L'Ontario français m'est tatoué sur le cœur », a-t-il dit dans une intervention au Club canadien de Toronto le 23 septembre. « Faire partie de cette première rentrée, c'est une fierté incroyable », insiste celui qui fut de 2011 à 2016 recteur à l'Université de Hearst.

Cette inauguration met fin à une inégalité d'accès à l'enseignement post-secondaire pour les francophones dans le Centre et le Sud-Ouest. Environ 225 000 des 620 000 Franco-Ontariens habitent dans cette région, soit 36 % d'entre eux. Un nombre qui ira en s'accroissant dans les prochaines années, selon Pierre Ouellette.

Cours transdisciplinaires... à distance

Située au 2^e étage du 9 Lower Jarvis, dans un immeuble neuf, l'institution a décidé de ne pas accueillir ses étudiants en présentiel pour le moment. Mais ce n'est qu'une question de semaines avant de basculer vers un format hybride, assure M. Ouellette.

« Nous avons reçu notre campus qu'à quelques jours de la rentrée. Nos professeurs n'ont ainsi pas reçu la

« Nous entendons les commentaires de la communauté et entrons en contact avec elle pour réfléchir aux prochaines pistes de développement. Nous voyons des besoins de main-d'œuvre dans plusieurs secteurs. »

PIERRE OUELLETTE, recteur de l'Université de l'Ontario français

formation pour utiliser les technologies de pointe pour l'enseignement en salle de classe. Nous étions soucieux de ne pas les mettre dans une

situation de vulnérabilité, et nous voulions miser sur la qualité de l'enseignement. Donc, nous avons opté pour un enseignement entièrement à

distance pour le moment. Ces cours « hybrides », aussi appelés « en comodalité », feront partie intégrante de la pédagogie de l'UOF,

même après la pandémie.

Certains programmes se sont révélés plus populaires que d'autres. Les études de l'économie et de

l'innovation sociale ont le vent en poupe. Les cultures numériques arrivent en seconde position, suivies de l'étude des environnements urbains. Le programme sur la pluralité humaine a été le moins plébiscité.

D'autre part, une quinzaine d'étudiants se sont inscrits dans des certificats (1an) ou micro-certificats (1 semestre), comme en pédagogie ou en sciences humaines appliquées.

Se voulant innovante, l'université adopte une approche transdisciplinaire qui mélange les disciplines pour mieux cerner la complexité des problèmes du XXI^e siècle.

De nouveaux programmes pour l'Ontario français

L'Université de l'Ontario français ne s'arrêtera pas à 4 programmes principaux. L'objectif est d'enrichir l'offre dans les années à venir.

« Nous entendons les commentaires de la communauté et entrons en contact avec elle pour réfléchir aux prochaines pistes de développement. Nous voyons des besoins de main-d'œuvre dans plusieurs secteurs », indique M. Ouellette.

Par exemple, un nouveau baccalauréat en éducation est en cours de préparation. Actuellement en attente d'approbation par le ministère, ce 5^e programme sera présenté en avril et viendra répondre à la pénurie d'enseignants francophones dans les écoles secondaires et d'immersion.

En effet, rien que pour les écoles d'immersion, l'Association canadienne des professionnels de l'immersion (ACPI) chiffre à 20 000 le nombre d'enseignants supplémentaires requis dans les années à venir.

Pourquoi ne pas avoir proposé ce programme dès la rentrée 2021? « Les 4 programmes que nous avons lancés cette année sont urgents pour former un leadership francophone dans nos communautés. Nous en avons besoin. Cela fait 5 ans que je vis à Toronto. Je vois un leadership ici, mais il pourrait être renforcé. Il n'est pas le même que celui des autres milieux universitaires francophones ailleurs dans la province et au pays », insiste Pierre Ouellette.

Attirer les Franco-Ontariens à l'UOF Les défis sont nombreux pour cette jeune université qui devra se faire une place au milieu d'autres institutions plus anciennes.

En priorité, l'Université de l'Ontario français souhaite rééquilibrer le ratio entre étudiants internationaux et locaux, pour ainsi mieux correspondre à son mandat initial: « Par et pour les Franco-Ontariens ».

Lors de l'année universitaire 2021-2022, 70 % des étudiants sont étrangers, contre 30 % de Canadiens.

« Pour le recrutement domestique, notre fenêtre de recrutement en 2020 a été raccourcie, car nos programmes ont été approuvés tardivement par le ministère, en octobre. L'UOF n'a pas été présente dans les écoles secondaires autant que nous l'aurions voulu. En comparaison, lorsqu'on recrute à l'international, nous sommes face à une population étudiante qui a déjà pris la décision d'aller étudier ailleurs. Le Canada est très attractif. C'est donc une décision qui se prend très rapidement », analyse-t-il.

Pour attirer davantage de Franco-Ontariens, surtout ceux des régions du Centre et du Sud-Ouest, l'UOF entend aller au contact des élèves tout au long de leur cursus secondaire, et approcher les conseillers d'orientation pour se faire connaître.

Cependant, Pierre Ouellette admet qu'il faudra s'armer de patience. « Une université ne se crée pas en 3 semaines, ni en 3 mois, et peut-être même pas en 3 ans », souligne-t-il.

Un autre défi de taille pour attirer les étudiants concerne l'accès à un logement abordable. L'université, située en plein centre-ville, a dorénavant tissé un premier partenariat pour proposer des logements à proximité du campus.

METROLINX

Avis de publication de l'ébauche de rapport sur les travaux préliminaires à la gare East Harbour et de l'ébauche de rapport sur les travaux préliminaires du corridor commun de Lakeshore East Projet de ligne Ontario

Le projet

La ligne Ontario donnera 15,6 kilomètres de nouvelles voies de métro à Toronto, ce qui accélérera et facilitera les déplacements quotidiens des gens. La ligne s'étendra du Centre des sciences de l'Ontario (au nord-est) jusqu'à la Place de l'Ontario/gare Exhibition (au sud-ouest). La ligne Ontario comprendra 15 nouvelles stations, y compris 6 stations de correspondance et des correspondances avec les trois lignes ferroviaires GO, deux lignes de métro existantes, le nouveau TLR Eglinton Crosstown et des lignes de tramway à 10 de ses stations. Le projet comprendra des tunnels, des passages en surface ainsi que des passages surélevés et sera complètement séparé de la circulation automobile afin d'offrir un service rapide et fiable.

Travaux préliminaires à la gare East Harbour

Des travaux préliminaires auront lieu à la gare East Harbour, où la ligne Ontario rejoint le service ferroviaire GO. L'achèvement des travaux préliminaires avant le début des principaux contrats de construction aidera à simplifier la réalisation des projets de ligne Ontario et d'expansion du réseau GO et à éviter les retards dans le calendrier des deux projets. À la gare East Harbour, les travaux préliminaires consistent à reconfigurer les voies existantes de la ligne GO de Lakeshore East pour accueillir les installations de la gare et les futures voies de la ligne Ontario; à construire les installations de la gare, notamment les quais et les entrées; à remplacer et élargir l'actuel viaduc ferroviaire de l'avenue Eastern pour faire place à quatre voies de la ligne GO de Lakeshore East et à deux voies de la future ligne Ontario; et à effectuer les activités de préparation du site, notamment le nivellement, la démolition des structures existantes si nécessaire et le déplacement ou la protection des services publics.

Travaux préliminaires du corridor commun de Lakeshore East

Les travaux préliminaires du corridor commun de Lakeshore East auront lieu le long du corridor ferroviaire de Lakeshore East, environ entre l'avenue Eastern et l'avenue Pape. L'avancement des travaux préliminaires dans ce secteur facilitera l'exécution rapide du projet de la ligne Ontario et aidera à réaliser des économies dans la planification, la conception et la mise en œuvre du programme d'expansion du réseau GO. Les travaux préliminaires du corridor commun de Lakeshore East comportent des modifications à l'actuel corridor ferroviaire de Lakeshore East, notamment : la reconfiguration des voies GO existantes pour faire place à la future infrastructure de la ligne Ontario; le remplacement des viaducs ferroviaires existants de la rue Queen Est, de la rue Dundas Est et de l'avenue Logan; la construction de deux nouveaux viaducs sur la rue Dundas Est et l'avenue Logan pour accueillir les voies de la ligne Ontario; la construction des fondations des poteaux du système de suspension caténaire de la ligne GO et de l'infrastructure de soutien pour la quatrième voie GO; la construction de murs de soutènement; et la construction d'écrans acoustiques, notamment à l'est de l'avenue Pape.

Les répercussions environnementales des travaux préliminaires à la gare East Harbour et dans le corridor commun de Lakeshore East sont en cours d'évaluation conformément au Règlement de l'Ontario 341/20, Projet de ligne Ontario (Règl. de l'Ont. 341/20) en vertu de la Loi sur les évaluations environnementales. Conformément à l'article 8 du Règl. de l'Ont. 341/20, Metrolinx a rédigé l'ébauche de rapport sur les travaux préliminaires à la gare East Harbour et l'ébauche de rapport sur les travaux préliminaires du corridor commun de Lakeshore East (les ébauches de rapport sur les travaux préliminaires) qui peuvent maintenant être consultées par le public.

Les ébauches de rapport sur les travaux préliminaires documentent l'évaluation des travaux préliminaires réalisés à la gare East Harbour et dans le corridor commun de Lakeshore East. Les rapports définissent l'objectif des travaux préliminaires, décrivent les conditions de l'environnement local, les répercussions potentielles ainsi que les mesures d'atténuation proposées et contiennent un journal des consultations.

Processus d'examen et de consultation dans le cadre de l'ébauche de rapport sur les travaux préliminaires

À compter du 23 septembre 2021, les ébauches de rapport sur les travaux préliminaires se trouveront sur la page Web du projet (www.metrolinx.com/ligneontario).

Vous pourrez consulter les rapports du 23 septembre au 24 octobre 2021 et les commenter en ligne à l'aide du formulaire fourni.

Les personnes qui souhaitent envoyer des commentaires sur les ébauches de rapport sur les travaux préliminaires doivent le faire d'ici le 24 octobre 2021 et les transmettre au moyen du formulaire se trouvant sur la page Web ou par courriel à l'adresse ontarioline@metrolinx.com.

L'article 10 du Règl. de l'Ont. 341/20 exige que Metrolinx établisse un processus de résolution des problèmes afin de tenter de résoudre toute préoccupation soulevée par le public ou les Premières Nations au cours de la période d'examen. À la fin de cette période, Metrolinx mettra à jour les ébauches de rapport sur les travaux préliminaires en y ajoutant une description du processus de résolution des problèmes, les mesures prises par Metrolinx pour répondre aux préoccupations, et l'incidence du traitement des préoccupations sur les calendriers de mise en œuvre des travaux préliminaires, le cas échéant. Metrolinx publiera ensuite le rapport définitif sur les travaux préliminaires à la gare East Harbour et le rapport définitif sur les travaux préliminaires du corridor commun de Lakeshore East sur la page Web du projet, www.metrolinx.com/ligneontario, et émettra un avis de publication du rapport définitif sur les travaux préliminaires à la gare East Harbour et du rapport définitif sur les travaux préliminaires du corridor commun de Lakeshore East.

Pour obtenir une copie des ébauches de rapport sur les travaux préliminaires, veuillez écrire à l'adresse courriel indiquée ci-dessous.

Ontario Line design consultations start in the East Segment following release of latest report

SEPTEMBER 23, 2021

Having a strategy to reduce the impacts of new transit projects is critical to their success. That's why Metrolinx takes time to do thorough environmental assessments and gather public feedback well before construction begins. Today (Sept. 23), the transit agency released a report for upcoming work along the Lakeshore East GO rail corridor, where new Ontario Line trains will run on dedicated new tracks. The report confirmed that new noise solutions will keep sound levels the same or lower than they are today in most areas, and residents are now invited to weigh in on design and construction plans.

Riverside and Leslieville residents can learn more about Metrolinx plans for noise walls that will block sound along the Lakeshore East GO rail corridor between approximately Eastern Avenue and Pape Avenue.

The release of [a report on early works in the area](#) kicks off the start of consultation around the plans, which also call for new retaining walls that will shrink the physical footprint of the corridor [and create more green space](#).

Open House

To help gather feedback on the plans, Metrolinx has also launched an online sound demonstration and a design questionnaire for the new walls. These developments will be

discussed during a virtual open house taking place today (Sept. 23). A second report released today also looks at the works planned for the future [East Harbour station](#).

“We’ve been working for many, many months on an effort to develop comprehensive design concepts that integrate noise barriers, retaining walls and vegetation to help this new infrastructure fit in within the community,” said John Potter of the Metrolinx Design Division.

Here’s an example of elements that make up the look and feel of the noise and retaining walls that the public will be asked for feedback on. (Photos from SvN)

Noise Walls and Vibration

Noise walls are proposed as a tool to block noise generated by the Ontario Line and GO trains in the area and are just one part of an integrated plan to manage noise and vibration in the area.

Metrolinx will also explore a number of proven solutions to address or avoid increases in vibration. These could include rubber mats placed under the track structures for GO trains and specialized fasteners for the rails. Vibration solutions for GO tracks will be installed as part of the upcoming early works along the Lakeshore East GO rail corridor. Exact solutions for the Ontario Line tracks will be determined once a project partner is on board for the Northern Civil, Stations and Tunnel project and experts complete detailed designs for this work.

Metrolinx has not only studied how walls will reduce noise – the transit agency also worked with AECOM, an infrastructure consulting firm, to create an online [sound demonstration](#). At select locations along the rail corridor in Riverside and Leslieville, people can hear today’s noise levels and noise levels predicted for the future, when new Ontario Line trains are up and running. This provides an easy comparison between current sound levels and what can be expected once noise walls and new train trips are in place.

Metrolinx Land Acknowledgement

Of course, people don't just want to hear about how the walls will block sound. They want to know how they will look together with retaining walls, and once landscaping around them is complete. That's the focus of the [online questionnaire](#) Metrolinx launched today, which is open until Oct. 14.

Wherever possible, noise and retaining walls will be lined by trees, shrubs, vines and other plants to enhance the appearance of the space.

"We want to create welcoming spaces around the new walls so people can continue to enjoy their neighbourhood," Potter said.

"Our goal is to ensure the neighbourhood has a green, self-sustaining border to the rail corridor that is made up of healthy native plantings."

A look at Jimmie Simpson Park, earlier in the year, on a very sunny day. (Metrolinx photo)

The guiding principle is to make sure Jimmie Simpson Park and other green spaces along the rail tracks will look better than ever after construction is complete.

"We are aiming not just to return it to what it was but to bring it to a new state," Potter said. "Over time, we want there to be an improvement on what's there today."

The Early Works Reports for the [Lakeshore East Joint Corridor](#) and [East Harbour Station](#) are available on [MetrolinxEngage](#). Public consultation on the reports will run until October 24. Comments can be submitted on the website or to ontarioline@metrolinx.com.

If you haven't yet registered to participate in tonight's open house, which starts at 6:30 p.m., you can do that [here](#).

Metrolinx has scheduled an additional virtual open house to review the Early Works Report for East Harbour on Oct. 5 at 6:30 p.m. More details and a registration link will be posted [here](#) in the coming days.

Metrolinx acknowledges that it operates on the traditional territory of Indigenous Peoples including the Anishnabeg, the Haudenosaunee and the Wendat peoples. In particular these lands are covered by 20 Treaties, and we have a responsibility to recognize and value the rights of Indigenous Nations and Peoples and conduct business in a manner that is built on the foundation of trust, respect and collaboration. Metrolinx is committed to building meaningful relationships with Indigenous Peoples, and to working towards meaningful reconciliation with the original caretakers of this land.

Your Network
Questions, Answered**

The Ontario Line

YOUR NETWORK QUESTIONS, ANSWERED

FASTER TRAVEL

From one end of the line to another in 30 minutes or less, making it fast and convenient to get where you need to go.

BETTER CONNECTIONS

15 new stops across the city, with dozens of subway, GO train, streetcar and bus connections along the way.

LESS TRAFFIC & POLLUTION

28,000 fewer cars on the road each day and 7.2 million fewer litres of fuel consumed each year.

The Ontario Line will be the largest single subway expansion in Toronto's history, helping to ease congestion and bring better transit to underserved neighbourhoods. It will stretch 15.6 kilometres across the city, from the Ontario Science Centre at Eglinton Avenue, under Danforth Avenue, through the downtown core and on to Exhibition Place. Connections to GO and TTC lines will put the Ontario Line at the centre of a true network, making it faster and easier for hundreds of thousands of people to get where they need to be, across Toronto and across our region.

Big projects with lots of details come with many questions, so here are some of yours, answered.

**388,000
TRIPS**

PER DAY BY 2041

RELIEVE CROWDING BY

**6,000
PEOPLE**

ON LINE 1 DURING
MORNING RUSH HOUR

—41M—

**100-METRE
LONG TRAINS**

LONGER THAN TRAINS ON MANY OTHER
NEW TRANSIT LINES IN CANADA

Q

QUESTION

Will the Ontario Line have enough capacity for our growing region?

A

ANSWER

Yes! Fast and frequent Ontario Line trains will serve up to 388,000 trips each day by 2041. This will relieve crowding on Line 1 by as much as 15% - or 6,000 people - during the morning rush hour. The trains will also be up to 100 metres long, which is longer than trains used for many other new transit lines in Canada. The Ontario Line has been designed to grow as demand grows.

Q

QUESTION

Is the Ontario Line running above ground because the trains are smaller?

A

ANSWER

No, going above ground has nothing to do with train size. We're building above ground in certain areas because it will create better connections to other transit, like the GO trains at the future East Harbour transit hub. This will make it faster and easier for about 8,600 people to transfer between the Ontario Line and the Lakeshore East and Stouffville GO lines during morning rush hour. On the other side of downtown, the station at Exhibition Place will also offer connections between GO trains and the Ontario Line, with another 6,300 morning rush-hour transfers expected.

Q

QUESTION

Why are we building a subway that will only serve Toronto?

A

ANSWER

The Ontario Line will serve customers well beyond the Toronto boundary. It will make more than 40 vital connections to other transit lines including:

- Lakeshore West, Lakeshore East and Stouffville GO trains
- Line 1 and Line 2 TTC subways
- the Eglinton Crosstown LRT (Line 5)
- streetcars at 10 stations
- buses at 12 stations

These connections will transform our existing system into a true network that will seamlessly move people to more destinations around Toronto and across our entire region.

Q

QUESTION

Aren't subways supposed to always run underground?

A

ANSWER

No. In fact, many subway systems have significant above ground stretches, including the current TTC subway system in Toronto.

Nearly 26% of the TTC's subway network runs above ground. Lines 1 and 2 have seven stations each with tracks at or above surface. In New York City, 40% of the subway runs in open air. And 55% of the London Underground runs above ground.

Q

QUESTION

Will communities have a say on the materials and design of the noise walls?

A

ANSWER

Absolutely! We will be holding consultations on noise wall materials and surrounding landscaping treatments this summer. We'll have a range of options for the community to weigh in on, and are eager to work together to keep your community spaces beautiful and green.

FAST AND FREQUENT SERVICE

As little as 90 seconds between trains during morning rush hour.

EASIER ACCESS TO TRANSIT

More than 255,000 people living within a 10-minute walk of an Ontario Line station.

MORE ACCESS TO JOBS

Up to 47,000 more job opportunities that can be easily accessed by transit.

ONTARIO LINE

Lakeshore East Joint Corridor Early Works Public Flyers

- **The Ontario Line:
Facts and Fiction**

FACTS AND FICTION

FASTER TRAVEL

From one end of the line to another in 30 minutes or less, making it fast and convenient to get where you need to go.

BETTER CONNECTIONS

15 new stops across the city, with dozens of subway, GO train, streetcar and bus connections along the way.

LESS TRAFFIC & POLLUTION

28,000 fewer cars on the road each day and 7.2 million fewer litres of fuel consumed each year.

At Metrolinx we are here for you - to listen to your questions about the new Ontario Line and provide the accurate answers you deserve.

The Ontario Line will be a critical addition to our transit network, bringing 15.6 km of much-needed relief and new connections across the city. But with a project so large, it's no surprise that incorrect information and myths are making their way around.

We want to make sure you're getting the facts. Read on for a few specific misleading claims that need correcting for Leslieville and Riverside residents.

MYTH

The rail corridor will be widened and extend far into neighbouring properties and streets.

INCORRECT CROSS SECTION THAT HAS BEEN CIRCULATING ONLINE

REALITY

It won't. The green line someone painted in the community is incorrect. We have the space and that's where we will build. New Ontario Line and GO tracks will fit almost entirely in the rail corridor where trains run today.

It's true that we will extend past our boundaries in park areas around the new stations at Queen and Gerrard, but we will keep this to a minimum and give park space back to the community in other areas.

TRUE-TO-PLAN METROLINX CROSS SECTION WITH BOTH ONTARIO LINE AND GO SERVICES WITHIN EXISTING PROPERTY BOUNDARIES (NORTH OF REC CENTRE)

MYTH

The Ontario Line will destroy parks.

REALITY

This is not true - we will protect your parks. Keeping almost all of our work within the existing Metrolinx property means no parks will be lost.

Our guiding principle is to avoid using park space during construction, but if we do need space on a short-term basis, we'll keep it to an absolute minimum. We'll also make safety our top priority and work with the community to restore it to a better state after we're done.

MYTH

Important community spaces will close because of the Ontario Line.

REALITY

They won't - they will stay open.

Jimmie Simpson Park and its recreation centre, basketball court and hockey rink will stay open during construction and beyond.

There is simply no reason that Ontario Line work would force these spaces to close.

MYTH

The Ontario Line will eliminate all tree cover in neighboring green spaces.

REALITY

This is incorrect - we intend to maintain and improve tree cover in neighbouring green spaces.

First, we'll protect as many mature trees as possible.

Second, we will replace any trees we need to remove.

If we must remove a tree outside of our property, we will work with the City of Toronto to plant three new ones nearby.

MYTH

The community will be noisier than it is today.

REALITY

It will not be noisier - it will be quieter.

New noise walls will reduce noise levels in most areas in the community.

Further, the Ontario Line will be electrified, which means the trains themselves will be much quieter than the diesel ones you hear today.

WE'RE HERE FOR YOU

We understand you have concerns, and we are here to be your source of truth.

Please don't hesitate to reach out to us if you have questions or want to talk more about our plans for the Ontario Line.

Ontario Line LIVE: East – Question and Answer

- September 23, 2021

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
Why no study of the underground option?	There is viable underground route proposed between Gerrard and Eastern - based on the approved (but cancelled) Relief Line. Why is there no comparison of cost, construction impact and health impacts? The Metrolinx above ground proposal has huge impacts on people living/working here - especially people in apartments above the proposed noise wall. The 2019 "business case" for Ontario Line does not include your proposed widening/rebuilding 6 bridges and raising the entire track bed by 1+ metre. It appears that the proposed alignment above ground is being driven by developers (No-frills, Carlaw Dundas, East Harbour) and NOT by an evaluation of impacts. Why no detailed study of underground?	Anonymous	Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.
My greatest concern this segment; it should be buried here?	My greatest concern is with this segment; noise, visually distracting, and just plain wrong to ram this through these mature neighbourhoods - It should be buried along here	[REDACTED]	Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
Alignment	<p>Running tracks beside the GO has led to many complaints, and also constrains potential future GO expansion, or inclusion of GO platforms.</p> <p>Follow a route from downtown more similar to the Relief Line route. Have the station at Broadview roughly between the Relief and Ontario Line stations proposals. Then continue cut-and-cover along Eastern (or just south of it) right to Pape. Head north on Pape, cut-and-cover to Pape and then to Don Valley.</p> <p>Linear cut-and-cover with precast tunnel segments takes a matter of months - a small disruption and a moving operation. The stations would be much shallower and likely take half the time of the deep bore stations (~12m deep versus 40m). The line could be quite shallow as it comes out the Don Valley, reducing the grade to cross the Don near Millwood.</p> <p>Essentially, this satisfies the locals by making the line fully underground. It provides a more reliable fully underground transit line. It adds a Queen station farther into Leslieville. It has reduced grade changes and only one significant curve. It frees up GO corridor for a Gerrard Station.</p>	Anonymous	<p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
<p>Cost comparison above vs below</p>	<p>Why are you refusing to do a side by side cost comparison with your current above ground plan vs. our community Underground plan? The City has asked for it (Motion 31.12] and a provincial order question was logged at Queen's Park asking the same question.</p>	<p>Anonymous</p>	<p>The Ontario Line businesses cases determined the best alignment to solve the transit problem, maximize benefits and reduce impacts. The environmental assessment process investigates the preferred alignment, presents studies to understand impacts and suggests proven solutions to reduce those impacts.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>
<p>Impact of above ground</p>	<p>When can the community expect to see some quantitative data about the Ontario Line?</p> <ul style="list-style-type: none"> - Indoor noise measurements to ensure the above ground option does not lead to inhospitable living conditions - Vibration measurements where train frequency is expected to increase 10-fold - Number of trees which may be cut down to accommodate the above ground OL and its impact on parks and greenspaces <p>It seems like Metrolinx is deliberately keeping the community in the dark because the impacts of this above ground option are too awful.</p>	<p>Anonymous</p>	<p>The Draft Lakeshore East Joint Corridor Early Works Report includes a noise and vibration study both during construction and once the Ontario Line is in operation.</p> <p>Vegetation within the rail corridor will have to be cleared in order to meet the safety requirements of the new electrified infrastructure. Removals have already started and will continue into 2022. An arborist report will be released in early 2022 that details the number of trees adjacent to the corridor that may need to be removed or pruned. Metrolinx following all relevant City bylaws and our own Metrolinx Vegetation Guideline to ensure appropriate compensation is followed.</p> <p>All parks will be open during construction and once Ontario Line is in operation serving customers. The only exception is Gerrard Carlaw Parkette and Dog Park where we are exploring alternative programming space with our partners at the City of Toronto.</p>

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
<p>Compare the level of disruption of above grade vs tunnelling</p>	<p>You have said at previous consultations that tunnelling would cause as much disruption as the proposed above grade concept. Now that we know the bridges over Eastern, Queen and Gerrard have to be entirely rebuilt higher and wider, that the rail bed has to be raised in elevation, and that tall retaining walls must be built each side of the rail bed, how can this possibly be true?!!</p>	<p>Anonymous</p>	<p>Residents will see obvious improvements to their neighbourhoods as aging railway bridges are replaced at Eastern Avenue, Queen Street, Dundas Street and Logan Avenue. The bridges, which currently accommodate both GO and VIA Rail services, are located within the shared rail corridor where Ontario Line tracks will also be located.</p> <p>We are replacing the bridges because they need to line up with the new tracks we are adding to support expanded GO services as well as the existing tracks that will be repositioned to make room for the Ontario Line. Ontario Line-only bridges will be built next to the new GO rail bridges.</p> <p>We are consulting with the city and building the bridges to their current standards for new bridges, with five metres between the bottom of the bridge and the roadway. By comparison, the existing Queen Street bridge has a clearance of only 3.9 metres.</p> <p>Replacing these bridges now means they will last for at least another 100 years and will avoid the need for frequent and disruptive repair work on aging infrastructure.</p>
<p>Public health risks</p>	<p>Community members have raised serious concerns with the above ground Ontario Line:</p> <ul style="list-style-type: none"> - loss of greenspace and trees (just how many trees will you cut down??) - elevated levels of noise and vibration in a residential area - disruption of 24/7 traffic - years of overnight construction to widen the live rail corridor - a portal near school - 8m tall noise wall permanently dividing our community in half (just how high will this noise wall be??) <p>Has Metrolinx considered public health risks associated with the above ground Ontario Line?</p> <p>How on earth can this public transit agency justify a plan that prioritizes the interest of Cadillac Fairview over community health and safety?</p>	<p>Anonymous</p>	<p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
Joint OL-GO Corridor	Does expanding the corridor mean closing some intersections to do it	Anonymous	We are currently working on a traffic impact analysis and management strategy with City of Toronto that looks at the impacts of Metrolinx work along with other projects in the area. Findings from this study will be communicated to the public in early 2022. Some closures may be necessary in order to safely complete certain construction activities in a safe manner. Duration of closures will be limited to the extent feasible, and notifications issued ahead of any closures.
Track between East Harbour and Leslieville	how will GO track go in between Ontario line tracks from East Harbour to Leslieville	Anonymous	The fourth GO track will be on the eastern side of the rail corridor. We have a cross section available on Metrolinx Engage here: https://www.metrolinxengage.com/sites/default/files/ol_-_cross_section_near_jimmie_simpson_park_-_dft_v13_-_2021-06-24.jpg
How will the line affect Jimmie Simpson park?	Will the community center be turned into a transit hub and will expansion of the rail take away green space in the park?	Anonymous	No, there are no plans to turn the Jimmie Simpson Recreation Centre into a transit hub. That said, we are protecting Jimmie Simpson Recreation Centre during construction and beyond. At Jimmie Simpson Park, we are going to be increasing the green space available to the public since the new infrastructure will be closer into the existing rail corridor than the current fence line. We have created a video walkthrough of the neighbourhood parks which you can find here: https://blog.metrolinx.com/2021/11/15/new-ontario-line-video-details-park-plans-for-east-end-of-toronto/
Can Trucks must be cleaned before they get onto the road	That are not cleaned on a job site make a horrific mess on the road and it's impossible to clean up. Other advanced countries make trucks clean themselves on a job site so they don't track the mud onto the roads. This is a 10-year construction project we don't want the mess for that long.	Anonymous	As part of the Lakeshore East Joint Corridor Early Works Report's Air Quality study, Metrolinx will ensure daily removal of accumulated mud, dirt and debris deposits on-site, and regular truck washing.

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
Underground costing	City of Toronto passed a motion asking Metrolinx to cost out the Steve Munro underground option. Why is Metrolinx deliberately ignoring the directive from City Council and wishes of host community?	Anonymous	<p>The cost difference is \$870 million however there are more factors than just cost such as property impact, community impact and customer experience.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>
WHERE IS THE EARLY WORKS REPORT??!!!!	WHERE IS THE EARLY WORKS REPORT and WHY ARE YOU HAVING COMMUNITY CONSULTATIONS WHEN NO ONE HAS READ THE ONLY ENVIRONMENTAL REPORT WE WILL TO GIVE FEEDBACK ON GET BEFORE CONSTRUCTION BEGINS NEXT SUMMER? This is another example of your calculated attempt to control community information and feedback on this project.	Anonymous	The goal of this virtual open is to raise awareness of the Lakeshore East Joint Corridor Early Works Report. We scheduled an additional session on October 5 to answer questions, once folks have had a chance to review the content in the report.
East Harbour Station	With the East Harbour station being built will both the Ontario Line and the Go have Screen Protective doors on there platforms and how can one transfer from Go to Ontario Line at this station?	Anonymous	The Ontario Line will feature platform screen doors to ensure quick and safe journeys across the entire line. Design for East Harbour is still ongoing so we cannot commit to platform screen doors for GO trains. Transfers between Ontario Line and GO trains will be completed via shared concourse.
can we limit the dust that is created by the construction	We get so much dust from dirt coming from site construction can we eliminate this.	Anonymous	As part of the Lakeshore East Joint Corridor Early Works Report's Air Quality study, Metrolinx will ensure daily removal of accumulated mud, dirt and debris deposits on-site, and regular truck washing.

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
<p>Is Metrolinx required to conduct value engineering reviews?</p>	<p>Contrary to Metrolinx' assertions, the tunnel option looks cheaper, less disruptive and better for all concerned, and yet Metrolinx has discarded it without even doing the normal course value engineering of potentially cost-saving alternatives (July 6 Metrolinx letter to Toronto Executive Committee). How does your owner let you get away with this?</p>	<p>Anonymous</p>	<p>The cost difference is \$870 million however there are more factors than just cost such as property impact, community impact and customer experience.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
<p>Gerrard Go Station</p>	<p>As part of the GO RER expansion planning it was announced that Carlaw and Gerrard would have both a GO station and an Ontario Line Subway Station, but now seems is being advertised as only having an Ontario Line Station. What happened to the original plans for a GO station at this location and why was it changed?</p> <p>Pape / Carlaw is the East End's busiest / densest North South artery with substantial commercial and residential activity. It already has high density and is will densify increasingly with the expected redevelopment of the Riverdale Mall and further redevelopment of Carlaw Ave. Furthermore a GO stop at this location would seamlessly connect with the 506 Streetcar and the 72 Bus, both heavily used routes.</p> <p>Furthermore is located much more equidistance between current Lakeshore East GO stations (Danforth GO and Union) than East Harbour, which won't see any real density for another decade at earliest.</p> <p>Finally, if a GO Station is not being built at this location, is Metrolinx committed to an integrated fare system, to ensure easy and affordable transfers between GO and the TTC? If so, can this be rolled out before the completion of the Ontario line and RER expansion?</p>	<p>Anonymous</p>	<p>With current plans, there will be only one Ontario Line station at Gerrard and Carlaw to serve customers. There is no planned GO station at Gerrard and Carlaw anymore as GO trains will continue onwards to East Harbour station.</p> <p>There will be an integrated fare between Ontario Line and existing TTC networks. That said, we are exploring integrated fare systems between GO and TTC with our partners at the City however there is no commitments or timelines we can speak to at this time.</p>

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
Number of trains	Please provide the current and future projected number of trains per day for the LSE GO and the Ontario Line over the next decades. What will be the hours of operation for the Ontario Line?	Anonymous	Number of GO trains travelling along the LSE joint corridor, as well as number of Ontario Line trains are provided in the Lakeshore East Joint Corridor Operational Noise and Vibration Report.
between East Harbour & Gerrard	how will you fit the Ontario Line above ground ?	Anonymous	Metrolinx will rearrange the tracks in the existing corridor and add fill to each side in order to make room for the new six track corridor.
Public Spaces	With the stations at Gerrard, Leslieville and East Harbour being along the GO Corridor, will there be public spaces built below?	Anonymous	There are no plans to build public spaces below the new stations. That said, we are creating additional green space at Jimmie Simpson Park, Bruce Mackey Park, McCleary Park and Gerrard Carlaw Parkette. In addition, we are working with our partners at the City to look into park enhancements for the community.
Elevators	What kind of elevators will you use for the Ontario line? The ones used on the Toronto subway or the ones used on the Eglinton Crosstown?	Anonymous	Details regarding station design is still ongoing and we do not have the specific type of elevators available yet this early in the procurement process.
Signage Typeface	what kind of typeface should the Ontario line use for wayfinding signage? ClearviewADA or Swiss721?	Anonymous	This information is not available yet this early in the procurement process. We will ensure the typeface is accessible and ensures strong wayfinding for our future customers.
Property values	In Rosedale there's a subway line AND a heavy rail line (with big, long freight trains) running above ground through that neighbourhood. Will the OL make my Riverdale property as valuable as the homes in Rosedale? If not, why do they have such high property values AND so many trains which aren't in a tunnel?	Anonymous	We cannot comment on the real estate market however you are correct that there are examples in Toronto where subways run above ground and next to heavy rail.
How high is the top of the sound barrier walls from Grade	i.e when combined with retaining wall aspects etc.		In the October 5 virtual open house, we detailed the heights of the retaining walls on slide 22: https://www.metrolinxengage.com/sites/default/files/oct_5_east_voh_final_0.pdf

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
East Harbour	at East Harbour, how many GO platforms will it take to connect the Stouffville line and the Lakeshore East line to the Ontario line	Anonymous	Two platforms to serve exclusively GO trains are currently planned at the East Harbour Station. Ontario Line trains will be served by a single platform. Connections between GO and Ontario Line will be via a shared concourse.
How long will the DVP be closed to build bridge over the Don?	Construction Over the Don Valley	Anonymous	Duration of DVP closures, if any are required, is currently being determined. If required, closures will be limited to least busy periods and advance notice of any closures issued.
Leslieville	Should Leslieville station be named that way or should it be changed to Riverside ?	Anonymous	The station names you see right now are working titles and will change as we decide on their final names. That said, we have changed how we refer to the station at Queen Street East and De Grassi. It will now be referred to as Riverside and Leslieville.
What is being done about the noise of the Ontario Line?	<p>What type of sound barriers are being installed on above ground parts of the Ontario Line and where. Seeing that there's four sets of tracks, which include three different types of trains (i.e TTC, Go and Via) and the frequency of these trains, there will be tremendous noise and vibrations from the tracks, since it's going to be above ground. Currently with the Go and VIA trains the noise is extremely loud and these do not run as frequently or as late a TTC would.</p> <p>Please share with the community how metrolinx plans on appeasing our community and keeping it undisturbed by the number of trains running through it daily.</p>	Anonymous	We are currently looking at installing transparent noise walls along the rail corridor. Our studies tell us these barriers will be effective in maintaining or reducing noise levels despite increasing transit service.
It looks like all noise modellign is right beside the noise wall	I understand noise will be reflected and increased throughout the community - in fact the worst impacts could be some distance from the noise shadow beside the walls - affecting many more people. Why are you not dealing this question?	█	In order to reduce the visual impact of the new walls, the noise barriers will be made of a transparent material. We just finished a consultation with the community to determine how much transparency the noise walls will have in addition to other design elements to ensure the new infrastructure fits within the fabric of Riverside and Leslieville.

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
Where will it exit underground	Why complete silence on the Pape route south of O'Connor? Am I on the wrong call? I've asked repeatedly where the subways will exit underground south of Danforth and no one will answer my question other than to say it's still uncertain. South of Pape school will result in many houses being impacted. What is the answer??	Anonymous	We are still refining the design of the tunnel portal at Gerrard and Pape. Once design has sufficiently advanced, we will provide an update to the community and any impacted property owners.
Houses 30 meters from Pape requiring permits from Metrolinx	We've been told (via a letter in the mail) that because we are 30 meters from Pape we require special permission from Metrolinx to do any outdoor repairs or changes to our house. In fact we are more than 30 meters from Pape however it appears that all of our street (Dingwall) has been designated in this way as being above the corridor for building. It says "we are not appropriating your house", which is great news!! Why are houses more than 30 meters away forced to get permission from Metrolinx for any repairs or reno's?	Anonymous	In the previous municipal permitting process for these repairs or renovations, Metrolinx was always a background commenting agency since we need to coordinate to ensure there is no conflict with our work to deliver transit. The new changes described in the letter help ensure this process is more transparent and easily coordinated between property owners and Metrolinx directly. Please reach out to our permitting development team to inquire if you need a permit and we will make it as quick as possible.
Westward Extension	Are there plans to extend the line westward?	Anonymous	We have protected for possible westward and northern expansion. At this time, we are focused on delivering current Ontario Line plans with 15 planned stations.
Bridge Construction	Do you plan to proceed with all the new bridge construction prior to a full environmental assessment?	Anonymous	The Draft Lakeshore East Joint Corridor Early Works Report is an environmental report that looks at potential impacts of bridge construction and suggests proven solutions Metrolinx will use. Once approved, bridge construction activities will begin in 2022.
Why are you destroying our neighborhood for a new development?	n/a	Anonymous	It's important to note there are no Transit Oriented Community planned for the Ontario Line station at Queen Street East and De Grassi Street.
Are there plans for new buildings AROUND the Leslieville station	Plans or PREplans? Who decides where such new buildings will be and what they will look like? Will there be the same process around ALL the Ontario Line stations? Thanks!	Anonymous	No, there are no Transit Oriented Community planned for the Ontario Line station at Queen Street East and De Grassi Street.

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
Escalators	<p>You didn't answer my question from the previous two meetings. What kind of elevators will you use for the Ontario line?</p> <p>The ones used on the Toronto subway or the ones used on the Eglinton Crosstown?</p>	Anonymous	Details regarding station design is still ongoing and we do not have the specific type of elevators available yet this early in the procurement process.
Additional Green Space	While you very cleverly and disingenuously toss out large numbers in relation to the "additional greenspace" that you say the project will "add" the community, in reality it looks like this is just narrow bands of additional green space along the corridor - nothing that would effectively enhance any use of the area by the community. How wide are any of these anticipated additional green spaces and what effective use do you actually think the community would be able to make of them? How do you see this as mitigating the profoundly negative impact that this project will have on the neighbourhood where the above-ground portion will run?	Anonymous	After the construction of the Ontario Line and GO Expansion in the Joint Corridor, Metrolinx is creating additional green space thanks to the location of the new infrastructure. We have received feedback from the community through a survey and are working with our partners at the City of Toronto to determine what this new green space could used for and how it can best integrate in Riverside and Leslieville.
What is the timeline?	n/a	Anonymous	Construction for the east segment of the Ontario Line serving Riverside and Leslieville will begin in mid-2022.
Why are you not providing real information?	Malcolm just said the Ontario Line "performed" better than the proposed relief line. But he gave ABSOLUTELY NO DETAILS on why or how it was measured to have performed better? Very disappointing.	Anonymous	Additional details can be found in the Ontario Line Initial Business Case: https://www.metrolinx.com/en/regionalplanning/projectevaluation/benefitscases/20190725_Ontario_Line_IBC.PDF
two different kind of stations with the same name	Hold it. If the future Gerrard GO station on the Stouffville line cannot connect with Gerrard station on the future Ontario line, won't that confuse riders if they're both built?	Anonymous	With current plans, there will be only one Ontario Line station at Gerrard and Carlaw to serve customers. There is no planned GO station at Gerrard and Carlaw anymore as GO trains will continue onwards to East Harbour station.

Ontario Line LIVE: East - September 23, 2021

Head Line	Question	Questioner	Response
How will traffic and noise be minimized	Disruptions during construction phase and ongoing noise from train traffic. Residents along the airport express line going to Pearson experience ongoing noise and shaking in their homes despite the noise minimizing walls. What will Ontario line residents recourse be if currently designed noise minimizers are not sufficient	Anonymous	The Lakeshore East Joint Corridor Early Works Report comprehensively studies potential noise and vibration impacts and suggests proven solutions both during construction and operations. Metrolinx will control construction noise and vibration via developing and implementing a construction noise and vibration management plan, setting project-specific construction noise limits and implementing appropriate mitigation measures such as scheduling noisiest activities during the day-time and others. Operational noise study shows that noise barriers will be effective in ensuring noise levels from passing trains remain the same or are reduced in many areas of Riverside and Leslieville despite the increase in transit service. Noise barriers through Riverside and Leslieville will be built as part of the Lakeshore East Joint Corridor early works.
Why go up Pape so far west?	Pape is so far west to go north. It barely brings transit to new people. Wouldn't it make more sense to continue east further, perhaps going north on Woodbine or Kingston/VicPark, bringing dedicated rail lines to more people? Going north too soon just means you're bringing rail to people who are already along the Eglinton or Danforth lines, minimizing the benefit.	Anonymous	We have protected for possible westward and northern expansion. At this time, we are focused on delivering current Ontario Line plans with 15 planned stations.

Ontario Line LIVE: East – October 5, 2021

Head Line	Question	Questioner	Response
<p>What is the cost of the "Munroe" underground option?</p>	<p>You are asking for comments and questions about noise walls and tree plantings but our community is not ready to move on from the fundamental decision about the alignment of the Ontario Line through Leslieville-Riverside. At the Sept 23rd Open House the most popular question asked for a detailed cost comparison of your plan to run the OL along the elevated rail corridor with the community and Toronto City Council endorsed plan to run this 1.5 km section underground (the "Munroe Option"). Your answer was not acceptable. Given the expense and disruption involved, it is your responsibility to give serious consideration to this viable alternative. We believe the Ontario Line should be buried between East Harbour and Gerrard Street. You will never convince this community that you have chosen the best alignment until you respond to the very reasonable request from this community to provide a detailed analysis of the underground Munroe Option. When will you provide this?</p>	<p>Anonymous</p>	<p>The cost difference is \$870 million however there are more factors than just cost such as property impact, community impact and customer experience.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>
<p>Underground alignment</p>	<p>The question of underground alignment will not go away - likely because it was not address properly. These 2 questions must be answered:</p> <p>1) What is the cost and cost difference between the current plan using the rail corridor and the underground "Munro" option (e.g. continue on Eastern to Carlaw to Gerrard to Pape station).</p> <p>2) What alternatives are there and what concessions can the local community provide to reduce the cost difference to allow the underground alignment to proceed (e.g. a) go under Eastern to Pape, eliminating the Carlaw "jog", and/or b) using cut-and-cover for the portion of the line from East Harbour Station to Pape Station and to Minton Place)</p>	<p>Anonymous</p>	<p>The cost difference is \$870 million however there are more factors than just cost such as property impact, community impact and customer experience.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>

Head Line	Question	Questioner	Response
Sound demonstration	<p>Your "noise demo" https://www.ontariolinesoundstudio.ca/listen/ is an interesting idea. To be closer to reality, please add these options so we can hear the sound of:</p> <ul style="list-style-type: none"> - an OL and GO train passing at the same time as they are likely to do given there will be 1500 trains a day - a diesel GO train given that it will be years before all GO service is electric - an OL train braking and starting up at Queen and Degrossi rather than just passing through the station since all OL trains will stop there - announcements/bells etc that will be audible on the street level of Queen and Degrossi from the open-air station above. We need to have a demo of the "peak/breakthrough noise" 	Anonymous	<ul style="list-style-type: none"> - The demonstration videos were prepared to enable comparison of the simulated noise characteristics of the Ontario Line vehicles and GO trains, and to create an audio representation of the predicted effects of noise barrier and retaining walls at the demonstration locations. To enable these scenarios to be experienced and compared, single pass-by events provide a more straightforward demonstration. As such, simultaneous pass-bys have not been included in the sound demonstrations. The noise barriers are expected to significantly reduce noise from train pass-bys at the sound demonstration locations, whether during single pass-bys or simultaneous pass-bys. The operational noise model, which assessed the noise impacts for the project and investigated the effects of noise barriers, included the cumulative effects from all rail services operating in the Lakeshore East Joint Corridor throughout the daytime and night-time periods. The results are detailed in the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report - GO trains in the demo are diesel trains currently running through the corridor - Stopping and starting at the station is good feedback for future demos. As the noise model accounted for a worst case scenario (the train passing through at a full speed), this was what was reflected within the sound demo for this location. - The purpose of the demo is to demonstrate relative differences in noise levels associated with passing trains. - Station announcements and other noise associated with station operations, is related to indoor acoustics and architectural design rather than train operations. The station and its announcement and other systems can be designed to mitigate noise intrusion at street level and will be determined as detailed design progresses.
Tree Removals on the Corridor	<p>Why is your plan for tree removals not part of the EWR? We have 30 days to comment on the plans and they are not included, nor any timeline for removals. How will you address the lack of community feedback and issue resolution process on this priority issue for our community?</p>	Anonymous	<p>Vegetation clearing in the rail corridor is scheduled for November 2021. The first phase will be GO Expansion removals as approved through the GO Rail Network Electrification TPAP EPR (2017). Any vegetation removals required for Lakeshore East Joint Corridor early works will not be removed until the Lakeshore Joint Corridor Early Works Report is finalized and approved by the Ministry of the Environment, Conservation and Parks. We do not expect this second phase of removals to begin until 2022. The Arborist Report outlining planned removals on City- and privately owned lands is anticipated to be shared with the public in early 2022. Metrolinx following all relevant City bylaws and our own Metrolinx Vegetation Guideline to ensure appropriate compensation is followed.</p> <p>Separate Arborist Report(s) will be prepared for tree removals not part of early works.</p>

Ontario Line LIVE: East – October 5, 2021

Head Line	Question	Questioner	Response
How is this consultation being used?	It's not clear what the objective of this "consultation" is. Metrolinx is vigorously promoting an above ground design with slogans e.g. "Awkward...", billboards and glossy promotional booklets. It appears that the proposed design will have huge impacts on the host community. But you have not costed or evaluated the community's proposed underground option in spite of repeated requests. This process is meaningless if it does not evaluate other less impactful designs. Slogans and advertising in the middle of a consultation demonstrates how this process is disingenuous and simply a corporate communications exercise. Might that change?	Anonymous	<p>Feedback from the questionnaire on noise barriers, retaining walls and vegetation designs options will be considered in the final design for the look and feel of the rail corridor in Riverside and Leslieville.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>
Frequency and simultaneous passby in your noise calculations	What is the frequency calculation you are using? Your average passby DBA for OL trains with mitigation shows 60-70 DBA per passby, which is under the MOEE protocol - however, how do you account for the frequency of passbys vs. the current level of passbys DBA's? OL passby predicted at every 90 seconds vs. current GO passby - every 15 minutes to 7 mins - which will create a constant level of noise duration vs. what is current. Have you mapped this to understand how the overall level of noise will increase due to overlapping simultaneous passby and duration?	Anonymous	<p>The assessment documented in the Draft LSE JC N&V Operations Report accounts for the increased cumulative frequency of pass-bys of GO, VIA, freight, and Ontario line trains. When reading the report: Leq,16h and Leq,8h values are the equivalent sound level over 16 hours (day-time, 7AM-11PM) and 8 hours (night-time, 11PM -7AM) respectively. These predicted values account for all of the train volumes and fluctuations in noise over these periods. This metric is applicable to trains on GO tracks and Ontario Line vehicles, as per the MOEE/GO and MOEE/TTC protocols.</p> <p>For comparison, the Lpassby accounts for only 1 pass-by at a time, and is the equivalent sound level of one single train pass-by over the pass-by time interval given the length and speed of the train. This metric is applicable to the Ontario Line trains in order to meet MOEE/TTC protocol criteria.</p>
Other types of Noise Walls materials	You have only given one choice of noise wall material - and from the EWR you've only modelled for one choice - clear walls- and yet you are asking what kind of noise walls we want. What other choices are there and what sound absorption properties do they have?	Anonymous	Our current modelling tells us we can maintain and even reduce existing sound levels with transparent noise walls. We have engaged the community through a questionnaire, open houses, door knocking and correspondences to understand the preferred level of transparency for the future noise walls.
Baseline noise standards not met.	Why is Metrolinx not meeting the standard noise & vibration limits of 55 dB during the day and 50 dB during the night as their baseline for the rail corridor? Your average 'Project w Barrier' Day noise levels are significantly over the 55 dB standard. Shouldn't you be doing everything you can to meet these existing standards?	Anonymous	As per the MOEE/GO and MOEE/TTC protocols, the noise level objective is the higher of existing day-time (Leq,16h) or night-time (Leq,8h) levels, or 55 dBA (day)/50 dBA (night). As existing levels were predicted to be higher than 55 dBA during the day and 50 dBA during the night time periods at all assessed receptors within the report, the existing predicted railway noise level was used as the objective noise level for the assessment

Ontario Line LIVE: East – October 5, 2021

Head Line	Question	Questioner	Response
Explain why you are saying you meet noise standards?	Are trains not running simultaneously? Please explain why would 'additive vibration' be a rare occurrence on a 6 lane railway -- as per this quote from the EWR. "In the rare occurrence of additive vibration, such as during a simultaneous GO train and Ontario Line vehicle pass-by, sample calculations indicate that overall vibration levels would not be significantly higher than that of the dominant individual source. Therefore, the results within this report are based on the worst case single pass-bys of trains operating on GO or Ontario Line tracks" page 82.	Anonymous	The word 'rare' used in the referenced sentence is subjective and was removed from Section 4.3. There would be no consideration for additional mitigation based on additive pass-bys as it is standard practice to assess based on single pass-by events, and the overall level would not be significantly higher (and the change in vibration would be unlikely to be perceptible) than the dominant individual source (e.g., a GO train travelling along the GO track closest to a given receptor), partially because secondary sources would be relatively further away (e.g., Ontario Line train travelling along Ontario Line track further away from that receptor). Additional simultaneous pass-by events would have diminishing incremental cumulative impact for the same reason.
Staging Area – Impacts	You haven't listed Staging Areas as impacting Heritage properties and other sensitive receptors. Why and will you update the EWR to include them?	Anonymous	Potential impacts to heritage properties are captured in the report. The project footprint assessed in the report is inclusive of areas that may be used for staging.
Peak levels vs Average noise levels	Please explain the difference between average noise levels and peak noise levels. Where is the data for peak levels? How have you accounted for diesel trains with 1 or 2 locomotives and either 6 or 12 cars?	Anonymous	The metrics assessed within the report per the MOEE/GO and MOEE/TTC protocol are the Leq,16h and Leq,8h values are the equivalent sound level over 16 hours (day-time, 7AM-11PM) and 8 hours (night-time, 11PM -7AM), and that of a single Ontario Line train pass-by (LPassby). The Leq16h and 8h values account for all pass-bys throughout the day. Diesel trains with 12 cars and 2 locos as well as 6 cars and 1 loco are both considered in the noise model. Full data on this is presented in Appendix C, where the ones mentioned are referred to as "D2L12" and "D1L6" .
MOEE/TTC Noise/Vibration Protocols	MOEE/TTC protocol was written 30 years ago -and clearly states it should only be used to assess TTC vehicles. How can you claim that the TTC SUBWAY DBA standard at 80 DBA passby is applicable to above ground OL trains as a baseline?	Anonymous	The MOEE/TTC criteria provide sound level limits for airborne noise, which is applicable to subway trains above ground. Given the absence of other provincial subway pass-by limits, this guidance was adopted for the Ontario Line trains.
Trains will be running during construction	Why have you not included noise & vibration data showing those levels for construction equipment/activities COMBINED with existing corridor noise and vibration levels? How do you plan to factor in the current corridor noise levels into construction and mitigate for it?	Anonymous	The assessment was based upon conservative worst case construction noise levels, which will not happen for the majority of the construction period. The worst case predicted construction levels will control the noise levels during the worst case period (train contribution over the 8 hour assessment period will be much less than the assessed worst case continuous 8 hour construction noise). Existing trains will not affect the predicted worst case construction noise level.

Ontario Line LIVE: East – October 5, 2021

Head Line	Question	Questioner	Response
No alternative explored in this EA	<p>You present only the disruptive above ground option in this report. Shouldn't you explore different options and consult the public about pros and cons of different routes? If there's one alignment that is being presented, what exactly is the point of this meeting? What are you consulting us on?</p> <p>Cost out the underground option!</p> <ul style="list-style-type: none"> - Let's see how the underground option performs in terms of noise and vibration. - Let's see how many trees we can save. - Let's see how less disruptive the construction is. - Let's see if we can keep Riverside and Leslieville healthy and livable. 	Anonymous	<p>The cost difference is \$870 million however there are more factors than just cost such as property impact, community impact and customer experience.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>
Further Vibration mitigations	<p>Vibration from the future Ontario Line and GO track operations is predicted to exceed the MOEE/GO or MOEE/TTC Protocol mitigation thresholds at locations POW01_V, POW04, POW09, POW14, POW15, POW18, POW23, POW24 (exceedances due to GO track operations), and POW_10V (exceedance due to Ontario Line track operations). page 40</p> <p>We note the 30 day feedback for issue resolution process will be over by the time this vibration plan is released. What is the timing of this further study and will the community have access to it?</p>	Anonymous	<p>Vibration will be mitigated at the source, on Metrolinx property at track level and not at private properties. We are refining construction plans to reduce impacts to private properties where possible. Once details are finalized we will share them with the community through meetings with community groups, open houses, construction notices and Metrolinx Engage. So far, we have released construction staging plans and access requirements. In our latest open house, we released a construction sequencing video along with timelines. Once more details are finalized, we will share them immediately with the community.</p>
More noise mitigation for Seniors High Rise Buildings	<p>We have 3 high-rise buildings of vulnerable senior populations - how can you not provide additional noise mitigation for these buildings, one next to the 'Leslieville Station', one between and overlooking 2 major bridges at Dundas & Logan, and one overlooking the portal at Pape/Gerrard?</p>	Anonymous	<p>Existing noise levels at the Fontbonne building are predicted to be met. At the residences at Logan and Pape, we predict that noise impacts will be below the protocol criteria though above predicted existing levels. We are looking into exploring means such as receptor-based mitigation to achieve our beyond-protocol goal.</p>
Overnight track work	<p>Please describe the mitigations you will be providing the community during overnight track work prior to the noise walls being installed?</p>	Anonymous	<p>Construction noise mitigation measures that will be considered to reduce noise impacts from early works are identified in the Draft Lakeshore East Joint Corridor Early Works Report. Suggested mitigation measures include establishing and applying project-specific construction noise criteria, using construction equipment compliant with noise level specifications from the Ministry of the Environment, Conservation and Parks, and use of upgraded construction hoarding between construction equipment and noise sensitive receivers.</p>

Ontario Line LIVE: East – October 5, 2021

Head Line	Question	Questioner	Response
Air Quality Monitoring during construction	"A plan to manage air quality will be developed to ensure consistent attention to mitigation of dust and particulates, including silica, from the construction site. The following mitigation measures should be considered in the plan to manage air quality" Who develops this plan, Metrolinx or Contractor? Who is responsible for monitoring and adherence of it?	Anonymous	The air quality management plan will be developed by the Contractor, though Metrolinx has oversight of this process and ensures that this plan is in prior to construction commencing. Monitoring and adherence to the plan would be a joint responsibility between Metrolinx and the contractor.
Fix your Noise Contour Map -	In many cases your noise contour maps for 'Future Day' and 'Future Night' are incorrect and do not match the data tables included for 'Project with Barriers' noise levels. Will you be revising these maps to accurately reflect the data? (Colours indicate 55-60 when levels are over 60 dB at POW- 02, POW - 03, POW-11, POW-24, POW-20, POW 19,) chiefly, Fontbonne Ministry, Jimmie Simpson Centre, Ray McCreery Towers, Francis Beavis Towers)	Anonymous	Noise contour maps are provided in Appendix F of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, for day-time receptors at a height of 1.5 metres (representing ground level at an outdoor receptor), and night-time receptors at a height of 4.5 metres (representing the plane of window for a 2nd storey window), for both existing and "with barrier" future scenarios. It should be kept in mind that while contours are presented at "general" heights, the results presented within this report were for receptor heights accounting for the number of storeys at the specific respective locations.
Construction plans	Please clarify how homeowners and residents would find out more about the specific construction plans for their homes and when?	Anonymous	We have created a construction animation video which can be found here: https://hdr.wistia.com/medias/czrk84lfbg . Once we advance construction plans to more detail, we will communicate that update to the community directly.
24 Hour Construction Hotline	Will you be provide 1 week or more notice of night work and details and 24 construction hotline to call for complaints/information?	Anonymous	As we get closer to construction, we will set up a 24 hour construction hotline to keep residents informed. Yes, we aim to provide as much notice of upcoming nighttime work as possible via our website, newsletter and physical canvassing.
Disingenuous consultation	After ignoring community wishes for months about wanting an underground route, now you're disingenuously 'consulting' about the colour of the noise wall. If you're serious about letting the public have a say, you need to provide better data as to how different types of noise walls perform in terms of noise mitigation. Your report provides predicted noise levels with barrier. Well, which barrier? Clear one, absorptive one? Don't you think the public needs to know? You're not fooling anyone with these farcical open houses. No noise wall can effectively reduce the noise from 6 lanes of rail traffic in our residential neighbourhood. BURY THE LINE!	Anonymous	Noise modelling was completed based on the predicted minimum required barrier heights presented in Appendix D of the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report in order to reduce future noise levels (day, Leq,16h and night Leq,8h) to existing predicted railway noise levels. Barriers were modelled assuming a transparent barrier with an absorption coefficient of alpha=0.21. Regardless of the minimum barrier heights modelled and presented within the report, Metrolinx has committed to raise barrier heights to a minimum height of 5 metres where modelled heights were less than 5 metres. While noise barriers are predicted to be the primary reason for the reduction of future railway noise levels, Ontario Line trains are expected to be significantly quieter than existing diesel GO trains, and future electric GO trains are also expected to be quieter.

Ontario Line LIVE: East – October 5, 2021

Head Line	Question	Questioner	Response
Re: Expropriation	Has it been determined what properties in the East segment will require expropriation and have all affected property owners been informed?	Anonymous	Property requirements continue to be confirmed as project planning and design progresses. Impacted property owners are actively engaged and kept up to date with project requirements and timelines
Drainage of water/snow from corridor	Please explain how water and snow will drain off the elevated corridor, and will the drainage plans impact property owners and their land who back onto the corridor? There have been many flooding complaints where noise walls back onto properties in other areas of the city.	Anonymous	Early works will include installation of the drainage system for the joint corridor. The main approach will be infiltration within the corridor. The system will be designed to all applicable standards, including ability accommodate stormflows of high volume, and design will be reviewed by the City of Toronto as it progresses.
Wifi	Will all stations have Wifi?	Anonymous	Public Wi-Fi will be available at each Ontario Line station.
Who is running the 'consultations'? Name please.	The noise 'simulation' is completely biased in two ways. First, we only get to hear noise without the barrier that Metrolinx has already chosen and the noise without. There is no underground option, what the local Leslieville and Riverside communities have been promoting, and the city too. Second, the high frequency of GO and the OL will mean that we neighbours get the CUMULATIVE noise of several different trains at once, very often in the course of a day. Why not do a proper study of the CUMULATIVE impacts of all the trains?	Anonymous	<p>The assessment documented in the Draft LSE JC N&V Operations Report accounts for the increased cumulative frequency of pass-bys of GO, VIA, freight, and Ontario line trains. When reading the report: Leq,16h and Leq,8h values are the equivalent sound level over 16 hours (day-time, 7AM-11PM) and 8 hours (night-time, 11PM -7AM) respectively. These predicted values account for all of the train volumes and fluctuations in noise over these periods. This metric is applicable to trains on GO tracks and Ontario Line vehicles, as per the MOEE/GO and MOEE/TTC protocols.</p> <p>For comparison, the Lpassby accounts for only 1 pass-by at a time, and is the equivalent sound level of one single train pass-by over the pass-by time interval given the length and speed of the train. This metric is applicable to the Ontario Line trains in order to meet MOEE/TTC protocol criteria.</p>
Additional park land created	During the last update additional park land was brought up many times as a benefit for the above ground Ontario line option. Is there a map that shows the additional park land locations?	Anonymous	We have recently created a video walkthrough of the neighbourhood parks which you can find here: https://blog.metrolinx.com/2021/11/15/new-ontario-line-video-details-park-plans-for-east-end-of-toronto/
Rail Bridges	Does the bridge over Eastern Avenue not need replacement or alteration? Will the bridge over Queen Street be added to or replaced?	Anonymous	The existing Eastern Avenue rail bridge will be replaced and expanded to accommodate four Lakeshore East GO tracks and two future Ontario Line tracks. The existing Queen Street rail bridge will be replaced to support the realigned Lakeshore East GO rail tracks.

Ontario Line LIVE: East – October 5, 2021

Head Line	Question	Questioner	Response
<p>Why are you planning to ruin south riverdale?</p>	<p>Its not an opinion, its a fact that the sound barriers used will only baffle sound close to the track and amplify it for those who are about 100 meters away. The sound barrier technology proposed has a long and solid history of not working as intended. Not just that, but this involves removing mature trees and replacing them with nonsense. Furthermore this is not what anyone in the east end wants. This is not smart development, this is cost cutting at the expense of one of the most up and coming neighbourhoods in Toronto. This asinine idea it can go above ground needs to stop.</p>	<p>Anonymous</p>	<p>Noise barriers are an industry standard method of reducing noise levels, especially from transportation noise, at distances both within and exceeding 100 meters. Barrier effectiveness is dependant on not just distance to a receptor, but barrier height, barrier extents, barrier construction (no gaps or holes), surface type (absorptive, reflective, a combination) and other nearby reflections, such as parallel barriers.</p> <p>The noise model accounts for receptors at different distances, and reflections are accounted for in the noise model as well from barriers to other directions. Barrier heights within the noise model were adjusted accordingly to account for these parameters.</p> <p>Metrolinx will provide compensation for tree removals in accordance with the Metrolinx Vegetation Guideline (2020), striving to provide compensation tree plantings as close to the areas where trees will be removed as possible.</p>
<p>Health consequences from excessive noise from trains</p>	<p>Your report suggests the noise generated from the Ontario Line trains overnight to be around 70 dB. You provided no data at all about cumulative noise impacts from GO, VIA, freight and OL trains. OL train alone generating ~70dB is a significant concern, especially overnight! This will wake people up along the rail corridor. You can't build transit that prevents thousands of local residents from sleeping.</p> <p>Are you consulting with Toronto Public Health or Ministry of Health about your plans?</p> <p>The data clearly shows we need an underground alignment in our neighbourhood.</p>	<p>Anonymous</p>	<p>The Leq,16h and Leq,8h noise levels evaluated take into account the number of cumulative pass-bys from OL, GO, VIA, and Freight trains during the day-time and night-time periods, respectively, described as an equivalent continuous sound level (the constant sound pressure level that would result in the same total sound energy as the fluctuating sound level within the same period) per the MOEE/GO and MOEE/TTC protocol. It should be noted as well that overall noise levels are expected to be significantly lower indoors than outdoors.</p> <p>Per the Environmental Assessment Government Review Team Master Distribution List from the Ministry of the Environment, Conservation and Parks, the Ministry of Health requests that only EAs for sewage and water-works, and for waste facility projects which may have health implications be sent to the public health unit for the geographical area. Although the Ontario Line EA does not fall under this category, Metrolinx consults with the City of Toronto through the City's Transit Expansion Office.</p>

Ontario Line LIVE: East – October 5, 2021

Head Line	Question	Questioner	Response
Underpass	You are creating a very large area under the railway corridor that already, with the existing one, is a dark unpleasant space that receives no sunlight and suffers from moisture and water problems. Your design will not only increase these problems, but even makes walking along the underpass a very unpleasant experience. Your design shows no sensitivity to a neighborhood that is supposed to be a friendly walkable community. You are creating a "Gardiner expressway" within a heritage district under the pretense of building "better and cheaper" transit . You have not provided detailed costs for this project compared to other alternatives, which have been submitted and are supported by the community. Any reasonable explanation for this?	Anonymous	<p>Residents will see obvious improvements to their neighbourhoods as aging railway bridges are replaced at Eastern Avenue, Queen Street, Dundas Street and Logan Avenue. The bridges, which currently accommodate both GO and VIA Rail services, are located within the shared rail corridor where Ontario Line tracks will also be located.</p> <p>We are replacing the bridges because they need to line up with the new tracks we are adding to support expanded GO services as well as the existing tracks that will be repositioned to make room for the Ontario Line. Ontario Line-only bridges will be built next to the new GO rail bridges.</p> <p>We are consulting with the city and building the bridges to their current standards for new bridges, with five metres between the bottom of the bridge and the roadway. By comparison, the existing Queen Street bridge has a clearance of only 3.9 metres.</p> <p>Replacing these bridges now means they will last for at least another 100 years and will avoid the need for frequent and disruptive repair work on aging infrastructure.</p>
Please extend the 30 day limit for submitting comments	You released the EWR for the East Segment on Sept 23, on the same day as the EWR for the East Harbour Station. The public has until October 24 to comment on both of these reports. It is unreasonable to expect members of the public to read, understand and make comments on two reports that are hundreds of pages long within the same 30 day period. This shows a lack of desire on the part of Metrolinx to conduct meaningful community consultation with the public. Will you extend the 30 day comment period for these reports? How about until November 15?	Anonymous	The Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report were prepared in accordance with Ontario Regulation 341/20: Ontario Line Project under the Environmental Assessment Act. This review period length is consistent with review period lengths of other Metrolinx transit projects. Both Early Works Reports were available for review for 31-days from September 23 to October 24, 2021. We have had two virtual open houses on September 23 and October 5 to provide summaries and answer questions. We have met with the LSE CAC to answer their questions about the Lakeshore East Joint Corridor Early Works Report. We are also working to respond to the 60-70 questions the LSE CAC provided as well as respond to questions from Save Jimmie Simpson community group and residents directly. Public participation is very much encouraged.
Why won't metrolinx answer questions honestly about the Ontario	Less PR and more straight answers. Treat people with integrity and honesty. We know the difference.	Anonymous	Feel free to email OntarioLine@Metrolinx.com or call 416-202-5100
Predicted noise	Your noise data is all predicted. Even for 'current' noise levels, you predicted them. Why did you not measure current noise levels? How can we be assured that these are accurate estimates?	Anonymous	<p>In accordance with the MOEE/GO and MOEE/TTC protocols, operational noise is assessed based on predictions. Both existing and future noise levels are predicted in order to provide an 'apples to apples' comparison, at many receptor locations. However, existing noise levels were measured in several locations within the Ontario Line study area and documented in the Ontario Line Final Environmental Conditions Report.</p> <p>In addition, a measured existing noise level will contain not just train noise, but roadway noise, which would increase the existing noise level, decrease the apparent change in noise from the project, and result in a less conservative assessment. Furthermore, predictions allow for the assessment of far more receptors than would be possible by setting up noise monitors. This is the standard procedure for transit project assessments in Ontario and similar approaches are used in other jurisdictions.</p>

Ontario Line LIVE: East – October 5, 2021

Head Line	Question	Questioner	Response
Indoor noise data	Above ground OL is going to be extremely disruptive. There are hundreds of homes in close proximity to the rail corridor. We need to understand how your above ground OL will impact indoor noise levels, and whether our homes will continue to be livable are very serious concerns. Please provide indoor noise data (current and predicted).	Anonymous	The assessment criteria are based on exterior points of reception as there may be variations in individual building facade constructions and room acoustic conditions. However, the predicted changes in noise levels would be expected to be similar indoors. For example, if the residual noise impact is noted as -2 dB based on a plane of window receptor, a similar impact would be expected in the associated interior space. Overall noise levels are expected to be significantly lower indoors than outdoors.
No 'Alternatives considered' in Early Works Report	The Early works report is suppose to identify what alternative were considered. The alternatives do not show that the viable underground option put forward by the city and Steve Monroe was never considered. How can you justify saying it is too costly, if it was never considered? The only alternatives are slight variations of the Metrolinx plan. This is NOT community engagement.	Anonymous	<p>The Draft Lakeshore East Joint Corridor Early Work Report documents the alternatives considered in Section 1.3.3 of the report, in accordance with Ontario Regulation 341/20. As noted in Section 1.3.3, Metrolinx previously considered placing the Ontario Line tracks in the Lakeshore East Joint Corridor segment on both sides of the Lakeshore East GO track instead of entirely on the north side of the GO tracks. Metrolinx also considered alternative methods of delivering the Project including a non-phased approach to Project implementation. However, it was determined that a phased approach to implementation is most beneficial.</p> <p>The Ontario Line businesses cases determined the best alignment to solve the transit problem, maximize benefits and reduce impacts. The environmental assessment process investigates the preferred alignment, presents studies to understand impacts and suggests proven solutions to reduce those impacts.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>
Platforms	I think that most of the Ontario line stations should have side platforms to avoid blind people to fall onto tracks.	Anonymous	The Ontario Line stations through the Lakeshore East Joint Corridor area, namely Gerrard, Leslieville/Riverside, and East Harbour Stations will have centre platforms with platform screen doors adjacent to the platform edges. These platform screen doors will remain shut at all times to protect the public from inadvertently falling off the platform or crossing the tracks, and will open only when the train is in the station and at a complete stop. This system will protect the public on both centre and side Ontario Line platforms.

- Ask-A-Question

Ask-A-Question – September 17, 2020 to October 19, 2021

Comment Title	Comment Body	Response
Ontario Line Alternatives	<p>What alternatives has Metrolinx considered if the cost of 6 bridge fortifications and reconstruction (to support additional tracks and train load), sound barrier mitigation, projected maintenance of the overland portion of the Ontario line (Leslieville, Don Mills, Liberty Village), the reallocating of parks, community centres, businesses proves too costly to build the Ontario line as proposed? Will metro links consider burying the overland portions of the Ontario Line in accordance to the affected communities wishes?</p>	<p>The plan that we are advancing which involves running the Ontario Line on a mix of elevated, at-grade and underground sections means we can deliver a nearly 16km route that will serve more communities with less construction impact and within the budget set out in the Initial Business Case. By using the GO corridor and building bridges across the Don River instead of tunneling underneath it, a route that is approximately twice the length of the Relief Line South can be built at a similar cost. Above-ground sections will make transferring to and from the Ontario Line even easier, shaving even more time off people’s commutes. Metrolinx will work closely with communities to realize the full benefits of the Ontario Line while managing any impacts during construction and beyond.</p>
Noise Wall through Leslieville	<p>I note the noise wall mitigation measure listed in the South Section between Gerrard Station and Leslieville Station. I also note that this noise wall is listed as being built as part of Early Works beginning in 2021. However, the financial close of the RFP for Design, Build, maintain is not slated until 2022 or later, when the actual trains and technology will be chosen. How does Metrolinx intend to build an effective noise wall, and predict noise mitigation behind from 6 lanes of rail traffic, without knowing the important decibel levels in technology that hasn't been chosen yet? How will Metrolinx then include noise mitigation from the many construction projects slated for this area - including building new bridge supports, track bed creation, vegetation removal - most slated for overnight work?</p>	<p>Preliminary study results show that noise walls along the shared rail corridor through the Riverside area will be effective in reducing noise from both Ontario Line and GO Transit trains. The noise study is taking into account various potential train options and associated noise levels and is basing the noise mitigation on the train option with highest anticipated noise levels, taking a conservative approach. The exact locations, height and designs of noise walls will be confirmed as planning work continues. Select noise walls will be installed as part of the Lakeshore East Joint Corridor early works to facilitate Ontario Line and GO Expansion implementation efficiencies along the joint corridor. Remaining noise walls, where required, will be implemented as part of the Rolling Stock, Systems, Operations and Maintenance contract which also includes the design and supply of trains, to specifications set by Metrolinx.</p> <p>Preliminary construction noise impacts and mitigation measures include equipment enclosures/silencers, temporary construction site noise barriers, and construction work hours restrictions where possible. These measures will be refined and provided for public review and comment as part of the forthcoming Early Works and Environmental Impact Assessment Reports.</p>

Ask-A-Question – September 17, 2020 to October 19, 2021

<p>SmartTrack at Gerrard Station and Rail Electrification Information</p>	<p>The maps and stations you have just released do not show the addition of a 4th electrified track which is referred to many times in the ECR, as well as the SmartTrack entryway/exit on the Gerrard station design. When will we have more details about these 2 complex and integral components of the Ontario Line planning and project? Why are you releasing maps without this information on them?</p>	<p>As a transit agency, Metrolinx is doing our part by responding to areas that are growing with increasing demands of service, as well as finding the most sustainable solution for electrifying the GO rail network. The 4th GO track, previously approved as part of the Lake Shore East Rail Corridor Expansion (Don River to Scarborough GO Station) Environmental Project Report, is being considered as part of the six-track Lakeshore East Joint Corridor planning and design. The Province, the City and Metrolinx continue to work together on the planning and design of Smart Track. Further information on the Smart Track program will be available at a later date. As the purpose of the Ontario Line Environmental Conditions Report is to document the existing environmental conditions, maps of future planned projects have not been included in this report. Relevant maps and other information will be included as part of the forthcoming Early Works and Environmental Impact Assessment Reports, where appropriate.</p>
<p>Eglinton is underground - why not here?</p>	<p>Why is the Eglinton line going underground, but this project is not? if budget was available to go underground there, where the roadways are much wider and with lower residential density, why is there not budget allocated to do the same in the Leslieville area?</p>	<p>Surface stations in this area will save customers significantly more time in their journeys than underground stations because they would have to be almost 40 metres deep in order to avoid sewer mains. By building and operating above-ground in the Riverside and Leslieville area, we can reduce construction impacts on area residents and businesses and finish the work in shorter timeframes. It also allows us to significantly reduce the amount of property we need to accommodate construction and long-term operations – as of now we are staying almost entirely within the current footprint. Since we are coordinating work on the Ontario Line with previously announced GO expansion efforts, we are able to avoid multiple disruptions in these neighbourhoods and invest in noise and vibration mitigations such as sound barriers that will protect the community from the sights and sounds of rail operations. Further details on impacts, mitigations and designs to fit the new infrastructure into the fabric of the neighbourhood will be shared in upcoming environmental reports and public engagement.</p>

Ask-A-Question – September 17, 2020 to October 19, 2021

<p>Misleading information / neighbourhood impact - Leslieville</p>	<p>The information you're presenting on the alignment of the rail and the station locations is misleading. - the ongoing GO rail expansion (including extra tracks is not factored-in to the proposed 'refinements' for the portion south of Gerrard - there's no certainty or precedence for light rail (Ontario Line rolling stock) running closely adjacent to heavy rail (GO trains) in a narrow corridor - there's no information on the major bridge expansions required (the overbearing impact of a wider bridge at Gerrard / Carlaw is a good example) - there is no acknowledgement that planting trees to replace those removed is not a 'win' for the neighbourhood I've read the business case for moving this portion of the Ontario Line above ground but it's still not clear why closer study is not being done on the neighbourhood impact during construction and in operation. This neighbourhood successfully resisted the Gardiner East expansion (including lobbying for demolition of the elevated portion to Leslie) and the bents remain along Lakeshore as a reminder of the folly. The proposed Ontario Line alignment repeats this folly, ripping through small, single-lane, well-treed neighbourhoods while infringing on the existing limited park space. Surely there's a better approach.</p>	<p>Metrolinx responded to a similar comment with the following response: A great deal of information is uncovered as a project evolves from the early analysis phase to the planning and design phase, through procurement, and onward to the delivery and operations phases. We use all the facts we have to update and inform decisions about the project. The decision to run the Ontario Line on a mix of elevated, at-grade and underground sections means we can deliver a longer route that will serve more communities. By using the GO corridor and building bridges across the Don River instead of tunnelling underneath it, a route that is approximately twice the length of the Relief Line South can be built at a similar cost. Decisions related to the alignment for the Ontario Line are made in the interest of improving the customer experience, increasing access to transit, maximizing ridership, achieving travel time savings, and creating better access to jobs. These criteria are balanced by cost and other community considerations.</p>
<p>Sound vibration</p>	<p>What sound vibration assessment has been done for the Leslieville portion of the system? E.g. between Dundas and Eastern?</p>	<p>You can find information on noise and vibration existing conditions assessment conducted for the Ontario Line in Appendix B3: Noise and Vibration Report released as part of the Draft Environmental Conditions Report. Page 3 of Appendix B3 includes description of the study areas followed by maps outlining these areas. Page 10 and 15 includes information on noise and vibration measurement locations and results for each study area. The Leslieville portion of the alignment is within the Ontario Line South Study Area.</p> <p>The draft ECR summarizes potential impacts and potential mitigation measures for consideration during project planning and design. As detailed design advances, potential impacts and mitigation measures, including those associated with noise and vibration, will be confirmed. These details as well as supporting studies will be included in the Early Works Reports and/or Environmental Impact Assessment Report.</p>

Ask-A-Question – September 17, 2020 to October 19, 2021

Leslieville Station	Would it be possible not to build Leslieville Station in Riverside? A lot of us would be fine using East Harbor. Toronto is planning Broadview to go south of Eastern. Maybe TTC can send some Queen street cars down to East Harbor instead of building the station. It's not too far away at all.	Thank you for your suggestions. The station at Queen Street is an important connection that will bring customers to the Riverside and Leslieville communities and provide a higher order transit option for local residents who want to get downtown or up to the Danforth and beyond. We will be working closely with the community to construct the station in a way that contributes to the rich fabric of the neighbourhood.
Safety at narrow above-ground corridor	Your maps and material do not show the 4th track and the impact of SmartTrack on the OL. When will you provide information on how you will fit 6 tracks into a narrow corridor? Your current material doesn't even acknowledge the coming of the 4th track. When will you be addressing safety concerns about run subway trains adjacent to heavy freight trains, homes and parks?	As a transit agency, Metrolinx is doing our part by responding to areas that are growing with increasing demands of service, as well as finding the most sustainable solution for electrifying the GO rail network. The 4 th GO track, previously approved as part of the Lake Shore East Rail Corridor Expansion (Don River to Scarborough GO Station) Environmental Project Report, is being considered as part of the six-track Lakeshore East Joint Corridor planning and design. The Province, the City and Metrolinx continue to work together on the planning and design of Smart Track. Further information on the Smart Track program will be available at a later date. As the purpose of the Ontario Line Environmental Conditions Report is to document the existing environmental conditions, maps of future planned projects have not been included in this report. Relevant maps and other information will be included as part of the forthcoming Early Works and Environmental Impact Assessment Reports, where appropriate.

Ask-A-Question – September 17, 2020 to October 19, 2021

<p>Noise and Vibration at Leslieville section</p>	<p>In the Leslieville above-ground section there are only two receptors for noise and none for vibration. This is an area that will be heavily impacted by 6 rail lines and a narrow corridor that will bring the lines and stations extremely close to houses. Why were there not more receptors deployed? Why wasn't more of the area covered? Why was vibration not studied?</p>	<p>For the purposes of the Environmental Conditions Report, noise measurement locations were selected based on proximity to the above ground sections of the representative alignment and potential facility locations as presented in the Ontario Line Initial Business Case, 2019. For the vibration measurements, the locations were selected because they accommodate spaces and equipment that are potentially more sensitive to ground borne noise and vibration than typical residential buildings. As project planning and design advance and further details on planned transit facilities are available, additional noise and vibration estimates or measurements will be considered for locations beyond those included in the Environmental Conditions Report. Measurements or predictions of the baseline levels, or a combination of both can be used for impact assessment studies, as per the current guidelines such as the Environmental Noise Guideline - Stationary and Transportation Sources - Approval and Planning (Ministry of the Environment (now Ministry of Environment, Conservation and Parks), 2013). Further, impact assessment studies will consider and adopt appropriate vibration impact criteria for buildings susceptible to vibration damage. Noise and vibration impact studies are currently in progress and results will be available as part of the forthcoming Early Works and Environmental Impact Assessment Reports.</p>
<p>Proposed above-ground OL for Riverside/Leslieville & parks</p>	<p>Why does Metrolinx persist in planning an above-ground line through Riverside/Leslieville without considering an underground alternative as specified in Motion EX9.1, Amendments 19 & 20, as passed by City of Toronto in 2019? In addition to the motion by City Council, neighbourhood residents and other stakeholders have repeatedly requested that you investigate the underground route in order to spare our park space and tree cover. How can you call this a consultation when you refuse to consider alternatives to the above-ground line?</p>	<p>Metrolinx is designing a transit line that keeps costs down and maximizes benefits, allowing the Ontario Line to go further and serve more of the city. Community engagement will be continue as we move through all stages of the project and has already helped us to improve the plans for the Ontario Line. We value any feedback we receive and factor it into our project delivery wherever possible.</p> <p>We appreciate your concerns about park space and tree cover. We aim to minimize and mitigate impacts on ecosystems and make best efforts to manage, preserve or protect vegetation in and around the proposed route of the alignment. Metrolinx will work with its contractors to preserve surrounding vegetation in areas where we are building. Removed trees will be compensated in accordance with Metrolinx's Vegetation Guideline, which provides a landscape science-based approach that exceeds the requirements of applicable bylaws and regulations.</p>

Ask-A-Question – September 17, 2020 to October 19, 2021

<p>Ontario Line Riverside</p>	<p>If the OL must come above ground – why can't it remain underground heading south and rise above ground in south of Eastern Ave. in the industrial area – not residential? This is going to wreak havoc on a number of historical homes in the area which feels entirely unnecessary. It seems that the residents of this neighbourhood are not being considered whatsoever.</p>	<p>Leveraging the existing GO rail corridor and running the line above ground in certain areas means we can reduce construction timelines and costs and streamline our work with existing GO Expansion plans. This means that communities won't be impacted by additional construction that would have otherwise ran along Carlaw Avenue under the Relief Line South plans. We're sensitive to the community's concerns about the project's impacts in this area, which is why our plans preserve local institutions such as the Jimmie Simpson Recreation Centre and include the installation of noise walls. We will continue to pursue other mitigation measures and design innovations to ensure that this project is a good fit for the community.</p>
<p>Above ground section of the Ontario Line</p>	<p>Can you explain why the section of the Ontario Line running thru Riverside/Leslieville has to be above ground, and why this section of the track can't remain underground thru this neighbourhood?</p>	<p>Running the Ontario Line on a mix of elevated, at-grade and underground sections means we can deliver a longer route that will serve more communities. By using the existing GO corridor in this area, a route that is approximately twice the length of the Relief Line South can be built at a similar cost. Leveraging the existing GO rail corridor and running the line above ground in this area also means we can reduce construction timelines and costs and streamline our work with existing GO Expansion plans. Furthermore, using the GO corridor will allow people to more easily connect between GO and TTC services that will both be accessible by street level, saving time compared to connections that would lead people into deep underground stations.</p>
<p>Tracks in Leslieville</p>	<p>Hi. Thanks for posting a reminder for everyone to give feedback on the important draft Enviro Conditions Report for the OL. Here: https://www.metrolinxengage.com/en/content/ontario-line-ask-question We suggest posting any one of these questions on the ALIGNMENT of the route through our section of track or just clicking on the THUMBS UP on anyone of the questions about alignment of our section: 1. Please explain why the 2km section of track through Riverside/Leslieville must go above-ground, when the same route but underground alignment would be less invasive and less destructive on our neighbourhood, businesses and environment? 2. If the OL must come above ground – why can't it remain underground heading south and rise above ground in south of Eastern Ave. in the industrial area – not residential? 3) Why is Metrolinx not investigating an underground route in Riverside/Leslieville when a viable underground route was developed by the City of Toronto for the Relief Line?</p>	<p>Metrolinx responded to a similar comment with the following response: There a few reasons for running the Ontario Line above ground in the Riverside and Leslieville area. By running the line here at-grade alongside the existing GO rail corridor, it will help to reduce construction impacts and costs. This is because it layers construction of the Ontario Line with the corridor improvements that were already planned to support the expansion of GO rail services. The current plans include maintaining traffic and streetcar service along Queen Street and we will be working closely with businesses and residents so they are aware of construction plans and anticipated impacts and can provide feedback on mitigations. Details about anticipated impacts of constructing and operating the Ontario Line will be released as part of forthcoming environmental reports and we look forward to sharing them for public feedback.</p>

Ask-A-Question – September 17, 2020 to October 19, 2021

<p>Ont Line Costing for 1.5km between Riverdale Ave and Eastern Ave</p>	<p>Why is there no costing of the above ground vs. below ground on the 1.5 km section between Pape School and Eastern Avenue? The big cost savings cited by Metrolinx was to eliminate tunneling under the Don River. Keep that savings but tunnel from East Harbour (former Lever factory) north to Riverdale Ave. There will be significant costs associated with the proposed (but uncOSTed) 1.5 km above-ground section. These costs can be itemized (and likely will be by the community). For example, four bridge widenings, footings and support structures for elevated line, property expropriations, park replacement, noise walls, tree replacements, property acquisition for construction staging to name a few. In contrast, the tunneling equipment and specialized crews are already mobilized and in place as they move south on Pape Ave. Why has there not been any costing done for a hybrid option - burying it between Riverdale Ave and Eastern Ave.? Help people understand the rationale. Everyone wants improved transit but to ignore this basic question will further undermine public trust in Metrolinx and the provincial government. It will fuel growing opposition, which may jeopardize the project politically.</p>	<p>Metrolinx responded to a similar comment with the following response: Cost is only one consideration. Decisions related to the alignment for the Ontario Line are made in the interest of improving the customer experience, increasing access to transit, maximizing ridership, achieving travel time savings, and creating better access to jobs.</p> <p>We are also able to reduce construction impacts through Riverside by layering construction of the Ontario Line with the corridor improvements that were already planned to support the expansion of GO rail services. Also, using the GO corridor will allow people to more easily connect between the Ontario Line, GO and TTC at street level, saving time compared to connections that would lead people into deep underground stations. We will be working with communities to plan and develop stations and infrastructure that fits into and contributes to the neighbourhood.</p>
<p>Cost comparison of above ground vs below ground</p>	<p>Why was there no cost comparison done on the section of the Ontario Line in the Riverside/Leslieville area? In this densely populated area, an underground route would be much less destructive to the neighbourhood. How would you feel if a train was running past your house every 45 seconds?</p>	<p>Metrolinx responded to a similar comment with the following response: Cost is only one consideration. Decisions related to the alignment for the Ontario Line are made in the interest of improving the customer experience, increasing access to transit, maximizing ridership, achieving travel time savings, and creating better access to jobs.</p> <p>We are also able to reduce construction impacts through Riverside by layering construction of the Ontario Line with the corridor improvements that were already planned to support the expansion of GO rail services. Also, using the GO corridor will allow people to more easily connect between the Ontario Line, GO and TTC at street level, saving time compared to connections that would lead people into deep underground stations. We will be working with communities to plan and develop stations and infrastructure that fits into and contributes to the neighbourhood.</p>

Ask-A-Question – September 17, 2020 to October 19, 2021

<p>Underground vs Aboveground</p>	<p>1. Please explain why the 2km section of track through Riverside/Leslieville must go above-ground, when the same route but underground alignment would be less invasive and less destructive on our neighbourhood, businesses and environment?</p>	<p>Metrolinx responded to a similar comment with the following response: There a few reasons for running the Ontario Line above ground in the Riverside and Leslieville area. By running the line here at-grade alongside the existing GO rail corridor, it will help to reduce construction impacts and costs. This is because it layers construction of the Ontario Line with the corridor improvements that were already planned to support the expansion of GO rail services. The current plans include maintaining traffic and streetcar service along Queen Street and we will be working closely with businesses and residents so they are aware of construction plans and anticipated impacts and can provide feedback on mitigations. Details about anticipated impacts of constructing and operating the Ontario Line will be released as part of forthcoming environmental reports and we look forward to sharing them for public feedback.</p>
<p>Ontario Line - Why Above Ground?</p>	<p>Why has Metrolinx seemingly not even considered putting the Ontario Line below ground in Leslieville? It is a small dense community and your proposed route will impact on much of the parkland in the area. The original plan for the relief line was underground - why not the Ontario line?</p>	<p>We appreciate the importance of park spaces to the local community. We will work with contractors to preserve surrounding vegetation in areas where we are working.</p> <p>Running the Ontario Line on a mix of elevated, at-grade and underground sections means we can deliver a longer route that will serve more communities. By using the GO corridor in this area, a route that is approximately twice the length of the Relief Line South can be built at a similar cost. It will also reduce construction timelines and streamline our work with existing GO Expansion plans. Furthermore, using the GO corridor will allow people to more easily connect between GO and TTC services that will both be accessible by street level, saving time compared to connections that would lead people into deep underground stations.</p>
<p>Above Ground Encasing</p>	<p>Instead of building a wall. Why are we not encasing the line above ground ro create useable green space above and around the line?</p>	<p>Thank you for your suggestion! We currently have an open survey for the community to provide feedback on the design elements of the retaining walls, noise barriers and vegetative elements. You can submit your feedback and idea here.</p>

Ask-A-Question – September 17, 2020 to October 19, 2021

Noise	If the Ontario Line is planned to have trains every 90 seconds, and of course there are trains traveling both ways, given the length of each train plus arrival and departure times, how many seconds in every minute on average will NOT have train noise?	Thank you for your question and sharing your concern with us about noise levels. While Ontario Line trains will be able to run as frequently as every 90-seconds, service may not run this frequently at all times. Metrolinx is also committed to minimizing and managing the effects of noise and vibration of the Ontario Line on our neighbours – during both construction and operations. As a part of the Environmental Impact Assessment Report (forthcoming early 2022), a detailed noise and vibration assessment will be completed for the Ontario Line to ensure that potential impacts are identified and appropriate site-specific mitigation measures are in place. You can learn more about our environmental assessment process for the Ontario Line here on our website. Please also consider signing up for our newsletter, as we will send out a notice to our e-newsletter distribution list as soon as it's released.

Date	What are your thoughts on the results of the Lakeshore East Joint Corridor early works environmental studies?	Which Lakeshore East Joint Corridor early works environmental study is most important to you and why?	Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft Lakeshore East Joint Corridor Early Works Report.	Response
28-Sep-21	<p>You have released several thousand pages of EWR's for both East Harbour area and the Joint Corridor - two EWR's, and you have only allocated 30 days to hear and resolve issues. This not right and not in the spirit of the legislation. You continue to bulldoze your way through the essential community feedback process like it was unnecessary.</p>	3	3	<p>The Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report were prepared in accordance with Ontario Regulation 341/20: Ontario Line Project. Both Early Works Reports were available for review for 31-days from September 23 to October 24, 2021. This review period length is consistent with review period lengths of other Metrolinx transit projects. Prior to the publication of the early works reports, Metrolinx also provided specific updates on the Project website, reached out to Leslieville and Riverside area residents via information flyers in June and July 2021 and held meetings with local community groups to provide the most up to date information regarding these early works segments. Virtual presentation and live question and answer sessions were also hosted by Metrolinx prior to and during the review period. Metrolinx is committed to continuing engagement with the local community as project planning progresses.</p>
30-Sep-21	<p>I am concerned about water & air quality, loss of green space and wildlife habitat, the delay of emergency vehicles and transit, as well as noise and vibration. Too many times in the report do we see 'where feasible or where possible' which likely means Metrolinx won't do anything because it's 'not feasible'. What does that even mean?</p> <p>In addition, where monitoring is noted as required, frequency is not addressed and it is largely done by the construction companies. That is ridiculous as they have a vested interest and cannot be seen to be objective in any way. Far more work needs to go into monitoring. Why is there no outline of a complaint process.</p>	<p>Water, Air, Traffic, Noise, Vibration - because they all impact quality of life, because this community is vulnerable to flooding and poor water (and air) quality to begin with, because our streets are already overburdened with traffic due to the removal of the Gardiner and because our community already has less green space than most other communities in this city. It seems as though our community will effectively be cut off from and westward routes and our park space will likely be unusable due to the constant noise. It is this constant noise with a train passing every 45 seconds that will make this project unlivable for the residents of this community.</p> <p>I also don't want to see any trucks on our residential streets. Despite being a 'no truck' street, Booth has become a highway for local construction traffic.</p>	<p>Yes, the wildlife review is inadequate. If fails to note many species of birds and other wildlife resident in our community that will be at risk including: hummingbirds, blue jays, eastern bluebird, cardinals, hawks, baltimore orioles, chickadees, doves, warblers, woodpeckers and many others.</p> <p>There is also no quality of life assessment which should be of paramount consideration both now and in the future! In addition, there are still too many reports that need to be completed before this report can be seen within the entire scope of the project. We are being asked to accept the early works without any indication of the full impact and that is unacceptable.</p> <p>The biggest thing you've missed - the wishes of the community! Consultations are not really consultations - we are simply told what will happen. There has been no legitimate consultation.</p>	<p>I am concerned about water & air quality, loss of green space and wildlife habitat, the delay of emergency vehicles and transit, as well as noise and vibration.</p> <p>Metrolinx is committed to reducing impacts from early works construction and minimizing disruption to the community during construction.</p> <p>The potential impacts to surface water and groundwater, air quality, vegetation communities, wildlife habitat, and transportation network, as well as impacts associated with construction noise and vibration and Lakeshore East Joint Corridor operational noise and vibration have been assessed and outlined in the Early Works Report. The report also documents mitigation measures to reduce the potential environmental impacts of Lakeshore East Joint Corridor early works</p> <p>For example, a plan to manage air quality will be completed to reduce impacts to air quality as a result of the early works. A plan to manage groundwater and dewatering will also be completed to minimize impacts to groundwater. Please note that there will not be any impacts to water bodies during early works construction as the nearest waterbody, Lower Don River, is approximately 325 metres away.</p> <p>Vegetation removals will be limited to within the early works construction areas and compensation for the removal of vegetation will be in accordance with Metrolinx's Vegetation Guideline (2020). All requirements of the Endangered Species Act will be met.</p> <p>To manage traffic impacts, a transit and traffic management plan will be developed, and will address specific emergency services requirements in consultation with the City of Toronto.</p> <p>To reduce noise associated with the Joint Corridor operations, Metrolinx is committed to installing noise barriers with a minimum height of five metres between approximately Eastern Avenue and Jones Avenue. Implemented noise barriers are predicted to effectively meet MOEE/GO and MOEE/TTC criteria at all assessed sensitive receptors along the joint corridor and achieve reductions below the predicted existing noise levels at most assessed receptors. For more information, please see the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report [Link: https://www.metrolinxengage.com/en/content/operational-noise-vibration]. In addition to the Noise and Vibration Operation Report, Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels (with and without noise barriers). The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p> <p>During early works construction, Metrolinx will also apply construction noise and vibration mitigation measures which may include, but won't be limited to using equipment compliant with noise level specifications from the Ministry of the Environment, Conservation and Parks, and siting construction vehicles and construction laydown and staging areas away from sensitive receptors, where possible.</p> <p>Please see other mitigation measures and monitoring activities to ensure mitigation measures effectiveness outlined in Section 6 of the early works report.</p> <p>Too many times in the report do we see 'where feasible or where possible' which likely means Metrolinx won't do anything because it's 'not feasible'. What does that even mean?</p> <p>The Early Works Report documents certain mitigation measures in this manner because mitigation is often specific to the environmental component and scope of work, which varies throughout the Lakeshore East Joint Corridor study area. This allows Metrolinx to explore additional mitigation measures beyond those outlined in the Early Works Report and also refine the mitigation measures as project planning and design progresses, such that they are effective at reducing specific project impacts, as not all mitigation measures may apply to a certain project impact.</p> <p>Mitigation requirements will be included in the contract document as a contractual obligation for the contractor. Metrolinx provides oversight of this process to ensure that the contractor completes the required mitigation measures in accordance with any applicable regulations or guidelines.</p> <p>In addition, where monitoring is noted as required, frequency is not addressed and it is largely done by the construction companies. That is ridiculous as they have a vested interest and cannot be seen to be objective in any way. Far more work needs to go into monitoring.</p> <p>The frequency of monitoring is specific to the environmental component that is being monitored, the scope of work and applicable guidelines. An environmental specialist will determine the frequency of monitoring required based on these factors prior to construction. Monitoring requirements will be included in the contract document as a contractual obligation for the contractor. Metrolinx provides oversight of this process to ensure that the contractor completes the required monitoring activities in accordance with any applicable regulations or guidelines.</p>

Date	What are your thoughts on the results of the Lakeshore East Joint Corridor early works environmental studies?	Which Lakeshore East Joint Corridor early works environmental study is most important to you and why?	Is there anything we missed? Please let us know if you have any additional thoughts or concerns about the Draft Lakeshore East Joint Corridor Early Works Report.	Response
				<p>Why is there no outline of a complaint process.</p> <p>Complaint process is outside of the environmental assessment scope and was therefore not included in the Early Works Report. Residents are encouraged to reach out to the Ontario Line Community Relations team at any point with their feedback or questions. The Ontario Line Community Relations team will be available for the duration of the project to address questions, complaints and concerns via email and phone (416-202-5100 and ontarioline@metrolinx.com). Prior to the start of construction, a telephone number in operation 24/7/365 will also be set up to address any questions or concerns from the public during construction. The team is also available through a virtual appointment booking system on the Metrolinx Engage website and our social media channels. When possible, in person meetings will also resume.</p> <p>Water, Air, Traffic, Noise, Vibration - because they all impact quality of life, because this community is vulnerable to flooding and poor water (and air) quality to begin with, because our streets are already overburdened with traffic due to the removal of the Gardiner and because our community already has less green space than most other communities in this city. It seems as though our community will effectively be cut off from and westward routes and our park space will likely be unusable due to the constant noise. It is this constant noise with a train passing every 45 seconds that will make this project unlivable for the residents of this community.</p> <p>Please see response under the first paragraph above.</p> <p>I also don't want to see any trucks on our residential streets. Despite being a 'no truck' street, Booth has become a highway for local construction traffic.</p> <p>Construction traffic will be kept off of local roads that the community relies on. As noted in the Early Works Report, mitigation measures to reduce traffic impacts from early works activities include development of a traffic and transit management plan and coordination with the City of Toronto.</p> <p>Yes, the wildlife review is inadequate. If fails to note many species of birds and other wildlife resident in our community that will be at risk including: hummingbirds, blue jays, eastern bluebird, cardinals, hawks, baltimore orioles, chickadees, doves, warblers, woodpeckers and many others.</p> <p>A thorough background review of wildlife, including Species at Risk and other species such as hummingbirds, cardinals and blue jays, that may occur within the Lakeshore East Joint Corridor Study Area was completed as part of the Early Works Report. Refer to Appendix A: Species Records from Wildlife Atlases of Appendix A1: Lakeshore East Joint Corridor Early Works - Natural Environment Early Works Report for this background review. Wildlife habitat within the rail corridor is not of high quality and there are other naturalized areas (e.g., Don Valley, city parks, etc.) in proximity of the Lakeshore East Joint Corridor Study Area to provide habitat for these common wildlife. Through appropriate mitigation measures such as investigating construction areas prior to commencing or resuming construction activities for wildlife and wildlife habitat that may have established following the completion of previous surveys, impacts to urban wildlife with abundant and secure populations in the City of Toronto will be avoided. Furthermore, Metrolinx will provide compensation for tree removals in accordance with the Metrolinx Vegetation Guideline (2020), striving to provide compensation tree plantings as close to the areas where trees will be removed as possible.</p> <p>There is also no quality of life assessment which should be of paramount consideration both now and in the future! In addition, there are still too many reports that need to be completed before this report can be seen within the entire scope of the project. We are being asked to accept the early works without any indication of the full impact and that is unacceptable.</p> <p>The Draft Lakeshore East Joint Corridor Early Works Report was completed in accordance with Ontario Regulation 341/20. The regulation defines early works as any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process. Ontario Line early works, including the Lakeshore East Joint Corridor early works, are being advanced where the Project interfaces with other concurrently planned transit projects (i.e., GO Expansion) and where portions of the alignment run in parallel to the existing Lakeshore East and Lakeshore West GO rail corridors. Advancing work in these areas will facilitate timely implementation of the Ontario Line Project and provides planning, design and implementation efficiencies for ongoing projects such as GO Expansion. The forthcoming Ontario Line Environmental Impact Assessment Report is anticipated to be shared with the community in January 2022 for review. This report will assess operations of the entire project as well as construction of components not covered by previously published Early Works Reports.</p> <p>The Lakeshore East Joint Corridor Early Works Report includes an assessment and evaluation of the impacts that the early works might have on the environment, a description of proposed measures for mitigating any negative impacts of the early works on the environment and proposed monitoring activities. Environmental impacts assessed include those associated with the natural environment, air quality, noise and vibration, soil and groundwater, surface water and hydrogeology, archaeology, built heritage resources and cultural heritage landscapes, traffic and transportation, and socio-economic and land use characteristics. Metrolinx also published the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report along with the Early Works Report, which documented noise and vibration operational impacts in the joint corridor and identified appropriate mitigation measures including noise barriers.</p> <p>The Ontario Line will have tremendous benefits, as outlined in the Preliminary Design Business Case for the project (available here: http://www.metrolinx.com/en/regionalplanning/projectevaluation/benefitscases/2020-12-08-Ontario-Line-PDBC-Summary-Public-Final.pdf). These benefits include:</p> <ul style="list-style-type: none"> • Improved Quality of Life and Public Health: The Ontario Line could improve local air quality and reduce collisions by up to 1,200 over the project life cycle by taking over 28,000 cars off the road each day and encouraging use of active travel to access transit. Travellers who switch to rapid transit from driving tend to walk more and realize health benefits from a more active lifestyle. • Unlocking Jobs and Economic Development: The Ontario Line is expected to support over 4,700 jobs per year between 2020 and 2030, with continued employment after 2030 for the operations and maintenance of the line. • Moving People with Less Energy and Reduced Emissions: The Ontario Line could reduce overall energy expended for transport by up to 7.2 million litres of automobile fuel every year. This is the same as nearly 120,000 fill ups at the pump per year. This reduction in automobile travel is estimated to amount to over 14,000 tonnes of greenhouse gas emission reductions per year. <p>The Ontario Line will strengthen connections between people and jobs within Toronto and the surrounding region by improving the speed, frequency, reliability and overall footprint of rapid transit service. It will bring rapid transit to new communities in the east end, north of Danforth Avenue, and</p>

Date	What are your thoughts on the results of the Lakeshore East Joint Corridor early works environmental studies? 				<p>surrounding Exhibition/Ontario Place, providing residents with greater access to transit options and economic opportunities in closer proximity to their homes.</p> <p>The biggest thing you've missed - the wishes of the community! Consultations are not really consultations - we are simply told what will happen. There has been no legitimate consultation.</p> <p>We agree that meaningful consultation is critical to ensuring we can deliver the Ontario Line successfully. When we held open houses in early 2020, we heard from Riverside and Leslieville residents how important it is to manage noise and vibration, protect existing parks and minimize disruption from construction. We acted on that feedback as the continuous noise barriers will ensure noise levels stay the same or lower despite the cumulative increase in transit service. Second, careful planning has ensured almost all parks will continue to operate during construction and some parks will in fact gain green space. The only exception is Gerrard Carlaw Parkette Dog Park which will be temporarily closed to facilitate construction of the station at Gerrard and Carlaw. Third, construction traffic will be kept off of local roads that the community relies on. As noted in the Early Works Report, mitigation measures to reduce traffic impacts from early works activities include development of a traffic and transit management plan and coordination with the City of Toronto regarding potential traffic impacts. We have also carefully planned our construction works to complete much of the work within the existing rail corridor.</p>
7-Oct-21	Smoke and mirrors	Smoke and mirrors	<p>This line route is not necessary, is not what you are claiming it is. Had you looked at a map, you'd have noticed that you could have:</p> <ol style="list-style-type: none"> 1) Run your line along the lake and up to either Greenwood Ave (where there are existing tunnels from the work yard down to Queen St E. 2) Up Main St...there is an existing GO station and Main St subway station in close proximity. 3) Or maybe you'd notice that at Kennedy subway station...there is the Scarborough LRT connection...and a GO station on the same site. <p>If you really were interested in moving people. But no. gotta maximize the pork for connected business friends...and that is why you chose the route you did. And the local Councillor and MPP both wanted this in our community, and I can assure you, in meetings I attended...the local public Did NOT. So enough of you phony 'public consultation'.</p>	<p>Thanks for your feedback. Metrolinx has explored similar alignment options (specifically the Relief Line South) through the Initial Business Case [Link: https://www.metrolinx.com/en/regionalplanning/projectevaluation/benefitscases/20190725_Ontario_Line_IBC.PDF] and decided that an underground alignment in this area would not be advantageous to the reference alignment that utilizes the existing rail corridor. The decision to not pursue a fully underground or partial underground alignment is based on the following main reasons: customer experience, fewer community impacts and property impacts. By utilizing the existing rail corridor where GO Expansion work has already been planned, we can streamline construction to minimize community impacts by reducing our project footprint. We have acted on community feedback by protecting important neighbourhood parks and ensured noise is controlled via noise barriers.</p>
7-Oct-21	"Appendix A5 – Traffic and Transportation Report" - can't be accessible. Please provide the right link.	"Appendix A5 – Traffic and Transportation Report" - can't be accessible. 9-Oct-21	The Ontario Line should be buried along this segment of the Ontario Line	Traffic and Transportation Report - We have already lost too much space required for pedestrian, bike, and vehicular mobility		<p>Thanks for your feedback. Metrolinx has explored similar alignment options (specifically the Relief Line South) through the Initial Business Case and decided that an underground alignment in this area would not be advantageous to the reference alignment that utilizes the existing rail corridor. The decision to not pursue a fully underground or partial underground alignment is based on the following main reasons: customer experience, fewer community impacts and property impacts. By utilizing the existing rail corridor where GO Expansion work has already been planned, we can streamline construction to minimize community impacts by reducing our project footprint. We have acted on community feedback by protecting important neighbourhood parks and ensured noise is controlled via noise barriers.</p> <p>We are currently consulting with the City on the traffic and transportation impacts of the Ontario Line and GO Expansion, in combination with all other planned city and private projects in the immediate area. We have acted on feedback from the community and planned our construction access routes through the main roads only. Our intent is to work with our partners at the City to carefully plan construction to preserve existing transit, bike and pedestrian mobility. We will share more details with the community once they are finalized.</p>
19-Oct-21	Still reviewing.	I am particularly interested in the East Harbour to Gerrard stations.	I am trying to download the pdf report for offline reading, but my computer is telling me that I need a newer version of Adobe Acrobat to open the file. I tried to install a newer version of adobe acrobat reader, but since I have an older Adobe Acrobat Pro installed, I cannot install the newer version without uninstalling the older version. I don't want to uninstal the older version since it has more capabilities. Unfortunate situation. Can you just upload the pdf report such that it can be opened with a older version of Acrobat? That would really help. Thanks.	<p>Thank-you for your comment. More information about the stations from East Harbour to Gerrard can be found here: https://www.metrolinxengage.com/en/content/ontario-line-neighbourhood-updates-east</p> <p>The pdfs of the Early Works Reports were updated on the website on October 20, 2021, following receipt of the comment, to allow for compatibility with older versions of Adobe Acrobat.</p>

24-Oct-21	see below	see below	<p>The early works package clearly demonstrates the impact of the above-ground line will have on the neighbourhood, including widening of the existing track bed and bridges. Consistently, Metrolinx has stated that the Ontario Line would "remain in the existing right of way" with the intent to mislead the public. The "right of way" is much larger than the existing track bed and the widening of bridges on key Leslieville streets will negatively affect the pedestrian and residential realm. Look at the intersection at Gerrard / Carlaw - half the intersection will be under a bridge! How is this safe or advisable? Again, Metrolinx has consistently dismissed community input on burying the line, in keeping with Steve Munro's very viable options; now the true damage of the Ontario Line on Leslieville is laid bare. You're doing Doug Ford's bidding to enact revenge on the neighbourhoods that resisted his brother as Mayor and him as Premier. Subways in Scarborough and above-ground rail in dense urban neighbourhoods - the politics of this is disgustingly obvious.</p>	<p>Metrolinx has looked at various tunneled proposals for the East Segment of the Ontario Line in the business cases but every tunnelled option results in greater private property impact, longer construction times, greater community impacts and increased costs.</p> <p>Metrolinx is moving forward with plans to use the existing rail corridor because it reduces community impacts, property impacts and creates a better customer experience. The Lakeshore East Joint Corridor Early Works Report identifies proven solutions that Metrolinx will utilize to reduce potential impacts.</p> <p>It is true that Ontario Line infrastructure will fit mostly within the Metrolinx property boundary where the GO Expansion is already planned. It's important to note the existing right of way is defined by the existing fence or berm along the rail corridor.</p> <p>For many of the neighbourhood parks, not only will they operate throughout construction, certain parks will expand once construction is complete. When it comes to bridges, this is an opportunity to refresh the 100-year-old bridges in the neighbourhood to modern standards and create a better pedestrian experience. An example could be better architectural lightning.</p>
24-Oct-21	<p>I think that a project of this size deserves a more comprehensive environmental study. It does not seem appropriate to use the EA that was done for the downtown relief line for this re-jigged plan. I also think it is wrong to use the estimates of ridership from pre-covid times. The need for the expanded GO service and for the Ontario Line is very suspect now that companies are encouraging people to work from home, even post-covid. The world is changing and this plan is for the old world. I worry that you are going to finally realize this half-way through construction and halt or slow the project.</p>	<p>The natural environment report shows that the leslieville area of Toronto has a deficit of parkland. And yet you are going to run so many trains through the parks of this neighbourhood that they will be noisy all the time.</p>	<p>You don't seem to acknowledge that even if the sound of one train will be less there will be near constant train traffic on the rail corridor. This will mean a background noise that is incredibly annoying and probably bad for the health of residents. We don't know if it really will be bad for our health because you haven't studied that. A health impact study is missing from your report. It is shocking that the Ministry of Health or the Federal Government doesn't insist that you do one. I am also concerned about the timing of this report and how the schedule shows trees being removed from the corridor before the arborist report comes out. That doesn't make any sense.</p>	<p>The Draft Lakeshore East Joint Corridor Early Works Report was completed in accordance with Ontario Regulation 341/20 and was not based off the Downtown Relief Line environmental assessment. The impacts, mitigation measures and monitoring activities are specific to the Lakeshore East Joint Corridor early works. Although the pandemic has made it difficult to make predictions about the future of work and play, Toronto is still projected to be a growing world class city which requires a world class transit system. Funding from different levels of government has been secured and Ontario Line plans are moving forward based on the cost benefit analysis and projections found in the Ontario Line Initial Business Case and the Ontario Line Preliminary Business Case.</p> <p>Metrolinx has minimized the impacts to neighbourhood parks, ensuring almost all parks stay open. Furthermore, Metrolinx has also protected for additional green space for specific parks once construction of Ontario Line and GO Expansion are complete.</p> <p>As part of the Lakeshore East Joint Corridor early works, Metrolinx will install noise barriers with a minimum height of five metres, in alignment with the noise barrier implementation approach planned to be undertaken by GO Expansion. Implemented noise barriers are predicted to effectively meet MOEE/GO and MOEE/TTC criteria at all sensitive receptors along the joint corridor between Eastern Avenue and Pape Avenue and achieve reductions below the predicted existing noise levels at most assessed receptors along the joint corridor. For more information, please see the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report [Link: https://www.metrolinxengage.com/en/content/operational-noise-vibration]. In addition to the Noise and Vibration Operation Report, Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels (with and without noise barriers). The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p> <p>We have heard some residents in Riverside and Leslieville ask for a health impact assessment and are concerned with potential impacts as it relates to noise, vibration, air quality and access to green space. The Lakeshore East Joint Corridor Early Works Report comprehensively assesses these potential impacts using the relevant protocols set by the Ministry of the Environment, Conservation and Parks and recommends proven solutions that Metrolinx will utilize.</p> <p>An Arborist Report will be completed prior to removal of trees for Lakeshore East Joint Corridor early works. The Arborist Report will inventory all trees within the private and City-owned lands which will support construction. The intent of the Arborist Report is to identify which trees to retain or remove based on the construction footprint. Tree protection measures will be identified in the Arborist Report. Permits will also be obtained from the City of Toronto prior to any removals.</p>
24-Oct-21	<p>RE: Metrolinx 'early works' report on the Ontario Line portion through Leslieville For over ten years now I have researched infrastructure project governance in Ontario, and have published scholarly articles that focus on the information practices of public agencies such as Waterfront Toronto and Infrastructure Ontario, which I and colleagues have shown are designed to produce an impression of transparency while hiding the most important facts (such as who made the decisions that are taken for granted in later stages) and avoiding democratic accountability. I am now a professor emeritus at the Centre for Criminology and Sociolegal Studies at the University of Toronto, and an internationally renowned scholar of urban governance.</p> <p>The 'early works' reports that Metrolinx has made public are textbook examples of what I and colleagues have called "the performance of transparency". They appear to contain a great deal of information simply due to their length but: (a) the information is not presented in a reader-friendly manner, but rather in a 'document dump' that seems designed to not be read; and (b) the key decisions that have been contested by community groups and transit experts such as advocate Steve Munro are taken for granted as if they were carved in stone, without being justified.</p> <p>The key decision contested by community groups, supported by the local city councillor and the local MPP, is to run the Ontario Line, meant to have hundreds of trains a day, be placed within the same corridor that already has GO trains and VIA trains. Metrolinx has refused to provide a cost-benefit analysis that would justify this incredibly disruptive choice. The 'early works' project is very verbose but remains wholly silent on this key issue. Thus, neither local political representatives</p>	See above		<p>The Draft Lakeshore East Joint Corridor Early Works Report was completed in accordance with Ontario Regulation 341/20. The regulation defines early works as any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process. Ontario Line early works, including the Lakeshore East Joint Corridor early works, are being advanced where the Project interfaces with other concurrently planned transit projects (i.e., GO Expansion) and where portions of the alignment run in parallel to the existing Lakeshore East and Lakeshore West GO rail corridors. Advancing work in these areas will facilitate timely implementation of the Ontario Line Project and provides planning, design and implementation efficiencies for ongoing projects such as GO Expansion. The forthcoming Ontario Line Environmental Impact Assessment Report is anticipated to be shared with the community in January 2022 for review. This report will assess operations of the entire project as well as construction of components not covered by previously published Early Works Reports.</p> <p>The Lakeshore East Joint Corridor Early Works Report includes an assessment and evaluation of the impacts that the early works might have on the environment, a description of proposed measures for mitigating any negative impacts of the early works on the environment and proposed monitoring activities, in accordance with Ontario Regulation 341/20. Environmental impacts assessed include those associated with the natural environment, air quality, noise and vibration, soil and groundwater, surface water and hydrogeology, archaeology, built heritage resources and cultural heritage landscapes, traffic and transportation, and socio-economic and land use characteristics. Metrolinx also published the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report along with the Early Works Report, which documented noise and vibration operational impacts in the joint corridor and identified appropriate mitigation measures including noise barriers.</p> <p>Metrolinx has explored similar alignment options (specifically the Relief Line South) through the Initial Business Case and decided that an underground alignment in this area would not be advantageous to the current alignment that utilizes the existing rail corridor. The decision to not pursue a fully underground or partial underground alignment is based on the following main reasons: customer experience, fewer community impacts and property impacts. By utilizing the existing rail corridor where GO Expansion work has already been planned, we can streamline construction to minimize community impacts by reducing our project footprint. We have acted on community feedback by protecting important neighbourhood parks and ensured noise and vibration is controlled to existing or lower levels via effective noise barriers.</p> <p>The cost to rebuild the 100-year-old bridges to modern standards and create a better pedestrian experience is required for the new GO Expansion and Ontario</p>

Date	What are your thoughts on the results of the Lakeshore East Joint Corridor early works environmental studies? Please let us know if you have any additional thoughts or concerns about the Draft Lakeshore East Joint Corridor Early Works Report.	Response
	<p>nor the community know whether it might not in fact be cheaper, just in money terms, to run the Ontario Line underground, with the help of the tunnel boring machines that will have to be used for the portion directly north of Gerrard St.</p> <p>Just one example of the appalling lack of proper evidence for decisions taken for granted in the 'early works' report: there are from four to six old railway bridges that Metrolinx admits have to be rebuilt to accommodate the Ontario Line tracks, and we have not seen any estimates of the cost of that. The early works report further states that two new bridges will be built somewhere around Carlaw and Gerrard –but there are no drawings, no cost estimates, and no justification for this. I could go on; the early works report is a shining example of bureaucratic 'document dumping' practices that purport to make information available but avoid accountability on the issues that matter not only to the local community but also to anyone who believes in evidence-based transportation planning. But I will draw my comments to a close for the sake of brevity.</p> <p>The key bone of contention not addressed in the 'early works' report is that the public still does not know why exactly the Ontario Line is meant to be buried most of the way but, for no apparent reason, made to run overground including over very old railway bridges. And this in a 1.6km portion characterized by century-old homes (which are already subject to noise and vibration problems from the existing trains) and several facilities for vulnerable community members –from seniors housing to the Jimmie Simpson recreation centre to the four playgrounds located right next to the tracks.</p> <p>I do not expect an answer from Metrolinx; I am writing this for the sake of adding to the extensive record of opposition to both the substance and the process followed by Metrolinx in this part of the city. I might add that this open letter is based on much more than the 'early works' report. I have closely followed the project from the start, and as my address suggests, I have been personally subjected to Metrolinx's expensively produced corporate communications, including many full-colour expensively produced flyers and booklets placed in my mailbox, as well as being exposed to nearby billboards that attempt to sell decisions that have never been justified with proper evidence.</p> <p>To summarize: the problem with the 'early works' document dump is not what is in it but what is missing from it. Most significantly, the early works report lacks even the pretense of hard evidence to support the bizarre decision to run hundreds of daily and nightly trains through a very dense and very old neighbourhood, while burying the same line in other more suburban and spacious locations.</p>			<p>Line infrastructure but also has positive financial and community impact benefits as well. By building modern bridges, Metrolinx is significantly reducing the frequent and costly maintenance required on these existing bridges which are approaching the end of the lifespan. In addition, Metrolinx will take the opportunity to create a better pedestrian experience by introducing new features such as architectural lighting. Lakeshore East Joint Corridor early works do not include bridge work in vicinity of Gerrard and Carlaw bridges. Future Ontario Line Gerrard Station located here will be assessed in the forthcoming Environmental Impact Assessment Report and built as part of main Ontario Line contracts.</p> <p>It's important to note that Metrolinx is following Ontario Regulation 341/20 and the review period length is consistent with review period lengths of other Metrolinx transit projects. In order to increase public participation, Metrolinx sent mail notifications about the release of the Early Works Reports and held two virtual open houses on September 23 and October 5. In addition, Metrolinx has met with area community groups, Business Improvement Areas and residents throughout the review period to explain the methodology behind the studies and findings in these reports.</p>

Date	What are your thoughts on the Natural Environment study key findings and identified potential impacts and mitigation measures?	Response
24-Oct-21	<p>There is great value to local residents in the vegetated areas slated for destruction by Metrolinx along the rail tracks and our limited parkspace.</p> <p>The vegetated habitat supports indigenous wildlife throughout the year and a wide variety of migratory birds and butterflies.</p> <p>The mature trees along Wardell and Jimmie Simpson Park, over the years have provided shelter to migrating birds and habitat to nesting Cooper's Hawks with fledglings, Snowy Owls, Cedar Waxwings, and a wide variety of songbirds, providing wonderful evensong..</p> <p>The wildlife consists of possums, skunks, squirrels, raccoons, rabbits, foxes, non-venomous snakes (2 sighted).</p> <p>The benefits are a reduced vermin population plus the pleasure of spotting and learning about wildlife for our kids.</p> <p>In the local community garden by the tracks at Tiverton, we cultivate echinacea and milkweed for Swallowtails and migrating Monarchs - local children take a keen interest in learning about and monitoring the Monarch's cycle.</p> <p>Metrolinx plans to demolish the community garden for construction/equipment storage.</p> <p>1000 Dundas Street East Boulevard:</p> <p>It is shown within the Early Works boundary.</p> <p>What are your plans for the boulevard?</p> <p>It is maintained.</p> <p>Tree destruction</p> <p>The proposed sound barrier wall adds no value to the neighbourhood, except for providing a canvas for graffiti vandals who will trample over any planted vegetation.</p>	<p>Vegetation removals will be reduced to the extent possible and limited to the Lakeshore East Joint Corridor early works construction areas which form part of the Project Footprint assessed in the Lakeshore East Joint Corridor Early Works Report. Compensation for the removal of vegetation will be completed in accordance with Metrolinx's Vegetation Guideline (2020). Species at Risk and their habitat are protected under the Endangered Species Act. Any loss of Species at Risk habitat will meet the requirements of the Endangered Species Act and required compensation will be provided. Prior to construction, investigation of the construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If any wildlife is encountered during surveys or during construction, measures will be implemented to avoid destruction, injury or interference with the species.</p> <p>The community garden located adjacent to the building at 444 Logan Avenue is not anticipated to be impacted by early works construction because it is located outside of the early works project footprint.</p> <p>1000 Dundas Street East is outside of the current project footprint (approximately 100 metres north of the project footprint), therefore no impacts to the boulevard are anticipated. Tree impacts are only anticipated where Dundas Street East intersects the rail corridor.</p>

		<p>The implemented noise barriers are predicted to effectively meet MOEE/GO and MOEE/TTC criteria at all sensitive receptors along the joint corridor between Eastern Avenue and Pape Avenue and achieve reductions below the predicted existing noise levels at most assessed receptors along the joint corridor. For more information, please see the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report [Link: https://www.metrolinxengage.com/en/content/operational-noise-vibration]. In addition to the Noise and Vibration Operation Report, Metrolinx has also undertaken a sound demonstration exercise that compares existing noise levels with predicted noise levels (with and without noise barriers). The Ontario Line Immersive Sound Demonstration can be accessed here: https://www.ontariolinesoundstudio.ca/.</p> <p>Metrolinx is taking lessons learned from previous noise barrier installations and has developed numerous strategies to deter and remove graffiti from our infrastructure. We will use a mix of graffiti deterrence strategies for noise barriers and retaining walls through Riverside and Leslieville, which could include things like graffiti-resistant coatings, landscaping on or adjacent to vulnerable surfaces, murals, increased lighting, and so on. Planting vines, plants, and shrubs (natural and artificial) are also a proven graffiti deterrence strategy.</p>
--	--	---

24-Oct-21	<p>I'm concerned about the impact of the construction access proposed for the green space attached to Roy McCleary Towers on Logan. It's a naturalized green space used by seniors for gardening and exercise and a buffer between the tracks and the residents on Tiverton Ave. I think the construction access should be on the east side of the tracks off Thackeray St. which is already an industrial area. If it's only for bridge construction that's one thing but if its for all the ongoing track work it really should be left alone and an alternative access point should be created in the industrial area behind the Carlaw businesses.</p>	<p>A temporary ramp will need to be built to allow for the construction of the Dundas and Logan bridges, retaining walls, and tracks on the north side of the corridor. The ramp will allow for construction to occur during regular daytime hours while trains are running, which will accelerate the work and reduce the overall duration of construction. If the construction access area were to be placed off Thackeray Street, construction activities would only be able to occur between 1:30 am and 5:30 am, which would have a greater impact on nearby residents and significantly increase the duration of construction.</p>

 - **Noise & Vibration Study**

Date	What are your thoughts on the Noise & Vibration study key findings and identified potential impacts and mitigation measures?	Response
10-Oct-21	Appreciate the report and the effort. Unfortunately, the report is light on what is ACTUALLY going to be done to mitigate noise and vibration instead of what COULD be done.	<p>The Early Works Report documents certain mitigation measures in this manner because mitigation is often specific to the environmental component and scope of work, which varies throughout the Lakeshore East Joint Corridor study area. This allows Metrolinx to explore additional mitigation measures beyond those outlined in the Early Works Report and also refine the mitigation measures as project planning and design progresses, such that they are effective at reducing specific project impacts, as not all mitigation measures may apply to a certain project impact.</p> <p>Mitigation requirements will be included in the contract document as a contractual obligation for the contractor. Metrolinx provides oversight of this process to ensure that the contractor completes the required mitigation measures in accordance with any applicable regulations or guidelines.</p>
14-Oct-21	Given the experiences of my friend who lives along the construction corridor of the Eglinton LRT (power outages to her building, incredible noise and difficulty walking anywhere on the street,) I guess I have an idea of the horrors we in Leslieville are going to face. Also the building of the LRT is now 2 years behind schedule; I am certain the noise and vibration mitigation and the whole Ontario line will take many more years to build than promised. We and everyone along this line of construction are the unluckiest Torontonians I know.	<p>The Ontario Line and Crosstown projects are two very different projects and therefore have been planned and designed very differently. The Ontario Line will have less road disruptions compared to Crosstown because construction of the Ontario Line will not be done along a single major road in the city. Instead, construction of the Ontario Line will be spread throughout the city from Exhibition/Ontario Place to the Ontario Science Centre at different times.</p> <p>In addition, road and traffic disruptions will be avoided or reduced largely due to the fact that Ontario Line stations are not being built one kilometre apart in a straight line across a major Toronto road, the way the Crosstown was designed and built. The Ontario Line alignment has been planned to minimize impacts wherever possible while providing time saving, conveniently connected travel benefits. Where there are disruptions anticipated, our Community Relations team will provide early notification and communication to area residents and businesses.</p> <p>Operational noise mitigation along Lakeshore East Joint Corridor – noise barriers between approximately Eastern Ave and Jones Ave – will be installed as part of the Lakeshore East early works. Operational vibration mitigation solutions for GO tracks will also be installed as part of these early works.</p> <p>The opening of Ontario Line is expected by 2030.</p>

Date	What are your thoughts on the Noise & Vibration study key findings and identified potential impacts and mitigation measures?	Response
24-Oct-21	<p>I appreciate the efforts to minimize construction noise however I have been disappointed by efforts to date and that was only during the drilling and testing stage. Communication and updates seem to only happen for immediate neighbours on impacted streets and not on the wider area where the noise travels to. I would recommend all early work construction sites and especially the bridges receive an expanded circle of updates.</p> <p>In terms of vibration it is critical that when trackbed building is taking place that all current and future GO tracks receive updated bedding and the latest vibration minimization solutions. Currently one track in particular, the western most GO track creates far more vibrations felt by residents than the GO track to the east. I'm concerned that this one errant track will have a negative affect on the lifetime of the new bridge if not addressed. This is particularly noticeable in the section of tracks between First Ave. and Dundas.</p> <p>Finally, it will be critical to ensure that all bridges receive the same sound proofing as other track sections. It will be of no use to have sound barrier walls behind homes on First Ave. east of Logan and then a huge gap as the bridge crosses Logan, and then another gap at the Dundas Bridge. Sound travels as you know and therefore the full route needs sound barriers including the bridges otherwise noise, especially from the increased rail traffic of the Ontario Line will reach terrible levels through these gaps.</p>	<p>Given the constraints of staff and resources, we strive to proactively notify residents via physical notice if there is work occurring which has direct impacts or is taking place overnight. That being said, we publish all community notices for work taking place through our e-newsletter, our website and circulate it via email to community groups and business improvement areas for circulation through their mailing lists. As we move forward, Metrolinx will continue with proactive notification as it is an important tool to ensure the community is informed about the upcoming construction work related to the Ontario Line and GO Expansion.</p> <p>The north side of the rail corridor in the Lakeshore East Joint Corridor segment will be upgraded to accommodate future Ontario Line tracks. Residents living north of the rail corridor are anticipated to experience lower vibration levels than existing levels since the Ontario Line trains will be lighter than the heavier existing GO and VIA trains. The GO tracks which accommodate heavier trains will move further to the south of the corridor, further reducing vibration levels for residents living north of the corridor. As a result, future vibration levels north of the corridor may be in fact be lower than existing vibration levels. Note that, as GO tracks get moved, proven vibration mitigation solutions will be installed to ensure vibration levels are within the vibration limits at sensitive receptor locations along the corridor.</p> <p>The bridges in the Lakeshore East Joint Corridor segment requiring replacement (Queen St, Dundas St and Logan Ave) will be redesigned and reconstructed to accommodate an additional GO track and, in some cases, improved road clearances. The bridges will be re-designed according to the latest GO protocol. This requires ballast mats to be applied to all overpass structures, reducing vibration transmitted to the bridge and in turn, its ability to radiate noise.</p> <p>Noise barriers will be installed on both sides of the rail corridor in the Lakeshore East Joint Corridor segment, between approximately Eastern Avenue and beyond Pape Avenue. Our current noise model accounts for the reflected noise off these barriers and the presence of gaps and height variations as barriers approach bridges. The noise barriers will be designed to limit the passing of noise through gaps, allowing for continuous sound proofing.</p>

Public Feedback

 - **Socio-Economic & Land Use Characteristics Study**

Date	What are your thoughts on the Socio-Economic & Land Use Characteristics study key findings and identified potential impacts and mitigation measures?	Response
10-Oct-21	Why aren't these finding inside the EWR??	The socio-economic and land use characteristics potential impacts, mitigation measures and monitoring activities are listed in Section 6.6 of the Draft Lakeshore East Joint Corridor Early Works Report.

Public Feedback

- **Provide Your Feedback**
 - **Traffic & Transportation Study**

Date	What are your thoughts on the Traffic & Transportation study key findings and identified potential impacts and mitigation	Response
23-Sep-21	Maintaining constant pedestrian access along Queen St E is critical, as it is the only place between Eastern & Dundas to move east-west. Ideally for transit as well, as vehicular traffic can be routed to Dundas or Eastern where no transit exists.	<p>Noted. Closures of Queen Street may be needed for bridge demolition and construction. Closures will only be implemented if absolutely necessary, and their duration will be reduced to the extent feasible. The local community will be notified well in advance of any closures. Metrolinx will conduct the work while ensuring the safety of all community members.</p> <p>The Lakeshore East Joint Corridor Early Works Report documents mitigation measures for reducing impacts to pedestrians and the transit network in Section 6.9. A transit and traffic management plan will be developed and implemented to mitigate traffic impacts associated with Lakeshore East Joint Corridor early works. The plan may contain measures such as temporary changes to intersection lane configurations, traffic signal timing optimization and modifications to existing signal timing plans. The effectiveness of the transit and traffic management plan will be monitored throughout the construction period and adjustments will be made based on actual field observations, as needed.</p> <p>Currently, a quantitative multi-modal transportation impact assessment is underway to identify traffic impacts as a result of Lakeshore East Joint Corridor early works as well as other nearby construction projects. Metrolinx will co-ordinate with other ongoing projects when scheduling the early works activities to maintain the mobility of road users, and to identify mitigation measures that optimize traffic flow during construction.</p>
4-Oct-21	This sounds like an absolute nightmare for the community. Eastern, Queen and Dundas St?? Those are the three main east-west arteries. You need a major rethink.	<p>There will be potential traffic impacts to Eastern Avenue, Queen Street East and Dundas Street East in effort to keep construction traffic off the local roads that the community relies on. As noted in the Early Works Report, mitigation measures for traffic impacts include development of a transit and traffic management plan and scheduling early works activities during off-peak periods and weekends, where possible, to minimize disruptions to traffic during critical peak hours.</p> <p>The Lakeshore East Joint Corridor Early Works Report documents mitigation measures for reducing impacts to pedestrians and the transit network in Section 6.9. A transit and traffic management plan will be developed and implemented to mitigate traffic impacts associated with Lakeshore East Joint Corridor early works. The plan may contain measures such as temporary changes to intersection lane configurations, traffic signal timing optimization and modifications to existing signal timing plans. The effectiveness of the transit and traffic management plan will be monitored throughout the construction period and adjustments will be made based on actual field observations, as needed.</p> <p>Currently, a quantitative multi-modal transportation impact assessment is underway to identify traffic impacts as a result of Lakeshore East Joint Corridor early works as well as other nearby construction projects. Metrolinx will co-ordinate with other ongoing projects when scheduling the early works activities to maintain the mobility of road users, and to identify mitigation measures that optimize traffic flow during construction.</p>

Date	What are your thoughts on the Traffic & Transportation study key findings and identified potential impacts and mitigation	Response
18-Oct-21	<p>Vague and misleading, with minimal information. Phrases such as "may be", "Consider scheduling", "Potential realignment", "may cause ", etc are simply avoiding being honest with the residents of the affected areas. Be honest and state the obvious : ALL of these disruptions and more WILL occur, and there's nothing the residents can do about it. I hope this line never gets built. A visit to the on-going, never-ending chaos of Eglinton Ave demonstrates in concrete terms why I hope this line never gets built.</p>	<p>The Early Works Report documents certain impacts and mitigation measures in this manner because impacts and mitigation are often specific to the environmental component and scope of work, which varies throughout the Lakeshore East Joint Corridor study area. This allows Metrolinx to refine project impacts associated with specific components of early works, as planning and detailed design progress; and to explore additional mitigation measures beyond those outlined in the Early Works Report. Where needed, mitigation measures will be refined as project planning and design progresses, such that they are effective at reducing specific project impacts, as not all mitigation measures may apply to a certain project impact.</p> <p>Mitigation requirements will be included in the contract document as a contractual obligation for the contractor. Metrolinx provides oversight of this process to ensure that the contractor completes the required mitigation measures in accordance with any applicable regulations or guidelines.</p> <p>The Ontario Line and Crosstown projects are two very different projects, with different planning and design approaches. The Ontario Line will have less road disruptions compared to Crosstown because construction of the Ontario Line will not be done along a single major road in the city. Instead, construction of the Ontario Line will be spread throughout the city from Exhibition/Ontario Place to the Ontario Science Centre at different times.</p> <p>In addition, road and traffic disruptions will be avoided or reduced largely due to the fact that Ontario Line stations are not being built one kilometre apart in a straight line across a major Toronto road, the way the Crosstown was designed and built. The Ontario Line alignment has been planned to minimize impacts wherever possible while providing time saving, conveniently connected travel benefits. Where there are disruptions anticipated, our Community Relations team will provide early notification and communication to area residents and businesses.</p>
25-Oct-21	<p>I think it's really important to stagger construction of the bridges across major intersections. For many west of Logan the major shopping offered at No Frills and Gerrard Square is necessary for daily living. Cutting off Gerrard, Logan, Queen and Dundas at the same time will blockade eastbound traffic in a major way. Residents would have to go up to the Danforth and down or down to Eastern somehow before being able to go east. With Eastern already jammed due to the Gardiner de-construction traffic in this part of town is going to clog up even worse than Eglinton. Please consider traffic routing and timing carefully.</p>	<p>Noted. Closures will only be implemented if absolutely necessary. Their duration will be reduced to the extent feasible and closures of adjacent major intersections will be staggered, where possible, to minimize overlapping traffic impacts. The local community will be notified well in advance of any closures. Metrolinx will conduct the work while ensuring the safety of all community members.</p> <p>A transit and traffic management plan will be developed and implemented to mitigate traffic impacts associated with Lakeshore East Joint Corridor early works. The plan may contain measures such as temporary changes to intersection lane configurations, traffic signal timing optimization and modifications to existing signal timing plans. The effectiveness of the transit and traffic management plan will be monitored throughout the construction period and adjustments will be made based on actual field observations, as needed.</p> <p>Currently, a quantitative multi-modal transportation impact assessment is underway to identify traffic impacts as a result of Lakeshore East Joint Corridor early works as well as other nearby construction projects. Metrolinx will co-ordinate with other ongoing projects when scheduling the early works activities to maintain the mobility of road users, and to identify mitigation measures that optimize traffic flow during construction.</p> <p>A video detailing the planned construction sequencing at Jimmie Simpson Park and Bruce Mackey Park can be found here.</p>

Public Feedback

Date of Correspondence	Summary of Public Correspondence	Date of Response	Summary of Metrolinx Response
December 4, 2020	<ul style="list-style-type: none"> Requested dates of when the electric track will be built 	December 7, 2020	<ul style="list-style-type: none"> Metrolinx advised that early works is anticipated to begin in summer 2021 and more updates regarding timelines will be shared through the procurement phase
December 5, 2020	<ul style="list-style-type: none"> Requested information regarding the impacts of the Ontario Line on Bruce Mackey Park 	December 8, 2020	<ul style="list-style-type: none"> Metrolinx advised that wherever park spaces are needed to avoid impacting private properties will be restored as much as possible, including compensating for removed trees in accordance with Metrolinx's Vegetation Guideline Metrolinx provided a link to the Vegetation Guideline Metrolinx advised that to shield communities sound barriers, landscaping and new trees and greenery will be added to reduce the sound and visibility of the corridor and trains Metrolinx advised that a more detailed analysis, including noise wall details and aesthetics, will be shared for public consultation in upcoming environmental reports Metrolinx provided a link to subscribe to the e-newsletter
December 9, 2020	<ul style="list-style-type: none"> Requested answers to previous questions submitted on behalf of over 150 residents of Leslieville that have not been answered 	December 17, 2020	<ul style="list-style-type: none"> Metrolinx advised that their questions have been shared with the project team and will be setting up opportunities for community discussions in 2021 Metrolinx advised that the environmental assessments being completed, including the Early Works Report for the Lakeshore East Joint Corridor and the Environmental Impact Assessment Report, will include many more details Metrolinx advised that the noise and vibration study that will form part of the Environmental Impact Assessment Report is planned to include figures with contour-type mapping indicating anticipated levels of noise and vibration in proximity to project activities Metrolinx confirmed that impacts on air quality will also be assessed in detail, in forthcoming reports
December 9, 2020	<ul style="list-style-type: none"> Requested that the Ontario Line be buried underground Concerned about noise and neighbourhood impacts 	December 10, 2020	<ul style="list-style-type: none"> Metrolinx advised that tunneling is complex, time-consuming, and disruptive due to the amount of excavation required. In areas where there are practical alternatives, such as the Metrolinx owned right of way, construction impacts to communities can be drastically reduced and finished in a shorter timeframe Metrolinx advised that to better shield communities living alongside the joint rail corridor from all rail operations, including GO and VIA services, Metrolinx will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it Metrolinx provided a link to subscribe to the e-newsletter
December 10, 2020	<ul style="list-style-type: none"> Concerned that transit plans for the City of Toronto had already been developed prior to the development of the Ontario Line and that the Ontario Line's current design was created for political reasons and will negatively affect the residents of Riverdale/Leslieville more than the original design 	December 11, 2020	<ul style="list-style-type: none"> Metrolinx thanked the resident for sharing their thoughts
December 14, 2020	<ul style="list-style-type: none"> Concerned about the map that showed proposed boundaries for the construction of the noise wall through Riverside Requested information about how the proposed Ontario Line alignment will minimize impacts to the community and what mitigation efforts will be in place during the construction of the walls 	December 15, 2020	<ul style="list-style-type: none"> Metrolinx advised that the map shows where we will be installing noise walls across the entire network as part of the GO Expansion program. The map is not intended to show the specific locations of noise walls which will be determined through detailed design work for individual projects

*Metrolinx proactively provided updates about the Lakeshore East Joint Corridor to members of the public based on previous correspondence about the Lakeshore East Joint Corridor and/or related project components.

Date of Correspondence	Summary of Public Correspondence	Date of Response	Summary of Metrolinx Response
	<ul style="list-style-type: none"> Requested information about whether adjacent property owners will be compensated for the physical damage and loss of value of their properties 		<ul style="list-style-type: none"> Metrolinx advised that the environmental studies and design work for improvements to the joint corridor shared rail corridor in the Riverside neighbourhood is under way Metrolinx advised that design concepts, noise and vibration studies and recommended noise barrier heights and locations will be included in a draft environmental report which will be released for public consultation in 2021 Metrolinx provided several noise wall design concepts to give an idea of how they can be integrated with trees and shrubs to reduce the visibility of the rail corridor as well as effective protection from noise and vibration
December 18, 2020	<ul style="list-style-type: none"> Concerned about the destruction of the neighbourhood for the above-ground portion of the line south of Gerrard Requested information about how much of Jimmie Simpson Park and the surrounding neighbourhood will be destroyed Requested information on whether there will be a separate fare for the line 	December 18, 2020	<ul style="list-style-type: none"> Metrolinx advised that by running the Ontario Line along the existing corridor, construction impacts can be cut in half and work can be completed in a shorter timeline. Fitting the work within the rail corridor also means that the construction footprint can be minimized Metrolinx advised that by building and operating the Ontario Line above ground South of Gerrard, important community destinations like Jimmie Simpson Recreation Centre can stay open during construction and beyond Metrolinx advised that further steps are also being taken to reduce disruption by streamlining Ontario Line construction with GO expansion work that is already planned for the rail corridor Metrolinx advised that the Ontario Line will be further integrated with the TTC by running as a part of the TTC network, accessed with a TTC fare, and customers will be able to pay with PRESTO, as they do today
December 21, 2020	<ul style="list-style-type: none"> Concerned that there has not been any consultation with the neighbourhood Concerned that people have asked for an alternative to the above-ground portion of the Ontario Line and have yet to see a rational explanation 	December 22, 2020	<ul style="list-style-type: none"> Metrolinx advised that the plans have been updated based on what we have heard from the community, and we will continue to work with you to deliver infrastructure that fits within and enhances the neighbourhood
January 22, 2021	<ul style="list-style-type: none"> Requested to know the cost to complete the Ontario Line underground Requested Metrolinx to be more transparent about cost calculation 	January 29, 2021	<ul style="list-style-type: none"> Metrolinx provided an estimated cost of an underground Ontario Line which was generated with the help the city's Transit Expansion Office and shared a link for more detail Metrolinx shared a link to information about benefits of the Ontario Line's alignment Metrolinx informed that forthcoming environmental reports will have more details about impacts on environmental and way to mitigate through construction Metrolinx offered to setup call if more information is required
March 5, 2021	<ul style="list-style-type: none"> Expressed objection to the Lakeshore East Corridor Expansion and the Lakeshore East Joint Corridor portion of the Ontario Line Expressed concern for potential impacts to parks and neighbourhoods Requested more information on impact to parks, homes, and neighbourhoods 	March 23, 2021	<ul style="list-style-type: none"> Metrolinx noted that the Lakeshore East Joint Corridor will be a shared railway where the Ontario Line will run parallel to existing GO Service and that the Ontario Line tracks are planned to run on the north side of four GO train tracks Metrolinx confirmed that using the existing rail corridor and streamlining Ontario Line construction work with planned GO Expansion means work can remain mostly within an existing footprint to minimize impacts to surrounding neighbourhoods as much as possible Metrolinx provided a response to concerns related to the Lakeshore East Corridor Expansion and provided links for more information
March 8, 2021	<ul style="list-style-type: none"> Requested information on the Ontario Line to counteract a letter being shared within a community group 	March 8, 2021	<ul style="list-style-type: none"> Metrolinx outlined the benefits of the Ontario Line regarding traffic and pedestrian congestion on TTC Line 1

*Metrolinx proactively provided updates about the Lakeshore East Joint Corridor to members of the public based on previous correspondence about the Lakeshore East Joint Corridor and/or related project components.

Date of Correspondence	Summary of Public Correspondence	Date of Response	Summary of Metrolinx Response
			<ul style="list-style-type: none"> Metrolinx outlined the benefits of a surface transfer at East Harbour Station, Leslieville and Gerrard Station, including faster journey times and reduced construction and property impacts Metrolinx noted that community feedback is an important factor in the decision-making process and committed to bringing forward a comparison of impacts and benefits of various construction approaches for public discussion Metrolinx explained how Ontario Line trains will be electric and will ensure no additional emissions are introduced to the community Metrolinx confirmed that safety is central to everything they do, and that Metrolinx is partnering with the Standards Council of Canada to ensure potential hazards are identified and mitigations are put in place Metrolinx noted that the Environmental Conditions Report, Early Works Reports and an Environmental Impact Assessment Report will be shared with the community for public feedback in 2021 and 2022 Metrolinx provided a link to the Metrolinx blog for more information on the Ontario Line
March 8, 2021	<ul style="list-style-type: none"> Requested information on the Ontario Line and noise to counteract a letter being shared within a community group 	March 9, 2021	<ul style="list-style-type: none"> Metrolinx noted that environmental assessments are still being conducted Metrolinx noted that noise mitigation measures will be implemented in the identified community Metrolinx provided a link to the newsletter for more information on the Ontario Line
March 8, 2021	<ul style="list-style-type: none"> Expressed disappointment in the above-grade section of the Ontario Line through Leslieville and Riverdale, specifically related to potential impacts to neighbourhoods, residents and trees Expressed concerns regarding construction timelines and associated potential noise, vibration and dust impacts Requested the Ontario Line be underground 	March 9, 2021	<ul style="list-style-type: none"> Metrolinx noted that community feedback is an important factor in the decision-making process and committed to bringing forward a comparison of impacts and benefits of various construction approaches for public discussion Metrolinx outlined the benefits of a surface transfer at East Harbour Station, Leslieville and Gerrard Station, including faster journey times and reduced construction and property impacts Metrolinx confirmed that property will only be used when necessary and all possible impacts to private property will be avoided where possible Metrolinx provided a link to the Metrolinx blog for more information about why burying the Ontario Line through Leslieville and Riverside would result in significant community impacts
N/A	<ul style="list-style-type: none"> N/A* 	March 12, 2021	<ul style="list-style-type: none"> Metrolinx noted that the Draft Lakeshore East Joint Corridor Early Works Report will be released in September 2021 and the public will have the opportunity to provide feedback before the report is finalized Metrolinx noted that despite information provided in October 2020, the limits of the early works will include the portion of the rail corridor behind the condo property on First Avenue and details regarding anticipated impacts and proposed noise wall design concepts are expected to be available in six-to-eight weeks time at which a meeting can be setup Metrolinx noted that no Lakeshore East Joint Corridor early works construction is planned prior to July 2022 Metrolinx noted that the Draft Environmental Impact Assessment Report is expected to be released for public consultation in January 2022 and the public will have a 30-day review period
March 13, 2021	<ul style="list-style-type: none"> Expressed interest in the Ontario Line project being changed to the Relief Line 	April 14, 2021	<ul style="list-style-type: none"> Metrolinx explained how building in the rail corridor at-grade in this area can mitigate

*Metrolinx proactively provided updates about the Lakeshore East Joint Corridor to members of the public based on previous correspondence about the Lakeshore East Joint Corridor and/or related project components.

Subject: RE: Noise wall installation plans east of Jones Avenue

Hi [REDACTED]

Apologies for the late response.

Thank you for taking the time to write to us and I understand the impact of the GO trains to your home and family. As we move forward with Ontario Line and GO Expansion, we are taking great care to ensure this increase in transit service is met with proven solutions to ensure noise levels stay at existing levels or are reduced in many areas of your neighbourhood.

Retaining and noise walls are planned for the east side of Jones Avenue. You can view a plan attached here on page 8:
[https://urldefense.com/v3/___https://www.metrolinxengage.com/sites/default/files/_early_works_lsejc_2021-10-01_ol_draft_60611173_optimized_locked.pdf_!!ETWISUBM!iZMAJ34ohUt3o_owCGlDQ7vV6TNWl3TNlH8NcpdIXmKOkIKv5_NNdFwQi5inSJknVw\\$](https://urldefense.com/v3/___https://www.metrolinxengage.com/sites/default/files/_early_works_lsejc_2021-10-01_ol_draft_60611173_optimized_locked.pdf_!!ETWISUBM!iZMAJ34ohUt3o_owCGlDQ7vV6TNWl3TNlH8NcpdIXmKOkIKv5_NNdFwQi5inSJknVw$)

Happy to discuss plans over a phone call if that is easier. We also have a community office at 770 Queen Street East should you wish to have a conversation in person.

Feel free to reach out should you have any further questions,

Hello,

I am a Leslieville resident close to the Leslie/Gerrard Street intersection.

GO trains run immediately behind my property- all day.

The noise and vibrations are disruptive and have an adverse impact on our lives.
Our plates rattle on the dining table at meal times, our children wake up every time a train passes at night.

I have seen and heard a lot about noise walls in Riverside, but have not been able to find any clear information about your plans, if any, regarding noise walls east of Jones Avenue and north of Gerrard Street.

Those of us who live in this area deserve the same noise abatement as our neighbours on DeGrassi Street.

I would appreciate some information on your plans to install noise walls in my immediate community.

I look forward to hearing from you.

Regards,
[REDACTED]

Subject: RE: Lakeshore East Early Works Report

Hi [REDACTED]

Apologies for the late response. Thank you for your questions and taking the time to write to us.

I recognize your name from previous correspondence so thank you for your continued advocacy and feedback. I have responded to your questions below:

- Environmental assessment of this rail corridor (from Eastern to Pape) was already completed as part of the GO electrification TPAP for the Lakeshore East Rail Corridor. That said, Metrolinx has paused removals from Eastern Avenue to Gerrard Avenue until 2022 when the Lakeshore East Joint Corridor Early Works Report is approved.
- [A noise and vibration study of GO trains, Ontario Line trains, VIA trains and even freight trains](#) was included in this Early Works Report. It is detailed in the operational noise and vibration study.
- Methods used in the simulation are included in the appendix of the report. Can you please identify which pieces of the methodology you take issue with? The predictions were backed up by recordings at each receptor.
- In the data tables, receptors where weather impacted readings are noted with an X.
- Conservative estimates are defined as assuming max service levels that are possible based on the best information we have available.
- Bruce Mackey park will get additional green space because we will remove the existing fence and the new added walls will be further in the existing rail corridor than the existing fence.
- The Lakeshore East Joint Corridor Early Works Report analyzes potential impacts and identifies proven solutions for above ground Ontario Line plans. The Ontario Line business cases have concluded using the existing rail corridor with GO expansion ensures we can reduce community impacts and acquire less private property.
- Metrolinx has [analyzed multiple tunneled options](#) put forward by residents, community groups and City Council. All tunneled options increase construction time significantly, increase private property requirements and result in additional impacts compared to above ground plans. Most importantly, GO Expansion construction will still continue in the rail corridor.

I want to continue the conversation with you by phone or in-person. Can you please let me know your contact details and availability? I am also happy to meet you on De Grassi Street.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Dear Metrolinx,

The Draft Lakeshore East Joint Corridor Early Works Report (EWR) has several areas of concern and information that is missing. Please address the following issues and provide detailed explanations.

- The EWR is supposed to be the environmental assessment, however it does not include tree removal and subsequent habitat disruptions/displacement in the rail corridor, yet plans to begin removing trees this fall/winter. How is it possible to start removing trees without a full environmental assessment? The EWR states 'will try to avoid', what does this mean?
- In your communication with MP Julie Dabrusin you responded to a question regarding noise that "We are currently completing a noise study that assesses combined noise along the joint corridor (GO trains, VIA trains, Ontario Line, and freight trains). Results will be shared as part of the Lakeshore East Joint Corridor Early Works Report, which we expect to publish in the fall of this year. However, we are able to share that overall noise levels in the community will be lower than they are today." There is no such combined noise and vibration assessment in the ERW report. The ERW only briefly touches on noise during construction. Please provide a COMBINED report of the GO, Ontario Line and VIA Rail lines.
- Noise simulation are inaccurate. We live on De Grassi Street and the noise simulation of Bruce Mackey at highest level are lower than what we currently hear in our home. Please provide an accurate simulation.
- The 'data collected during inclement weather conditions were discounted from statistical analysis'. It is not stated which areas were discounted in

the report. Please provide which areas were discounted and what the actual levels were. There is a clear lack of transparency and misinformation.

- Baseline vibration measurements not required in EWR (4.5.1.2), 'existing vibration levels are expected to be below human perceptibility, except in close proximity to the existing rail lines'. How is this not required, when the issue is the at grade portion through Riverside and Leslieville where there is close proximity?
- 5.5.2 Vibration – only discusses construction vibration, though with increased trains there will be increased vibration.
- “Predicted construction noise levels estimates based on conservative assumptions” same for vibration (4.5.2.2). What was the rationale for these conservative assumptions?
- "In Bruce Mackey Park, a small sliver of land extending about two metres beyond the rail corridor at the south end of the park is needed for the new station. This will be more than made up for by the release of additional green space in the northern section of the park, resulting in approximately 1,100 square metres of net new green space." How are the park size “increasing” with finite land? Is this going into the ‘zone of influence’, will this take over the land indefinitely and on to people’s property/eliminate Wardell Street.
- There have been no viable alternatives considered, only variations of the same plan, ie. Phase approach and moving tracks to one side. Why is this?
- The cost of Etobicoke extension underground 6 lanes of traffic is higher than the cost to build underground in Riverside/Leslieville that is highly populated. Why was this choice made?
- What is the cost and addition to construction time for the new requirement to elevate the bridges?
- Why has there been no consideration of the revised relief line, though a motion put forth by city council?
- Current community engagement has been nonexistent, there have only been ‘virtual presentations’.
 - There is no feedback taken in from the community. Just scripted answers. Please provide honest and transparent answers.
 - When asking questions during the virtual presentations, there is no ability to follow up questions or rebuttals, the community member is muted.
 - Why was the notification of EWR first published on Sept 23, the same day as virtual presentation, was this on purpose so there was no time to review? There was no notification of the subsequent meeting Oct 5.
 - Received written notice on Oct 8, with feedback until Oct 24. This is not sufficient time to review at 270 page document.

- In general there has been a lack of consistent and timely information.
 - Why does the EWR downplay community concerns? “Several individuals expressed concern about the lack of meaningful community engagement regarding the at-grade portion of the Ontario Line through Leslieville and Riverside neighbourhoods”. The use of 'several' seriously downplays concerns and tries to gloss over this devastating change to the neighbourhood.
-
- Why does the Ontario Line East Segment Engagement survey only give very few options and no information on the pro/cons of each option to make informed decision? (ex. three different textures for retaining wall, is one more resistant to graffiti than another?)

I look forward to hearing from you regarding these serious concerns.

Subject: Jimmie Simpson Park

Hi [REDACTED]

I received your contact from my colleague regarding the tree normal at Jimmie Simpson Park. My name is Daryl and I focus on engaging Riverside and Leslieville residents.

First of all, thank you for your feedback about the shade the current trees provide and the lack of shade in the north end of the park. We are currently completing a comprehensive tree impact analysis and any trees impacted outside of the rail corridor will be detailed in a forthcoming Arborist report by early next year. The removal of these trees will take place in the second half of 2022, when constructions starts. The removals starting at the end of fall this year are within the rail corridor (within the existing fence).

That said, we do have a comprehensive tree compensation program we are following which compensates at a 3:1 basis. We are also actively engaging the community on landscaping treatments and tree replanting ideas [through this questionnaire here](#).

At our latest open house, we showed some representative and approximate renderings after the Ontario Line and GO Expansion is complete:

The Ontario Line

Jimmie Simpson Park

- 1 Estimated retaining wall heights in this area are between 4 - 5.5 metres.
- 2 Estimated noise wall heights are 5 metres.

NOTE: this rendering and measurements are approximate and are subject to change as design progresses and tree impact analysis is complete.

Happy to jump on a call to answer any outstanding questions,

Daryl Gonsalves

Subject: RE: Form submission from: Contact

Hi [REDACTED]

Thanks for writing to us through Metrolinx Engage and via email.

You are correct that we are moving forward with above ground plans because we have an opportunity to streamline construction with the already planned GO Expansion. In addition, above ground construction will be less disruptive and result in fewer property impacts.

I appreciate your creative idea and I believe some highways in Alberta incorporate that design feature. While I cannot promise it is possible from a technical and cost perspective, we do have a design questionnaire which is open until October 14 so the community can provide ideas on the design elements of the retaining walls, noise barriers and vegetative elements. Please submit your feedback and idea [here](#).

Again, thank you for writing to us and we appreciate your feedback,

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Ontario Line Through Leslieville

Message:

Hello,

I just watched all the the meetings with regards to the Ontario Line going through Leslieville.

Though I believe the community would prefer it to go underground. It does not look likely at this point due to the extra cost associated and the duration of construction.

They have proposed sound barrier walls though I think that would be unsightly and a short term solution as trains get older and tracks age and the volume of traffic significantly increases. I don't think that that is the best option. It will be unsightly, divisive and create a through neighbourhood as opposed to one where folks want to stop.

In saying that there is an opportunity to enhance community that I have not heard being explored. Why not build a tunnel around the lines above ground in certain areas (parks) and have it encased in green space so that it looks like a natural hill. This could connect Jimmie and Mackey park as well as other areas of the community as you would not need to use the main roadways to traverse the track system. We could have pedestrian walk and bike way going north south above the lines and stations (Pape-Lakeshore) to the dock, corktown park and don trails. It would be better for sound, sight, green space, pedestrian pathways... of course certain areas this may be too intrusive for residential and a sound or privacy wall may more appropriate.

I do not know where to express this opinion without having it fall on deaf ears. This would be less expensive than going underground and help to unify the community and bike paths around Toronto. Happy compromise. Furthermore, rails in the city are being covered by development and dock space, long term this could lead all the way downtown and all the way up across the where the current go rail line it. Just need to get metrolinx on board. Which they might do because it saves them going underground.

Has this option been weighed at all? The way the conversations are going and the way the website and survey are set up so sounds like the barrier walls are a forgone conclusion.

Thanks!

Cheers,

To: [REDACTED]

Subject: RE: East Harbour Station

Hi [REDACTED]

Thank you for your feedback and questions. Please see below for the answers:

- It would appear as if the East Harbour GO station is to be positioned on curved tracks. Will the requisite super-elevation of those tracks on which VIA express trains run make the boarding of and alighting from Metrolinx's existing Bi-level vehicles more difficult?

The track designs will consider alignments, curves, geometry, and fleet parameters to ensure the GO Bi-Level vehicles operate to the required technical standards for passenger boarding.

- Stated in the Ontario Line design consultations report (Sept. 23rd, 2021) is, "the transit agency released a report for upcoming work along the Lakeshore East GO rail corridor, where new Ontario Line trains will run on dedicated new tracks". As it planned to have a fourth GO transit track laid from Scarborough Junction to Union – and preparatory work has already started - this implies that there will be six tracks from Gerard to East Harbour station. Could the present embankment west of Gerard accommodate three more tracks?

The two Ontario Line tracks and four GO transit tracks will be located primarily within the existing rail corridor right-of-way and the embankment within the rail corridor will be modified to accommodate both systems. Concept design illustrating this is available in the [Draft Lakeshore East Joint Corridor Early Works Report](#). Another drawing can be found here:

<https://www.metrolinxengage.com/en/content/ontario-line-neighbourhood-updates-east-lakeshore-east-joint-corridor#technicaldrawings>

- If, however, the Ontario Line vehicles share the very same tracks between Gerard and East Harbour station that VIA and Metrolinx vehicles use, this has some important implications: the chosen wheel profiles and suspension characteristics of the (lighter) Ontario Line vehicles will have to be compatible with FRA track standards. Furthermore, their carbodies will have to meet AAR end loading requirements. Has such an approach where LRT's share main line tracks been done already in North America?

The Ontario Line and GO vehicles will have separate dedicated tracks designed for each system accordingly.

- Were Ontario Line vehicles to run on Metrolinx tracks they would have to use Metrolinx's

proposed catenary. Moreover, their propulsion systems would have to be compatible with Metrolinx's chosen electrification system.

The Ontario Line and GO vehicles will have separate dedicated tracks designed for each system accordingly.

- Bi-level vehicles are built to an AAR Plate H cross-section with their roofs at 15' 9" (nominally) above top of running rail (TOR). As the catenary wires must necessarily be several inches higher, their height above top of running rail will have to decrease considerably before entering the tunnels at either end. This has implications for the design of the pantograph (overhead sliding conductor).

The Ontario Line and GO vehicles will have separate dedicated tracks designed for each system accordingly. Bi-level vehicles will not operate on the Ontario Line system.

- Metrolinx state that *"the majority of stations and tracks for world-class transit services like Vancouver's SkyTrain network and London, England's Docklands Light Railway system are above ground"*. Be it noted that these two cities do not have the snow, ice and freezing rain conditions that Toronto has in the winter months. *The existing subway network in Toronto has a large percentage of at-grade and elevated portions. The Ontario Line will take lessons learned from existing issues and best practices to improve reliability during winter months. Weather conditions are a key design criterion for the stations and tracks, and Metrolinx is looking to develop the rail system to accommodate and be resilient against weather conditions including snowfall events and freezing rain. For example, heating elements can be installed at strategic locations on the guideway to protect critical elements and analysis of the potential for snow drift along the guideway can help prevent snow accumulation on the guideway.*

-

- One notes on the East Harbour Station diagram that the existing three GO Transit tracks intersect the platforms. Are the tracks going to be slewed or are the platforms going to be tapered? *East Harbour Station Early Works Reports depicts tracks and platforms at a conceptual level. Track alignment and platform configuration will meet all applicable standards, and will be refined as detailed design progresses. Track alignment configuration and platforms are being designed to Metrolinx rail standards. This takes into consideration geometry and site conditions. Corridor widening will be introduced where required to satisfy platform and track alignments requirements.*

- The report also stated *"that new noise solutions will keep sound levels the same or lower than they are today"*. With additional tracks allowing more trains to be run and given the same wheel-to-rail noise levels, I find this hard to believe. Out of interest, were the noise levels of the pantographs sliding on overhead wires ever modelled? *Metrolinx is committed to installing noise barriers with a minimum height of five metres, on both sides of the Lakeshore East Joint Corridor between approximately Eastern Avenue and Pape Avenue. With the noise barriers, noise levels are predicted to be the same as existing or lower at most locations. Details of the noise impact assessment for the Lakeshore East Joint Corridor can be found in the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report, available here:*

https://www.metrolinxengage.com/sites/default/files/rpt_2021-09-22_ol-oncorr_lse_nv_60611173_draft_optimized_locked_0.pdf. Metrolinx has also created a sound demonstration website that allows users to experience the predicted sound levels of the GO vehicles

as well as Ontario Line vehicles once in operation compared to existing conditions today. Visit OntarioLineSoundStudio.ca to check it out and leave your feedback.

Pantograph noise was not included in the assessment, as pantograph noise is not considered significant in comparison to locomotive and wheel rail interaction noise for trains operating at the speeds within this assessment. Pantograph noise typically becomes a significant source of noise for high-speed trains exceeding 150 mph (per the Federal Railroad Administration High-Speed Ground Transportation Noise and Vibration Impact Assessment document), due to aerodynamic noise resulting from airflow moving past the train.

Feel free to reach out should you have any further questions,

Attention: Franca Di Giovanni:

[Ontario Line - Projects | Metrolinx](#)

Franca:

May I please make a few comments and pose a few questions about the “Draft East Harbour Station Early Works Report” and also the “Draft Lakeshore East Joint Corridor Early Works Report”:

- It would appear as if the East Harbour GO station is to be positioned on curved tracks. Will the requisite super-elevation of those tracks on which VIA express trains run make the boarding of and alighting from Metrolinx’s existing Bi-level vehicles more difficult?

- Stated in the Ontario Line design consultations report (Sept. 23rd, 2021) is, “the transit agency released a report for upcoming work along the Lakeshore East GO rail corridor, where new Ontario Line trains will run on dedicated new tracks”. As it planned to have a fourth GO transit track laid from Scarborough Junction to Union – and preparatory work has already started - this implies

that there will be six tracks from Gerard to East Harbour station. Could the present embankment west of Gerard accommodate three more tracks?

- If, however, the Ontario Line vehicles share the very same tracks between Gerard and East Harbour station that VIA and Metrolinx vehicles use, this has some important implications: the chosen wheel profiles and suspension characteristics of the (lighter) Ontario Line vehicles will have to be compatible with FRA track standards. Furthermore, their carbodies will have to meet AAR end loading requirements. Has such an approach where LRT's share main line tracks been done already in North America?

- Were Ontario Line vehicles to run on Metrolinx tracks they would have to use Metrolinx's proposed catenary. Moreover, their propulsion systems would have to be compatible with Metrolinx's chosen electrification system.

- Bi-level vehicles are built to an AAR Plate H cross-section with their roofs at 15' 9" (nominally) above top of running rail (TOR). As the catenary wires must necessarily be several inches higher, their height above top of running rail will have to decrease considerably before entering the tunnels at either end. This has implications for the design of the pantograph (overhead sliding conductor).

- Metrolinx state that *"the majority of stations and tracks for world-class transit services like Vancouver's SkyTrain network and London, England's Docklands Light Railway system are above ground"*. Be it noted that these two cities do not have the snow, ice and freezing rain conditions that Toronto has in the winter months.

- One notes on the East Harbour Station diagram that the existing three GO Transit tracks intersect the platforms. Are the tracks going to be slewed or are the platforms going to be tapered?

- The report also stated *"that new noise solutions will keep sound levels the same or lower than they are today"*. With additional tracks allowing more trains to be run and given the same wheel-to-rail noise levels, I find this hard to believe. Out of interest, were the noise levels of the pantographs sliding on overhead wires ever modelled?

All the very best and stay healthy.

Subject: Meeting to discuss construction activities

Hi [REDACTED]

It was a pleasure to meet you today. I was talking to my Senior Manager (Mark, copied) and we wanted to offer you a meeting to answer your questions + provide the latest information to help you make an informed decision for the future of [REDACTED] and your property.

If that is something you are interested in, we can set a time up in the next two weeks.

I know you wanted a better understanding of the construction sequencing you can expect. We created a [short video here](#) that outlines what activities will take place as we begin construction mid-2022. Happy to chat about this in detail.

Have a great long weekend,

Daryl Gonsalves

Hi [REDACTED]

Thank you for your email. Going forward, please ensure you email the Ontario Line email so this correspondence gets captured in the final early works report.

I have attached the early works general map to this email. A good reference point is the 'existing GO tracks' to get a sense of where the new Ontario Line bridges will go in relation to the existing corridor for both Dundas and Logan.

Thank you for the note on [REDACTED]. I will pass it to our environmental team who will get a response to you and should it be an error, correct it for the final report.

Daryl

To: [REDACTED]
Subject: RE: Early works comments/ question

Hi Mike,

Thank you for your question on crash walls. It's important to note that we take safety very seriously so I would like to explain the safety regime the Ontario Line and GO Expansion is following in this particular rail corridor.

Metrolinx has worked together with the Standards Council of Canada (SCC) to create the Independent Safety Assessor for Railway Systems Accreditation Program. Following this program, SCC-accredited Independent Safety Assessors will review and provide recommendations of safety assurance during the design, build and testing & commissioning phases of the project, as well as continuing review of proposed changes to the railway once a project is in operation. Independent Safety Assessors who are accredited under the Program undergo annual assessments and witness audits by the SCC to ensure continued conformance with accreditation criteria. You can find more information about the program [here](#).

The risk assessments carried out by the contractor throughout the design, construction and operation phases of the project are based on CSA EXP11, Canadian method for risk evaluation and assessment for railway systems (CMREA) which Metrolinx worked with the Canadian Standards Association (CSA) to create. The CMREA sets out requirements for evaluating the significance of changes being made to a railway as well as detailed requirements for the corresponding risk management process and criteria for independent assessment by an independent safety assessor (ISA.) The Working Group for the development of the CMREA included representatives from Metrolinx, the private sector, and the Ontario Ministry of Transportation. Based on the European Union's Commission Implementing Regulations (EU) No. 402/2013 of April 30, 2013 on the common safety method for risk evaluation and assessment, CMREA introduces into Canada best practices as established and widely implemented in Europe for making any change to a railway system that is technical, operational, or organizational in nature. The framework for SCC: accredited safety assessor reviews and evaluates safety risks in the operation of the Ontario Line provided by the contractor, including possible interactions and any proposed mitigations with adjacent railways, property and associated facilities. Continued evolution risk assessments are carried out by the design team throughout the design process, ensuring that if risks are discovered, mitigations are created and captured in the design and construction of the project.

The CMREA risk evaluation process will address a wide spectrum of potential risks and will include proximity of Ontario Line operations to property and other buildings, along with any mitigations proposed by the designer team, all of which the Independent Safety Assessor will review in evaluating the safety case for the Ontario Line.

This is all to say the independent safety assessor will make recommendations that Metrolinx will ultimately have to adopt to ensure the safety of our customers, employees and the community.

I know this is a lot of information but I wanted to give you all the details to provide some assurance.

Feel free to reach out should you have any further questions,

None of the drawings show the crash barrier wall which is necessary to construct between the go/freight corridor and the lrt/subway corridor. Current federal regulations do not permit sharing corridors between light rail and heavy rail vehicles, except where temporally separated. Hence a crash barrier wall is necessary between the Go/freight corridor and the lrt. Please advise how this will be accomplished.

Hi [REDACTED]

Thank you for reaching out, and please accept our apology that the reports were not live on the website when you checked this morning.

Please find the links below to review and provide feedback on the two Draft Early Works Reports released today:

- [East Harbour Station](#)
- [Lakeshore East Joint Corridor](#)

Both reports are open for review and comment until October 24, 2021.

Please do not hesitate to reach out if you have any further questions. Thank you again for writing.

Best regards,

Caitlin

Hi Daryl:

We're you able to get any further information about this?

[REDACTED]

On Sep 20, 2021, at 3:27 PM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thank you for emailing us and I am sorry to hear your sleep was disrupted. I am looking into this work with the appropriate teams that oversee railway access.

We usually aim to complete work during the day time however due to safety concerns with an active railway, it is sometimes completed at nighttime. Our team strives to notify residents of upcoming work, especially if it is overnight.

Best,

Daryl

Hello:

Late last night / very early this morning, I could hear what sounded like heavy machinery and related project noise (construction? destruction? maintenance?) It was after midnight and ongoing and was very loud. I could hear it through my window over on Howie Avenue. It sounded like it was coming from north east of here. Needless to say it greatly disrupted my sleep.

Can you tell me if this was anything that Metrolinx was doing in connection with the planned Ontario Line or any other transit project? I did not receive any notice of overnight work being done. If it was Metrolinx and there is a plan to do anymore overnight work, what are you doing to mitigate the noise that this is creating?

Yours,

[REDACTED]

Subject: RE: Question - Sept. 8th Crew under Logan bridge - one of your's?

Hi [REDACTED]

Thanks for your note and I know the work was disruptive. It is associated with the Ontario Line and GO Expansion/GO RER work in the Lakeshore East rail corridor. They need to get an understanding of underground conditions to inform the best construction approach. The City of Toronto ultimately issues the work permits and determines if work needs to be completed overnight, such as this case.

Notice was provided to homes along Logan Avenue (via mailboxes and door knocking). My team also visited Ray McCleary towers to post notices on the front doors as well. In addition, we provided notices to cars parked near the work area. Digitally, the notice was also sent to community groups, posted on our website and shared through our weekly newsletter.

I do understand your frustration as canvassing is not perfect and we could miss a house or two. I do encourage you [to sign up for our newsletter](#). Notices can be found [here](#) on our website as well.

Feel free to reach out should you have any further questions,

Greetings

Last week on Wednesday, August 8th a crew did drilling work from 11pm to 1 or 2am underneath the Logan Ave. bridge between Gerrard St. and Dundas St.

There was no notice given to nearby residents on local streets and in the adjacent senior's apartment building.

As this crew appeared to be drilling to cut concrete and pavement for soil samples I was wondering if it was part of the Ontario Line project or the RER project.

Can you please confirm whether it was work being done on Metrolinx's behalf and if so why no notice was provided.

It was extremely loud and interrupted sleep for many blocks around.

Thanks ■■■

Hi Vanessa,

I saw the letter that was sent out in Riverside. I have a house coming on the market on Booth across from Jimmie Simpson Park - do you have any further details on how that house may be affected by the construction? The letter was vague in terms of how much access to the properties Metrolinx may need.

Thanks very much,

[REDACTED]

Dear Premier Doug Ford,

cc: Transportation Minister Caroline Mulroney, and Metrolinx

Transit riders have spent years waiting for fast, reliable and affordable new transit.

We need to build transit in Toronto, and it has to be built right, and built now.

That is why I am calling on you to:

- Build transit without delay;
- Commit to keeping transit in public hands, and not sell off our system to big business;
- Ensure riders pay only one flat fare for to ride the TTC and the Ontario Line;
- Listen to local residents' concerns; and,

- Expand the underground section of the line to include the route from Pape and Danforth to south of Eastern Avenue.

We get one shot to build transit. Let's build it right.

I look forward to your response,

Subject: RE: Truncated Gerrard St E

Hi [Redacted]

Thanks for your follow-up.

I know which area you are talking about. I can confirm that parcel of land is beyond the Metrolinx property boundary and requires consultation/direction with the City. Right now, we have plans to deliver new park space on the west side of the bridge like you see below. I will relay your message to the project team for consideration however, it may be worth it to note that it is unlikely to fit into the project scope due to timelines, compacity and construction impact.

Hi Daryl

Thank you for your reply!

I understand what you are saying in terms of that stretch of asphalt being city property. There is a small slice of greenspace between truncated Gerrard and the rail bridge (pic below for reference). What I am hoping is to simply have that greenspace expanded to cover over truncated Gerrard, creating a new park. Is all that land owned by the city? Would it be possible for Metrolinx to coordinate with the city to develop this space as the Ontario Line is being constructed? I have attached Nicolas Valverde, our neighbourhood's contact at Paula Fletcher's office, to this message in the hopes that some coordination between the levels of government can occur and this chapter on that small slice of Toronto rail and street history can be closed with a happy ending.

Thanks again!

Subject: RE: Truncated Gerrard St E

Hi [Redacted]

Thank you for your continued advocacy on this subject. I do appreciate how well you crafted the document and I love the history you included. I frequently walk/drive past that area and I understand what you are referring to – it is confusing and odd to have it laid out that way. I can see how it leads to traffic that should not pass by there.

In terms of the Metrolinx work in the area, we will be working on the rail bridge and the [future Ontario Line station at Gerrard](#). Although we will be impacting the dog park, we will be converting land just south of the park to restore and expand the Gerrard Parkette when the Ontario Line is completed (see 'Gerrard' drop down). As part of Ontario Line plans, we will be building continuous noise walls to reduce the sights and sounds of the rail corridor. The area you are referring to is unfortunately City land that we simply do not have jurisdiction over – this belongs entirely to the City and they ultimately will decide what happens to it.

If you do have any questions about the Ontario Line plans, feel free to reach out anytime.

Have a great weekend,

Hello

I am a resident of Leslieville near Gerrard and Carlaw and our neighbourhood has been trying to work with the city on solving an issue for 10+ years. In my most recent communication with Paula Fletcher's office, they suggested that this issue might be resolved as part of the Ontario Line construction. This is an opportunity for Metrolinx to create more greenspace in our neighbourhood and solve a misdirected traffic issue that has been ongoing since 2007. You guys could be heroes! For a detailed description of the history of this issue please see the attached document. I have gathered 20+ emails of my neighbours who I regularly update on this issue. I also created a Facebook page to document the ongoing misdirected drivers, despite the city's efforts to solve this issue.

Please start with the attached document. One correction I need to make (this will make sense after you read it) at the end I infer that the residents of truncated Gerrard will "lose" their frontage. As one of those residents pointed out, they would NOT "lose" their frontage, their frontage would simply be extended to straightened Gerrard St E.

Here is a link to the Facebook page:

<https://www.facebook.com/WhyTwoGerrards>

Here is a link to the discussion and show of support from City Council on this issue. One correction here, they state this section is "Gerrard Street between Carlaw Avenue and Badgerow Avenue". It's actually between Carlaw Avenue and Boston Avenue (although most of the misdirected drivers do end up on Badgerow).

http://app.toronto.ca/tmmis/viewAgendaItemHistory.do?item=2019.TF8.73&fbclid=IwAR1Z0nm54p7A0tebvd55w0NA__O5UKIvYH8iZwzCT-kWkNzYz7UXTIvw8

On the Facebook page you will find MANY videos of misdirected drivers who ignore all the signage. Here are links to the most recent. This was just a couple of weeks ago, but this type of thing is a regular occurrence:

Subject: RE: Ontario Line Technical Drawings

Thanks [REDACTED]

The backstory on these designs is that we have received numerous requests from local community groups (LSE CAC, Save Jimmie Simpson) for technical measurements. We provided them the cross section initially as we did not make enough progress on design and property conversations needed to play out from a legal perspective before we could provide the engineering drawings below. These drawings are simply fulfilling a request from community groups and the more technical folks in the community. Alongside the recent news on parks, we will put out a video showcasing the different parts of the rail corridor to help the community access this information easily.

[REDACTED] Save Jimmie Simpson has received these drawings and we have very frequent meetings with the Lakeshore East Community Advisory Committee. All the folks on that speaker's list I recognize and we have engaged.

Just so you know, I have also started door knocking in the community. The next consultation opportunity will be for the community to provide input into the design of the retaining/noise walls. I will keep you updated as we roll this out over the next two months.

Daryl

Thanks for this Daryl,

I'll assume that as these are being made accessible to the public, that these design elements will be made easier to digest? I'm listening to [REDACTED] Save Jimmie Simpson version of

speaking for "Everyone in Riverdale and Leslieville" They are gearing up as always and will continue to attack anything that could look out of place on the designs or that isn't easily explained.

No critique on the open house, though I know the public wants more time to ask questions.

Keep well sir.

Cheers,

Does this mean that an 60ft retaining wall will be built along our park?

Subject: Ontario Line - Follow up

Hi [REDACTED]

It was a pleasure to speak to your husband and yourself. I hope you got to work in time.

As promised, [here](#) is the east virtual open house link to replay the video or view the [presentation](#). I also mentioned to your husband the roll plan can be viewed [here](#).

Metrolinx completes a series of business cases to enable government to make decisions that are informed by the best available evidence. Our goal is to ensure the best possible ridership while minimizing impacts on homes, businesses and communities. Once we identify which communities the line will serve, we're able to then reach out to them to start discussing any impacts and how we'll solve for them. Thanks to the feedback from local community groups in your area, we have found even more creative ways to avoid construction activities in the parks within your community.

When determining the Ontario Line's Route and elevation, planners balanced considerations like:

- How many people could be served,
- How much travel time could be saved
- How many connections could be made to other major rapid transit lines
- How quickly and effectively the line could be built to bring relief faster to the network
- How effectively any local impacts could be managed, and
- How to ensure maximum transit benefits within the approved budget

I know you also mentioned the Eglinton line and why different alignment decisions were made. I want to say it's not about choosing one neighbourhood over another. We have a unique opportunity here to make use of a space that we already own, where trains are already running and where GO Expansion work was already planned. We're able to streamline the Ontario Line work into the same place, meaning we're not spreading out across multiple construction areas in the community. Where there's an opportunity like this, it makes sense to take it – especially when we have so many solutions available to us that will effectively manage any impacts. Tunneling the Ontario Line through this area would delay completion between 15 and 24 months – also adding to the length of time neighbourhoods would be disrupted by construction.

Again, thanks for taking the time to chat and I do recognize your advocacy and feedback on a

tunneled alternative,

Feel free to reach out should you have any further questions,

Hello [REDACTED]

I appreciate you taking the time to ask questions about current Ontario Line plans and voicing your strong support/advocacy for a tunneled option in your neighbourhood and your home [REDACTED]. We hope to be talking more regularly with residents directly in the future as we open our community office on Queen Street East.

I promised you some items to review:

- [Here](#) is the Toronto City Council review which provides more information on five tunneled options we studied.
- [Here](#) is a letter sent on June 8 by Metrolinx to the City's Transit Expansion Office which was shared with City Council and community groups.
- For your context, [here](#) is our report to Toronto City Council last year in November. We work directly with the City's Transit Expansion Office.
- [Here is an article we wrote](#) which explains the Ontario Line's environmental assessment process. A reminder that the environmental report for your neighbourhood will be shared this fall and will provide a 30-day feedback period to the public.

In the future, we are looking to hold more updates and a consultation on what the new retaining/noise walls will look like. Thank you for participating in previous engagements and we hope to see you in future ones.

If you have any questions or concerns in the future, please reach out to us directly,

Subject: RE: Questions about disruptions

Hi [REDACTED]

I appreciate you taking the time to write and start a conversation.

1. The portal at Gerrard is planned to ensure the Ontario Line will be underground before it reaches the school itself. It won't affect safe access to Pape Avenue public School. We're working closely with the school and parent council on plans to keep the area safe for students and faculty while also protecting the building and playground. For families who choose transit, the nearby station at Gerrard will make getting to and from school simpler.
2. [Here](#) are the detailed drawings you requested.
3. As we have mentioned in the town hall last week, the noise and vibration studied are ongoing and will be shared once they are complete and verified. The environmental report is currently on track for release this September (fall)
4. Bridges will be replaced in consultation with the city and we will be building them to their current standards, with five metres between the bottom of the bridge and the roadway. By comparison, the Queen Street bridge has a clearance of only 3.9 metres. This means the connecting rail tracks must also be higher. They will be raised by 1.1 metres at Queen, 0.9 metres at Dundas, and 0.6 metres at Logan. Replacing these bridges now means they will last for at least another 100 years and will avoid the need for frequent and disruptive repair work on aging infrastructure.
5. While bridge construction will result in temporary traffic and transit impacts, Metrolinx will communicate these impacts early and often through many different communications channels to help people plan their trips in advance. We also have a community office on Queen Street East and feel free to report any safety hazards to this email – OntarioLine@Metrolinx.com or give us a call. We take safety very seriously.
6. Metrolinx is committed to ensuring local businesses stay accessible, visible and 'open for business' throughout construction. We will do this through promotional materials, partnerships with BIAs, signage/wayfinding, marketing campaigns, workshops, events, partnerships with the city and streetscape maintenance. We are in close contact with the Corktown Residents and Business Association and of course, the West Don Lands Committee and St. Lawrence Residents Association/ St. Lawrence Market BIA.

Hope this helps,

Feel free to reach out should you have any further questions,

Hello -

I have some questions about the Ontario Line project.

- 1) Why is a portal on a city works yard going to be more disruptive to the community compared to being in the middle of a residential area next to an elementary school?
- 2) Where can I access the survey drawings with measurements of how the tracks will all fit within the existing transit corridor as your illustrations suggest? I'm looking for the drawings from Gerrard to Eastern.
- 3) Where can I access the consolidated sound and vibration study for the Ontario Line, SmartTrack, electrification, and increased GO services through the Gerrard-to-Eastern corridor that scientifically demonstrates how 1,500 trains daily won't lead to more noise and vibrations?
- 4) When the Ontario Line was proposed, one of your selling points was that the bridges from Gerrard to Eastern wouldn't need to be redone. Now you are saying they will need to be redone. What other parts of the project are you projecting to be repurposed to the community based on your original plan?
- 5) I am a pedestrian and business owner, living in Riverside but my company is in Corktown. How will you guarantee my safety as I walk to work considering the bridge reconstruction on Eastern and Queen?
- 6) With the new location of the Corktown stop, my business will be negatively affected as my company is in a historical building across from the proposed Corktown stop site. How will the construction noise, construction vibration, staging areas, etc, impact my team's ability to work when we're back in the office? After holding onto our office space through COVID, we are now concerned

that we'll have to leave as a result of your change of plans and alignment to what the city of Toronto had originally planned. What compensation are you offering to businesses who will have to relocate as a result of the destruction of the Corktown community?

I look forward to receiving your answers.

Dear Peter

Thank you for your prompt reply . Of Course you can give my information to Metrolinx my cell number is [REDACTED] so that I may speak to them and hopefully get some answers .

I tried the link they gave on your email and it was useless. Really no information about how I am 30 m. within the transit corridor and what actually is the area of the transit corridor .

However I hope that you are also going to provide for us support and further information on this situation as Metrolinx does have a history of lack of transparency, no concern for the environment, a total disregard for the Toronto historical neighbourhoods and city planning as well as human beings but worst of all of incompetence in doing a job if the Eglinton subway and now Corktown are examples of their work.

The issue that disturbs me is the lack of planning and destroying the property value of my house and many others by are putting properties on the land registry before they have made a decision what to expropriate.

Please give Metrolinx my number [REDACTED] as I need to have the information to make important decisions about my livelihood and retirement.

Thank you

Subject: NOTICE From Metrolinx

[REDACTED]

Dear Peter,

I received the attached notice today from Metrolinx stating that my property [REDACTED] is 30 meters of the transit corridor land and this will be put on the land registry and they will now

have control of my property to do what they want. From what I saw as from the original plans of the Ontario Line I am not 30 meters - I am at least 2 blocks away from the transit corridor. For me this is actually a falsehood or intimidation from METROLINX

Has Metrolinx used the COVID Crisis to change and enlarge their plans and just put neighbouring properties in the corridor so they can do whatever they want ?

It is despicable that they are sending such a form notice when people cannot protest and are vulnerable during COVID especially as we all are concentrated on getting the second dose vaccine.

Would you please look into this and provide answers. Have the plans changed behind our backs?.

Why do we not have any say in this matter? Metrolinx and Doug Ford are destroying downtown Toronto .

I am a senior and my retirement savings are in my house This will destroy all chances of me selling my house and my retirement savings if that goes on the land registry

I need answers !!

Subject: RE: Facts and Fiction - follow-up

Hi [REDACTED]

Following up on my email below.

1. Please review the presentation we provided at our open house on June 24. Slide 11 provides exact measurements of our impacts and the net increase in green space we will give back to the community. No park will be smaller after the Ontario Line is complete.

Parks	Approximate New Green Space (m ²)	Maximum Permanent Takes (m ²)	Net Increase in Green Space (m ²)
McCleary Playground	300	-	300
Jimmie Simpson Park	700	-	700
Bruce Mackey Park	1,300	-200	1,100
Gerrard-Carlaw Parkette / Dog Park	1,100	-600	500
Saulter Street Parkette	-	-	-
Tiverton Parkette	-	-	-
Total:	3,400	-800	2,600

2. Please see above table in the presentation (Slide 11). In addition, [please see here](#) for detailed drawings of current Ontario Line plans.
3. We are currently working with the City of Toronto to look at the existing parks and see if we can refurbish existing amenities or add new ones. We will also consult with the community on what the noise/retaining walls will look like and how that space can bring value to the community.
4. Gerrard Dog park will need to close due to Ontario Line and GO Expansion construction. We are working with the City to explore alternative green space that can be used to hold programming in the interim.
5. Regarding noise and vibration, please refer to my answer provided below.

Subject: RE: Facts and Fiction - follow-up

Hi [REDACTED]

Apologies for the delay in responding. I appreciate you writing to us and starting a conversation.

I am gathering some more information to share with you. In the meantime, here are some initial comments:

1. Due to progress with design, we are currently developing a graphic to share with the community in the [upcoming June 24 open house](#) regarding the Ontario Line and the neighbourhood parks. It will detail where we expect to grow by a small margin beyond our property line (only near the new stations to accommodate the station platform). If you can't make it, let me know and I will ensure you receive this graphic.
2. See answer above. We will have more to say on this specific point at the virtual open house this Thursday.
3. We are looking at a variety of options that we hope to present to the community shortly after we have completed discussions with City of Toronto staff on feasibility and their requirements. Some examples include: noise walls and additional vegetation such as embankments, vertical walls, tree planting (see link [here](#), slides 20 to 23). This summer, we will hold consultations with the community to see which feasible options they want to see implemented for the noise/retaining walls.
4. All community spaces are important. I bike through Riverside and Leslieville quite often and see the value these spaces have. We are working hard to think of creative solutions to avoid impacts and mitigate where it is possible. Right now, we are determining the impact at Gerrard Carlaw dog park due to the station at Gerrard and will have more to share in the upcoming June 24 open house. Again, if you can't make it, I will ensure you receive this information. Under current design, careful planning has ensured Bruce Mackey Park, Jimmie Simpson Park and Recreation Centre will be open to the public during construction and beyond the Ontario Line and GO Expansion.
5. The statement was made due to preliminary analysis from the ongoing noise study. In the current situation, there is no mitigation. Ontario Line plans have committed to continuous noise walls to protect the community from the sights and sounds of all railway traffic (see this [link](#) and attached image). Once it has been completed, and the findings have been verified, we will release it to the public. The environmental report for this area is due to release this fall (currently on track for September). The study will assess not only the increase in trains from the Ontario Line but also GO Expansion as well.

If it helps, I am happy to also have a telephone conversation for the week of June 28 so we can continue the discussion.

Hi. I received your Facts and Fiction handout earlier this month, and I have a few requests for clarity:

1. Myth / Reality #1 - if the rail corridor extending "far into neighbouring properties and streets" is a myth, but you later concede that "we will extend past our boundaries in park areas around the new stations at Queen and Gerrard", it feels like you're hanging your argument on the word "far". So, just how far do your engineering plans indicate that you will extend past said boundaries? I'm looking for a calculation, a hard number here, not a descriptive phrase.
2. Still with Myth / Reality #1 - again, based on your engineering plans, please tell me how much park space you calculate you will give "back to the community in other areas". And, could you also please tell me specifically where these other areas are? As you're able to confidently say that you "will" be doing this, you should be able to say where.
3. Myth / Reality #2 - "We'll also make safety our top priority and work with the community to restore it to a better state after we're done." What does "it" refer to in this statement - "the community" or "park space" from the previous sentence? And what are some ways you might do this (I'm hoping you have some possible ideas, if you're going to make this claim)? And who will be the decider of whether or not whatever you do has in fact made it a better state?
4. Myth / Reality #3 - "Important community spaces will close because of the Ontario Line" is countered with "They won't - they will stay open." Does this mean that there may be some community spaces which you consider 'unimportant' that may close? If so, which spaces? If not, why didn't you simply say 'ALL community spaces will stay open'?
5. Myth / Reality #5 - "It will not be noisier - it will be quieter." At some of the town hall meetings I've attended, 'noise' has been identified/measured/quantified not only in volume but also frequency and duration - i.e., with an increase in the number of trains, noise of some level will occur more frequently. Would you not agree that for those occasions in a day when there will be some level of train noise where there previously wasn't any train noise (because there was no train), those occasions are examples of when "the community will be noisier"?

Thank you for taking the time to read this. I would appreciate an answer to my questions.

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Hi [REDACTED]

Thank you for following up. We do anticipate the transfer points at Exhibition station and East Harbour station to be major contributors to reducing crowding at Union station. However, the 14% anticipated reduction accounts for both relief from these two Ontario Line-GO interchange stations and relief from Ontario Line-TTC subway transfer points at other interchange stations.

We appreciate your feedback about the transit corridor lands portion of the presentation and will pass it on to our teams. Thank you again for writing.

Sincerely,

Caitlin

Thanks for your reply.

One point that should be clarified is the “diversion of trips from Union Station”. In the neighbourhood profile you linked, this number is 6,300 for Exhibition. However, during the online presentations, a diversion of 14% of Union Station trips and a count of 14,000 were cited. If only 6,300 transfer occur at

Exhibition, then I have to assume that the rest of the diversion occurs at East Harbour.

Can you reconcile whether the diversion number/percentage is 14,000/14% in total for both directions/transfer points or conversely why the number cited for transfers at Exhibition is much lower than the trip diversion cited for Union?

Re the map: Yes I know it's available online. Given that this was only just introduced shortly before this round of meetings, it would be useful to explain how the map works and what the various colours mean, and also why the boundary of the "transit corridor" is so jagged on the map, but not on your cross section diagram.

Thanks

Subject: Consolidating Stats re Stations

Message: Greetings: In the West Segment presentation, Malcolm mentioned in passing various numbers including projected demand, population and jobs near stations, zero car households, etc. Some of these are on the map slides, but some are only in the verbal presentation. It would be useful if stats like this were consolidated for the entire line in one place. With respect to the corridor lands, it would be useful to include closeups of the affected areas around each station so that viewers did not have to dive into your site with the system-wide map (I did closeups myself for several locations in my article on this). You should also distinguish between the strictly "corridor" boundary and the 30m buffer. Thanks.

Subject: RE: Ontario Line Questions

Hi [REDACTED]

Thank you for writing to us and apologies for the delay in responding as we have received many inquiries lately.

We hope to rebuild trust with you and members of your community. As part of this, we have an office on Queen Street East that will reopen to the community once renovations are complete. This will ensure that we are close by to you and answer your questions directly. In addition, we have an upcoming virtual open house that you can sign up for [here](#). We have committed to more frequent engagement and will have consultations for determining what the future noise/retaining walls look like. We showed options at our last virtual open house [here](#).

It is important to note that we are a year from beginning construction and we are still working on understanding many details. We agree that a substantive environmental assessment is needed before construction starts. We are currently completing the environmental assessment for your neighbourhood and will share it **this fall** with a 30 day feedback period before construction begins in 2022.

I understand you want more measurements for the cross section we initially shared. Due to progress with design, please see attached for more detailed measurements and the location of the cross section.

You can look up your property [here](#) to see the boundary, labelled as the "Transit Corridor Lands + 30-metre buffer area" and shown in blue. I have also attached a screenshot of the Riverdale area. Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. More information [here](#).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place, just to coordinate your plans with Ontario Line plans by asking you to reach out to us prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. More details [here](#). The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions or near an airport, and it will be removed from the title after construction of the Ontario Line is complete. This does not prevent you from leasing, renting or selling your property.

Feel free to reach out should you have any further questions on anything I mentioned above,

Daryl Gonsalves

Hello Ontario Line Team,

As a resident of Riverdale, I have deep concerns about the Ontario Line and how it is being implemented.

I wanted to make clear that I am completely supportive of increased transit in our community and our city. What I am opposed to is the current plan for the Ontario Line and the manner in which Metrolinx is proceeding and the lack of transparency in planning and communication with my community. We are still waiting to see an actual plan from Metrolinx as to how exactly and where the Ontario Line will proceed and yet you are proceeding with early works that will irrevocably change the nature of our community.

As a homeowner who was informed just this week that our property falls within 30 m of the transit corridor land and that our land title will be altered to indicate that, I am very upset. We still don't know the exact nature of the transit plan that will apparently be running so close to our house.

Metrolinx has yet to accomplish a substantive environmental review that will inform us about the impacts on the environment including environmentally sensitive areas, species and habitat and other important concerns. It doesn't make sense to me that a project can move forward without these reviews taking place. What will the impacts be for our community for generations to come? We all need to hear this before any work is done on the construction of this project.

Metrolinx has lost the trust of my community. Your organization not been acting in good faith in interacting with the community from the start of the Ontario Line project. There has been evasive and misleading communication about how this will proceed. It is blatantly obvious that as an organization that Metrolinx is just barely following the community consultation guidelines so that you can claim to be listening to the community. You most certainly are not listening to the community.

Recently Metrolinx released a flyer into my community stating the facts and fictions of the Ontario Line project including the “myths” that community have been sending forth. The cartoon illustrations in the flyers with slim actual details further obscured the supposed plans and didn't address the specifics of the width of platforms for trains, the impact of the new bridges, the trees and sections of parks that will be removed, the close proximity of the expanded tracks to community buildings, the list of what Metrolinx is not telling the community goes on and on.

My questions for you are:

What will you do to restore the faith in building transit in the communities that you are impacting?

When will Metrolinx begin consulting with communities in an open and transparent way?

Will you let everyone in the community know what the actual environmental, social, noise and vibration impacts will be before you start the early works that will irrevocably change the face of our community?

Would you want to live in a house that was 30 m from the transit corridor land and have the title of your property indicate that in the land registry? Would you want to be informed of that fact by a letter addressed to Owner?

I look forward to hearing your responses to these time sensitive questions.

Thank you for your considerations,

Subject: RE: June 3rd letter received

H [REDACTED]

Apologies for the delay in responding as we have received quite a few inquiries recently.

The Ontario Line is being advanced in this area by using the existing rail corridor.

I have attached a detailed cross section north of Queen Street for your reference. We will be lifting and shifting the three existing GO tracks. GO Expansion will add one track while Ontario Line will add two. In addition, there will be continuous noise walls delivered to protect your community from the sights and sounds of the rail corridor. Currently, there is no mitigation in place between your home and the rail corridor.

After the environmental study for this area has been released to the public this fall, construction will begin in mid-2022. A timeline can be viewed [here](#).

We have written [here](#) about previous tunnelled approaches in this area. Most importantly, if we tunnel underground with the goal of preserving the planned station at Queen Street East, a tunnel portal is required which means significant impacts to homes on Saulter and McGee street. Should you wish to register a complaint, you can do so via this email or the 30-day feedback period following the environmental report release this fall.

Should you wish to chat further, happy to continue the conversation.

We have an virtual open house for this area this Thursday and you can sign up [here](#). If you have not yet, we do have a e-newsletter you can sign up for [here](#) that will provide all the latest updates to the community.

Hello,

I am at [REDACTED] and received the attached letter in the mail. I would appreciate clarity on whether it is certain or still uncertain whether this project will be going above ground next to my home.

I would also like to know:

- when construction will begin next to my house
- how many additional tracks lines are going in
- how I can register a formal complaint that this is now happening above ground instead of underground as initially proposed

Thank you,

Re: Ontario Line and Transit Corridor Land Designation under the *Building Transit Faster Act, 2020*

Dear Owner,

This letter is to notify you that the property you own or occupy is located on, or within 30 metres of, transit corridor land that has been created by the Province under *Building Transit Faster Act, 2020* for the Ontario Line. The *Building Transit Faster Act* introduces measures that support the accelerated completion of the Province's four priority subway projects.

What this means for you

We recognize how important your property is to you and that you want to know how this change impacts you. **This letter is not an expropriation notice and it does not mean we need to enter or acquire your property.** If we determine that your property is needed in any way as we complete our plans for the project, you will receive separate letters from us with more details.

As part of this change, the title of your property will include a notice about it being on or within 30 metres of transit corridor land. This will be shown in the land registry. **This does not restrict or prevent you from renting, leasing or selling your property now or in the future.**

The notice on your property means the following conditions **may** now apply to you:

- **Getting permits for planned work**
If you are planning to build, change or place a building, other structure or road on or under your property, a permit from Metrolinx may be required in addition to any necessary municipal permits. The same applies to excavation and water drainage work. This new permitting requirement will help avoid conflicts with nearby transit construction and reduce the likelihood that you might have to stop or redo your work in the future. If you are currently undergoing or planning any of these activities, please contact Metrolinx at development.coordinator@metrolinx.com or visit [Metrolinx.com/permits](https://metrolinx.com/permits).
- **Allowing access for transit planning**
Metrolinx may need to visit your property to help prepare transit plans. You will receive 30 days advance notice of any required visits. Workers will **not** enter any homes and will follow all necessary health measures to ensure your safety during these visits.

The plans Metrolinx prepares may identify a need to remove something that could interfere with construction, such as a shed, tree, or hedge. If this applies to your property, Metrolinx will also give you at least 30 days advance notice of removal.

If something on your property needs to be removed, Metrolinx will work with you to come to an agreement on how to best carry out the work and determine compensation.

Hi 

Thank you for reaching out. We hear your concerns about the transit corridor lands designation and how these lands were defined. We appreciate you sharing your feedback with us and hope to provide some additional context to clear up any confusion.

With the introduction of the new transit corridor lands designation for the Ontario Line, a high volume of property owners across the project had to be notified, which is why the letters were not further customized.

Transit corridor lands represent the areas where we need to carry out activities to plan and build the project, including noise and vibration studies, traffic access planning, and utility relocations, to name a few. We wanted to account for an array of needs that might come up during the delivery of this complex infrastructure project, which is why the boundaries extend further away from the planned route of the project in certain areas. You can find more information about transit corridor lands on our website [here](#).

The transit corridor land designation is intended to support the Ontario Line project and help avoid construction conflicts. It is not intended to prevent renovations or expansions from taking place; we just want to coordinate your plans with Ontario Line plans by asking you to reach out to us prior to getting any necessary municipal permits. The information we require is largely the same as what the City of Toronto permitting process requires. You can find more information about the permit process [here](#).

The letter we sent does not necessarily mean that we need to access or acquire your property in the future – you will receive separate letters if either situation applies. The language going on the title is purely for informational purposes, similar to properties located in certain subdivisions or near an airport, and it will be removed from the title after construction of the Ontario Line is complete.

Please let us know if you have any further questions, and consider signing up [here](#) for our e-newsletter. You may also wish to register [here](#) for one of our upcoming virtual open houses to learn more about transit corridor lands and the Ontario Line project.

Thank you,

Caitlin

Hello,

I write to express my dismay at receiving a form letter from Metrolinx telling me my property has been designated as part of the priority transit land use and will require Metrolinx permit approvals. The letter is upsetting on multiple fronts: Your letter failed to provide a map indicating Transit Zones Boundaries (I found it online); I received a form letter with no ownership name on it to address the highly sensitive issue of changing our property titles; and the letter was not anticipated in recent meetings with local residents.

Is this how you plan to treat our community? It is deeply disrespectful.

To Whom it may concern,

As we all know Metrolinx has absolutely no morals or conscience regarding the Ontario Line and how it affects our neighborhood or our property values and you continue to prove it to the general public. The lies you continue to spread are unbelievable. The fact or fiction piece of PR you put out to try and convince people you are in the right and everyone else is wrong was a nice try, but no one is buying it! Metrolinx has proven time and time again they can't be trusted to tell the truth and this is no exception.

Now you drop off a generic form letter saying the title of our property will now be altered has left us beyond bewildered and angry. Why is this the first time we are all hearing about transit permit zoning? And now we have to get your permission to do work on our homes? In one fell swoop, you have effectively destroyed our property value and for many of us, our home value is our retirement.

Your bullying and your overreach in our community is unacceptable and we will continue to fight

you every step of the way. You are a prime example of Ford politics at its worst.

Subject: RE: Ontario Line - Cost Comparisons

Hi [REDACTED]

Thanks for taking the time to write to me.

We are currently understanding the requirements and determining the exact measurements for raising the track bed. Once we had a better understanding of the range the project team was looking at, we shared it with a local community group in your area this past Thursday. The current estimate is between 0.9 – 1.6 metres. These measurements depends on several factors, including City of Toronto requirements, available space, constructability requirements, etc. Once we gain a better understanding, we will share all this information with the community for feedback and a better conversation grounded in all the details. This includes the bridge refurbishments and what will be required.

With the bridges this area, they are very old and require rehabilitation to not only extend their life but also accommodate the new Ontario Line and GO Expansion infrastructure. At the request of a community group, I checked with our project team and confirmed we are currently determining the best and most efficient way to refurbish the bridges.

Everything is still within the original funding envelope that was approved by the provincial government. After we release the environmental report this fall (currently tracking for September), we will tender the early works contract through our procurement portal.

From our last call, I know how important the trees were to you. The diagram I shared does not reflect any tree removals since we are still completing the tree survey. That said, there will be tree removals. Once we have more information on the number of trees that will be removed (healthy or invasive) to accommodate GO Expansion and Ontario Line work, we will share it with the community. On our call, I mentioned the various compensation ratios and vegetation guidelines we follow but happy to provide that information again if asked.

I attached the previous diagram I shared with you. In addition to this, I marked the exact location where this cross section is taken.

Best,
Daryl

Hi Daryl,

It's extremely troubling that, again, plans regarding the Ontario Line have changed dramatically without any community consultation. In fact, I learned about the proposed re-grading of the entire Lakeshore East corridor from a BLOG (!!!), rather than through our conversation last week or through a Metrolinx newsletter. My first question to you is to ask you why Metrolinx doesn't feel the need to consult with the community. The answer is clearly that your organization does not place any value on our opinions or feedback. Why not even show the courtesy of informing us about the change?

Second, was this re-grading factored into the cost projections released in 2019? If not, I would like to understand the proposed cost of this piece of work. Will this be only the first example of many cost overruns that are inevitable from an above ground option?

Finally, how could you tell me last week that an above ground option would be less disruptive to our neighbourhood when you're now proposing to rip apart two bridges within 150m of our street and regrade our rail corridor by lifting it 5 feet? Also your new diagram shows about 50% less trees in Bruce McKay. Is this an attempt to try to level set our expectations so we're happy with the 2-3 trees that will remain in our park after the OL rips through our neighbourhood?

Thank you.

I apologize as I did get a chance to review the specific details of the Transit Corridor Lands letter until after our meeting on Monday.

That said, I am happy to discuss what this means with you and I appreciate you reaching out. The language going on your property title is purely for informational purposes only. This is very similar to residential properties located in subdivisions or properties near an airport. You will still be able to sell, lease or rent your property. This language will be removed from your property title once the Ontario Line opens.

What this all means is if you are planning to build, change or place a building, other structure or road on or under your property, a (no cost) permit from Metrolinx may be required in addition to (and prior to) any necessary municipal permits. The same applies to excavation and water drainage work.

This letter is not a letter of expropriation nor does it necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. You can look up your property [here](#) to see where it sits within the transit corridor lands and buffer area, which are together labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and shown in **blue**. I attached a picture of the area around your home so it is easier to visualize.

Like I mentioned previously, we will answer questions about the transit corridor lands at our upcoming virtual open house on June 24 at 6:30pm. You can sign up for the virtual open house [here](#).

Happy to answer any additional questions,

Daryl,

We connected via Zoom on Monday and I just received a notice that Metrolinx will be placing a note on my property title indicating that the land is within transit corridor land. It's unbelievable that you didn't mention this on our call, especially as I was

discussing my concerns about this project affecting property values in the area. Could you please explain how this is not just another form of expropriation? I am very concerned with how Metrolinx is approaching engagement with the community.

Thanks,

Hi [REDACTED]

We are still fine tuning design in that area (it is at 30%) and we will share updated maps of Ontario Line plans once they are available. The June 24 open house will have more information.

That said, the project team recently shared more detailed measurements for a previous cross section we shared north of Queen Street which I am attaching for your reference. As you can see, the new Ontario Line trains will be closer to you due to the positioning of the new tracks. As a mitigation, they will be fully electrified from day 1 and there will be an effective noise wall added as well. Once again, we have written an article on the effectiveness of the noise wall which I linked to below.

Best,

Daryl

Thank you for chatting with me on the phone and I look forward to staying connected with you. I had the chance to connect with your neighbour as well [REDACTED]. I hope to keep your neighbours on Tiverton informed through you and I invite you to reach out to me directly should additional questions arise.

I understand how important your home and community on Tiverton is to you. Our commitment is open lines of communication as more information about the project is known and studies are completed. A reminder that we are working towards the Environmental Report which is currently expected to share **September 2021**. This is part of the Ontario Line's Environmental Assessment process and you can learn more about it [here](#). It will detail the full plan, associated impacts and mitigation measures Metrolinx will deploy. We are looking to advance the noise

and vibration study as we know residents want to see that.

Under current plans that are yet to be finalized, Tiverton Park will continue to operate throughout construction and beyond. We understand all the work you put into making this park a great asset for the community. That said, there might be short periods where geotechnical work is needed in the park to understand underground conditions or utilities in the area. If this is the case, residents will be informed through community notices with well defined timelines.

You can learn more about the future Ontario Line stations at Queen Street and Gerrard Street [here](#). Please note we are updating these maps with the latest information shortly.

If you did not attend our previous open house, you can view the presentation materials [here](#). Our next open house will continue the conversation and answer questions about the transit corridor land letters you received. It will take place on June 24 and you can sign up [here](#). The size of the transit corridor lands vary along the Ontario Line corridor, and are not limited to 30 metres from the existing the rail corridor where the Ontario Line will run. The boundaries were determined through work conducted by technical teams at Metrolinx and the Ministry of Transportation, who looked at the existing infrastructure of the area, the route and design of the line, and many technical considerations beyond that which could impact transit plans. An additional 30-metre buffer area was then set to create the defined transit corridor lands. This is why your home on Tiverton falls within these lands despite being a certain distance from the rail corridor where the Ontario Line will run.

What this all means is if you are planning to build, change or place a building, other structure or road on or under your property, a (no cost) permit from Metrolinx may be required in addition to (and prior to) any necessary municipal permits. The same applies to excavation and water drainage work. The language going on your title is purely for informational purposes only similar to properties located in subdivisions or properties near an airport. You will still be able to sell, lease or rent your property.

This letter is not a letter of expropriation nor does it necessarily mean that we need to access or acquire any of your property in the future – you will receive separate letters if either situation applies to you. You can look up your property [here](#) to see where it sits within the transit corridor lands and buffer area, which are together labelled as the “Priority Transit Project (Planned Subways) Corridor Development Permit Zone” and **shown in blue**. I attached a picture of this area so you have context.

I look forward to staying connected and I hope you reach out as you have more questions. I understand you have a group chat so please pass this invitation to your neighbours should they want to reach out to me.

Team,

I want full transparency on plans on how my property and street will be affected. I've lived here for 10 years, started my family, renovated my house, led an initiative to revitalize Tiverton Park, and was alarmed to receive the letter dated June 3rd. I'm extremely confused by proposed plans, revisions, spray paint on streets, green tags on trees, etc.

I'd like more information on exactly what is proposed and how the construction will affect Tiverton Avenue. I have spent a lot of money and time to make my house and neighborhood a great place to live. I also pay my taxes on time (which went up, again, this year, despite having two school aged children with me at home while my wife and I try to work). Our little street is a fabulous corner of the city that I would hate to see destroyed because of the Metrolinx line. I appreciate that this needs to be done somewhere, but please not here. There isn't a day that goes by that you won't see dozens of children playing on our street, something we don't have enough of in the city.

I would also like to know my rights as a land-owner with the aforementioned proposed work/construction.

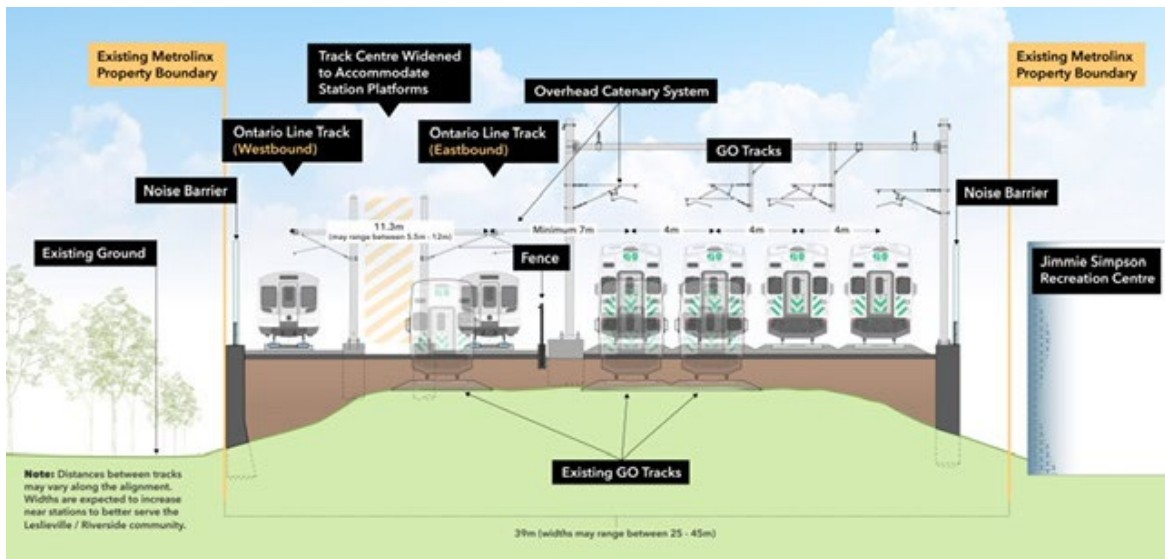

Please add me to any and all communications regarding the proposed work, I have added Paula Fletcher's office to comment on any/all of the above.

Happy to communicate to the distribution list I have from my time leading the Tiverton Park initiative, I'm sure that the 100+ residents in the neighborhood would appreciate more clarity on this issue.

Hi [REDACTED]

Great to chat for a little and open to having a phone conversation when you are available. Apologies for the delay in responding.

If you did not attend our June 24 open house, we have a replay available [here](#). The presentation posted includes more information about the neighbourhood parks will be larger after construction and more information on construction access into the rail corridor.

I appreciate the need for more detailed information. Detailed design is still ongoing so there are certain specifics we are still refining. In addition, property conversations need to progress with property owners impacted before we share information with the public. That said, due to progress on both of these fronts, we have made the engineering detailed drawings available [here](#).

Thank you for writing to us and starting a conversation.

Feel free to reach out should you have any further questions or if you want to chat further,

Metrolinx has distributed a very expensive PR campaign for the proposed Ontario

Line which continues to throw around massively false claims like 'a quieter corridor,' and one 'with all our trees in it' etc.- without providing one single finalized map with elevations, approved plans, or noise data tables to back it up with - something our community has been asking them for more than a year. We have been asking for factual data but all we get is a finger pointing back at us, accusing us of misleading our own neighbours. All we have been asking to see are accurate engineering and landscape drawings which show the true impact of the proposed Ontario Line - something that seems strangely elusive. Until we get accurate information how can you truly expect to get any community support?

Thank you,

Subject: RE: Ontario Line Media Campaign

[REDACTED]

I appreciate the conversation and thanks for engaging. We recently shared some more [detailed drawings](#) of Ontario Line plans in this area and I want to make sure you have a chance to review them.

I also want to make clear there is no transit oriented community planned for the station at Queen Street East as I know there has been speculation in the community. On June 8, [Metrolinx responded to the City Council](#) motion exploring the SJS community option. For numerous compelling reasons, we do not believe it will perform better than current plans and we continue to advance the Ontario Line in the existing rail corridor where the GO Expansion is already planned.

Due to consultation and requirements from the City of Toronto, bridges will be and we will be building them to their current standards, with five metres between the bottom of the bridge and the roadway. By comparison, the Queen Street bridge has a clearance of only 3.9 metres. This means the connecting rail tracks must also be higher. They will be raised by 1.1 metres at Queen, 0.9 metres at Dundas, and 0.6 metres at Logan.

Best regards,

Daryl Gonsalves

Daryl...

Thanks for the reply.

The flyer was designed to discredit opposition to MX plans. It only made them more angry.

The green line is symbolic. Where would it be if MX observed federal guidelines for setbacks from train traffic? It would be through peoples homes.

The decision to run above ground is irrational, unless we include developer influence. With the latest revelation that MX plans to raise the track bed 1 - 2 metres, the cost argument, any technical arguments, the "sound wall benefit" and the construction disruption arguments are all dead in the water. Customer experience was never compelling - the alternative proposed by SJS has no impact on station flow. The vertically stacked option is the norm everywhere.

Why do you put your good name on these messages?

>

> The primary goal of the flyer is to provide information to residents and encourage them to come start a discussion with us, bringing their questions and concerns about the project. The green line someone painted in the community to represent the new corridor boundary is incorrect and we needed to ensure Riverside and Leslieville residents can continue engaging in community discussion with a solid foundation of facts. Last night we held a virtual open house and you can view the replay by going here: <https://can01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.metrolinxengage.com%2Fen%2FOLLiveEJune24&data=04%7C01%7Contarioline%40metrolinx.com%7Cdb420a8ff14b4cda465a08d93b0e0927%7C191b00eaedcc406c8456dc29abc0f10f%7C0%7C0%7C637605753727284672%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzliLCJBTiI6IjEhaWwiLCJXVCi6Mn0%3D%7C1000&sdata=IFaSvcogErwGPFdn2sHuwJ07JrjI%2FmdZpkr1v6EFKI%3D&reserved=0>

>

> The decision to run the Ontario Line above ground is due to many compelling considerations, customer experience being one of them. Another consideration is how GO Expansion was already planned for this area and by streamlining Ontario Line work, we can reduce disruption by having a shorter construction schedule. In addition, plans for the Ontario Line include a commitment to noise walls along the rail corridor through Riverdale and Leslieville, a benefit as there is no noise mitigation that exists today.

>

> I'm not impressed that my tax dollars are being used by Metrolinx (information flyer) to discredit legitimate neighbourhood concerns about its proposed train corridor in Riverside. It is obvious that Metrolinx staff and consultants are dancing on the head of a pin in order to point the finger at the victims of the Ontario Line fiasco.

>
> I am similarly unimpressed with the Government of Ontario's Opinion piece from the Transportation Minister (Toronto Star: Ontario's Commitment... June 1). Yes it is unbridled self promotion, and I suppose we should expect to have to pay for that. But what isn't said is that this government has cut itself in to deal directly with developers behind closed doors, and at every decision point the benefits for developers take priority over the existing communities that will be affected. Seems like a recipe for bad choices and even corruption to me - and corruption is a reality in many jurisdictions - we are not immune.

>
> And so I felt somewhat cynical when I read in the Toronto Star (Toronto's Canary Wharf? June 6) about the glorious new development potential in East Harbour, and the facile explanation for why the subway is proposed to be above ground through Riverside after East Harbour - to save 4 minutes on a fantastic 20 minute commute (on the GO Train?!) vs a non-existent design (Relief Line) option, for the rare passenger who takes the subway to get to the East Harbour GO station, and who would not have had to wait for the GO Train in any case. I'm sure it could happen.

At this point in the project, this is the level of detail that is available.

The station will be integrated with the new bridge that will be constructed. The parking lot will help support construction.

Best,
 Daryl

Station? Parking structure? Please provide much more detailed plans please.

On Wed, Jul 14, 2021 at 2:48 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Happy to respond via email and if you would like a phone chat, give me a shout.

I included a zoom in for the current design of the nearby Ontario Line station at Queen Street East. As you can see, it will be integrated within the new bridge in this area. I also included land requirements for access and staging. Right now, the closest staging area to your store would be the Fontbonne Parking Lot near the bridge. Although construction in Riverside and Leslieville will start in mid-2022, we do not expect construction to begin on the west or north side of the rail corridor until the end of 2022.

Please note that we are in active discussions with Fontbonne to explore mitigation options. As mentioned on our previous call, the environmental reports for this area will be released this fall (tracking for September) and the final overall environmental report for the Ontario line will be released early next year.

Best,
 Daryl

Potential Land Requirements | Early Works

Potential Lands Required

- 1 356 Eastern Avenue
- 2 Laneway adjacent to rail corridor near Saultier Street
- 3 City owned plaza north of McCleary Playground
- 4 Dundas Street near Paisley and Booth Avenues
- 5 Dundas Street near Bruce Mackey Park
- 6 Logan Avenue
- 7 First Avenue and Gerrard-Carlaw Parkette (dog park)
- 8 10 Dickens

NOTE: If any properties are identified at this time and the map will be updated as design progresses, property owners are informed and/or agreement received.

Subject: RE: Seeking detailed plans and schedules for Ontario Line in Riverside

Hi [REDACTED]

It was a pleasure to talk to you and I appreciate how important this decision is for you. Should you choose continue your operations, Metrolinx works with owners and tenants operating businesses to see how they can continue operating if they are impacted by construction of a transit project. We will help businesses through construction by offering noise and traffic mitigation and local business supports like promotional signage, wayfinding, shop local programs and construction hoarding.

You asked for more information and I am happy to provide some materials for you to read below. Let me know if you have any questions on the content.

- [April open house presentation](#) – info on overall plan, graphics what the rail corridor will look like, what the retaining/noise walls could look like and preliminary results from the noise and vibration study.
- [Information on various parts](#) of the Ontario Line plan to service Leslieville and Riverside.
- The environmental report detailing full Ontario line plans, impacts and mitigation measures for this area is tracking for release in September 2021.
- [Article](#) on preliminary results from noise and vibration study. We are looking to advance these studies to release before the final environmental report in September 2021.
- [How plans were refined](#) recently to reduce infrastructure requirements
- Construction staging and access – this has not been defined yet as we are working to finalize the design. What we do know is that much of the access will be through main roads and much of the work can be done inside the rail corridor.
 - Like I mentioned, the Ontario Line is very different than the Crosstown project because it is not being constructed along one major road with stations in close proximity.
- [Preliminary Design Business Case](#) for the Ontario Line.

We also have a virtual open house coming up – June 24, at 6:30pm. Register [here](#). We will have monthly engagements with the community as more information about the project is known and ready to share.

Please reach out should you have any further questions,

Daryl

We received a flyer outlining some claims about the new Ontario Line that will be going through Riverside where we have two of our business locations. We are writing to you today to seek the technical documentation that supports those claims so that we can assess the impact on our businesses.

We are making post-pandemic plans for our businesses and we need to assess if we should close our two Riverside businesses permanently when our leases come up for renewal. It is our current understanding that our Riverside businesses will not be viable given the proposed above ground expansion of the rail line.

We require current and accurate technical drawings and schedules so we can make a fact informed

assessment of the future viability of our businesses in Riverside.

Please provide us detailed technical drawings of the plans of the Ontario Line for the area where the Ontario Line crosses Queen Street East as well as any documentation regarding proposed train schedules and any noise data you have.

Thank you.

Daryl,

May I be clear?

There is only ONE tunnelled alignment that the Riverside community has requested which is defined by Steve Munro as you point out.

If [REDACTED] and others think otherwise, please ask them to accept this option and cost it out. I am happy to meet with him to go through all the details.

Also, I'm happy to talk about bridges and measurements.

I/we have been waiting for months to get dimensions while recognizing that the route and track layout has been a moving target. It has changed configuration on more than one occasion.

I have already signed up for the virtual open house. With luck, this will be the last one and we will be able to meet in person going forward.

I am available all day next Monday, Tuesday or Wednesday, and Thursday morning.

Regards,

[REDACTED]

Hi [REDACTED]

Thank you for reaching out and sharing your excitement about the Ontario Line. We're excited too!

We appreciate your suggestion about building mixed-use, multi-storey developments around Ontario Line stations. Infrastructure Ontario is leading a [transit-oriented communities](#) program for the Ontario Line, which is focused on incorporating these types of developments. Plans for two stations at Corktown and East Harbour have been announced to date, and we look forward to sharing more information as further plans are developed.

To stay updated on the Ontario Line, including any transit-oriented communities announcements, please consider [signing up for our newsletter](#).

Thank you again for reaching out! Please do not hesitate to contact us in the future.

All the best,

Caitlin

Nearest Ontario Line Station (Optional): Pape

Subject: Density

Message:

Hello,

I strongly support the construction of the Ontario line and utilizing the existing rail corridors above ground to save time and resources. Density has to be a priority along these stations, I would love to see mixed use mid/high-rises incorporated into the new stations rather than wasteful one storey standalone buildings like most TTC stations are today. The Danforth near Pape is particularly underdeveloped and would love to see more high density residential as this becomes a transit node. Can't build this soon enough!

Cheers,

[REDACTED]

You know yourself that we aren't in the burbs or in the country side this is an extremely dense neighbourhood. How do you actually think this is ok? I will never understand that. You mentioned on our walk that Metrolinx didn't choose underground option as they would have to take peoples homes. So that isn't happening now? Or are the trains just going to go into people's back yards now. You have no other example in the entire world where they are designing this close to homes with all these trains tracks and are definitely not following any kind of recommended set back guide so that just proves to me that Metrolinx has complete disregard about safety, healthy neighbourhoods, and just real people in general.

Subject: Re: Ontario line Leslieville

what do you mean you dont have an example??? you mentioned that you are basing your design on other standards with these kind of crazy close set backs. So there are no examples in the world where trains are this close to houses.
Seems kinda crazy no? and risky?

Hi Daryl,

Can you please stop advertising that it will be less quiet as that is pure lies and you havent even completed a study yet that represents the actual scenario now. There are rarely trains going by now its perfectly quiet. So you cant tell me it will be less quiet then no trains now. Got me? Or do I have to explain it in a different way?

Hi [REDACTED]

Thanks for following up.

My previous email still has the latest information I have on safety and noise. The environmental report for this area is currently tracking for release this fall (current ETA is September) once studies are complete.

I attached an updated cross section and location we shared with a local community group recently. Due to progress with design, we included additional measurements.

Daryl

Hi Donald,

Can you please send me an example of where residential homes have been 2m away from 6 train tracks running continuously with no crash wall.

That's what s going to happen in leslieville on Tiverton avenue.

Also why does metrolinx require crash walls for new build on degrassi street but no crash wall for their own build along all those existing old homes?

Can a study be done for continuous noise vs now where there is no noise as trains rarely go by?
Metrolinx States it will be quieter then the current trains going by but it doesn't talk about the effects of constant quieter train noise?

Subject: RE: Riverside Station (Queen and Degrassi)

Hi [REDACTED]

Good to hear from you. Appreciate you taking the time to read through these dense documents. It's very impressive.

I also appreciate how you understand the importance of the Ontario Line project but want to have a debate the most effective way to deliver it. I will say Metrolinx has looked at 5+ underground options that the community brought forward to us. In our analysis of all these options, we found they negative impact the ridership, customer experience, many of them have major technical constraints such as slope restrictions and most importantly, they increase disruption to communities by increasing the construction schedule by 1-2 years. Much of this is detailed in reports to the City of Toronto [here](#) and [here](#).

By using in the existing rail corridor, we can streamline Ontario Line work with the already planned GO Expansion work to add an additional fourth track to the corridor. This will ensure we are impacting the community once instead of twice.

If you have some time, I would love to chat with you on the phone, have a video meeting on Microsoft Teams or have a socially distanced meeting outside. I am in the community quite often. Let me know what times work best for you and if you are interested.

Have a nice day,

Hi Daryl,

Thank you for your response. I certainly had my work cut out for me, reading through the 85 page Initial Business Case and 149 page Preliminary Design Case!

My concern is balance between providing additional transit service and the effect of the project on the local community. Although I appreciate that I will be able to get to Exhibition Place on a one-seat ride and get from Exhibition Place to the Ontario Science Centre in 30 minutes or less, quite frankly, I doubt that I would do either more than once or twice a year. Has a poll been taken of the surrounding community to see whether other community residents feel the same or whether they feel that this benefit outweighs the disruption to the community? I've never been asked, so I doubt that anyone else has either.

As for community consultation, your response below, says it all:

“As we make more progress with design, construction plans and mitigation solutions to protect the community, we will share this all in the forthcoming environmental reports this fall before any construction begins. Before those reports are released, we will also hold more open houses soon to provide a better understanding of the look at feel of this project in your community.”

Is it really “consultation” when decisions are made and then simply presented? By then it is a done deal.

The recent “Your Network Questions, Answered” brochure has a number of interesting statements, particularly to the question: *Aren't subways supposed to always run underground?* Yes, TTC's subway network has seven stations with tracks or above surface. But they all run along major streets, e.g. Yonge Street, Allan Expressway, Bloor/Danforth, not through residential side streets. And yes, in NYC 40% of the subway runs in open air as does 55% of the London Underground. But is that necessarily a good thing? Both of those systems were built over a hundred years ago. Are those the standards that Metrolinx should be measuring itself against! Hopefully we have come a long way since then.

Again, I have no dispute with the need for the Ontario Line. I do question though the decision to have the line 1) run above ground through the quiet Riverside neighbourhood side streets when there is a viable, even if more costly, option 2) need for a huge station at Queen Street East and Degrassi Streets so that I will be able to get to the Exhibition grounds or the Science Centre more

quickly.

[REDACTED]
[REDACTED]

On May 13, 2021, at 10:27 AM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thank you for reaching out and for choosing transit to get where you need to be.

You can find more information about the planning behind in the Ontario Line in the [Initial Business Case](#) and the [Preliminary Design Business Case](#). Strategic criteria that influenced the location of the Ontario Line station serving Riverside included:

- How many people could be served
- How much travel time can be saved
- How many connections could be made to other major rapid transit lines
- How quickly and effectively the line could be built to bring relief faster to the overall network
- How local impacts could be managed
- How to ensure maximum transit benefits within the approved budget

Like you identified, there is a congestion problem. We expect this particular station to be part of the solution by providing a popular transfer opportunity between the streetcar network and the Ontario Line. It will also make destinations in the city more accessible. For example, a trip from Leslieville to Exhibition, which was previously only served by a combination of surface network routes, can now be completed on a one-seat ride on the Ontario Line. A trip across the entire Ontario Line will also take 30 minutes or less, getting you from Exhibition Place all the way to the Ontario Science Centre in record time – something that cannot be achieved with additional buses or streetcars in an already congested city. Our estimate shows the Ontario Line will have daily ridership of 388,000.

Construction means some level of disruption and we are committed to working with your community on Allen Avenue to mitigate those disruptions. One example is coordinating construction schedules so that noisy operations do not occur simultaneously. As we make more progress with design, construction plans and mitigation solutions to protect the community, we will share this all in the forthcoming environmental reports this fall before any construction begins. Before those reports are released, we will also hold more open houses soon to provide a better understanding of the look at feel of this project in your community.

My name is Daryl and I am your contact at the Ontario Line. We are opening a community office on Queen Street East so feel free to visit us in the future if you have

any concerns or questions. Consider signing up for our [e-newsletter](#) to receive all the latest project updates.

Feel free to reach out should you have any further questions,

I have lived in the community (Allen Avenue) for thirty years and have seen a lot of good changes to the neighbourhood. So I am greatly interested in the proposed Ontario line and specifically the proposed Riverside station at Queen and Degrassi.

One of the reasons given for the need for the station is:

“Eliminating the station would greatly reduce customer benefits – especially for people living in the immediate vicinity – and the much-needed relief for the 501 streetcar will be lost.”

I don't own a car so one of the reasons I have lived in the community for so many years is the excellent public transit available: the 501 Queen, 503 Queen, 504 King, 505 Dundas and 506 Gerrard streetcar lines.

So I wonder how many local residents will take advantage of the proposed Riverside station at Queen and Degrassi which will create a huge disruption to the surrounding residential area.

Could you please provide me with the data you used to determine that people living in the immediate vicinity have a need for / would use this station.

I agree that the 501 streetcar line is overcrowded. Has Metrolinx, in conjunction with the TTC, considered alternative solutions that would be much less expensive and cause

less disruption to the community, such as:

A) An express bus along Queen from Victoria Park to the proposed Moss Park station. The bus could pick up/drop off riders at major intersections only.

B) Increase in the number of streetcars on Queen street or a car free corridor as was done on King Street.

I look forward to your reply.

Hi [REDACTED]

Don't apologize, it's a large project and we can always do better to improve our maps.

That's correct. Ontario Line plans will not impact or modify Leslie Barns. Since you live on Woodfield Road, your neighbourhood will not be impacted by Ontario Line construction. Once the Ontario Line is completed, the Eastern Avenue (East Harbour Station) and Queen Street (Leslieville Station) will in fact serve your neighbourhood as you can easily connect via the TTC streetcars.

If you neighbours have any more concerns, feel free to reach out to me directly.

Daryl

Hi Daryl,

Thank you very much for taking the time to answer my question. I guess I find the map a little confusing for which I apologise. Plus, as I mentioned, there are a lot of rumours about Leslie Barns being a part of this so I thought I might ask about it.

I live on Woodfield Road and was wondering if there are plans for Leslie Barns or how these new lines might affect those who live on this street.

When I look at your map, I don't see anything to do with Leslie Barns at all.

I would be happy to share the information with my neighbours whom are concerned as I am as well.

Thank you so much.

Hi [REDACTED]

Thanks for reaching out. I am not sure I understand your question so apologies if I do not provide all the information you need. Happy to follow-up if you can provide more details. I am assuming you live in the east end based on your question.

The Ontario Line will include a new East Harbour station which will be at Eastern Avenue, just on the east side of the Don River. From there, the Ontario Line will continue north and east to stop at Queen Street (Leslieville Station) and Gerrard/Carlaw (Gerrard Station). Our maintenance and storage facility will be in Thorncliffe Park.

You may have also been mentioning the TTC's streetcar yard, Leslie Barns, which is a different facility for different types of vehicles.

To learn more about the Ontario Line stations I mentioned, [click here](#).

To learn about the Ontario Line in general and sign up for our e-newsletters, [click here](#).

Hi [REDACTED],

Thanks for taking the time to write to us and sharing your experiences with walking along Wardell Street.

The Ontario Line is following a robust [Environmental Assessment process](#) and one important component which we did not have too much time to speak about at the April 22 open house are the natural environment studies. The [Environmental Conditions Report](#) released last year studied the natural environment along the Ontario Line route, which includes wildlife in and near the communities where the Ontario Line will serve. As we complete these comprehensive studies looking at the impact of construction and operation of the Ontario Line on wildlife, we will propose solutions. All of this information will be shared in the forthcoming environmental reports which will be released later this fall and in early 2022.

Once again, thanks for writing to us and participating in the April 22 open house. We will be sharing more engagement opportunities and we look forward to sharing the results of these studies once they are completed.

Feel free to reach out should you have any further questions,

Message:

I attended your virtual public meeting on April 22 and just wanted to make a few comments.

I started taking daily walks with my dog along the park on Wardell Street about 20 years ago and have continued the habit with my second dog. Yesterday the robins and cardinals were singing loudly and a group of 5 red-winged blackbirds was fluttering about in the bushes on the railway right-of-way. That area, with its bushes, tangles of vines and scrubby trees, provides such an important micro-habitat for birds - in the winter there are chickadees, hairy and downy woodpeckers, cardinals and goldfinches. In the spring we have kinglets, brown creepers, vireos and a variety of warblers passing through. I've seen Cooper's hawks and sharp-shinned hawks and kestrels. There are groundhogs and I once saw a coyote.

I was disappointed during the Metrolinx presentation to hear the chair say that you would 'consult' with the community about what we wanted in those parks - perhaps a bench or some shrubs. You can't replace the natural habitat which is there now by doing some sort of manicured planting. I realize it's your r-o-w and you will do what you want with it. Already much of the underbrush seems to have been cleared. However, I just want to voice my concerns about something else that this community will be losing because of the above-ground railway corridor expansion.

Please provide a response to this submission.

Thank you.

Regards,

[REDACTED]

Subject: RE: Dundas street bridge - leslievile

Hi [REDACTED],

Thank you for your email and I believe my colleague Josh met with you earlier. Great to e-meet you, my name is Daryl and I am leading engagement with Leslieville and Riverside. We operate from one shared email so feel free to reach out through this email.

At this point, we do know the Dundas Bridge will need be refurbished in order to accommodate the Ontario Line and GO Expansion. We are still in the process of identifying design requirements for the bridge refurbishment and so we cannot confirm measurements and impacts at this time. Our priority is to reduce impacts on area parks and private property. Once we have more information, we will provide an update to the community. Based on what I am hearing from the project team, I expect there should be more details available in early summer.

Feel free to reach out should you have any further questions,

Hello - I live up the street from the Dundas street bridge in Leslieville on Tiverton Ave. Many of us use the public car park at the south end of Tiverton. How much will the Dundas Street bridge need to be widened and how much of the car park will be affected during construction and after the tracks are live? Thanks!

Subject: RE: GO/Ontario Line Transfer at Exhibition Station

Hi [REDACTED]

Thank you for your question about the future joint Ontario Line-GO platform at Exhibition station. Please accept our apology for the delay in responding.

We hear your concern and feedback regarding the practicality of the eastbound Ontario Line and westbound Lakeshore GO line sharing a joint platform. This is an issue our project teams have also considered. We investigated several construction options when developing the current layout, including possibly crossing the Ontario Line over when travelling westbound into Exhibition station as you suggested, but the operational complexity and associated costs of switching to a left-side configuration outweighed the potential benefits of having cross-platform transfers.

That said, we are developing plans for a new overhead concourse at Exhibition station and the need for easy and intuitive GO and Ontario Line customer access and reduced transfer times is a key priority.

If you haven't already, please consider [signing up for our newsletter](#) to stay updated on the Ontario Line and future public engagement opportunities. Please do not hesitate to contact us if you have any further questions.

Thank you,

Caitlin

I see the GO Westbound and Ontario Line will share a platform.

If Ontario Line trains run on the right side, that would be Ontario Line Eastbound meeting with GO Lake Shore Westbound train; a transfer very few would use.

Is there an intention to run Ontario Line trains on the left-side (opposite of TTC subway) so an Ontario Line Westbound train will share a platform with GO Lake Shore Westbound?

Has there been consideration to having the OL tunnel cross-over (duck eastbound below westbound) between Bathurst and Exhibition? That is, OL trains run on the right most of the time, but on the left at Exhibition station only to provide a convenient westbound transfer?

regards,

Thanks for the follow-up.

GO Expansion will add one additional track and Ontario Line plans will add two additional tracks. Since both Ontario Line and GO Expansion project schedules overlap, Metrolinx will be able to streamline construction in the area. I have attached a cross section graphic to help visualize what certain points of the rail corridor could look like. More detailed design work is continuing which will allow us to confirm the locations of the retaining walls and any impacts to adjacent property. Thanks for your patience while we complete this work.

Feel free to reach out should you have any further questions,

Ok thanks for the update. Just a couple quick things.

I understood there was a 4th GO track to be installed (Ontario Line) and in addition to the subway expansion (relief line), which would bring 2 additional tracks.

Has the 4th GO line been greenlit or is that on hold? Is it 2 separate projects or are they contingent on each other?

Thanks

Thank you for writing to us and for participating in the recent virtual open house. A lot of the discussion last week was focused on the area around the future Leslieville station because we had new information to share about anticipated impacts there.

Right now, we are still finalizing details related to the portal at Gerrard, looking at how we can best reduce our requirements as much as possible. Once that is complete and any property requirements are identified, we will reach out directly to property owners to make them aware. Due to legal sensitivities, we cannot share more about these conversations with employees or tenants but we will provide information to the public as soon as possible.

Feel free to reach out should you have any further questions,

Hi [REDACTED]

Thanks for your follow-up.

For the Lakeshore East Joint Corridor Early Works, we are still finalizing the design before determining the best construction method to use and a construction work schedule. Once we start determining the construction schedule, we consider impacts to the community, safety issues, rail traffic, coordination with other construction in the area, etc. Once we start construction, we will establish lines of communication with the community so you are aware of what work is happening and what to expect for the future. We know construction means disruption but we are looking at how best to minimize it wherever we can.

Hi Daryl,

Thanks for your reply from a couple of weeks ago now (please see below).

I do have another question:

In terms of the Early Works part of the project for Lakeshore East Joint Corridor, does Metrolinx anticipate much of the work happening at night?

We've heard that is likely the case due to safety issues surrounding work happening during the day as the

majority of trains use the corridor.

Can you let me know any thoughts on this?

Thanks very much,

██████████

On Apr 23, 2021, at 12:54 PM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi ██████████

Thank you for your question and your kind words. We recognize the need for more engagement with your community and as we start making more progress with the project, we are excited to share more information.

Since the Ontario Line is a massive project, we have split the work into three different packages and multiple 'Early Works' projects. For the East section, three pieces of work are important to note: Lower Don Bridges Early Works, the Lakeshore East Joint Corridor Early Works and the Northern Civil, Stations and Tunnels package. I have attached a graphic to this email to help visualize the timeline.

Lower Don Bridges Early Works

- New Ontario Line bridge will be added to the north side of the existing rail bridge.
- Expected to start in 2022, following public consultation on the draft environmental report this summer.

Lakeshore East Joint Corridor Early Works

- Expected to start in mid-2022, following public consultation on the draft environmental report this fall, and last for at least three years.
- Includes GO rail corridor vegetation removal, grading, realignment of existing tracks and new track, relocation of utilities, refurbishment of all existing bridges (Queen, Dundas, Logan), installation/upgrading retaining and noise walls.

Once early works are concluded, station construction for Leslieville and Gerrard will begin followed by rail track installation. Construction of the tunnel beginning at Gerrard and running north up Pape is expected to begin in 2023.

As we advance procurement, we will have a better idea of when the each piece of work will be completed. The opening of the Ontario Line is expected by 2030.

We recognize construction of major transit infrastructure is disruptive and we are here to help. Along the way, we will strive to keep the community updated with advance notification where possible and we will be close by with our community office on Queen Street.

Let me know if you have any further questions,

Message:

Hi there,

Thank you for putting on the virtual open house for the East section last night. I'm encouraged by your team's commitment to holding monthly meetings, as well as the upcoming opening of your office on Queen. In the meantime, I'm hoping to get a rough idea of the construction timeline specifically for the East Section, including Leslieville Station. Are you envisioning three years, five, one? Will construction go on throughout work along the entire line, so closer to a decade? I won't hold Metrolinx to any numbers, as I know variables are a fact of life for transit around the world, but would like some sense of how long we can expect disruption, no matter how rough that estimate is. Thanks again for last night, and I look forward to your reply. [REDACTED]

Thank you!! What about the compensation process in case our foundations which are in stone are destabilized? You mentioned there is a compensation process.
Have a great day?

On Mon., 3 May 2021 at 9:03, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

It was great to chat with you last week. I connected with my colleagues internally and here is some more information you requested:

Ontario Line train specifications

- Ontario Line trains will be fully electric and smaller than the trains TTC uses.
- They will be fully automated which is the safest system in use around the world. Train doors will automatically open and close in sync with platform edge doors that will be installed at all stations, keeping both passengers and objects safely separated from moving vehicles.
- Trains could be about 100 metres in length assuming a three metre car width
- There will be capacity to run 40 trains per hour during rush hour which means an interval of 90 seconds between each train.
- More details will be shared in the future as we advance in the procurement process.

Noise wall design

- I have attached pictures of some design ideas that the team is considering.
- Public engagement on retaining and noise wall design concepts will begin in early Summer 2021.

Bridges

- As part of the 2022 construction work, all of the bridges will be refurbished to accommodate the Ontario Line and GO Expansion.
- There are no further details I can share as they are still finalizing requirements and design.

Property impact process and compensation

- Right now, there are no impacts identified to [REDACTED] at this current moment in time.
- If Metrolinx confirms that a property is needed/impacted to support construction or operation of the Ontario Line, you will receive direct confirmation from us informing them that this is case. After that, Metrolinx will arrange to meet with the you to answer any questions you have, including how much property is needed and why, how the acquisition process works and expected timelines. Multiple meetings will take place throughout this process to ensure you have the information and support you need. Like I mentioned on our call, we are still confirming requirements and we expect to complete this by fall 2022. If your property is impacted or required, Metrolinx will compensate you at fair market

value, and our commitment is to ensure owners do not experience a financial loss.

I hope this helps and feel free to reach out if you have any further questions,

<ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

I understand that picture looks disturbing and thanks for reaching out again.

As part of Ontario Line early works in your neighbourhood, we will be doing an extensive refurbishment of the Queen Street rail overpass. This will be done according to the latest bridge construction standards set by the City of Toronto and the Province of Ontario.

I can assure you that the project team is taking safety very seriously. In my previous emails, I provided some background on how Metrolinx is looking to international rail best practices to determine all potential hazards, like derailment, and properly mitigating them as much as possible. It's important to note that Ontario Line's train technology has automatic control which will have the latest monitoring technology so sensors can detect if the trains need to stop due to any hazard on the rail tracks.

As we advance design and develop this standard, Metrolinx will have more so share on safety and our construction plans.

Have a good day,

<ontarioline@metrolinx.com> wrote:

[REDACTED]

Thanks for taking the time to meet me on Wednesday morning and for attending the open house yesterday. I hope this will be start of many conversations as we move forward with the Ontario Line.

Responding to your points of concern:

1. The six-track joint corridor will be subject to an evaluation conducted with an Independent Safety Assessor to ensure the utmost

safety standards are in place for passengers, operating and maintenance staff, and the communities that the Ontario Line will travel through. This evaluation will follow the European Standard the European Common Safety Method for Risk Evaluation and Assessment and will consider a range of factors, including operations, safety, and security measures, emergency procedures and maintenance. As we discussed, the Ontario Line will use remotely operated trains that run on an automatic signalling system which are considered to be the safest model in use.

2. As discussed in last night's open house, [here is a link to a recent blog post](#) where we share initial data from the noise studies which look at the effectiveness of noise walls in rail corridor. Early results show the sound of every train passing through Leslieville and Riverside will be reduced by up to 50%. Noise levels throughout the day and night will also be lower than they currently are at a majority of locations along this part of the route. Once the findings are reviewed and verified, they will be shared with the community in the Lakeshore East Joint Corridor Early Works which will be released later this year.
3. As you saw with the two cross sections last night, Metrolinx will be able to stay almost entirely within the existing Metrolinx property boundary.
4. Above-ground rapid transit is already a proven solution in cold-weather cities across the world, including the TTC's existing subways here in Toronto. As we select a successful bidder to deliver the train technology, we will review

the track record of the proposed technology in cold weather.

5. Vancouver (Canada Line), Montreal (REM) and London (Docklands Light Railway) are a few examples of other transit systems that have used above and below ground routes to significantly expand their transit systems through urban environments. Our experts looked around the world for best practices and how to best deliver this project.

Our decision to build the Ontario Line in the existing railway was based on plans to limit or reduce the combined impacts of rail traffic to surrounding communities, including private residences, businesses, parks, streets and existing transit.

I understand you have concerns and we welcome you to bring them forward as we continue more frequent engagement with your community in advance of the Lakeshore East Joint Corridor Early Works Environmental Report this fall. As we move forward, we are committed to working with the community to ensure the Ontario serves the neighbourhood with maximum benefits and the solutions put into place allow you to enjoy your neighbourhoods for years to come.

Please reach out should you have any additional questions or feedback,

Hi Daryl,

Thanks for meeting us today. Have you read this guideline but for new developments.

Some points of concern:

1. safety , crash walls for 8 degrassi recommended by metrolinx so obvious safety concern by them even with these new trains but grandfathered approach for all others?
2. Noise levels and constant noise what is recommended levels for being this close to tracks and what will be achieved?
3. Cross section showing closest house and train what is the recommended setback vs what is being proposed. Will this be clear to everyone?
4. Above ground seems like it will cost way more compared to underground. Maintenance in winter ex. Go trains always shut down during winter snow and Scarborough above trains. I don't see how a new train system would avoid winter maintenance.
, working with old railway corridor expensive, many engineering studies, Walls walls walls \$\$\$, retaining walls, crash walls, noise walls etc.,. Artwork landscaping to try and make it look nice, destroying neighbourhood as no one will want to live next to this no matter how beautiful , wonderful and compelling you try and make it seem. I think realistically you can also see this.

Example of an old neighbourhood where trains are this close to houses and thriving would be beneficial.

Overall I just think going underground will be a future ready approach and just makes sense in many ways however what I got from you today was metrolinx will proceed with above ground plan as they have done the studies to support this.

Subject: RE: Ontario Line Open House - East Segment

[REDACTED]

Thanks for your email and for attending our open house last week.

We have noise and vibration engineers completing this important study and once complete, we will be sharing it with the community through the Lakeshore East Joint Corridor environmental report which will be released in the fall. This environmental report will include a 30-day consultation period and be released well before construction begins in 2022.

We know the community has many questions about noise and vibration so we shared some initial results from the study so far which tells us that Ontario Line plans will ensure noise levels will be lower than they currently are at many locations along Riverside and Leslieville. Right now, we can confidently say the sound of every train passing through many locations in these neighbourhoods will be reduced by up to 50 per cent. To learn more, please read the [latest blog](#) we released which summarizes the information you heard at the open house last week. We will be sharing more information as soon as we can.

Feel free to reach out should you have any further questions,

Hello Metrolinx,

I am a resident of Leslieville and I attended the Open House virtual meeting on April 22, 2021.

Today I received the Metrolinx email newsletter in my inbox that included the following statement,

At the virtual open house for the East segment last night, the Ontario Line team shared details about how seamless noise walls proposed along the existing rail corridor in the neighbourhoods of Riverside and Leslieville are expected to result in quieter, more peaceful streets, with noise levels lower than they are today at many locations along this stretch of the Ontario Line.

If possible, could you please provide the engineering and/or scientific data to support this claim?

Please excuse me for saying, but without real scientific data to support a claim that trains running every 45 seconds will be quieter than the current situation, your claims resemble KGB-style propaganda. It's hard to understand how this current plan could be quieter.

Thank you,

[REDACTED]

Hi David,

Thanks for reaching out.

We are looking at how best to deliver seamless noise walls along the existing rail corridor in Riverside and Leslieville which includes the bridges you listed as well. We'll have more to share as designs and environmental assessments advance over the rest of this year.

If you have not already, consider signing up for our [e-newsletter](#) to receive all the latest updates.

Subject: RE: Contact Ontario Line Submission

Hi [REDACTED]

Thanks for your follow-up and great to continue the conversation.

We recognize the character of your neighbourhood and our priority is to advance Ontario Line plans to deliver higher order transit while minimizing impacts as much as possible. In the article I previously shared, we looked at tunneled options which would have resulted in the acquisition of numerous homes along McGee and Saulter Streets, including the beloved Saulter Street Brewery.

Based on the homework we did in the business case process I mentioned, utilizing the existing rail corridor while staying mostly within the Metrolinx property boundary is a solution to minimize impacts to homes and parks, while creating an effective transit system. Based on our early designs, we are confident we can deploy effective mitigations that address the community's concerns. For example, Ontario Line plans have committed to the installation of seamless noise walls which will make the neighbourhood quieter than it is today at a majority of locations along the rail corridor.

We understand the community wants more engagement so we have committed to monthly touchpoints to discuss these mitigations as we advance the forthcoming environmental reports. These engagements will offer a chance for us to prove to the community that our mitigations are effective and also a chance for community members to provide direct feedback.

Thanks again for taking the time to write to us George.

Thanks so much for the response!

As was communicated on the call, there is massive community support for going underground so as not to disrupt our small and unique neighbourhood. I don't necessarily support the under Carlaw plan that is being INACCURATELY identified as a community backed plan. The reality is no one in the Carlaw/Queen area was given any chance for feedback.

Having said all this, I fully believe any delay in construction to bury the line, even within the current rail corridor, would be fully accepted by the community. Is this a plan that MetroLinx is willing to revisit and consider as the only underground option?

Forcing an above ground solution when clearly the community is opposing this will not resolve well. Although not ideal for some, a proposal that is under the rail corridor would perhaps be a resolve that everyone could agree to. Having everyone in alignment would certainly make the entire process easier and friction free.

Thoughts on this?

On Tuesday, April 27, 2021, 9:45 AM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thank you for writing and providing your feedback on the recent east virtual open house.

At Metrolinx, we complete [business cases](#) to determine how best create new transit capacity in a way that would minimize negative impacts while achieving the greatest benefits. Throughout this planning work, we have found that using the existing rail corridor in Riverside and Leslieville will help us minimize impacts to the local community and connect more neighbourhoods with higher order transit sooner while getting cars off the road and reducing greenhouse gas emissions.

[In an article here](#), we looked at tunneled alternatives but found they would be more disruptive to the community and increase the construction schedule by 15 and 24 months. We are advancing Ontario Line plans that use the 150 year old rail corridor because we are confident that we can provide effective mitigations and achieve the best customer experience for those using the Ontario Line.

As we discussed at the end of the meeting, we know the community wants more information and more engagement opportunities so we committed to more frequent touchpoints in the future as we advance the forthcoming environmental reports by the end of this year.

Again, thank you for writing to us. Feel free to reach out should you have any further questions,

Subject: Meeting follow up questions

Message:

Thanks for the meeting tonight. I am under the belief that the only underground option you attempted to cost out was under Carlaw Avenue. As you likely heard on the call tonight, this community has not had a real chance to discuss this project. Fletcher and a small group of concerned residents had NO input into the Carlaw underground plan. Regardless of the money they wasted already, I would be most interested in hearing if a straight line underneath Pape would be considered. There

is more resident density with all the new condos on Carlaw and the total supporter number would far outnumber the small count of Pape Ave residents. People near the current rail line would also very likely support this (they have valid proximity concerns). I know Fletcher has NOT compromised, but this is your chance to hear the community and react in a way that meets the VAST MAJORITY of residents needs. I also wonder what happened to the proposal of tunneling under the current railway as a means to minimize disruption. As you saw tonight, the people of Leslieville are adamant in wanting an underground solution. You do NOT have to relent to Fletcher's specific Carlaw plan in order to secure a victory. Actually, a move back to Pape would be a clear sign her pandering politics of a few voters does not work. Metrolinx can own some REAL community consultation and have support instead of pushback for the duration of the project. Please advise, and thanks in advance.

██████████
P.S. I don't typically make comments about individuals, but Fletcher/Save Jimmie Simpson and the LSE CAC are all aligned ONLY for a Carlaw plan and will not engage in anything else (sorry they also support Steven's plan, but this is also up Carlaw). Don't even ask to see a plan, instead feel free to work for the residents and not these niche groups to create your own plan. The reality is that residents would be overjoyed for a plan calling for a straight line under Pape (and the old TTC yard could be used for staging).

So the bottom line is the whole community wants an underground plan, but the vast majority want it under Pape as was originally designed.

Thanks for you consideration.

Subject: RE: Form submission from: Contact

Hi [REDACTED]

Thank you for taking the time to write to us and provide your feedback.

We understand the community has concerns with Ontario Line plans and we want to continue working with you as we share more opportunities for public feedback and open our community office in Riverside. Not sure if you had a chance to attend our virtual open house last night but I would like to highlight some of the information we shared.

Protecting parks in your neighbourhood while making use of the 100+ year old rail corridor means we can reduce community impacts by avoiding significant excavations compared to a tunneled option. Current plans ensure the Ontario Line remains in the existing rail corridor which means the Jimmie Simpson Recreation Centre can continue operations throughout construction and beyond.

Providing ongoing access to your beloved green space in the community is a top priority for us as we deliver this important project. If we need a small parcel of park space in order to avoid impacts to homes or businesses, we will work with the City of Toronto to ensure it is thoughtfully restored to its original condition, or better. When it comes to trees, we are working hard to avoid impacts unless absolutely required. That being said, with our commitment to deliver effective continuous noise walls for your neighbourhood, we will also plant new trees and other greenery. The attached graphic gives you an idea of how the new tracks will be arranged in the corridor, mostly within the Metrolinx property boundaries.

Thank you for taking the time to write to us and please let us know if you have any further questions.

Hi,

I am wondering if I can get an update on the “do not anticipate impacts “ as I understand a decision has been made to build the subway (elevated way?) platform on the west side on the existing Go platform. I live on the west side.

I don't feel continually informed. I would have thought there would have been community conversation before these decisions.

Subject: Expropriations on elevated portion of Ontario Line

Dear Metrolinx,

A representative of yours managing the twitter account (fs) indicates there will be expropriations of homes along the elevated portion of the Ontario Line. I also understand from some of your promotional material that construction will be starting soon. The representative also is indicating that you are presently identifying properties.

I love my home and wish to understand the risk of expropriation before I decide to invest further in it.

Is there a way to understand the risk for my address (or any other address for that matter)?

Subject: RE: [REDACTED] [REDACTED] Construction Impacts Not Noise [REDACTED]

Hi [REDACTED]

Thanks for your follow-up email and your questions on social media as well.

Rearranging the corridor with both Ontario Line tracks on the west side doesn't mean the tracks are closer to homes. As you can see from the image that we [recently shared with the community](#), the six tracks stay mostly within the rail corridor. In addition, this change allows us to reduce the need for permanent infrastructure which means even fewer impacts to parks that the community enjoys. What we're working on now is how the design of retaining walls to protect the parks and provide a foundation on top of which we will install noise walls that will protect the community from the sights and sounds off the corridor and bit landscaped so they reduce visual intrusion and blend in the with parks.

We're still in the early stages of design and there will be many future opportunities to provide your feedback. For your neighbourhood, environmental assessment reports will be released in fall 2021 and early 2022 that will detail associated impacts of the Ontario Line and proven solutions Metrolinx will deploy to mitigate those impacts. Before construction starts, there will be opportunities to provide feedback alongside each of these reports. You can learn more [here](#). Details will be shared through our [e-newsletter](#).

We'd like to setup a time to chat with you on the phone or via Microsoft Teams. Let us know when would be convenient for you.

Thank you,

Hi Sivahami,

The new drawings will impact the homes on De Grassi and Wardell by being closer to peoples' actual homes versus in the park. Though this change has been taken to consider "community feedback" I am quite certain no one in the neighbourhood would have fathomed that the solution would be to increase the proximity to peoples' homes. This is less than the recommended set back by Rail Canada and the World Health Organization. How is Metrolinx obtaining feedback from all of the people who will now be directly beside this expansion at an unsafe distance? What measures is Metrolinx willing to take to make this safe for ALL individuals?

Subject: RE: [REDACTED] Construction > Construction Impacts Not Noise [REDACTED]

Hi [REDACTED]

Thanks for your email about Ontario Line plans in your neighbourhood, and thank you for the

work you do on the frontlines as a nurse.

Metrolinx is looking at reconfiguring the corridor and positioning the Ontario Line tracks beside one another on the western side of the existing rail corridor instead of having one track on either side. It's important to note that we're still committed to fitting the Ontario Line mostly within the existing corridor. This would be done by shifting the GO tracks to the east. The homes on Wardell and De Grassi would not be blocked by the new configuration.

Having both of the Ontario Line tracks on the west would mean we are able to minimize our construction footprint even more by limiting station infrastructure to just one side instead of two and better integrate the new stations with the bridges. We'll also be able to provide a much better experience for customers, who will be able to access both northbound and southbound trains from a single centre platform.

The Ontario Line team has been working hard with GO Expansion colleagues and City of Toronto staff to advance these initial designs to a point that we can bring forward updated plans to the community for discussion. We are planning a virtual open house for April to provide an update to the community and seek feedback. This open house will also provide an opportunity for us to share some of the initial work we have been doing on noise and vibration mitigation, including well-designed noise barriers, that will shield the community from the sights and sounds of the rail corridor.

No construction will begin until summer 2022, after a robust environmental assessment has been completed, including public consultation. This environmental assessment process began in 2019 and is ongoing, with noise, vibration, and air quality studies. More information is available [here](#).

Please sign up for our newsletter or check our [website](#) for more information about the upcoming virtual open house. In the meantime, please reach out if you have any further questions.

Thanks,
Sivahami

Subject: [REDACTED] Construction > Construction Impacts Not Noise [REDACTED]

[REDACTED]

I am a resident of the Riverside neighbourhood in Toronto and writing to you regarding

the Ontario Line and its impact on the environment, health, and safety of my community. My family just recently moved into this cherished neighbourhood where we finally had outdoor space. I am shocked and appalled that without public consultation my home and neighbourhood have been put in jeopardy. I am a registered nurse and have been working on the frontlines during this pandemic, not only do I have to worry about my family's safety through my work but also in my own home.

The proposed Ontario Line over ground plans are problematic for the following reasons:

- 1. The new proposed changes will directly impact the homes of those on both Wardell Ave and De Grassi St by blocking access to homes and increased proximity to the rail tracks, as well as indirectly impacting many other residents. Had the most recent changes in plans been disclosed we would not have purchased our home. The doubling of rail tracks, over ground and in close proximity (less than 10 m) from residential and social housing exposes residents to dangerous noise levels, vibration and pollution. This is supported by the World Health Organization. Noise walls are ineffective, when significant noise reduction is required - such as having 4 rail lines within 10 m of social housing or a residential neighbourhood. Moreover, Metrolinx has not completed a vibration study for the impacted neighbourhoods.**
- 2. The proposed plan of 10m setback from residential homes is far below the recommended minimum of 30m set by RailCan in 2013. This is unsafe.**
- 3. The changes to the ground plans are in complete contradiction to the latest funding agreement set out by the federal government which stipulates "no site preparation, vegetation removal or construction will occur for a Project ... until Canada is satisfied that the federal requirements under the Canadian Environmental Assessment Act ... are met.**

For these and many other concerns, including lack of public consultation throughout this process, we are asking for your support on the following:

- Put the Ontario Line underground from north of Gerrard St E to south of Eastern Ave.**
- A proper Health Impact Assessment (HIA) needs to be incorporated into the Environmental Assessment to understand the health impacts for the communities that surround the line.**

Subject: RE: Ontario Line East Virtual Open House - April 22

[REDACTED]

Thank you for writing to us again and apologies for the delay in responding.

Ontario Line plans commit to continuous noise walls, a benefit as there is no mitigation in place in the existing rail corridor. We are currently completing noise studies and will share it with the community in the upcoming environmental report. This is on track to release this fall (currently tracking for September).

In addition, all Ontario Line trains will be electric from day one and GO Expansion will increase GO train service using electric trains (diesel will still run since Metrolinx does not own certain tracks in the corridor).

Our preliminary results tell us that many parts of Leslieville and Riverside will have lower noise levels due to the planned noise walls. We will have more details to ensure in the upcoming report.

Hope this helps,

Hi,

What about the noise impact of the Toronto Lakeshore East Rail Corridor? Right now these trains are pretty loud.

What is planned in regards to that? If these trains are supposed to go every 15 minutes, this is an important question.

Thanks,

■

■

Thanks for your follow-up and I appreciate you relaying the concerns of folks living on Pape Avenue.

In terms of mitigation noise and vibration, Metrolinx is first addressing these impacts directly at the source – the trains and track. Ontario Line trains will be completely electric, resulting in significantly less noise than what you might hear from TTC or GO trains. In addition, since the Ontario Line will connect with the existing Line 2/Pape station by going underneath it, the depth of tunnel will go a long way in terms of mitigating noise and vibration once the Ontario Line is operational.

We are still completing studies and modelling of the anticipated impacts during construction and operation of the Ontario Line. The results will be included in the Environmental Impact Assessment Report that is expected to be shared with the community in early 2022.

Feel free to reach out should you have any additional questions,

Daryl Gonsalves

Hello Daryl,

Not sure if it makes such a big difference if the completion is taking 10y or 12y. Adding on 1/5 of work time and then having no impact above the ground after completion seems way less disruptive and worth it for the people to me. In the long term of course, which is the "term" we are all striving for. The argument of emissions of two more years of car traffic seems very much insignificant in the big picture.

Another question would be, how much will the underground part underneath Pape Ave affect the surrounding houses in terms of noise/vibration? Knowing how it sounds inside a house close to the Danforth/Bloor line, i've met many people who are very much worried about this.

Please let me know.

Thanks,

■

Thanks for your question.

Underground does not always mean less impact. In our planning and design work, we have found that using the existing 100+ year old rail corridor in Riverside and Leslieville will help us minimize impacts to the local community and connect more neighbourhoods with higher order transit sooner while getting cars off the road and reducing our greenhouse gas emissions. Tunneling the Ontario Line through this area would delay completion between 15 and 24 months – also adding to the length of time the neighbourhood would be disrupted by construction – and it would result in significantly more impacts to local businesses, homes and park space. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond. In addition, we have committed to continuous noise walls that we will work with the community to deliver. We have written more about this in an article which you can read [here](#).

Our plans have been updated based on what we heard from the community so far. We will continue to share more mitigation plans as soon as we have them. Please take a moment to read our [latest update](#) about plans for this area.

Please reach out should you have any further questions or concerns,

Hello,

I have a question indeed: why are you not keeping the project underground and instead decide to destroy a whole community?

Thanks

[REDACTED] 13. Apr. 2021 um 15:53 [REDACTED] <ontarioline@metrolinx.com>:

Hello there,

You are receiving this email because you have reached out to us about the Ontario Line in your community.

Since we cannot be in person, we have scheduled a virtual open house for an Ontario Line presentation and Q&A for East Harbour, Leslieville/Riverside and Gerrard. It will take place on Thursday, April 22 starting at 6:30pm. You can register and submit questions in advance by visiting this [link](#).

If you can, please circulate this opportunity with your neighbours.

Looking forward to seeing you at the event,

Daryl Gonsalves

Hi [REDACTED],

Thank you for reaching out to Metrolinx. From your message to our colleagues, we understand that you are a householder at [REDACTED] and are looking for more details about Metrolinx's projects in your neighbourhood.

We wanted to connect with you directly as Metrolinx has two overlapping projects planned in your area – the [Ontario Line](#) subway project and the [Lakeshore East GO Expansion Project](#) (Pape Avenue to Kennedy Road). The joint-corridor will be a shared railway where the Ontario Line will run parallel to existing GO Service. The Ontario Line tracks are planned to run on the north side of four (three existing and one new) GO train tracks. Using the existing rail corridor and streamlining Ontario Line construction work with planned GO Expansion means we can keep mostly within an existing footprint, and minimize impacts to surrounding neighbourhoods as much as possible. Each project has its own dedicated Community Relations team who would be happy to assist in answering any specific questions you might have with regards to either project and the joint-corridor.

Based on current plans, we do not anticipate property impacts to [REDACTED]. Given your proximity to the rail corridor, I understand you may be concerned about dust, noise and your safety. Minimizing disturbances to the neighbourhood is an important part of the construction planning work we will do with our contractors. As we move towards the construction phase of the Ontario Line, we have a variety of best practices to manage dirt and dust we'll be looking for our contractors to employ in order to manage the impact of construction on communities across the Ontario Line. You can learn more [here](#). In addition, we also will employ proven solutions to monitor and mitigate noise and vibration. There is some more information available [here](#).

We will be releasing further details in our Final Environmental Impact Assessment report in spring 2022, which will share specific impacts and associated mitigations Metrolinx will take to minimize disruptions to communities across the Ontario Line. If you have not yet, consider signing up for the Ontario Line [e-newsletter](#) to receive all the latest updates.

I hope this provides some helpful information. Feel free to reach out should you have any further questions.

Subject: Re: Above ground train Ontario Line at Leslie like

Hello [REDACTED]

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to

develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association's newly released "Canadian method of risk evaluation and assessment for railway systems." This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Hi Donald

I am very concerned that Metrolinx has decided to put the trains above ground in the Leslieville section.

I live on Boulton Avenue behind Degrassi Street and my house already shakes everytime the current trains pass by.

I know that Metrolinx is extremely concerned about the trains derailing and crashing into the new construction building that is being proposed at the bottom of Degrassi and Queen at 8 Degrassi. So much so that they want the developer to build a crash wall in front in order for project to proceed. Does Metrolinx have this same concern for all the existing houses along Wardell / Degrassi Avenue that are even closer to the proposed tracks? Or is this building special?

Is the plan to build a crash wall along that entire street? Seems expensive and absolutely hideous, no?

Why are we not sticking to the same underground plan down Carlaw ave. for the previous relief line that was approved which is more commercially zoned?

It seems completely absurd to have all these trains a few metres from people homes. Isn't there some sort of health and safety set back that you have to follow? Or are Health and safety studies ignored for the Ontario line?

Bury the line and build better transit that is future proof. 800 million doesn't seem very much for putting the line underground to avoid having a train derail and crashing into our houses especially when this is being done for way more in Doug fords Etobicoke.

Regards,

Subject: Re: The Ontario Line and its impact on the Riverside and Leslieville communities

Hello [REDACTED]

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

The anticipated impacts of constructing and operating the Ontario Line will be comprehensively analyzed in upcoming environmental reports that will be released for public consultation over the next year. A dedicated Joint Corridor Early Works Report, that will consider the advance construction work that will take place in Riverside and Leslieville, will be released this fall. This will be followed by the Ontario Line Environmental Impact Assessment Report which is expected in early 2022. Each report is released in its draft form for public review and comment during a formal 30-day consultation period. Feedback received during the consultation is incorporated in the final reports, which guide further project plans and designs.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional

emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. Chairperson Wright,

I am a resident of the Riverside neighbourhood in Toronto and am writing you

regarding the Ontario Line and its impact to the environment, health and safety of my community. The over ground plans for the Ontario Line proposed by the Province and Metrolinx are problematic for the following reasons:

1. The doubling of rail tracks, over ground and in close proximity (less than 10 m) from residential and social housing exposes residents to dangerous levels of noise, vibration and pollution. This is supported by the [WHO](#). Noise walls are not effective, when significant noise reduction is required - such as having 4 rail lines within 10 m of social housing or a residential neighbourhood. Moreover, no vibration study was conducted by Metrolinx for the impacted neighbourhoods
2. From a rail safety perspective the proposed plan of 10m set back from residential homes is far below the recommended minimum of 30m set by RailCan in 2013. How and who is approving this exception and what is the rationale?
3. The latest funding agreement set out by the federal government stipulates “no site preparation, vegetation removal or construction will occur for a Project ... until Canada is satisfied that the federal requirements under the Canadian Environmental Assessment Act ... are met.”

For these and many other reasons, including lack of public consultation throughout this process, we are asking for your support on the following :

- Ensure a proper Health Impact Assessment (HIA) is incorporated into the Environmental Assessment to understand the health impacts for the communities that surround the line.
- Review efforts and plans to put the Ontario Line underground from north of Gerrard St E to south of Eastern Ave

Yours truly,

Subject: RE: Relief Line

Hi [REDACTED]

The Ontario Line builds on the previous Relief Line South plans, providing much more than just downtown relief. The Ontario Line will operate underground, at-grade and on elevated structures. Because of this, it is able to cover a larger geography, provide more stations and expanded network integration, and generate greater benefits for travellers. Communities in Thorncliffe Park and Flemingdon Park will be able to access an Ontario Line station whereas the Relief Line did not extend service to them.

By building and operating above-ground in the Riverside and Leslieville area, we can reduce construction impacts on area residents and businesses and finish the work in shorter timeframes. Yes, there will be some impacts to the adjacent parks but we expect they can be managed and, in fact, that we can help improve the enjoyment of the parks by adding attractive noise barriers with vegetation to break up the visual impact and new tree plantings. We will also be working with the City of Toronto and Toronto Region Conservation Authority to develop a robust tree replacement program.

Our commitment is to reduce community impacts for Leslieville and Riverside throughout and beyond construction, and you can learn more about it here: bit.ly/3cCekLQ

We know that people have concerns and questions about Ontario Line plans. It's important to note that no construction will begin until Summer 2022 and before then there will be two environmental assessment reports for the joint corridor portion of the project. These reports will provide a clear picture of anticipated impacts and how they will be mitigated. Each draft report is released for a 30 day public consultation period.

We are holding a virtual community meeting in the coming month to update Leslieville and Riverside on the Ontario Line and we hope that you will be able to join. Details will be shared through our e-newsletter: bit.ly/2O4E8qf

Happy to answer any further questions,

Daryl Gonsalves

Dear Mr. Wright,

As you are aware, the Toronto residents of Riverside and Leslieville are unilaterally opposed to the proposed destruction of our neighbourhood by Metrolinx and Doug Ford. That you should believe yourselves entitled to decide the fate of two historic Toronto neighbourhoods and the hundreds of thousands of residents who live here by elevating (rather than burying) the Ontario Line is nothing less than an attack on human life and the democratic process designed to protect collective rights.

Do you know anything about Karma?

Metrolinx has NOT conducted valid environmental testing nor ANY studies of the **mental health impact** on hundreds of thousands of residents that will be adversely affected by the eight fold increase in train traffic, not to mention the obliteration of the ONLY parks existing in the area.

Given the EXTREMELY close proximity to a thousand private homes, an Elementary school, historic Degross Street, a seniors home, a low income apartment building, six of the ONLY six parks that exist in the neighbourhood and a huge recreation centre with outdoor hockey rink used by hundreds of children it is my belief that allowing this construction to move forward is a veritable **crime against humanity, existing wildlife habitat and Toronto tourism.**

Is this even legal from an environmental law perspective? **As a mental health practitioner of almost twenty years I assure you that the adverse psychological affects on humans devoid of nature and exposed to continuous noise are real and PALPABLE.** I don't need to tell you how vitally important our parks have become during the covid pandemic when the only place where ISOLATED people have been able to meet for almost a year has been in these parks. By elevating the Ontario Line rather than burying it, as was the original plan of previous governments, the residents of Riverside and Leslieville will have to walk 3 kilometres to the closest park. Nevertheless they will NOT BE ABLE TO ESCAPE the ever-present sound of 800 daily trains running within a few metres of their faces.

We are not against development. Indeed as you are fully aware there has been an existing plan in place for a number of years that involves burying the Ontario-line due precisely to the fact that this is a **highly sensitive residential area with very few existing parks** and one of the few welcoming neighbourhoods in the city that provides housing for many low income families, seniors and the homeless.

According to Phil Verster Metrolinx's decision to elevate the line is based on high cost and yet recent cost analysis has shown that his claims are EXCESSIVELY EXAGGERATED. In fact he has at the same time mandated that the **Ontario line running through Etobicoke where the premier lives is to be buried.** The cost of burying the line in Etobicoke will be far more costly (1.8 billion to be precise) to tax payers it turns out than the cost of burying the Ontario line in Riverside. (800 million).

Nevertheless a price tag cannot and should not be placed on the physical and mental health of thousands of Toronto residents. This is criminal. Especially when mandated by non-elected corporate civilians. Given that the federal government has recently allocated 14.9 Billion Dollars to public transit there is no excuse.

Please act as on our behalf and bring this pending disaster to a firm STOP. In the interim I

will be seeking consultation with the Ontario Human Rights Tribunal. If **protection against elitism** is not part of their mandate I will be advocating for it.

Yours sincerely,

A small black rectangular redaction box covering the signature.A large black rectangular redaction box covering the signature.

Dear Chair,

For the health and safety of our community, the Ontario Line MUST be built underground.

I know you understand the arguments for and against. I implore you to do the right thing for our community with the future in mind.

Sincerely,

[REDACTED]

Subject: Re: Put the Ontario Line Underground

Hello [REDACTED]

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. I hope the links I sent to you earlier today worked.

We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

The anticipated impacts of constructing and operating the Ontario Line will be comprehensively analyzed in upcoming environmental reports that will be released for public consultation over the next year. A dedicated Joint Corridor Early Works Report, that will consider the advance construction work that will take place in Riverside and Leslieville, will be released this fall. This will be followed by the Ontario Line Environmental Impact Assessment Report which is expected in early 2022. Each report is released in its draft form for public review and comment during a formal 30-day consultation period. Feedback received during the consultation is incorporated in the final reports, which guide further project plans and designs.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum

and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association’s newly released “Canadian method of risk evaluation and assessment for railway systems.” This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Dear Mr. Wright,

I look forward to more public transit in Toronto, but I fear that the Ontario Line lacks meaningful public consultation and adequate environmental, health and safety assessments.

I understood that the TTC was ready to start construction of a thoroughly evaluated, publicly supported and funded relief line subway. Then our new provincial government dismissed that plan, replacing it with a new plan with extensive above grade sections through densely developed inner city neighbourhoods. How to square that with the billions of extra dollars being budgeted to extend rapid transit underground in the low-density suburban neighbourhoods of Scarborough and Etobicoke?

I believe that the current plan lacks adequate evaluation. It feels rushed, with little or no consultation with the people who will be directly affected. I've heard that our public parks along the route might be damaged as trees may be cut down. Has the public even seen details of the current design proposal, or studies and costing of any alternatives? Furthermore, I've heard that the scope of the EA has been scaled back substantially.

Please allow for meaningful public input and adjust your plans for the Ontario Line accordingly. Then carry out a fulsome EA, to protect us and to protect future generations.

Thank you,

Subject: RE: Contact Ontario Line Submission

Hi [REDACTED],

Thank you for taking the time to provide your feedback. Happy to respond and begin a conversation.

Utilizing the existing rail corridor in Leslieville and Riverside is not only about the money involved. More importantly, we [shared](#) why running the Ontario Line in the existing rail corridor is the right approach for the community but also for an effective transit network. Surface stations in this area will save customers significantly more time in their journeys than underground stations because they would have to be almost 40 metres deep in order to avoid sewer mains. By building above ground in this area, we can avoid at least five major excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. The most significant excavation associated with the underground option would be a tunnel portal that would have been required between Eastern Avenue and Queen Street. With the above ground plan, we are able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and Riverside and Leslieville residents. We are committed to designing infrastructure that is a good fit for your community and will work with our contractors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with [our Vegetation Guideline](#). We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage.

Due to careful planning and streamlining construction with other projects in the area, we can keep mostly within the existing rail corridor footprint which minimizes impacts to surrounding neighbourhoods.

Again, thank you for taking the time to write to us. Feel free to reach out with any further questions and we are happy to continue the conversation.

Nearest Ontario Line Station (Optional): Leslieville

Subject: Ruining Parks, Trees and the Go Line berm should not be extended.

Message: This section needs to be underground. The trees and parks and berms along the Leslieville corridor add to the character of this neighbourhood. It will ruin it. There was an underground plan. Go back to that. There should not be an expanded rail berm along the Go corridor. There are so many parks, homes, business that will be negatively impacted by an above ground expansion. Terrible planning to try to save money.

Dear Mr Wright,

As a resident and tax payer in the Leslieville/ Riverdale neighbourhood, I am glad that plans are starting about increasing public transportation. However, I understand that for just the portion through our neighbourhood, the proposed Ontario Line will be above ground (running below ground from Gerrard Square north and heading east into downtown). This is shocking. It will have a devastating impact on the area, destroying many mature trees and parkland as well as contributing unknown amounts of additional noise and pollution into the neighbourhood. This gives me great concern for the health and safety of our community. I am

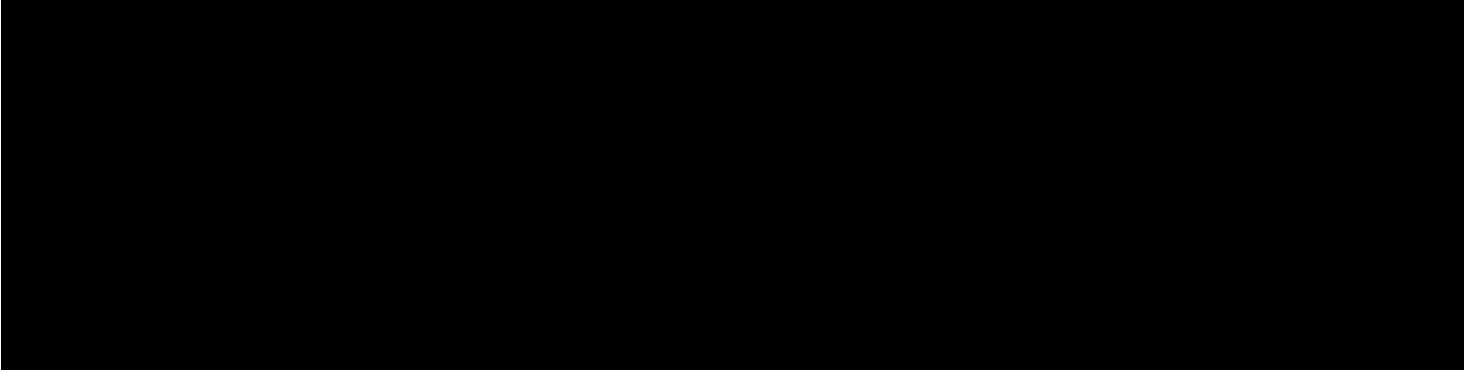

a strong believer and consumer of public transit but firmly believe that we need to get this right. Listen to the people who will be using this and experiencing it daily as part of their daily lives.

Bury the Ontario Line

Thank you

Dear Sir,

I am writing on the subject of the proposed construction of the Ontario Line, which will pass through my Leslieville neighbourhood.

There is no question that improved transit in the City of Toronto is much needed. And as planning for the Ontario Line is underway, I want to add my voice to those advocating for an underground solution through the area from south of Gerrard to Eastern Avenue.

As a long-time resident of this area, I am particularly concerned by the potential impact to the many green spaces in the area, especially Jimmie Simpson and Bruce Mackey parks. These green spaces are much needed, and greatly contribute to the beauty, vibrancy and essential character of this community.

Like many others, I am concerned about public health impacts, rail safety, and the proposed kickstarting of construction prior to completion of a thorough environmental assessment.

I encourage the Government and Metrolinx to take a long-term and considered perspective in designing and delivering this much needed infrastructure, taking community concerns into account.

This can be a signature project for the City of Toronto and the Province for decades to come. Please do this right.

Yours truly,

[Redacted signature block]

Dear Mr. Wood,

My partner [REDACTED] and I live on Wardell Street and will be directly affected by the Ontario Line.

We value the green space and trees in front of the tracks, the quiet between currently infrequent trains, and not having unsightly sound barriers that will reduce our sunlight.

We want to see the Ontario handled responsibly, leaving our street attractive, green, bright, and as quiet as possible. We have put everything into our property and want to see its value preserved.

Yours truly,

Hi [REDACTED],

Thank you for taking the time to share your feedback.

The Ontario Line builds on the previous Relief Line South plans. By using a mix of different route options, we are able to bring more high-order transit to more communities sooner than previously planned, including Thorncliffe Park and Flemingdon Park. Our commitment is to reduce community impacts throughout and beyond construction, and you can learn more about it [here](#).

As we continue with our initial designs we are responding to community concerns, including preserving the Jimmie Simpson Recreation Centre so it's not impacted at all during and beyond construction, working with the City to design attractive and effective sound barriers, and planning a suite of mitigation techniques to reduce sound and vibration impacts from the Ontario Line. Going forward, there will be further opportunities for community feedback through virtual public open houses. More details will be shared through our [e-newsletter](#) in the coming weeks.

Again, thank you for sharing your feedback.

>> Subject: Ontario Line - Bury the Line

>>

>> Mr. Chair...

>>

>> We in the community hear from Metrolinx that burying the line (the preferred option for the community) is technically difficult. I don't see it - once you separate it from the current rail line right of way it could run out all the way to Booth in order to get below grade. And of course you still have the abandoned but previously supported option of going under the river (i.e. continue the tunnel from Union that you already have planned).

>>

>> On the other hand, politically, if you don't bury the line, the Premier will not be able to avoid being labelled the guy who favours the suburbs at the expense of the urbanites - without regard to cost. A zealot. And this could play very badly in 2022, when he will be busy saying the deficit is not his fault.

>>

>> So my advice to you and the Premier - start digging.

>>

>> [REDACTED]

Subject: RE: Booth Avenue

Hi [REDACTED],

Thank you for your follow-up.

As we make progress in the project, we will be reaching out to property owners individually to respect their privacy. As we move forward, Metrolinx will only be acquiring properties that are absolutely necessary to get transit built. Consider reading our [blog post](#) about how we have refined plans to reduce property impacts in Leslieville and Riverside.

I understand you are concerned about noise and disturbances after construction. As we move forward, our commitment is to reduce community impacts throughout and beyond construction. Even after the Ontario Line is built, the work of reducing noise and vibration will start at the source – the train and the track. Here are some proven solutions we will deploy, as needed:

- When the Ontario Line trains are running, they will be electrified, which means they will be quieter than TTC or GO trains, in addition to clean and fast.
- At track level, we will be deploying rail dampers and resiliently supported rail ties technology that helps trains and subways run quietly over the tracks, very similar to soundproofing. I have attached a picture of a rail damper for your reference.
- In the shared rail corridor, where Ontario Line trains will run alongside GO trains, ballast mats could be installed on GO track – these are like cushions under the tracks that help soften the vibrations and sounds as trains pass over them. I have attached a picture of a ballast mat for your reference.
- For the Leslieville and Riverside communities, we will also be installing noise walls in certain above-ground areas, which will deflect even more noise. Wherever possible, these will be surrounded by attractive landscaping with trees and shrubs to keep things looking nice. Our initial studies show that the noise walls will reduce almost all of the noise from Ontario Line trains and reduce the noise from other railway traffic.

Feel free to reach out with any further questions,

Hi Daryl

What properties do you anticipate being impacted?

Furthermore, "noise and disturbances" are not a concern solely during the construction phase but after as well.

I will sign up for the newsletter.

Thank you

Thank you for your follow-up.

Based on current plans, we do not anticipate property impacts to [REDACTED]. Given your proximity to the rail corridor, I understand you are concerned about dust, noise and your safety. Minimizing disturbances to the neighbourhood is an important part of the construction planning work we will do with our contractors.

As we move towards the construction phase of the Ontario Line, we have a variety of best practices to manage dirt and dust we'll be looking for our contractors to employ in order to manage the impact of construction on communities across the Ontario Line. You can learn more [here](#). In addition, we also will employ proven solutions to monitor and mitigate noise and vibration. There is some more information available [here](#). We will be releasing further details in our Final Environmental Impact Assessment report in spring 2022, which will share specific impacts and associated mitigations Metrolinx will take to minimize disruptions to communities across the Ontario Line.

In regards to train derailment, safety is central to everything we do – we would not design or operate a service that was not safe for our customers, our communities, or our employees. The

Ontario Line will operate using remotely operated trains on an automatic signalling system which is currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Before the Ontario Line opens for communities to use, there will be robust testing program to ensure the system is safe.

If you have not yet, consider signing up for the Ontario Line [e-newsletter](#) to receive all the latest updates.

I hope this provides some helpful information. Feel free to reach out should you have any more questions,

Daryl Gonsalves

Hello Daryl

Thank you for your reply.

The property is at the north end- [REDACTED] Is there a timeframe for completion of the final assessment?

Other concerns include dust, noise and the possibility of a train derailment.

[REDACTED]

On Wed., Mar. 17, 2021, 1:20 p.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Thanks for your question, and I am happy to provide some clarity regarding property needs for the Ontario Line.

Given the relative distance from Booth Avenue to the rail corridor where the Ontario Line will be running, we do not anticipate there will be any direct property impacts. However design work on the Ontario Line is not yet complete. Final assessments of whether a property is

needed or not will be identified through further design, as more details are confirmed. Can you please provide a specific address to see if there is any further information we can share at this moment?

If a property is directly or partially impacted, Metrolinx will contact the property owner directly via email and letter. We will work collaboratively with our partners, communities and with affected property owners to ensure the lines of communications remain open and that those impacted are continually informed from planning and design through construction, as we move forward with the Ontario Line.

Again, thank you for reaching out and feel free to ask any further questions,

Subject: RE: Ontario Line and its impacts to Leslieville.

Hello [REDACTED]

Thank you for your letter sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with your family to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you, your children and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound

from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association’s newly released “Canadian method of risk evaluation and assessment for railway systems.” This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Hello Mr. Wright,

Please find a letter attached for your review outlining our concerns as local residents and parents, with rationale to support the burying of the Ontario Line through the east side of Toronto.

Sincerely,

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

March 16, 2021

**Mr. Donald Wright, Chair
97 Front St. West, Toronto, ON,
M5J 1E6**

Dear Sir,

We're writing to you in regards to the proposed expansion and construction of above-ground rail tracks that go through a number of residential areas in East Toronto. As residents of Booth Avenue, which is very close to the tracks across from Jimmie Simpson Park, and parents of two small children under six, we're extremely concerned with these tracks potentially being constructed above-ground.

If this were to go ahead, the Jimmie Simpson Community Center, the sports facilities, the children's park, and all of the trees would be eliminated. In essence, all of the activities that my children engage on an almost-daily basis would be gone permanently. Additionally, the Community Centre is critical to supporting the South Riverdale community, including vulnerable populations – for example, during the COVID-19 pandemic it has served as a respite site for individuals experiencing homelessness and beginning this week it will be used as a COVID-19 vaccination clinic.

It is imperative to the welfare of the neighborhood and the people living in this community that the line be underground, given the numerous environmental risks, the loss publically-available facilities, the loss of greenspace, as well as overall rail safety. The damage to the green canopy alone would be felt for decades. In researching the detrimental impacts of the line being above ground, it appears that, nowhere in the world, including Western Europe, are train lines so close to residential zones. Many of my former classmates at the University of Waterloo who are civil engineers have indicated to me that there is a significant lack of due diligence in the proposals to date, and further public consultation must be available to those impacted by this undertaking.

We strongly urge you to please ensure that every effort is made to ensure that any additional train lines constructed underground through these neighbourhoods, which would avoid the decimation of the existing facilities and green space in Leslieville. Please do not hesitate to contact us should you wish to discuss this matter in further detail.

Yours sincerely,

From: Ontario Line

We must express our profound opposition to the above ground expansion of the Ontario Line through the

neighbourhoods of Riverside and Leslieville. The danger to the health and safety to us the residents is too extreme to let the project proceed as envisioned by Metrolinx. You appear to be ignoring the normal protocols which must be followed to vet a project of this disruptive magnitude. Please do your due diligence and reconsider the above ground option.

Dear Donald Wright,

My family and I live at the intersection of Wardell and Dundas St East, right next to where part of the Ontario Line is being proposed by the current provincial government and Metrolinx. This is an urgent concern for me and my family given that this will create a significant impact on our lives insofar as there will be loud trains running very close to our house every few minutes above ground with the current proposal.

Current noise levels already exceed the Ontario Ministry of Environment and WHO guidelines. Doubling of rail tracks will expose residents like myself and my family to dangerous levels of noise and vibration. Noise walls are not effective when significant noise reduction is required. Metrolinx conspicuously did not carry out a vibration study in our neighbourhood.

There has already been a gross lack of due diligence and public consultation regarding this matter from the province and from Metrolinx. I am asking you to help to protect our community. How will you help to address the various environmental, health, and safety concerns regarding this issue? How will you help to protect families and residents from such impacts? How will you prevent harm to communities?

I hope that you will work with my community to advocate to bury the Ontario Line and put it underground. I would be glad to speak with you further about this matter.

Best regards,

Dear Donald Wright,

As a resident of Riverside, I am writing to you to ask you to do what you can to ensure that the

coming Ontario line is built underground. The expansion of public transportation, in a great city like Toronto, is crucial. But equally important is the health and safety of the communities that these transportation systems serve. Building the Ontario line above ground would not have serious health and safety implications in the short term, but would also negatively affect the health of this community forever. This is a growing neighbourhood with lots of kids. The homes are mostly modest in size, with little to no backyards. The existing green spaces in our community are vital, they are our backyards, our way of enjoying the outdoors.

I know there may be financial implications to burying the Ontario line through our community, but in the long run, it is so important to the health and vitality of the people in this area for generations to come. Please let me know if there is anything I can do to help convince you to bury the Ontario line, it is so important!

Thank you for your consideration,

[REDACTED]

We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant

aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Metrolinx Board
Mr Donald Wright, Chair

Dear Mr. Wright,

Respectfully, I write to implore you to give full consideration to putting the OntarioLine *underground* to prevent the considerable destruction to neighbourhoods, parks, greenery, and communities in its path.

Please-- HEAR the Residents of these Communities.

Yours sincerely

Subject: Re: Don't Ruin Riverdale

Hello 

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. Cost is only one consideration that we factor into our plans. We are also streamlining Ontario Line work with already planned GO Expansion work in the area, using a rail corridor that has been there for more than 100 years.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to residents in this area. We are committed to designing infrastructure that is a good fit for the community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound

from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association’s newly released “Canadian method of risk evaluation and assessment for railway systems.” This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work the community to address them. Even though you do not live in the community, please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#) if you are interested.

As a non-resident of the area i write to support the community in it's struggle to protect the local environment from an above-ground 'subway' line.

The extra cost of tunnelling the stretch in question is a blip when seen in light of the overall cost of the project. It is even less significant when considered over the life of the subway line and when

compared to the direct and indirect costs of the impacts on the community over the same time period.

If the extra funds cannot be generated by using the above-ground option in Etobicoke, where there is hardly a case for tunnelling, then i would be happy to see a tax levy for this specific purpose.

To Mr. Donald Wright,

I would like to request that the Ontario Line become the Relief Line and go underground once more. The health and safety of our community is at stake. I was excited to have the Relief Line starting as the city needs more transit. I have been following the design process for years, filling out questionnaires in the early stages etc.

I was very disappointed in the abrupt change to the Ontario Line just as Toronto was starting to put shovels in the ground for the Relief Line.

The Ontario Line cannot stay above ground in the downtown urban core. We live in an area where space is a premium. We value the small spaces that we have and the Ontario Line impacts this along its entire route.

I read the “McMaster University’s Health Forum survey of existing literature, [Planning Mass-Transit Projects](#)” and it states many reasons to put the rails underground.

Please consider the downtown communities and how they function.

Sincerely,

[REDACTED]

Subject: Re: Bury the Line!!!

Hello [REDACTED]

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We'd like to share some information about how our plans for the Ontario Line will take the concerns you have raised into account and how we will be streamlining our work with GO Expansion work to reduce impacts.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

I want to also share that we recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. Dear Mr Chair, Donald Wright!

If you lived anywhere near Leslieville, I would not need to write this letter - because you would know that Leslieville is an older Toronto community just east of downtown, and houses well over a hundred years old are squished together in a well established community. Being close to the tracks doesn't make it a posh neighbourhood. But it IS a well established neighbourhood to many of us. We like where we live and we don't want our homes destroyed so that a much needed commuter train can pass by. We don't want our neighbourhoods destroyed because 1 train every 90 seconds passes by. (Can you actually imagine that? I can't. I keep thinking that information can't be right. But there it is.)

Burying the line underground may be time consuming and costly. But that cost would be shared by all. Having the train run above ground would only cost the neighbourhood where it passes through, by expropriating houses or creating such a noise hazard that the value drops and people sell homes for cheap and move, losing not just their homes but their investment.

Do you live in Rosedale? Forest Hill? Some nice place in King City? I live in Leslieville. Please visit our neighbourhood and see the train tracks that you're thinking of adding more trains to. Then you will

know what that is simply NOT an option!

Cheers, [REDACTED]

Subject: Ontario Line Update

Hi [REDACTED],

I hope this email finds you well and you are enjoying the gradual approach of spring.

I'm writing to provide a brief update on environmental assessment and early works project timelines.

We anticipate that the draft Joint Corridor Early Works report will be released for public consultation in September 2021, this report will discuss impacts and recommended mitigations for the Early Works in the joint corridor. The public will have the opportunity to provide their feedback before the report is finalized. Contrary to what I told you in October 2020, the limits of the early works *will* include the portion of the rail corridor behind your condo property on First Avenue. I expect we will have details regarding any anticipated impacts and proposed noise wall design concepts to share in six to eight weeks time and hope we can setup another meeting with some of your members. No early works construction is planned prior to July 2022.

Finally, we anticipate the draft Environmental Impact Assessment Report (EIAR) will be released for public consultation in January 2022. This report will look at work impacts, recommended construction mitigations, and operations for the full project. Similar to the Joint Corridor Early Works Report, the public will have a 30 day period to review the EIAR and provide comment on the draft report.

Thanks again for your patience while we continue our initial design work and environmental studies. I look forward to setting up an opportunity for the team to reconnect with the First Ave Condo members. Let me know if you have any questions in the meantime.

From: Ontario Line

Sent: March 9, 2021 12:13 PM

To: [REDACTED]

Subject: RE: good enough for Leaside but not Riverdale/Leslieville? - bury the Ontario Line

Hi [REDACTED],

Thank you for your email to Metrolinx CEO, Phil Verster. We understand you are passionate about Leslieville and Riverside - your neighbourhood is important to us too! Community feedback is an important factor in the project decisions we make. We will be bringing forward a comparison of the impacts and benefits of various construction approaches for public discussion, but in the interim, we appreciate the opportunity to share some of the thinking behind the decision to use the existing rail corridor.

Metrolinx sees significant benefits for customers in a surface transfer at East Harbour, Leslieville and Gerrard stations. Surface stations in this area will save customers significantly more time in their journeys than underground stations because they would have to be almost 40 metres deep in order to avoid sewer mains. By building and operating above-ground in the Riverside and Leslieville in the rail corridor that Metrolinx already owns, we are also able to reduce construction and property impacts on area residents and businesses and finish the work in shorter timeframes. In fact, we expect that our work will remain largely within the existing rail corridor footprint as opposed to a tunnelled option would have resulted in significantly more impacts.

We will only use property that is absolutely necessary. While there may be some impacts to parks, it will be to avoid impacts to private property. Throughout the project, we will minimize our impacts on parks and return land to the same condition or better once construction is complete. We expect that over the long term, we can help improve the enjoyment of the parks by adding attractive noise barriers with vegetation to break up the visual impact. We will also be working with the City of Toronto and Toronto Region Conservation Authority to develop a robust tree replacement program.

In our recent [blog](#), we provided more information about why burying the Ontario Line through Leslieville and Riverside would result in significant community impacts. Since the Ontario Line cannot go under the Don River, a large portal would have to be built. Due to the maximum grade, or steepness, that modern train technology can accommodate, the portal would have to be somewhere in the area of Eastern Avenue and extend all the way to Queen Street. Many homes, community organizations and small businesses would be impacted.

Thank you again for taking the time to send us your concerns. Metrolinx will continue to work closely

with the City of Toronto, councillors, community groups, neighbours and businesses to build a transit line that serves the needs of communities along the entire alignment.

Dear Mr. Verster,

I have been disheartened to see the original plans for the much needed Ontario Line now has an above ground rail link planned through two of Toronto's oldest and most diverse neighbourhoods - Leslieville and Riverside. The plans for SIX parallel rail lines will effectively ruin both neighbourhoods. It will build a huge divide separating the east end from the balance of the city to the west of us, decimate our trees, eliminate six parks (SIX PARKS!!?), endanger the lives of people unfortunate enough to live alongside the new tracks especially those neighbours in government housing who will have no choice or ability to move.

This short-sighted view needs to be revised and rethought immediately. If burying the Eglinton Line was good enough for the Leaside neighbourhood, why isn't burying the Ontario Line good enough for Riverdale/Leslieville? Maybe that's a question you should answer at your next public forum or meeting?

This "easy" solution is anything but easy or simple. This plan will see dozens of new bridges needing to be build, the destruction of ALL our parks, the expropriation of swaths of private homes, the massive disruption of core east/west transit lines like the Queen and Gerrard streetcar routes.

Do you really want your legacy to include building the second Gardner Expressway – another concrete monstrosity that cuts and divides our green city?

I am resigned to the misery of five to six years of construction, noise, vibration, dirt & dust, re-routed traffic and crummy arterial roads as this would be necessary to move Toronto's transit plan and network into the 21st century and to meet Toronto's green and carbon-reduction targets.

I was happy to make that sacrifice as EVERYONE in Toronto knows this line is desperately needed.

BUT if you do not fight to ensure the **right transit** is built for our future (and believe me a six-track scar ripping through this neighbourhood cleaving it into two while enduring 800+ trains a day passing through is not it), you will be in for a rude awaking.

Don't doom Leslieville/Riverside to a cold, concrete-divided future.

Do your job – advocate for sustainable transit and fight for the transit we deserve.

Bury and Build the Ontario Line.

Great to chat again and thank you to David for copying us.

In terms of our ongoing work to refine plans in response to the feedback we have heard from the community, I understand from the project team that the goal of this adjustment is to make maximum use of the space in our existing corridor in order to further protect parks and greenspace. By reconfiguring the corridor and positioning the Ontario Line tracks beside one another on the western side of the existing rail corridor instead of having one track on either side, we are able to minimize our construction footprint even more by limiting station infrastructure to just one side instead of two and better integrate the new stations with the bridges. We'll also be able to provide a much better experience for customers, who will be able to access both northbound and southbound trains from a single centre platform. The change in plans will not cause delays to construction, nor increase costs.

We understand there is frustration but the Ontario Line team has been working hard with GO Expansion colleagues and City of Toronto staff to advance these initial designs to a point that we can bring forward updated plans to the community for discussion. We are holding a virtual community meeting in the coming month to update Leslieville and Riverside on the Ontario Line and we hope that you will be able to join. Details will be shared through our e-newsletter: bit.ly/2O4E8qf.

Hi David,
Thanks for the response.

I guess I'm still a little foggy on the plans in respects to where and how the tracks will be built and what parks, homes and neighbourhoods will be disrupted?

The latest I've heard is that,

... "Ontario Line alignment in our area to have both Ontario Line tracks run on the west side of the rail corridor, rather than straddling the GO tracks as had been previously proposed."...

Which from what I understand is different and more disruptive than what was presented as the way forward -

On a personal note, our home is situated at the top of Tiverton Ave. At the foot of the street the rail bridge crosses Dundas Street east. While The crews were drilling for soil samples, the level of vibration resonating through our heritage home was 8/10.

I can only imagine how hard it will be on old foundations when actual pilings are drilled and hammered in to support the bridge. Testimonials from home owners in the junction during the UP line creation serves as a warning and worry to us all.

Ultimately, I would suggest we all understand the need for improved transit in and around the city. The frustration seems to come from lack of clarity in regards to the actual plan and it's actual and real effects on the concerned neighbourhoods.

Thanks.

On Mar 23, 2021, at 17:20, David Phalp <David.Phalp@metrolinx.com> wrote:

Mr. [REDACTED]

We are responding to your inquiry submitted to the Ministry of the Environment, Conservation and Parks (MECP).

Firstly, thank you for taking the time to share your thoughts and feedback. Metrolinx understands and values that we are planning work in areas where people live, work and play.

We wanted to connect with you directly as we have two overlapping projects planned in your area – the [Ontario Line](#) subway project and the [Lakeshore East GO Expansion Project](#) (Pape Avenue to Kennedy Road). The joint-corridor will be a shared railway where the Ontario Line will run parallel to existing GO Service. The Ontario Line tracks are planned to run on the north side of four (three existing and one new) GO train tracks. Using the existing rail corridor and streamlining Ontario Line construction work with planned GO Expansion means we can keep mostly within an existing footprint, and minimize impacts to surrounding neighbourhoods as much as possible. Each project has its own dedicated Community Relations team who would be happy to assist in answering any specific questions you might have with regards to either project and the joint-corridor.

With respect to your interest in the GO Rail Network Electrification Addendum. In response to your comments (which have been included in **bold italics** below) contained in your email received March 5, 2021, we have provided the following clarifications and responses.

Thank you for taking the time to read the note below regarding the "Notice of Environmental Project Report Addendum GO Expansion Program."

Please consider this a written objection to the expansion of the line in relation to the Lakeshore East Corridor.

The plan in place without question will upset numerous parks and other communal greenspaces in the affected neighborhoods. More than ever, these spots need our protection as they are the places where communities are made, enjoyed and maintained.

The Lakeshore East Corridor is cutting through one of Toronto's oldest areas. Numerous heritage homes, irreplaceable buildings and parks are under threat from the expansion of this line.

The expansion will not only be disruptive from a geographical and environmental perspective but also from a human one. The people who call this neighbourhood home and the people who seek out this neighbourhood for its parks and other amenities will forever be missing a piece of what has made this area irreplaceable for the last 100+ years.

The Significant Addendum to the previously approved 2017 GO Rail Network Electrification EPR has been undertaken to assess additional electrification infrastructure required for new

tracks and layover facilities (which were studied as part of separate Metrolinx studies called “New Track & Facilities TPAP” and “Scarborough Junction Grade Separations TPAP”) proposed across various portions of the GO Rail Network that were not previously examined as part of the 2017 EPR. In addition, updated assessments of noise, vibration and air quality associated with increased service levels across six Metrolinx-owned rail corridors, including the Lakeshore East Corridor have also being undertaken.

With respect to assessment of impacts, each new transit project undergoes an Environmental Assessment in accordance with Ontario Regulation 231/08 (Transit Projects and Metrolinx Undertakings). A Transit Project Assessment Process (TPAP) is a centralized environmental assessment created specifically for transit projects. The process involves an investigative pre-consultation phase followed by a regulated consultation phase (up to 120-days) to develop an Environmental Project Report (EPR). The report includes project scope, consultation and an environmental impact assessment (including Natural Environment, Cultural Heritage, Land Use and Socio-Economic, Visual, Noise and Vibration, Air Quality, Vegetation etc.) with associated mitigation measures where required. The EPR goes through a 30-day public review period before being submitted to the Minister of the Environment Conservation and Parks’ for a final review.

In accordance with Section 15 of Ontario Regulation 231/08, Metrolinx assessed the significance of the proposed changes to the GO Rail Network Electrification Project that are inconsistent with the previously approved 2017 EPR. Thorough assessments of potential impacts, including the natural environment and cultural heritage features have been completed as part of the EPR Addendum and mitigation has been identified to avoid/offset these effects, as applicable. Specifically, no built heritage resources or cultural heritage landscapes will be directly or indirectly impacted by the works proposed as part of the EPR Addendum.

It is important to note that the additional electrification infrastructure proposed as part of the GO Rail Network Electrification EPR Addendum is primarily located within the existing Metrolinx Right-of-Way (ROW). Limited impacts beyond the Metrolinx ROW are anticipated.

Updated noise and vibration studies have been undertaken to assess potential impacts associated with Metrolinx’s new detailed service plan and to determine where mitigation is warranted. Metrolinx follows a specific Ontario Provincial Protocol (Ministry of Environment, Conservation and Parks (MECP)/GO Transit Protocol for Noise and Vibration Assessment. More detailed information regarding the Noise and Vibration Assessment Update completed for the Lakeshore East corridor, including further clarification regarding assessment methodology and mitigation, is available within Section 4.7.7 of the EPR Addendum at the link below:

https://www.metrolinxengage.com/sites/default/files/go_rail_network_electrification_epr_addendum_1.pdf

A copy of the Noise and Vibration Assessment report (provided as EPR Addendum Appendix G6) for the Lakeshore East corridor can also be viewed at:

https://www.metrolinxengage.com/sites/default/files/appendix_g6_-_lse_noise_and_vibration_study_0.pdf

The GO Rail Network EPR Addendum and associated supporting studies can be viewed on the Metrolinx Engage website at: <https://www.metrolinxengage.com/en/content/go-rail->

[network-electrification-epr-addendum](#)

In addition, with emptying offices spaces and lease occupancy of over 42+% and growing in the downtown core, how many people can we expect to use this rail corridor in the future? Ultimately, is it really needed?

Aside from further environmental and human impact studies, the current situation should require us to do deeper study into the actual need for an expanded rail corridor in its proposed form.

While progress is something that is always in motion, it feels like now is the time to stop and evaluate what is at stake.

Metrolinx is focused on building a faster, more efficient and sustainable regional transit network as part of the GO Expansion Program. The long-term goal and vision of the GO Expansion Program is to provide 15-minute two-way all-day service on core segments of the rail network. GO Expansion consists of many different projects. The largest piece represents all the work that is required to enable service levels identified in the [GO Expansion Full Business Case](#), including new trains, signals, systems, track, as well as the maintenance and operation of the system for years to come.

The GO Expansion program consists of six elements, the following five GO Expansion elements, are undertaking a Transit Project Assessment Process (TPAP) or TPAP addendum regulated by the Province of Ontario. These projects include TPAPs – [New Track and Facilities TPAP](#), [Scarborough Junction Grade Separation TPAP](#), [Stouffville Rail Corridor Grade Separations TPAP](#), and addenda - [the Network-Wide Structures Project](#) (an Addendum to the Barrie Rail Corridor Expansion TPAP 2017), and [an Addendum to the GO Rail Network Electrification TPAP 2017](#). The [Union Station Trainshed Heritage Conservation](#) project is being addressed in a Minister's Consent Application and a Strategic Conservation Plan.

Metrolinx understands the future "normal" may look different, as people continue to adjust their work and commuting patterns. Investments such as GO Expansion are now needed more than ever because the travel patterns of the future will be two-way all-day and much less about commuter peaks in the mornings and evenings. This is more about connecting the different cities in the GTHA, with organizations and businesses seeing more decentralization in the years to come.

Infrastructure Ontario and Metrolinx are continuing to advance the procurement of these important infrastructure projects on behalf of the province. We are working closely with all of our partners, stakeholders, and the private sector to move forward and will re-assess our procurement schedule, if necessary, as the global situation continues to evolve.

As noted above, this current commenting opportunity is with respect to the GO Rail Network Electrification EPR Addendum. Through the application of identified mitigation and monitoring measures, no negative impacts are anticipated to natural or cultural heritage environments.

Should you have any further questions or comments, please reach out via Torontoeast@metrolinx.com.

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Mr. Wills,

Thank you for taking the time to read the note below regarding the "Notice of Environmental Project Report Addendum GO Expansion Program."

Please consider this a written objection to the expansion of the line in relation to the Lakeshore East Corridor.

The plan in place without question will upset numerous parks and other communal greenspaces in the affected neighborhoods. More than ever, these spots need our protection as they are the places where communities are made, enjoyed and maintained.

The Lakeshore East Corridor is cutting through one of Toronto's oldest areas. Numerous heritage homes, irreplaceable buildings and parks are under threat from the expansion of this line.

The expansion will not only be disruptive from a geographical and environmental perspective but also from a human one. The people who call this neighbourhood home and the people who seek out this neighbourhood for its parks and other amenities will forever be missing a piece of what has made this area irreplaceable for the last 100+ years.

In addition, with emptying offices spaces and lease occupancy of over 42+% and growing in the downtown core, how many people can we expect to use this rail corridor in the future? Ultimately, is it really needed?

Aside from further environmental and human impact studies, the current situation should require us to do deeper study into the actual need for an expanded rail corridor in its proposed form.

While progress is something that is always in motion, it feels like now is the time to stop and evaluate what is at stake.

Thanks, and hope all is well.

Hi [REDACTED]

Thank you very much for your feedback and taking the time to share your thoughts.

We are committed to listening to the residents of Riverside and Leslieville so we can provide you with the information you need about the benefits of the project while helping to manage impacts. Our plans have been updated based on what we heard from the community, and we will continue to work with you to deliver infrastructure that fits within and enhances the neighbourhoods we will serve.

Please don't hesitate to contact us in the future if you have any questions,

Simon

Subject: Re: Ontario Line

Thanks for sending back the Metrolinx party line on this. Not helpful though and did not respond to my concerns. No actual consultation with the neighbourhood has occurred. None of our concerns have been addressed. Destroying a neighbourhood to save us 4 minutes? Nobody wants this. Nobody believes this work will fit within the existing rail corridor. If this project proceeds as planned, irreparable and needless harm will be done to this neighbourhood. I have yet to see any evidence that "community considerations" factored in. Restoring park space? You cannot restore what you have torn apart and paved over.

As for the Don River issue: you could come above ground in that area and still pass over it, instead of under it. The line does not need to come above ground at Gerrard in order to pass over the Don where the line is planned. I know that many people asked about this as an alternative and I have yet to see a rationale explanation.

We had a plan to improve transit in the area - the DRL. Mr. Ford, as always, decided that he knew better and threw years of planning and already spent resources out the window and replaced it with the Ontario Line. All without any consultation. I'm quite sure that some are benefitting from this, but let's not pretend it is Leslieville/Riverside.

Metrolinx should stop the lies and deception in relation to the Ontario Line. The truth is, it is being built with total disregard toward my neighbourhood and to pretend that it is being done for my benefit only adds insult to injury.

Hi [REDACTED],

Thank you for sharing your thoughts with us.

By running the Ontario Line along the existing corridor, we are able to cut construction impacts in half, and get the work done quicker. Fitting the work within the rail corridor also means that we are able to minimize our construction footprint. We understand that community institutions are important to you, and they are important to us too. By building and operating the Ontario Line above ground South of Gerrard means that important community destinations like Jimmie Simpson Recreation Centre can stay open during construction and beyond. We will work continuously to limit the footprint of our work, and where using park space cannot be avoided, we will strive to limit our footprint, as well as work with our contractors and the City of Toronto to restore the park space to its original state or better. We are also taking further steps to reduce disruption by streamlining Ontario Line construction with GO expansion work that is already planned for the rail corridor. As a result, we are able to further reduce impacts and disruption in the community, including dramatically reducing property impacts than if the Ontario Line were tunneled.

Decisions made about the Ontario Line and its route are made with the goals to increase the customer experience, better access to transit, and create more access to jobs, while balancing cost and community considerations. Due to Toronto's geography, the Ontario Line would need to be at a depth of approximately nine stories below ground to pass under the Don River. The Line would then need to continue at that depth to avoid major Toronto sewer infrastructure. At Leslieville station, for example, it would take customers approximately four and a half minutes to get from the station to the train if the line were below ground. Another benefit is that by having surface stations, riders can get where they need to go quicker and easier. This will make for a seamless travel experience for passengers transferring between the Ontario Line and the existing TTC network, while easing overcrowding on Line 1 and connecting more people to high-order transit. The Ontario Line will be further integrated with the TTC by running as a part of the TTC network, accessed with a TTC fare, and customers will be able to pay with PRESTO, as they do today.

Thank you again for writing and sharing your thoughts with us, and don't hesitate to let us know if you have any further questions.

Subject: Ontario Line

Just read your latest propaganda - I still see nothing in it to justify or to even attempt to justify the destruction of my neighbourhood for the above-ground portion of the line south of Gerrard. Is that reckless plan still on?

Nor does the utopian picture you paint indicate how the Ontario Line will in fact be integrated with the TTC. For example, will it be a separate fare?

How much of Jimmie Simpson park and the surrounding neighbourhood will be destroyed to make way for this "gift" that is being foisted upon us? What development will be permitted in exchange for funding this portion of the line?

So many unanswered questions remain, but it is clear that the concerns of the people most directly impacted by this above-ground portion have to date been ignored.

Shame.

Subject: RE: Ontario Line - Cost Comparisons

Hi [REDACTED]

Thank you for the question. We know how important parks are in your community and are committed to minimizing our impact on them. The map at the link you provided shows where Metrolinx will be installing noise walls across its entire network as part of the GO Expansion program. The map is not intended to show the specific locations of noise walls which will be determined through detailed design work for individual projects.

As I mentioned in my earlier message, the environmental studies and design work for improvements to the shared rail corridor in your neighbourhood is underway. Design concepts, noise and vibration studies, and recommended noise barrier heights and locations will be included in a draft environmental report which will be released for public consultation in 2021 prior to any work beginning. We are committed to designing infrastructure that is a good fit for the community and will take great care when constructing it to minimize impacts on existing trees and parks. We will also be working closely with the City of Toronto to restore the parks after construction is completed.

I have attached several noise wall design concepts to this message to give you an idea of how they can be integrated with trees and shrubs to reduce the visibility of the rail corridor as well as effective protection from noise and vibration. We look forward to sharing more details with the public and receiving their feedback.

I hope this information is helpful, but please don't hesitate to contact us if you have further questions. I'm also happy to give you a call this afternoon, if you have time.

Sincerely,
Josh

Subject: Re: Ontario Line - Cost Comparisons

Hi Josh,

I was very disappointed to see Metrolinx's map setting out the proposed boundaries for the construction of the noise wall through my neighbourhood in Riverside (<https://maps.metrolinx.com/arcgis/apps/webappviewer/index.html?id=199ded6da5e746c08f4742df9c921f8c>). In particular, the map directly contradicts your statement below regarding "staying almost entirely within the current footprint", since it's evident that significant portions of Bruce Mackey park will be taken to build the sound walls. I feel particularly misled by you since the barrier will be less than 40 feet from our property line. Could you please clarify how this proposed alignment will minimize impacts on our community when the fact is that a 15-20 foot wall will be erected directly in front of our houses? Will Metrolinx share what mitigation efforts they will be taking with respect to the construction of these walls? Will adjacent property owners be compensated for the physical damage and loss of value of their properties and the adverse impacts to their overall health and safety? Please advise at your earliest opportunity.

Subject: Re: Pandemic impact - no rush to build and cheap out - Ontario line

Thank you Simon,

I really appreciate your reply and feedback! I thought this was just an automated/one way email address!

I am fully aware of your explanation and the details of the Ontario line. I do not doubt what you said. It is a valid solution and you mentioned only positive points.

However, there is also nothing wrong with my approach/solution (original relief line design) either. Ontario line has its pros and cons and so does the original relief line design before the election, whether it is cost, time to build or Alignment and etc.

The issue is not that the Ontario line is better as you position your feedback, it is the fact that Ontario line exists for political reasons. There was already a plan on the table (before the election) that the city needs and just like the past 30-40 years, a new government (any party) comes in and has a grand new political plan. And changes everything up. It's a vicious cycle.

At the end of the day, no matter how much you try to sell the Ontario line to the residents of Riverdale/Leslieville, this project will more negatively impact (less positively) the neighbourhoods permanently vs. the original design.

You do not live there.

Now the question is which political party feels which design is the lesser of the two evils, in this case, and the answer is Doug Ford. Ironically, the saviour of build subway, subways subways.

Anyways, thanks for your time. I really do appreciate your time and hearing me out.

Regards,

To: [REDACTED]
Subject: RE: Pandemic impact - no rush to build and cheap out - Ontario line

Hi [REDACTED]

Thanks for sharing your thoughts about the Ontario Line with us. The community's needs are at the centre of our decision making. Because of the Ontario Line's mix of

below ground, at-grade and elevated track, it is able to reach more communities sooner and offer an improved customer experience with less construction impacts.

At twice the length of the previously proposed Downtown Relief Line South, the Ontario Line will give residents of Thorncliffe Park, Liberty Village, Flemingdon Park, and Liberty Village access to higher order transit, and be built within a similar timeframe. Tunneling is complex, time-consuming and disruptive due to the amount of excavation required. In areas where there are practical alternatives—such as the Metrolinx owned right of way—we can drastically cut down on construction impacts to communities and finish the work in a shorter timeframe. In fact, in the East from the Don Yard to Gerrard, our plans have the Ontario Line fitting almost exactly into the current railway footprint, and by doing that we can cut property impacts by half. In the above-ground areas, construction techniques will be faster and simpler which results in less construction impacts for residents. As a result, we can provide more transit, quicker, with fewer property impacts.

To better shield communities living alongside the joint rail corridor from all rail operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. The new Ontario Line tracks will be a continuous rail design with no joints, supported by rubber bases and the trains will be automated, which means less noise and vibration when trains come to a stop. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor. A more detailed analysis will be shared for public consultation in upcoming environmental reports.

Having the Ontario Line as a mixture of tunneled, at-grade, and elevated track also supports a better customer experience. For example, due to Toronto's geography, between the Don Yard and Gerrard Station, the Ontario Line would have to be buried more than 38 meters below ground to cross below the Don River, and continue at that approximate depth to avoid Toronto sewer infrastructure. As a result, a tunneled station would need to be so far below ground that it would take passengers approximately four and a half minutes to get from Queen Street East to board the train underground. Surface level stations in this area mean that we can provide a better customer experience. Customers can hop on or off the Ontario Line quickly and easily, getting downtown, coming home, or easily getting where they need to go.

We look forward to sharing more details as our work moves ahead. If you haven't already, please consider signing up for [our e-newsletter](#) to help stay up-to-date on the latest project information.

Subject: Pandemic impact - no rush to build and cheap out - Ontario line
Importance: High

Hi,

my opinion, this was purely a political decision vs What is really required for this route

If we are going with the Ontario line vs The original relief line before Ford got elected at least build the tunnels to be upgraded in the future using subway cars on line1 and line2 just like how crosstown was designed

Now that there is no rush to build this due to the pandemic has decrease demand and political reasons to build the line 1 north ext asap we can now bury the lines as intended using the original route before Ford was elected
Don't tear up neighbourhoods along the rail corridor Don't increase the noise along that route Cars running frequently, especially as demand increase is not fair for those neighbourhoods

The current proposal now feels like the scarborough RT all over again

Just build a big chunk of the line right the first time So we don't have to spend more money later to fix a poor decision made in the past

Thanks

To: [REDACTED]
Subject: RE: Ontario Line

Hi [REDACTED]

Thanks for your follow up questions.

In areas where there are practical alternatives to tunneling, such as an already Metrolinx-owned right of way, we can reduce impacts to communities and finish the work in shorter timeframes. A tunneled Ontario Line would have to be buried approximately 40 metres from East Harbour all the way to Gerrard and Carlaw in order to avoid major sewer mains, specifically the midtown interceptor sewer. We are continuing to refine our plans, based on feedback from the community. As we plan and carry out our work, we will minimize the impact to parks and trees. Where those impacts are unavoidable, we will compensate trees in accordance with [Metrolinx's Vegetation Guideline](#). We will have more to share in 2021 as we advance our designs and complete environmental studies. This will help us answer your questions in greater detail.

To better shield communities living alongside the joint rail corridor from all rail operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. The new Ontario Line tracks will be a continuous rail design with no joints, supported by rubber bases and the trains will be automated, which means less noise and vibration when trains come to a stop. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor.

Throughout the project we will maintain an open dialogue with businesses and work to help them stay accessible and successful during construction. We have already begun our outreach to BIAs and individual businesses to understand their operations and questions about the project. Businesses will be represented on community liaison tables that we will be setting up

along the entire alignment. Once we move into construction, we will partner with business improvement areas on shop-local initiatives and work with construction teams to keep access to businesses clear and clean.

We appreciate the opportunity to respond to your concerns and look forward to continuing to engage with the community as the project moves forward.

Sincerely,

SIMON GRANAT

Cc: Councillor Fletcher <councillor_fletcher@toronto.ca>; Mayor Tory <mayor_tory@toronto.ca>
Subject: Re: Ontario Line

Thank you for your very prompt reply.

I ought to be re-assured by your response, but I find myself very surprised by many of your assertions, which seem inconsistent with the logic applied elsewhere. Is surface rail somehow only less disruptive than tunneling in east downtown, but not in the suburbs?

I am also surprised with your comment that the rail footprint will be almost exactly the same when doubling the number of rail lines, and you will keep your work in the existing corridor. Perhaps we just disagree about the meaning of 'almost exactly', and 'work'.

I am also surprised by the assertion that the tunneling and station would have to be 9 stories below grade. The deepest TTC stations in old Toronto are no more than five stories deep by my estimate. (I have at times counted the stairs, invariably on the way up). Similarly, I've seen the sewer line 100m north of Queen St. East: it is about 3 metres below grade. There must be a main trunk at greater depth, but it is disappointing to hear that sewers and the local geology are so different on this side of the City.

I think your comment that above ground "provides much needed higher order transit access compared to tunnelling" implies that Metrolinx would not build a Queen St East station if it were required to tunnel, due to the cost, and I can see that underground subway station construction can be very costly and disruptive to surface activities, as it has been on Eglinton. Yet somehow the TTC managed to build lots of them in downtown Toronto. Those stations lack the grand entrance buildings that characterize the Spadina/York subway extension, but otherwise have been working

well for about 60 years. Furthermore, I understood that Metrolinx was planning shorter train sets and therefore smaller stations than the downtown TTC system. Finally, I think that cost is a strange justification for elimination of what would likely be a high performing station on a necessary line, when the government insists that it will proceed with entirely new Scarborough and Eglinton West (suburban) transit lines that by Metrolinx' own analysis have been shown to not pass a cost benefit test.

I suppose I would be able to place more trust in your responses if I knew that Metrolinx would bear the cost of the disruption through agreements with the City for interim and permanent loss of parkland and roadways, and would provide business disruption compensation for what promises to be a protracted construction period. You do say disruption is less for surface rail. Words are cheap. Do your agreements with the City and landowners compensate them appropriately, so we can infer that surface rail disruption has been priced and considered by Metrolinx and remains the best approach? Or does Metrolinx want the community to just trust them, without putting its money where its mouth is, so to speak?

Thank you for your consideration.

On Dec 3, 2020, at 10:16 AM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi ██████████

Thank you for writing, and sharing your thoughts with us.

The Ontario Line route puts community interests first. The route was created by carefully anticipating issues, talking with residents and businesses. The above ground alignment has unique and significant benefits for your community. Having the line above ground is the least disruptive option, drastically reduces property impacts, improves customer service, and provides much needed higher order transit access compared to tunneling.

By having the line above ground we drastically reduce property and traffic impacts than if the line were tunneled. Tunnelling is a complex, time-consuming and disruptive process. Our careful design fits the Ontario Line almost exactly in the rail corridor's footprint and cuts property impacts in half. By keeping our work in the existing corridor we are significantly reducing the property needed to accommodate near-term construction, and long-term operations. This is especially impactful considering that tunneling requires laydown areas needed to build stations and emergency exit buildings between stations. Another benefit of the at-grade route is its faster construction—meaning fewer community and

traffic impacts.

There's a much better customer service experience above ground, too. Due to Toronto's geography and municipal sewer infrastructure, the Ontario Line would have to be buried very deep below ground. In fact, we estimate station locations through this part of the City would need to be approximately nine stories below ground. As a result, it would take customers approximately four and a half minutes to get from Queen Street East to the train at Leslieville Station. Having surface stations means that riders can seamlessly transfer to their other TTC connections, shop, or get where they need to go quicker.

Lastly, I want to address safety. Safety is the centre of everything we do at Metrolinx. We would not design or operate a service that was not safe for our customers, community and our employees. I would like to share that the approach to run trains along a joint rail corridor is not new. This approach is similar to other operations such as the Scarborough Rapid Transit and Stouffville GO train operations between Kennedy and Ellesmere Roads, and Line 2 and CP railway operations between Bloor Street West and Kipling Station.

For more information you can visit our [website](#), and if you haven't already, please sign up for our [e-newsletter](#) to stay engaged with the project and get notified about future virtual open houses.

Thanks for the solicitation of my opinions that you sent in the mail.

My opinion is that you are going above ground in Riverside to save a little money at the expense of the local community, because the provincial government's, and metrolinx's, priority is to better serve communities that are likely to support the governing party. I find your 'caring about the community' posture disingenuous. Here's why I think so:

1) Nowhere in Canada is a six lane rail or auto highway being build through an existing and historic downtown residential community of a major city. Only in Toronto is the government seemingly bent on implementing strategies more at home in the 1950s.

2) Nowhere else in Toronto has a surface subway been built so close to residential development. In every case I can think of -Rosedale, Bloor High Park, Downsview, Scarborough east of Warden, there are significant gullies or separations. Why have our standards fallen precipitously under Metrolinx? What justifies the unusual and disruptive treatment in this case? There has to be a better reason than "it's the best way to make intermodal transfers work at East Harbour", as your mail-out implies.

3) In the inner suburbs, where the governing party gets more support, the priority has been to build underground subways in Scarborough and North York even where surface right of ways already exist, and surface land is a lot less valuable (compare the development activity). In Riverside your plan will blight valuable land. It is clear that the new Ontario and GO rail lines are primarily designed to improve service to suburban areas. Metrolinx has used end to end travel times as its most important benchmark for evaluating new stations. Our community appears to be expressly (pardon the pun) not important to Metrolinx. Oh, and I have not forgotten the placement of a gas generating station in our community, and the expensive political cancellations in suburban neighbourhoods. The bias is real.

4) The land that will be taken to increase the surface lanes from 3 to 6 is important space for the neighbourhood, much of it a buffer with the existing railway, and very expensive to replace. Perhaps if Metrolinx were required to fully replace it, and build with current buffer space standards in keeping with the frequency of the rail traffic and the residential contiguous use, Metrolinx would find it more attractive to go underground.

5) The business and neighbourhood traffic disruption will be brutal. Is Metrolinx providing compensation for this, like the contractor on the Gardiner Expressway (lane occupancy charges), and to the BIAs and others who will be harmed for

years? Your reputation for timely completion on Eglinton, a big wide thoroughfare, is in tatters. The work in this case would be much more complicated, fully integrated into the community - with no staging grounds on the right of way. Perhaps if compensation for these disruptions was properly included in your agreements, Metrolinx would reconsider going underground.

6) The project involves tunnel boring machines at both ends of the surface section - they are available to continue the work. I have been told by your drillers that your core sample drilling has gone down over 180 feet, which seems only needed if you are considering tunnelling. I think you know it is the appropriate solution.

I believe you are capable and prepared to bury this line if it becomes politically necessary. Why wait. Recommend the obviously more reasonable approach and tunnel through Riverside, and earn the trust of the people you serve.

Subject: RE: Ontario Line - Bruce Mackey Park

Hi [REDACTED]

Thanks for your email. We agree that the parks in your neighbourhood, and greenspace throughout the city and province, is valuable. We are applying significant design and engineering effort to fit the Ontario Line almost exactly within the existing rail corridor. Wherever park spaces are needed in order to avoid impacting private properties, we will work with our contractors and the City of Toronto to restore them as much as possible, including compensating for removed trees in accordance with [Metrolinx's Vegetation Guideline](#). We are still finalizing designs and will share updates about impacts to park spaces as soon as we have them. We have already committed to shielding the community from the rail corridor by adding effective, well-designed noise walls, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. Our preliminary analysis shows that when combined with the other mitigation we will put in place, the noise and vibration impacts from the Ontario Line will be eliminated and we will reduce the noise and vibration profiles of the GO trains that currently use the corridor. A more detailed analysis, including noise wall details and aesthetics, will be shared for public consultation in upcoming environmental reports.

Thank you for reminding us how important Bruce Mackey park is to the community. We look forward to staying in touch as the project moves ahead. Please sign up for our [e-newsletter](#) to stay updated with the latest developments.

Subject: Ontario Line - Bruce Mackey Park

What is the anticipated impact of the Ontario Line on Bruce Mackey Park? I live on Wardell Street, and Bruce Mackey is important to my family and our quality of life. It provides a natural space in our neighbourhood with trees and acts aesthetically to offset the train tracks. Bruce MacKey is very important to everyone living on Wardell and Dundas within the area, or with a view from Boulton, as well as to people in the neighbourhood who walk their dogs or bring their children to play.

Yours truly,

Hi [REDACTED]

Glad that I can help. [Early works](#) in your area is anticipated to begin in summer 2021 and you're right that just includes the grading, preparatory work and noise wall installation. We'll have more to say about the timelines for what comes next as we move through the Ontario Line procurement phase as well as similar processes on GO Expansion. Work will be streamlined to minimize disruption.

Thanks again for your question.

Subject: Re: GO Electrification / coordination with Ontario Line

Hi again Simon,
It is so helpful to have someone to communicate with at Metrolinx!

Great to hear that the 4th line will be electrified.

Any idea when that electric track will be built?

I ask because in the early work info I don't see anything about this -- just prep (grading, walls etc).

Thanks for any light you can shed on this important piece of the puzzle. It is going to be very difficult to coordinate GO expansion and OL. The devil will be in the details!

Hi Simon,

Thanks for your quick response. So, just to clarify, the GO Line 4 along the joint corridor will be electric?

[REDACTED]

On Fri, Dec 4, 2020 at 12:22 PM Ontario Line <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thanks for your question about the timing GO Line 4 work in the joint corridor through Riverside. Yes, we will coordinate the GO expansion plans with the Ontario Line construction to avoid multiple disruptions in your community. We'll be starting with combined early works in 2021 which includes:

- grading to prepare for track installation

- new retaining walls and noise barriers along the corridor to shield communities from all rail operations, including GO and VIA services
- relocation or protection of utilities, and
- bridge construction.

The work to install Ontario Line tracks and stations will be part of one of the main P3 contracts and will be coordinated with GO Expansion, including electrification. We'll have more details, including timelines, to share as procurement advances.

I hope this answers your question. Please let us know if you need anything further.

Thank you,

Subject: GO Electrification / coordination with Ontario Line

I have reviewed your material about the plans to Electrify the GO system. To quote from your website:

"Metrolinx is committed to finding the most sustainable solution for electrifying the GO rail network. ... The contract is in a multi-year procurement process, and currently teams are completing the bids that will close in 2021. Construction will get underway in 2022."

Metrolinx has promised that the Ontario Line will be electric. Do you promise that the work to electrify GO Line 4 in the Joint Corridor where the Ontario Line and GO will run side-by-side will be done at the same time as the Ontario Line work? That is, will you do all of the construction work for both of these projects at the same time so we don't have to live through this disruption twice?

Thank you,

Subject: RE: Contact Ontario Line Submission

Hi [REDACTED]

Thanks for writing and sharing your thoughts about noise, vibration and the Ontario Line. We appreciate your questions and concerns and agree that Riverside and Leslieville is a very special place.

The route of the Ontario Line, above ground and within the joint corridor, is carefully designed with community in mind. Tunelling is a time consuming and complex process. Due to underground interferences at Queen and Gerrard Streets, the Ontario Line platforms would have to be almost seven stories underground. Where there are practical alternatives, such as an already Metrolinx-owned right of way, we can drastically cut down on construction impacts, reduce property impacts, and shorten the overall construction time.

We will be coordinating previously announced GO expansion work with Ontario Line construction to avoid multiple disruptions in the community while still containing our work to the existing rail corridor – staying almost entirely within its current footprint. To better shield communities living alongside the joint rail corridor from all rail operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. The new Ontario Line tracks will be a continuous rail design with no joints, supported by rubber bases and the trains will be automated, which means less noise and vibration when trains come to a stop. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor. A more detailed analysis will be shared for public consultation in upcoming environmental reports.

We are committed to listening to the residents of Riverside and Leslieville so we can provide you with the information you need about the benefits of the project while helping to manage any impacts. Our plans have been updated based on what we heard from the community and we will continue to work with you to deliver infrastructure that fits within and enhances the neighbourhoods we will serve.

if you haven't already, please sign up for our [e-newsletter](#) to stay engaged with the project.

Thank you and please don't hesitate to contact us if you have further questions,

Your name: [REDACTED]

Your e-mail address: [REDACTED]

Nearest Ontario Line Station (Optional): Leslieville

Subject: Above Ground Trains

Message: I am a resident of Riverside/Leslieville. I actually live on Grant St. I'm quite concerned that the trains will be above ground blasting their way through Riverdale all day long. Via and Go are bad enough. I know that Metrolinx/Gov of Ont have more than enough funds to bury this line in it's entirety. If Metrolinx cares about our community like they say they do, they would bury the line underground and save Riverdale from the destruction, ugliness and noise this will bring. Maybe the next Ontario Government will see how special Riverdale/Leslieville actually is and stop this ridiculous proposal.

Subject: RE: Thank you for keeping our community at the heart of your planning

Hi [REDACTED]

Appreciate your email and sharing your thoughts with us.

Our design decisions put community first, and the planned route was selected to minimize community impacts. There will be some Early Works projects in the joint corridor that are expected to begin in 2021 and we estimate that the Leslieville station construction will start in mid-2023, with timelines driven by the successful awarding of the construction contract. We are working through confirming the exact height, location, and timelines for noise wall installation and that information will be shared with the community for feedback in 2021. Throughout construction and operation, we will be available to support the community and answer questions as we work to build much needed higher order transit.

To learn more about how the Ontario Line, you can visit [our website](#) and if you haven't already, please consider signing up for [our e-newsletter](#) to keep up to date with the project.

Thanks again for taking the time to share your thoughts,

Hi Metrolinx

I received your notice in the mailbox today about What did we think about the most when planning the Ontario Line ? Your neighbourhood.

Thank you for that. I love our community here.

May I ask when construction will begin to put in the Leslieville Station near McGee St. And Queen St. East ?

And when will the attractive noise barriers to reduce the sound of the Ontario Line be installed ?

Thank you again for putting our neighbourhood at the forefront of your planning and decision making.

To: [REDACTED]

Hi [REDACTED],

Thank you for your email. The station will be located where the rail bridge crosses Queen Street East, just west of McGee Street. You can view maps and more detailed information on our [East Neighbourhood Updates page](#).

The Ontario Line will fit almost exactly within the existing rail corridor footprint. After construction, the corridor will be lined with effective and well-designed noise walls, landscaping, and new trees and greenery. Noise wall specifics have not yet been finalized (designs will be brought forward for community feedback as the project progresses) but our preliminary analysis shows these combined measures will effectively eliminate noticeable noise and vibration impacts from the Ontario Line while also reducing the noise and vibration profiles of the GO and VIA trains that currently use the corridor.

Let us know if you have any other questions and if you haven't already, please consider signing up for [our e-newsletter](#) to keep up to date with the project and receive notice about future virtual community meetings.

Best,
Sivahami

Subject: RE: feedback ontario line

Hi [REDACTED],

Thank you for taking the time to email us about the Ontario Line. We are committed to responding to the concerns we receive and appreciate the opportunity to share some of the thinking behind our plans. By building at-grade through the shared rail corridor in Riverside and Leslieville, we are able to cut construction impacts in half. A tunneled approach is complex, time-consuming and disruptive due to the amount of excavation that is required. In areas where there are practical alternatives, such as an already Metrolinx-owned right of way, we can drastically cut down on construction impacts to communities and finish the work in shorter timeframes. It also allows us to significantly reduce the amount of property we need to accommodate near-term construction and long-term operations, not to mention avoiding considerable impacts to local traffic and businesses.

We will also streamline Ontario Line construction with GO expansion work that was already planned along the rail corridor, reducing overall construction impacts to the community. We will work continuously to limit the footprint of our work, and where we need to use park space to avoid impact to private properties, we will work with our contractors and the City of Toronto to restore the park space to its original state or better. With surface stations, we are able to provide customers with a much better experience that is fully accessible, shielded from the elements, and provides an easy transfer to and from surface transit options in the area. To reduce noise once the Ontario Line is in operation, we will line the corridor with effective and well-designed sound barriers, landscaping, and new trees and greenery. Our preliminary analysis shows that these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line while also reducing the noise and vibration profiles of the GO and VIA trains that currently use the corridor.

We are continuing to address the feedback we receive as we move forward with this important project. Please do not hesitate to contact us if you have more questions.

Thank you,
Sivahami

Subject: RE: Follow up on Community Submission sent on Oct 17, 2020

Hi [REDACTED]

Thanks for following up. Your questions and feedback have been shared with our project team and we will be setting up opportunities for community discussions in 2021 as environmental studies and detailed project design are sufficiently advanced. These studies will help us respond to your concerns in more detail and no construction will begin in your area before we conduct public consultation on environmental reports. If you are interested in connecting sooner, we can certainly arrange that.

The environmental assessments we are completing, including the Early Works Report for the Joint Corridor and the Environmental Impact Assessment Report, will include many more specifics. The noise and vibration study that will form part of the Environmental Impact Assessment Report is planned to include figures with contour-type mapping indicating anticipated levels of noise and vibration in proximity to project activities. This study and the design of corridor improvements will inform proposed heights and locations of the noise barriers that Metrolinx has committed to installing along the shared GO/Ontario Line rail corridor from Eastern to Logan. We will share all of this information, as well as noise barrier design options, with the community for input and discussion.

Impacts on air quality will also be assessed in detail, in forthcoming reports. Traffic data used to estimate existing conditions in the Environmental Conditions Report was determined from vehicular traffic counts from 2017, 2018, and 2019. Note the "existing conditions" year is 2019 in the report. An annual growth rate of 1% was applied to the 2017 and 2018 data to produce comparable 2019 annual average daily traffic (AADT). However, since the Ontario Line trains will be powered by electricity, no operational impacts to air quality are anticipated. The Ontario Line can help to improve background air quality levels by allowing more people to leave their cars at home and take transit instead.

We appreciate the opportunity to address your concerns and will keep you updated as we complete the necessary work to provide you with more fulsome answers. My direct number is included below if you want to discuss by phone.

Sincerely,
Josh

Hi Josh,

Thanks for your reply. I'm afraid we didn't get much in the way of substantive feedback in your response. Our community is genuinely concerned about the health impact of the proposed OL. If answers are not known to you, could you please share our questions with project managers and decision makers? We've been trying to get answers from Metrolinx for a long time. We need substantive feedback from Metrolinx.

Thanks,

[REDACTED]

= = =

1. Metrolinx has not considered any **alternative alignments**, despite the motion passed by the City of Toronto in 2019 (motion Ex9.1 Amendments 19 and 20) as well as repeated calls from the community to investigate underground routes through Riverside/Leslieville. Why is Metrolinx continuing to ignore the City directive and community feedback?
[Your response is talking about the cost of going under the Don River. We're not asking for that. What's the cost of burying the line north of Eastern and south of Gerrard? This is a distance of about 1km. Please provide actual costing that have been completed per City's directive.](#)
2. There is no mention of the effects of noise and vibration on the human body. Will the Environment Assessment include a **Health Impact Assessment** as stipulated by Health Canada?
[Your response made no reference to this. Will the final EA include a Health Impact Assessment? What is the impact of running a 6-lane railway less than 10m from residential homes? How many people and how many households can expect adverse health effects WHO and Public Health Toronto warn us about?](#)
3. We need **more noise measurements** to be taken in our neighbourhood to properly gauge the existing noise levels.
[You alluded to more info to be included in the final ECR. Will the final ECR include more noise measurements in our neighbourhood, parks and schools?](#)
4. **Predicted noise levels:** Will a future study include assessment of *expected* rail traffic noise impact conducted using a prediction method like STEAM (Sound from Trains Environmental Analysis Method)? Will this assessment include sound levels expected with and without noise mitigation measures such as a sound barrier wall?

Will the final ECR include predicted noise levels?

5. Current noise measurement on Wardell already exceed MOE and WHO guidelines. Have you engaged **medical officers for the Province and Toronto** so they can provide their professional view on whether OL can proceed without serious public health implications?

Your response made no reference to this. Are you engaging medical experts?

6. Health Canada states “**the determination of %HA** is a widely accepted indicator of the human health effects of long-term noise exposure.” It stipulates “a calculation of baseline percent highly annoyed (%HA) at receptors” be provided in environmental assessment. Please include in the final ECR.

Your response made no reference to this. Is this in the works?

7. **No vibration study** was undertaken in Riverside/Leslieville. We are extremely nervous about the exposure to constant vibration on an ongoing basis from rail traffic and how it may interfere with our health and everyday activities such as conversation and sleep. Please include in ECR.

Your response made no reference to this. OL contravenes safety standards endorsed by Railway Association of Canada and Federation of Canadian Municipalities. We demand a vibration study in our neighbourhood.

8. The **Air Quality Study** was conducted in May 2020, during the height of pandemic lockdown when vehicular and rail traffic was the lowest we have seen in half a century. Will Metrolinx commit to re-doing the Air Quality Study to accurately record these greenhouse gas levels?

Your response mentioned air quality is consistent with the rest of the city. Does this mean that Metrolinx will not conduct an air quality study to better gauge the existing air quality in our neighbourhood?

9. When will Metrolinx publish **details of the sound barrier wall**? Its height, its position and material?

You alluded to well-designed sound barriers. Could you please provide details? Existing rails are elevated on a 6m berm. Just how high will this sound barrier wall going to be? Will it cover the entirety of the elevated tracks? What material will be used for this?

Dear [REDACTED],

Thank you for your submission regarding the Ontario Line and the draft Environmental Conditions Report and please accept my apology for the delay in responding. A record of your comments will appear in the final Environmental Conditions Report, which will be made available for review later this year. We will continue to outline the impacts and benefits of various construction approaches and will be addressing many of your questions and concerns in our further environmental reports, but in the interim we provide the following information for consideration.

Tunneling is complex, time-consuming and disruptive due to the amount of excavation that is required. In areas where there are practical alternatives, such as an already Metrolinx-owned right of way, we can drastically cut down on construction impacts to communities and finish the work in shorter timeframes. As noted in the [Ontario Line Initial Business Case](#), the previous Relief Line South proposal put forward by the City of Toronto and the TTC looked at the option of tunneling in this area, and we used their initial work to inform our decision making. We determined that using sections of our existing rail corridors meant we could extend the Ontario Line farther and reach more neighbourhoods sooner than previously planned, providing much needed additional relief to subway congestion on Line 1.

At the proposed location of the new station at East Harbour, the Ontario Line would have to be buried more than 38 metres, or nine stories, underground to be below the Don River. It would create a long and unattractive transfer between Ontario Line and GO trains. From here, a tunnel would have had to maintain a similar depth all the way to the station at Gerrard and Carlaw to avoid major sewer mains in that area (specifically the midtown interceptor sewer). Stations built this deep underground would have required approximately three separate, very long escalators to reach the platforms, taking four and a half minutes longer for customers to get to and from the platform level at every station in the area, including the station at Queen Street in Leslieville. Bringing these stations above ground avoids those long connection times while providing customers with a fully accessible experience that is shielded from the elements and encourages more transfers from the crowded streetcar network and from GO services.

Faster and simpler construction techniques and methods employed in the above-ground areas and along the rail corridor makes construction less impactful to residents and businesses, avoiding complex utility relocations and multiple excavation points. This approach also allows us to significantly reduce the amount of property we need to accommodate near-term construction and long-term operations, not to mention avoiding considerable impacts to local traffic and businesses when you consider the excavations and adjoining construction laydown areas that would have been needed to build stations as well as the emergency exit buildings.

We will be coordinating previously announced GO expansion work with Ontario Line construction to avoid multiple disruptions in your community while still containing our work to the existing rail

corridor – staying almost entirely within its current footprint. The new Ontario Line tracks will be a continuous rail design with no joints, supported by rubber bases. The trains will be automated, which means less noise and vibration when trains come to a stop.

To better shield communities living alongside the joint rail corridor from all rail operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor. We will provide the details from this analysis in upcoming environmental reports.

Metrolinx is following the same methodology for noise and vibration as we have for previously assessed projects. We work closely with the Ministry of the Environment, Conservation and Parks to ensure that our approach to noise and vibration assessment is sound and in line with all applicable guidelines and regulations.

With the introduction of the Ontario Line, we hope to improve background air quality levels by allowing people to leave their cars at home and take transit instead. The draft Environmental Conditions Report provided information on ambient air quality levels, which we received from the Ministry of the Environment, Conservation and Parks, and from Environment and Climate Change Canada. The exceedances noted in the draft Environmental Conditions Report are similar across downtown Toronto and are common in urban centres. Many of these elevated contaminant levels are associated with fossil fuels that will be offset or reduced when more people choose public transit over driving. As noted, all the subway vehicles will all be electric, and operation of the line will not introduce new emissions into the local airshed.

It is also important to note the purpose and nature of the report that has been posted to date. The Ontario Line Environmental Conditions Report adheres to the requirements laid out in Ontario Regulation 341/20 under the Environmental Assessment Act and outlines the current conditions in the Ontario Line study area. The report characterizes existing conditions for various environmental disciplines, including background/ambient levels of noise, vibration and air quality, and it includes a preliminary assessments of impacts that will be comprehensively analyzed in subsequent Early Works Reports and an Environmental Impact Assessment Report, per Ontario Regulation 341/20. These assessments rely on a specific level of design that is forthcoming, and releasing this information progressively is meant to facilitate more robust consultation while necessary planning work continues. Many of the questions and concerns detailed in your letter will be addressed through these reports, which we expect to be available in 2021.

We are committed to listening to the residents of Riverside and Leslieville so we can provide you with the information you need about the benefits of the project while helping to manage any impacts. Our plans have been updated based on what we heard from the community and we will continue to work with you to deliver infrastructure that fits within and enhances the neighbourhoods we will serve.

We appreciate your feedback and will continue to work hard to address your concerns. I will reach out to you again when we have more information to support a further discussion about the questions you have raised.

Sincerely,
Josh

Josh Vandezande
Senior Manager of Community Relations - Ontario Line

Subject: Follow up on Community Submission sent on Oct 17, 2020

ATTENTION: Josh Vandezande, senior manager

Hi Josh,

I have been asked by Ryan Ko with the Ombudsman's office to reach out to you. On behalf of over 150 residents of Leslieville, I sent the attached community submission on Oct 17, 2020. We have not received any feedback from Metrolinx.

Please acknowledge receipt of this email. We have been waiting for a month now. Would appreciate if you could set reasonable timeline expectation as to when we can receive feedback on each question below. If some answers are available sooner than others, piecemeal emails would be just fine.

We are seeking clarification on the following:

Metrolinx has not considered any **alternative alignments**, despite the motion passed by the City of Toronto in 2019 (motion Ex9.1 Amendments 19 and 20) as well as repeated calls from the community to investigate underground routes through Riverside/Leslieville. Why is Metrolinx continuing to ignore the City directive and community feedback?

There is no mention of the effects of noise and vibration on the human body. Will the Environment Assessment include a **Health Impact Assessment** as stipulated by Health Canada?

We need **more noise measurements** to be taken in our neighbourhood to properly gauge the

existing noise levels.

Locations that warrant investigation include 88 Wardell St, 12 De Grassi St, 15 Tiverton Ave and 2 Paisley Ave.

We need baseline measurements for the proposed station sites: Gerrard/Carlaw and Queen/De Grassi.

Why were parks (Jimmie Simpson Recreation Centre, Jimmie Simpson Park, Bruce Mackey Park and McClearly Playground) and school (Pape School) not included in the ECR study area?

Inclusion of outdoor living area and indoor living area noise measurements.

Predicted noise levels: Will a future study include assessment of *expected* rail traffic noise impact conducted using a prediction method like STEAM (Sound from Trains Environmental Analysis Method)? Will this assessment include sound levels expected with and without noise mitigation measures such as a sound barrier wall?

Current noise measurement on Wardell already exceed MOE and WHO guidelines. Have you engaged **medical officers for the Province and Toronto** so they can provide their professional view on whether OL can proceed without serious public health implications?

Health Canada states “**the determination of %HA** is a widely accepted indicator of the human health effects of long-term noise exposure.” It stipulates “a calculation of baseline percent highly annoyed (%HA) at receptors” be provided in environmental assessment. Please include in the final ECR.

No vibration study was undertaken in Riverside/Leslieville. We are extremely nervous about the exposure to constant vibration on an ongoing basis from rail traffic and how it may interfere with our health and everyday activities such as conversation and sleep. Please include in ECR.

The **Air Quality Study** was conducted in May 2020, during the height of pandemic lockdown when vehicular and rail traffic was the lowest we have seen in half a century. Will Metrolinx commit to re-doing the Air Quality Study to accurately record these greenhouse gas levels?

When will Metrolinx publish **details of the sound barrier wall**? Its height, its position and material?

Thanks,

From: Ontario Line

Subject: RE: Ontario Line - Cost Comparisons

Hi 

Thanks for reaching out again. In our previous correspondence, I offered to chat over the phone so we can have a better conversation. That offer is still there if you would like to take it. Once restrictions lift and it is safe to do so, I look forward to meeting with you to continue the conversation.

An initial cost assessment was completed and the additional cost of an underground approach will exceed \$800 million due to the requirement for deep underground stations. In addition, Metrolinx updated City Council that the average costs per kilometre for the Ontario Line was \$0.6 - 0.7 billion compared to the tunneled Relief Line South of \$0.8 – 1.0 billion. That being said, cost is just one factor because going underground does not mean no impact. Our initial analysis revealed tunneling would delay completion between 15 and 24 months – adding to the length of time the neighbourhood would be disrupted by construction. Due to the requirement for a tunnel portal, numerous homes along McGee and Saulter Streets would be required, including the popular Saulter Street Brewery. In addition, there are technical challenges that make an underground route unfeasible such as a tunnel slope that exceeds vehicle limitations and multiple interferences with critical sewer infrastructure.

To give you a better understanding of how current Ontario Line plans were developed, Metrolinx used a robust [business case process](#) where planners balanced considerations including:

- How many people could be served,
- How much travel time could be saved
- How many connections could be made to other major rapid transit lines
- How quickly and effectively the line could be built to bring relief faster to the network
- How effectively any local impacts could be managed, and
- How to ensure maximum transit benefits within the approved budget

Like everything, there are pros and cons no matter which option you choose – but we only choose options that we know will offer maximum benefits with the least amount of impact to the

community. We understand that building transit through Toronto will require difficult decisions and disruption but we are committed to doing everything we can to minimize those impacts. [Our latest article](#) shares that the noise barriers which are part of our Ontario Line plans will result in daytime and nighttime noise levels being lower than they currently are at many locations around Riverside and Leslieville.

In a previous email you mentioned your concerns about park land and green space. As we previously discussed, Ontario Line plans will stay primarily within the existing rail corridor. We won't be impacting space that isn't absolutely needed to get transit built and we're taking extra care to avoid temporary impacts wherever we can. The Jimmie Simpson Recreation Centre, basketball court and hockey rink will not be affected, and all the other neighbourhood parks and playgrounds will still be there once the project is complete.

Please let me know if you would like to chat further on the phone,

Daryl Gonsalves

Metrolinx,

Could you please finally provide a detailed breakdown of the cost comparisons of an above ground option through Riverside as compared to an underground option, which takes into account the ongoing costs of operating both? I've asked this question several times to this group and haven't received a sufficient response. I feel like my only recourse is to submit a complaint to the Ombudsman if I do not hear back.

Many thanks,

Subject: RE: Ontario Line - Cost Comparisons

Hi [REDACTED]

I have been to Bruce Mackey Park and it is beautiful. We [released some updated information](#) this morning, including images that help explain in more detail how the six tracks will be configured within the corridor. As you will see, there are a couple places where we come close to the property line but for the most part we are able to stay within the existing corridor. What we are looking at now is how to safely construct the necessary infrastructure while minimizing impacts to the parks and trees.

For the most part, the Metrolinx right-of-way is delineated by the existing fence line. We are still undertaking surveying to confirm the exact location in a few areas. We are also continuing to advance our designs for retaining walls that will be installed to protect the parks. As this work continues, we will be able to answer questions about impacts more precisely but we expect that any property required beyond the Metrolinx property line would be in the magnitude of one to three metres and only in select places.

I agree Metrolinx has to build trust with the community and we are being as transparent as possible with the information we have available. We look forward to continuing the conversation and hope that someday soon it will be safe for us to chat in the park!

Subject: Re: Ontario Line - Cost Comparisons

Thanks, Daryl. When you say “mostly within the existing corridor”, could you please confirm two things. First, do you define the existing corridor as ending at the existing fence line along Bruce Mackey Park (if you’re unaware of the fence line, I would encourage you to visit our community to see the fence line as it’s quite beautiful!). Second, how do you quantify “mostly”? Please use specific measurements (I.e. Metrolinx needs to impact 10 extra feet beyond the fenceline).

Metrolinx needs to build trust in our community and a fundamental part of trust is transparency around goals.

Thanks,

██████████

On Apr 1, 2021, at 9:26 AM, Ontario Line <ontarioline@metrolinx.com> wrote:

Hi

██████████

Thanks for your email about Ontario Line plans in your neighbourhood. Simon has moved on to a new role and I will be working with Josh on community relations in the Riverside area.

Metrolinx is looking at reconfiguring the corridor and positioning the Ontario Line tracks beside one another on the western side of the existing rail corridor instead of having one track on either side. We’re still committed to fitting the Ontario Line mostly within the existing corridor. Having both of the Ontario Line tracks on the west side would mean we are able to minimize our construction footprint even more by limiting station infrastructure to just one side instead of two and better integrate the new stations with the bridges. We’ll also be able to provide a much better experience for customers, who will be able to access both northbound and southbound trains from a single centre platform.

The Ontario Line team has been working hard with GO Expansion colleagues and City of Toronto staff to advance these initial designs to a point that we can bring forward updated plans to the community for discussion. We are planning virtual open house for April to provide an update to the community and seek feedback. As we have mentioned previously, no construction will begin until summer 2022, after a robust environmental assessment has been completed, including public consultation.

We will reach out once further details about the upcoming virtual open house are available. In the meantime, I’d be happy to setup a meeting so we can share the information we do have at this time and discuss your concerns. Can you send us a couple dates and times that work for you to have a call next week?

Sincerely,

Daryl Gonsalves

[REDACTED] wrote:

Hi Josh and Simon,

Could you please elaborate on Metrolinx's recent decision to realign the portion of the OL that cuts through our community such that there will be two tracks on the western portion of the corridor? Why was there no consultation with the community on this decision? How does this tie out with your promise that the OL will fit entirely within the current footprint of the corridor?

Truthfully, I am very concerned with Metrolinx's decision making process with respect to this project. As a resident that lives within 25 meters of the corridor, I am very concerned with the impacts to the health and safety of our community. Metrolinx has done nothing to address these concerns so far. And this is very disappointing.

I would request a meeting with you and your team as soon as possible to try to understand the impacts on our community.

Many thanks,

[REDACTED]

[REDACTED]:

Hi Simon,

My obvious concern with this response is that Metrolinx appears to have decided on an above ground option between the Don River and Gerrard (the "Affected Area") without adequate consultation with the neighbourhoods affected, or adequately considering any relevant factors, other than the perceived "\$800 million cost-savings". This is exactly why Metrolinx needs to publish a detailed estimate for an underground alignment in the Affected Area - in order to give the public an understanding of what is driving Metrolinx's decision in this regard. In particular, Metrolinx needs to consider the following factors in such estimate:

- Whether OL capacity can be increased by using an underground option in the Affected Area;
- What non-financial costs will be payable by the residents and businesses in the Affected Areas in connection with an above-ground alignment; namely, with respect to the health and safety of individuals in close proximity to the above-ground alignment?
- What are the expropriation costs payable by the Ontario government, and are those costs significant enough to impact the perceived \$800 million cost-savings for an above-ground option?
- Are there increased maintenance costs associated with an above-ground option on the rolling stock? Are those costs significant enough to impact the

perceived \$800 million cost-savings for an above-ground option?

- What value does Metrolinx place on the parkland that it is proposing to destroy in connection with the above-ground option? Are those costs significant enough to impact the perceived \$800 million cost-savings for an above-ground option?

It is extremely unfortunate that Metrolinx's only justification for an above-ground alignment through the Affected Area is to achieve a perceived cost-savings of \$800 million, especially when, by your own admission, there has been no detailed estimate for an underground alignment in the Affected Area. How can a decision of this magnitude be made without Metrolinx considering all of the relevant factors, in accordance with its governing statute?

Many thanks,

Hi

██████████

My name is Simon and I am the station specialist for the Leslieville and Gerrard Stations. Thank you for your follow up questions.

A detailed estimate of the costs of an underground alignment for the portion of the Ontario Line from East Harbour to Gerrard has not been completed given the technical challenges that make this route infeasible, including a tunnel slope that exceeds vehicle limitations and multiple interferences with sewer infrastructure. However, Metrolinx worked with the city's Transit Expansion

Office, to provide an update to city council on this issue, noting that average costs per kilometre for the Ontario Line was \$.6 - .7 billion compared to the Relief Line South of \$.8 – 1.0 billion. You can find more detail on page 10 of the city's [Fourth Quarter 2020 Update on Metrolinx Transit Expansion Projects](#).

Released on December 17, 2020, the [Preliminary Design Business Case](#) confirmed the rationale and benefits of the Ontario Line's alignment, including the at-grade portion within the joint corridor. Forthcoming environmental reports will provide more details about anticipated impacts on the environment and community and how they will be mitigated through construction and into operation.

We look forward to sharing more details about the project in the coming months. In the meantime, please don't hesitate to contact us or let us know if you're interested in setting up a call with our team for more information.

Best,

Hi Josh,

Following up on the below, I understand that the City has asked Metrolinx to provide an underground costing and Metrolinx has failed to provide such costing in time for this week's executive meeting. Could you please clarify what has caused this delay? As a reminder, myself and many others have asked for this to be done for many months and nothing sufficient has been provided to date.

I would appreciate if Metrolinx could be more transparent about their own calculations and rationale for favouring an above ground option. How can we ask our federal politicians to fund this project when your agency has not been transparent about the true costs of this capital project?

Many thanks,

██████████

To: [REDACTED]
Subject: RE: Ontario Line - Cost Comparisons
Attachments: [REDACTED]

Hi [REDACTED],

Thank you for your email about the Ontario Line. We know your neighbourhood is important to you – it's important to us too! We will be bringing forward a comparison of the impacts and benefits of various construction approaches for public discussion but in the interim we appreciate the opportunity to share some of the thinking behind the decision to use the existing rail corridor.

A tunneled approach is complex, time-consuming and disruptive due to the amount of excavation that is required. In areas where there are practical alternatives, such as an already Metrolinx-owned right of way, we can drastically cut down on construction impacts to communities and finish the work in shorter timeframes. It also allows us to significantly reduce the amount of property we need to accommodate near-term construction and long-term operations, not to mention avoiding considerable impacts to local traffic and businesses when you consider the major excavations and adjoining construction laydown areas that would have been needed to build stations as well as the emergency exit buildings under the Downtown Relief Line South plans.

We will be coordinating previously announced GO expansion work with Ontario Line construction to avoid multiple disruptions in your community while still containing our work to the existing rail corridor – staying almost entirely within its current footprint. The new Ontario Line tracks will be a continuous rail design with no joints, supported by rubber bases. The trains will be automated, which means less noise and vibration when trains come to a stop.

To better shield communities living alongside the joint rail corridor from all rail operations, including GO and VIA services, we will add effective, well-designed sound barriers, landscaping, and new trees and greenery which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor. We will provide the details from this analysis in upcoming environmental reports.

Transit operators here and around the world are successfully operating different types of rail service side-by-side, including Scarborough Rapid Transit and Stouffville GO train operations between Kennedy and Ellesmere roads, the Calgary South LRT which runs alongside CP rail for a portion, and the Ringbahn line of Berlin's S-Bahn which operates next German Federal Railways operations for its entirety.

This has an added benefit for customers. At the proposed location of the new station at East Harbour, the Ontario Line would have to be buried more than 38 metres or nine stories underground to be below the Don River. From here, a tunnel would have had to maintain a similar depth all the way to the station at Gerrard and Carlaw to avoid major sewer mains in that area. Stations built this deep underground would have required approximately three separate, very long

escalators to reach the platforms. Together, these would have made it four and a half minutes longer for customers to get to and from the platform level at every station in the area, including the station at Queen Street in Leslieville. Bringing these stations above ground avoids those long connection times while providing customers with a fully accessible experience that is shielded from the elements and encourages more transfers from the crowded streetcar network and from GO services.

I hope this provides some additional context to show how Metrolinx considers benefits and impacts rather than a purely financial perspective. However, in terms of costs for the Don Yard to the Gerrard portals portion of the Ontario Line, the rail systems costs are similar whether the alignment is above or below ground, but the estimated cost of tunneling is \$330M. The biggest cost benefit comes from not having to build three stations (at East Harbour, Leslieville and Gerrard) deep underground, which means a further cost benefit of \$700M is realized.

By building and operating above-ground in this area, we will dramatically reduce community impacts, improve the customer experience and deliver long-needed improvements that shield residents and businesses from rail operations. We will continue to share more information as design of the Ontario Line advances and look forward to engaging with the community to understand and address their concerns.

I hope this information is helpful. If a follow-up discussion with members of our team would be useful, please let me know and we can set something up.

Sincerely,

Josh Vandezande
Senior Manager, Community Relations

Subject: Ontario Line - Cost Comparisons

On September 30, 2020, I understand that the Toronto city council passed a motion directing the City Manager to report to the November 18, 2020 meeting of the Executive Committee regarding, among other things, a price comparison on constructing the Ontario Line above ground versus below ground from Don River and Gerrard. Assuming that Metrolinx is working on these cost comparisons to assist the City Manager in this reporting obligation, is Metrolinx in a position to share those

comparisons to the public at this point?

As residents of Riverside, one of the most densely populated residential neighbourhoods in Canada, my family and I are deeply concerned about the increased presence of above-ground heavy rail along the Lakeshore East Go Corridor. For this reason, I would like to better understand the cost-benefit analysis that is driving the decision to elevate the Ontario Line through our neighbourhood.

Please note that my expectation is that Metrolinx will provide a much more detailed analysis regarding cost comparisons than what was contained in the initial business case (more specifically, Table 31 therein). I have reviewed those comparisons and have found them very unhelpful as they do not provide enough meaningful information to help me understand the Government of Ontario's proposal to elevate the Ontario Line through this portion.

I appreciate your timely response.

Subject: RE: Ontario Line vs. GO Corridor electrification plans

Hi [REDACTED],

Thank you for your message and question about Ontario Line construction and GO electrification.

In areas where the Ontario Line aligns with sections of existing GO rail corridors, we are able to streamline our work with GO Expansion plans which helps avoid multiple disruptions in the same neighbourhoods. Construction is anticipated in 2021, when teams will break ground on integrated [early works](#) which will include existing bridge modifications and new Ontario Line bridges, rail corridor expansion, station work, and utility relocations for parts of the line shared by the GO rail corridor. You can find more information about the [projected timeline](#) for the Ontario Line project on our website and follow GO Expansion plans outside the joint corridor on their [web pages](#).

The details of construction impacts have not been finalized. Every effort will be taken to ensure that GO service and access is maintained. In the event of service disruption, alternative access and routes will be provided and displayed to the public in advance to ensure a seamless transition.

Feel free to reach out if you have any further questions.

Sincerely,

Caitlin

Subject: Ontario Line vs. GO Corridor electrification plans

Good evening,

I'm a student at U of T and am writing about the Ontario Line project. One area that I was unable to find details on was how the Ontario Line would impact the planning (and construction) of the GO Corridor electrification plans. Is it intended that the Ontario Line and GO electrification will be constructed concurrently?

Further, what type of impact to the rail Corridor are expected during the construction phase? Will the rail lines be shut down or limited at times?

Many thanks,

Hi [REDACTED],

Thank you for your message.

You can find detailed information about the public engagement process for the Ontario Line under Section 7 in the [Draft Environmental Conditions Report](#) (ECR) from pages 387 to 398. Metrolinx has also detailed the feedback we received before its publication in the draft ECR's [Appendix C2. Engagement Summary Report](#).

During formal engagement periods that are part of the Environmental Assessment (EA) process, we document feedback and any actions we take as a result of that feedback in consultation summaries that are part of finalized EA reports. The formal engagement period for the draft ECR ended on October 17, 2020. We will include the feedback we received in the final report which we anticipate to release later this fall.

In addition to the formal engagement process for EA reports, we are always accepting feedback and responding to questions and concerns from residents via email, phone and our [Metrolinx Engage](#) website. Metrolinx Engage also includes a [public forum](#) where you can submit questions and our team will respond.

Should you have any further questions, do not hesitate to reach out.

Sincerely,

Subject: RE: Leslieville station and tracks

Hi [REDACTED]

Thank you for your message which was also received by our CEO, Phil Verster. We appreciate you taking the time to email us your feedback as a long-time resident and want to take this opportunity to share some of the reasons why building above ground in your neighbourhood is a better option.

By building and operating above-ground in this area we can dramatically reduce community impacts, deliver long-needed improvements that shield residents and businesses from rail operations and improve the experience for customers.

Tunnelling and excavating is complex, time consuming and disruptive for the community. By running the line along the existing corridor, we limit the properties we need, cut construction impacts in half, and finish the work in shorter timeframes. By fitting the Ontario Line almost exactly within the footprint of the rail corridor we are able to ensure important community destinations, like Jimmie Simpson Recreation Centre, can remain in operation throughout construction and beyond. We will work continuously to limit the footprint of our work and where we do need to use park space to avoid impact to private properties, we will work with our contractors and the City of Toronto to restore the park space to its original state or better.

We know that any construction can be disruptive which is why we are also going to streamline Ontario Line construction with GO expansion work that was already planned along the rail corridor, reducing overall construction impacts to your community. Once constructed, effective and well-designed sound barriers, landscaping, and new trees and greenery will significantly reduce the sound and visibility of the corridor and the trains that will operate within it, better shielding neighbourhoods from all rail operations, including GO and VIA services. Our preliminary analysis shows these combined measures would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor, as well as enhancing adjacent parks.

Surface stations also mean a better customer experience. Due to Toronto's geography, tunnelled stations would need to be as deep as 38m underground—approximately nine storeys—to be below the Don River. From there, a tunnel would have to maintain a similar depth to avoid major sewer mains. At Leslieville Station, it would take customers about four and a half minutes to get from the

train to Queen Street East at an underground station. With surface stations, we are able to provide customers with a much better experience that is fully accessible, shielded from the elements, and provides an easy transfer to and from surface transit options in the area.

We are continuing to address the feedback we receive as we move forward with this important project. I hope this information is helpful and I want you to know that as we work through construction to operation and beyond, we are here for you and your neighbours. Please do not hesitate to contact us if you have more questions.

Best,
Simon

Subject: Leslieville station and tracks

Hi,

I am an 11-year Leslieville resident and mother of two young children. Please seriously (re)consider moving your tracks underground in our area. The devastation it would create in terms of noise and changing (even obliterating) our beloved parks (we live on [REDACTED], so right in between McCleary park and Jimmie Simpson) is really depressing and infuriating.

Thank you,

Subject: RE: Ontario Line

Hi [REDACTED],

Thank you for your message regarding the Ontario Line.

We are committed to listening to the residents of Riverside and Leslieville so we can create the right solutions. Our plans have been updated based on what we heard from the community and now preserve the Jimmie Simpson Recreation Centre and commit to the installation of noise walls. We will continue to work with the community to develop and construct infrastructure that fits within and enhances the neighbourhoods in which the Ontario Line will run.

Running the Ontario Line on a mix of elevated, at-grade and underground sections means we can deliver a longer route that will serve more communities. By using the GO corridor, a route that is approximately twice the length of the Relief Line South can be built at a similar cost. Also, using the GO corridor will allow people to more easily connect between GO and TTC services that will both be accessible by street level, saving time compared to connections that would lead people into deep underground stations.

When it comes to possible impacts to parkland, we are actively working with community partners and the City of Toronto to mitigate impacts to parks as we advance this important project to bring more higher order transit to the City of Toronto

Feel free to reach out in the future,

Daryl Gonsalves

Subject: Ontario Line

I am shocked that you are considering putting the Ontario Line above ground through Leslieville - particularly when the Eglinton Crosstown's western section is going underground. Really? The short distance of tunneling even just to get the line below ground down to Eastern avenue would avoid disrupting much of the little parkland there is in the area.

Subject: Re: [REDACTED] Construction > Construction Impacts Not Noise [REDACTED]

Hi [REDACTED],

Thank you for your message.

We are committed to listening to your neighbourhood about the project's impacts in Riverside and Leslieville so that we can come up with the right solutions. Leveraging the existing GO rail corridor and running the line above ground in certain areas means we can reduce construction impacts, timelines and costs while building a longer line that serves more communities. Factoring in feedback we've received so far, our latest plans protect local institutions such as the Jimmie Simpson Recreation Centre and include the installation of noise walls. You can read more about this in our [east segment](#) update. We will continue to pursue other mitigation measures and design innovations to ensure that this project is a good fit for Leslieville and Riverside.

Feel free to reach out should you have more questions,

Subject: RE: Contact Ontario Line Submission

Hello [REDACTED],

Thank you for reaching out to us.

The Ontario Line tracks will run parallel to the GO tracks within the existing rail corridor in this section of the planned route. While property impacts are still being determined, we do not anticipate that construction or operation of the Ontario Line will directly impact the Ray McCleary Tower, but there may be some impact to the green space adjacent to the rail corridor.

That being said, initial design work on the Ontario Line is underway but not complete. Final assessments of whether a property is needed or not will be identified through further design, as infrastructure requirements and project details are confirmed. Metrolinx has begun outreach to property owners to ensure they are aware of the project and the implications it may have on their property. We will work collaboratively with our partners, communities and with affected property owners to ensure the lines of communications remain open and that those impacted are continually informed from planning and design through construction, as we move forward with the Ontario Line.

If you have any further questions, do not hesitate to reach out to us.

Sincerely,
Gurjeet

Subject: Plans for Ray McCleary Tower

Message:

Hi,

I live very close to the proposed Gerrard station and have been reviewing the plans released today. Are you able to confirm if Ray McCleary Tower (444 Logan Ave) is going to be expropriated/demolished as part of the current plan? It is very unclear in the information released today what will happen as the tracks go north over Dundas to the proposed new station at Gerard and Carlaw.

Kind regards,

[REDACTED]

Subject: RE: Contact Ontario Line Submission

Hello [REDACTED],

Thank you for sharing your concerns with us.

It is expected that trains will be able to run as frequently as every 90 seconds (up to 40 trains per hour, per direction), allowing customers to avoid long wait times so they can get moving right away.

We expect the line to feature fully automated trains with modern signalling like the ones used in Vancouver, London, Paris, Shanghai and Singapore. These trains will be able to cycle through the system faster, and because of advances in vehicle design and rail technology, they will result in significantly less noise than what we are used to from the city's current subway trains. You can read more about the trains and technology on our [website](#).

That being said, we will continue to work with communities to ensure a comprehensive array of measures are in place to address any noise or vibration impacts. We have committed to installing noise walls along the joint corridor where the Ontario Line will run alongside Lakeshore East GO Trains. You find more details in our [East Neighbourhood Update](#).

If you have any further questions, feel free to reach out to us.

Sincerely,
Gurjeet

Hello [REDACTED]

Thank you for sharing your concerns with us. We understand that the decision to go above-ground in your area has raised a lot of questions. By leveraging the existing GO rail corridor and running the line above ground in certain areas means we can connect more communities with a line that is twice the length of the Downtown Relief Line, reduce construction timelines and streamline our work with existing GO Expansion plans.

We're sensitive to the community's concerns about the project's impacts in this area and will continue to pursue other mitigation measures and design innovations to ensure that this project is a good fit for the community.

Hi [REDACTED],

Thank you for your questions regarding the Ontario Line. Significant investigation and initial design work is still underway but we anticipate sharing an update with the public this summer, including seeking public feedback on the Environmental Conditions Report which lays out the existing conditions along the line and against which anticipated impacts will be measured. Further information will be provided as environmental studies and procurement activities continue, including more details on plans to address community impacts, including robust mitigation strategies.

We agree that public input is vital to the project and ask for your patience as we complete the necessary studies and investigations to support informed discussions with the community. We will be posting more details in our enewsletter and on our website and we will also reach out to [REDACTED] to let you know about upcoming opportunities.

Sincerely,
Josh

Subject: Metrolinx Ontario Line

Dear Mr. Verster,

I have serious questions and concerns about Metrolinx's plans for the above-ground section of the Ontario Line running between Gerrard Street and Eastern Avenue.

These concerns were not addressed at the Ontario Line open house in my community. At this

event, your staff were unwilling or unable to answer my questions with any level of detail.

At the open house on January 28th, members of my community gave your staff a list of our top questions that - so far - you and Metrolinx have failed to answer:

- Why is Metrolinx doing the bare minimum possible to assess the environmental impact of the Ontario Line in our neighbourhood and without any community consultation?
- There are five parks and community green spaces along the 2 km corridor between Gerrard and Eastern. How will Metrolinx protect these areas?
- Why won't Metrolinx tell us the total number of trains per hour, including Ontario Line, VIA, and GO, that are expected to run along the 2 km corridor?
- How will Metrolinx protect the health of children and community members subjected to the noise, vibration, and air pollution of so many trains?
- What will Metrolinx do to protect local businesses and preserve the economic viability of our community?
- Why won't Metrolinx do a full cost-benefit analysis that addresses the reconstruction of six bridges, affecting accessibility to Toronto's East End for years?

I am calling on you and Metrolinx to commit to a clear and transparent consultation process with my community.

This consultation must start with a community meeting in my neighbourhood where Metrolinx officials who can provide clear information about the proposed design – including alignment, vibration impacts, and expropriations – will answer local people's specific and urgent questions.

This meeting needs to take place immediately, before any further planning is done. The communities of South Riverdale, Riverside, and Leslieville want safe transit, done right.

This cannot be accomplished without real public consultation, and we will not stand for anything less.

I look forward to your response,

A large black rectangular redaction box covering the signature area.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

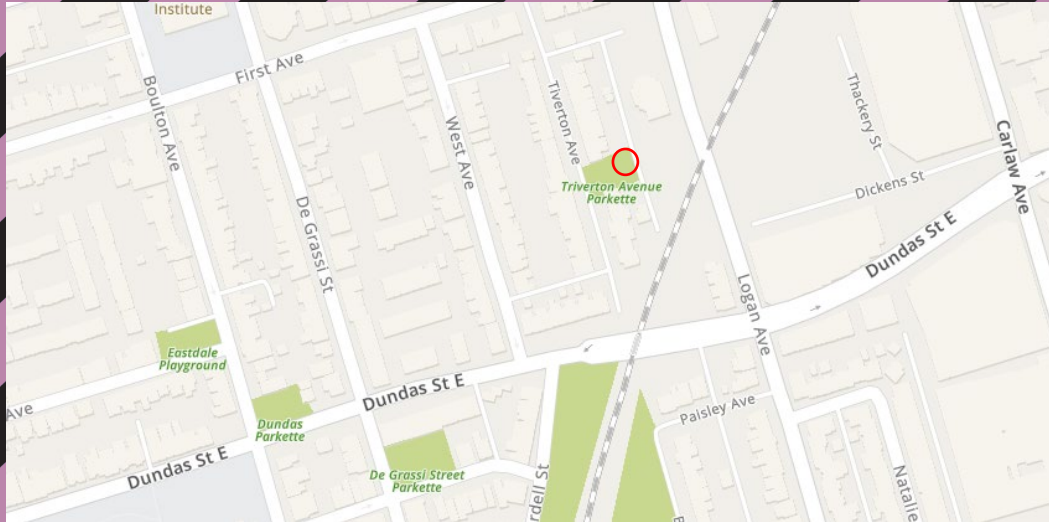

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Metrolinx: connecting our communities

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

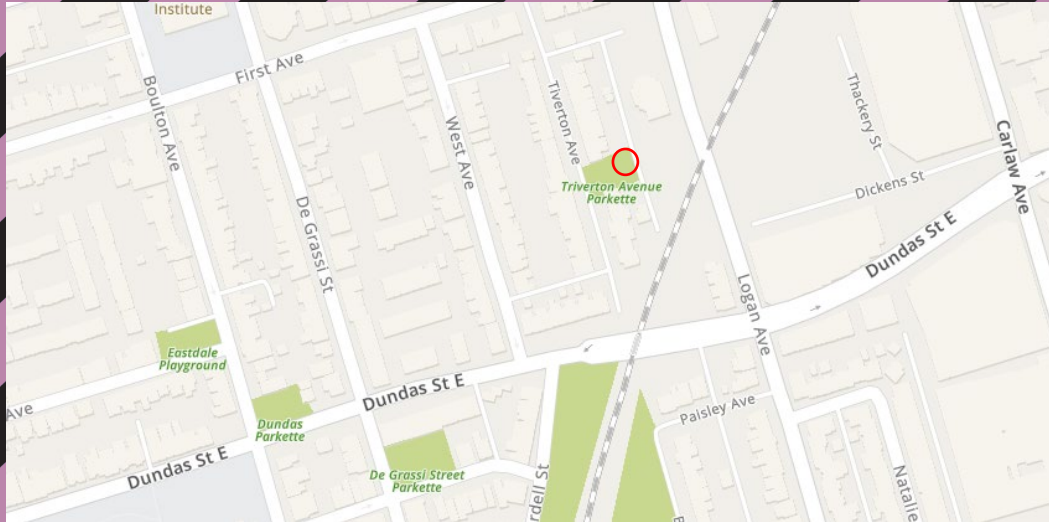

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Hi [REDACTED],

That's fair. I relayed your request to have both topics discussed at our next meeting.

I connected with Malcolm's office and got the following times he is available. Can you please confirm which ones work best for your team and I can circle back to get the appropriate hold placed in Malcolm's calendar.

September 13th 4pm

September 15th 4:30-5:30pm

September 17th 1-2pm; and 3-5pm

September 23rd 1-3pm

September 24th 2-4pm

Thank you,

Daryl

Hi Daryl,

I hope that you enjoyed the long weekend. Thanks for the heads up on the open house and the environmental report.

As I mentioned, I'm coordinating with other members on our team. In terms of the right Metrolinx people at the table, let's keep the parking and noise & vibration discussions moving in parallel given that they both impact the residents of [REDACTED] and that is what we are trying to resolve. We also hope that Malcolm will participate in the meeting. It's been several months since we've had a discussion that included the broader teams, and it would be helpful have everyone together and on the same page. Please let me know some dates that would work in his schedule and we can coordinate on our end.

Best Regards,

[REDACTED]

Glad to hear the break was nice.

That is totally fair. I will make the team aware we are tracking for a meeting in the week of September 13th. Once you get an idea of possible meeting times, please send it our way so I can begin coordinating internally to get the right people at the virtual table.

For your awareness, there is another public open house for Riverside and Leslieville planned for September 23. This will focus on the retaining and noise walls. The environmental report is also tracking for release in the second half of September.

Have a great long weekend,

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Hi Daryl,
No worries. Looking forward to connecting soon. FYI, I will be away for the last two weeks of August.

Best Regards,

Hi [Redacted]

Apologies, please disregard my email below. There is some more work that needs to be done before

we can connect.

We will re-connect once more progress has been made.

Have a good day,

Daryl

Hi [REDACTED]

I hope you had a good weekend.

Circling back to update you on our next meeting. There has been progress in discussions with the City of Toronto and at this point, we are ready to continue the discussion.

Franca, Jackie and I want to have a quick phone call with you to discuss the relocation of Fontbonne Ministries and schedule the next meeting between our teams. Would you be available tomorrow? Since there is four of us, we will likely use Microsoft Teams for our call.

Thank you,

Daryl Gonsalves

Good Afternoon Daryl,

I hope that you had a nice weekend and that you are doing well. I wanted to follow up on your email below about the need for Fontbonne and Metrolinx to convene again. As you know, we received our notice of expropriation on June 7, 2021. While we are pleased that the possession date has been pushed to the end of 2022, we are mindful that time passes quickly, and accessibility of our building and the living conditions simply will quickly become untenable for our vulnerable residents. It is very important that there is a plan in place for our residents well ahead of the expropriation. For your reference, I have attached the letter we sent on February 26, 2021 advising Metrolinx that the living situation will be untenable for our residents.

Looking forward to your reply with some proposed dates for meeting.

Best Regards,

Hi [REDACTED]

It is great to e-meet you as well. I was hoping to reach out in the future to introduce myself so this works out well.

I know a lot of work is ongoing on our side in order to provide Fontbonne Ministries with a meaningful update. We are looking at dates to meet with you and will reach out in the future to organize another meeting. I ask for your patience as this work continues.

Thank you for reaching out and have a great weekend,

Hello Daryl,
[REDACTED] has forwarded your email from earlier this week to me. I'm [REDACTED] of Fontbonne Ministries and [REDACTED] is being impacted by the Ontario Line. It's nice to make your electronic acquaintance. I'm sorry to hear that Josh has moved on. Josh has been our primary contact at Metrolinx over the last year and we have had a few meetings with the team headed by Malcolm MacKay. Our latest meeting was in February and there was discussion regarding options to mitigate the impact of the Ontario Line on our residents, including relocating them. Josh was working on some dates for a follow up meeting with the team, and I was waiting to hear back. I hope that a meeting to continue the conversation can be scheduled soon. In the

meantime, I'd be pleased to have an introductory call with you. I look forward to your reply.

Best Regards,

Great.

Just a note that Josh moved on from our team so if you have any questions, I am happy to be your contact going forward.

In addition, I want to give you a heads up about a campaign to correct some misinformation about the Ontario Line in your neighbourhood. I have attached the brochure which we will be mailing out physical copies shortly.

If you have any questions or concerns, I am an email away.

Hi Daryl

Thanks so much for your email, yes I did receive your initial one thank you.

We have been in active discussions with Metrolinx since last year and our contact is Josh Vandezande. At this time we do not have any questions, however if we do, we will follow up with Josh.

Thank you

Hi [REDACTED]

Hope you got my previous email and are enjoying this rainy Friday.

Following up to see if you would be interested in a phone call next week to discuss any more questions you have about the project. I also want to share a new campaign we are starting in the neighbourhood and fill you in before it gets underway.

Have a great long weekend!

[REDACTED] Ontario Line <ontarioline@metrolinx.com>

Subject: Ontario Line - Fontbonne - Letter to Serve Order in Council - January 5 2021

Hello [REDACTED]

Thank you for the discussion we had in December regarding Fontbonne's future in the Queen Street East area. Malcolm and I are continuing to work with our technical and property teams to get a better sense of timelines as well as anticipated impacts to help us develop some options to explore with you. Would it work for you to reconnect in February?

I also wanted to give you a heads up about the attached letter which you will be receiving (by mail) later this week. Several properties have been identified where we anticipate needing the required property interests for the Ontario Line project before 2023. To acquire the property interests, we will be negotiating in good faith to reach amicable agreements with owners. The backstop approach for acquiring properties that are needed for important infrastructure projects is expropriation. The letter is to inform you that a Hearing of Necessity is not an option for the parking lot portion of your property [REDACTED]

These hearings do not often change the outcome of the process. For the Eglinton Crosstown LRT project, Metrolinx has received 35 requests for hearings of necessity. Of those 35 requests, five moved on to hearings, all of which resulted in confirmation of the need for the properties and, in turn, delays for the project.

As you know, we are committed to working closely with you and your team to make sure that the people served by Fontbonne Place and Mustard Seed programs continue receiving support while we work to deliver the Ontario Line. Even if the expropriation process is initiated, we will still continue negotiating and remain committed to providing fair market value and reasonable compensation, guided by the Expropriations Act, for all property rights that are required.

If you have any questions about the attached letter, let me know and I can arrange a meeting with our Property team.

Sincerely,

Josh

Ontario

**Executive Council of Ontario
Order in Council**

**Conseil exécutif de l'Ontario
Décret**

On the recommendation of the undersigned, the Lieutenant Governor of Ontario, by and with the advice and concurrence of the Executive Council of Ontario, orders that:

Sur la recommandation de la personne soussignée, le lieutenant-gouverneur de l'Ontario, sur l'avis et avec le consentement du Conseil exécutif de l'Ontario, décrète ce qui suit :

Pursuant to subsection 6(3) of the *Expropriations Act*, R.S.O. 1990, chapter E.26, in view of the special circumstances surrounding the expropriations relating to the properties described in Schedule "A" attached hereto and the consideration that it is both necessary and expedient in the public interest, the expropriations shall proceed without the inquiry procedure and such direction shall be in force and have effect on and after the day it is approved.

En vertu du paragraphe 6(3) de la *Loi sur l'expropriation*, L.R.O. 1990, chap. E.26, compte tenu des circonstances particulières entourant les expropriations visant les propriétés décrites à l'annexe « A » jointe aux présentes et du fait que cela est à la fois nécessaire et opportun dans l'intérêt public, les expropriations doivent se réaliser sans la tenue d'une enquête et une telle directive est en vigueur à compter du jour où elle est approuvée.

Draft Lakeshore Joint Corridor and East Harbour Early Works Reports are available on Metrolinx Engage for public review and feedback until **Sunday, October 24, 2021**.

Virtual open house on **October 5, 2021** to hear your feedback and answer questions about these two early works reports.

Managing Construction Noise and Vibration

Potential Effects: During construction, the use of heavy machinery may cause some noise and vibration above existing levels.

Mitigation measures are identified in the Lakeshore East Joint Corridor Early Works Report to avoid, reduce or manage noise and vibration impacts.

Measures to manage construction noise and vibration:

- Meet the Ministry of the Environment Conservation and Parks (MECP) noise levels standards
- Implement measures to minimize transfer of noise and vibration, where possible (*e.g., equipment must be in good working order, use of muffling devices, compressors, restrict construction hours for vibration-causing activities, hoarding, or noise barriers*)
- Before construction begins, complete pre-condition surveys at properties that may be affected by vibration-causing activities.
- Install noise monitoring equipment to monitor noise levels and identify where further mitigation is required.
- Ongoing communication and consultation with nearby residents to provide advance notice of noise and vibration causing activities.

Details are available in the *Key Findings* of the Early Works Report.

Examples of noise mitigation for residents during construction

White Noise Machines

- Provides ambient noise to mask disruption and calm listener
- Often used as a sleep aid
- Noise machines can cancel noise between 50 to 80 dB, while reducing louder disruptions.

Sound Curtains

- Captures and absorbs incoming sound, reducing how much sound makes it into your home
- Some commercial claims to reduce decibel levels
- Blackout outdoor light and visual distractions

Vibration Pads

- Absorbs vibration between a source and a person to minimize vibratory transfer
- Applications include: under bed posts, washers and dryers

Double-Glazed Windows

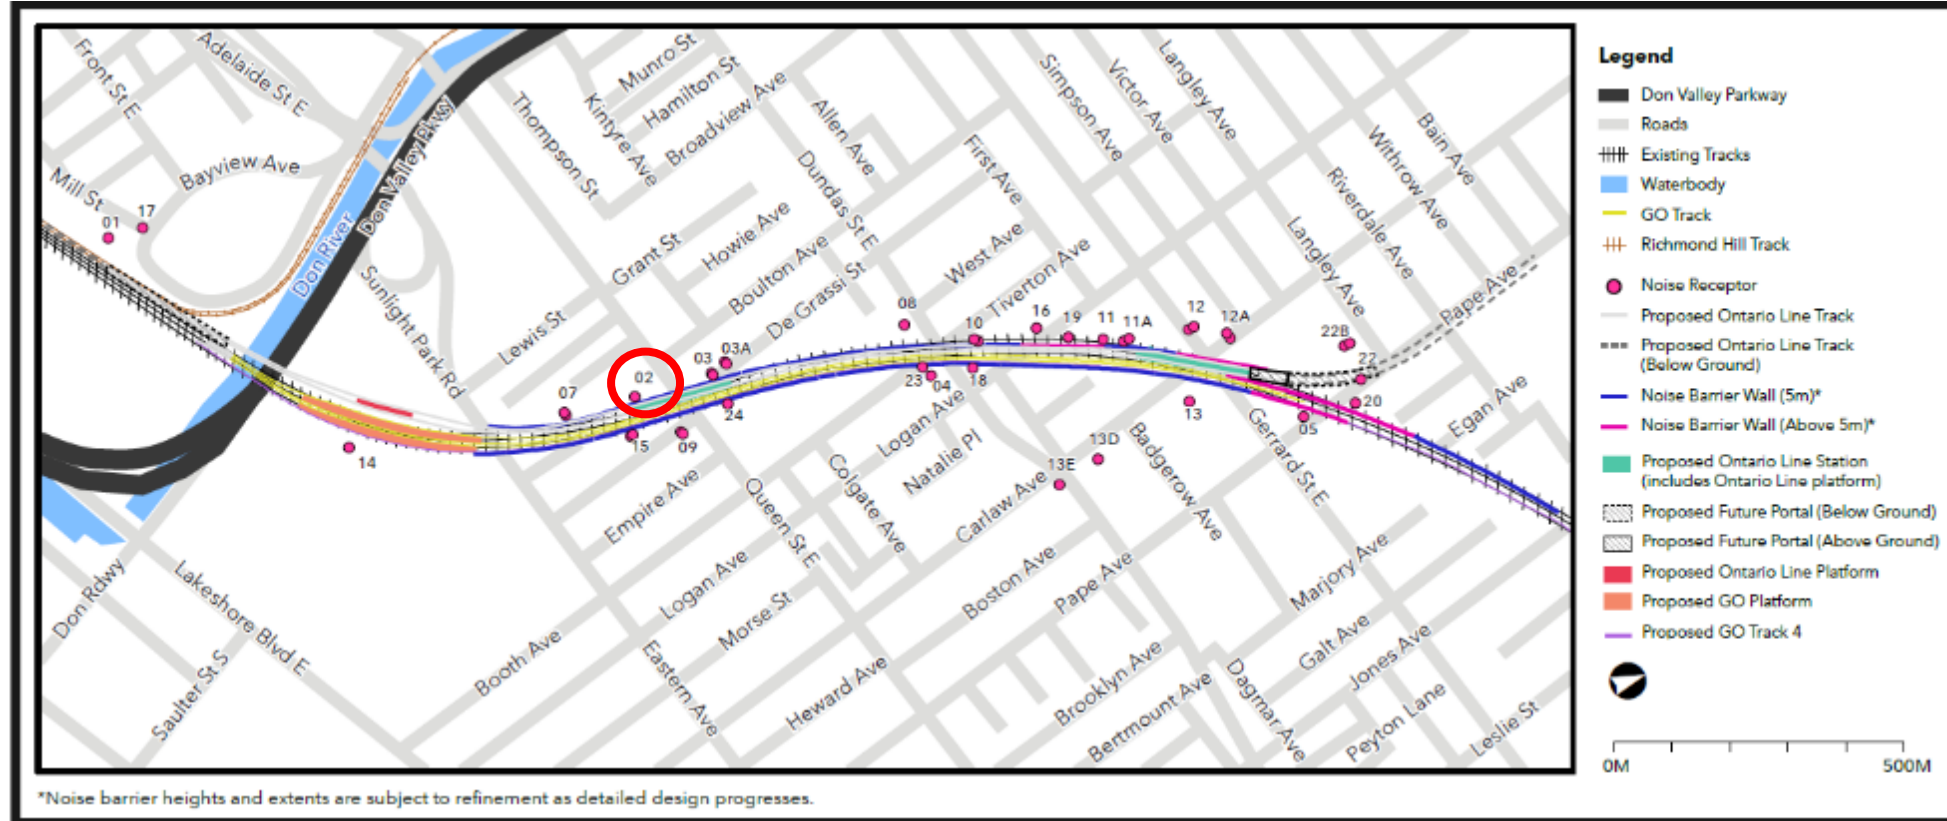

- A second window added inside an existing window
- Effective at reducing outside noise
- Reduce noise by as much as 40 dB

Metrolinx is open to working with Fontbonne Ministries to explore other mitigation to reduce noise and vibration

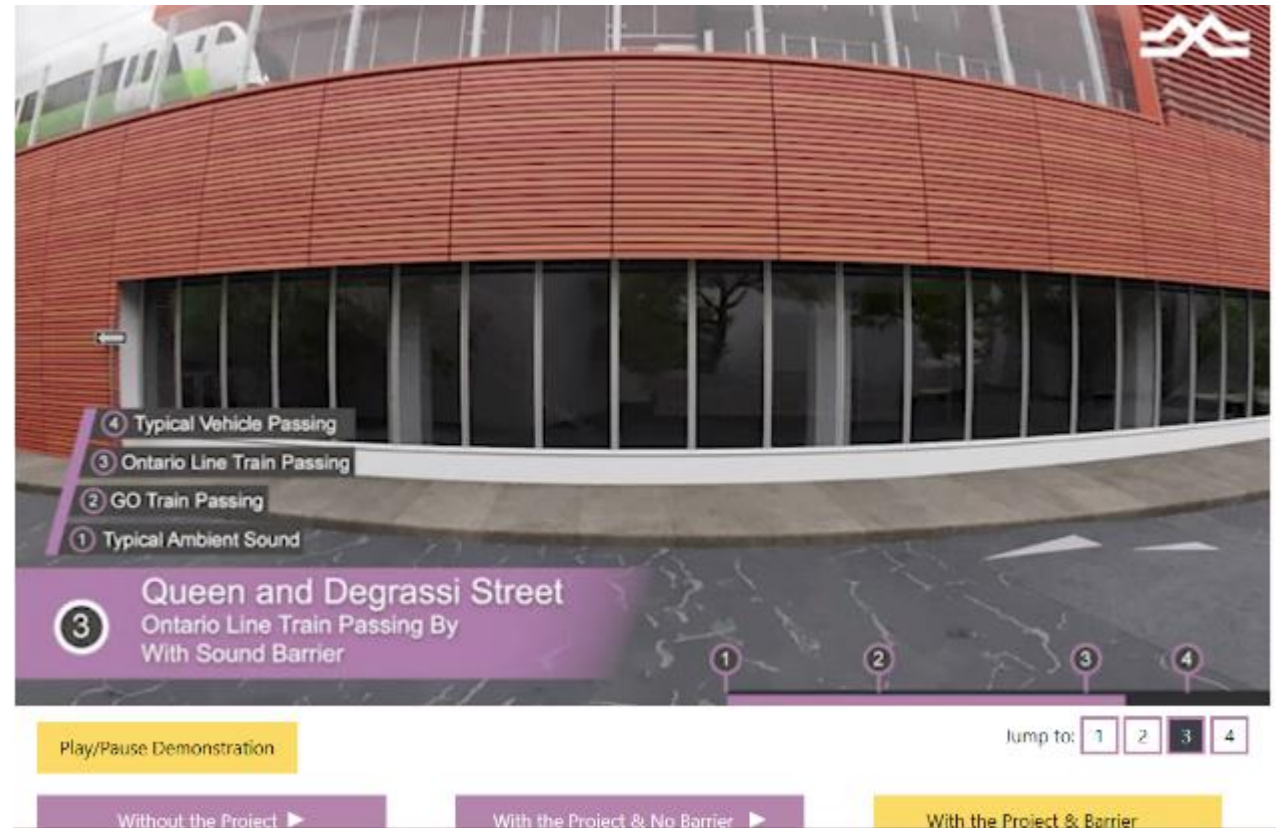

Operational Noise and Vibration Assessment

- 1 28 locations assessed, modelling both Ontario Line and GO Expansion.
- 2 Metrolinx will install noise barriers with a minimum height of five metres.
- 3 Noise barriers will reduce existing noise levels at most locations in the corridor.

Immersive Sound Demonstration

- The demo will allow you to compare current noise levels in the rail corridor to future noise levels after installation of the noise walls and once GO Expansion and Ontario Line are in operation.
- Queen & De Grassi location is closest to Fontbonne
- You will be able to hear a simulated Ontario Line train passby and a GO train passby.

Visit [Ontariolinesoundstudio.ca](https://ontariolinesoundstudio.ca) to experience this virtual demonstration for yourself

Next steps:

- Fontbonne to share floor plans with Metrolinx
- Fontbonne and Metrolinx to advance parking mitigation
- Continued collaboration between Fontbonne and Metrolinx to explore additional mitigation on noise and vibration

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Metrolinx: connecting our communities

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

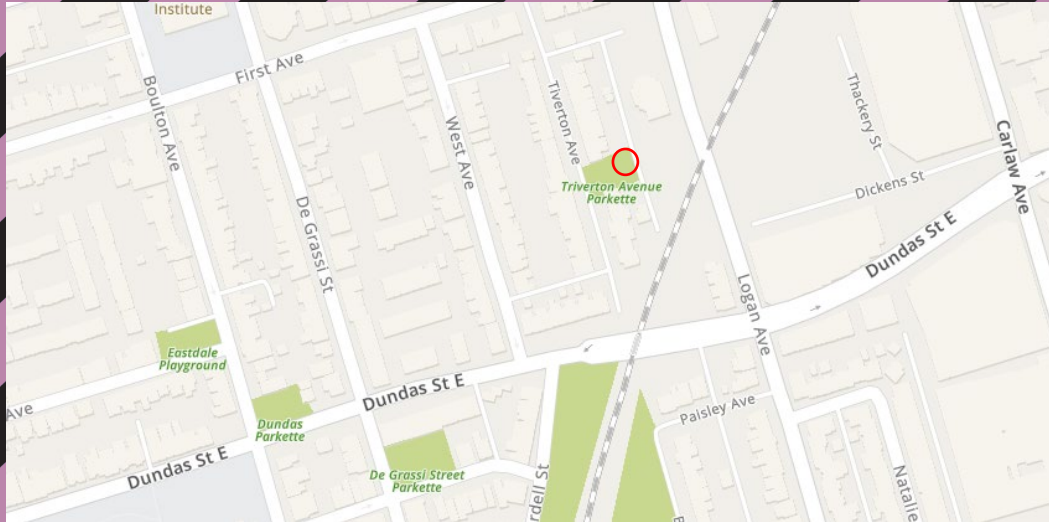

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Metrolinx: connecting our communities

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

RE: Ontario Line – Lakeshore East Joint Corridor Early Works Report

I have had extensive discussions with members of the community and local businesses regarding the AECOM Canada Ltd. September 2021 Lakeshore East Joint Corridor Early Works Report, referred to as the Draft Report. I am writing to you regarding a number of questions that have surfaced in Toronto-Danforth with respect to the Draft Report:

- 1. Planned Early Works projects create risk of increases in contaminants associated with construction vehicle emissions as well as increases in dust, silica and airborne particulate matter resulting from earthworks, material handling and transfer, demolition and construction activities. As the infrastructure owner, please confirm that Metrolinx commits to managing the air quality plan and adheres to dust control mitigation for the neighbouring areas.**

Metrolinx is committed to developing a plan to manage air quality. The plan will ensure attention to mitigation of dust and particulates, including silica, from the construction site. Mitigation measures that will be considered in the plan to manage air quality include roadway cleaning, watering or application of a non-chloride dust suppressant and others, as outlined in Section 6.4 of the Lakeshore East Joint Corridor Early Works Report.

- 2. The Draft Report states that Metrolinx will utilize construction noise mitigation measures that are best industry practices. However, Metrolinx does not appear to be offering anything above what is best practice. Noise mitigation during construction is a primary concern for the community. Further, it is too often the case that when initial noise mitigation measures are inadequate, community members have no recourse to improve noise mitigation. Please provide details of how Metrolinx will receive and timely address noise complaints.**

Project specific noise criteria/limits will be established and monitoring will be conducted during early works construction to ensure that noise levels stay below those limits. To ensure that the limits are not exceeded, Metrolinx will apply construction noise mitigation measures which may include, but won't be limited to using equipment compliant with noise level specifications from the Ministry of Environment, Conservation and Parks, and siting situating construction vehicles and construction laydown and staging areas away from sensitive receptors, where possible. Other practical steps we take to reduce noise in residential areas include fitting equipment with muffling devices and using equipment and coordinating construction schedules so that noisy operations do not occur simultaneously. A noise management plan will be developed prior to construction, and mitigation measures will be refined as project planning progresses to ensure that the optimal/most effective measures are implemented.

Best practices for noise control are recommended due to the variability of construction equipment types, staging schemes, and quantities that the contractor may use. The Lakeshore East Joint Corridor early works project exceeds the typical practices in Ontario as mitigation measures will be employed to meet project-specific noise level limits. As noted above, mitigation measures will be refined as project planning progresses and throughout construction to ensure optimal/most effective measures are implemented at any given time.

Residents are encouraged to reach out to the Ontario Line Community Relations team at any point with their feedback or questions. The Ontario Line Community Relations team will be available for the duration of the project to address questions, complaints and concerns via email and phone (416-202-5100 and ontarioline@metrolinx.com). Prior to the start of construction, a telephone number in operation 24/7/365 will also be set up to address any questions or concerns from the public during construction. The team is also available through a virtual appointment booking system on the Metrolinx Engage website and our social media channels. When possible, in person meetings will also resume.

Metrolinx will also establish a Construction Liaison Committee (CLC) with local community representatives. The CLC will meet regularly as we advance towards work beginning and throughout construction to share information and address concerns.

- 3. Construction vibration is another key community concern. The Draft Report documents that one of the construction vibration mitigation measures Metrolinx will utilize is to maximize distance between equipment and sensitive receivers. It would appear that technique would artificially depress vibration readings. Please clarify this mitigation measure.**

Maximizing equipment separation distances decreases vibration levels at sensitive receivers. This is a mitigation measure to control vibration levels at the sensitive receivers. 'Equipment' in this case refers to construction machinery, not monitoring equipment.

- 4. Will Metrolinx install ballast mats on the one existing track as it is moved? As you know, when relaying each track, Metrolinx should be digging down to sort drainage, modern fastenings, and well-tamped track. Please confirm Metrolinx's commitment to regular maintenance or enhanced maintenance where additional tamping and maintenance along with higher quality fastenings should be used due to the residential areas.**

Track-level vibration mitigation will be introduced in order to achieve the reductions required to meet the MOEE/GO and MOEE/TTC protocols. Specific mitigation types will be determined during the detailed design stage. Predicted vibration reduction requirements are presented in Table 4-2 of the [Lakeshore East Joint Corridor Noise and Vibration Operations Report](#), and expected mitigation locations and extents are

provided in Appendix D of the report. Though design is currently ongoing and final mitigation solution or combination of solutions associated with GO tracks have not been selected, if ballast mats are such a solution they will be installed as the tracks are moved.

Safety is of utmost importance to Metrolinx and regular maintenance will be conducted as per Metrolinx's standards to ensure the safety of customers, employees, and communities. Fastenings used will adhere to Metrolinx Standards, which requires higher quality fastenings to ensure safety and longer lifecycles. The Ontario Line will also be subject to an evaluation conducted with an Independent Safety Assessor to ensure safety standards are in place, and will include numerous safety considerations including maintenance of tracks.

5. Noise barriers have been modelled as reflective with an absorption coefficient (alpha) of 0.21. Please confirm Metrolinx's commitment to utilizing noise barrier materials that will both be effective and blend into the local surroundings to the extent possible.

We will be installing noise barriers on both sides of the joint corridor through Leslieville and Riverside that will result in noise levels that are no higher or even lower than they are today at the majority of locations. The noise barriers will be at least five metres high and extend from approximately Eastern Avenue to east of Pape Avenue. To reduce visual impacts of the barriers, Metrolinx is proposing to install transparent noise barriers.

Community members were given the opportunity to take part in an online questionnaire from September 24 to October 24, 2021 where they could provide feedback on potential approaches for wall materials and nearby landscaping options. The feedback we gathered through this initial consultation will give us valuable insight as we discuss design options with our City partners and plan for future community consultations.

We are taking the feedback we received from the east segment consultation survey, environmental reports, public correspondence and open houses to ensure the new infrastructure fits into the existing fabric of Riverside and Leslieville.

6. Graffiti has become a serious problem in Toronto. The Draft Report does not address graffiti removal. As you may know, coating retaining and noise walls with a clear varnish will make graffiti easy to remove. Please confirm Metrolinx's commitment to remove graffiti within 7 days of identification.

Metrolinx is taking lessons learned from previous noise barrier installations and has developed numerous strategies to deter and remove graffiti from our infrastructure. We will use a mix of graffiti deterrence strategies for noise barriers and retaining walls through Riverside and Leslieville, which could include things like graffiti-resistant coatings, landscaping on or adjacent to vulnerable surfaces, murals, increased lighting, and so on.

Graffiti occurring on the Ontario Line system will be removed as early as within 24 hours of being reported. Graffiti that contains obscene material or hate messaging will be removed within 24 hours after the policing authority has conducted a crime scene investigation.

**I look forward to your full, detailed and prompt responses to these questions so as to address the concerns that have been raised by members of the community.
Thank you for your attention to this matter.**

- Duration: Up to 4 hours to capture ambient sound and video
- Hours: 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Subject: CAC - Metrolinx Agenda & Questions for Thursday, Oct. 14 @6pm- 8pm

Hi Lakeshore East Community Advisory Committee ,

Thank you for sending your comments and questions about the Lakeshore East Joint Corridor and East Harbour early works reports. Please see attached for our answers in the excel sheet format you requested.

A copy of this excel sheet will be included in the Final Lakeshore East Joint Corridor and East Harbour early works reports which we expect to issue shortly.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Morning Daryl and Mark:

Please see our CAC Agenda for **Thursday, Oct. 14**. We are waiting for the link to be sent out, and remind you that we would like this session recorded to accurately capture Minutes to be included in the final EWR for Joint Corridor & East Harbour.

We have also included a longer spreadsheet of questions and issues from the Early Works Report, **"LSECAC_EWR_JC Questions&Issues.xls."**

We would like these questions and answers to be included in the final EWR version as well, and to be answered back to our community by Metrolinx.

The column **"Metrolinx Responds"** is to be filled out by the specific Metrolinx Project Team in a timely manner, ideally before the Oct. 24th deadline.

Please send the meeting link as soon as possible.

Sincerely,

[Redacted signature block]

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
NOISE DATA - MODELS					
1	MOEE/TTC Protocol	"criterion limit of 80 dBA for passing trains (applicable to the Ontario Line vehicles).	Appendix C:	MOEE/TTC protocol was written 30 years ago -and clearly states it should only be used to assess TTC vehicles. How can you claim that the TTC SUBWAY DBA standard at 80 DBA passby is applicable to above ground OL trains as a baseline?	The MOEE/TTC criteria provide sound level limits for airborne noise, which is applicable to subway trains above ground. Given the absence of other provincial subway pass-by limits, this guidance was adopted for the Ontario Line trains.
2	Noise modeling baselines	Baseline noise levels for train types over an hour.	Baseline Details:	<p>Note: We want to see this information in graphs before the EWR deadline. You are providing Lpassby data for one OL Train.</p> <p>We are requesting graphs to show the Lmax, Lpassby and Leq, for one hour for with and without noise barriers installed, at POW 08 -88 Wardell, for each of these scenarios:</p> <ol style="list-style-type: none"> Two GO trains each way per hour, two diesel locomotives, 12 cars. This is equivalent to a half-hourly service. Four GO trains each way per hour, two diesel locomotives, 12 cars. This is equivalent to a 15 minute service. Six GO trains each way per hour, two diesel locomotives, 12 cars. This is equivalent to a 10 minute service. Six GO trains each way per hour, electric locomotives, 12 cars. 18 Ontario Line trains each way per hour. This is the projected early morning and late night service. 24 Ontario Line trains each way per hour. This is the projected off-peak service. 40 Ontario Line trains each way per hour. This is the projected peak service. 	<p>Lpeak, Lmax and the various 1-hour Leq scenarios were not assessed as per the MOE/GO and MOE/TTC protocol criteria as they are outside of the assessment framework and thus not applicable to the Lakeshore East Joint Corridor assessment.</p> <p>Lpassby is a metric applicable to a single Ontario Line train passby event, and was assessed as per the MOE/TTC protocol. Lpassby values at various receptors with and without noise barriers are outlined in the Lakeshore East Joint Corridor Noise and Vibration Operations report.</p> <p>Both Lpeak and Lmax apply to single noise events. Lpeak, the true peak or maximum value reached by a sound pressure wave, is typically used for hearing damage assessments, impulse noise or very loud noises such as blasting or hammers rather than transit projects. Neither the applicable provincial protocols nor our model incorporate this metric.</p> <p>Lmax represents the maximum value of the sound pressure during a noise event (e.g., single train passby) for a very short duration (typically, 0.125 or 1 sec). Similar to Lpeak, this metric is not used in the provincial protocols applicable to the Joint Corridor assessment and our model does not incorporate it.</p> <p>The various 1 hour Leq scenarios for various numbers of GO and Ontario Line trains are outside of the assessment framework which looks at 16 hour and 8 hour Leq's, and are thus not applicable to the project. Note that Metrolix assessment conservatively combined the noise impacts from both GO and Ontario Line trains – rather than looking at GO and Ontario Line trains separately – as well as freight and VIA trains, and looked at the highest projected service levels for GO Expansion and Ontario Line, subsequently using this as the basis for mitigation investigation.</p>
3	Noise modelling baselines	Corridor without trains levels		Please provide noise data for ambient levels without trains from 8-9 am; 5- 6pm; 2am - 3am.	The collection of ambient noise that excludes trains is not within the scope of this noise assessment, as the assessment conservatively considers the impact between existing rail noise and project rail noise.
4	Noise Data - High Rises	"noise levels to predicted existing railway noise levels at assessed worst case receptor locations facing the corridor between Eastern Avenue and Pape Avenue with the exception of five high-rise buildings, where noise impacts are expected to be in the "insignificant" to "noticeable" range and are below the MOEE/GO and MOEE/TTC Protocols criteria limits.	Appendix C: page 7	EWR states noise receptacles at mid-point of storey with the highest expected noise levels. Details of which storey is this for each of the 5 buildings should be included. Please explain how a range can be "negligible to noticeable" Can we see elevation noise contours around each of these high rise buildings?	<p>The existing high rise receptors discussed in Section 3.5 of the LSE JC N&V Operations Report were assessed at approximately the 8th storey, which was the location which had the highest overall noise levels while testing the noise model. In addition, this storey also represents the storeys above it because these higher storeys saw little to no benefit from noise barriers.</p> <p>The range of overall noise impacts is broken out into greater detail in Section 3.5 of the LSE JC N&V Operations Report. The receptor specific results provide specific results for these locations.</p>
5	Noise Receptors	Table 2-1: Representative Sensitive Points of Reception	Appendix C: page 15	We are concerned about the constant noise of trains impacting programming in Jimmie Simpson park. For example, will baseball players be able to hear the Umpire? Why are there no POR's in JS Park at the baseball backstop and the in the playground wading pool or on Booth Avenue. Please add these areas in modelling.	<p>Park locations are not considered noise sensitive receptors within the MOEE/GO or MOEE/TTC Protocol. However, a discretionary receptor has been included for the Jimmy Simpson Rec Centre that can be considered representative of a worst case receptor for other areas in the Park as it is closer to the railway and higher up (considered a 2nd storey window receptor), resulting in less noise shielding.</p> <p>While an assessment on speech intelligibility within the park has not been conducted as it is outside of the scope of this noise assessment, single train pass-bys are expected to be quieter than existing levels with noise barriers in place.</p>

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
6	Future Train Volumes		Appendix C: LSE OnCorr Tracks, East Harbour to Danforth – Combined Table, p62.	How have you modelled noise levels if electrification of GO Diesel trains is delayed or doesn't happen?	In May 2021, Metrolix completed a Significant Addendum to the 2017 GO Rail Network Electrification TPAP. GO Expansion, including electrification, is part of a system wide project to design, build, operate and maintain the network, currently in the procurement phase. Once a proponent (contractor) is selected there will be further information in terms of construction scheduling and sequencing of electrification on the rail network. Community updates will be provided to the public and stakeholders prior to construction. To achieve the GO Expansion service levels identified in the Business Case, the GO rail fleet will need to be electrified to the greatest extent possible. The Ontario Line Lakeshore East Joint Corridor Noise and Vibration Operations Report modeled the service levels associated with the future electrification scenario. A continued diesel service scenario was not modeled as Metrolix is committed to electrification of the rail corridor. In the interim, Metrolix is continuing to improve on its operations, for example by purchasing Tier 4 diesel trains, which is a type of train that meets more stringent air quality standards. Metrolix's ongoing train silencer program will also install exhaust noise silencers on all diesel trains which will decrease the sound by an estimated 3dB.
7	Future Train Volumes	Your numbers do not add up in Table: LSE OnCorr Tracks, East Harbour to Danforth – Combined Table, p62.	Appendix C: LSE OnCorr Tracks, East Harbour to Danforth – Combined Table, p62.	"Please update your Table to show missing numbers: As there should be the same number of trains in both directions if it includes both revenue and non revenue trains, especially for the diesel ones. What happens to the extra trains? What happened to the D2L12 trains? Lakeshore East Trains: D1L6 5 +0 +21 + 5 = 31 westbound 19 +3 +5 +0 = 27 eastbound gives 4 extra westbound D1L12 1 + 31 +5 + 0 = 37 westbound 37 +3 +2 +0 = 42 eastbound gives 4 extra eastbound E1L6 46 + 6 +1 + 0 = 53 westbound 1 + 0 + 47 +9 = 57 eastbound gives 4 extra eastbound E1L12 18 + 7 + 1 +0 = 26 westbound 1 + 0 + 19 + 4 = 24 eastbound give 2 extra westbound VIA 0+ 0 +16 + 1 = 17 westbound 18 + 0 +0 + 0 = 18 eastbound gives 1 extra east bound. Stouffville Trains: D1L6 6 + 0 +1 +0 = 7 westbound 1 + 0 + 6+0 = 7 eastbound this one is balanced E1L6 129 +29 +2 +2 = 162 westbound 4+0 + 128 + 32= 164 eastbound gives 2 extra eastbound E2L12 0 + 1 + 3 +2 = 6 westbound 5 + 0 + 0 + 0 = 5 eastbound gives 1 extra westbound"	The train numbers shown in the Ontario Line Lakeshore East Joint Corridor Noise and Vibration Operations Report are consistent with the train numbers presented in the Electrification Final Environmental Project Report Addendum. Please note that there are no D1L12 trains running through the Lakeshore East Joint Corridor segment. The # of D1L12 trains noted in the comment are D2L12 trains (i.e. 0 D1L12 trains and 79 D2L12 trains run through the Lakeshore East Joint Corridor segment). Eastbound and westbound train numbers are not always balanced because some trains may be traveling without passengers, servicing different GO lines or traveling to train yards or storage facilities.
8	Future Train Volumes	High Frequency Rail Service	https://policyoptions.irpp.org/magazines/septembe-2021/full-speed-ahead-for-high-frequency-rail-in-the-busy-canadian-corridor/	Have you modelled for the addition of a High Frequency Rail Service through the Joint Corridor? Please show these revised noise/vibration levels in the EWR.	No specifics of this proposed project, such as proposed service levels, are available to Metrolix, and as such have not been modelled.
9	Noise Contour maps	* Note: Noise contours do not account for shielding from all buildings. Therefore, it can be expected that project sound levels will be lower than shown in the figure beyond receptors directly facing the corridor.	Appendix C: Page 78 & 79	Your noise contour maps do not depict the data as shown in Table 3-4 Project w Barriers levels. Please include your explanation of noise contour map receptor levels in the EWR that you have provided to our CAC on October 6, 2021.	The following text has been added to Section 3.4: "Noise contour maps are provided in Appendix F, for day-time receptors at a height of 1.5 metres (representing ground level at an outdoor receptor), and night-time receptors at a height of 4.5 metres (representing the plane of window for a 2nd storey window), for both existing and "with barrier" future scenarios. It should be kept in mind that while contours are presented at "general" heights, the results presented within this report were for receptor heights accounting for the number of storeys at the specific respective locations. "

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
10	Noise Data	"The exceptions to this are locations such as POR_12 and POR_22 receptors adjacent to the north side of the corridor (closest to Ontario Line tracks) where existing buildings located in proximity to these receptors are expected to be removed due to construction of the Ontario Line infrastructure on the north side of the corridor. This is expected to result in removal of current noise shielding for these receptors provided by these buildings, leading to higher noise levels"	page 23	Why does noise shielding matter at these sites if you are modelling predicted noise levels?	The noise model accounts for shielding from existing buildings in the existing condition model, as well as the removal of respective buildings within the future condition model, where applicable.
NOISE DATA - VIBRATION					
11	Vibration Studies	Vibration from the future Ontario Line and GO track operations is predicted to exceed the MOEE/GO or MOEE/TTC Protocol mitigation thresholds at locations POW01_V, POW04, POW09, POW14, POW15, POW18, POW23, POW24 (exceedances due to GO track operations), and POW_10V (exceedance due to Ontario Line track operations).	Appendix C: page 40	We note the 30 day feedback for issue resolution process will be over by the time this vibration plan is released. What is the timing of this further study and will the community have and cess to it?	The detailed vibration analysis noted on page 40 of the LSE JC N&V Report is not part of the EA process and will be conducted during detailed design, as is typical of transit projects. Note vibration mitigation solutions are anticipated to be installed at track level, within Metrolix right-of-way, as GO tracks are moved/shifted during construction. Similar to other technical documents and drawings in support of construction that are developed during detailed design, these design details remain internal to Metrolix and the Contractor.
12	Vibration Data	"Vibration - a detailed vibration analysis will be conducted during the design phase to "refine mitigation requirements"	39 of report (not appendix)	You give a list of mitigations - are you committing to implement all of these?	MX will implement mitigation measures in order to meet the required vibration reductions to meet MOEE/GO and MOEE/TTC protocol requirements. However, this does not necessarily mean implementing every mitigation example mentioned within the report, as the required reductions are expected to be achievable using single instances of conventional vibration mitigation measures. Mitigation solutions to be implemented along the joint corridor as part of early works will be selected during detailed design.
13	Vibration Data	"In the rare occurrence of additive vibration, such as during a simultaneous GO train and Ontario Line vehicle pass-by, sample calculations indicate that overall vibration levels would not be significantly higher than that of the dominant individual source. Therefore, the results within this report are based on the worst case single pass-bys of trains operating on GO or Ontario Line tracks"	Appendix C: page 82	Why would 'additive vibration' be a rare occurrence on a 6 lane railway? Please explain.	The word 'rare' used in the referenced sentence is subjective and was removed from Section 4.3. There would be no consideration for additional mitigation based on additive pass-bys as it is standard practice to assess based on single pass-by events, and the overall level would not be significantly higher (and the change in vibration would be unlikely to be perceptible) than the dominant individual source (e.g., a GO train travelling along the GO track closest to a given receptor), partially because secondary sources would be relatively further away (e.g., Ontario Line train travelling along Ontario Line track further away from that receptor). Additional simultaneous pass-by events would have diminishing incremental cumulative impact for the same reason.
14	Vibration Mitigation Map	Vibration from the future Ontario Line and GO track operations is predicted to exceed the MOEE/GO or MOEE/TTC Protocol mitigation thresholds at locations POW01_V, POW04, POW09, POW14, POW15, POW18, POW23, POW24 (exceedances due to GO track operations), and POW_10V (exceedance due to Ontario Line track operations).		We would like to see this information outlined on a map, ideally a vibration level contour map, of further vibration mitigation areas and investigations.	At this time, a vibration contour map is not required per the applicable MOEE/GO and TTC/GO protocols.

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
15	Vibration	As noted above, this Report documents the operational noise and vibration assessment of Ontario Line vehicles and GO trains within the Lakeshore East Joint Corridor. A number of the Lakeshore East Joint Corridor infrastructure components, including realigned GO tracks and the new fourth track as well as associated vibration mitigation investigated in this report, will be installed as part of the Lakeshore East Joint Corridor early works.	Appendix C: page 8	Are you installing ballast mats on the one existing track as you move it?	Design is currently ongoing and the final mitigation solution or combination of solutions associated with GO tracks have not been selected. If ballast mats are such a solution they will be installed as the tracks are moved.
16	Noise & Vibration Report	Noise and vibration Operations Report	Appendix C	We note that this Appendix C is not signed by Acoustics Manager (Alan Oldfield). Why?	This was an internal error. The Final LSE JC N&V Operations Report will be signed by the Acoustics Manager.
17	Vibration Mitigation - 15 Tiverton	Mitigation was required to be investigated for GO tracks at 8 of these 9 locations – all except POW10_V. In the case of POW10_V, where mitigation was required to be investigated for Ontario Line tracks, the vibration limit exceedance can be attributed to the Ontario Line track proximity to this receptor. The greater extent of mitigation required for GO tracks can be expected because heavy rail trains generate higher overall vibration levels due to the higher weight of the trains and higher assessed speeds.	Appendix C: page 36	Please explain why no further investigation of mitigation is required at POW10 (15 Tiverton) when clearly the house is too close to the rail? The corresponding Table 4-2 indicates OL mitigation is required? Please clarify.	Investigation is required at this location. The exception indicated was that this exceedance was due to Ontario Line operations, where other exceedances were due to GO tracks.
NOISE DATA - CONSTRUCTION					
18	Construction Noise Mitigation			What is the combined current existing corridor noise levels plus construction noise levels. Please show how you are mitigating for these combined levels?	The assessment was based upon conservative worst case construction noise levels, which will not happen for the majority of the construction period. The worst case predicted construction levels will control the noise levels during the worst case period (train contribution over the 8 hour assessment period will be much less than the assessed worst case continuous 8 hour construction noise). Existing trains will not affect the predicted worst case construction noise level.
19	Noise Barriers - Construction Timeline		Sept. 23rd Townhall Presentation	From your construction timeline, residents north of Queen will not see a noise wall installed until mid-2023. Please include how will you mitigate 1 year of construction from surrounding homes/ parks/ playgrounds during this time period without a noise wall?	Metrolinx contracts for other rail projects in the GTA have included noise level limits for the contractor to meet and noise level limits will similarly be established for the Ontario Line project. Contractors would be obligated to meet these limits through various methods (adjusted to accommodate construction required and meeting limits) which could include movable noise screens, construction time limits, equipment limits, using alternative quieter equipment/methods, etc. The installation of noise walls will further decrease the noise impacts once in place.
20	Noise Barriers - Construction Timeline		Sept. 23rd Townhall Presentation	From your construction timeline you will be installing a noise wall north of Queen St. to Dundas on the west side in mid- 2024. How will you mitigate 2 years of construction from surrounding homes/ parks/ playgrounds during this time period?	Metrolinx contracts for other rail projects in the GTA have included noise level limits for the contractor to meet and noise level limits will similarly be established for the Ontario Line project. Contractors would be obligated to meet these limits through various methods (adjusted to accommodate construction required and meeting limits) which could include movable noise screens, construction time limits, equipment limits, using alternative quieter equipment/methods, etc. The installation of noise walls will further decrease the noise impacts once in place.
21	Construction Staging Areas: Ray McCleary Towers			Please clarify the plan and timeline for the construction staging for the area south of Ray McCleary Tower 444 Logan Avenue?	The area south of Ray McCleary Tower will be used to construct retaining walls and noise barriers. Construction is anticipated to start in summer 2023. The area will be restored to current City of Toronto standards once construction is complete.

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
22	Future Train Volumes	RE the GO Schedule included dated 2037	Appendix C:	Your GO numbers reflect trains running in the evening - this is not currently happening. Is this correct and when will this be happening? How have you factored this into your modelling?	GO Trains are currently running in the evening and have been considered as part of our modelling. For the purposes of noise modelling per the MOE/GO criteria, the day-time period encompasses both the day and evening periods (7:00 AM to 11:00 PM).
23	Oct. 5th Townhall question	Drainage of water/snow from corridor Anonymous Oct 1, 2021 - 15:48		Please explain how water and snow will drain off the elevated corridor, and will the drainage plans impact property owners and their land who back onto the corridor? There have been many flooding complaints where noise walls back onto properties in other areas of the city.	Early works will include installation of the drainage system for the joint corridor. The main approach will be infiltration within the corridor. The system will be designed to all applicable standards, including ability accommodate stormflows of high volume, and design will be reviewed by the City of Toronto as it progresses.
24	Communication with Owners	"Vibration from the future Ontario Line and GO track operations is predicted to exceed the MOEE/GO or MOEE/TTC Protocol mitigation thresholds at locations POW01_V, POW04, POW09, POW14, POW15, POW18, POW23, POW24 (exceedances due to GO track operations), and POW_10V (exceedance due to Ontario Line track operations).		What level of communication have you conducted with owners of properties who are listed as needing additional n&v mitigation? Please clarify how homeowners and residents would find out more about the specific construction plans for around their homes?	Vibration will be mitigated at the source, on Metrolix property at track level and not at private properties. We are refining construction plans to reduce impacts to private properties where possible. Once details are finalized we will share them with the community through meetings with community groups, open houses, construction notices and Metrolix Engage. So far, we have released construction staging plans and access requirements. In our latest open house, we released a construction sequencing video along with timelines. Once more details are finalized, we will share them immediately with the community.
25	Noise Conditions	All future diesel locomotives will have an exhaust silencer installed which will reduce the base sound level by 3 dB.	page 70	You have factored a 3 dB reduction which is not discernible to the ear, but what year does this adjustment happen?	Metrolix's train silencer program to install exhaust noise silencers on all diesel trains which will decrease the sound by an estimated 3dB is currently ongoing.
26	N&V Report AppA3	As noted in Section 7, at this time, provincial noise or vibration permits or approvals are not anticipated to be required for the Lakeshore East Joint Corridor early works construction. This will be confirmed as project planning progresses.	page 13	Please clarify why this work would not require a permit?	At the time of this report preparation, the Ontario Ministry of the Environment, Conservation and Parks (MECP) does not have receptor based noise or vibration limits for construction. The MECP also does not review construction noise or vibration levels outside of the Environmental Assessment process (which is not a permit).
27	Construction Staging Areas: Dundas Bridge	Minute 32 Richard's explanation during presentation at https://www.metrolixengage.com/en/OLLiveEJune24		Your June 24, 2021 presentation included slides showing a "ramp" being constructed from Dundas to Paisley for equipment access. What is the timeline for this and will it be removed after the bridge is constructed? If so, how will this area be restored?	The ramp is planned to be constructed in Fall 2023 and is anticipated to be in place until Summer 2025. This access will be removed and the area will be restored to current City of Toronto standards (e.g., re-graded if required, grass restored etc.), at minimum, once bridge construction is complete.
28	Construction Mitigation	Additional measures	page 14	Are trains horns being limited when work is being conducted on the tracks?	Operations will be maintained during construction, with all safety measures in place.
29	Construction Mitigation	Additional measures	page 14	Will back up beepers be limited during evening hours?	Safety is of utmost important to Metrolix and back-up beeper will be used to ensure the safety of construction workers and the community. All early works construction operations will follow standard Metrolix safety protocols.
30	Construction Mitigation	24-hour Hotline		Are you providing a 24 Hr construction hotline as construction work begins?	Yes, this is correct.
31	Construction Mitigation	791 Queen St. Fontbonne Residents & Ray McCleary Tower & Francis Beavis Manor	page 14	We have 3 high-rise buildings of vulnerable senior populations - how can you not provide additional noise mitigation for these buildings, one next to the 'Leslieville Station', one between and overlooking 2 major bridges at Dundas & Logan, and one overlooking the portal at Pape/Gerrard?	Existing noise levels at the Fontbonne building are predicted to be met. At the residences at Logan and Pape, we predict that noise impacts will be below the protocol criteria limits, though above predicted existing levels. We are looking into exploring means such as receptor-based mitigation to achieve our beyond-protocol goal.
NOISE DATA - NOISE WALLS					

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
32	Additional Noise Barriers & Retaining walls	"... refinements may also include removal of barriers from the GO and Ontario Line bridges as well as refinements to the barrier height and extent at the future Ontario Line stations (Riverside/Leslieville and Gerrard).		Will there be a noise wall on the bridges? If not, how will noise on the bridges be mitigated, especially at the Logan and Dundas bridges that are very close to the Roy McCleary Tower.	Metrolix continues to advance early works design and is examining noise barriers on bridges as part of this work. Noise barriers on bridges may not be included or simply reduced in height. As stated in the Lakeshore East Joint Corridor Noise and Vibration Operational Report, we are aiming to maintain the goal of reducing noise levels to existing levels or below, with or without noise barriers on bridges. Receptor based mitigation is being considered at the Roy McCleary Tower.
33	Noise Barriers	Noise barriers have been modelled as reflective with an absorption coefficient (alpha) of 0.21. Such barriers can be constructed using transparent materials such as acrylic panels. The locations, extents, heights, and additional details of modelled noise barriers are presented in Appendix D, and noise contour maps are provided in Appendix F.	Appendix C: page 28	You are only presenting one type of noise wall, as a choice, which it is not. What are the other noise wall material options and absorption coefficients?	Our current modelling tells us we can maintain and even reduce existing sound levels with transparent noise walls. We have engaged the community through a questionnaire, open houses, door knocking and correspondences to understand the preferred level of transparency for the future noise walls.
34	Noise Barriers Graphics	"barriers presented in this report range in height from 2.5 to 6.5 metres. Mention of 5 metre standard.	Appendix C: page 8 (and, on page 27 of Appendix C "up to a maximum considered height of 7 metres")	What will be visible above the noise wall ie. Does it cover the trains?	Trains will be covered (unless you have a view from above, such as at a high rise) as 5 metre minimum noise barriers are planned to be implemented, but may be visible through the barriers if transparent barriers are selected.
35	Additional Noise Barriers & Retaining walls	"To facilitate this and barrier detailed design development, refinements to the noise model and recommended barrier design presented in this report will be performed, and changes to barrier height, extent and surface types will be implemented where required. These refinements may also include removal of barriers from the GO and Ontario Line bridges as well as refinements to the barrier height and extent at the future Ontario Line stations (Riverside/Leslieville and Gerrard).	page 33	How will the community will know when critical sound mitigation plans are changing and what input the community will have into these changes?	Based on feedback from the design questionnaire, we are planning to have another engagement presenting the results and various options under consideration for the future noise walls.
36	Retaining walls/Noise walls	Discuss preliminary detailed design of walls and maintenance - particularly graffiti removal.		As retaining walls/noise walls will be up to 41 ft in height throughout the Joint Corridor, please address graffiti removal in the EWR. What is the plan and who is responsible for it Metrolix or the city?	<p>Metrolix is taking lessons learned from previous noise barrier installations and has developed numerous strategies to deter and remove graffiti from our infrastructure. We will use a mix of graffiti deterrence strategies for noise barriers and retaining walls through Riverside and Leslieville, which could include things like graffiti-resistant coatings, landscaping on or adjacent to vulnerable surfaces, murals, increased lighting, and so on.</p> <p>Grffiti occurring on the Ontario Line system will be removed as early as within 24 hours of being reported by Metrolix. Grffiti that contains obscene material or hate messaging will be removed within 24 hours after the policing authority has conducted a crime scene investigation.</p>
<p>Natural Environment - East Harbour & Joint Corridor</p>					

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
37	Natural Environment - East Harbour & Joint Corridor	Tree Removals	Oct. 5th Townhall	At the Townhall on Oct. 5th it was confirmed that tree clearing will be taking place in November 2021, and that it was previously approved for GO Expansion EA. We note that there has never been a publically circulated detailed design for this work and that the Joint Corridor ROW is now part of the OL's EW Assessment. Please provide a detailed design of the ROW tree & vegetation clearing plan for the community to comment on before the end of the 30 day feedback period.	Vegetation clearing in the rail corridor is scheduled for November 2021. The first phase will be GO Expansion removals as approved through the GO Rail Network Electrification TPAP EPR (2017). Any vegetation removals required for Lakeshore East Joint Corridor early works will not be removed until the Lakeshore Joint Corridor Early Works Report is finalized and approved by the Ministry of the Environment, Conservation and Parks. We do not expect this second phase of removals to begin until 2022.
38	Natural Environment - East Harbour & Joint Corridor	Tree Removals: Clearing and grubbing of vegetation, tree removal and protection. -Protection of trees & sensitive environmental features.-Erection of temporary and permanent fences.	page 31	"What is the difference between trees being removed and vegetation grubbing? What is the timeline for each?"	Tree removal involves the cutting of tree branches and trunks, whereas grubbing involves the excavation and disposal of the tree stumps, roots and other parts of the tree that remain after the tree removal. Vegetation clearing in the rail corridor is scheduled for November 2021. The first phase will be GO Expansion removals as approved through the GO Rail Network Electrification TPAP EPR (2017). Any vegetation for the Ontario Line will not be removed until the Lakeshore Joint Corridor Early Works Report is finalized and approved. We do not expect this second phase of removals to begin until 2022. Metrolinx is aiming to complete vegetation removal during the winter and early spring to the extent possible. Grubbing will be completed later on prior to construction commencement. The exact timeline for grubbing will be confirmed as planning progresses.
39	Natural Environment - East Harbour & Joint Corridor	No new field studies. "Field investigations were not completed for the Lakeshore East Joint Corridor Study Area as lands within the Lakeshore East Joint Corridor Study Area were recently investigated in 2016 to support other Metrolinx projects."	page 10	The field studies were conducted 5 or 6 years ago. At the Townhall on Oct. 5, Carrie Schaffer said that new field studies would be completed after trees and vegetation are cleared. Please explain why any SAR would still be located in a corridor cleared of habitats? This plan needs to change from a current study and consultation with appropriate field experts.	Using data collected 5 or 6 years ago is fairly typical. We do not anticipate a significant shift in vegetation or fauna communities over this time frame that would necessitate a re-assessment. SAR surveys are completed prior to removal of habitat features supporting those SAR, such as acoustic monitoring for bat SAR or surveys for Barn Swallow nests on bridge structures during detailed design to confirm presence/absence in habitats that are anticipated to be impacted.
40	Natural Environment - East Harbour & Joint Corridor	Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016b) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections.	Page 67	Noting the 30 day feedback period will be over and none of the tree removal plans are included in the EWR. When will the Arborist Report be ready to be reviewed by TRCA and the community?	Tree removal plans are dependant on detailed design and are finalized outside of the Environmental Assessment process. The Arborist Report outlining planned removals on City- and privately owned lands is anticipated to be shared with the public in early 2022
41	Natural Environment - East Harbour & Joint Corridor	"Barn Swallows are unlikely to nest underneath the rail overpass bridges and/or pedestrian bridges over Eastern Avenue, Queen Street East, Dundas Street East, Logan Avenue, Pape Avenue and Jones Avenue; however, it is possible that birds protected under the Migratory Birds Convention Act such as American Robins may nest under these structures and therefore could be killed, harmed or harassed."	Page 65* Include local Report	From our Community Member's Bird Survey which took place over the spring and summer 2021, we can see that your reference studies are out of date and there are many more varieties of migrating birds. We would like you undertake a field study to confirm this survey and to update your bird species to create a historical record of species on the rail corridor.	A thorough background review of wildlife, including Species at Risk and other species such as hummingbirds, cardinals and blue jays, that may occur within the Lakeshore East Joint Corridor Study Area was completed as part of the Early Works Report. Refer to Appendix A: Species Records from Wildlife Atlases of Appendix A1: Lakeshore East Joint Corridor Early Works – Natural Environment Early Works Report for this background review. Wildlife habitat within the rail corridor is not of high quality and there are other naturalized areas (e.g., Don Valley, city parks, etc.) in proximity to the Lakeshore East Joint Corridor Study Area to provide habitat for these common wildlife. Through appropriate mitigation measures such as investigating construction areas prior to commencing or resuming construction activities for wildlife and wildlife habitat that may have established following the completion of previous surveys, impacts to urban wildlife with abundant and secure populations in the City of Toronto will be avoided.
42	Natural Environment - East Harbour & Joint Corridor	Habitat Loss, Barn Swallows, Bats, Monarch, Eastern Wood-pewee -	page 17	Will Metrolinx commit to using some of the 'new' parkland and devote these spaces to creating new habitats for these species?	We will be working with the City of Toronto on the restoration and landscaping and will incorporate appropriate habitat features such as native plants wherever possible. We will also explore opportunities to plant as close as possible to the corridor.

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
HERITAGE PROPERTIES					
43	Heritage Properties	"Lakeshore East Joint Corridor early works have the potential to incur vibration impacts on the buildings within the property (OLS-122). The following monitoring activities are required for vibration impacts: <input type="checkbox"/> Monitor vibration during construction using seismographs, with notification by audible and/or visual alarms when limits are approached or exceeded; and <input type="checkbox"/> Conduct regular condition surveys and reviews during construction to evaluate efficacy of protective measures. Implement additional mitigation as required		Who is responsible for monitoring vibration impacts on Heritage properties, Metrolix or Contractors? Who determines if further mitigation is required?	The Project Agreement will include language putting the responsibility on the Contractor for monitoring vibration impacts on Heritage properties, in accordance with the Early Works commitments and mitigation measures. Metrolix provides oversight to the Contractor to ensure the vibration monitoring program is being followed. Metrolix will have access to all monitoring data to ensure we are apprised of conditions. Should vibration levels being to elevate, contractors will be required to implement additional corrective measure to ensure no exceedences in vibration levels.
44	Heritage Properties	Staging Areas		Will you revise the final EWR to include indentifying the impacts of having Staging areas in proximity to Heritage Properties?	Potential impacts to heritage properties are captured in the report. The project footprint assessed in the report is inclusive of areas that may be used for staging.
45	Heritage Properties	"Mitigation measures documented in Appendix H of the Ontario Line Cultural Heritage Report have been refined based on the early works impact assessment. The following mitigation measures for vibration impacts are required: <input type="checkbox"/> Documentation (Review and establish) of the structural condition of the affected building to determine if they are vulnerable to vibration impacts from early works <input type="checkbox"/> Establish vibration limits based on structural conditions, founding soil conditions and type of construction vibration <input type="checkbox"/> Implement vibration mitigating measures on the construction site and/or at the building	page 20	When will this process begin? Do Heritage homeowners have and access and input into this information?	Findings of the EA report on the potential vibration impacts will be revisited once more information about the work sequence, precise locations, means and methods and equipment is available. This is done prior to construction commencement. This allows impacts to be refined and some impacts identified in the EA may be resolved. During this step, the homeowners, if any have the potential to be affected, will be notified and Metrolix will work with them should any pre-construction surveys, monitoring or mitigation at the buildings in question is needed. We make all efforts to minimize the likelihood of impacts and mitigate at source (e.g., use equipment with low vibration settings).
SOCIO/LAND USE					
46	Socio/Land Use	Metrolix will be seeking feedback from the Riverside and Leslieville communities on the look and feel of the retaining and noise walls, as well as the landscaping strategies directly adjacent to the rail corridor.		Will there be any additional opportunities to consult the community about the look and feel of retaining walls?	Based on the feedback from the design questionnaire, we will be sharing the results with the community for review and to provide additional input.
47	Socio/Land Use	"Following completion of early works, impacted lands will be restored to current City of Toronto standards wherever feasible."		How will you determine what is "feasible"? What is the specific criteria used to determine this?	Metrolix will be working with the City on restoration plans as planning progresses. 'Where feasible' means that this may not apply to all lands that are used for the project, such as where permanent infrastructure as part of the Ontario Line will be built.
48	Socio/Land Use	https://www.metrolixengage.com/en/content/socio-economic-land-use-characteristics-lakeshore-east-joint-corridor		The photo on this page (and elsewhere) shows RiverDALE. We live in RiverSIDE.	The photos capture houses within the Riverdale and Riverside neighbourhoods.
RAIL SAFETY					

LSECAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
49	Rail Safety	6 lanes of mixed use rail - heavy rail beside light passenger rail.		Why are rail safety plans not addressed in the EWR? We are asking for rail safety plans to be detailed and included before finalizing the reports.	<p>Metrolinx places the utmost importance on rail safety across our network, however rail safety plans are not a typical component of Environmental Assessment (EA) studies. Further, note that the Lakeshore East Joint Corridor Early Works Report reflects an assessment of Lakeshore East Joint Corridor early works only, which include reconfiguration of existing GO tracks to support future Ontario Line infrastructure, replacement of several existing bridges, construction of two new bridges to support future Ontario Line tracks, and construction of retaining walls and noise barriers. As per O. Reg. 341/20, early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation, or bridge replacement.</p> <p>The design of the Joint Corridor infrastructure, including Ontario Line track work and stations are being completed in compliance with all applicable design standards. Any operations in the Joint Corridor will comply with safety standards and procedures such as the Railway Safety Act where applicable.</p>
50	Rail Safety	6 lanes of mixed use rail - heavy rail beside light passenger rail.		Will a crash wall be installed on the corridor - a requirement on any other rail line running heavy and light rail together? Explain why or why not.	<p>As we understand it, this question is asking if a crash wall will be installed between the Ontario Line and GO transit tracks on the rail corridor. A crash wall is not required and will not be installed on the rail corridor through Leslieville and Riverside. On similar corridors* in Canada and Europe running light and heavy rail adjacent to one another, a crash wall separating the two systems is not a precedence or requirement set by rail standards. Out of an abundance of caution, Metrolinx has undertaken an extensive Joint Corridor Safety Study in accordance with the Canadian Standards Association Express Document CSA EXP11:20, a Canadian Method for Risk Evaluation and Assessment (CMREA) for railway systems and the Common Safety Method (CSM) for Risk Assessment EU – 402/2013. The Joint Corridor Safety Study confirmed that a crash wall is not required and that no permanent changes or cumulative effects to public safety or rail safety are anticipated by running the two railways adjacent to each other. *Local examples of similar corridors include: TTC Line 2 adjacent to the Milton GO corridor at Kipling Station, Scarborough Rapid Transit adjacent to the Stouffville GO corridor between Kennedy and Ellesmere Stations, and the Calgary South LRT adjacent to the CP rail corridor at Somerset-Bridlewood Station.</p>
AIR QUALITY					
51	Air Quality	Out of date air quality studies.	Appendix B3: Correspondence	Your data has been noted by MECP as out of date. Locations of your surveillance receptors are not in study area. We expect your data to be based on existing conditions within the study zone. How will you address this?	<p>The AAQC levels listed in Table 2-1 and Table 3-1 of the AQ report (EWR Appendix A3) are current to May 1, 2020 and the reference has been updated accordingly.</p> <p>The exception to this is the use of sulphur dioxide standards from the technical memorandum "Technical Assessment and Standards Development Branch Ministry of the Environment and Climate Change: Ontario Air Standards for Sulphur Dioxide" (2018) as recommended by the MECP commentary on both the Early Works and Existing Conditions reports for Ontario Line. The comparable standards for Sulphur dioxide within the May 2020 AAQC are listed in ppb, rather than ug/m3 with a 20oC temperature used for conversion, rather than 10oC as referenced in the report and requested by MECP during the review period. This is explained in Note #2 below Table 2-1.</p>
52	Air Quality	"A plan to manage air quality will be developed to ensure consistent attention to mitigation of dust and particulates, including silica, from the construction site. The following mitigation measures should be considered in the plan to manage air quality:	page 48	Who develops this plan, Metrolinx or Contractor? Who is responsible for monitoring and adherence of it?	<p>The air quality management plan will be developed by the Contractor, though Metrolinx has oversight of this process and ensures that this plan is in prior to construction commencing.</p> <p>Monitoring and adherence to the plan would be a joint responsibility between Metrolinx and the contractor.</p>
OCT 5, 2021, TOWNHALL QUESTIONS					

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
53	Oct. 5th Townhall question	Anonymous' s avatar Underground alignment Anonymous Oct 3, 2021 - 10:17		<p>The question of underground alignment will not go away - likely because it was not address properly. These 2 questions must be answered:</p> <p>1) What is the cost and cost difference between the current plan using the rail corridor and the underground "Munro" option (e.g. continue on Eastern to Carlaw to Gerrard to Pape station).</p> <p>2) What alternatives are there and what concessions can the local community provide to reduce the cost difference to allow the underground alignment to proceed (e.g. a) go under Eastern to Pape, eliminating the Carlaw "jog", and/or b) using cut-and-cover for the portion of the line from East Harbour Station to Pape Station and to Minton Place)</p>	<p>The cost difference is \$870 million however there are more factors than just cost such as property impact, community impact and customer experience.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>
54	Oct. 5th Townhall question	Sound demonstration Anonymous Oct 3, 2021 - 14:42		<p>Your "noise demo" https://www.ontariolinesoundstudio.ca/listen/ is an interesting idea. To be closer to reality, please add these options so we can hear the sound of:</p> <ul style="list-style-type: none"> - an OL and GO train passing at the same time as they are likely to do given there will be 1500 trains a day - a diesel GO train given that it will be years before all GO service is electric - an OL train braking and starting up at Queen and Degras rather than just passing through the station since all OL trains will stop there - announcements/bells etc that will be audible on the street level of Queen and Degrassi from the open-air station above. We need to have a demo of the "peak/breakthrough noise" 	<ul style="list-style-type: none"> - The demonstration videos were prepared to enable comparison of the simulated noise characteristics of the Ontario Line vehicles and GO trains, and to create an audio representation of the predicted effects of noise barrier and retaining walls at the demonstration locations. To enable these scenarios to be experienced and compared, single pass-by events provide a more straightforward demonstration. As such, simultaneous pass-bys have not been included in the sound demonstrations. The noise barriers are expected to significantly reduce noise from train pass-bys at the sound demonstration locations, whether during single pass-bys or simultaneous pass-bys. The operational noise model, which assessed the noise impacts for the project and investigated the effects of noise barriers, included the cumulative effects from all rail services operating in the Lakeshore East Joint Corridor throughout the daytime and night-time periods. The results are detailed in the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report - GO trains in the demo are diesel trains currently running through the corridor - Stopping and starting at the station is good feedback for future demos. As the noise model accounted for a worst case scenario (the train passing through at a full speed), this was what was reflected within the sound demo for this location. - The purpose of the demo is to demonstrate relative differences in noise levels associated with passing trains. - Station announcements and other noise associated with station operations, is related to indoor acoustics and architectural design rather than train operations. The station and its announcement and other systems can be designed to mitigate noise intrusion at street level and will be determined as detailed design progresses.
55	Oct. 5th Townhall question	Anonymous' s avatar How is this consultation being used? Anonymous Oct 3, 2021 - 15:46		<p>It's not clear what the objective of this "consultation" is. Metrolinx is vigorously promoting an above ground design with slogans e.g. "Awkward...", billboards and glossy promotional booklets. It appears that the proposed design will have huge impacts on the host community. But you have not costed or evaluated the community's proposed underground option in spite of repeated requests. This process is meaningless if it does not evaluate other less impactful designs. Slogans and advertising in the middle of a consultation demonstrates how this process is disingenuous and simply a corporate communications exercise. Might that change?</p>	<p>Feedback from the questionnaire on noise barriers, retaining walls and vegetation designs options will be considered in the final design for the look and feel of the rail corridor in Riverside and Leslieville.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>
56	Oct. 5th Townhall question	Anonymous' s avatar Baseline noise standards not met. Anonymous Oct 1, 2021 - 14:12		<p>Why is Metrolinx not meeting the standard noise & vibration limits of 55 dB during the day and 50 dB during the night as their baseline for the rail corridor? Your average 'Project w Barrier' Day noise levels are significantly over the 55 dB standard. Shouldn't you be doing everything you can to meet these existing standards?</p>	<p>As per the MOEE/GO and MOEE/TTC protocols, the noise level objective is the higher of existing day-time (Leq,16h) or night-time (Leq,8h) levels, or 55 dBA (day)/50 dBA (night). As existing levels were predicted to be higher than 55 dBA during the day and 50 dBA during the night time periods at all assessed receptors within the report, the existing predicted railway noise level was used as the objective noise level for the assessment</p>

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
57	Oct. 5th Townhall question	Peak levels vs Average noise levels Anonymous Oct 1, 2021 - 15:02		Please explain the difference between average noise levels and peak noise levels. Where is the data for peak levels? How have you and counted for diesel trains with 1 or 2 locomotives and either 6 or 12 cars?	The metrics assessed within the report per the MOEE/GO and MOEE/TTC protocol are the Leq,16h and Leq,8h values are the equivalent sound level over 16 hours (day-time, 7AM-11PM) and 8 hours (night-time, 11PM -7AM), and that of a single Ontario Line train pass-by (LPassby). The Leq16h and 8h values account for all pass-bys throughout the day. Diesel trains with 12 cars and 2 locos as well as 6 cars and 1 loco are both considered in the noise model. Full data on this is presented in Appendix C, where the ones mentioned are referred to as "D2L12" and "D1L6" .
58	Oct. 5th Townhall question	No alternative explored in this EAAnonymous Oct 4, 2021 - 00:04		You present only the disruptive above ground option in this report. Shouldn't you explore different options and consult the public about pros and cons of different routes? If there's one alignment that is being presented, what exactly is the point of this meeting? What are you consulting us on? Cost out the underground option! - Let's see how the underground option performs in terms of noise and vibration. - Let's see how many trees we can save. - Let's see how less disruptive the construction is. - Let's see if we can keep Riverside and Leslieville healthy and liveable.	
59	Oct. 5th Townhall question	Anonymous's avatar More noise mitigation for Seniors High Rise BuildingsAnonymous Oct 1, 2021 - 14:51		We have 3 high-rise buildings of vulnerable senior populations - how can you not provide additional noise mitigation for these buildings, one next to the 'Leslieville Station', one between and overlooking 2 major bridges at Dundas & Logan, and one overlooking the portal at Pape/Gerrard?	Existing noise levels at the Fontbonne building are predicted to be met. At the residences at Logan and Pape, we predict that noise impacts will be below the protocol criteria though above predicted existing levels. We are looking into exploring means such as receptor-based mitigation to achieve our beyond-protocol goal.
60	Oct. 5th Townhall question	Anonymous's avatar Disingenuous consultationAnonymous Oct 3, 2021 - 23:58		After ignoring community wishes for months about wanting an underground route, now you're disingenuously 'consulting' about the colour of the noise wall. If you're serious about letting the public have a say, you need to provide better data as to how different types of noise walls perform in terms of noise mitigation. Your report provides predicted noise levels with barrier. Well, which barrier? Clear one, absorptive one? Don't you think the public needs to know? You're not fooling anyone with these farcical open houses. No noise wall can effectively reduce the noise from 6 lanes of rail traffic in our residential neighbourhood. BURY THE LINE!	Noise modelling was completed based on the predicted minimum required barrier heights presented in Appendix D of the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report in order to reduce future noise levels (day, Leq,16h and night Leq,8h) to existing predicted railway noise levels. Barriers were modelled assuming a transparent barrier with an absorption coefficient of alpha=0.21. Regardless of the minimum barrier heights modelled and presented within the report, Metrolix has committed to raise barrier heights to a minimum height of 5 metres where modelled heights were less than 5 metres. While noise barriers are predicted to be the primary reason for the reduction of future railway noise levels, Ontario Line trains are expected to be significantly quieter than existing diesel GO trains, and future electric GO trains are also expected to be quieter.
61	Oct. 5th Townhall question	Re: ExpropriationAnonymous Oct 5, 2021 - 17:11		Has it been determined what properties in the East segment will require expropriation and have all affected property owners been informed?	Property requirements continue to be confirmed as project planning and design progresses. Impacted property owners are actively engaged and kept up to date with project requirements and timelines
62	Oct. 5th Townhall question	Anonymous's avatar WifiAnonymous Oct 4, 2021 - 14:37		Will all stations have Wifi?	Public Wi-Fi will be available at each Ontario Line station.
63	Oct. 5th Townhall question	Anonymous's avatar Rail BridgesAnonymous Oct 5, 2021 - 18:51		Does the bridge over Eastern Avenue not need replacement or alteration? Will the bridge over Queen Street be added to or replaced?	The existing Eastern Avenue rail bridge will be replaced and expanded to accommodate four Lakeshore East GO tracks and two future Ontario Line tracks. The existing Queen Street rail bridge will be replaced to support the realigned Lakeshore East GO rail tracks.

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour

We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
64	Oct. 5th Townhall question	Why are you planning to ruin south riverdale?Anonymous Sep 30, 2021 - 09:07		Its not an opinion, its a fact that the sound barriers used will only baffle sound close to the track and amplify it for those who are about 100 meters away. The sound barrier technology proposed has a long and solid history of not working as intended. Not just that, but this indvolves removing mature trees and replacing them with nonsense. Furthermore this is not what anyone in the east end wants. This is not smart development, this is cost cutting at the expense of one of the most up and coming neighbourhoods in Toronto. This asinine idea it can go above ground needs to stop.	Noise barriers are an industry standard method of reducing noise levels, especially from transportation noise, at distances both within and exceeding 100 meters. Barrier effectiveness is dependant on not just distance to a receptor, but barrier height, barrier extents, barrier construction (no gaps or holes), surface type (absorptive, reflective, a combination) and other nearby reflections, such as parallel barriers. The noise model accounts for receptors at different distances, and reflections are accounted for in the noise model as well from barriers to other directions. Barrier heights within the noise model were adjusted accordingly to account for these parameters. Metrolinx will provide compensation for tree removals in accordance with the Metrolinx Vegetation Guideline (2020), striving to provide compensation tree plantings as close to the areas where trees will be removed as possible.
65	Oct. 5th Townhall question	Who is running the 'consultations'? Name please.Anonymous Oct 3, 2021 - 18:21		The noise 'simulation' is completely biased in two ways. First, we only get to hear noise without the barrier that Metrolinx has already chosen and the noise without. There is no underground option, what the local Leslieville and Riverside communities have been promoting, and the city too. Second, the high frequency of GO and the OL will mean that we neighbours get the CUMULATIVE noise of several different trains at once, very often in the course of a day. Why not do a proper study of the CUMULATIVE impacts of all the trains?	The assessment documented in the Draft LSE JC N&V Operations Report accounts for the increased cumulative frequency of pass-bys of GO, VIA, freight, and Ontario line trains. When reading the report: Leq,16h and Leq,8h values are the equivalent sound level over 16 hours (day-time, 7AM-11PM) and 8 hours (night-time, 11PM -7AM) respectively. These predicted values account for all of the train volumes and fluctuations in noise over these periods. This metric is applicable to trains on GO tracks and Ontario Line vehicles, as per the MOEE/GO and MOEE/TTC protocols. For comparison, the Lpassby accounts for only 1 pass-by at a time, and is the equivalent sound level of one single train pass-by over the pass-by time interval given the length and speed of the train. This metric is applicable to the Ontario Line trains in order to meet MOEE/TTC protocol criteria.
66	Oct. 5th Townhall question	Indoor noise dataAnonymous Oct 3, 2021 - 23:10		Above ground OL is going to be extremely disruptive. There are hundreds of homes in close proximity to the rail corridor. We need to understand how your above ground OL will impact indoor noise levels, and whether our homes will continue to be livable are very serious concerns. Please provide indoor noise data (current and predicted).	The assessment criteria are based on exterior points of reception as there may be variations in individual building facade constructions and room acoustic conditions. However, the predicted changes in noise levels would be expected to be similar indoors. For example, if the residual noise impact is noted as -2 dB based on a plane of window receptor, a similar impact would be expected in the associated interior space. Overall noise levels are expected to be significantly lower indoors than outdoors.
67	Oct. 5th Townhall question	Anonymous's avatar Underpass Anonymous Oct 5, 2021 - 07:21		You are creating a very large area under the railway corridor that already, with the existing one, is a dark unpleasant space that receives no sunlight and suffers from moisture and water problems. Your design will not only increase these problems, but even makes walking along the underpass a very unpleasant experience. Your design shows no sensitivity to a neighborhood that is supposed to be a friendly walkable community. You are creating a "Gardiner expressway" within a heritage district under the pretense of building "better and cheaper" transit . You have not provided detailed costs for this project compared to other alternatives, which have been submitted and are supported by the community. Any reasonable explanation for this?	Residents will see obvious improvements to their neighbourhoods as aging railway bridges are replaced at Eastern Avenue, Queen Street, Dundas Street and Logan Avenue. The bridges, which currently accommodate both GO and VIA Rail services, are located within the shared rail corridor where Ontario Line tracks will also be located. We are replacing the bridges because they need to line up with the new tracks we are adding to support expanded GO services as well as the existing tracks that will be repositioned to make room for the Ontario Line. Ontario Line-only bridges will be built next to the new GO rail bridges. We are consulting with the city and building the bridges to their current standards for new bridges, with five metres between the bottom of the bridge and the roadway. By comparison, the existing Queen Street bridge has a clearance of only 3.9 metres. Replacing these bridges now means they will last for at least another 100 years and will avoid the need for frequent and disruptive repair work on aging infrastructure.

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
68	Oct. 5th Townhall question	Please extend the 30 day limit for submitting comments Anonymous Oct 5, 2021 - 18:40		You released the EWR for the East Segment on Sept 23, on the same day as the EWR for the East Harbour Station. The public has until October 24 to comment on both of these reports. It is unreasonable to expect members of the public to read, understand and make comments on two reports that are hundreds of pages long within the same 30 day period. This shows a lack of desire on the part of Metrolinx to conduct meaningful community consultation with the public. Will you extend the 30 day comment period for these reports? How about until November 15?	The Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report were prepared in accordance with Ontario Regulation 341/20: Ontario Line Project under the Environmental Assessment Act. This review period length is consistent with review period lengths of other Metrolinx transit projects. Both Early Works Reports were available for review for 31-days from September 23 to October 24, 2021. We have had two virtual open houses on September 23 and October 5 to provide summaries and answer questions. We have met with the LSE CAC to answer their questions about the Lakeshore East Joint Corridor Early Works Report. We are also working to respond to the 60-70 questions the LSE CAC provided as well as respond to questions from Save Jimmie Simpson community group and residents directly. Public participation is very much encouraged.
69	Oct. 5th Townhall question	Anonymous's avatar Why won't metrolinx answer questions honestly about the Ontario Anonymous Oct 3, 2021 - 17:57		Less PR and more straight answers. Treat people with integrity and honesty. We know the difference.	If you would like to get in touch with us, please email OntarioLine@Metrolinx.com or give us a call at 416-202-5100
70	Oct. 5th Townhall question	Predicted noise Anonymous Oct 3, 2021 - 23:07		Your noise data is all predicted. Even for 'current' noise levels, you predicted them. Why did you not measure current noise levels? How can we be assured that these are accurate estimates?	In accordance with the MOEE/GO and MOEE/TTC protocols, operational noise is assessed based on predictions. Both existing and future noise levels are predicted in order to provide an 'apples to apples' comparison, at many receptor locations. However, existing noise levels were measured in several locations within the Ontario Line study area and documented in the Ontario Line Final Environmental Conditions Report. In addition, a measured existing noise level will contain not just train noise, but roadway noise, which would increase the existing noise level, decrease the apparent change in noise from the project, and result in a less conservative assessment. Furthermore, predictions allow for the assessment of far more receptors than would be possible by setting up noise monitors. This is the standard procedure for transit project assessments in Ontario and similar approaches are used in other jurisdictions.
71	Oct. 5th Townhall question	Anonymous's avatar Health consequences from excessive noise from trains Anonymous Oct 4, 2021 - 10:23		Your report suggests the noise generated from the Ontario Line trains overnight to be around 70 dB. You provided no data at all about cumulative noise impacts from GO, VIA, freight and OL trains. OL train alone generating ~70dB is a significant concern, especially overnight! This will wake people up along the rail corridor. You can't build transit that prevents thousands of local residents from sleeping. Are you consulting with Toronto Public Health or Ministry of Health about your plans? The data clearly shows we need an underground alignment in our neighbourhood.	The Leq,16h and Leq,8h noise levels evaluated take into account the number of cumulative pass-bys from OL, GO, VIA, and Freight trains during the day-time and night-time periods, respectively, described as an equivalent continuous sound level (the constant sound pressure level that would result in the same total sound energy as the fluctuating sound level within the same period) per the MOEE/GO and MOEE/TTC protocol. It should be noted as well that overall noise levels are expected to be significantly lower indoors than outdoors. Per the Environmental Assessment Government Review Team Master Distribution List from the Ministry of the Environment, Conservation and Parks, the Ministry of Health requests that only EAs for sewage and water-works, and for waste facility projects which may have health implications be sent to the public health unit for the geographical area. Although the Ontario Line EA does not fall under this category, Metrolinx consults with the City of Toronto through the City's Transit Expansion Office.

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
72	Oct. 5th Townhall question	No 'Alternatives considered' in Early Works Report Anonymous Oct 5, 2021 - 18:06		The Early works report is suppose to identify what alternative were considered. The alternatives do not show that the viable underground option put forward by the city and Steve Monroe was never considered. How can you justify saying it is too costly, if it was never considered? The only alternatives are slight variations of the Metrolinx plan. This is NOT community engagement.	<p>The Draft Lakeshore East Joint Corridor Early Work Report documents the alternatives considered in Section 1.3.3 of the report, in accordance with Ontario Regulation 341/20. As noted in Section 1.3.3, Metrolinx previously considered placing the Ontario Line tracks in the Lakeshore East Joint Corridor segment on both sides of the Lakeshore East GO track instead of entirely on the north side of the GO tracks. Metrolinx also considered alternative methods of delivering the Project including a non-phased approach to Project implementation. However, it was determined that a phased approach to implementation is most beneficial.</p> <p>The Ontario Line businesses cases determined the best alignment to solve the transit problem, maximize benefits and reduce impacts. The environmental assessment process investigates the preferred alignment, presents studies to understand impacts and suggests proven solutions to reduce those impacts.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>
73	Oct. 5th Townhall question	Anonymous's avatar Platforms Anonymous Oct 4, 2021 - 22:47		I think that most of the Ontario line stations should have side platforms to avoid blind people to fall onto tracks.	The Ontario Line stations through the Lakeshore East Joint Corridor area, namely Gerrard, Leslieville/Riverside, and East Harbour Stations will have centre platforms with platform screen doors adjacent to the platform edges. These platform screen doors will remain shut at all times to protect the public from inadvertently falling off the platform or crossing the tracks, and will open only when the train is in the station and at a complete stop. This system will protect the public on both centre and side Ontario Line platforms.

Questions provided by LSE
CAC via email October 15

Theme	Comment	AECOM to Respond	Response
Graffiti	Metrolinx agreed to share the graffiti removal policy and guidelines with us.	No	Metrolinx's Graffiti Management document will be shared with LSE CAC.
Traffic Management	1. Are you working with the City of Toronto on this plan?	No - Hatch	Metrolinx is coordinating with the City on the transit and traffic management plan and on any concurrent projects, to minimize overlapping traffic impacts to the community.
Traffic Management	2. How will you deal with closures along Queen/Dundas/Gerrard where patios are now extended into the roadways without further impacting these business?	No - Hatch	Gerrard is located outside of the scope of the Lakeshore East Joint Corridor early works. Any closures on Queen, Dundas, and Logan that are required for bridge demolition and construction will be located in the immediate vicinity of the rail bridges, and will not impact any patios.

Traffic Management	3. You mentioned you would only be closing one lane on these roads - however, these roads are ONLY one lane of cars with additional bike lane now on Dundas. Does this mean you will be closing the entire street during bridge demolition/reconstruction? Does this include bike lanes?	No - Hatch	<p>As they are dependent on the construction methodology and sequencing, the potential traffic impacts are currently being analyzed and will be confirmed as project planning progresses. Closures will only be implemented if absolutely necessary, and their duration will be reduced to the extent feasible. The local community will be notified well in advance of any closures. Metrolinx will conduct the work while ensuring the safety of all community members.</p> <p>A transit and traffic management plan is being developed and will be implemented to mitigate traffic impacts associated with Lakeshore East Joint Corridor early works. The plan may contain measures such as temporary changes to intersection lane configurations, traffic signal timing optimization and modifications to existing signal timing plans. The effectiveness of the transit and traffic management plan will be monitored throughout the construction period and adjustments will be made based on actual field observations, as needed.</p>
Traffic Management	4. When will the traffic management plan be shared with the community and BIA's?	No - Hatch	Metrolinx anticipates to communicate the findings of the plan with the local community in Spring 2022.
Senior High Rises	1. Have you met with the residents of Fontbonne Home, Ray McLeary Towers and Francis Beavis Manor and discussed the Early Works Report and further mitigations to their buildings with them?	No - Comms	There has been ongoing engagement with each of these high rise buildings through online meetings, literature drops and community notice canvassing. For Ray McLeary Towers and Francis Beavis Manor, Metrolinx is open to a meeting to discuss the project should one be requested. We are exploring further mitigation and will engage them once the options are understood. Furthermore, we understand there are a large number of non-English speaking populations and we are looking at the best approach to translate information so it more effectively reaches them.

Senior High Rises	2. On what dates did these meeting occur? We note the 30 day period for feedback is ending in 2 weeks and this information should be discussed with residents and management before then. Many residents do not use computers to attend online Town halls.	No -Comms	In 2020, the project team had meetings with Fontbonne three times. In 2021, meetings were held with Fontbonne on February 12, August 9 and September 24.
Noise Walls and Retaining Walls	1. Metrolinx agreed to extend discussion of noise walls with the community and provide more information and choices for both retaining walls and noise wall materials and surface choices. Enhanced graphics with depictions of total heights from the ground for each section of noise & retaining walls need to shown and surveyed to the community (including businesses) before making final decisions.	No - Comms	Renderings and a roll plot with heights of the retaining walls were provided in the October 5 open house. See here: https://www.metrolinxengage.com/sites/default/files/oct_5_east_voh_final_0.pdf
Tree & Vegetation Clearing	: In the strongest terms, the community rejects any tree clearing along and inside the corridor before municipal approvals, the Ontario Line EA Impact Assessment Report and Arborist Reports are all completed and impacts from removals, such a current field studies for SARs, are completed and assessed for accurate and targeted mitigations. Metrolinx agreed to look into this and 'circle back' with the community on this priority issue.	No - EPA	Vegetation clearing in the rail corridor is scheduled for November 2021. The first phase will be GO Expansion removals as approved through the GO Rail Network Electrification TPAP EPR (2017). Any vegetation removals required for Lakeshore East Joint Corridor early works will not be removed until the Lakeshore Joint Corridor Early Works Report is finalized and approved by the Ministry of the Environment, Conservation and Parks. We do not expect this second phase of removals to begin until 2022. Field studies for Species at Risk and Species at Risk habitat have been completed and Metrolinx is committed to following the requirements under the Endangered Species Act to reduce impacts to Species at Risk, including compensation and monitoring. Prior to construction, the construction area will also be inspected to ensure that no wildlife or wildlife habitat has established following the previous surveys undertaken.

Hi Mark & Daryl: I have a few inquiries from residents of Lewis St. & McGee - I'm hoping you can get answers for me please? One Resident is listing their home and would like to give answers to potential buyers immediately, if possible.

I note that these questions were not included in the construction timeline you released on Sept. 23rd - information about this should be forthcoming asap.

1. When is the Spaces Self Storage building being demolished at Eastern Ave.?
2. When is the staging area being set up there?
- 2A. When is the Eastern Ave bridge being worked on? From when to when?
3. How long will the staging area remain there?
4. Will the staging area be enclosed in noise walls to shield residents who live around this area?
What are the planned mitigations?
5. If you don't know them currently, when do you think you will be able to give residents specific answers?
6. Is Metrolinx able to conduct walkthroughs like this at Lewis/Eastern with concerned residents to discuss plans?

If #6 is yes-- then I can help set up these walkthroughs immediately.

Thank you.

Hi Mark and Daryl:

A few issues to note and further questions to follow up on from our meeting yesterday. CAC is requesting that our long list of Questions be answer and return no later than **November 8th.** - Questions #2 & #3 on noise modelling we have asked back **as soon as possible.**

1. **GRAFFITI:** Metrolinx agreed to share the graffiti removal policy and guidelines with us.
2. **TRAFFIC MANAGEMENT:**

1. Are you working with the City of Toronto on this plan?
2. How will you deal with closures along Queen/Dundas/Gerrard where patios are now extended into the roadways without further impacting these business?
3. You mentioned you would only be closing one lane on these roads - however, these roads are ONLY one lane of cars with additional bike lane now on Dundas. Does this mean you will be closing the entire street during bridge demolition/reconstruction? Does this include bike lanes?
4. When will the traffic management plan be shared with the community and BIA's?

3. **SENIOR HIGH RISES:**

1. Have you met with the residents of Fontbonne Home, [REDACTED] and discussed the **Early Works Report** and further mitigations to their buildings with them?
2. On what dates did these meeting occur? We note the 30 day period for feedback is ending in 2 weeks and this information should be discussed with residents and management before then. Many residents do not use computers to attend online Town halls.

4. **NOISE WALLS AND RETAINING WALLS:**

1. Metrolinx agreed to extend discussion of noise walls with the community and provide more information and choices for both **retaining walls** and noise wall materials and surface choices. Enhanced graphics with depictions of total heights from the ground for each section of noise & retaining walls need to shown and surveyed to the community (including businesses) before making final decisions.

5. **TREE & VEGETATION CLEARING:** In the strongest terms, the community rejects any tree clearing along and inside the corridor before municipal approvals, the **Ontario Line EA Impact Assessment Report and Arborist Reports are all completed** and impacts from removals, such a current field studies for SARs, are completed and assessed for accurate and targeted mitigations. Metrolinx agreed to look into this and 'circle back' with the community on this priority issue.

Thank you everyone. Have a good weekend.

The follow Topics from the *Early Works Report* will be covered by CAC Members from our spreadsheet, '*LSECAC_EWR_JC_Questions & Issues*':

DATA - PROTOCOLS AND MODELLING

DATA - NOISE CONSTRUCTION

DATA - NOISE WALLS

DATA – VIBRATION

NATURAL ENVIRONMENT

RAIL SAFETY

HERITAGE PROPERTIES

SOCIO/LAND USE

AIR QUALITY

Other Items for Discussion:

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
NOISE DATA - MODELS					
1	MOEE/TTC Protocol	"criterion limit of 80 dBA for passing trains (applicable to the Ontario Line vehicles).	Appendix C:	MOEE/TTC protocol was written 30 years ago -and clearly states it should only be used to assess TTC vehicles. How can you claim that the TTC SUBWAY DBA standard at 80 DBA passby is applicable to above ground OL trains as a baseline?	
2	Noise modeling baselines	Baseline noise levels for train types over an hour.	Baseline Details:	<p>Note: We want to see this information in graphs before the EWR deadline. You are providing Lpassby data for one OL Train. We are requesting graphs to show the Lmax, Lpassby and Leq, for one hour for with and without noise barriers installed, at POW 08 -88 Wardell, for each of these scenarios:</p> <ol style="list-style-type: none"> 1. Two GO trains each way per hour, two diesel locomotives, 12 cars. This is equivalent to a half-hourly service. 2. Four GO trains each way per hour, two diesel locomotives, 12 cars. This is equivalent to a 15 minute service. 3. Six GO trains each way per hour, two diesel locomotives, 12 cars. This is equivalent to a 10 minute service. 4. Six GO trains each way per hour, electric locomotives, 12 cars. 5. 18 Ontario Line trains each way per hour. This is the projected early morning and late night service. 6. 24 Ontario Line trains each way per hour. This is the projected off-peak service. 7. 40 Ontario Line trains each way per hour. This is the projected peak service. 	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
3	Noise modelling baselines	Corridor without trains levels		Please provide noise data for ambient levels without trains from 8-9 am; 5- 6pm; 2am - 3am.	
4	Noise Data - High Rises	"noise levels to predicted existing railway noise levels at assessed worst case receptor locations facing the corridor between Eastern Avenue and Pape Avenue with the exception of five high-rise buildings, where noise impacts are expected to be in the "insignificant" to "noticeable" range and are below the MOEE/GO and MOEE/TTC Protocols criteria limits.	Appendix C: page 7	EWR states noise receptacles at mid-point of storey with the highest expected noise levels. Details of which storey is this for each of the 5 buildings should be included. Please explain how a range can be "negligible to noticeable" Can we see elevation noise contours around each of these high rise buildings?	
5	Noise Receptors	Table 2-1: Representative Sensitive Points of Reception	Appendix C: page 15	We are concerned about the constant noise of trains impacting programming in Jimmie Simpson park. For example, will baseball players be able to hear the Umpire? Why are there no POR's in JS Park at the baseball backstop and the in the playground wading pool or on Booth Avenue. Please add these areas in modelling.	
6	Future Train Volumes		Appendix C: LSE OnCorr Tracks, East Harbour to Danforth – Combined Table, p62.	How have you modelled noise levels if electrification of GO Diesel trains is delayed or doesn't happen?	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
7	Future Train Volumes	Your numbers do not add up in Table: LSE OnCorr Tracks, East Harbour to Danforth – Combined Table, p62.	Appendix C: LSE OnCorr Tracks, East Harbour to Danforth – Combined Table, p62.	<p>"Please update your Table to show missing numbers: As there should be the same number of trains in both directions if it includes both revenue and non revenue trains, especially for the diesel ones. What happens to the extra trains? What happened to the D2L12 trains?</p> <p>Lakeshore East Trains: D1L6 5 +0 +21 + 5 = 31 westbound 19 +3 +5 +0 = 27 eastbound gives 4 extra westbound D1L12 1 + 31 +5 + 0 = 37 westbound 37 +3 +2 +0 = 42 eastbound gives 4 extra eastbound E1L6 46 + 6 +1 + 0 = 53 westbound 1 + 0 + 47 +9 = 57 eastbound gives 4 extra eastbound E1L12 18 + 7 + 1 +0 = 26 westbound 1 + 0 + 19 + 4 = 24 eastbound give 2 extra westbound VIA 0+ 0 +16 + 1 = 17 westbound 18 + 0 +0 + 0 = 18 eastbound gives 1 extra east bound.</p> <p>Stouffville Trains: D1L6 6 + 0 +1 +0 = 7 westbound 1 + 0 + 6+0 = 7 eastbound this one is balanced E1L6 129 +29 +2 +2 = 162 westbound 4+0 + 128 + 32= 164 eastbound gives 2 extra eastbound E2L12 0 + 1 + 3 +2 = 6 westbound 5 + 0 + 0 + 0 = 5 eastbound gives 1 extra westbound"</p>	
8	Future Train Volumes	High Frequency Rail Service	https://policyoptions.irpp.org/magazines/septembe-2021/full-speed-ahead-for-high-frequency-rail-in-the-busy-canadian-corridor/	Have you modelled for the addition of a High Frequency Rail Service through the Joint Corridor? Please show these revised noise/vibration levels in the EWR.	
9	Noise Contour maps	* Note: Noise contours do not account for shielding from all buildings. Therefore, it can be expected that project sound levels will be lower than shown in the figure beyond receptors directly facing the corridor.	Appendix C: Page 78 & 79	Your noise contour maps do not depict the data as shown in Table 3-4 Project w Barriers levels. Please include your explanation of noise contour map receptor levels in the EWR that you have provided to our CAC on October 6, 2021.	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
10	Noise Data	"The exceptions to this are locations such as POR_12 and POR_22 receptors adjacent to the north side of the corridor (closest to Ontario Line tracks) where existing buildings located in proximity to these receptors are expected to be removed due to construction of the Ontario Line infrastructure on the north side of the corridor. This is expected to result in removal of current noise shielding for these receptors provided by these buildings, leading to higher noise levels"	page 23	Why does noise shielding matter at these sites if you are modelling predicted noise levels?	
	NOISE DATA - VIBRATION				
11	Vibration Studies	Vibration from the future Ontario Line and GO track operations is predicted to exceed the MOEE/GO or MOEE/TTC Protocol mitigation thresholds at locations POW01_V, POW04, POW09, POW14, POW15, POW18, POW23, POW24 (exceedances due to GO track operations), and POW_10V (exceedance due to Ontario Line track operations).	Appendix C: page 40	We note the 30 day feedback for issue resolution process will be over by the time this vibration plan is released. What is the timing of this further study and will the community have and cess to it?	
12	Vibration Data	"Vibration - a detailed vibration analysis will be conducted during the design phase to "refine mitigation requirements"	39 of report (not appendix)	You give a list of mitigations - are you committing to implement all of these?	
13	Vibration Data	"In the rare occurrence of additive vibration, such as during a simultaneous GO train and Ontario Line vehicle pass-by, sample calculations indicate that overall vibration levels would not be significantly higher than that of the dominant individual source. Therefore, the results within this report are based on the worst case single pass-bys of trains operating on GO or Ontario Line tracks"	Appendix C: page 82	Why would 'additive vibration' be a rare occurrence on a 6 lane railway? Please explain.	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
14	Vibration Mitigation Map	Vibration from the future Ontario Line and GO track operations is predicted to exceed the MOEE/GO or MOEE/TTC Protocol mitigation thresholds at locations POW01_V, POW04, POW09, POW14, POW15, POW18, POW23, POW24 (exceedances due to GO track operations), and POW_10V (exceedance due to Ontario Line track operations).		We would like to see this information outlined on a map, ideally a vibration level contour map, of further vibration mitigation areas and investigations.	
15	Vibration	As noted above, this Report documents the operational noise and vibration assessment of Ontario Line vehicles and GO trains within the Lakeshore East Joint Corridor. A number of the Lakeshore East Joint Corridor infrastructure components, including realigned GO tracks and the new fourth track as well as associated vibration mitigation investigated in this report, will be installed as part of the Lakeshore East Joint Corridor early works.	Appendix C: page 8	Are you installing ballast mats on the one existing track as you move it?	
16	Noise & Vibration Report	Noise and vibration Operations Report	Appendix C	We note that this Appendix C is not signed by Acoustics Manager (Alan Oldfield). Why?	
17	Vibration Mitigation - 15 Tiverton	Mitigation was required to be investigated for GO tracks at 8 of these 9 locations – all except POW10_V. In the case of POW10_V, where mitigation was required to be investigated for Ontario Line tracks, the vibration limit exceedance can be attributed to the Ontario Line track proximity to this receptor. The greater extent of mitigation required for GO tracks can be expected because heavy rail trains generate higher overall vibration levels due to the higher weight of the trains and higher assessed speeds.	Appendix C: page 36	Please explain why no further investigation of mitigation is required at POW10 (15 Tiverton) when clearly the house is too close to the rail? The corresponding Table 4-2 indicates OL mitigation is required? Please clarify.	
	NOISE DATA - CONSTRUCTION				
18	Construction Noise Mitigation			What is the combined current existing corridor noise levels plus construction noise levels. Please show how you are mitigating for these combined levels?	
19	Noise Barriers - Construction Timeline		Sept. 23rd Townhall Presentation	From your construction timeline, residents north of Queen will not see a noise wall installed until mid-2023. Please include how will you mitigate 1 year of construction from surrounding homes/ parks/ playgrounds during this time period without a noise wall?	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour

We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
20	Noise Barriers - Construction Timeline		Sept. 23rd Townhall Presentation	From your construction timeline you will be installing a noise wall north of Queen St. to Dundas on the west side in mid- 2024. How will you mitigate 2 years of construction from surrounding homes/ parks/ playgrounds during this time period?	
21	Construction Staging Areas: Ray McCleary Towers			Please clarify the plan and timeline for the construction staging for the area south of Ray McCleary Tower 444 Logan Avenue?	
22	Future Train Volumes	RE the GO Schedule included dated 2037	Appendix C:	Your GO numbers reflect trains running in the evening - this is not currently happening. Is this correct and when will this be happening? How have you factored this into your modelling?	
23	Oct. 5th Townhall question	Drainage of water/snow from corridor Anonymous Oct 1, 2021 - 15:48		Please explain how water and snow will drain off the elevated corridor, and will the drainage plans impact property owners and their land who back onto the corridor? There have been many flooding complaints where noise walls back onto properties in other areas of the city.	
24	Communication with Owners	"Vibration from the future Ontario Line and GO track operations is predicted to exceed the MOEE/GO or MOEE/TTC Protocol mitigation thresholds at locations POW01_V, POW04, POW09, POW14, POW15, POW18, POW23, POW24 (exceedances due to GO track operations), and POW_10V (exceedance due to Ontario Line track operations).		What level of communication have you conducted with owners of properties who are listed as needing additional n&v mitigation? Please clarify how homeowners and residents would find out more about the specific construction plans for around their homes?	
25	Noise Conditions	All future diesel locomotives will have an exhaust silencer installed which will reduce the base sound level by 3 dB.	page 70	You have factored a 3 dB reduction which is not discernible to the ear, but what year does this adjustment happen?	
26	N&V Report AppA3	As noted in Section 7, at this time, provincial noise or vibration permits or approvals are not anticipated to be required for the Lakeshore East Joint Corridor early works construction. This will be confirmed as project planning progresses.	page 13	Please clarify why this work would not require a permit?	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
27	Construction Staging Areas: Dundas Bridge	Minute 32 Richard's explanation during presentation at https://www.metrolinxengage.com/en/OLLiveEJune24		Your June 24, 2021 presentation included slides showing a "ramp" being constructed from Dundas to Paisley for equipment access. What is the timeline for this and will it be removed after the bridge is constructed? If so, how will this area be restored?	
28	Construction Mitigation	Additional measures	page 14	Are trains horns being limited when work is being conducted on the tracks?	
29	Construction Mitigation	Additional measures	page 14	Will back up beepers be limited during evening hours?	
30	Construction Mitigation	24-hour Hotline		Are you providing a 24 Hr construction hotline as construction work begins?	At the Oct. 5th Townhall it was confirmed by Malcolm MacKay they would be providing a 24 hour construction hotline.
31	Construction Mitigation	791 Queen St. Fontbonne Residents & Ray McCleary Tower & Francis Beavis Manor	page 14	We have 3 high-rise buildings of vulnerable senior populations - how can you not provide additional noise mitigation for these buildings, one next to the 'Leslieville Station', one between and overlooking 2 major bridges at Dundas & Logan, and one overlooking the portal at Pape/Gerrard?	
NOISE DATA - NOISE WALLS					
32	Additional Noise Barriers & Retaining walls	"... refinements may also include removal of barriers from the GO and Ontario Line bridges as well as refinements to the barrier height and extent at the future Ontario Line stations (Riverside/Leslieville and Gerrard).		Will there be a noise wall on the bridges? If not, how will noise on the bridges be mitigated, especially at the Logan and Dundas bridges that are very close to the Roy McCleary Tower.	
33	Noise Barriers	Noise barriers have been modelled as reflective with an absorption coefficient (alpha) of 0.21. Such barriers can be constructed using transparent materials such as acrylic panels. The locations, extents, heights, and additional details of modelled noise barriers are presented in Appendix D, and noise contour maps are provided in Appendix F.	Appendix C: page 28	You are only presenting one type of noise wall, as a choice, which it is not. What are the other noise wall material options and absorption coefficients?	
34	Noise Barriers Graphics	"barriers presented in this report range in height from 2.5 to 6.5 metres. Mention of 5 metre standard.	Appendix C: page 8 (and, on page 27 of Appendix C "up to a maximum considered height of 7 metres")	What will be visible above the noise wall ie. Does it cover the trains?	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
35	Additional Noise Barriers & Retaining walls	"To facilitate this and barrier detailed design development, refinements to the noise model and recommended barrier design presented in this report will be performed, and changes to barrier height, extent and surface types will be implemented where required. These refinements may also include removal of barriers from the GO and Ontario Line bridges as well as refinements to the barrier height and extent at the future Ontario Line stations (Riverside/Leslieville and Gerrard).	page 33	How will the community will know when critical sound mitigation plans are changing and what input the community will have into these changes?	
36	Retaining walls/Noise walls	Discuss preliminary detailed design of walls and maintenance - particularly graffiti removal.		As retaining walls/noise walls will be up to 41 ft in height throughout the Joint Corridor, please address graffiti removal in the EWR. What is the plan and who is responsible for it Metrolinx or the city?	
Natural Environment - East Harbour & Joint Corridor					
37	Natural Environment - East Harbour & Joint Corridor	Tree Removals	Oct. 5th Townhall	At the Townhall on Oct. 5th it was confirmed that tree clearing will be taking place in November 2021, and that it was previously approved for GO Expansion EA. We note that there has never been a publically circulated detailed design for this work and that the Joint Corridor ROW is now part of the OL's EW Assessment. Please provide a detailed design of the ROW tree & vegetation clearing plan for the community to comment on before the end of the 30 day feedback period.	
38	Natural Environment - East Harbour & Joint Corridor	Tree Removals: Clearing and grubbing of vegetation, tree removal and protection. -Protection of trees & sensitive environmental features.-Erection of temporary and permanent fences.	page 31	"What is the difference between trees being removed and vegetation grubbing? What is the timeline for each?"	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
39	Natural Environment - East Harbour & Joint Corridor	No new field studies. "Field investigations were not completed for the Lakeshore East Joint Corridor Study Area as lands within the Lakeshore East Joint Corridor Study Area were recently investigated in 2016 to support other Metrolinx projects."	page 10	The field studies were conducted 5 or 6 years ago. At the Townhall on Oct. 5, Carrie Schaffer said that new field studies would be completed after trees and vegetation are cleared. Please explain why any SAR would still be located in a corridor cleared of habitats? This plan needs to change from a current study and consultation with appropriate field experts.	
40	Natural Environment - East Harbour & Joint Corridor	Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016b) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections.	Page 67	Noting the 30 day feedback period will be over and none of the tree removal plans are included in the EWR. When will the Arborist Report be ready to be reviewed by TRCA and the community?	
41	Natural Environment - East Harbour & Joint Corridor	"Barn Swallows are unlikely to nest underneath the rail overpass bridges and/or pedestrian bridges over Eastern Avenue, Queen Street East, Dundas Street East, Logan Avenue, Pape Avenue and Jones Avenue; however, it is possible that birds protected under the Migratory Birds Convention Act such as American Robins may nest under these structures and therefore could be killed, harmed or harassed."	Page 65* Include local Report	From our Community Member's Bird Survey which took place over the spring and summer 2021, we can see that your reference studies are out of date and there are many more varieties of migrating birds. We would like you undertake a field study to confirm this survey and to update your bird species to create a historical record of species on the rail corridor.	
42	Natural Environment - East Harbour & Joint Corridor	Habitat Loss, Barn Swallows, Bats, Monarch, Eastern Wood-pewee -	page 17	Will Metrolinx commit to using some of the 'new' parkland and devote these spaces to creating new habitats for these species?	
	HERITAGE PROPERTIES				

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
43	Heritage Properties	"Lakeshore East Joint Corridor early works have the potential to incur vibration impacts on the buildings within the property (OLS-122). The following monitoring activities are required for vibration impacts: ☐ Monitor vibration during construction using seismographs, with notification by audible and/or visual alarms when limits are approached or exceeded; and ☐ Conduct regular condition surveys and reviews during construction to evaluate efficacy of protective measures. Implement additional mitigation as required		Who is responsible for monitoring vibration impacts on Heritage properties, Metrolinx or Contractors? Who determines if further mitigation is required?	
44	Heritage Properties	Staging Areas		Will you revise the final EWR to include indentifying the impacts of having Staging areas in proximity to Heritage Properties?	
45	Heritage Properties	"Mitigation measures documented in Appendix H of the Ontario Line Cultural Heritage Report have been refined based on the early works impact assessment. The following mitigation measures for vibration impacts are required: ☐ Documentation (Review and establish) of the structural condition of the affected building to determine if they are vulnerable to vibration impacts from early works ☐ Establish vibration limits based on structural conditions, founding soil conditions and type of construction vibration ☐ Implement vibration mitigating measures on the construction site and/or at the building	page 20	When will this process begin? Do Heritage homeowners have and access and input into this information?	
SOCIO/LAND USE					
46	Socio/Land Use	Metrolinx will be seeking feedback from the Riverside and Leslieville communities on the look and feel of the retaining and noise walls, as well as the landscaping strategies directly adjacent to the rail corridor.		Will there be any additional opportunities to consult the community about the look and feel of retaining walls?	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
47	Socio/Land Use	"Following completion of early works, impacted lands will be restored to current City of Toronto standards wherever feasible."		How will you determine what is "feasible"? What is the specific criteria used to determine this?	
48	Socio/Land Use	https://www.metrolinxengage.com/en/content/socio-economic-land-use-characteristics-lakeshore-east-joint-corridor		The photo on this page (and elsewhere) shows RiverDALE. We live in RiverSIDE.	
RAIL SAFETY					
49	Rail Safety	6 lanes of mixed use rail - heavy rail beside light passenger rail.		Why are rail safety plans not addressed in the EWR? We are asking for rail safety plans to be detailed and included before finalizing the reports.	
50	Rail Safety	6 lanes of mixed use rail - heavy rail beside light passenger rail.		Will a crash wall be installed on the corridor - a requirement on any other rail line running heavy and light rail together? Explain why or why not.	
AIR QUALITY					
51	Air Quality	Out of date air quality studies.	Appendix B3: Correspondence	Your data has been noted by MECP as out of date. Locations of your surveillance receptors are not in study area. We expect your data to be based on existing conditions within the study zone. How will you address this?	
52	Air Quality	"A plan to manage air quality will be developed to ensure consistent attention to mitigation of dust and particulates, including silica, from the construction site. The following mitigation measures should be considered in the plan to manage air quality:	page 48	Who develops this plan, Metrolix or Contractor? Who is responsible for monitoring and adherence of it?	
OCT 5, 2021, TOWNHALL QUESTIONS					

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
53	Oct. 5th Townhall question	Anonymous' s avatar Underground alignment Anonymous Oct 3, 2021 - 10:17		<p>The question of underground alignment will not go away - likely because it was not address properly. These 2 questions must be answered:</p> <p>1) What is the cost and cost difference between the current plan using the rail corridor and the underground "Munro" option (e.g. continue on Eastern to Carlaw to Gerrard to Pape station).</p> <p>2) What alternatives are there and what concessions can the local community provide to reduce the cost difference to allow the underground alignment to proceed (e.g. a) go under Eastern to Pape, eliminating the Carlaw "jog", and/or b) using cut-and-cover for the portion of the line from East Harbour Station to Pape Station and to Minton Place)</p>	
54	Oct. 5th Townhall question	Sound demonstration Anonymous Oct 3, 2021 - 14:42		<p>Your "noise demo" https://www.ontariolinesoundstudio.ca/listen/ is an interesting idea. To be closer to reality, please add these options so we can hear the sound of:</p> <ul style="list-style-type: none"> - an OL and GO train passing at the same time as they are likely to do given there will be 1500 trains a day - a diesel GO train given that it will be years before all GO service is electric - an OL train braking and starting up at Queen and Degras rather than just passing through the station since all OL trains will stop there - announcements/bells etc that will be audible on the street level of Queen and Degrassi from the open-air station above. We need to have a demo of the "peak/breakthrough noise" 	
55	Oct. 5th Townhall question	Anonymous' s avatar How is this consultation being used? Anonymous Oct 3, 2021 - 15:46		<p>It's not clear what the objective of this "consultation" is. Metrolinx is vigorously promoting an above ground design with slogans e.g. "Awkward...", billboards and glossy promotional booklets. It appears that the proposed design will have huge impacts on the host community. But you have not costed or evaluated the community's proposed underground option in spite of repeated requests. This process is meaningless if it does not evaluate other less impactful designs. Slogans and advertising in the middle of a consultation demonstrates how this process is disingenuous and simply a corporate communications exercise. Might that change?</p>	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
56	Oct. 5th Townhall question	Anonymous' s avatar Baseline noise standards not met. Anonymous Oct 1, 2021 - 14:12		Why is Metrolinx not meeting the standard noise & vibration limits of 55 dB during the day and 50 dB during the night as their baseline for the rail corridor? Your average 'Project w Barrier' Day noise levels are significantly over the 55 dB standard. Shouldn't you be doing everything you can to meet these existing standards?	
57	Oct. 5th Townhall question	Peak levels vs Average noise levels Anonymous Oct 1, 2021 - 15:02		Please explain the difference between average noise levels and peak noise levels. Where is the data for peak levels? How have you and counted for diesel trains with 1 or 2 locomotives and either 6 or 12 cars?	
58	Oct. 5th Townhall question	No alternative explored in this EAAnonymous Oct 4, 2021 - 00:04		You present only the disruptive above ground option in this report. Shouldn't you explore different options and consult the public about pros and cons of different routes? If there's one alignment that is being presented, what exactly is the point of this meeting? What are you consulting us on? Cost out the underground option! - Let's see how the underground option performs in terms of noise and vibration. - Let's see how many trees we can save. - Let's see how less disruptive the construction is. - Let's see if we can keep Riverside and Leslieville healthy and liveable.	
59	Oct. 5th Townhall question	Anonymous's avatar More noise mitigation for Seniors High Rise BuildingsAnonymous Oct 1, 2021 - 14:51		We have 3 high-rise buildings of vulnerable senior populations - how can you not provide additional noise mitigation for these buildings, one next to the 'Leslieville Station', one between and overlooking 2 major bridges at Dundas & Logan, and one overlooking the portal at Pape/Gerrard?	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
60	Oct. 5th Townhall question	Anonymous's avatar Disingenuous consultationAnonymous Oct 3, 2021 - 23:58		<p>After ignoring community wishes for months about wanting an underground route, now you're disingenuously 'consulting' about the colour of the noise wall.</p> <p>If you're serious about letting the public have a say, you need to provide better data as to how different types of noise walls perform in terms of noise mitigation.</p> <p>Your report provides predicted noise levels with barrier. Well, which barrier? Clear one, absorptive one? Don't you think the public needs to know?</p> <p>You're not fooling anyone with these farcical open houses. No noise wall can effectively reduce the noise from 6 lanes of rail traffic in our residential neighbourhood. BURY THE LINE!</p>	
61	Oct. 5th Townhall question	Re: ExpropriationAnonymous Oct 5, 2021 - 17:11		Has it been determined what properties in the East segment will require expropriation and have all affected property owners been informed?	
62	Oct. 5th Townhall question	Anonymous's avatar WifiAnonymous Oct 4, 2021 - 14:37		Will all stations have Wifi?	
63	Oct. 5th Townhall question	Anonymous's avatar Rail BridgesAnonymous Oct 5, 2021 - 18:51		Does the bridge over Eastern Avenue not need replacement or alteration? Will the bridge over Queen Street be added to or replaced?	
64	Oct. 5th Townhall question	WHy are you planning to ruin south riverdale?Anonymous Sep 30, 2021 - 09:07		Its not an opinion, its a fact that the sound barriers used will only baffle sound close to the track and amplify it for those who are about 100 meters away. The sound barrier technology proposed has a long and solid history of not working as intended. Not just that, but this involves removing mature trees and replacing them with nonsense. Furthermore this is not what anyone in the east end wants. This is not smart development, this is cost cutting at the expense of one of the most up and coming neighbourhoods in Toronto. This asinine idea it can go above ground needs to stop.	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolinx Responses
65	Oct. 5th Townhall question	Who is running the 'consultations'? Name please. Anonymous Oct 3, 2021 - 18:21		The noise 'simulation' is completely biased in two ways. First, we only get to hear noise without the barrier that Metrolinx has already chosen and the noise without. There is no underground option, what the local Leslieville and Riverside communities have been promoting, and the city too. Second, the high frequency of GO and the OL will mean that we neighbours get the CUMULATIVE noise of several different trains at once, very often in the course of a day. Why not do a proper study of the CUMULATIVE impacts of all the trains?	
66	Oct. 5th Townhall question	Indoor noise data Anonymous Oct 3, 2021 - 23:10		Above ground OL is going to be extremely disruptive. There are hundreds of homes in close proximity to the rail corridor. We need to understand how your above ground OL will impact indoor noise levels, and whether our homes will continue to be livable are very serious concerns. Please provide indoor noise data (current and predicted).	
67	Oct. 5th Townhall question	Anonymous's avatar Underpass Anonymous Oct 5, 2021 - 07:21		You are creating a very large area under the railway corridor that already, with the existing one, is a dark unpleasant space that receives no sunlight and suffers from moisture and water problems. Your design will not only increase these problems, but even makes walking along the underpass a very unpleasant experience. Your design shows no sensitivity to a neighborhood that is supposed to be a friendly walkable community. You are creating a "Gardiner expressway" within a heritage district under the pretense of building "better and cheaper" transit . You have not provided detailed costs for this project compared to other alternatives, which have been submitted and are supported by the community. Any reasonable explanation for this?	
68	Oct. 5th Townhall question	Please extend the 30 day limit for submitting comments Anonymous Oct 5, 2021 - 18:40		You released the EWR for the East Segment on Sept 23, on the same day as the EWR for the East Harbour Station. The public has until October 24 to comment on both of these reports. It is unreasonable to expect members of the public to read, understand and make comments on two reports that are hundreds of pages long within the same 30 day period. This shows a lack of desire on the part of Metrolinx to conduct meaningful community consultation with the public. Will you extend the 30 day comment period for these reports? How about until November 15?	

LSE CAC- Issues & Questions to be included in the Final EWR Joint Corridor/East Harbour
 We kindly request that wherever possible answers be given by Ontario Line Project Specific Area Management Teams.

Question #	Conditions:	Issues:	Reference	Questions	Metrolix Responses
69	Oct. 5th Townhall question	Anonymous's avatar Why won't metrolinx answer questions honestly about the Ontario Anonymous Oct 3, 2021 - 17:57		Less PR and more straight answers. Treat people with integrity and honesty. We know the difference.	
70	Oct. 5th Townhall question	Predicted noise Anonymous Oct 3, 2021 - 23:07		Your noise data is all predicted. Even for 'current' noise levels, you predicted them. Why did you not measure current noise levels? How can we be assured that these are accurate estimates?	
71	Oct. 5th Townhall question	Anonymous's avatar Health consequences from excessive noise from trains Anonymous Oct 4, 2021 - 10:23		Your report suggests the noise generated from the Ontario Line trains overnight to be around 70 dB. You provided no data at all about cumulative noise impacts from GO, VIA, freight and OL trains. OL train alone generating ~70dB is a significant concern, especially overnight! This will wake people up along the rail corridor. You can't build transit that prevents thousands of local residents from sleeping. Are you consulting with Toronto Public Health or Ministry of Health about your plans? The data clearly shows we need an underground alignment in our neighbourhood.	
72	Oct. 5th Townhall question	No 'Alternatives considered' in Early Works Report Anonymous Oct 5, 2021 - 18:06		The Early works report is suppose to identify what alternative were considered. The alternatives do not show that the viable underground option put forward by the city and Steve Monroe was never considered. How can you justify saying it is too costly, if it was never considered? The only alternatives are slight variations of the Metrolinx plan. This is NOT community engagement.	
73	Oct. 5th Townhall question	Anonymous's avatar Platforms Anonymous Oct 4, 2021 - 22:47		I think that most of the Ontario line stations should have side platforms to avoid blind people to fall onto tracks.	

From: Ontario Line

Subject: RE: Chat with Carrie or someone on the Noise Team?

Hi [REDACTED]

Please see below for the answers to your questions. I am also copying [REDACTED] as he had some similar questions and I think he would appreciate reading the responses to yours.

- **What does N/A mean?**
The MOEE/GO protocol for single unit dwellings with outdoor spaces assigns outdoor receptor locations as the point of assessment for the day-time period, and the building facade as the point of assessment for the night-time period. The N/A note within the result tables indicates that the receptor type is not applicable for the assessed time period (e.g., an outdoor receptor during the night-time for a house with a yard).
Please see the description of why N/A is used within the table above.
- **Why are there N/A for existing conditions? And for Project levels w or w/o barrier?**
Please see the description of why N/A is used within the table above.
- **Why would existing levels be higher when 3 tracks are being added w/o sound barriers? Single passby or cumulative?**
Noise levels are predicted to decrease at some outdoor receptor locations on ground level where the lower elevation at the receptor locations, relative to the tracks and retaining wall, results in a noise screening effect by the retaining wall, even before the addition of a barrier. This would be applicable to Leq,16h day and Leq,8h night time levels, as well as GO train pass-bys.
- **Future w Barrier levels show over 55 DBA Day & 50 DBA night - why?**
As per the MOEE/GO protocol, the noise level objective is the **higher** of existing day-time (Leq,16h) or night-time (Leq,8h) levels, or 55 dBA (day)/50 dBA (night). As existing levels were predicted to be higher than 55 dBA during the day and 50 dBA during the night time periods at all assessed receptors within the report, the existing predicted railway noise level was used as the objective noise level for the assessment. For additional reference, Leq,16h (day) and Leq,8h (night) noise levels at Wardell and Pape Avenue were also measured above 55 dBA and 50 dBA (respectively), as documented within the August 2020 environmental conditions report.
Why aren't the levels shown in "Future w Barrier" reflected in noise contour maps? Where is that data coming from?
Noise contours can only be generated for a consistent elevation throughout the project area, and were provided within the report at a height of 1.5 metres above ground for day-time periods, and 4.5 metres above ground for night time periods to depict noise contours applicable to the majority of receptors. For receptors such as third storey windows (assessed at a height of 7.5m) or above or high rise buildings, results in the report reflect assessed levels at the specific receptor height.
- **Where barrier levels showed no decrease or rise - and DBA over 55/50 levels - what are planned further mitigations?**
All receptors within the report are predicted to meet MOEE/GO and MOEE/TTC protocol criteria with the modelled barriers implemented, and as such do not require further mitigation per the applicable protocol. Further mitigation is being implemented at Metrolinx's discretion to provide seamless noise barriers with a minimum height of 5 metres between Eastern Avenue and Pape Avenue, which are expected to provide additional noise reduction at most locations beyond the reductions presented in the report.
- **Mitigated OL - is this a single passby or both directions? What does "mitigated" mean?**
Mitigated indicates that this is during the "with barriers" scenario. This column is the Lpassby level for a single Ontario Line train pass-by (passing by on the predicted louder of the 2 tracks at each receptor), as per the MOEE/TTC protocol.
- **How are Mitigated OL DBA's different from "Future w Barrier" DBA's?**
The mitigated OL Lpassby column is for single Ontario Line train pass-bys per the Lpassby limit within the MOEE/TTC protocol with modelled noise barriers. The "Future-With Barriers" column is the 16 hour day-time Leq and 8 hour night time Leq for combined Ontario Line train and GO train impacts (includes all predicted pass-bys), with those same modelled noise barriers. Where:

LPassby = The passby sound level, defined as the A-weighted equivalent sound level, Leq, over the passby time interval given by the total length and speed of the vehicle and
Leq = Constant sound pressure level which would result in the same total sound energy as would the measured time-varying sound pressure level over equivalent time duration.
The Leq16hr, for example, describes the equivalent continuous sound level over a 16-hour period.

Best,

Daryl

Hi Daryl;

Here are a few:

RE: TABLE 3-4: PREDICTED 'WITH BARRIER' NOISE IMPACTS

Questions:

- What does N/A mean?
- Why are there N/A for existing conditions? And for Project levels w or w/o barrier?
- Why would existing levels be higher when 3 tracks are being added w/o sound barriers? Single passby or cumulative?
- Future w Barrier levels show over 55 DBA Day & 50 DBA night - why?
- Why aren't the levels shown in "Future w Barrier" reflected in noise contour maps? Where is that data coming from?
- Where barrier levels showed no decrease or rise - and DBA over 55/50 levels - what are planned further mitigations?
- Mitigated OL - is this a single passby or both directions? What does "mitigated" mean?
- How are Mitigated OL DBA's different from "Future w Barrier" DBA's?

Thanks!

Hi Daryl: Is it possible to arrange a quick zoom chat with someone from Carrie's Team who can speak to the Operational Noise Report **data** and answer some questions about it to clarify this week? I would just need under an hour probably - maybe on my lunch break? I don't want to roll this out to the community until I have some clarification that I'm reading this right particularly "Table 3-4: Predicted "With Barrier" Noise Impacts"

Also, wanting to see the corresponding data tables that Noise Contour maps are based on - I can't seem to find that table in the report.

Thank you.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Hello Ontario Line Team: Our community is asking you to 'resolve' the main issue of the 30 day time limit on the release of 2 seperate Early Works Reports - one for East Harbour and one for Joint Corridor, which were released last Thursday, Sept 23 at 4pm.

You have combined these reports together into one 30 day release- thousands of pages of information and data into one timeline and expected the community to get through it all in that period.

We strongly feel this is against the intention of the Ontario Line Act and the Issue Resolution process which is to gather important feedback from the community about the coming project and address concerns. The Federal government has asked you to conduct meaningful consultations with our community and this is yet another example of how you are controlling and limiting the conversation with our community.

On behalf of our community, we are asking you to extend the 30 day deadline on the Joint Corridor Report, in order to give us time to go through and discuss the East Harbour Report. This will be the first of many issues you are being asked to resolve.

Sincerely,

[REDACTED]

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: RE: Early Works Report ?

Hi [REDACTED]

Yes, the Lakeshore East Joint Corridor Early Works Report will be released on the same day as the next open house – September 23rd. That said, I understand your concern.

One goal of our open houses is to draw attention to the release of environmental reports. For example, the June 24 east open house took place when the Lower Don Bridge and Don Yard Early Works Report got released.

As part of any environmental report, there is a one month public review period where members of the public and community groups can respond to the draft early works reports. This feedback is incorporated into the final early works reports.

The September 23rd open house will cover a lot more ground than just the release of the East Harbour and Lakeshore East Joint Corridor Early Works Reports. Your briefing tonight will cover most of these materials.

Hi Daryl: September 23rd release? Isn't that the date of the East Section Townhall online? You realize that no one will have read the EWR before being asked to comment and ask questions about it right? I don't know if you are aware of this, but one of the Federal Funding conditions of the Ontario Line was to conduct 'meaningful consultations' with the community and stakeholders.

If no one has seen the report, how is this in any way a meaningful dialogue with our community? Especially about an environmental report that is essentially ALL we will get to comment on before construction begins next year?

I would like to request that the date of the Townhall be moved to at least to the following week to allow for the community to review the EWR.

Sincerely,

[REDACTED]

Hi [REDACTED]

We have developed a construction schedule for the upcoming public consultation on September 23rd. It will be included in the LSE CAC briefing that is being organized.

Vegetation clearing for GO Expansion and Ontario Line will begin once the early works (environmental report) is released and finalized. The earliest this can begin is in the fall of this year after the report is finalized to the public. This is considered site preparation and does not fall into the early works contract that will begin mid 2022.

Happy to take a call on this as I think more conversation needs to happen,

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

Capturing ambient sound and video information in Jimmie Simpson Park

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- Work will take place on a single day either on August 31 or September 1
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

-  15.6 kilometres of transit service
-  Making it faster and easier for hundreds of thousands of people to get where they need to be

-  Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.
-  To stay updated, sign up for our e-newsletter at [Metrolinx.com/OntarioLine](https://www.metrolinx.com/OntarioLine)

Subject: RE: Big red machine

Good morning [REDACTED]

Thanks for your patience as I tracked this work down.

This is geotechnical work to understand underground conditions. No trees were impacted and the red work equipment is a drill rig related to this work. After the drilling concludes, there will be short duration site visits to complete sampling work and there will be no noise related to this work.

Please see here [for the notice](#) which was circulated to you late June.

[REDACTED] I am still following up on the Safety/Standards Council of Canada response. It is been circulated with all the teams working on the partnership to ensure accuracy. Once complete, I will share with you immediately.

Have a good day and thanks for reporting this to me,

Daryl Gonsalves

Subject: RE: Standards council of Canada

Hi [REDACTED],

Apologies for the delay in getting this to you. Many teams had to provide input.

I'm pleased to give you an update on some of the safety guidelines and approaches that we are taking for the GO Lakeshore and Ontario Line joint corridor.

Ensuring safety of the community, our employees and our contractors is of utmost importance to us. Metrolinx has worked together with the Standards Council of Canada (SCC) to create the *Independent Safety Assessor for Railway Systems Accreditation Program*. Following this program, SCC-accredited Independent Safety Assessors will review and provide recommendations of safety assurance during the design, build and testing & commissioning phases of the project, as well as continuing review of proposed changes to the railway once a project is in operation. Independent Safety Assessors who are accredited under the Program undergo annual assessments and witness audits by the SCC to ensure continued conformance with accreditation criteria. You can find more information about the program [here](#).

The risk assessments carried out by the contractor throughout the design, construction and operation phases of the project are based on [CSA EXP11, Canadian method for risk evaluation and assessment for railway systems \(CMREA\)](#) which Metrolinx worked with the Canadian Standards Association (CSA) to create. The CMREA sets out requirements for evaluating the significance of changes being made to a railway as well as detailed requirements for the corresponding risk management process and criteria for independent assessment by an independent safety assessor (ISA.) The Working Group for the development of the CMREA included representatives from Metrolinx, the private sector, and the Ontario Ministry of Transportation. Based on the European Union's Commission Implementing Regulations (EU) No. 402/2013 of April 30, 2013 on the common safety method for risk evaluation and assessment, CMREA introduces into Canada best practices as established and widely implemented in Europe for making any change to a railway system that is technical, operational, or organizational in nature.

The framework for SCC: accredited safety assessor reviews and evaluates safety risks in the operation of the Ontario Line provided by the contractor, including possible interactions and any proposed mitigations with adjacent railways, property and associated facilities.
Regarding set-back distances from the railway right-of way to adjacent properties: we can confirm this has been considered and reviewed. Metrolinx has carried out initial risk

assessments both for the railway system as a whole, and specifically related to the alignment of the railway through the Lakeshore East and Lakeshore West corridors. Continued evolution risk assessments are carried out by the design team throughout the design process, ensuring that if risks are discovered, mitigations are created and captured in the design and construction of the project.

The CMREA risk evaluation process will address a wide spectrum of potential risks and will include proximity of Ontario Line operations to property and other buildings, along with any mitigations proposed by the designer team, all of which the Independent Safety Assessor will review in evaluating the safety case for the Ontario Line.

On your question of noise and vibration, Metrolinx is working closely with the Ministry of the Environment on the standards which have been developed and will be incorporated into the project contract for the constructor to follow. More details will be shared in the upcoming Lakeshore East Joint Corridor Early Works Report which will be released to the public this fall.

Happy to answer any additional questions you have or organize a meeting to discuss further,

Daryl

Hi Daryl : I do know this, thanks.

1. I am asking you to confirm they were done.
A simple yes or no will suffice.

2. If it wasn't OL or Go who did the maintenance tree cutting, who was it?

3. From the ECR on tree removal preparations by Mx:

- Preparation of an arborist report;
- Preparation of a Tree Removal Strategy/Tree Preservation Plan in line with the City of Toronto's [Tree Protection Zone](#)
- Establishing Tree Protection Zone fencing in accordance with local by-law requirements;

On-site inspections to confirm the implementation of mitigations.'

Our community is requesting ALL these measures be undertaken by Mx and we will be asking Councillor Fletcher to help ensure they are completed before tree removals are undertaken.

Thanks.

[REDACTED]

Hi [REDACTED]

For any tree removals within Metrolinx rail corridors (including Lakeshore East), a qualified avian biologist must complete a nest search within 48 hours. This is completed in accordance of the regulations in the *Migratory Bird Convention Act, 1994*. Where migratory birds and their active nests are present, the Qualified Avian Biologist will develop a mitigation plan to address any potential impacts.

Similar to the Eastern to DVP vegetation clearing, Metrolinx strives to schedule this type of work during the daytime.

Thanks for your suggestion, I will take that back to the team.

Daryl

Hi Daryl: Thanks for the clarification.

Couple of points:

1. Metrolinx has not confirmed if nest searches were performed prior to 'regular' tree removals on our section of track.
2. We would like to request that trees that are in the city permit process and/or will not be cut down, would be marked in some way, or have protection around them, so the community is aware of what is staying and what is being cut down. Especially given contractors will be working in the darkness of the night with large bulldozers.

On Tue., Aug. 3, 2021, 12:30 p.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi [Redacted]

Both City and Metrolinx staff do use 'Winter 2022' for project milestones sometimes. I can appreciate this can be confusing. I have advocated internally that we stick to 'early 2022' to avoid any misunderstandings.

The vegetation clearing from the DVP to Eastern Avenue is associated with the [GO Expansion TPAP](#). The upcoming environmental report for Riverside and Leslieville (Lakeshore East Joint Corridor Early Works Report) will provide more details regarding the extent of vegetation removal in the rail corridor due to Ontario Line and GO Expansion work. This environmental report is expected this fall. There will be a separate arborist report which have more details about trees outside of the rail corridor. This report is also expected this fall.

The associated vegetation clearing in the area will only begin once the Lakeshore East Joint Corridor Early Works Report has been shared for public review and comment. This means there is a possibility removals start at the end of this year.

I have confirmed the overnight work in your neighbourhood was not related to the Ontario Line or GO Expansion. I was informed by the track maintenance team that after bad weather events, it is common to have trees blow over and create very real safety concerns. In fact, trimming vegetation that has reached the tracks is done on a bi-annual basis across all rail corridors. I do understand that many residents were woken up by the noise of this work and safety concerns were reported.

Hello Daryl,
We have looked into the timeline item you have raised. There seems to have been some confusion about the term "winter 2022" as used in the City report "[Update on Metrolinx Transit Expansion Projects](#)." This was interpreted by several people as meaning late (i.e. Nov/Dec) rather than early (Jan/Feb) 2022. We appreciate you bringing this to our attention and will take steps to share the correct information.
Could you please confirm that no further tree removal either inside the corridor or on city parkland will take place before the environmental impact assessment is complete in 2022?
In regards to the overnight vegetation clearing, a bulldozer can be driven through the ever-evolving story provided by Metrolinx. There is evidence to demonstrate this did not happen as the result of an 'emergency' situation as has been posited by your organization. We question why tree clearing is taking place during the day south of

Eastern Ave, but in a residential neighbourhood, Metrolinx decided to it overnight, with no warning.

Subject: RE: 2AM Track work on corridor

Good morning [REDACTED]

Residents have been asking me if the Ontario Line environmental assessment has been pushed to late 2022 and mentioned Save Jimmie Simpson told them this. I want to clarify there has been no change to the environmental assessment schedule. The timeline on our [website](#) and shown in the recent virtual open houses are still accurate.

- The Lakeshore East Joint Corridor Early Works is on track for **release in the fall of 2021**. Construction for this work will start in mid-2022, after the EA report has been released.
- The overall Ontario Line Environmental Impact Assessment is still on track for public release **early 2022**.

Happy to have a chat on the phone to clear this up and answer any questions,

Hi [REDACTED]

Thanks for sharing the information about the overnight work. I can confirm it is not related to the

Ontario Line or GO Expansion.

Last night, a safety issue was identified as a tree caused minor damage to a GO train passing within the Lakeshore East rail corridor. Due to the extreme weather we have had recently, a few trees had blown over and was obstructing one track. As soon as this was identified, emergency teams were dispatched overnight to immediately clear the specific trees obstructing the track and ensure the safety of passengers. Due to the nature of this emergency work, there was no opportunity to reasonably notify the community.

I would appreciate if you share this with the community,

On Mon., Aug. 30, 2021, 12:17 p.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Good morning [REDACTED]

I understand your advocacy on the underground option for the Ontario Line. At this time, I can confirm Metrolinx is advancing the above ground option. The forthcoming Lakeshore East Joint Corridor Early Works Report will provide more details through various study disciplines.

That said, our conversations with the LSE CAC are very important and we do want to continue our collaboration to keep your community informed and collect feedback on Ontario Line plans as we approach construction. As you know, we will be consulting residents in Riverside and Leslieville on the future retaining/noise walls.

For our upcoming conversations with the CAC, we are proposing the following topics: noise and vibration data, noise wall materials/effectiveness, construction sequencing and vegetation clearing. We can have our Environmental and vegetation removal experts attend so you get the answers you are seeking.

Please see below for our tentative timeline:

- **This week:** our consultant will reach out to LSE CAC members to schedule a briefing

on the upcoming retaining/noise wall public consultation.

- **Mid-September, date TBD:** release of Lakeshore East Joint Corridor Early Works Report
- **Week of September 13:** MX/CAC meeting to discuss noise and vibration data, noise wall materials/effectiveness, construction sequencing and vegetation clearing. We will also take this opportunity to discuss any questions you have about the Lakeshore East Joint Corridor Early Works Report.
- **September 23:** Public consultation for the Joint Corridor retaining/noise walls.

Let me know your thoughts on this proposed agenda and timing of meetings.

Daryl

Hi Daryl: From the list below it doesn't appear that anything we wanted to meet about is on it or available to discuss.

What is the purpose of meeting until the information we requested is available? This includes the costing of our underground plan away from the corridor.

Our community was promised a costing of our underground plan by Malcolm Mackay and Duncan Law at several meetings for the past few months, and you were directed to undertake it by the City. Now you are clearly withdrawing that commitment to our community after only costing routes which ran under the corridor, which for many reasons are not feasible.

This is not our plan which clearly solves all the issues your u/g plans ran into.

We do not accept your arguments or underground conclusions.

Our community does not accept your arguments or conclusions.

What else would suggest for an agenda?

Sincerely,

[REDACTED]
[REDACTED]

On Wed., Aug. 18, 2021, 11:55 a.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

Thanks for sharing topics for discussion.

Our Environmental team is currently identifying comparables for noise wall materials. We can go over this at our meeting.

[This letter](#) sent on June 8, 2021 concludes that we are not pursuing a fully underground or partial underground alignment.

We initially anticipated being able to share the noise modelling data before the Lakeshore East Joint Corridor Early Works Report was released. Due to delays with the study, we will be releasing the noise data within the Joint Corridor Early Works Report which is still on track for early September.

Raising the tracks does not affect the amount of rain that runs off. All runoff will be captured on-site and directed into the storage/infiltration system. For small events, such as a typical rainfall or meltwater event, we would expect that the vast majority of the water would be intercepted by the infiltration system, and very little, if any, the flow would be directed to the existing storm system. Thus, drainage will be meaningfully improved. We do not anticipate an increase in the overall groundwater elevations or the presence of exfiltration in the area. In addition, Metrolinx is currently investigating the connections to the existing system. If the existing infrastructure lacks capacity, there will have to be either restricted outlets (and thus additional storage on-site), or refurbishment of the existing system.

Looking forward to receiving dates for our upcoming meeting,

Daryl Gonsalves

Hi Daryl: We have several members away at the moment so we will get back to you for dates in August.

Re issues for discussion. We understand from Malcolm MacKay that Mx is costing out our underground plan south of Eastern Ave. We would like to meet and go over those dollars and understand the costs.

Also, you told us that the new noise modeling study for the Joint corridor would be released this summer, so we could through results as well.

We had also asked for a report on the composition of the noise wall materials and their sound absorbing properties, so we could look at that data.

Another issue we have yet to tackle is how the Joint Corridor will drain water/snow off the corridor with noise walls on either side. With the elevated corridor and heated tracks, we are interested in how you will drain water off properties backing on to the corridor and also along the parks.

We will get back to you with more details and some dates.

Hi [REDACTED],

It's been a while since our last meeting with the LSE CAC. Can you please provide some times in August for us to meet and what topics you would like to focus on? I understand you are working now so we are happy to organize a time past 5pm.

A reminder of some upcoming milestones:

- Lakeshore East Joint Corridor Early Works Report – fall 2021
- Next virtual open house for East Segment – September (date to be confirmed shortly)
- Public consultation on retaining/noise walls – timing to be confirmed shortly and will be shared with CAC

Thank you,

Daryl

Thanks. Just to clarify, they were ripping down branches violently, shaking the entire tree line, and chips and branches were flying everywhere. This work did not require a nest search unless the entire tree was being removed? Is this correct?

Hi [REDACTED]

I have reviewed the video and picture you attached.

To answer your question, nest searches are required to be completed if a tree needs to be removed. This applies to any removals of trees from the work between Eastern Avenue to the DVP or any emergency removals due to safety concerns.

Hi Daryl:

We appreciate you following up on this important matter for our community. Can I clarify that nest searches you are detailing are currently only for the tree clearing work south of Eastern Ave to the DVP - removals outlined in the Addendum for Go Expansion?

This 'regularly scheduled maintenance' of tree destruction that has taken place all week in the middle of the night for more than a kilometer of track - all with no notice or information - has this work also had nest searches completed? And if not, why? What is the difference when it is still migratory nesting season? And if this was regularly scheduled tree maintenance - why were we not informed about it??

I'd like to point out the emotional shock this caused our community to wake up at 1am on Sunday morning to see trees and branches flying around the corridor and parks. It was and is deeply upsetting. It was also very dangerous for anyone nearby.

I'm attaching a picture and brief video of a huge HOLE in the treeline, there are visibly less trees on the corridor now, especially behind the splash pad & playground in JS park which wasn't there before.

Please clarify the nest search timeline as well.

Regards,

[REDACTED]

Good morning [REDACTED]

I investigated further with the appropriate teams.

Our contracts with Avian Biologists do not include preparation of reports for the public. That said, avian surveys are being conducted every 48 hours And will continue until the removals are complete. The surveys are conducted to ensure compliance with the Migratory Bird Convention Act, 1994 (MBCA). Some more information:

- Avian surveys will take place throughout the breeding bird period identified by Environment Canada for migratory birds (early April – late August).
- A Qualified Avian Biologist is to complete the avian nest surveys prior to

commencement of works to identify and locate active nests of species covered by the MBCA, if works must be conducted during the breeding bird season.

- Where migratory birds and their active nests are present, the Qualified Avian Biologist will develop a mitigation plan to address any potential impacts.

Our Rail Corridor team has informed me the work you noticed is related to a regular maintenance to ensure sight lines for train traffic. This would include trimming back vegetation that has overgrown so train operations staff are not only safe but can also see signals, crossings and signs. The [Metrolinx Vegetation Guideline](#) guides this work. It is also important to note this work is attached to the bi-annual cleanup of any scrap materials on the tracks themselves. I have put in an internal request to be looped into these events so we can notify the community in the future.

Hi Daryl & Jackie: We would like to see the report from the Biologist and understand more of the timing of these inspections before tree removals proceed please.

Again, last night the tree clearing machine was on our corridor around 11pm. Why are we getting no notice of this work? And why hasn't there been nest searches completed beforehand? This is some kind of regular maintenance work and why are nests not being protected? Why is this work different from protections given in the EA's? There are many migratory birds along the corridor.

Sincerely

[REDACTED]

Subject: RE: Ontario Line Roll Plot

I think it's fair to say it is new green space for the community. In my recent conversations with community members, they are surprised to learn this based on their understanding of the project. That said, there is still more to do. We are going to be holding consultations on what the retaining/noise walls will look like and how we can animate these areas so it provides value for the community.

Outside the joint corridor (Eastern to the Gerrard area), vegetation clearing has begun due to approvals and awareness from the associated TPAP reports. With Ontario Line, the LSE joint corridor tree survey and impact analysis is being completed right now and will be included in the forthcoming environmental report this fall. For the joint corridor specifically, no vegetation removals will begin until environmental report is released.

Hi Daryl: Thanks for this - finally. I'd like to note after an initial glance that the fence line you are currently marking with stakes along the JS park, is not what appears to be the retaining wall line in blue in this map - it is much, much wider - as we knew all along - you will be using the entire ROW and then some, and not staying inside the fence line along JS park.

Hi 

Due to your request, the team has added property lines to the rollplot (see attached).

I checked in with our property team again on that specific retaining wall in Jimmie Simpson Park. They are still figuring it out with City staff and do not have an answer yet. I will update you when I hear something.

For the trees, if they fall within the existing fence, they are most likely Metrolinx trees. The forthcoming environmental report this fall will provide more details regarding the extent of tree removals.

Thanks Daryl,

So if the wall is in question, the trees are certainly in parks property yes? When will you know by?

And when would a retaining wall detail be available? Happy to get a drawing prior to a video being made.

Hi [REDACTED]

I inquired internally on your question of ownership of that specific retaining wall. Right now, we are investigating who is responsible for it and I will send you a note when I hear back. There was talk that it might be leftover from the old Grand Trunk Railway.

As part of the upcoming noise/retaining wall consultation, we are working with our construction team to develop a video detailing the construction sequencing for the T-wall retaining system. This will help the community understand the 'look and feel' of this work.

Best,

Daryl

Thanks Daryl.

Is the wall in Jimmie Simpson (cited below) in metrolinx property ownership? And is there a construction detail of the T-Wall retaining system?

Morning [REDACTED]

I hear you. Invasive trees still provide oxygen and shade despite their impacts to biodiversity and local ecosystems. In the vegetation guideline I linked previously, we have a section on invasive species (page 39).

I know the wall you are talking about. Unfortunately, I cannot provide an answer at this moment until the tree impact analysis is complete and shared with the community in the forthcoming environmental report this fall. We specifically used a T-wall construction method for the retaining wall because it minimizes impacts to trees. The report will provide details on trees that will be protected and those that will be removed/pruned.

Best,

Daryl

Thanks Daryl,

1. For the record, "invasive species", from a health standpoint still provide oxygen and much needed shade and (as I am sure you would agree) are far better than no trees when tackling climate change. The birds certainly do not discriminate.

2. More specifically, there is a very old retaining wall along the west boundary of JS Park. I presume this is the property line as you mention below. When the tire factory was converted to a park, trees were planted on the east side of the wall. I believe they are about 50 years old, providing shade, co2 sequestration, noise and visual screening. They run between JS rec centre and Paisley Ave. Will those trees be removed? Have they been identified as "to remain" in any reports?

Hi [REDACTED]

It is an interesting question to which I do not have full understanding of the history behind it.

The property line is defined by the existing fence/berm/retaining wall. It is not perfect as these items may have shifted around the many years they existed. For areas where we are exceeding our property lines, conversations are underway with the City and individual property owners.

For the trees, I am not aware of who planted them but I do know Metrolinx is responsible for any vegetation within the rail corridor/property boundary and we have our own [vegetation guideline](#) we follow. I also believe many of the trees in the existing corridor are invasive and the tree survey in the forthcoming environmental report will provide more details.

If you did not get a chance to attend our open house, we [provided more details](#) about how future retaining wall locations will unlock more green space for the community. There is a table on Slide 11 which provides the approx. numbers for your review.

Best,

Daryl

Hi Daryl,

Mx says it will do the work (mostly) inside the property lines. I am looking at other Mx maps and wondering how the Mx property came to include parkland and many mature trees planted 50-60 years ago as well as things such as the corner of a house at Paisley and Booth.

Did the City plant trees by mistake (Jimmie Simpson, Mcleary Park and Bruce Mackey) in the rail right of way? Was the house built over the R.O.W. 100 years ago? Or is Mx taking that land from parks? I get that houses will be expropriated just don't understand the property line discrepancies.

Thanks, [REDACTED]

Hi [REDACTED]

I know at the Save Jimmie meeting on May 7, you requested a corridor width measurement and more detailed drawings.

As you may know, we provided detailed measurements for the cross section to Save Jimmie Simpson (I hope you received it). In addition, due to progress with design and property conversations, we have made the roll plot available to the public [here](#).

Hope this helps,

Daryl Gonsalves

Subject: RE: Draft Lower Don Bridge and Don Yard Early Works Report

Hi [REDACTED]

Thanks for reaching out and happy to talk about this.

In accordance with Ontario Regulation 341/20, feedback and comments **are** accepted during the public review period of an Ontario Line Draft Early Works Report or Draft Environmental Impact Assessment Report to the Project email address (ontarioline@metrolinx.com) or via webpage forms available on the Project website during the public review period for a Draft Report.

This final report which was released includes a description of the concerns raised by Indigenous Nations and interested persons and what Metrolinx did in respect of the concerns raised. For the Lower Don Bridge and Don Yard Early Works, the public consultation period was from June 22, 2021 to July 22, 2021.

That being said, is there something I can specifically help with? If your issue is something that spans the 'East Segment', you can save it for the East Harbour Early Works Report or the Lakeshore East Joint Corridor Early Works Report coming out shortly. You also have an opportunity during the Environmental Impact Assessment Report as well.

Happy to chat more about this,

On Wed., Aug. 25, 2021, 3:24 p.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi [REDACTED],

Today Metrolinx took another step in the environmental assessment process for the Ontario Line with the release of the final [Early Works Report for Lower Don Bridge and Don Yard](#). The final report incorporates the feedback received during the consultation period from June 22, 2021 to July 22, 2021.

To recap, the report provides details on the planned early works where the Ontario Line will run alongside GO train operations, the anticipated impacts from construction and the steps Metrolinx and its contractors can take to mitigate these effects. The scope of work includes:

- building a new bridge north of the existing rail bridge over the Lower Don River that will carry Ontario Line tracks;
- shifting GO tracks in the Don Yard and nearby rail corridor to accommodate Ontario Line infrastructure;
- modifying the existing rail bridge to accommodate GO track shifts and Ontario Line infrastructure; and,
- relocating and protecting utilities and signal infrastructure in the area.

As we move through 2021 and 2022, Metrolinx will release additional Early Works Reports and an Environmental Impact Assessment Report. These reports will be released in draft for public consultation. We look forward to sharing them and receiving your feedback.

Our team is available to discuss plans for early works at Lower Don Bridge and Don Yard or anything related to the Ontario Line project. Please reach out to us at any time.

Thank you.

Hi [REDACTED]

Reaching out to let you know the Draft Lower Don Bridge and Don Yard Early Works Report is now live on Metrolinx Engage and can be accessed [here](#).

The Lower Don Bridge and Don Yard early works will include:

- Construction of a new bridge north of the existing Lakeshore East rail corridor bridge over the Lower Don River that will carry the Ontario Line tracks;
- Shift of the Union Station rail corridor GO tracks to accommodate Ontario Line infrastructure within the Union Station rail corridor and Don Yard;
- Modifications to the existing Lakeshore East rail corridor bridge to accommodate future Lakeshore East GO track shifts to accommodate Ontario Line infrastructure and
- Utility and signal infrastructure relocation or protection.

The public feedback period is open until **July 22, 2021**. We will also raise awareness about this report at our upcoming East virtual open house this Thursday.

Please add these questions to [REDACTED]

The graphic shows the existing GO tracks as being lower than they will be in future. Does that mean that all of the tracks are going to be raised? If so, by how much? Will this be done at the same time as moving one of the GO tracks?

What is the space/width between the middle of the 4th GO train on the east side and the noise wall? Is that 4 metres? It looks like it, but please confirm.

Looking forward to continuing our conversation. Have a nice weekend.

[REDACTED] wrote:

Hi Daryl: Thank you for the measurements - but we are still confused by the JSC building to the right and it being north of the station. Please see this red property line indicated below - Where about is this cross section that shows parkland to the west? Because there will also be a retaining wall and noise wall - so please explain this amount of space on your cross section. Can you please give us lat and long on a map? Is this after Wardell avenue, if so there is no JSC to the east.

Also, can you check that the electric poles are on the inside of the 2 OL tracks, we do not think this is correct, nor the amount of space given to the disembark/embark from each train - it is much too narrow.

Thank you!

We can discuss next week.

Hi Jackie, Franca and Daryl: Thank you for the informative discussion. It was great to meet you Jackie and welcome.

We have agreed there is much more to discuss, so we'll be sending an invite for next Friday 18th, around the same time - which we will confirm shortly.

We will also be sending an updated list of our follow up questions for the project teams to answer, next week.

Daryl, if you'd like to share the map you have with measurements with us now, we can agree to discuss it together next Friday, along with information about Transit Land Designations and the permitting process?

Thank you, and have a nice weekend.

Questions for MX-CAC mtg 2021-06-18		
Topic	LSE CAC Questions	Metrolinx Answers
OL Detailed Cross Section north of Queen Street at JSRC provided June 11, 2021	The June 11, 2021 cross section shows the existing GO tracks as being lower than they will be in future. Does that mean that all of the tracks are going to be raised? If so, by how much? Will this be done at the same time as moving one of the GO tracks?	Yes, they will be raised between 0.9 - 1.6 metres. These measurements depends on several factors, including City requirements, available space, constructibility requirements, etc. All the GO tracks will need to be moved. Moving GO tracks laterally and vertically will be carried out in different stages of construction. That said, the early works construction schedule is still in development.
	What is the space/width between the middle of the 4th GO train on the east side and the noise wall? Is that 4 metres? It looks like it, but please confirm.	Yes. At this stage of design, the measurement from the centreline of the 4th train to the retaining/noise wall is approx. 4 metres. All measurements are subject to change and will be identified by the successful bidder.
	Where about is this cross section that shows parkland to the west? Because there will also be a retaining wall and noise wall - so please explain this amount of space on your cross section. Can you please give us lat and long on a map? Is this after Wardell avenue, if so there is no JSC to the east.	The cross section we shared was taken north of the future station at Queen Street East, in between Bruce Mackey Park and Jimmie Simpson Recreation Centre. See the orange marker in the attachment to this email:
Land Designation Notices	What is the explanation for the large transit corridor land designation outside the LSE rail corridor property lines?	The size of the transit corridor lands vary along the Ontario Line corridor, and are not limited to 30 metres from the existing rail corridor where the Ontario Line is planned for. The transit corridor lands were first created by starting with current transit plans. From that, experts from Metrolinx and the Ministry of Transportation used many technical considerations to expand that area, in consultation with the City of Toronto. Technical considerations include activities to plan and build the project, including noise and vibration studies, traffic access planning, underground utilities and utility relocations, to name a few. Once they were confident in that area, a 30 metre buffer was added to define the transit corridor lands you see in blue on the public website we shared with you.
	Do you anticipate further expansions? Where? When?	If you are referring to the transit corridor lands, then I can say there are no plans to change the area at this time. Of course, we are still in the middle of design so as requirements change, the transit land corridor could change as well.
	How long will the permit be required on our property titles? Decades? Post completion of project? What is the process for removing the notice on property titles?	The language going on property titles is for information purposes only and will be removed once the Ontario Line is complete . This is similar to properties in housing subdivisions or near airports.

	What is the permit process for property owners?	
	Where do they apply? Will the city administer the permits?	<p>You will need a permit if you are building, altering or placing a building or structure or utility infrastructure that requires dewatering, grading or excavation and other work as may be prescribed by the Regulation under section 84 of the Act.</p> <p>Other examples include pools, deck, new sheds, or big exterior reno projects. Projects such as these are sent to the above noted address, and MX will administer the permit. A good rule of thumb is that for all things that you might build that would otherwise require a permit from the city, those are the same types of works you come to us for now.</p> <p>For your context, Metrolinx used to review those applications anyways (via the City, as an external commenting agency) but now we are requesting direct access to us for a separate permit. It allows us to be more transparent and have a two way conversation about our work.</p>
	What are the fees involved in permit applications?	There is no fee to acquire the Metrolinx permit.
	How long does it take to get a permit?	<p>Each situation is unique. There are circumstances where work may not require a permit such as renovations to the interior of your home or business or finishing your basement (ie. bathroom renovations, window replacements) will not require a permit from Metrolinx.</p> <p>The length of time to receive a permit will depend on the complexity of the project being considered and it is the goal of the permitting team to ensure this process is as quick as possible. For more complex work, it will take on average 45 days. For less complex work, we expect a fast turn around of 30 days or less.</p>
	What is the permit enforcement process? Will there be inspections?	<p>Failure to comply with the above requirements may endanger public safety, impact Metrolinx rail operations and cause delays for active construction.</p> <p>Metrolinx has enforcement authority under the Act, including the ability to issue non-compliance notices, and stop work orders depending on the severity of the infraction.</p>

	Can property holders request specific details of how their property will impact the transit corridor? For example, property owners who are 100's of metres away from the corridor want to know how their property expansion would impact the OL?	See answer above about how the Transit Corridor Lands were determined. There are a lot of technical considerations and the overall goal is to ensure Metrolinx coordinates transit plans with specific renovations that property owners want to make. In most cases, it will not necessarily mean an impact and in the future if a requirement from Metrolinx was identified, we strive to notify the property owner as soon as possible to start a discussion.
Bridge changes	Status update on what will happen to each of these five bridges: replacements? Widening?	The bridges in the area are very old and require rehabilitation. With Ontario Line plans, we not only plan to refurbish all the existing bridges but also want to ensure they can accommodate the new infrastructure required by Ontario Line and GO Expansion. The project team confirmed we do not have design or estimates to share as we are determining the best and most efficient way to refurbish the bridges which can include potential replacement if that is identified as the best way forward.

Subject: RE: Question Re Issues Resolution Process on the Ontario Line

Hi [REDACTED]

Following up your previous questions regarding the issues resolution process.

Where and how to file a complaint?

In accordance with Ontario Regulation 341/20, concerns can be submitted during the public review period of an Ontario Line Draft Early Works Report or Draft Environmental Impact Assessment Report to the Project email address (ontarioline@metrolinx.com) or via webpage forms available on the Project website during the public review period for a Draft Report.

What is the process for resolution of the complaint?

Concerns submitted during the review period are reviewed by the Project team, followed by the development of responses to concerns that are then provided to the party who submitted the concern and included in the Project consultation record.

For example, as part of the Exhibition Station Early Works Report process, an individual requested for consideration of a bridge/tunnel between Atlantic Avenue and Exhibition Place to support population growth. In response, Metrolinx confirmed that the station modifications and improvements planned at Exhibition Station will improve pedestrian connectivity across the rail corridor and at Exhibition Station. Additional information on the issues resolution process undertaken for the Exhibition Station Early Works Report [can be found in Section 8.7 of the Final Exhibition Station Early Works Report](#).

Following the issues resolution process, a Draft Early Works Report or the Draft Environmental Impact Assessment report will be updated to include a description of the issues resolution process employed by Metrolinx in respect of any concerns raised by Indigenous Nations and interested persons, in accordance with Ontario Regulation 341/20. The Final Reports will also include a description of the concerns raised by Indigenous communities and interested persons; what, if anything, Metrolinx did or will do in respect of the concerns raised; and a description of any impacts to the timeline for implementation of the early works or Ontario Line Project as a result of how Metrolinx has addressed concerns.

Hope this helps,

Hi Josh and Daryl:

We are wondering if we can have more information about Metrolinx's **Issue Resolution Process** please?

As outlined in the Ontario Line Act:

(22.7) The proponent shall establish an issues resolution process to attempt to resolve,

(a) any concerns raised by Indigenous communities or interested persons in a way that does not cause unreasonable delay to the implementation of the transit project; and

(b) any adverse impacts to the existing aboriginal or treaty rights of the aboriginal peoples of Canada, as recognized and affirmed in section 35 of the *Constitution Act, 1982*, related to the

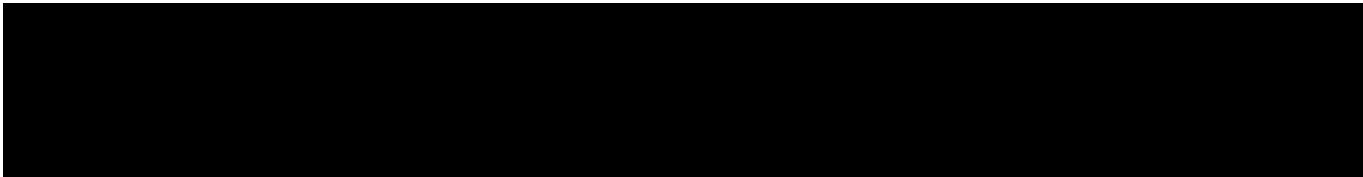

change. O. Reg. 342/20, s. 12 (8).

1. Where to file a complaint?
2. How to file a complaint?
3. What is the process for resolution of the complaint?

Thank you!

Subject: RE: Thorncliffe Park MSF & Timeline Questions

Hi [REDACTED]

Now that the location of the Ontario Line Maintenance and Storage Facility has been identified, environmental impact studies are underway and will be used to inform the draft Environmental Impact Assessment Report which we anticipate releasing for public review in early 2022. This will build on information collected in the Environmental Conditions Report about existing conditions in the area, which is within the Ontario Line North segment of the study area assessed in the [final Environmental Impact Assessment Report](#). Construction of the MSF is included in the Rolling Stock, Operations and Maintenance contract which we expect to finalize in late 2022 with construction to begin in 2023. All of these dates are included in the most recent Ontario Line project timeline which is posted on our website.

Hope this helps,

Daryl

Hi Josh: We are wondering if you can answer some questions about the newly selected MSF in Thorncliffe Park?

1. Will there be an Environmental Condition Assessment done on the newly selected MSF site as it was not specifically included in the ECR, other than as a large red zone area of study?
2. Will there be an Impact Report conducted on the site specifically?
3. When will either of these reports be released to the public for comments and review?

4. What is the projected timeline for construction to begin on the MSF? Is this before or after the EIA is released and finalized?
5. Will a new OL timeline be updated to reflect the MSF project dates?

Many thanks!

Hi Daryl: Thank you for finally returning our CAC questions from our March 25th meeting. We would like to set up a zoom call to discuss them with you, and discuss setting up monthly Metrolinx meetings going forward.

Perhaps this Friday morning around 10 or 11am for an hour?

Would that work for you?

Please let us know.

Additionally, we would like to review our '*LSE CAC Terms of Reference Agreement*' with you, so you understand who we represent in our community, and the agreed expectation of Metrolinx outlined in the section, 'Roles and Responsibilities of Metrolinx.'

I am attaching it here for your reference and our discussion.

Sincerely,

Apologies it took some time to get back to you about your questions after our meeting in March. Going forward, would you be interested in a biweekly touch base with myself so we can be better connected? If so, please let me know and I can set it up for us.

I followed up with the Ontario Line team for some further information to address the questions the LSE CAC shared following our meeting in March. Great that you could join our recent meeting with the Save Jimmie Simpson group. Some of the information below reiterates elements of that discussion but there is still design work and studies underway and we will in a better position to provide greater detail as we move closer to the release of the early works report for the joint corridor. As previously noted, we are taking extra time to refine our plans and minimize impacts on the community to the greatest extent possible.

You included a request for updates on our response to a number Council motions. We are continuing to work with the city's Transit Expansion Office to provide information to address issues raised at Council. More details regarding construction plans, environmental studies and contract language to protect communities will be shared with the community for feedback once they have been sufficiently advanced and validated, but this information is not yet available given we are more than a year away from starting construction in your community.

At the request of the community, we have already looked at various tunneled approaches, including the most feasible tunneled approach that preserves the most customer benefits. We have found building any underground tunnel east of the Don River would be extremely disruptive to the nearby communities and erase much of the important customer benefits along the way. Constraints in the area include longer and more disruptive construction, additional property requirements, impacts to utilities, large sewer mains and active flood protection areas. Additionally, in order for trains to go underground through here, they would have to exceed the maximum grade possible. Ultimately, we would likely have to permanently close roads and lose access to existing transit that so many in the community rely on.

Addressing your questions about the Eglinton Crosstown and BIA councils for the Ontario Line, it is important to first note how both projects are very different. The Ontario Line will have less road disruptions compared to Crosstown because construction of the Ontario Line will not be built along only one major road in the city. Instead, construction of the Ontario Line will be spread throughout the city from Exhibition/Ontario Place to the Ontario Science Centre at different times. In addition, road and traffic disruptions will be avoided or reduced largely due to the fact that Ontario Line stations are not being built one kilometre apart in a straight line across a major Toronto road, the way the Crosstown was designed and built. We are in regular contact with the Riverside and Leslieville BIAs and we will establish more formal community tables that includes local businesses as we advance the Ontario Line to a point where more communication is needed.

We are still confirming details about the latest refinements that put the Ontario Line tracks side-by-side within the corridor instead of straddling either side of it. This change helps us slim down permanent station infrastructure, reduce impacts to parks and create a better customer experience. The Environmental Conditions Report always anticipated our plans to be refined and created a baseline that is flexible enough to accommodate slight design changes. The forthcoming Lakeshore East Joint Corridor Early Works Report this fall and Environmental Impact Assessment Report in early 2022 will provide the answers you are looking for and the methodology used for the studies. I ask for your patience as we take the time to complete the studies and ensure our results are accurate. To help visualize how it is possible to stay mostly within the existing rail corridor, I have attached a cross section with existing GO tracks. I am working to get the measurements you asked for and will provide them soon.

On the tree canopy and air quality in Riverside and Leslieville, I understand you have many questions along with community members such as Rebecca Wood. For trees within the existing rail corridor, Metrolinx will follow our [Vegetation Guideline 2020](#). For any trees outside the rail

corridor which need to be removed, Metrolinx will work closely with the City of Toronto and follow their compensation requirements. It is important to note our dedication to the mature tree canopy is strong and we will ensure every opportunity is explored to keep removals at a minimum. As you may know, tree removals have begun outside of the joint corridor as part of other projects. For the joint corridor, we do not have any firm timelines at this moment but we do not expect tree removals to begin before the end of this year. All these details and more will be included in the Lakeshore East Joint Corridor Early Works report. With the introduction of the Ontario Line, we hope to improve background air quality levels by allowing people to leave their cars at home and take transit instead. The planned electrification of numerous GO trains that run through the rail corridor in the Leslieville and Riverside area will also have a similarly positive impact.

On noise walls, we are following standards for subways set by the Ministry of Environment, Conservation and Parks (MECP). This includes the Ontario Ministry of the Environment and Energy/GO Transit Protocol for Noise and Vibration Assessment (MOEE/GO Transit, 1994) and the Ontario Ministry of the Environment and Energy/Toronto Transit Commission Protocol for Noise and Vibration Assessment (MOEE/TTC, 1993). We will also have several options for new vegetation, landscaping and streetscaping to keep community spaces beautiful. We look forward to working closely with the community and the City on how to design these walls to enhance the neighbourhood. These conversations will start this summer.

On the natural environment, you asked when the work to assess potential impacts to parks and schools will be completed. As we advance the forthcoming environmental reports, these studies will be completed and shared with the public through the draft and finalized environmental reports. A reminder that the Lakeshore East Joint Corridor Early Works report will be released this fall and the Environmental Impact Assessment Report will be released in early 2022.

As you know, we hold ourselves to the highest standards when it comes to safety. The six-track joint corridor is no exception and is subject to an evaluation conducted with an Independent Safety Assessor to ensure the utmost safety standards are in place for passengers, operating and maintenance staff, and the communities that the Ontario Line will travel through. This evaluation will follow the highly respected, well established and widely adopted European Standard the European Common Safety Method for Risk Evaluation and Assessment. The evaluation will consider numerous safety considerations, including the separation between the Ontario Line and GO tracks; signal systems and operating rules; operations, safety, and security measures; emergency procedures; maintenance of lines/tracks; and traction power spacing requirements. We will share more details about this robust evaluation as it becomes available.

I will be sending a response to Save Jimmie Simpson's questions as per our recent meeting shortly.

Have a good weekend,

Daryl Gonsalves

Thanks for your patience as we looked into your questions.

This upcoming work will supplement the joint corridor noise report included in the Ontario Line Existing Conditions Report and will be a part of the forthcoming Lakeshore East Joint Corridor Early Works Report. The report will be released this fall and we're hoping to be able to share some results before then.

Sound level recordings of existing train pass-bys and existing ambient sound will take place at the locations identified in the notice. The equipment being used include a Zoom Q8 video recorder, Zoom H3 360° Audio recorder and a Bruel and Kjaer Model 2250 Sound Level Meter. In the overall noise model, we will use typical train traffic rather than pandemic levels you hear now. In addition, we take into account future GO service/trains as outlined in the [GO Rail Network Electrification EPR Addendum](#) noise study.

Hi Josh: We've had a look at this coming work order and have some questions about it.

1. What specific sound collection device(s) are you using to record 'ambient' sound levels?
2. What specific use will this ambient sound be part of?
3. Will this sound data collection be part of an official noise and vibration report and released to the public?
4. Why are you taking 'ambient' sound levels during the pandemic, when train volumes are so low - and;
4. Please explain any modeling used in the data collection, specifically at which heights & specific locations you will be collecting noise data along the corridor?

Thank you.

Hello [REDACTED]

Please find attached a notice about work to capture ambient sound and video information taking place at six locations along the rail corridor using handheld video and audio recording equipment, starting as early as May 4. The information that AECOM will collect will be used to develop more public information materials about the project and measures we will be putting in place to reduce community impacts.

Work at each location is expected to take up to 4 hours, but due to weather conditions, we are anticipating it will take place intermittently over 3 weeks. The field crew will begin next Tuesday at the Queen and De Grassi, and Wardell Street locations. Once the remaining location dates have been finalized, we will provide advance notice to area residents and businesses. You can find more details in the attached notice.

This notice is being emailed to Elected Officials and community groups. It will also be carried by field crew carrying out the work, distributed to residents and businesses in each work area, and available on our website.

Please let us know if you have any questions.

Thank you for the email. We will work with our project teams to provide information to respond to these questions and use them to help guide our future discussions.

Continuing to refine plans for the Ontario Line is an important part of the initial project design phase that we are currently in. The Environmental Conditions Report looked at existing conditions. The early works reports and Environmental Impact Assessment Report will set out the detail of anticipated impacts but those reports require a detailed level of design that has not yet been reached. As I mentioned prior to our last meeting, Metrolinx is taking this extra time to conduct further due diligence and refine initial designs so that we minimize impacts throughout the corridor as much as possible.

We know the community wants to be part of this process and we will continue to share updated graphics and information as soon as it is available, following a thorough discussion with city staff. We are working on updated maps for the East segment and just released a [new blog](#) that includes a graphic showing the six track corridor fitting mostly within the Metrolinx property lines. We are looking forward to a virtual open house where we can share updates with the community, answer questions and receive public feedback. As soon as we have a date, I will let you know.

Hi Josh: I hope you had a relaxing long weekend?

Our CAC has put together questions from our March 25th meeting for the OL Project Team members, in the same format as we had asked questions from the draft ECR.

We were completely taken aback by the news that the Ontario Line tracks are being realigned to the west side of the corridor, especially after the ECR was finalized, and we don't understand why we were not told that this was on the Agenda for discussion.

We have now included questions about the realignment and we would like to request a meeting together as soon as you have more details and drawings to share with our community about this major shift.

Along with the City of Toronto, our community is asking Metrolinx to undertake a serious costing of an underground alternative away from the corridor.

Thank you.

Conditions:	Issues:	Responses from Metrolinx re ECR:	CAC Questions for Follow up from March 25 th meeting:	Metrolinx Responses March 25th meeting:
Noise & Vibration	Noise Wall		Clarification of statements made by Mx that they are looking for the 'best locations' of noise walls, when it is our understanding that Mx will be providing a seamless noise wall for the entire 2km section between EH and Gerrard/Pape areas. Confirm seamless noise wall for 2km Joint Corridor.	
Air Quality & Tree Canopy			When will applications for tree removals be submitted to the City for the fall tree removals?	
Air Quality & Tree Canopy		Removals will be kept to a minimum and limited to within the construction footprint, based on careful consideration of construction access and laydown requirements. Following construction completion, areas will be restored and plantings will be undertaken in accordance with Metrolinx's Vegetation Guideline.	Are trees being considered for relocation as opposed to removal?	
Air Quality & Tree Canopy		Details about construction timelines and anticipated impacts will be shared before the end of December 2020.	What is the timeline for removing trees from the parks on either side of the rail corridor between Dundas and Queen?	
Air Quality & Tree Canopy		Further details about required vegetation removals in the Lakeshore East joint corridor will be shared as planning and design advance. In addition to the well-designed sound barriers that we will be adding, landscaping new trees and greenery will significantly reduce the visibility of the corridor and the trains that will operate within it.	Confirm when trees will be replanted along JC in project timeline.	

Feedback & Questions from our March 25th meeting with our Lakeshore East Community Advisory Committee.

We kindly request that wherever possible answers be given by Project Management Teams.

Conditions:	Issues:	Responses from Metrolinx re ECR:	CAC Questions for Follow up from March 25 th meeting:	Metrolinx Responses March 25th meeting:
Noise & Vibration:		Vibration measurements were undertaken at locations which accommodate activities and equipment that are potentially more sensitive to ground borne noise and vibration than typical residential or commercial buildings. As project planning and design advance and further details on planned transit facilities are available, additional noise and vibration estimates or measurements will be considered for locations beyond those included in the draft Environmental Conditions Report.	As noted in your comments from the ECR, what additional Noise and Vibration studies are being undertaken and on what locations?	
Noise & Vibration:		Residential receptors on Booth Avenue are represented conservatively by the assessment of 2 Paisley Ave and 14 Wardell St assessment locations, which are considered to be potentially exposed to the worst-case noise and vibration within this segment of the study area.	As noted in your comments from the ECR, when were these measurements done to Paisley and Wardell? They are not listed in the either the draft or final ECR. Can we get copies?	
Natural Environment:	The area of study is so narrow along the route, that it allows Metrolinx to skew the conditions and impacts (Noise, Vibration, Air Quality, Demographics, Community Resources, etc.) in/on our surrounding residential areas, particularly demographics and community resources.	Metrolinx will be examining potential impacts to parks that may be affected by the Project as part of the Environmental Impact Assessment Report.	When will this work be completed and in which parks?

Subject: RE: Ontario Line update

Hi everyone,

Thank you for following up. This work will no longer be taking place this weekend, and will instead be postponed to the fall.

The planned tree and vegetation clearing in the rail corridor was approved and covered by a separate Environmental Assessment that was conducted as part of the GO Expansion project. To protect birds and wildlife, qualified avian biologists always conduct nest searches in advance of any tree removals. Metrolinx also has a voluntary program to compensate for trees that are removed – more information [here](#). This weekend, tree removals were being planned by the GO Expansion team for the area between Gerrard and Pape in order to take advantage of the upcoming closure of Lakeshore GO line, which would allow several weeks of off-hours work to be conducted in two days.

Though this GO Expansion tree removal work is separate from Ontario Line work and had its own approvals, the Ontario Line team also recognizes that we committed to the community that no work would take place in the rail corridor until after the Ontario Line Joint Corridor Early Works report is released in the fall. In light of this commitment, we have reached out to our partners on the GO Expansion team and worked with them to postpone this weekend's work to begin after the Early Works report is released.

Thank you again for reaching out to us, and have a good weekend.

Hi there,

I have in writing below that "Early works construction for the joint corridor is expected to begin in summer 2022."

I'm shocked to receive a notification that early works construction such as tree and vegetation removal is now scheduled to begin as early as August 14. This is before any public consultation has been carried out and before we have been informed of environmental impact.

Believe this is totally out of line. Please confirm the notice about tree removal was sent out in error.

Subject: Ontario Line update

To: ■

Hi ■

Hope you are enjoying the warmer weather today. I wanted to reach out and provide you with an update on a couple things and find out if you were interested in setting up a meeting between Save Jimmie Simpson and the Ontario Line team. We would welcome a chance to discuss your questions about the project and provide a bit of an update on our plans.

In terms of timelines to be aware of, I wanted to let you know that we recently updated [our website](#) to include the latest timelines for early works in the joint corridor. We expect to release the draft reports for a 30-day public consultation in Summer 2021 (Lower Don Bridges) and Fall 2021 (Lakeshore East Joint Corridor). Procurement for both of these packages of work will advance only after each respective environmental assessment is completed. Early works construction for the joint corridor is expected to begin in summer 2022. These schedule adjustments do not impact the overall timeline for early works completion or the larger P3 construction packages.

■ I appreciate your patience while we continued our initial design and environmental studies. This will help us respond to more of the concerns the community has raised and we hope that there will be many opportunities for us to connect this year.

Sincerely,

Josh

Morning Josh:

The CAC would be available for a meeting on Thursday March 25th from 6:30pm. We hope this works for Metrolinx?

Re Agenda: In addition to the items you have listed below, our community would like the details of the 800 Million dollar figure that was released in January to the media for an underground route through our community, and we would like to know how Metrolinx arrived at this cost and the details of the route in depth.

Thank you.

[REDACTED]

On Fri, Mar 12, 2021 at 10:18 AM Josh Vandezande <Josh.Vandezande@metrolinx.com> wrote:

[REDACTED]
Thanks, we were just double confirming details with a couple of different teams.

While Metrolinx is continuing to look at the sequencing of the different pieces of work to ensure good coordination and minimal community disruption, no vegetation removals are planned in the shared rail corridor between Eastern Ave and Pape Ave before the release of the Joint Corridor Early Works Report in Fall 2021.

We will provide more information as details are available, including the updated Arborist's report that includes anticipated impacts from both the Ontario Line and GO Expansion work.

Thanks
Josh

Hi Josh: I'm just following up on this question as I'm hoping to send out an update to our community this weekend and want to be able to give more details.

Can I confirm that there will be no tree removals this year on the Joint Corridor?

Thank you!

Morning Josh:

We are smiling this morning, as this delay is good news for all of us along the Joint Corridor. The community is buzzing with relief, as we are well at the CAC.

Taking time to do a thorough Impact Assessment before beginning the Early Works is reassuring to our community that you are taking the time to evaluate the impacts of your plans carefully, and hopefully consider more alternatives to them. We commend Metrolinx for taking this step back.

Can I confirm this means no trees or vegetation will be removed until next summer on the Joint Corridor?

I'm going to poll CAC with best dates to meet, earlier in March is better for us, but I hope to confirm by the end of the week.

We are excited to share this bit of good news with our community.

Sincerely,

On Tue, Mar 9, 2021 at 4:52 PM Josh Vandezande <Josh.Vandezande@metrolinx.com> wrote:

you're enjoying the sunshine today.

Would March 25, 29 or 30 work? The extra couple weeks will help ensure we have meaningful content to review with you. Is 6:30pm too early a start time?

In terms of agenda, I would propose we discuss the following, but am open to your suggestions:

- Early works and environmental assessment timelines (some details below)
- Alignment update
- Noise wall design concepts and early noise modelling results
- Engagement plans
- Discussion

We expect to release the draft reports for a 30-day public consultation in Summer 2021 (Lower Don Bridges) and Fall 2021 (Lakeshore East Joint Corridor). Procurement for both of these packages of work will advance only after each respective environmental assessment is completed. Early works construction for the joint corridor is expected to begin in summer 2022.

We are taking this extra time to conduct further due diligence and refine initial designs so that we minimize impacts throughout the corridor as much as possible. These schedule adjustments do not impact the overall timeline for early works completion or the larger P3 construction packages. We have also shared this update with MPP Tabuns, Councillor Fletcher and the Riverside BIA today.

Thanks let me know which of those meeting dates work best for the group.

Josh

Hi Josh: Hope you are doing well. I'm following up your suggestion we meet early March with updates. Where are we at with this? I'd like to give everyone as much notice as possible with upcoming meetings.

Many thanks!

On Fri, Feb 12, 2021 at 12:39 PM Josh Vandezande <Josh.Vandezande@metrolinx.com> wrote:

Wanted to send along a couple more answers to your questions on a cold, snowy Friday before a long weekend.

First off, I'd like to suggest that we plan a next meeting with the LSE CAC in the first half of March. This would be an opportunity to discuss noise and vibration mitigation, including noise wall options, and cross sections of the joint corridor as well as a general project update. We are also hoping to setup some virtual community meetings to share noise wall concepts, receive feedback and answer questions about the project.

Simon or I will send you a few options for dates as soon as we can but I did want to get back to you about your questions today.

Take care,
Josh

Subject: RE: Follow UP - & Draft Early Works Report and Minutes approved and Link to our Minutes with Metrolinx?

Thanks again for your patience as we wrestled with getting the website up-to-date.

The ██████████ is being updated with the missing documents and they should be "live" by tonight. I've copied Simon on this message so he can confirm once it's done -- he worked with David to get this sorted. We'll be setting up similar pages for the Ontario Line later this year.

Our team is continuing environmental studies for the early works reports for the Lower Don Bridges and Lakeshore East Joint Corridor, allowing additional time for the technical team's design and coordination that is required with GO Expansion plans. Within a week, we should be able to provide you with an updated timeline, including proposed dates for an advance meeting on noise & vibration / noise walls.

Take care,
Josh

Hi Josh,
I'm emailing to follow up on a number of items and find out current timelines for their public release.

Firstly, following up the list of our CAC Minutes I sent you for a link to the Mx website posting. Is this ready yet for us to link our webpage to?

Secondly, according to the Ontario Line Timeline you gave us in Oct. the *draft Early Works Report* was to be released last fall, and then in our discussion before the holidays, you thought it would be released by the end of January. Can we have an update on when this report is coming please? We will need to review it but would like to meet with Mx and go through it with our questions.

Thirdly, we spoke about having a Noise & Vibration meeting with the OL Team specifically to address our concerns and to find out what is being planned for the noise wall and further N&V studies in our community. We'd like this to happen asap. in order to help us understand the mitigations that will be offered around the Early Works construction this year. Is that possible?

Lastly, we had also spoken about more detailed design renderings being released on the section of track from East Harbour to Gerrard Stn. When will this happen?

Subject: RE: FW: Small's Creek - Technical Materials - (1 of 4)

[REDACTED]
We couldn't agree more! I found the report a bit tough to figure out myself, so I'll do my best to explain it and you should feel free to give me a call to discuss. The inventory portion of the entire Lakeshore East (West) corridor from the Don Valley to Midland is included in this report. However, only impacts from Pape eastward have been confirmed. Impacts west of that will be determined later this year, once Ontario Line/joint corridor designs are further along.

<http://www.metrolinx.com/en/greaterregion/projects/docs/lakeshoreeast//LSE-W-Arborist-Report.pdf> is where the report is posted on the website.

As you know, Appendix A (starting on page 19) lists each tree, by number. Unfortunately the list isn't divided up by the segments shown in the map on page 6. However, if you scroll to Figure 2 (starting on page 54) you can see each tree, with its number, in an aerial photograph.

I hope this helps.

You may have noticed some media reports regarding expropriations for the Ontario Line. While it's true that we do plan to use the parking lots and land south of Front Street between Parliament Street and Berkeley Street for the project, no expropriation has been initiated there or anywhere else along the alignment. We're working to correct this misinformation but I thought I'd mention it.

Talk soon,
Josh

Subject: Re: FW: Small's Creek - Technical Materials - (1 of 4)

Hi Josh: I think it would be in Metrolinx's best interest to release the information they have now to the community - Small's Creek ravine is a perfect example of why the community needs to understand these assessment reports. Also, the Environmental Conditions Report was released without showing impacts - and I don't see why this report is any different. It will give us the knowledge that what is being further assessed because of the coming impacts, like a noise wall, is required. Mostly it will give us an understanding of what trees we have, types etc., and how they are viewed by an Arborist.

I think it should have been released along with the ECR information.

Please can you push for this?? Please?!

[REDACTED]
On Wed, Jan 20, 2021 at 3:55 PM Josh Vandezande <Josh.Vandezande@metrolinx.com> wrote:

[REDACTED]
I'm doing well, thank you. The Arborist's report includes the summer 2020 tree inventory for the entire Lakeshore East - West portion of the corridor but only anticipated impacts/removals east of Pape Avenue. A subsequent report regarding impacts from Ontario Line and GO Expansion work west of Pape will be completed once Ontario Line plans are sufficiently advanced. As you can imagine, determining a tree-by-tree impact requires a certain level of design detail. This information will be shared with the community as part of Ontario Line / joint corridor environmental reporting later this year. I'll get you an updated timeline as soon as I can.

Hope you stay warm, well and safe too!

Josh

As promised, please find attached the hydrology report as well as the arborists report for the Lakeshore East rail corridor. I've had to break the documents up into smaller parts – sorry for the trouble. We will post of the copies online shortly – but wanted to share them with you at this time.

The hydrology report outlines drainage and stormwater management for the Lakeshore East corridor, including the applicable guidelines that must be met (section 3.1), as well as the specific design criteria from those guidelines that must be met in this corridor (section 3.2). Detailed design for the Small's Creek Culvert is documented in the Culvert Design Report within Appendix C (page 78). The new culvert will meet current design standards for stormwater management and allow free passage of water during a 25-year storm event and allow the passage of water during a 100-year storm event with a headwater no deeper than 1.5 meters. The culvert will also reduce flood elevations on the north side of the corridor.

Also attached, is an approximate footprint of the slope if it were a geoengineered slope rather than contained within a retaining wall. This is a best guess approximation from the engineers at Hatch, and should help our discussion with the communities technical experts tomorrow.

The arborist report documents a tree inventory for the entire Lakeshore East corridor (Don Valley to Kennedy), as well as a tree impact assessment for the Lakshore East-West project (Pape to Kennedy only). The impact assessment provides recommendations for tree protection, removals and mitigation measures. Only trees that are determined to be impacted by the project may be removed. Final tree removals will be determined once the contractor is on board and will fall within what is outlined in the report. We can discuss this as well as the restoration plan at our second technical meeting, which should give you some time to review the report. Once the contractor is on board, we can review once again.

Finally, please see below a link that contains all the EPR studies including Natural Environment, Socio-Economic and Traffic.

http://www.metrolinx.com/en/aboutus/publications/environmental_assessment.aspx#lse-donriver

I look forward to our meeting tomorrow.

Subject: Fwd: statement

Morning Josh: Our CAC wanted to thank everyone at Metrolinx again for staying later than planned to answer our questions.

I think, going forward, we learned that during this busy period when there is much activity

on both OnCorr and OL projects - we should hold 2 separate meetings. We were trying to save everyone's time, especially around the Thanksgiving weekend, but we barely touched on many of the important issues on each major rail project on the LSE. Lesson learned.

I'm forwarding our *CAC Community Statement on the Ontario Line* below to be included in the Minutes and eventually the ECR Correspondence when we finalize the Minutes.

We are going to review our document "*LSE_ECR_Questions*," and will send you an updated version from last night, to send around to the Teams to answer. Wherever possible, we would like the Teams to address our questions, as we are looking to understand the underlying data/methodologies that are behind the Conditions.

I'm hoping to get this document updated and to you before the end of the week.

One follow up question for you - when are you coming to do community consultations here? This was supposed to happen in August - what is the timing on this now, our community wants to know. Can you confirm the plan for our neighbourhood?

Thank you again for putting in the extra time for our community.

CAC Community Statement on the Ontario Line - Oct. 13, 2020

Our elected representatives and other members of the CAC are going to ask specific questions about the plan you have put forward for the Ontario Line between the Don River and Gerrard Street this evening.

Before we get into these specifics, we want to be on the record that we object to the entire premise of the Ontario Line plan for our community. You have been told many times by our CAC and feedback from our community, that we do not want this section of the Ontario Line to go above ground along the rail corridor, because of the devastating impacts it will have on us, our families and our community. We don't believe that your consultation process has had any impact since you have not done the due diligence necessary with detailed comparisons of alternative alignments on this section in your draft 'Env. Conditions Report.' Without this information the entire ECR is biased in favour of the one plan outlined in the Business Case, nor have you convinced us that this is the best plan for our neighbourhood. We continue to believe that this 2 km section should be built underground and we are extremely disappointed that you have not complied with the Toronto City Council Executive motion Ex 9.1 - 20 from October 2019 that asked Metrolinx to consider options for constructing "portions of the Ontario Line underground where local impacts cannot be reasonably managed."

We say again, that Metrolinx needs to do an unbiased, comprehensive comparison of the costs and implications to the community of putting this two kilometer section underground. Without that comparison, we will never be convinced that the plan to run the Ontario Line along the rail corridor is what is best for our neighbourhood. We are a transit community, we believe in transit, we are

your ridership, and we support an Ontario Line built right.

So, given that preamble, note that the comments and questions from our CAC members are made under this protest, we can now proceed with the ECR as it is currently drafted.

<TorontoEast@metrolinx.com>, Ontario Line <ontarioline@metrolinx.com>

Morning Josh: Thank you for further clarification. Understood.

How will Metrolinx be sharing this station information with our community? More details about this appreciated.

Depending on the amount of information Carmen has for OnCorr/RER, it may be best to do 2 CAC meetings, instead of one that is mostly Ontario Line updates.

Also, when do you think I can the copies of the draft ECR? I'd like to get those around to members ASAP. I can come and pick them up if its easier for you.

Thank you.

Hi [Redacted]

Apologies, I should have said the general location of the stations is unchanged. There is more detailed information coming for your segment of the Ontario Line. As per my previous message, "Neighbourhood Updates and the latest information on the alignment and more details about station positions for your area will be shared before the end of the month."

I've attached a sample slide for King/Bathurst. Once that specific information is released for your area and the group has a few days to review it, we will have the meeting. I can give you a call to discuss later today if this is still unclear.

Thanks

Josh

Subject: Re: Ontario Line update

Hi Josh: Unchanged station locations? I'd like to point out that Metrolinx's pink dots on a pink line, one labeled 'Gerrard' and one 'Leslieville,' on a large white mostly blank space that is supposed to represent a map of the GTA- is not actually telling us where the stations are located.

Without this vital and specific information it doesn't seem like Metrolinx is interested in soliciting any meaningful input from our communities.

On Thu, Sep 17, 2020, 5:19 PM Josh Vandezande, <Josh.Vandezande@metrolinx.com> wrote:

Hi [REDACTED]

The alignment and general station locations are unchanged in your area and continue to be available on our website [here](#).

Neighbourhood Updates and the latest information on the alignment and more details about station positions for your area will be shared before the end of the month and we'll setup the meeting with your group soon after so you can get more information. A reminder that the ECR is just the preliminary environmental report on existing conditions. Details on impacts and mitigations will be part of the early works and environmental impact reports.

Hope this helps.

Sincerely,

Josh

Hi [REDACTED]

[REDACTED] is hard to replace so no news there yet but we should have someone in place by the end of the month.

Carmen and I are going to figure out the best way to get you updated on both projects. Depending on how you want to structure the agenda, it might be better to do two meetings. We'll put a proposal together and come back to you. I have noted your preferred timeframe.

We'll use Microsoft Teams for the meeting and while I can't promise zero echoes, we've had lots of practice figuring out how to resolve them over the last couple months!

Talk soon,

Josh

Subject: Re: Ontario Line update

Morning Josh: Thanks for the update. We have all been wondering what the heck is happening, so this is welcome news.

Welcome also to Vanessa and Simon to the OL team. Can I ask who is replacing Nicole as the Supervisor while she is on Mat. leave?

Will we be getting an OnCorr/RER electrification update as well, or is this just Ontario Line?

We look forward to meeting up and reviewing the release of this new information with you virtually. I'm hoping we can use something other than the phone line we used last time - with many echo issues. Is it possible to have a video chat - like zoom or something Mx would approve of?

Please send me a few dates and times - but if you can ensure they are around 7-9pm time period that would be ideal. As you know, our membership has children back to school and this week has been very stressful and hectic for them. We would also appreciate some time to review the Draft Environmental Conditions Report you are releasing today.

Many thanks.

LSE CAC

On Thu, Sep 17, 2020 at 8:28 AM Josh Vandezande <Josh.Vandezande@metrolinx.com> wrote:

Hi ██████████,

Today, Metrolinx will be releasing the Ontario Line Environmental Conditions Report for public review and feedback. We will also be updating our website with the latest information for the public about procurement and project timelines. Over the coming weeks, we will be posting Neighbourhood Updates to share progress as teams have been studying how to speed up delivery, reduce building costs, minimize community impacts and improve connections for customers.

The Ontario Line team would appreciate the opportunity to meet with again with the LSE CAC. We know it has been too long since our last meeting and we appreciate your patience. In addition to a discussion of the ECR, we can review updated information that will be posted for the joint corridor/Riverside/Leslieville area towards the end of the month. I'll get in touch with you with some proposed dates soon. I also want to coordinate with Carmen as I know their team has an update for you.

In the meantime, please encourage your community to visit our [website](#) to learn about and provide feedback on the Environmental Conditions Report and other Ontario Line details. We will be sending you updates and issuing our e-newsletter as new information is posted. This round of public engagement will be conducted virtually, following advice from Public Health Ontario on COVID-19 and large gatherings. We will be promoting the opportunity through outreach on print and social media, our websites, e-newsletter and a mailing to residents and businesses within 500m of the alignment.

Finally, I wanted to take this opportunity to e-introduce you to Vannesa Cheng and Simon Granat who have joined the Ontario Line Community Relations Team. Simon will be the LSE CAC contact, working with Carmen. For consistency and to keep thing easy for the community, the Ontario Line team all works from the one email address: ontarioline@metrolinx.com. I'm not going anywhere but wanted you to get to know a couple more people who will be supporting you. We will have to find time to meet up in the park again, while it's still nice out!

We look forward to connecting with you soon.

Josh

Hi Carmen. We understand that repairs need to happen. However, this work happened over 4 nights along a stretch of track next to homes, not one spot, and no one bothered to alert our community? I don't understand how this happens? This not being the first time.

What if there is some kind of gas leak or emergency procedure that the neighbourhood must know about? What happens then, is there a procedure to follow? Our neighbourhood is deeply frustrated by the lack of communication on this overnight work.

Thank you.

On Fri, Sep 4, 2020, 11:53 AM TorontoEast, <TorontoEast@metrolinx.com> wrote:

Hi [REDACTED],

Emergency unplanned maintenance work was done to correct a series of defects. This work was done immediately after the defects were discovered in order to uphold our stringent safety standards for train operations. The work needed to be completed overnight when it is safe to access the corridor. Shelley, the work is now complete.

Nicole is now on maternity leave. Please continue to use me and the Ontario Line team, as your contacts for any questions/concerns.

Regards,

Carmen Rapati

Hi Josh: Thanks for some further details here on the reports. Frankly, I don't understand why Metrolinx isn't allowing you to tell us the start dates of the release of this information. It doesn't reflect well on Metrolinx or build the kind of trust in our communities that we spoke about at our last meeting in May. I am hoping you will be sending around links to these reports and any other information or updates as soon as it is posted on your website for the communities to review?

I'm sure I will have more questions for you after our meeting this evening.

Sincerely,

[Redacted]

On Mon, Jul 20, 2020 at 8:16 AM Josh Vandezande <Josh.Vandezande@metrolinx.com> wrote:

Hi [Redacted]

We are working on getting the environmental reports and other updates ready. As soon as we have a firm timeline for release, we will let you know.

As you know, the environmental process includes several reports. Each report includes a 30-day public comment period and followed by a final report that includes consultation details and feedback received, prior to any work beginning. Here are the reports you can expect to see in the next few months:

- **Environmental Conditions Report** (for the entire line) – a description of existing environmental conditions, a preliminary description of potential impacts the Project may have on the environment and a description of studies that will be carried out as part of the Environmental Impact Assessment Report/Early Works Report. To be released in July/August.
- **Early Works Report** (for areas where early works will be undertaken prior to the beginning of the main P3 contracts, including Riverside) - a description of the early works, local environmental conditions, and an outline of anticipated Early Works-specific environmental impacts (**including noise and vibration**), mitigation measures, monitoring activities, and potentially required permits and approvals. To be released in July – September.

Once released, feedback will be collected through the website, email and phone. We will also have regular meetings with the LSE CAC and other community groups to discuss these reports and other information about progress on the Ontario Line.

The **Environmental Impact Assessment Report** (for the entire line) a description of scope of work, local environmental conditions, anticipated environmental impacts, mitigation measures, monitoring activities, and potentially required permits and approvals. Feedback will be collected on line as with the above and we're hopeful that smaller in-person meetings are also possible by that time. To be released later in 2021.

The balance of what you said is correct.

Thanks for following up. I hope this helps.

Josh

Subject: Re: Ontario Line engagement update

Hi Josh: I appreciate your attempts to answer our questions, but I confess I'm even more confused as to when information will be shared, and when you are asking the community for feedback on it.

Q 1: Is the updated Noise and Vibration Report included in the Environmental Impact Assessment Report??

Q 2: If not, when will this studies be released?

Q 3: At our last meeting in May, there were to be specific community presentations on this N&V report, this summer, is this still planned?

Do I have your information correct?

1. In a few weeks from now we will be getting from Metrolinx the following information, and we will be able to give feedback and ask questions on the Mx Engage website/Mx email/ phone line:

- More details about the alignment, or route, of the line
- Stations locations and some initial design concepts
- A report on existing environmental conditions
- Procurement activities and anticipated construction timelines.

2. September, the EA Reports are released and we have 30 days to give feedback on them - not sure at this point where to give feedback or how?

3. Most feedback questions will be answered by Metrolinx and the project teams will take it into consideration with other factors.

4. Public engagement will continue through the Fall. No date for the Mx Community Offices opening.

Is this basically correct?

Thank you.

On Fri, Jul 17, 2020 at 7:39 AM Josh Vandezande <Josh.Vandezande@metrolinx.com> wrote:

Hi [REDACTED], I've updated my original message to you with some more information to address your questions. Note that while we don't have an exact start date yet due to the need to get everything ready online and complete elected official briefings prior to public engagement, the only fixed timeframe for consultation is for the various environmental reports which have a prescribed timeline for public comment (30 days) followed by an issues resolution process. The rest of the engagement will be ongoing and we'll notify people as new information is available.

Planning for the Ontario Line subway project is continuing, including gathering information to refine the design and engineering plans, procurement planning, due diligence work and conducting environmental studies. We recognize that people have specific questions and the work currently underway will help us provide detailed answers. We're still working out the exact start date but here's some information about what people can expect.

Beginning in late July/early August and continuing through the fall, Metrolinx will be sharing the latest information about the project on [Metrolinx Engage](#) for public input and feedback, including:

- More details about the alignment, or route, of the line
- Stations locations and some initial design concepts
- A report on existing environmental conditions
- Reports on anticipated environmental impact and recommended mitigations (September)
- Procurement activities and anticipated construction timelines.

There will be a range of ways to provide feedback:

- **online public comment forums** on Metrolinx Engage, where Metrolinx staff post responses to all questions (responses within 3-5 business days)
- **direct email** to ontarioline@metrolinx.com (responses within 24 hours to 10 days, depending on volume and complexity of questions)
- **phone calls** to 416-212-5100, and
- community group meetings.

All feedback is shared with the project team and they consider it alongside factors like overall passenger experience, cost and technical feasibility as we continue to advance the project. We will regularly share updates on what we heard through public engagement, as we did in the [summary report](#) following the initial public engagements in early 2020. We are also adding a list of frequently asked questions (and answers) to the website and will be updating it regularly as new themes emerge. It is important to note that answers to specific questions may not be immediately available, depending on the state of

the design and engineering work or other inputs such as geotechnical investigations or environmental reports which are still in progress.

Concerns regarding the environmental reports, received during the 30-day public review period that follows the public notice and release of the report, will be:

- Considered by Metrolinx who will attempt to resolve them in a way that does not cause unreasonable delay to the implementation of the Ontario Line Project, particularly if there is a potential for a negative impact on:
 - a matter of provincial importance that relates to the natural environment;
 - a matter of provincial importance that has cultural heritage value or interest; or
 - the existing aboriginal or treaty rights of the aboriginal peoples of Canada.
- Documented in the consultation record for the project and included in the final environmental reports.

Once launched, engagement will be ongoing. Participation will be promoted through elected officials, community groups and broadly on social and mainstream media. To protect public health, information will be shared through project websites and virtual meetings which will include several different ways for people to provide feedback and ask questions.

In the meantime, the Ontario Line Community Relations Team is the conduit for information and dialogue:

- Email: ontarioline@metrolinx.com
- Phone: 416-212-5100
- Community Offices (opening once public health conditions allow and renovations are complete).

We will send you an update once we know when information is ready to be shared and will suggest some dates for a next meeting with your group.

[Let me know if you have any questions.](#)

Josh

Hi Josh: Thank you for this information. Can you please answer these questions for us before Monday's community meeting?

1. Specific dates online community consultations will start and finish?
2. Specific platforms or apps being used? Facebook? Twitter?

3. Can a person give feedback more than once and on different topics?

4. Will the community's questions be given answers from Mx?

3. How will feedback be used by Metrolinx?

A. Will feedback change design plans?

4. Will Metrolinx be sharing the feedback with the community?

Many thanks!

Subject: an Ontario Line update
Attachments: [REDACTED]

Hi [REDACTED]

Thanks for your patience as we continue to refine our plans for the next round of engagement which has unfortunately been delayed a bit due to the challenges of COVID-19.

We are working towards sharing further information about the Ontario Line with the public in late July. As previously noted, engagement will be virtual with a variety of ways for people to learn about what's new and ask questions. We will be promoting this opportunity on social and mainstream media and will be collecting feedback throughout August so people will have lots of time to participate.

In advance of the public engagement, we will be providing update briefings to elected officials and key community groups, including the LSE CAC. I should be able to get back to you after July 6 with a couple proposed dates for the meeting. I have copied Carmen and Nicole as they are working towards an OnCorridor/GO Expansion update for you along the same timelines.

You asked about the environmental work for the Ontario Line. Current plans anticipate us releasing the Environmental Conditions Report - a description of existing environmental conditions, a preliminary description of potential impacts the Project may have on the environment and a description of studies that will be carried out as part of the Environmental Impact Assessment Report/Early Works Report - for the entire line in late July. I should have confirmation of timelines for the Early Works Environmental Report in the next couple weeks.

More information on the process can be found in the proposed [Ontario Line Environmental Assessment \(EA\) Regulation](#).

Finally, I have attached a notice about some further geotechnical work that started in your area today. Copies were delivered to nearby residents on Wednesday and we worked with the owner of Saulter Street Brewery to coordinate this work. There is also some drilling work planned within the corridor starting late next week and I will send you the notice for that on Monday.

I'm in meetings until 4:30 but happy to give you a call after that or Monday if you would like to chat.

Sincerely,
Josh

Josh Vandezande
Senior Manager of Community Relations - Ontario Line
Metrolinx: connecting our communities

Dear Nicole:

Thank you for your phone call on Tuesday, Feb. 11. As indicated on our call, I am following up to clarify a few things based on the "On Corridor Public Consultation Briefing," presentation file dated February 6, 2020:

You mentioned over the phone that no RFP will be issued for the LSE Enabling Works and that contractors will be chosen and contracted individually per project, but the timeline on Page 18 shows the RFP coming out in 2020.

- Q1: Please confirm that the timeline provided is incorrect and that no RFP for Enabling Works will be issued.
- Q2: What is the new timing of the On Corridor works for LSE?
- Q3: Will track clearing begin in Spring 2021, as indicated on the timeline?

Slide 11, "Go Rail Network Electrification," indicates Metrolinx is "proposing to electrify 6 of 8 rail corridors." For over two years we have been working with the assumption that electrification of the LSE corridor is happening, but it seems no further ahead.

- Q4: When will the RFP for Phase II (electrification) be issued? This is not indicated on the timeline.

The timeline on Page 18 shows construction of early works beginning in approximately one year (2021).

- Q5: When in 2021 will this work commence and for how long?
- Q6: In what specific areas will the enabling works to place?
- Q7: Please provide a detailed project schedule we can provide to our communities.
- Q8: How will communities be notified of early works construction in their area?
- Q9: Where are the construction staging areas?
- Q10: Will residents have the ability to comment on and provide suggestions on construction staging areas?
- Q11: Will there be a 24/7 phone number for residents to call with concerns about disruptive construction, including excessive noise, safety concerns?

We were advised by Metrolinx in November 2019 that tree removal would not be required within the Riverside 2km corridor (Eastern to Gerrard).

- Q12: Please confirm that this 2km corridor is considered separate from the rest of the On Corridor project.

- Q13: Please confirm that the vegetation removal and track bed preparations, identified as beginning in spring of 2021 in the timeline on page 18, does not pertain to the 2km corridor from Eastern to Gerrard.

I understood from our call that the noise and vibration report will be delayed as it is being revised to measure impacts of the Ontario Line.

- Q 14: Slide 15, "Noise & Vibration Along Joint Corridor" states "Results and proposed mitigation approach to be shared at upcoming Ontario Line public meetings – anticipated Spring 2020." Is this timeline still correct?
- Q15: Will the format of sharing this information (Ontario Line public meetings) be similar to the recently-held Ontario Line open houses? Please confirm the format.
- Q16: Can your public meeting format be revised to include an open forum question and answer period between community residents and Metrolinx staff involved in the noise and vibration assessment?

Feedback on the format of the recent Ontario Line open houses was very negative. Residents were provided conflicting information from different Metrolinx staffers, some information provided was entirely incorrect (e.g. some residents were advised that a full EA would be completed for the Ontario Line).

- Q17: Slide 20 states "open house, drop-in format" for the public information centres, but this approach has proven to be ineffective. How will future community consultations be improved, based on the lessons learned from the open houses?
- Q18: The open houses were not examples of public consultations, because the public wasn't consulted at all. Information was shared one way from Metrolinx to residents. What mechanisms will be put in place to allow a true consultative approach moving forward?
- Q19: Several residents have advised us that they have written letters to Phil Verster, Metrolinx CEO, complaining about the format of the recent open houses and demanding answers to their outstanding questions. These residents have yet to receive any type of response from their emails. When can residents expect answers to their questions?
- Q20: When will the Metrolinx Ontario Line Project Office on Queen St. East in our neighbourhood be opening, your timeline indicates spring?
- Q21: What are the hours of operation of the Metrolinx Ontario Line Project Office in our community?
- Q22: What is the contact information (phone and email address) of the Metrolinx Ontario Line Project Office in our community?
- Q23: Who will staff the Metrolinx Ontario Line Project Office in our community (i.e. job titles of people who will be taking questions from the public).

- Q24: What will be done with any feedback or comments received at the Metrolinx Ontario Line Project Office? Please specify your method of collecting feedback, sharing feedback with the Ontario Line project team, and providing responses to residents.

We have a number of outstanding questions that are not addressed by this presentation deck:

- Q25: This deck does not state the impact of construction and operation of the Ontario Line on Pape School, Jimmy Simpson Recreation Centre, and Fontbonne Ministries. Please clarify the impact of the Ontario Line, from construction to operation, on Pape School, Jimmy Simpson Recreation Centre, and Fontbonne Ministries.
- Q26: When will the information requested in Q25 be made available?
- Q27: The timeline on slide 18 suggests the environmental assessment process for the Ontario Line will occur at the same time as the procurement process (RF) instead of completing the assessment process before, which is the traditional approach. Could Metrolinx clarify what environmental assessment process will be used on the Ontario Line in Riverside, and when this environmental assessment process will begin and end?
- Q28: Will the new "Noise and Vibration Report," be part of the environmental assessment or will there be another study in our neighbourhood as part of the environmental assessment?
- Q29: When will this new study planned?
- Q30: As part of the EA, will you be doing a Cultural Heritage Assessment Report in Riverside, or will you be re-using the "Heritage Impact Assessments for Riverside and Queen Street Reports," that were a part of the RER EPR?
- Q31: When do you expect to have these answers?

Lakeshore East Community Advisory Committee - Community Partner Meeting Summary Report

Meeting Details

- Date: September 15, 2021
- Time: 6pm – 7pm
- Location: Zoom
- CAC Participants: 5

Meeting Participants

LURA Consulting: Ciaran Thompson, Liz McHardy, Sayan Sivanesan

[REDACTED]

[REDACTED]

Meeting Overview

The purpose of this meeting was to provide an opportunity for the Lakeshore East Community Advisory Committee (CAC) to discuss feedback on the community discussion process, and to share details on upcoming engagement opportunities for the East Segment of the Ontario Line. The meeting began with introductions and a review of LURA's role as an independent third-party facilitator, followed by an opening statement by the CAC that outlined its positions regarding the Ontario Line project. The remainder of the meeting was an open discussion to gather CAC member feedback.

Summary of Feedback Received

The following summary documents the feedback received from the CAC and is organized by key themes. This summary includes feedback received from the CAC at the September 15th community partner meeting, as well as feedback received through email.

Opening statement from CAC

The following opening statement was read by the CAC:

"Before we move on with the agenda you have proposed, the CAC wants to be on the record as continuing to object to building the Ontario Line along the elevated rail corridor through Leslieville/Riverside. On more than one occasion, Metrolinx senior staff member Malcolm Mackay promised to provide the cost of the alternative underground route proposed by Steve Munro and endorsed by the CAC. Metrolinx has not fulfilled this promise to our community or multiple requests from Toronto City Council to consider this option.* We were shocked to learn that Metrolinx sent a letter on June 8, 2021 to the Toronto Transit Expansion office stating that they would not be considering an underground alignment in this area. This is unacceptable. The CAC has filed a complaint with the Ontario Ombudsman regarding this blatant disregard of the community consultation process.

According to the Terms of Reference agreed to by Metrolinx, our CAC is supposed to provide input on elements along the rail corridor that will affect our community. As well as violating our Terms of Reference and ignoring requests from Toronto City Council, this arrogant refusal to investigate this option violates these conditions that must be met in order to receive federal government funding:

- Engagement processes that enable early community involvement inclusive of local communities and diverse voices and stakeholders, and opportunities to access decision-makers and influence decisions;
- Inclusive community consultation processes that address neighbourhood and community.

The community is not satisfied with the glib statement that “the hybrid option has many of the same disbenefits as the alternative options already studied and will not perform better than the reference alignment.” We do not agree.

The Ontario Line will have an enormous impact on our community’s health, safety and well-being. Our CAC is ready, willing and very able to provide meaningful input about the Ontario Line design. We ask Metrolinx to fulfill the promise made to cost out the underground route that we endorse. We are sure that, once given serious consideration, the benefits of this route will be obvious and well worth any minimal additional upfront expense.

*Toronto City Council Executive motion Ex 9.1 - 20 from October 2019 that asked Metrolinx to consider options for constructing “portions of the Ontario Line underground where local impacts cannot be reasonably managed.” Also, per directive 2b in MM31.12, City Council requested Metrolinx to review the feasibility of the proposed hybrid Ontario Line developed by the local community.”

Outstanding questions on project rationale and costing

- CAC stated that on more than one occasion, Metrolinx staff including Program Sponsor promised to provide costing of the community proposed hybrid option that is endorsed by the CAC.
- CAC stated that they were shocked to learn that in June 2021 Metrolinx announced that they would not be considering the community proposed hybrid option.
- CAC does not agree with the presented rationale that the hybrid option has many of the same issues/problems as underground options that have previously been studied by Metrolinx.
- Unwillingness to look at community proposed option makes CAC suspicious that commercial development interests for East Harbour station, as well as the entire Ontario Line project, are driving alignment decision-making.
- CAC wonders if protecting commercial development interests are not the reason, then why won’t Metrolinx consider the community proposed option?
- CAC has lost trust in Metrolinx due to lack of communication and sharing of rationale on this question.

Timing of release of materials

- CAC stated that Metrolinx had promised to release the Early Works Report a week before the next Virtual Open House (September 23, 2021), but now it’s being released on the same day. As the community has only 30 days from release of the report, timing, review and addressing priority issues are critical to the community. This will be the last time they have any chance to engage on plans before construction will begin. The CAC feels that the Virtual Open House should be solely focused on a review of the Early Works Report and gathering feedback and issues from the community about it.
- CAC stated that the same thing happened at the last Virtual Open House (June 24, 2021), where key information was released on the same day.

- This leads to CAC, and larger community, not having enough time to review new information so that they can meaningfully engage in consultation with Metrolinx.
- CAC has concerns about the lack of consideration in timing of release of materials and how it limits the scope of input the community can provide.
- CAC is also concerned about a lack of notification of work on the corridor. Work has taken place in the middle of the night along the corridor with no notice to neighbours. This lack of respect makes the community worried about what it will be like during construction.

Meaningful engagement and adherence to CAC Terms of Reference

- CAC feels that communications from Metrolinx do not reflect the information that CAC is asking for nor does it follow what was agreed to within the Terms of Reference; CAC wants to engage with technical and environmental details, such as noise and vibration data and tree removal plans.
- CAC is disappointed that they learn key information through other parties and not directly through Metrolinx:
 - Noted that letter announcing decision to not consider hybrid option was shared with Toronto Transit Expansion office and not with CAC.
 - At the CAC-Metrolinx update meeting on March 25, 2021, Metrolinx did not disclose the new plan to build both Ontario Line tracks on the west side rather than straddling the GO tracks as previously announced. The meeting was well underway when Councillor Fletcher revealed this information to the CAC that Metrolinx had not shared with the CAC.
- CAC expressed that the Metrolinx pamphlet 'Facts vs. Fiction' and Metrolinx social media communication referring to 'community myth making' was not helpful to facilitating dialogue when they have not provided the information necessary to dispel 'myths.'
- Actions to date has led CAC to conclude that Metrolinx is not meaningfully engaging CAC in the consultation process and that this is not consistent with the CAC Terms of Reference which states in the *Roles and Responsibilities of Metrolinx*:
- *"Metrolinx is a partner with the CAC and will endeavour to maximize the community building opportunities that are available as part of the project. Metrolinx will to the best of its ability:*
 - *Support the CAC with the expertise it needs to provide strong advice to Metrolinx.*
 - *Ensure that CAC is kept up to date on design and planning work to ensure the work of the CAC is integrated with the Metrolinx project team. Among other things, Metrolinx will ensure that members of the Metrolinx Design Team are available to provide information to, and receive information from, the CAC, to assist the CAC and Metrolinx in fulfilling their roles and responsibilities under these Terms of Reference.*
 - *Give careful consideration to all advice provided by the CAC in a timely fashion.*
 - *Incorporate wherever possible the advice received from the CAC.*
 - *Communicate with the CAC with clarity, timeliness and transparency."*
- Furthermore, the CAC is looking to maintain a dialogue with Metrolinx as one of its key stakeholders. This requires questions being answered by the right people: senior project team members.
- CAC asks that a side-by-side costing and analysis of the hybrid underground plan next to the existing plan be undertaken and shared, and states that this is now a requisite for rebuilding community trust.

CAC remains pro-transit

- CAC remains pro-transit and is open to discussing project elements such as noise/retaining walls that they recognize will be built along the rail corridor, and is looking for a more meaningful engagement and communication process. The CAC wants the ability to have meaningful input regarding the design of the project, not just details regarding aesthetics.
- CAC understands the need to build transit. There is a right way to build transit and the current process needs to change to ensure the impacts on communities are minimized.
- CAC is not advocating for a tunnel under the Don River; they support East Harbour Station above-grade plans; the community is asking for the Ontario Line alignment to cross the Don River to the south side of the Lower Don Bridge, not the north side; this will allow the trains to then move to the east from the station, cross a short path through East Harbour development, where the trains will descend into a portal south of Eastern Avenue where the current “XYZ Storage” building is located and where it will then meet up underground with the original Relief Line plan with underground stations at Queen/Carlaw and Gerrard/Pape.

Next Steps

LURA shared this summary report with CAC for review in advance of sharing it with Metrolinx. The next opportunities for CAC to provide feedback include a Virtual Open House on September 23, 2021, an online digital feedback tool available for three weeks starting September 23, 2021, the Public Comment Period on the Early Works Report from September 23 – October 23, 2021, and in-person engagements with the Riverside Community Office including Information Pop-ups.

Opening Statement by Save Jimmie Simpson

We started this community group because we were concerned about the Ontario Line and we are determined to have an impact on current plans. Since the LSE CAC was already in place, we decided to take on a role of advocacy and education. We support public transit expansion but this current plan is not workable for us or our neighbourhood.

Opening Statement from Metrolinx

We are here to listen and address the misinformation. First, we are not expanding into neighbourhood spaces and in many areas we will not extend beyond the existing property lines. Second, noise and vibration levels will actually be lower at many parts of the community due to the mitigations we have planned. Third, we recognize how important park space is and our current plan allows us to protect park space in the long term. Jimmie Simpson Recreation Centre and the basketball court and hockey rink will continue to remain open.

Discussion

- SJS: In other environmental assessments, there are criteria and weighting used to evaluate different designs. Ontario Line seems to be influenced by land development interests, cost and construction duration. Impacts to parks and adjacent lands do not seem to factor into your decisions or choices. Can you please provide a chart with weighted numbers so we can understand how you are making decisions?
 - MX: We don't have a weighted model in the evaluation, we have a business case model. For the strategic part, we look at community impacts, natural environment impacts, network performance, operations, passenger comfort, constructability, cost, and schedule. For the economics part, we look at the financial business case and the constructability part. We look at how many people can be served by transit, how much travel time can be saved, how many connections can be made to existing transit and how it all can be mitigated.
 - We started with the Relief Line and building upon that with multiple alignments looked at. Critical points are the interchanges at Exhibition and East Harbour which provide relief to Union station, Line 1 and 2.
- SJS: Was there any elevation criteria that was used to put the Eglinton Crosstown extension underground when there is a lot more space compared to the Ontario Line plans in our neighbourhood?
 - MX: We don't own the right of way in Eglinton and we have an existing rail corridor that we will be using because we are confident we can mitigate impacts.
 - The comparison graphic you circulate shows De Grassi street and we are not going to be in that street as we are in our rail corridor.
- SJS: Who makes the final decision on alignment and design? The Relief Line had an advisory committee that consulted with six different route options with various criteria which included health.
 - MX: We have technical experts from around the world study various alignments through this area and the best one was approved in 2019. Sponsor team can make

recommendations to management and government. We are confident that the perceived negative impacts can be dealt with effectively via mitigation.

- SJS: You have not defined what is meant by the Metrolinx right of way. The drawings you have shown leaves out any measurements. The City of Toronto report identified the Metrolinx rail corridor to be 25 metres in width at the narrowest section.
 - MX: As you can see from the cross section, we can fit in the rail corridor and we are happy to share technical drawings once we get into more detailed design. The rail corridor varies in width between 34 and 41 metres.
- SJS: Why will you be twinning the bridge at Logan and Dundas?
 - MX: Under the straddle approach, we were going to add separate Ontario Line bridges on either side. With the refined plans, we are now replacing the bridges because it is the right thing to do.
- SJS: As a mother, how you justify putting a portal so close to Pape Elementary School? I am concerned about construction, over safety and impacts during operations.
 - MX: Work in this area is very similar to the work proposed in the Relief Line. There were conversations with the principal and parent council. With the mitigations we have, the quality of the kid's education will not be impacted and in fact, some of them will be able to get to school faster.
 - We have constructed close to schools before and we will have more to share how this can be done successfully once we reach a specific level of design. We look forward to feedback as those plans get developed and shared.
- SJS: You claim that Leslieville will be quieter once the Ontario Line is completed. Can you provide current and future noise and vibration numbers so our experts can vet this data? According to our research, Metrolinx noise walls can reduce noise by 5-10 decibels at best.
 - MX: This study will be shared in the forthcoming Lakeshore East Joint Corridor Early Works Report. There is no mitigation currently in place and preliminary results show the planned mitigations will be effective.
- SJS: Metrolinx has confirmed to us in writing that vibration will exceed industry standards in a past letter Malcolm sent.
 - MX: We are working towards the industry standard of 0.1 millimetres per second for subways which is the level of perceptibility provided by the Ministry of the Environment.
 - If we had included that in a letter, it might have been during certain parts of the construction and we will be working with the City to mitigate that as much as possible.
- SJS: we are concerned with increase in diesel trains service in our rail corridor. There are vulnerable residents nearby and diesel trains have carcinogenic properties. Our estimate shows a 200% increase in diesel train service. What is the increase in the next five years?
 - MX: We need to evaluate that question because we have service levels impacted by COVID. We will check in with our service planning department to come up with the best answer with the available information and estimates we have at the moment. The overall goal is to transition from diesel to electric and not have as much diesel as you experience today.
- SJS [REDACTED]: I want to be on record saying that the mature tree line is our current barrier and mitigate the audio and visual impacts from the rail corridor.
- SJS: Will Metrolinx answer all of our factual questions in writing?

- MX: Yes.
- SJS: We are mindful of the staging needed for Eglinton Crosstown. What are the staging requirements for the current Ontario Line plans? How long will the construction take?
 - MX: Crosstown is different than Ontario Line because we have access to our own right of way – the existing rail corridor. We have been working to arranging construction traffic so it will be only accessed through main streets. Most of the construction will take place right within the rail corridor itself.
 - Right now, we are still working out how long construction would take.
- SJS: Will you be using the parks for staging or laydown? What about the Gerrard Dog park?
 - MX: No, we will not. In a few places, we will need to use small slivers to do bridge work but it will be temporary.
 - For the Gerrard dog park, at the end of the day there will be a net gain but for the interim, there will be a temporary loss.
 - We are identifying parameters for the future bidders which include reducing park impact as much as possible.
- SJS: Where does this \$800 million figure come from to go underground? If it does cost \$300 million to go under the Don, that should be removed as our plan does not call for that. City council has asked a number of times for costs to tunnel this portion of the Ontario Line. We think the amount is much less and we want Metrolinx to release a detailed costing so we can analyze the numbers.
 - MX: In response to the community and City council, we looked at a number of underground options, in addition to the Relief line. We looked at putting a portal south of Leslieville station. We looked at putting a portal just south of Eastern avenue as an option. We looked at undergrounding the entire alignment compared to the base case. The result was an additional \$805 million which is mostly two deep stations at Leslieville and Gerrard.
 - We have shared the detailed costing with the City of Toronto. We have not yet shared the numbers for this new Munro option yet.
 - We looked at the Munro alignment and full credit to the East Harbour above ground transfer. As the plan goes east, there is the large Enbridge facility to get over. The alignment is about 300 metres longer than the current plans and we price it at \$870 million more expensive.
- SJS: You committed to no impacts to Jimmie Simpson recreation centre. Can you also make that same commitment to Bruce Mackey and Jimmie Simpson Park as well?
 - MX: Our dedication to the parks and trees are very strong and we look forward to showing you how we will have very minimal impacts to the parks.
- SJS: We think the LSE CAC is already meeting with you regularly so we think they are best suited to continue sharing information with us. We think it is very important we have monthly meetings in order to stay connected. Our community is clear: we don't care if it costs \$800 million, we want the Ontario Line underground.

Ontario Line

Update for Lakeshore East CAC

March 25, 2021

Agenda - March 25, 2021

- Safety Moment and Introductions
- Lakeshore East Joint Corridor alignment update, alternative considerations and costing estimate
- Ontario Line Early Works and EA Update
- Noise mitigation
- Engagement timeline
- Discussion

Alignment Considerations

- By running the Ontario Line above-ground in Riverside and Leslieville will ensure a seamless customer experience while reducing impacts to our communities. This means faster journey times and limiting property and construction impacts while ensuring frequent, safe and reliable service.

 ✓ Eliminate 3 to 5 escalators needed to get from the surface to Ontario Line platforms

 ✓ Cut 4.5 minutes of added connection time between surface transit and platforms

- Tunnels/stations would need to be nearly 40 metres deep to avoid the Don River.
 - Longer connections between Ontario Line and GO trains at East Harbour would mean fewer transfers and less crowding relief at Union Station.
- Similar depths would be needed until the station at Gerrard to avoid major sewer mains (midtown interceptor sewer).

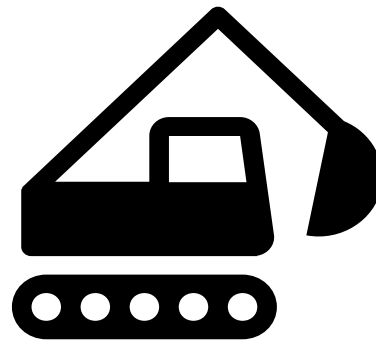

Ontario Line 
Streamlined construction

Coordinating Ontario Line and GO expansion work in the same joint rail corridor streamlines construction that would have been spread out into separate areas under previous plans. This minimize impacts to local traffic and streetcar services during construction.

Alignment Considerations - Tunneled Option

- Under the previous proposal, tunneling plans in Riverside and Leslieville would have resulted in major excavation sites and adjoining construction laydown areas in the community, which would have impacted multiple businesses and residential properties.
- Using a sequential excavation method (SEM) would have taken longer and meant more of an impact to Queen Street.

+ 15 to 24 months of additional construction schedule required

+ Construction laydown areas and impacts to residential/business properties

Alignment considerations, continued

- The Ontario Line needs to be above-ground at East Harbour to give GO customers a new quick and easy transfer to the local transit network, helping to relieve congestion at Union Station by up to 14%.
- Metrolinx considered whether it would be possible to bring the Ontario Line underground just east of the surface station at East Harbour and identified numerous challenges, including additional disruptions it would cause in the community:
 - Would need to rise above-ground through a portal at Queen Street, leaving no room for a station.
 - Would result in permanent street closure, major impacts to neighbouring properties, and increased construction traffic on local streets.
 - Would extend construction by 15 to 24 months.
- A tunneled approach in this area is estimated to increase costs by \$805M to \$1B.
 - Tunneling ~ \$330M+
 - Underground stations ~ \$700M

Lakeshore East Joint Corridor Early Works & Environmental Assessment

Early works timelines and details, opportunities for input

- Field Studies, geotechnical and surveying work – Spring/Summer 2021
- Draft Early Works Report released for public consultation – **early Fall 2021**
 - Anticipated impacts of and recommended mitigations for early works construction.
 - Noise assessment results to inform noise wall construction will be included.
 - **Engagement:** Future CAC meeting planned to include report overview with OL Environmental Team & discussion; 30 day public consultation on draft report.
- Some in-corridor vegetation removals may occur next fall/winter in advance of early works construction. Full details of trees to be removed or pruned to be shared publicly in advance.

Lakeshore East Joint Corridor Early Works & Environmental Assessment

Early works timelines and details, opportunities for input, cont'd

- Draft Environmental Impact Assessment Report (EIAR) released for public consultation – **January 2022**
 - Anticipated impacts of and recommended mitigations for construction and operation (full project).
 - **Engagement:** Future meeting planned to include report overview with OL Environmental Team & discussion; 30 day public consultation on the draft report.
- Early Works main construction start – **Summer 2022**
 - **Engagement:** regular dialogue to review construction schedules and locations, discuss mitigations to reduce disruption.

Noise and Vibration

- Metrolinx is pursuing an array of solutions including, but not limited to, well-designed sound barriers from approximately Eastern Ave to Gerrard Ave which will significantly reduce the sound. Landscaping, new trees and greenery will reduce the visibility of the corridor and the trains that will operate within it.
- Metrolinx is awaiting results of environmental studies that will determine the recommended heights and locations of barriers – **expected Summer 2021**. Initial modelling results indicate seamless noise walls will be effective at reducing average daytime and nighttime noise at nearby residences by at least four decibels (approximately 25%) below current levels, and single train passbys by approximately 50%.
- Metrolinx was already planning a wide array of other proven solutions for reducing noise and vibration at the source such as continuously welded rail, rail isolation systems and more.

Noise Barrier Design

- As the alignment and bridge layout options advance, Metrolinx will work collaboratively with City of Toronto staff on noise wall design concepts that integrate with area parks.
- In addition, Metrolinx is gathering input from City in order to advance design of the retaining wall structure that will support the wider corridor.
- **Engagement:**
 - East segment virtual Q & A, including noise barrier design concepts – week of April 12
 - Public engagement on noise barrier heights, locations and design – Summer 2021

Design drivers

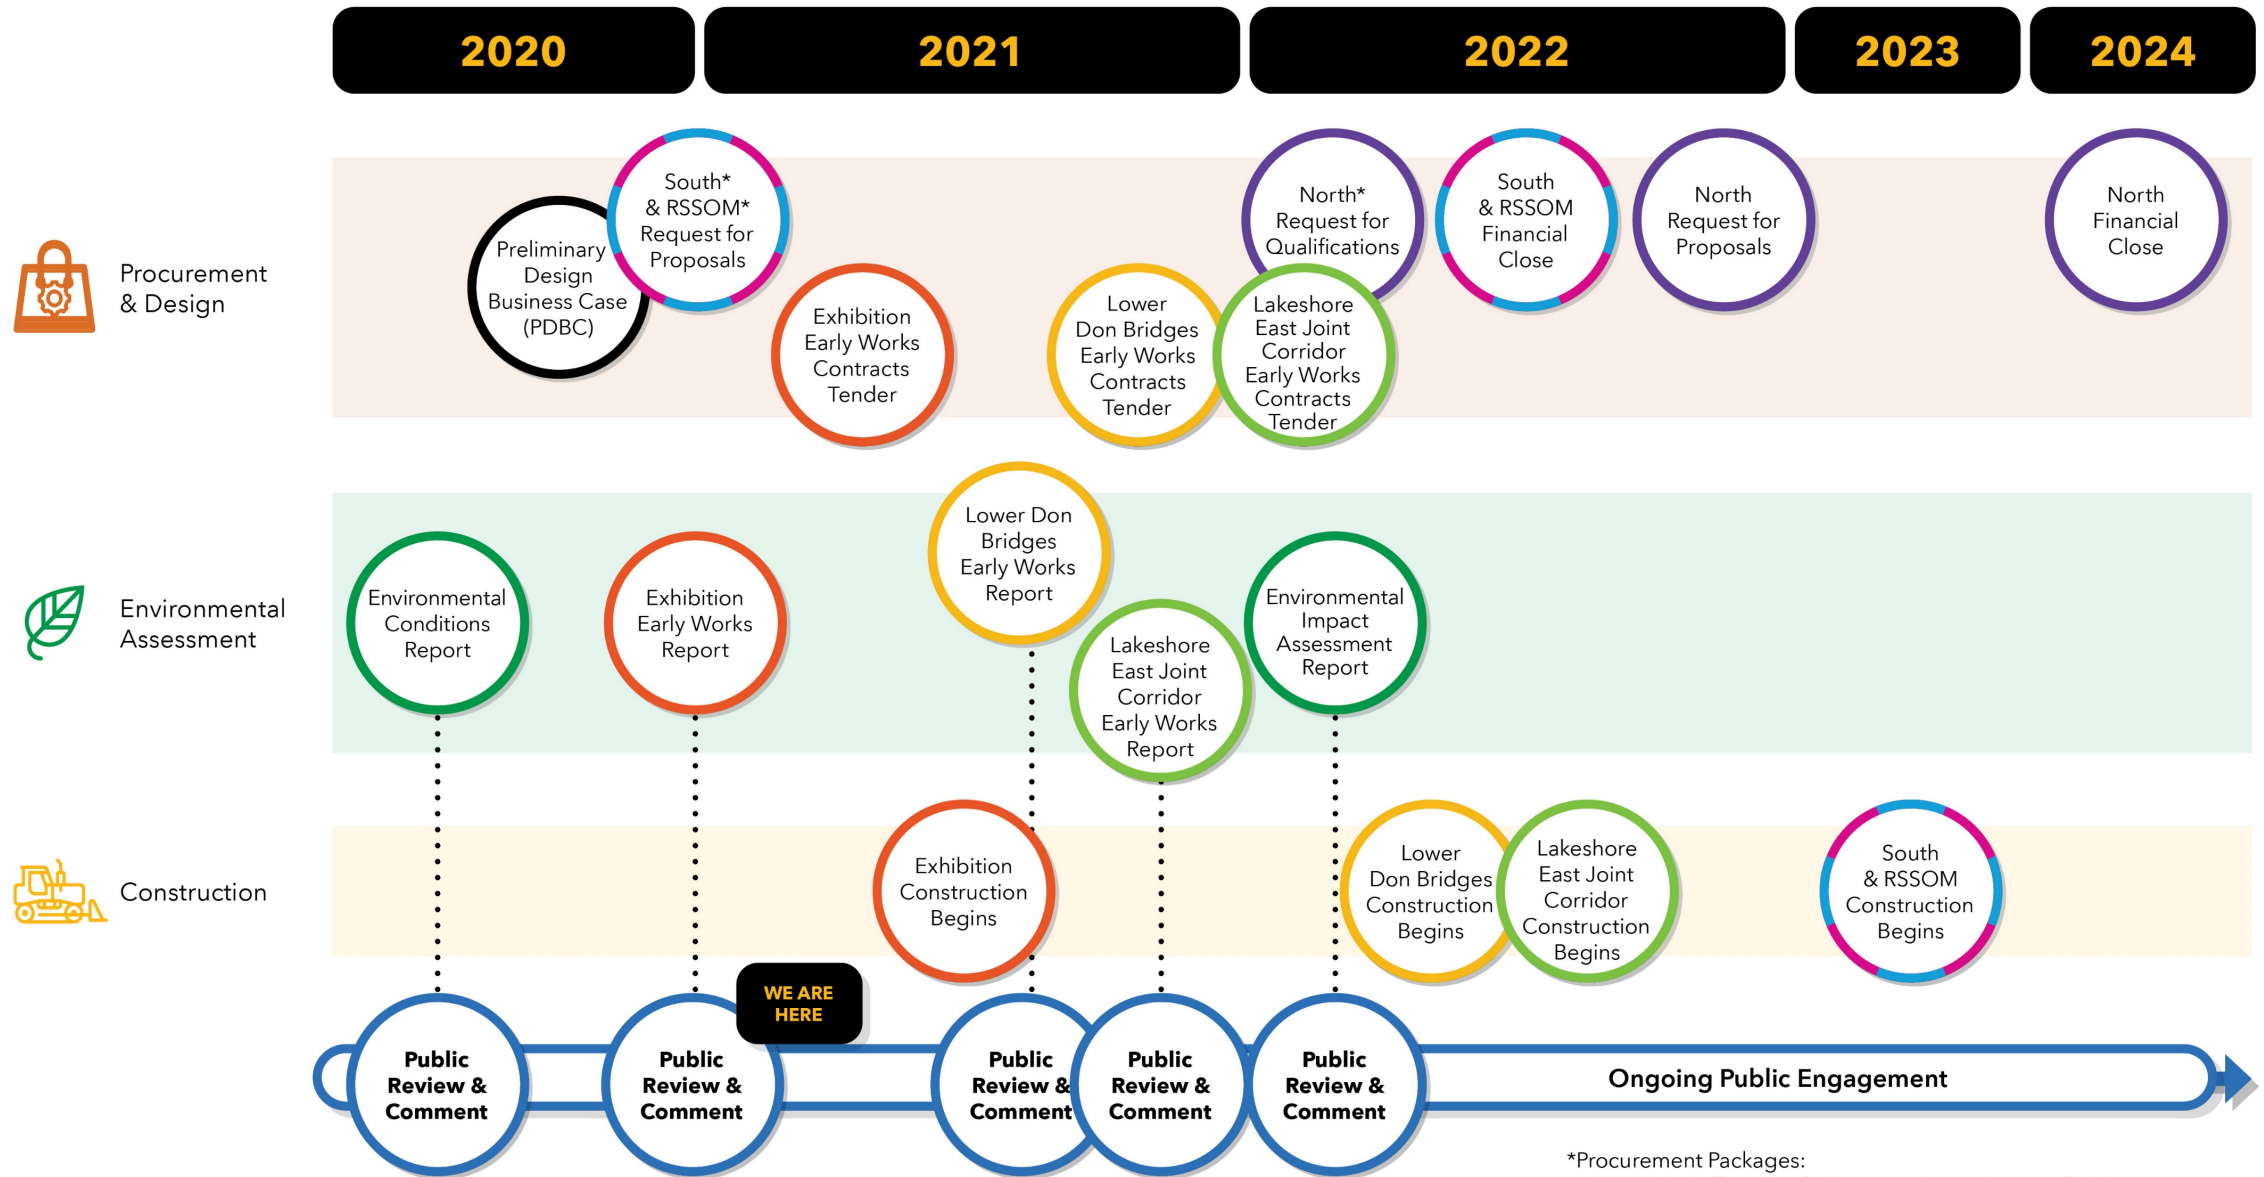

Conceptual noise barrier design for reference. Noise barriers of up to 4-5 metres may be required in some areas but a variety of techniques can be employed to minimize the visual impacts.

Meeting Purpose

[REDACTED]

Agenda

[REDACTED]

LSE CAC Statement

- The CAC wants to be on the record as objecting to the premise of the current plan to run this two kilometers section above ground along the rail corridor. Members of the Leslieville/Riverside Community have presented many reasons to support our position that this two kilometers section should go underground, and we're extremely disappointed with what we see is a minimal effort by Metrolinx that you put into complying with the Toronto City Council's motions requesting that you consider alternatives for the station locations and alignment, including placing the section from East Harbour station to Gerrard street underground. So again, we asked Metrolinx to conduct an unbiased study of putting this section underground. If your analysis shows that running directly under the rail corridor isn't feasible, that doesn't mean that you should give up. It is still your responsibility to dedicate a sincere effort to finding the

best underground routing option for this section, and then cost that option for serious consideration. We just don't believe that Metrolinx has done this sort of due diligence, or conducted a meaningful consultation with the community. We sincerely hope that the situation will improve in the future.

Noise Mitigation

- Metrolinx presented that modelling results to date indicate that implementation of noise walls will result in future noise levels that are noticeably lower than current noise levels in the community.

Discussion

- MPP Tabuns asked why LSE Joint Corridor Early Works got pushed from 2021 to 2022.
 - MX: No construction will begin until after the EA process is complete.
- Regarding noise walls, we know technology has not been chosen for the Ontario Line, what are you modelling and are you considering GO Expansion as well?
 - MX: Our model uses train noise levels corresponding to that of trains currently running elsewhere that we expect future Ontario Line trains to be similar to. Canada Line in Vancouver is one example. We are also including sound limits in the specifications of the new vehicles to limit the noise levels at source. We have factored in GO Expansion as well – in other words, we are studying the combined noise levels of Ontario Line and GO Expansion.
- What is the current decibel level in the corridor? Will the 25% reduction (four decibels) be noticeable in real world conditions, especially with the future increases planned for diesel traffic?
 - MX: Information on the current sound levels is provided in the Existing Conditions Report and the modeled data for current and future conditions at additional receptor locations will be provided in a future impact assessment report. **The reduction in sound levels is anticipated to be noticeable. The modelling has factored in future planned diesel train traffic.**
- Our community is very skeptical about the noise walls being effective. We are doubling our corridor and even if there is good sound walls, it is effectively pointless if there is more trains passing by, particularly diesel trains. The Agincourt community was promised 4 metre high noise walls but only got 3.5 metres.
 - MX: We are aware of experiences in Agincourt. Every project is different and our project team will use different mitigation measures as warranted for different communities.
- Why didn't the final ECR have more noise and vibration receptors in Leslieville/Riverside? How do you know what measurements you took were actually accurate?
 - MX: The ECR documented baseline noise and vibration measurement data which provides a record of existing conditions. For the assessment of operational noise and vibration, we place receptors within a computer-based model in many more noise and

vibration-sensitive locations, including those closest to the corridor, and our models use data from every receptor to establish a baseline of conditions. A conservative baseline is modelled and will be revised if needed. The future conditions are then modelled at the same receptor locations considering future grading, corridor configuration and mix of trains, to enable impacts to be predicted and mitigation options to be reviewed. During the mitigation review, more receptors are typically modelled to evaluate the effectiveness and extents of mitigation required.

- Councillor Fletcher raised that Fontbonne Ministries views noise and vibration to be a great concern to them and did not appreciate the mitigations Metrolinx has proposed.
 - MX: We presented a suite of mitigations used in other projects and we are working closely with them to navigate impacts caused by the Ontario Line.
- We have not seen effects of Ontario Line and RER together, we have only seen bits and pieces.
 - MX: Our project team is taking time to advance modeling and detailed design through this area that respects the community's concerns.
- When are you building the noise walls? Will they be seamless and in the MX ROW? Will the community have input?
 - MX: Yes, we will be building the retaining and noise walls as part of the Early Works in the MX ROW. The noise walls will be seamless and we do plan to present some options to the community for public feedback.
- Why was the \$800 Million cost released to the media before it was shared with our community? What does that even capture?
 - MX: The \$800 million to \$1 billion capital cost is associated with a variety of underground options we looked at. The more we tunnel, the higher the cost. More important to us was the increased community impacts and longer construction time.
- Why did you tunnel a portion of the Crosstown and currently have downtown Ontario Line stations below 40 metres. Our community doesn't trust you and this presentation is just spin. We want to see an underground alignment that avoids all of our parks and community centres.
 - MX: We have promised to not impact Jimmie Simpson Recreation Centre. In addition, it is our goal is to not cut down trees in the parks which are close to the corridor and to minimize impacts as much as possible.
- How can you guarantee our safety if there is no standard created yet?
 - MX: We have completely eliminated train to train risk. In terms of risk to the community, safety is not something that will be compromised as it is built into the design of the Ontario Line.
- MPP Tabuns asked about transit in Washington DC since they have station depths of 60 metres. They have high speed elevators that takes 20 seconds from surface to platform and escalators which take two minutes.

- MX: Travel time is not the ultimate deciding factor as we look at a matrix of considerations when choosing alignment. The fact is there is a viable solution in the shared corridor which allows the Ontario Line to deliver the transit Toronto needs.
- Why is Metrolinx shifting the tracks north/west of the corridor? Does this even benefit the community?
 - MX: Yes, it does. We found there is community benefit, a customer experience benefit, construction improvements, sound improvements and operational benefits.
- Will there be any impacts to surface transit as part of the bridge work required in the LSE EW? What about expropriation?
 - MX: No, we do not expect anything except for maybe lane restrictions as we can stay within the rail corridor.
- Where will the staging areas be and when we can learn how long we will lose portions of our parks?
 - MX: The Early Works Report will provide those details.
- When will the community see the look and feel of the corridor after Metrolinx projects are complete?
 - MX: We will showcase a cross section in mid April through a virtual open house. Between April and June, we will do some more engagement on noise barrier design as well.
- Are you considering an underground option?
 - MX: The plan our teams are advancing is an aboveground option for a range of compelling reasons.

Tone:

1.0 SAFETY MOMENT

█

2.0 WELCOME AND INTRODUCTIONS

Josh Vandezande thanked all for coming and gave a safety moment and a land acknowledgement. Carmen Rapati introduced the GO Expansion Team.

3.0 GO EXPANSION

Siricius Augustin presented the slide deck for the GO expansion.

Councillor Fletcher inquired about timeline for the GO Expansion procurement process, contracts and electrification. Metrolinx provided information on the three early works contracts and clarified that electrification will happen at a later date.

Rishab Mehan (Councillor Bradford's Office) asked what road closures to expect during bridge work. Additionally, a member of the LSE CAC asked what residents can expect from bridge work. Metrolinx advised that there will be lane reductions, but road closures would be minimal and may occur on a one-time basis during the weekend. Metrolinx also added that high level overview of bridge construction, noted that pile driving at night will be avoided as much as possible, and some will be augured to minimize the disruption. The first package to begin, Central Section (Woodbine to Wolcott), confirmed mobilization to start is in January and February 2021 and construction of the bridges (Woodbine Avenue, Warden Avenue and Danforth Avenue bridges) is likely to begin in the spring. Residents and CAC will be given further notice. Grading will be both day and night work, and Metrolinx will look at ways to minimize disruptions.

A member of the LSE CAC asked Metrolinx to clarify planned work at Small's Creek and the impact on trees. Metrolinx provided information about retaining wall construction and work on North and South sides of Creek. Metrolinx agreed to follow up with further information.

Councillor Fletcher asked for specific retaining wall information. Metrolinx clarified distinction between noise walls and retaining walls. Metrolinx will send specific retaining wall location information to Councillor Fletcher's Office later this week.

Councillor Fletcher inquired about community communications plan. Metrolinx provided an overview of various tactics to keep people informed. Metrolinx to add item for next discussion to present overview of communications plan including outreach, and tactics.

A member of the LSE CAC asked about standards used for environmental mitigation efforts. Metrolinx responded that they will bring relevant staff to advise on standards for next meeting.

Councillor Fletcher and the LSE CAC asked about tree removal process and permitting. Councillor Fletcher asked for specific tree locations and plans. Metrolinx provided tree removal process overview, committed to follow up with additional information on tree impacts at Small's Creek, and provide advance notice before tree removal begins. Metrolinx clarified that the arborist report is submitted to the City of Toronto in draft and is pending their comment.

LSE CAC asked what to expect for work at Wildwood Cres. Rishab Mehan (Councillor Bradford's Office) asked about access points. Metrolinx provided an overview of mitigation measures, and community notice process.

4.0 ONTARIO LINE

Josh Vandezande provided introductions and gave an overview of the community relations plan including changes to community relations as a result of COVID-19. Josh Vandezande noted that majority of construction along the joint corridor will occur within Metrolinx property lines, and there will be few permanent property impacts. He also provided an overview of , noise mitigation plans which include sound walls and landscaping to help the new infrastructure blend into the area parks.

Councillor Fletcher and MPP Tabuns asked for cost comparison information for having the line below grade. Metrolinx explained that an underground alignment would be several times more costly, result in more negative impacts for customers and the community.

LSE CAC read community statement and requested it be recorded:

"CAC Community Statement on the Ontario Line - Oct. 13, 2020

Our elected representatives and other members of the CAC are going to ask specific questions about the plan you have put forward for the Ontario Line between the Don River and Gerrard Street this evening.

Before we get into these specifics, we want to be on the record that we object to the entire premise of the Ontario Line plan for our community. You have been told many times by our CAC and feedback from our community, that we do not want this section of the Ontario Line to go above ground along the rail corridor, because of the devastating impacts it will have on us, our families and our community. We don't believe that your consultation process has had any impact since you have not done the due diligence necessary with detailed comparisons of alternative alignments on this section in your draft 'Env. Conditions Report.' Without this information the entire ECR is biased in favour of the one plan outlined in the Business Case, nor have you convinced us that this is the best plan for our neighbourhood. We continue to believe that this 2 km section should be built underground and we are extremely disappointed that you have not complied with the Toronto City Council Executive motion Ex 9.1 - 20 from October 2019 that asked Metrolinx to consider options for constructing "portions of the Ontario Line underground where local impacts cannot be reasonably managed."

We say again, that Metrolinx needs to do an unbiased, comprehensive comparison of the costs and implications to the community of putting this two-kilometre section underground. Without that comparison, we will never be convinced that the plan to run the Ontario Line along the rail corridor is what is best for our neighbourhood. We are a transit community, we believe in transit, we are your ridership, and we support an Ontario Line built right.

So, given that preamble, note that the comments and questions from our CAC members are made under this protest, we can now proceed with the ECR as it is currently drafted."

A member of the LSE CAC asked about benefits of the Ontario Line for the community. Metrolinx responded that further community benefits will be addressed through the business case process.

A member of the LSE CAC asked about air quality analysis and methodology given reduced traffic during COVID-19 and how reduction of tree canopy will affect air quality. Metrolinx provided clarification that existing air quality measurements are based on a historical average with data from different government sources, and air quality data does not include measurements from during the COVID-19 pandemic. Future environmental studies will examine potential impacts to air quality and Metrolinx will look to mitigate contractor construction emissions.

Metrolinx also noted that a tree inventory would be part of future environmental reports, and cited tree replacement metrics included in its updated [Vegetation Guideline](#).

LSE CAC asked about why there were only two noise receptors and no vibration receptors in the Riverside neighbourhood. Metrolinx responded that monitoring locations are to aid in calibration of modelling. Metrolinx added that vibration modelling is a mathematical calculation but some sites with highly sensitive equipment (i.e. MRI machine in a hospital) have specific consideration. GO and TTC protocols are used and there is Ministerial approval on methodology before monitoring begins. Metrolinx is committed to vibration mitigation using practical and proven technology during operation and construction

LSE CAC asked how parkland will be compensated and noted the impact on the green spaces at Gerrard Station. Metrolinx advised that further information will come from the environmental impact assessment report. Amenities will be addressed in socio-economic reports. Metrolinx will look at alternatives to compensate other spaces.

Further detail provided in the attached draft ECR feedback table.

Nicolas Valverde, Constituency Assistant, Councillor Paula Fletcher's Office

1.0 SAFETY MOMENT

2.0 WELCOME AND INTRODUCTIONS

Josh Vandezande thanked all for joining the meeting and explained a presentation would follow.

█ noted that there have been two construction activities occurring and there was no notice of construction received from Metrolinx.

Josh Vandezande invited elected officials to share some opening comments. MPP Peter Tabuns also noted the construction happening without notification as an issue for the community. Councillor Paula Fletcher noted that her constituents do not want tracks operating at a level above their houses, there are concerns about safety of the Ontario Line and the six tracks, and there is a need for a clear protocol for construction notification. Councillor Brad Bradford had the same sentiments as already noted. A member sincerely thanked the elected officials for their generous support.

█ shared details about two construction activities, one was during the overnight period, there was construction noise, the areas included Aldergrove Avenue, Dundas Street and Logan Avenue. The street was blocked by the contractor. Members also noted construction in December in the area of Queen Street and McGee Street. Members indicated that no construction notice was shared and there was only online information. Nicole Panchal responded by explaining that this was an oversight on Metrolinx' part, and we are working through our internal processes to determine what happened. She acknowledged that these projects are going through the planning phase and preliminary stages and our teams are not yet as aligned as we would like. Metrolinx reinforced with our internal teams the importance of keeping the community informed and sharing construction information with the community in advance. █ asked about the possibility of a 24 hour community hotline to be able to respond to middle of the night concerns.

3.0 GO EXPANSION

Nicole introduced the scope of work / delivery packages for the GO Expansion projects. What we used to call RER is now called OnCorridor and OnCorridor includes network wide electrification. All of this is part of our GO Expansion program. OnCorridor includes preparatory work: the LSE West project which includes longer term components such as bridge widenings. Generally, the preparatory work is completed before the main network wide electrification phase. A member asked if LSE West includes Woodbine Bridge and Smalls Creek culvert work. Houtan Moravej, confirmed this.

█ asked for clarification regarding phases 1, 2, 3 and electrification. Mirjana Osojnicky and Nima Nouri explained that the first step or phase 1 for GO Expansion is the early works which is the grading and civil infrastructure work. Phase 2 is the off corridor works such as parking, stations, etc. Phase 3 is the main project, electrification, signaling, On Corr. The OnCorr RFP is in market and will close end of this year. This includes construction for electrification. Construction is to start end of 2021 to beginning of 2022 after the environmental assessment work is complete.

Nicole Panchal stated that for GO Expansion preparatory works , adding a 4th track between Don River and Pape, was part of LSE West package, but now it is part of the Ontario Line Joint Corridor package. We will share more information as it becomes available.

Councillor Paula Fletcher asked for clarification regarding the Environmental Assessments for both GO Expansion and Ontario Line. Mirjana Osojnicky explained that for GO Expansion there were two Environmental Assessments completed: Don Valley to Scarborough TPAP and the Network Wide Electrification TPAP. For the Joint Corridor, there is the two previously mentioned TPAPs, but no further EA for the Joint Corridor. Additional EA work is being done for the Ontario Line. James Francis explained that the EA work for the Ontario Line is currently underway and will be completed prior to construction start.

Nicole Panchal presented the OnCorridor scope of work as described. OnCorridor RFP is in market and will close end of this year. A member explained that she was informed there was no RFP for LSE West, the four bidders were not moving forward and LSE West will be broken into smaller projects. Nicole clarified that LSE West is moving ahead with the Joint Corridor scope of work removed from LSE West project.

█ stated that LSE West will take 3 years. So OnCorr cannot start until after the 3 years of work is completed? Nima Nouri explained that OnCorr is for all five corridors – a network-wide project. Some stretches of the network will be ready for OnCorr to start earlier.

Councillor Paula Fletcher explained that the CAC has an interest in all work from the DVP to Scarborough. For this section, there is the EA for the approved fourth track project. But there is no approved EA for the Ontario Line work. Will the current CAC cover the Ontario Line? Members explained that the CAC has representation from a broad area. The CAC terms of reference is not attached to only one project but any project. Metrolinx committed to a future discussion regarding the terms of reference.

4.0 ONTARIO LINE

Malcolm McKay provided an overview of the Ontario Line. There were five community meetings in February and we had great discussions at these meetings that we can carry forward into our work. The Ontario Line is above ground through the GO Corridor in this area which we are calling the Joint Corridor. Currently, we are completing EA investigations, noise & vibration assessments, and cultural heritage assessments. Procurement activities are being evaluated for the Ontario Line. Andre Marois and Nima Nouri manage the early works for the Joint Corridor. These early works will be completed in advance of the major Ontario Line project. There will be more public meetings in late spring to early summer. We will share the results of the noise and vibration studies. Currently, there is little noise and vibration mitigation along the corridor. But as part of the Ontario Line project, we will improve this mitigation along the entire joint corridor, including on bridges.

██████████ said that Metrolinx has talked about robust community meetings and engagement. We were told the alignment could change. But is it now a done deal that this section of the Ontario Line is above ground? Are you even studying other options?

Malcom McKay explained that ██████████ understanding is correct. There are no studies for an underground section in this area. There are strong benefits of using the Metrolinx corridor and the East Harbour Station platform and a strong community and environmental impacts mitigation strategy: continuously welded rail, automatic controlled trains with automatic braking as well as sound walls will mitigate noise and vibration. We are minimizing the width of the corridor, and will use construction methods that will minimize impacts.

██████████ stated that Jimmy Simpson Centre is very close to the corridor. Will the corridor impact the Centre? Malcom McKay explained that it is anticipated that the project will pass the Centre without impacting it. And we are working to minimize property impacts along the corridor.

██████████ asked what is going to happen to the bridges? How much work will be done on the bridges along the Joint Corridor? Malcom McKay explained that there is a separate body of work for the six bridges. More information will be available on this in late spring. We are looking at the heritage significance of the bridges, their conditions, if there is a need to rehabilitate the bridges. The new tracks will straddle the current GO tracks.

Josh Vandezande explained that getting public feedback on our projects is important. This feedback is balanced against other factors. Our next round of public meetings may be an online experience due to the ongoing public health situation. We are looking at online formats to make our teams and their expertise available for community members to ask questions. The Riverside Community Office opening is delayed.

Councillor Paula Fletcher asked about the need for a Leslieville Station. Malcom McKay explained that this station is the interchange for the TTC street car. There is a benefit to have a stop at this location.

█ explained that the community does not want the subway above ground and asked why Metrolinx is not considering this at all, suggesting that Metrolinx does not value input received. In response, Malcolm McKay explained that all feedback is taken into consideration and we weigh this against the overall program and satisfy as many stakeholders as possible.

█ asked what will happen to Pape Avenue School? The school is very close to the tracks. Have you gotten in touch with the school? Malcom McKay explained that we are assessing the impacts on the school and we are speaking with the school board.

5.0 ENVIRONMENTAL PROGRAMS: JOINT CORRIDOR

Josh Vandezande asked if members had any questions about the environmental studies timelines on slide 13. █ asked about timing of the EA reports. Josh Vandezande explained that we have been as precise as possible at this time and will keep updating the LSE CAC. Mirjana Osojnicki stated that the draft EA reports for OnCorr should be complete this summer and the report posted a month or two later.

6.0 WRAP UP AND NEXT MEETING

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

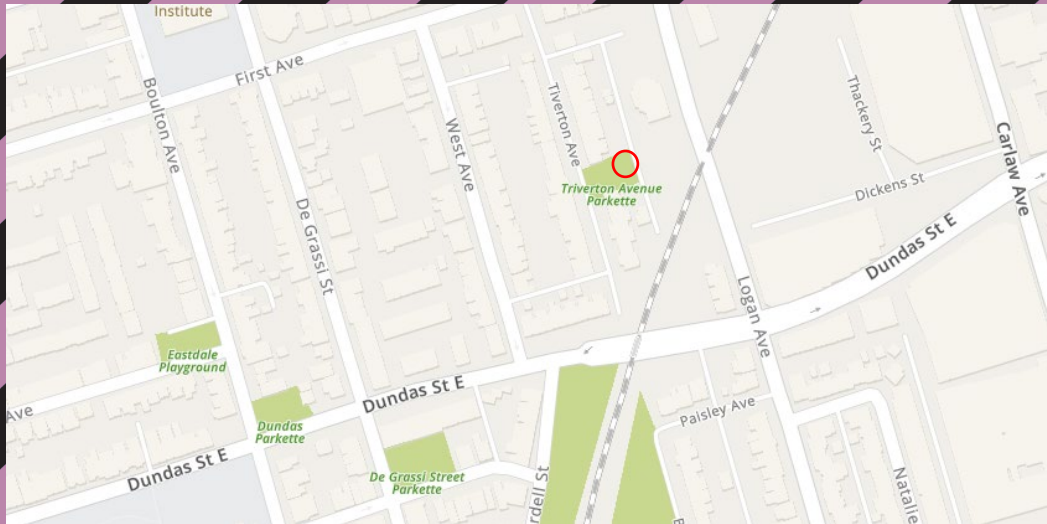

The Ontario Line Community Relations team

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

H [REDACTED]

Thank you for taking the time to meet with us today. It was great to connect with you, and have the opportunity to provide updates about the Ontario Line. I've attached the slide deck from today's meeting. As the project advances, we look forward to continuing the conversation with you, and the Leslieville BIA. If it's ok with you, we'd like to setup a follow-up meeting with you and Jennifer regarding the concerns about the advance notices of work.

Thank you and please don't hesitate to contact us if we may be of service,

SIMON GRANAT

Riverside & Leslieville Business Improvement Areas - Community Partner Meeting Summary Report

Meeting Details

- Date: September 16, 2021
- Time: 2pm – 3pm
- Location: Zoom
- BIA Participants: 5

Meeting Participants

LURA Consulting: Ciaran Thompson, Liz McHardy, Sayan Sivanesan

[REDACTED]

[REDACTED]

Councillor Fletcher's Office: Laura Anonen

Meeting Overview

The purpose of this meeting was to provide an opportunity for the Riverside BIA and Leslieville BIA to discuss their feedback on the community discussion process, and to share details on upcoming engagement opportunities for the East segment of the Ontario Line. Laura Anonen, Constituency Assistant for Councillor Paula Fletcher, also attended the meeting as an observer. The meeting began with introductions and a review of LURA's role as an independent third-party facilitator, followed by an overview of project details and design features that Metrolinx is seeking community feedback on. The remainder of the meeting was an open discussion to gather BIA member feedback.

Summary of Feedback Received

The following summary documents the feedback received from the Riverside BIA and Leslieville BIA and is organized by key themes. This summary includes feedback received from the BIAs at the September 16th community partner meeting, as well as feedback received through email.

Uncertainty on local business impacts

- The BIAs are concerned that they do not have information on how local businesses in Riverside and Leslieville will be impacted by construction.
- In particular, the BIAs are asking for details on:
 - What are the construction area boundaries and timelines?
 - Where will construction vehicles be parked? Where are the laydown areas?
 - What will the impact on foot traffic be for local businesses?
- Hearing about the experience and concerns of other BIAs that are being impacted by Metrolinx construction work, the Riverside and Leslieville BIAs are concerned that Queen Street will be closed for several years. They are asking for specific clarity on what sections of Queen Street will be closed and for how long.
- Many local business owners are speculating, due to lack of detailed information, that their business will be forced to shut down or relocate for an indefinite amount of time and are unsure if their business can survive this.
- The BIAs do not know how to respond to these concerns being raised by local businesses.

Collaborating on mitigating concerns

- The BIAs are asking that Metrolinx collaborates with them on addressing and responding to local business concerns.
- As an example, the BIAs can flag frequent questions asked by business owners that should be addressed in Metrolinx communications.
- The BIAs stated that there has been a breakdown in trust in the Metrolinx community engagement process. There is a feeling that the BIAs are being engaged with after decisions have already been made, and that they are not updated with relevant information.
- The BIAs are asking that Metrolinx involves them in discussions before decisions are made, and that Metrolinx be more proactive in having discussions with the BIAs so that trust in the Metrolinx community engagement process can be repaired.

Unclear on the community office and liaison role

- The BIAs are concerned that the Metrolinx community office in Riverside will be unable to provide answers with sufficient details and are seeking clarity on the scope of concerns that can be brought to the office or to the community liaison. Furthermore, the BIAs are looking for clarity regarding the role of the community liaison.
- The BIAs expressed being hesitant to promote updates from the community office because they are unsure on how to frame the office's mandate and ability to respond to specific questions.

Feedback on community discussion process

- The BIAs are concerned that Metrolinx is jumping ahead to discussing end finishes, noting that the community will have difficulty discussing the proposed design features when basic questions about local impacts have not been sufficiently addressed.
- The BIAs stated that many people they know who live on properties near the development, are unclear on what the impact to them will be, and that the inability to anticipate the future is leading to community anxiety regarding the project.
- The BIAs stated that it shouldn't be individuals' responsibility to try and find answers from Metrolinx, rather Metrolinx should be more transparent and proactive about sharing the information the community is seeking.
- The BIAs recommend that Metrolinx focuses its narrative on the community's values, such as protecting parks and neighbourhood assets, rather than celebrating transit improvements.

Next Steps

LURA shared this summary report with the BIA members in attendance in advance of sharing with Metrolinx. The next opportunities for the BIAs to provide feedback include a Virtual Open House on September 23, 2021, an online digital feedback tool available for three weeks starting September 23, 2021, the Public Comment Period on the Early Works Report from September 23 – October 23, 2021, and in-person engagements with the Riverside Community Office including Information Pop-ups.

Ontario Line

Update for Riverside BIA

March 2021

Agenda - March 9, 2021

- Safety Moment and Introductions
- Ontario Line Early Works and EA Update
- CaféTO 2021
- Discussion

Lakeshore East Joint Corridor Early Works & Environmental Assessment

Early works timelines and details, opportunities for input

- CaféTO 2021 – Summer/Fall 2021
 - Limited investigation work along rail corridor, continuing
- Draft Early Works Report released for public consultation - **September 2021**
 - Anticipated impacts of and recommended mitigations for early works only. Additional monitoring and modelling results will be included.
- **Engagement with BIA:** Report overview with OL Environmental Team & discussion; 30 day public consultation

Lakeshore East Joint Corridor Early Works & Environmental Assessment

Early works timelines and details, opportunities for input, cont'd

- Draft Environmental Impact Assessment Report (EIAR) released for public consultation – **January 2022**
 - Anticipated impacts of and recommended mitigations for construction and operation (full project). Additional monitoring and modelling results included.
 - **Engagement with BIA:** Report overview with OL Environmental Team & discussion; 30 day public consultation
- Early Works main construction start – **Summer 2022**
 - **Engagement with BIA:** regular dialogue through Community Liaison Committee to review construction schedules and locations, discuss mitigations to reduce disruption

Station serving Riverside and Leslieville

- Station Name
 - Metrolinx has been referring to Riverside in all recent communications relating to the station and neighbourhood
 - Station names are working titles only. There will be a community engagement process to select final names.
- Station location, entrances and design
 - Metrolinx will be sharing reference concepts designs and property impacts – **Spring/Summer 2021, starting with elected officials**
 - **Engagement with BIA:** presentation and discussion of initial design concepts
 - Previous BIA request to be engaged on any impacts to commercial properties, elements of the public realm, and streetscape elements within the Riverside BIA boundaries.

Noise and Vibration

- Noise barriers
 - Public commitment to add effective, well-designed sound barriers, landscaping, and new trees and greenery from Eastern Ave to Gerrard Ave which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it.
 - Metrolinx is awaiting results of environmental studies that will determine the recommended heights and locations of barriers – **expected late 2021**
 - Metrolinx will also be pursuing a wide array of other proven solutions for reducing noise and vibration at the source such as continuously welded rail, ballast mats, rail isolation systems and more.
 - **Engagement with BIA:** presentation and discussion of design concepts – Spring 2021; in advance of virtual public engagement
 - Previous BIA request to partner on art program (not currently in scope)

Summary Timeline

Spring 2021

OL x RBIA and virtual engagement with public and BIA on on station design concepts

OL x RBIA and virtual engagement with public and BIA on noise barrier design concepts

Summer 2021

Café TO

Community Office Opens TBC

Lower Don Bridges Early Works Report

Fall 2021

Joint Corridor Early Works Report

OL x RBIA: report overview & discussion

Winter 2021/22

Environmental Impact Assessment Report

OL x RBIA: report overview & discussion

Spring 2022

OL x RBIA: regular dialogue through Community Liaison Committee

Summer 2022

Joint Corridor Early Works Construction Begins

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

Subject: RE: Quick Question - Riverside Corridor

Hi [REDACTED]

The weather has been terrible but it has been exciting to have interactions and stores opening again.

We are onboarding a facilitator to carry out the noise/retaining wall consultation. Like you identified, it will follow a charrette process where we will socialize what feasible materials can be considered and look to the community to identify the design priorities we should follow based on what is important to the local neighbourhood. I will keep the EETA closely informed on the tentative date and hope we can leverage your community group to raise awareness of this consultation opportunity.

On working groups, there are no plans to begin them right at this moment. Working with Elected Officials in other parts of the line, we have established the foundation for working groups in the future once we are in the construction phase. When Early Works begins in mid-2022, we will establish working groups to ensure better coordination between the community, Metrolinx and our constructor.

On park redesign, the short answer is yes. As noted in the June 24 open house, we are working closely with the City of Toronto's Park and Forestry department to identify opportunities to refurbish or revitalize the existing parks. Once we understand what is possible based on consultation with the City, we will reach out to the community to understand what the local priorities are. This is another opportunity for the EETA to play a role in providing input and raising awareness.

On construction, the sequencing is still being determined. [This presentation](#) lays out the access requirements and timing. As you can see from the slides, the tentative plan is to access the east or south side of the corridor first before accessing the west or north side of the corridor. As part of the noise/retaining wall consultation, we are developing a video to help the community understand how the retaining/noise walls will be constructed along with the sequencing of activities.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Thanks Daryl and Jackie,
Can you tell that re-opening has brought a new level of busy-ness to our collective lives.
What should we expect when looking at the consultation process regarding designing the walls. Are you looking to host charrettes? Will there be working groups on this?
Also, is there an element of park redesign that will be brought into the process?
Onto construction: Construction for 'early works' will begin mid-2022, after the EA report and feedback period
What is the sequencing for early works, can you define that.

Thanks,

[REDACTED]

Subject: RE: Quick Question - Riverside Corridor

Hi [REDACTED]

Absolutely.

Some timelines:

- We expect to start consultation on retaining/noise wall design this summer.
- The Environmental Report for the Riverside and Leslieville Corridor will be shared this fall (currently on track for September). This report will have a 30 day feedback period and assess the cumulative impacts of Ontario Line and GO expansion in the joint corridor.
- In early 2022, we will release the full Environmental report for the entire project as a whole.
- Construction for 'early works' will begin mid-2022, after the EA report and feedback period
- 'North package' construction will begin in 2024

Happy to provide any outstanding timelines. Here is a [graphic](#) which shows all of this.

Daryl

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Capturing ambient sound and video information in Jimmie Simpson Park

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- Work will take place on a single day either on August 31 or September 1
- Duration: Up to 4 hours to capture ambient sound and video
- Hours: 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Metrolinx: connecting our communities

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

Email Edits from Riverside BIA		
Theme	Comment	Metrolinx Response
	<p>Following a review of the public documents released online by Metrolinx in September 2021, please find the Riverside BIA's general comments and then a list of specific comments, questions and requests as follows:</p>	<p>Thank-you for your review of the Draft Lakeshore East Joint Corridor Early Works Report.</p>
	<p>Construction impacts of the Ontario line are a primary concern for the Riverside BIA and its 100+ members who are commercial property owners and businesses in the area of the Queen Street station and crossing of the future Ontario Line. The 'support local' movement that emerged during the pandemic and the survival of main street businesses has come out as a clear priority over the past two years and the fragility of the economic health of local businesses has come to the forefront.</p> <p>Public transit is critically important but it should not be coming at the expense of an already struggling local economy. The Ontario Line Early Works Planning should take greater care and planning to prevent and mitigate impacts to the local economy along Queen Street East.</p> <p>Businesses depend on having a clear and inviting transport corridor to move goods and attract customers. Queen Street East is one of Toronto's busiest arteries for vehicles including transit, trucks, cars and cyclists. The pedestrian realm along Queen is also busy throughout the day and into the evening.</p>	<p>Metrolinx is committed to reducing impacts from early works and minimizing disruption to the community and businesses during construction. Metrolinx will consult with BIAs and local businesses to minimize impacts to businesses during early works construction. This commitment has been added to Section 6.9 of the Early Works Report.</p> <p>The Draft Lakeshore East Joint Corridor Early Works Report identified potential early works impacts and proposed mitigation measures and monitoring activities to reduce impacts as a result of early works. Proposed mitigation measures for reducing impacts to pedestrians and the transit network are documented in Section 6.9 of the report. A transit and traffic management plan will be developed and implemented to mitigate traffic impacts associated with Lakeshore East Joint Corridor early works. The plan may contain measures such as temporary changes to intersection lane configurations, traffic signal timing optimization and modifications to existing signal timing plans. The effectiveness of the transit and traffic management plan will be monitored throughout the construction period and adjustments will be made based on actual field observations, as needed.</p> <p>Currently, a quantitative multi-modal transportation impact assessment is underway to identify traffic impacts as a result of Lakeshore East Joint Corridor early works as well as other nearby construction projects. Metrolinx will co-ordinate with other ongoing projects when scheduling the early works activities to maintain the mobility of road users, and to identify mitigation measures that optimize traffic flow during construction.</p>

Traffic	<p>Businesses have also depended on vibrant and inviting outdoor spaces over this pandemic through recovery programs such as CafeTO outdoor dining program to have a fresh-air spaces where people feel safe and healthy dining. The Cafe TO program is certainly slated to return in 2022 and for the next several years. There are multiple such cafe spaces in the curb lanes along De Grassi Street and Queen Street East which operate during daytime and evening business hours from May through until November - this socio-economic and traffic/transportation related element should be noted and taken into the account within the Early Works reporting and construction mitigation planning.</p> <p>The movement and routes of heavy machinery and construction vehicles which create noise, dust and disruption must be recognized and mitigation measures in order to allow for the continued successful operation of outdoor dining and the local patio economy on Queen Street East put in place. Please find a map below of the 2021 curb lane closures in Riverside BIA alone:</p> <p>Construction vehicles physically blocking roads and preventing passage, blocking sidewalks and deterring pedestrians are a major concern. As well as removal of any parking or curb lane space which has been used for outdoor dining. All of these possibilities were noted within the draft Early Works Report, but no specifics were provided.</p>	<p>Metrolinx will consult with BIAs and local businesses to minimize impacts to businesses during early works construction. This commitment has been added to Section 6.9 of the Early Works Report.</p> <p>The Lakeshore East Joint Corridor Early Works Report documents mitigation measures for reducing impacts to pedestrians and the transit network in Section 6.9 of the report. A transit and traffic management plan will be developed and implemented to mitigate traffic impacts associated with Lakeshore East Joint Corridor early works. The plan may contain measures such as temporary changes to intersection lane configurations, traffic signal timing optimization and modifications to existing signal timing plans. The effectiveness of the transit and traffic management plan will be monitored throughout the construction period and adjustments will be made based on actual field observations, as needed.</p> <p>Currently, a quantitative multi-modal transportation impact assessment is underway to identify traffic impacts as a result of Lakeshore East Joint Corridor early works as well as other nearby construction projects. Metrolinx will co-ordinate with other ongoing projects when scheduling the early works activities to maintain the mobility of road users, and to identify mitigation measures that optimize traffic flow during construction.</p> <p>During early works construction, Metrolinx will reduce construction noise by applying construction noise mitigation measures such as using equipment compliant with noise level specifications from the Ministry of the Environment, Conservation and Parks, siting construction vehicles and construction laydown and staging areas away from sensitive receptors, where possible, and others.</p> <p>Construction laydown and staging areas are anticipated to be located adjacent to the rail corridor and road closures will only be implemented if absolutely necessary. The duration of any required closures will be reduced to the extent feasible. At this time, lane closures on the segments of road that will be required to support bridge works are not anticipated to include business frontage. The local community will be notified well in advance of any closures. During these periods, mitigation measures will be implemented to reduce impacts to the community.</p> <p>To reduce air quality impacts as a result of early works, a plan to manage air quality will be developed to ensure consistent attention to mitigation of dust and particulates from the construction site, and appropriate measures such as using water to suppress dust implemented, along with air quality monitoring.</p>
Noise and Vibration	<p>Please include the addresses 810, 812 Queen Street East as well as 807 Queen Street East on table (page xxv, Noise and Vibration, Construction Vibration) to ensure these commercial properties adjacent to the corridor receive appropriate study for Noise and Vibration Impacts.</p>	<p>807, 810 and 812 Queen Street East are outside of the Zone of influence for vibration sensitive structures. As project planning progresses, the vibration assessment will be reviewed based upon refined project details prior to the commencement of construction, and mitigation measures and monitoring activities will be updated if necessary.</p>
Socio-economic	<p>Identify Construction Staging Areas for early works on a map (xxvi, Socio-Economic and Land Use Characteristics, All Land Uses and Adjacent Lands).</p>	<p>The Lakeshore East Joint Corridor early works project footprint shown in Draft Early Works Report is defined as the area of direct disturbance associated with the early works construction activities, and includes anticipated required construction staging and laydown areas and construction access. The exact locations of the construction staging areas will be determined as planning progresses.</p>
General	<p>Wherever this phrase is noted: "Continue to engage with the City of Toronto and local school board(s), as required, to confirm mitigation measures.", please ADD "Continue to engage with the City of Toronto and local school board(s), local BIAs and businesses, to confirm mitigation measures." (for example, on page xxvii, Socio-Economic and Land Use Characteristics, All Land Uses and Adjacent Lands)</p>	<p>The following text has been added to Table 6.6 of the Lakeshore East Joint Corridor Early Works Report:</p> <p>"Continue to engage with the City of Toronto, local BIAs, and local school board(s), as required, to confirm mitigation measures."</p>

Public Realm	Regarding Public Realm (pg xxvii), please add note that some streetscaping materials/ assets (e.g. hydro pole banners, wraps, sidewalk detailing, street furniture, tree grates etc) belong to the local BIA and not to the City of Toronto and these materials should be noted, logged, documented and then replaced if damaged back to their original custom design or better in consultation with the local BIA. We request that the Riverside BIA Streetscape Master Plan (2018 - http://www.riverside-to.com/streetscape-master-plan/) be referenced, and streetscape features recognized within the report.	The following text was added to Table 6.6: "Consult with the City of Toronto and Business Improvement Areas, as necessary, for restoration of assets owned by the City or Toronto and local Business Improvement Areas." Information on the Riverside BIA Streetscape Master Plan was added to Section 2.2.3 of the Lakeshore East Joint Corridor Early Works Report.
Heritage	Regarding Built Heritage Resources and Cultural Heritage Landscapes, Impacts to, pg xxix, please ensure to involve Riverside BIA in discussions about changes to the De Grassi Street plaque and recognition as this is included in the Riverside BIA's Streetscape Master Plan as an area for an improvement project to better recognize De Grassi Street and its cultural significance, while improving this as an eastern gateway of the BIA.	Metrolinx will continue to engage with the Riverside BIA on heritage impacts as a result of the project. Metrolinx anticipates to share the Draft Heritage Detailed Design Report as part of the Ontario Line Environmental Impact Assessment Report in January 2022 for review. The De Grassi streetscape (OLS-126), as described in the Lakeshore East Joint Corridor Early Works Report, includes the group of plaques in Bruce Mackey Park. This group of plaques is located outside of the project footprint and as a result, no impacts to the plaques are anticipated. Removal and replacement of the existing Queen Street East GO rail bridge may impact the Heritage Toronto Plaque (Riverdale Railway Station plaque) located on the sidewalk on the north side of the bridge. This plaque will either be protected for the duration of construction, or temporarily removed and reinstated once construction is complete. As noted in the report, Metrolinx will consult with the City of Toronto regarding any anticipated impacts to the plaques.
Consultation	On page xxxiv we would like to see consultation with BIAs noted in the list of consultation undertaken given the numerous meetings directly with Riverside BIA over 2020.	Riverside Business Improvement Area is listed in Section 8.3 (Engagement with Community Groups and Stakeholders) of the Draft Lakeshore East Joint Corridor Early Works Report.
Table 5-10 socioec	Please add Riverside Common Park, 657 Queen Street East to your table on pg 103 as it is missing and has been open since Feb 2021.	Riverside Common Park has been added to Table 5-10 and Figure 5-16.
Table 5-11 socioec	Please add the Riverside BIA, 50 Carroll Street to your list of Community Groups on page 104.	Riverside Business Improvement Area is listed in Section 8.3 (Engagement with Community Groups and Stakeholders) of the Draft Lakeshore East Joint Corridor Early Works Report.
	Leslieville': Riverside BIA reiterates concern about Metrolinx's use of the name 'Leslieville' station and 'Leslieville' in communication materials when referring to the geographic area in which the line crosses Queen Street East. This is technically and geographically incorrect and does not take into account the Riverside neighbourhood that this line would cross and in which the station would be situated. Riverside, a formal neighbourhood with a history dating back to the 1800s, and the Riverside BIA, now in its 40th year of operation. Examples of this continued issue are on the map on page 7 of the Early Works report and pg 21 regarding the Traffic Management and Mitigation Study which only mentions the 'Leslieville Community' -this is of great concern as it gives the impression the Riverside Community, which the Ontario Line falls within, is being missed/overlooked within the study.	Riverside and Leslieville communities are referred to throughout the Early Works Report. The figure of the Ontario Line alignment on page 7 of the Draft Lakeshore East Joint Corridor Early Works Report has been revised to reflect 'Leslieville/Riverside Station' in the Final report. Section 2.2.3.2 (page 21) of the Early Works Report outlines applicable environmental assessment and planning studies that falls within the project study area including the 'Leslieville Traffic Management and Mitigation Study' (https://www.toronto.ca/community-people/get-involved/public-consultations/infrastructure-projects/leslieville-traffic-management-mitigation-study/). This study was completed by the City of Toronto and not by Metrolinx.

Noise and Vibration	Noise and Vibration: As noted above, we would request additional measurement locations closer to Queen Street East (e.g. at 812 Queen Street East, Bonjour Brioche and 807 McGee St) and around the area of the Riverside/Leslieville station to properly document baseline environmental conditions around this station.	<p>The noise and vibration assessment has been completed in accordance with the Ministry of the Environment, Conservation, and Parks NPC-115, and NPC-118. The noise and vibration assessment considers City of Toronto Noise By-law 878-2019 which identifies a Zone of Influence for structures more susceptible to building damage. 807, 810 and 812 Queen Street East are outside of this Zone of Influence. As Project planning and design progress, a review of the vibration analysis will be conducted based upon updated information to finalize controls and monitoring requirements.</p> <p>AECOM has conducted baseline measurements as part of the Ontario Line Final Environmental Conditions Report (AECOM, 2020a), to characterise the existing noise levels within the overall Ontario Line Study Area. Baseline measurements taken at monitoring locations representative of the Lakeshore East Joint Corridor study area are documented in Table 4-1 of the Draft Lakeshore East Joint Corridor N&V Early Works Report.</p> <p>In accordance with the MOEE/GO and MOEE/TTC protocols, operational noise is assessed based on predictions. Both existing and future noise levels are predicted in order to provide an 'apples to apples' comparison, at many receptor locations. Furthermore, predictions allow for the assessment of far more receptors than would be possible by setting up noise monitors. This is the standard procedure for transit project assessments in Ontario and similar approaches are used in other jurisdictions. Existing noise levels were measured in several locations within the Ontario Line study area and documented in the Ontario Line Final Environmental Conditions Report.</p>
socio-economic	As the project approaches construction planning we request that "Business Operations" be studied as a socio-economic factor. It is essential that there be a baseline to compare against activities like staging areas, utility relocation, heavy equipment operations, as well as increased impacts on parking due to construction workers, traffic from construction vehicles, and obstruction of regular traffic due to construction, which will cause strain on main streets and secondary streets.	<p>Metrolinx will be working with the City of Toronto and the corresponding Business Improvement Areas to maintain access to businesses and minimize the potential impacts of the early works on businesses.</p> <p>Text has been added to EWR that MX will be working with the City and BIAs to minimize impacts to businesses.</p>
	In summary, the Riverside BIA is requesting that all reports and documentation properly reflect, measure impacts, mitigate, plan for, and fully take into account the business districts that the Ontario Line will be embedded within, including Riverside District. We would like to reiterate our previous request and expectation that a formal agreement will be formed with our BIA similar or better than what was done with BIAs in projects like the Eglinton Crosstown LRT, prior to the start of any construction.	<p>Thank-you for providing your comments on the Draft Lakeshore East Joint Corridor Early Works Report. We have incorporated the Riverside BIA's comments into the Final Lakeshore East Joint Corridor Early Works Report, wherever applicable. We look forward to continuing engagement with the Riverside BIA as the project progresses.</p> <p>Metrolinx recognizes the need to work with local businesses and Business Improvement Areas (BIAs) in the effort to support businesses during the most disruptive periods of construction. Partnering with BIAs Metrolinx has supported the development of new websites, BIA logo's, coupon books, event flyers & signage, shopping bags/promotional items, and community events. BIA members/leadership will also be participants at the Community Liaison Groups .</p> <p>Metrolinx will continue to work with impacted businesses and business communities in conveying the message that local businesses are "Open for Business" and the community remains a viable shopping and working destination.</p>

Letter: Riverside BIA Comments and Questions regarding Metrolinx Draft Early Works Report - Ontario Line Lakeshore East Joint Corridor Early Works (September 2021)

Following a review of the public documents released online by Metrolinx in September 2021, please find the Riverside BIA's general comments and then a list of specific comments, questions and requests as follows:

Construction impacts of the Ontario line are a primary concern for the Riverside BIA and its 100+ members who are commercial property owners and businesses in the area of the Queen Street station and crossing of the future Ontario Line. The 'support local' movement that emerged during the pandemic and the survival of main street businesses has come out as a clear priority over the past two years and the fragility of the economic health of local businesses has come to the forefront. Public transit is critically important but it should not be coming at the expense of an already struggling local economy. The Ontario Line Early Works Planning should take greater care and planning to prevent and mitigate impacts to the local economy along Queen Street East.

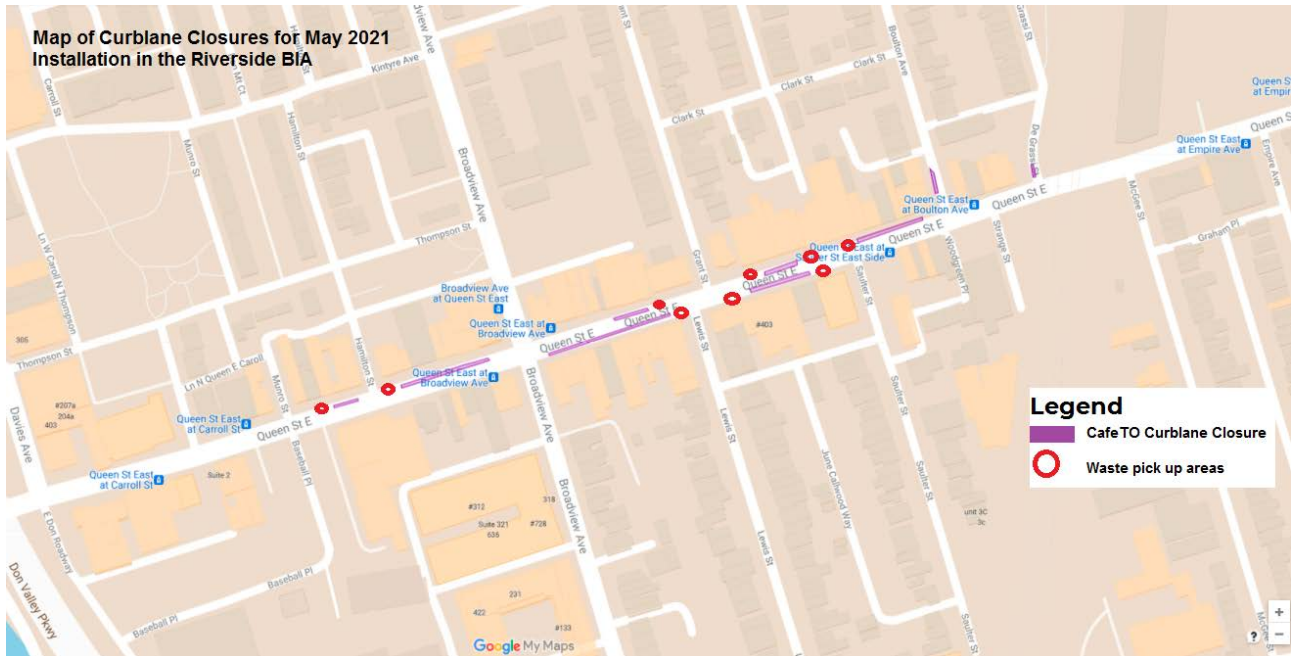

Businesses depend on having a clear and inviting transport corridor to move goods and attract customers. Queen Street East is one of Toronto's busiest arteries for vehicles including transit, trucks, cars and cyclists. The pedestrian realm along Queen is also busy throughout the day and into the evening.

Businesses have also depended on vibrant and inviting outdoor spaces over this pandemic through recovery programs such as CafeTO outdoor dining program to have a fresh-air spaces where people feel safe and healthy dining. **The Cafe TO program is certainly slated to return in 2022 and for the next several years. There are multiple such cafe spaces in the curb lanes along De Grassi Street and Queen Street East which operate during daytime and evening business hours from May through until November - this socio-economic and traffic/transportation related element should be noted and taken into the account within the Early Works reporting and construction**

Riverside

BIA mitigation planning. The movement and routes of heavy machinery and construction vehicles which create noise, dust and disruption must be recognized and mitigation measures in order to allow for the continued successful operation of outdoor dining and the local patio economy on Queen Street East put in place. Please find a map below of the 2021 curblane closures in Riverside BIA alone:

Construction vehicles physically blocking roads and preventing passage, blocking sidewalks and deterring pedestrians are a major concern. As well as removal of any parking or curblane space which has been used for outdoor dining. All of these possibilities were noted within the draft Early Works Report, but no specifics were provided.

We would like to see the Early Works Report reflect the points above under the Traffic and Transportation section AND Socio-Economic and Land-Use Characteristics.

Further, more specific comments, questions and requests include:

1. Please include the addresses 810, 812 Queen Street East as well as 807 Queen Street East on table (page xxv, Noise and Vibration, Construction Vibration) to ensure these commercial properties adjacent to the corridor receive appropriate study for Noise and Vibration Impacts.

2. Identify Construction Staging Areas for early works on a map (xxvi, Socio-Economic and Land Use Characteristics, All Land Uses and Adjacent Lands).
3. Wherever this phrase is noted: "Continue to engage with the City of Toronto and local school board(s), as required, to confirm mitigation measures.", please ADD "Continue to engage with the City of Toronto and local school board(s), **local BIAs and businesses**, to confirm mitigation measures." (for example, on page xxvii, Socio-Economic and Land Use Characteristics, All Land Uses and Adjacent Lands)
 - A. Regarding Public Realm (pg xxvii), please add note that some streetscaping materials/ assets (e.g. hydro pole banners, wraps, sidewalk detailing, street furniture, tree grates etc) belong to the local BIA and not to the City of Toronto and these materials should be noted, logged, documented and then replaced if damaged back to their original custom design or better in consultation with the local BIA. We request that the Riverside BIA Streetscape Master Plan (2018 -<http://www.riverside-to.com/streetscape-master-plan/>) be referenced, and streetscape features recognized within the report.
4. Regarding Built Heritage Resources and Cultural Heritage Landscapes, Impacts to, pg xxix, please ensure to involve Riverside BIA in discussions about changes to the De Grassi Street plaque and recognition as this is included in the Riverside BIA's Streetscape Master Plan as an area for an improvement project to better recognize De Grassi Street and its cultural significance, while improving this as an eastern gateway of the BIA.
5. On page xxxiv we would like to see consultation with **BIAs** noted in the list of consultation undertaken given the numerous meetings directly with Riverside BIA over 2020.
6. Please add Riverside Common Park, 657 Queen Street East to your table on pg 103 as it is missing and has been open since Feb 2021.
7. Please add the Riverside BIA, [REDACTED] to your list of Community Groups on page 104.
8. 'Leslieville': Riverside BIA reiterates concern about Metrolinx's use of the name 'Leslieville' station and 'Leslieville' in communication materials when referring to the geographic area in which the line crosses Queen Street East. This is technically and geographically incorrect and does not take into account the Riverside neighbourhood that this line would cross and in which the station would be situated. Riverside, a formal neighbourhood with a history dating back to the 1800s, and the Riverside BIA, now in its 40th year of operation. Examples of this

continued issue are on the map on page 7 of the Early Works report and pg 21 regarding the Traffic Management and Mitigation Study which only mentions the 'Leslieville Community' - this is of great concern as it gives the impression the Riverside Community, which the Ontario Line falls within, is being missed/overlooked within the study.

- 9. Noise and Vibration: As noted above, we would request additional measurement locations closer to Queen Street East (e.g. at 812 Queen Street East, Bonjour Brioche and 807 McGee St) and around the area of the Riverside/Leslieville station to properly document baseline environmental conditions around this station.
- 10. As the project approaches construction planning we request that "Business Operations" be studied as a socio-economic factor. It is essential that there be a baseline to compare against activities like staging areas, utility relocation, heavy equipment operations, as well as increased impacts on parking due to construction workers, traffic from construction vehicles, and obstruction of regular traffic due to construction, which will cause strain on main streets and secondary streets.

In summary, the Riverside BIA is requesting that all reports and documentation properly reflect, measure impacts, mitigate, plan for, and fully take into account the business districts that the Ontario Line will be embedded within, including Riverside District. We would like to reiterate our previous request and expectation that a formal agreement will be formed with our BIA similar or better than what was done with BIAs in projects like the Eglinton Crosstown LRT, prior to the start of any construction.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- Work will take place on a single day either on August 31 or September 1.
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

 15.6 kilometres of transit service

 Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Thanks Daryl for confirming. We just wanted to ensure the mural as located near there would not be impacted by something that close.

Best,

Subject: RE: Follow-up murals

Hi [REDACTED]

Apologies for the delay. Had a few people out on vacation.

These markings are to inform surveying of the area using a mobile LiDAR scan which is being completed on Queen Street East as well as Eastern Avenue. This marking helps inform the surveying scans.

I found out this marking was incorrectly placed. It should have been painted on the roadway next to the curb and our consultant talked to the surveyor to ensure this does not happen in the future.

I am following up further to see if this will result in future drilling in that location. That said, the initial answers I got was no, it is to help coordinate future surveys.

Hope this helps,

Hi Daryl, I'm wondering what the attached marking mean? It is beside [REDACTED] (just East of McGee) and it is a spot we were planning to put a mural which is much further out from the Ontario line site then the other location I mentioned.

Pls see attached and let me know

[REDACTED]

On Thu, Jul 8, 2021 at 4:13 PM Daryl Gonsalves <Daryl.Gonsalves@metrolinx.com> wrote:

Hi [REDACTED],

Great chatting today. I want to circle back on some topics we discussed:

- Regarding the sidewalk at Queen East and De Grassi, I checked in with our geotechnical project manager. Right now, there is nothing scheduled for that particular corner in terms of geotechnical work. That said, geotechnical work is very fluid and one at one location may lead to additional work in another corner. I cannot

promise that particular corner will not be tagged given the proximity to the bridge. My recommendation is to maybe shift to the sidewalk near Bonjour Brioche to be safe or another location away from the rail corridor. I know that specific location is attractive so if you choose to go forward with it, I will keep you updated accordingly.

- I followed up with our Partnerships Office to get some sort of answer on the request for support. Will follow up with you as soon as I hear back.

Have a good rest of your week!

Hi [REDACTED]

Great. We are confirmed for April 7th from 3-3:45pm. Please see the Teams meeting link below.

In terms of our ongoing work to refine plans in response to the feedback we have heard from the community, I understand from the project team that the goal of this adjustment is to make maximum use of the space in our existing corridor in order to further protect parks and greenspace. By positioning the Ontario Line tracks beside one another on the western side of the existing rail corridor instead of having one track on either side, we are able to minimize our construction footprint even more by limiting station infrastructure to just one side instead of two and better integrate the new stations with the bridges. We'll also be able to provide a much better experience for customers, who will be able to access both northbound and southbound trains from a single centre platform. The change in plans will not cause delays to construction, nor increase costs.

The Ontario Line team has been working hard with GO Expansion colleagues and City of Toronto staff to advance these initial designs to a point that we can bring forward updated plans to the community for discussion. As we mentioned at our recent meeting, we are planning for a virtual open house in April and further discussions regarding noise barrier and station design concepts through the Spring and Summer. We know the Riverside BIA is eager to provide early input into these design conversations and are looking forward to that.

Hope that helps and we'll be in touch soon with more details and a date for the community open house.

Hi Daryl - thanks and yes April 7th 3-3:45pm works well for me and sure pls send a Teams meeting.

Glad to hear the window is being addressed.

On a related note, there was a lot of activity around here over the weekend as I'm guessing

you are aware - I'm hoping to get better insight and information into the change of alignment that is being discussed and shared in the media for the Ontario Line through our area, but that we hadn't directly heard about yet from Metrolinx. If there's a link to more info you can send me in the meantime that I can share with our Board and members that would be very helpful.

Thanks,

Hope you are enjoying the sunny weather today.

Ahead of our next meeting with the BIA members, our team wanted to connect with you about how we are changing our community notices to address the feedback you provided.

Do any of the following times next week work for you? We can set up the Teams meeting on our end.

- Monday, April 5 from 1pm to 1:45pm
- Thursday, April 7 from 3pm to 3:45pm
- Friday, April 9 from 3:30pm to 4:15pm.

Josh also wanted me to mention that he managed to get the worst of the damaged exterior covering off the windows so it doesn't look so ugly while we wait for the replacements, which will be installed on the inside.

Have a good day,

Hi Simon,

Thanks for sending the deck and appreciate all the important updates you were able to share

to help respond to and alleviate our immediate concerns with regard to what's happening this summer - it's truly such a challenging time for local businesses and we were relieved to learn that construction will not be happening this year, and look forward to being involved in upcoming discussions at the earliest opportunity.

Happy to be in touch anytime and provide any feedback that may help support the communications.

Graffiti removal from your leased property

This is a smaller item but important for us as we keep our BIA member frontages clean of graffiti on a weekly basis as part of our member-funded services. Multiple instances of graffiti appeared on your leased storefront in Riverside over the past few weeks and unfortunately the type of film you've applied to the outside of the window was not possible to remove graffiti from. I've attached a photo of some of the graffiti and an attempt at removal (white smudged part) which did not work. The film has since partially been ripped off, as I noted today. **Would it be possible to have that film removed and applied on the inside of the window?** That way we could continue to effectively remove graffiti on the outside and keep it clean with the rest of the frontages along Queen.

Many thanks,

Thank you for meeting with us yesterday. It was great to connect with you, the MPP, Councillor and some of your members. I've attached the slide deck we presented at the meeting. Our website has also been updated with the latest timelines.

As the project advances, we look forward to continuing the conversation. There were a number of topics and questions raised that will require some follow-up or ongoing discussion. Perhaps we could set an agenda for the next meeting together so that it's as

productive as possible. In the meantime, we'll be considering some of your feedback about the community notices and may reach out to have a follow-up chat. Hope that's ok.

We appreciated the opportunity to be connected to the Leslieville BIA and will reach out to them as well to continue the dialogue.

Thanks again for your time and please don't hesitate to contact us if we may be of service,

SIMON GRANAT

Riverside & Leslieville Business Improvement Areas - Community Partner Meeting Summary Report

Meeting Details

- Date: September 16, 2021
- Time: 2pm – 3pm
- Location: Zoom
- BIA Participants: 5

Meeting Participants

LURA Consulting: Ciaran Thompson, Liz McHardy, Sayan Sivanesan

[REDACTED]

[REDACTED]

Councillor Fletcher's Office: Laura Anonen

Meeting Overview

The purpose of this meeting was to provide an opportunity for the Riverside BIA and Leslieville BIA to discuss their feedback on the community discussion process, and to share details on upcoming engagement opportunities for the East segment of the Ontario Line. Laura Anonen, Constituency Assistant for Councillor Paula Fletcher, also attended the meeting as an observer. The meeting began with introductions and a review of LURA's role as an independent third-party facilitator, followed by an overview of project details and design features that Metrolinx is seeking community feedback on. The remainder of the meeting was an open discussion to gather BIA member feedback.

Summary of Feedback Received

The following summary documents the feedback received from the Riverside BIA and Leslieville BIA and is organized by key themes. This summary includes feedback received from the BIAs at the September 16th community partner meeting, as well as feedback received through email.

Uncertainty on local business impacts

- The BIAs are concerned that they do not have information on how local businesses in Riverside and Leslieville will be impacted by construction.
- In particular, the BIAs are asking for details on:
 - What are the construction area boundaries and timelines?
 - Where will construction vehicles be parked? Where are the laydown areas?
 - What will the impact on foot traffic be for local businesses?
- Hearing about the experience and concerns of other BIAs that are being impacted by Metrolinx construction work, the Riverside and Leslieville BIAs are concerned that Queen Street will be closed for several years. They are asking for specific clarity on what sections of Queen Street will be closed and for how long.
- Many local business owners are speculating, due to lack of detailed information, that their business will be forced to shut down or relocate for an indefinite amount of time and are unsure if their business can survive this.
- The BIAs do not know how to respond to these concerns being raised by local businesses.

Collaborating on mitigating concerns

- The BIAs are asking that Metrolinx collaborates with them on addressing and responding to local business concerns.
- As an example, the BIAs can flag frequent questions asked by business owners that should be addressed in Metrolinx communications.
- The BIAs stated that there has been a breakdown in trust in the Metrolinx community engagement process. There is a feeling that the BIAs are being engaged with after decisions have already been made, and that they are not updated with relevant information.
- The BIAs are asking that Metrolinx involves them in discussions before decisions are made, and that Metrolinx be more proactive in having discussions with the BIAs so that trust in the Metrolinx community engagement process can be repaired.

Unclear on the community office and liaison role

- The BIAs are concerned that the Metrolinx community office in Riverside will be unable to provide answers with sufficient details and are seeking clarity on the scope of concerns that can be brought to the office or to the community liaison. Furthermore, the BIAs are looking for clarity regarding the role of the community liaison.
- The BIAs expressed being hesitant to promote updates from the community office because they are unsure on how to frame the office's mandate and ability to respond to specific questions.

Feedback on community discussion process

- The BIAs are concerned that Metrolinx is jumping ahead to discussing end finishes, noting that the community will have difficulty discussing the proposed design features when basic questions about local impacts have not been sufficiently addressed.
- The BIAs stated that many people they know who live on properties near the development, are unclear on what the impact to them will be, and that the inability to anticipate the future is leading to community anxiety regarding the project.
- The BIAs stated that it shouldn't be individuals' responsibility to try and find answers from Metrolinx, rather Metrolinx should be more transparent and proactive about sharing the information the community is seeking.
- The BIAs recommend that Metrolinx focuses its narrative on the community's values, such as protecting parks and neighbourhood assets, rather than celebrating transit improvements.

Next Steps

LURA shared this summary report with the BIA members in attendance in advance of sharing with Metrolinx. The next opportunities for the BIAs to provide feedback include a Virtual Open House on September 23, 2021, an online digital feedback tool available for three weeks starting September 23, 2021, the Public Comment Period on the Early Works Report from September 23 – October 23, 2021, and in-person engagements with the Riverside Community Office including Information Pop-ups.

Ontario Line

Update for Riverside BIA

March 2021

Agenda - March 9, 2021

- Safety Moment and Introductions
- Ontario Line Early Works and EA Update
- CaféTO 2021
- Discussion

Lakeshore East Joint Corridor Early Works & Environmental Assessment

Early works timelines and details, opportunities for input

- CaféTO 2021 – Summer/Fall 2021
 - Limited investigation work along rail corridor, continuing
- Draft Early Works Report released for public consultation - **September 2021**
 - Anticipated impacts of and recommended mitigations for early works only. Additional monitoring and modelling results will be included.
- **Engagement with BIA:** Report overview with OL Environmental Team & discussion; 30 day public consultation

Lakeshore East Joint Corridor Early Works & Environmental Assessment

Early works timelines and details, opportunities for input, cont'd

- Draft Environmental Impact Assessment Report (EIAR) released for public consultation – **January 2022**
 - Anticipated impacts of and recommended mitigations for construction and operation (full project). Additional monitoring and modelling results included.
 - **Engagement with BIA:** Report overview with OL Environmental Team & discussion; 30 day public consultation
- Early Works main construction start – **Summer 2022**
 - **Engagement with BIA:** regular dialogue through Community Liaison Committee to review construction schedules and locations, discuss mitigations to reduce disruption

Station serving Riverside and Leslieville

- Station Name
 - Metrolinx has been referring to Riverside in all recent communications relating to the station and neighbourhood
 - Station names are working titles only. There will be a community engagement process to select final names.
- Station location, entrances and design
 - Metrolinx will be sharing reference concepts designs and property impacts – **Spring/Summer 2021, starting with elected officials**
 - **Engagement with BIA:** presentation and discussion of initial design concepts
 - Previous BIA request to be engaged on any impacts to commercial properties, elements of the public realm, and streetscape elements within the Riverside BIA boundaries.

Noise and Vibration

- Noise barriers
 - Public commitment to add effective, well-designed sound barriers, landscaping, and new trees and greenery from Eastern Ave to Gerrard Ave which will significantly reduce the sound and visibility of the corridor and the trains that will operate within it.
 - Metrolinx is awaiting results of environmental studies that will determine the recommended heights and locations of barriers – **expected late 2021**
 - Metrolinx will also be pursuing a wide array of other proven solutions for reducing noise and vibration at the source such as continuously welded rail, ballast mats, rail isolation systems and more.
 - **Engagement with BIA:** presentation and discussion of design concepts – Spring 2021; in advance of virtual public engagement
 - Previous BIA request to partner on art program (not currently in scope)

Summary Timeline

Spring 2021

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

Subject: RE: New Metrolinx Ontario Line Community Notice - Investigative drilling work on Saulter and Strange Street -

Good morning [REDACTED]

I appreciate you continuing the conversation with us directly and I apologize for the disruption the work caused to your business.

The crew that is out today will be completing the final stages of this geotechnical work and should be complete it today if the weather cooperates. This work was related to a notice we provided to [REDACTED] early July and physically canvassed in the area as well. Due to equipment malfunctions, bad weather and City permits, they had to delay the final day of work to be completed today. This required work helps the team understand underground conditions so the best construction approach can be determined.

In addition to notifying [REDACTED], I made a note for our team to include you in our digital notification before work starts so you are aware if there is any work near your business as we move forward.

Once again, I apologize for the disruption and I hope you had great weekend business with the sunshine we got Sunday.

Subject: New Metrolinx Ontario Line Community Notice - Investigative drilling work on Saulters and Strange Street - Starting as early as May 25

Hello [REDACTED]

Please find attached a notice about investigative drilling work that will be taking place on Saulters Street and Strange Street, starting as early as May 25th. Should work begin later than the anticipated start date or should work be delayed by unforeseen circumstances, we'll reach out with an update.

As you will see in the notice, some parking may be inaccessible during drilling work hours in the corresponding work area, but access to and within Saulters Street and Strange Street will be maintained, with a flag person directing traffic at the work areas.

This notice is being emailed to Elected Officials, community groups, and will be hand-delivered to area residents and businesses. It will also be carried by field crew carrying out the work, and will also be available on our website.

Please let us know if you have any questions.

[REDACTED]

Not really more development, no. We're still looking at two Ontario Line tracks and four GO tracks within the corridor plus a retaining and noise wall on the outside edges to reduce the sights and sounds of the all the train traffic passing through. As we continue to refine the design, we'll get a clearer picture of how it can be constructed. As soon as we have some detailed plans to share, we'll get in touch.

Thanks for your patience!

Josh

Thanks for this much appreciated

So do you think now that there will be more development on west side that our brewery location will be affected? Prior plan with extensions on east and west the west part was already encroaching pretty close to our building.

Thanks

You may have heard some mention of an update to the Ontario Line plans in the area of the brewery. We wanted to reach out and tell you what we know now and when we expect to be in a position to share more details.

We are looking at reconfiguring the corridor and positioning the Ontario Line tracks beside one another on the western side of the existing rail corridor instead of having one track on either side. We're still committed to fitting the Ontario Line mostly within the existing corridor. Having both of the Ontario Line tracks on the west side would mean we are able to minimize our construction footprint even more by limiting station infrastructure to just one side instead of two and better integrate the new stations with the bridges. We'll also be able to provide a much better experience for customers, who will be able to access both northbound and southbound trains from a single centre platform.

The Ontario Line team has been working hard with GO Expansion colleagues and City of Toronto staff to advance these initial designs to a point that we can bring forward updated plans to the community for discussion. We are planning virtual open house for April to provide an update to the community and seek feedback. As we have mentioned previously, no construction will begin until summer 2022, after a robust environmental assessment has been completed, including public consultation.

We will reach out once further details about the upcoming virtual open house are available. In the meantime, don't hesitate to reach out if you have any questions I can help you with.

Subject: RE: Save Jimmie Simpson - Response to Ontario Line Early Works - Joint Corridor and East Harbour

Hello Save Jimmie Simpson,

Thank you for your comments and review of the Draft Lakeshore East Joint Corridor and East Harbour Early Works Reports. As mentioned at our previous meeting in May 2021, we appreciate your advocacy and feedback which has improved the Joint Corridor design to better serve Riverside and Leslieville.

Public participation in these draft early works reports is very much encouraged. We have held virtual open houses, distributed physical notification, held meetings and engaged residents directly. Although O. Reg. 341/20 sets out the timeline we must follow, we continue to remain open to feedback as we progress with Ontario Line and GO expansion plans in the Joint Corridor.

Regarding vegetation clearing *within* the rail corridor, I am happy to provide clarification and an update. It is important to note that an arborist report is not needed for any removals within our rail corridor and we use the Metrolinx Vegetation Guideline. From Gerrard to Pape, environmental assessment was completed as per the 2017 GO Rail Network Electrification TPAP and no additional tree removal requirements have been identified for Ontario Line needs. From Gerrard to Eastern, clearing is on hold until the Final Lakeshore East Joint Corridor Early Works Report is approved.

Regarding vegetation clearing *outside* the rail corridor, we are waiting on the arborist report to be completed and circulated with the City of Toronto for review. Once complete, we expect to release it to the community in early 2022.

As part of your submission, you made comments regarding noise & vibration and health impacts. Please see attached for our responses to your comments on the Draft Lakeshore East Joint Corridor and East Harbour Early Works Reports. A copy of this record will be included in the Final Lakeshore East Joint Corridor Early Works Report's correspondence record.

We have also received your letter to Malcolm MacKay and Donald Wright. We have comprehensively reviewed the Health Impact Assessment you commissioned and in order to be transparent, we are including the report in its entirety in the Final Lakeshore East Joint Corridor Early Works Report's correspondence record. Comments regarding your Health Impact Assessment can be

found in the second tab of the excel sheet attached.

We look forward to continued engagement with your community group as we move forward with Ontario Line and GO Expansion plans.

Mark Clancy

Attached please find comments from *Save Jimmie Simpson* on the Lakeshore East Joint Corridor and East Harbour Early Works reports. We cannot submit these without making some comments on the process for response to the report which we hope you will seriously consider.

As you are aware, two Metrolinx early works reports (East Harbour and Lakeshore East Joint Corridor), both of which concern Riverside and Leslieville, were released on the same day. Together they total over 3,000 pages of dense, often very technical, content. Despite this huge amount of material, Metrolinx only gave the public concurrent 30-day comment periods for responding to them. One would need to read & understand over 100 pages each day just to review all the information in the time allotted, let alone to compose cogent reactions.

Save Jimmie Simpson, as well as the LSE Community Advisory Committee and the Toronto Board of Health, requested Metrolinx to extend the comment period beyond Oct 24, 2021. Following 'the letter of the law', these requests were not granted. However, nowhere in O. Reg. 341/20 does it prescribe issuing two early works reports on the same day.

We cannot but conclude that this was a purposeful strategy to limit public participation.

Of course, SJS members (community volunteers who are not engineering or technical professionals) were unable to review these reports in full in the available timeframe. Our comments are unfortunately therefore limited to noise and vibration (**section A**) and health impacts (**section B**). We reiterate that we would welcome the opportunity for more time to review the information in full and provide meaningful feedback and other aspects.

Save Jimmie Simpson

Item No.	Reviewer Name	Description	Review Comment	Response & Details (Authors -)
1	Save Jimmie Simpson	Noise and Vibration	Future noise levels with barrier exceed recommended guidelines set by Ontario Ministry of the Environment (55 dB during the day, 50 dB at night) and the World Health Organization. Early Works reports also indicate vibration levels exceed guidelines at a number of receptors. The community funded Health Impact Assessment (submitted as part of this package) found that the underground Ontario Line results in less noise and vibration for our neighbourhood. SJS strongly believes the hybrid underground route must be seriously considered.	As per the MOEE/GO and MOEE/TTC protocols, which are the basis for the operational noise and vibration criteria framework for this assessment, the noise level objective is the higher of existing day-time (Leq,16h) or night-time (Leq,8h) levels, or 55 dBA (day)/50 dBA (night). As existing levels were predicted to be higher than 55 dBA during the day and 50 dBA during the night time periods at all assessed receptors within the report, the existing predicted railway noise level was used as the objective noise level for the assessment.
2	Save Jimmie Simpson	Noise and Vibration	Metrolinx is following MOEE/GO and MOEE/TTC Protocols from 1995 and 1993, respectively. These standards are 30 years out of date and do not reflect the latest scientific understanding about impact of noise and vibration on health. Therefore, we believe they are inadequate measures for this project.	MOEE/GO and MOEE/TTC standards are the current guidelines set by the province of Ontario for GO/TTC railway projects. Although other guidelines exist in other areas, many similarities still remain consistent in that existing noise levels are often the standard that future noise levels are held to, and a 5 dB increase is often seen as the typical allowable increase to avoid annoyance of nearby residents. However, in this case MX has gone beyond this standard and endeavored to limit future noise levels to existing 16h and 8h railway levels, where feasible. In addition, the Ontario Line and GO Expansion projects were assessed cumulatively rather than separately, which is also a measure that is beyond typical approach.
3	Save Jimmie Simpson	Noise and Vibration	When noise and vibrations exceed recommended guidelines, Metrolinx is only required to 'investigate mitigation.' It is under no obligation to keep noise and vibration levels deemed to be healthy and safe. This is unacceptable.	"Investigation" in the context of transportation noise and vibration assessments means to evaluate the effectiveness of mitigation with consideration for feasibility. However, Metrolinx will seek to meet MOEE/GO and MOEE/TTC protocol requirements. In addition, Metrolinx seeks to reduce future OL/GO noise levels to existing Leq,16h and 8h, where feasible.

4	Save Jimmie Simpson	Noise and Vibration	<p>Current noise levels were predicted, as opposed to measured. In essence, Metrolinx data is comparing predicted data to predicted data. Using only predicted data does not follow the preferred approach by Canadian Transportation Agency to rely on the results of actual field measurements of the railway sound levels.¹ Given the significant irregularities outlined below, we urge Metrolinx to carry out proper field measurements to accurately assess the current noise levels.</p>	<p>The guidelines and criteria applicable to this project (the MOEE/GO Transit Draft Protocol for Noise and Vibration Assessment and MOEE/TTC Protocol for Noise and Vibration Assessment for the Proposed Yonge-Spadina Subway) state that the rail projects should be assessed using applicable prediction methods. In addition, predictions of existing noise were used rather than measurements for the following reasons:</p> <ul style="list-style-type: none"> •To create an apples vs. apples comparison of existing vs. future conditions as the future can't be measured at this stage. Since the criteria is based on change above existing, and not a flat level (unless existing noise is predicted to be less than 55 dBA during the day-time, and 50 dBA during the night-time), we can predict the change in noise levels based on increases in track volumes, train types, changes to the track alignment and geometry, and other design parameters. •Predictions allow for the assessment of far more receptors than would be possible by setting up noise monitors. This is the standard procedure for transit project assessments in Ontario and similar approaches are used in other jurisdictions. <p>Furthermore, CTA standards also allow for predictions to be used rather than measurements for noise assessments.</p>
5	Save Jimmie Simpson	Noise and Vibration	<p>Ambient noise sources were not included in the noise modeling. This contrasts with the methodology used for environmental assessment for GO expansion and Ontario Line Environmental Conditions Report, which appears to have included the ambient sound level.</p>	<p>Including ambient noise sources would result in a less conservative assessment as the apparent change in noise level between future and existing railway noise would potentially be partially masked by road traffic noise, resulting in potentially lower noise wall recommendations.</p>
6	Save Jimmie Simpson	Noise and Vibration	<p>Community members pointed out that there were no vibration studies in our neighbourhood in Metrolinx Environmental Conditions Report last year; the report was released without any vibration study. In early works, Metrolinx 'predicts' existing vibration levels with no field measurements.</p>	<p>Similar to with noise, vibration criteria are based on the change in vibration levels for GO tracks (which is best assessed using an apples to apples change in predicted levels given changes to alignment and speed), and a flat 0.1 mm/s level for Ontario Line tracks (in which case existing levels for OL trains would not exist/not be relevant). As such, existing vibration level measurements were not required at residential receptors.</p>
7	Save Jimmie Simpson	Noise and Vibration	<p>Metrolinx says detailed vibration analysis, including vibration propagation testing, will be conducted at some future time. This should be done prior to any 'early works' construction so that the route alignment can be modified if environmental impacts cannot be mitigated for homes along the corridor?</p>	<p>Detailed vibration analysis for GO tracks, including in-field investigations, is part of the currently ongoing Lakeshore East Joint Corridor early works planning and design. Given the current design, vibration levels are expected to be mitigated with proven conventional mitigation measures, and as such, it is not expected that drastic changes to track alignment are required.</p>

8	Save Jimmie Simpson	Noise and Vibration	<p>In Guidance for Evaluating Human Health Impacts in Environmental Assessment, Health Canada recommends “construction noise lasting longer than 1 year be assessed as operational noise.” Metrolinx’s planned schedule shows a minimum 8 years of construction. The Early Works report does not show noise impact from construction as part of its operational noise. This should be added.</p>	<p>Construction noise was evaluated with respect to provincial requirements within Ontario, and Metrolinx will establish specific limits for construction noise, develop noise management plan and ensure that appropriate noise mitigation measures are implemented and effective in reducing construction noise impacts. However, as Ontario Line in general and Lakeshore East Joint Corridor early works specifically are linear projects, it is worth noting that construction noise will not generally be within one area along the alignment during the construction period, and will be localized at different areas along the alignment as construction progresses. As such, construction noise would not be expected to be significant at all times during the planned construction period.</p>
9	Save Jimmie Simpson	Noise and Vibration	<p>Metrolinx provides projected noise levels as average for 16h (day time) and 8h (night time). People do not experience noise like this. As CTA explains “several railway activities, including train pass-bys, emit repetitive noises of a significant level for brief periods of time that can interfere with sleep, communications, and the well being of the residents of neighbouring properties (WHO 1999).”</p> <ul style="list-style-type: none"> - CTA recommends the following metrics to be considered as part of the assessment procedures to supplement the noise assessment: Maximum events sound level (Lmax dBA) and Sound Exposure Level due to single events (SEL in dBA). Metrolinx has provided neither measurements in its early works report. - Given the number of residential homes in close proximity of the proposed project, it is incumbent on Metrolinx to carry out additional noise studies to ensure the projected noise profile not interfere with everyday activities for the host community. 	<p>Lmax and SEL were not assessed at receptors as per the MOE/GO and MOE/TTC protocol criteria as they are outside of the provincial assessment framework and thus not applicable to the Lakeshore East Joint Corridor assessment.</p> <p>It should be noted that Leq is a commonly used metric for the assessment of community noise annoyance from transportation corridors as it encompasses the noise from each vehicle passby and the number of passbys over the assessed time periods (in this case and in the case of typical transportation projects, 16h and 8h periods).</p>
10	Save Jimmie Simpson	Noise and Vibration	<p>Metrolinx provides L peak only for Ontario Line pass-by. It refuses to provide L peak for the simultaneous pass-by from multiple trains (GO, VIA, freight and Ontario Line). With a 10-fold increase in train frequency, our community expects numerous disturbances from the simultaneous pass-bys from GO, VIA, freight and Ontario Line trains. Worse yet, Metrolinx claims it has no obligation beyond what is prescribed in protocols that are 30 years old. Given that this six-lane rail corridor is being dropped in the middle of residential neighbourhood, Metrolinx planning must be more sensitive to community concerns and provide Leq max and L peak from all train sources before this project proceeds.</p>	<p>For clarity: Lpassby was provided for Ontario Line vehicles pass-bys, not Lpeak. Lpeak, the true peak or maximum value reached by a sound pressure wave, is usually used for hearing damage assessments, impulse noise or very loud noises such as blasting or hammers rather than transit projects. Neither provincial protocols nor our model incorporate this metric.</p> <p>Lpeak, Lmax and the various 1-hour Leq scenarios were not assessed as per the MOE/GO and MOE/TTC protocol criteria as they are outside of the assessment framework and thus not applicable to the Lakeshore East Joint Corridor assessment.</p>

11	Save Jimmie Simpson	Noise and Vibration	Metrolinx does not indicate when the GO electrification and conversion of motive power would occur. It means we could face service increases using more diesels than assumed in this noise and vibration study. Therefore, predicted noise and vibration levels underestimate the true impacts.	<p>In May 2021, Metrolinx completed a Significant Addendum to the 2017 GO Rail Network Electrification TPAP. GO Expansion, including electrification, is part of a system wide project to design, build, operate and maintain the network, currently in the procurement phase. Once a proponent (contractor) is selected there will be further information in terms of construction scheduling and sequencing of electrification on the rail network. Community updates will be provided to the public and stakeholders prior to construction.</p> <p>To achieve the GO Expansion service levels identified in the Business Case, the GO rail fleet will need to be electrified to the greatest extent possible. The Ontario Line Lakeshore East Joint Corridor Noise and Vibration Operations Report modeled the service levels associated with the future electrification scenario. A continued diesel service scenario was not modeled as Metrolinx is committed to electrification of the rail corridor. In the interim, Metrolinx is continuing to improve on its operations, for example by purchasing Tier 4 diesel trains, which is a type of train that meets more stringent air quality standards. Metrolinx's ongoing train silencer program will also install exhaust noise silencers on all diesel trains which will decrease the sound by an estimated 3dB.</p>
12	Save Jimmie Simpson	Noise and Vibration	There are no indoor noise measurements at all for homes facing the rail corridor. This omission was pointed out in our response to Environmental Conditions Report (Oct 2020). Metrolinx continues to fall short of best practices.	The assessment criteria are based on exterior points of reception as there may be variations in individual building facade constructions and room acoustic conditions. However, the predicted changes in noise levels would be expected to be similar indoors. For example, if the residual noise impact is noted as -2 dB based on a plane of window receptor, a similar impact would be expected in the associated interior space.
13	Save Jimmie Simpson	Noise and Vibration	<p>For a new development in proximity of rail corridor, detailed recommendations have been made specifying sound proofing materials to be used to make the living area hospitable. 125R Mill St condo for instance has been advised that exterior wall construction be made with sound isolation performance of minimum STC-45 and window glazing between STC-28 to STC-39.</p> <p>- This underlines the fact that the 100-year-old houses and 40-year-old apartment buildings close to the track are woefully deficient in their sound-proofing for the amount of rail traffic expected. Who bears the responsibility to upgrade sound proofing for these hundreds of homes along the rail line?</p> <p>- And if sound proofing doesn't resolve adverse impacts of rail expansion on nearby homes (according to early works reports, there are 365 homes within 30 metres of their project footprint), what recourse do local residents have?</p>	<p>For all homes that are not high rise buildings, noise barriers were predicted to be suitable in reducing noise levels to existing Leq,16h and Leq,8h levels. As such, adjustments to building constructions for typical homes would not be considered.</p> <p>For high rise buildings facing the corridor, we are looking into exploring other means of achieving our beyond-protocol goal, such as receptor-based mitigation.</p>
