2	TDSB		Traffic EW Report	Significant safety risks, notably the students walking to school, will exist due to increased traffic congestion.	Comment noted, a Transit and Traffic Management Plan will be developed prior to construction to ensure potential impacts to all road users are reduced or avoided. Please see Table 4-1 within the Traffic and Transportation Report for more information on proposed mitigation.

Air Quality Early Works Report

Date Out:

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	September 2021 LSE JC EWR Revised Response/Confirmation
1	TDSB		Air Quality EW Report	Increased traffic congestion around some of the schools will impact pollution levels for the student community and TDSB employees.	Noted - AECOM can update the text of the AQEW Report to include reference to potential traffic congestion. The Early Works Traffic Report should be referenced as a guide for traffic-specific impacts.	Morse Street Junior Public School, Queen Alexandra Middle School, Dundas Junior Public School, SEED Alternative School, Pape Avenue Junior Public School, Blake Street Junior Public School and Riverdale Collegiate Institute are identified as critical receptors within the Lakeshore East Joint Corridor Air Quality Study Area. Application of the mitigation measures and monitoring activities listed in Table 4-1 is anticipated to reduce or avoid local impacts to air quality. A plan to manage air quality will be developed prior to construction to identify additional or more project-specific mitigation measures, as noted in Table 4-1.
2	TDSB		Air Quality EW Report	Use of heavy machinery and large scale construction methods such as digging, concrete pours, dump trucks will significantly impact pollution levels at nearby schools. Students may need to stay inside and not open windows during long periods of this construction phase.	Concern noted - implementation of the Air Quality Management Plan (AQMP) included within the AQEW Report as Attachment 1 should help to minimize impacts on local school properties through continuous monitoring and implementation of immediate steps for mitigation during higher particulate impact periods.	Morse Street Junior Public School, Queen Alexandra Middle School, Dundas Junior Public School, SEED Alternative School, Pape Avenue Junior Public School, Blake Street Junior Public School and Riverdale Collegiate Institute are identified as critical receptors within the Lakeshore East Joint Corridor Air Quality Study Area. Application of the mitigation measures and monitoring activities listed in Table 4-1 is anticipated to reduce or avoid local impacts to air quality. A plan to manage air quality will be developed prior to construction to identify additional or more project-specific mitigation measures, as noted in Table 4-1.

3	TDSB		Air Quality EW Report	Inability to play during outdoor periods due to high level of pollution.	Concern noted - implementation of the Air Quality Management Plan (AQMP) included within the AQEW Report as Attachment 1 should help to minimize impacts on local school properties through continuous monitoring and implementation of immediate steps for mitigation during higher particulate impact periods. Subject: Ontario Line - Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report
Date: Tuesday, July 27, 2021 3:06:56 PM

Good afternoon,

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the following Dropbox link for review:

[REDACTED]
[REDACTED]

The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and GO rail where Ontario Line runs in parallel to GO tracks between the Ontario Line Don Yard Portal and Gerrard Portal.

Metrolinx welcomes any comments or feedback on the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Please provide these in writing no later than **August 24, 2021**.

Thank-you,

Crystal Ho

Hello Merlin,

Thank you for the response.

Please be advised that TLC has no further comments on the Environmental Conditions and Early Works Report.

Regards,

Anita

Noise and Vibration Early Works Report		Date Out:

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)
1	TDSB		N&V EW Report	Health concerns due to noise, vibration issues to the schools during the tunnelling phase of the project and during the construction of the transit stations.	Tunnelling is not part of planned Early Works activities. The TDSB's concerns regarding tunneling will be addressed through appropriate noise and vibration mitigation prescribed through the Environmental Impact Assessment Report, which will be provided for review under separate cover.
2	TDSB		N&V EW Report	Inability to play during outdoor periods due to high level of noise.	The closest TDSB school to Early Works (Dundas Jr PS) is over 200 metres away from the transit corridor, with several intervening buildings providing acoustic shielding from the Lakeshore East Joint Corridor Early Works. Impacts at this school will be lower than what are presented in the Early Works report (which examines noise levels at the closest residence to the Early Works). Construction noise levels should be more than 10 dB less than the predicted noise levels at the nearest receiver, indicating that construction noise levels should not cause an issue with playing outdoors.
3	TDSB		N&V EW Report	Impact on required student concentration eg. Exam time	The closest TDSB school to Early Works (Dundas Jr PS) is over 200 metres away from the transit corridor, with several intervening buildings providing acoustic shielding from the Lakeshore East Joint Corridor Early Works. Impacts at this school will be lower than what are presented in the Early Works report (which examines noise levels at the closest residence to the Early Works). Students within the school building would have quieter sound levels given that the building facade provides additional attenuation compared to outdoor noise levels.

Good afternoon Anita,

Thank you and the TDSB team for providing comments to the draft Ontario Line Early Works Report.

It is noted that the TDSB had provided comments on the Environmental Conditions Report and Early Works Report in the same letter. Our team has pulled relevant early works comments into a spreadsheet, separated by discipline. Please let us know if any additional comments or if this set of comments can be considered closed-out.

We look forward to continuing to engage the TDSB as project planning advances.

Regards,

MERLIN YUEN

Hello Merlin,

Please find attached the TLC comments, as agent and manager of the Toronto District School Board real estate for the reports submitted on the proposed Ontario Line.

Should you have any questions, please contact me at your convenience.

We look forward to meeting with you and the school communities in the future.

Regards,

Anita

Dear Mr. Satkunanathan:

**Re: Metrolinx Project: Ontario Line Project:
Potential Impacts and Associated Comments to Toronto District School Board Properties**

Metrolinx has advised the Toronto Lands Corporation (TLC) of the proposed Ontario Line project, which when completed will be a 16 km transit route spanning from Ontario Place to the Ontario Science Centre, with links to GO Transit, Eglinton LRT, and TTC Lines 1 and 2.

Toronto Lands Corporation, as agent and manager of real estate for Toronto District School Board (TDSB), provides general commentary on the potential impacts of the Ontario Line project. Notwithstanding at this early stage of the project, site specific comments are not fully known until drawings are prepared and there has been public consultation with the school community.

In reviewing infrastructure projects, TDSB requires TLC to consider any student impact within 500 metres of a school property. In this case, based on the draft Existing Conditions Social-Economic Land Use report, dated May 5, 2020, provided by Metrolinx, there are fifteen TDSB school properties within the proposed general Metrolinx project route that will be impacted at various levels. It is evident numerous other schools may be impacted to a lesser degree during construction over the term of this project.

Preliminary list of Impacted TDSB Schools:

- | | |
|---|--------------------------------|
| • ALPHA Alternative Junior School – 20 Brant Street | Student Capacity: 175 |
| • Oasis Alternative Secondary School – 20 Brant Street | Student Capacity: (with ALPHA) |
| • Downtown Alternative School – 85 Lower Jarvis Street | Student Capacity: 175 |
| • Market Lane Jr and Sr Public School – 246 The Esplanade | Student Capacity: 480 |
| • Pape Avenue Junior Public School – 220 Langley Avenue | Student Capacity: 509 |
| • Blake Street Junior Public School – 21 Boulton Avenue | Student Capacity: 802 |

- | | |
|--|--------------------------------|
| • East Alternative School of Toronto - 21 Boulton Avenue | Student Capacity: (with Blake) |
| • Earl Grey Senior Public School – 100 Strathcona Avenue | Student Capacity: 527 |
| • Jones Avenue Adult Centre – 540 Jones Avenue | Student Capacity: 461 |
| • William Burgess Elementary School – 100 Torrens Avenue | Student Capacity: 489 |
| • Valley Park Middle School – 130 Overlea Boulevard | Student Capacity: 1,145 |
| • Marc Garneau Collegiate Institute – 135 Overlea Boulevard | Student Capacity: 1,486 |
| • Thorncliffe Park Public School – 80 Thorncliffe Park Drive | Student Capacity: 1,720 |
| • Fraser Mustard Learning Academy – 82 Thorncliffe Park Dr | Student Capacity: 529 |
| • Gateway Public School – 55 Gateway Boulevard | Student Capacity: 918 |

As Metrolinx completes the numerous infrastructure projects throughout the City it is always preferred that no TDSB sites are impacted. When these impacts are unavoidable, TLC will make best efforts to work collaboratively with Metrolinx and other public agencies to resolve these issues when identified.

Recognizing that this project is in the early design phase, TLC has reviewed the Metrolinx Reports, dated May and June, 2020, and has identified the following specific concerns that are related to pre-construction and during construction to the above schools which include, but not limited to this preliminary list which may be altered as more detailed project information and site specific requirements are released:

Socio-Economic EC Report – Existing Conditions

- Student safety is a critical component in any large infrastructure project where active long term construction is in close proximity to a school, notably the preparation and open cut construction for the transit stations and the open pit locations for the tunnelling machines.
- The fifteen (15) TDSB schools identified by Metrolinx to be impacted by this project have a combined capacity of over 9,400 students, with the majority of the students walking or using public transit on a daily basis to and from the schools plus numerous school bus drop-off and pick-ups twice daily. Many of these schools also have special needs students in attendance and day care operations that may require specific attention.
- Potential relocation of existing bus stops that service these schools, either permanently or during the construction period, will impact TDSB students and employees.
- The proposed raised monorail system of tracks at certain locations may have significant noise, vibration, and visual impacts to TDSB schools located in close proximity to this style of transit route.
- Two TDSB schools, Valley Park Middle School (130 Overlea Boulevard) and Marc Garneau Collegiate Institute (135 Overlea Boulevard) are highly likely to be directly impacted with the proposed design of the transit system. With over 2,500 students plus staff at these two schools, it is imperative to understand that if there is any impact, the schools must still be able to operate as there are no alternative educational buildings within this vicinity for any potential relocation in this densely populated area. (Noise and dust limitation strategies need to be considered)

Natural Environmental EC – Existing Condition and Early Works Report

- Potential for significant environmental damages to the Don Valley Corridor and City parks/ravines in the Thorncliffe Park area. Two TDSB schools, Valley Park Middle School (130 Overlea Boulevard) and Marc Garneau Collegiate Institute (135 Overlea Boulevard) will be directly impacted with changes to these sensitive land areas. (These areas also provide for educational opportunities for students.)
- Potential drainage and water flow that may impact outdoor school sports fields and arenas.
- Dependent upon works, potential drainage or water flow, sewers, etc. at various sites.

Traffic EC – Early Works Report

- Increased traffic congestion around some of the schools, especially at major intersections, will impact ability to commute and increase travel time delays for the student community and TDSB employees.
- Significant safety risks, notably the students walking to school, will exist due to increased traffic congestion.

Air Quality EC – Early Works Report

- Increased traffic congestion around some of the schools will impact pollution levels for the student community and TDSB employees.
- Use of heavy machinery and large scale construction methods such as digging, concrete pours, dump trucks will significantly impact pollution levels at nearby schools. Students may need to stay inside and not open windows during long periods of this construction phase.
- Inability to play during outdoor periods due to high level of pollution.

Noise and Vibration EC – Early Works Report

- Health concerns due to noise, vibration issues to the schools during the tunnelling phase of the project and during the construction of the transit stations.
- Inability to play during outdoor periods due to high level of noise.
- Impact on required student concentration eg. Exam time

Stage 1 Archeological Assessment Report – All Study Areas

- There are potentially a number of TDSB schools located within the study areas. Should it be determined that onsite studies are required on any TDSB property, such as a Phase 2 or Phase 3 Archeological Study, please be advised that Metrolinx and/or its contractors will require approval and the execution of a temporary access agreement, prior to entry and works. Please contact TLC with a list of any TDSB schools that require further archeology study. (TLC will require receipt of all studies and reports relating to TDSB sites.)

Cultural Heritage Report

This report outlines that there is the potential for cultural and/or heritage impacts at the following TDSB schools:

- OLN-008 – Gateway Boulevard Public School – 55 Gateway
- OLN-018 – William Burgess Public School – 100 Torrens Avenue
- OLN-004 – Jones Avenue School – 540 Jones Avenue
- OLS-011 – Pape Avenue Jr. Public School – 220 Langley Avenue
- OLW087 – Brant Street Public School – 20 Brant Street

The report mentions that these schools are not anticipated to be impacted by this project based on the preliminary design but there is potential for surface/above/below grade tracks in the vicinity and vibration. The report cautions that the project design is not finalized and there is the potential for significant impacts to these schools if the route changes, including property takings, encroachments, easements, and in the most severe case the demolition of the school.

TLC supports the recommendation from this report that the Ontario Line project route should avoid TDSB schools wherever possible. The above mentioned schools have a capacity of over 2,500 students and any recommendation or decision regarding impacts to TDSB schools should involve discussions with TLC and TDSB to ensure that the school can continue to effectively deliver its education program and the safety of the students.

Traffic and Transportation Report

This report outlines the potential impacts to traffic, transportation, public transit, cycling, and pedestrian travel from the Ontario Line. The report is incomplete as it is missing some analysis on the Ontario Line South and all of the analysis within the Ontario Line North, areas that have many TDSB schools. In reviewing the potential impacts and solutions, there is no reference to TDSB schools and the high number of students that travel to these schools, primarily walking but also using public transit and vehicles. Extra care and precautions, such as traffic police, crossing guards, construction hoarding, must be taken to ensure student safety during the lengthy construction period. As the actual subway route is unknown, these concerns are intensified the closer the construction is to the school.

Soil and Groundwater Report

No comments (at this time)

Air Quality Qualitative Assessment Report

No comments (at this time)

Summary of Comments:

All of the above factors could potentially impact student programming, learning and overall school operations. Therefore, TLC will request specific mitigation matters, at Metrolinx's sole expense, to address the aforementioned concerns that relate to all of the above reports that may include, but not limited to, pay duty officers/site managers to ensure the safety for students during peak hours, transportation to other schools, additional caretaking and cleaning time, additional hoarding (not construction fencing) and other walking safety installations (temporary sidewalks); noise and vibration continual monitoring with test reports, window protections or installation of air conditioning units, requests for specific site work to be completed, if possible, evenings, weekends, non-school days (for example, concrete pours), pre and post construction surveys and on-going monitoring, communication plans, request input to the transportation and construction management plan.

These comments are based upon disruptions and not a request for a school closure, temporary or permanent. It is imperative to understand that the students do not have alternative local locations for education and schools must remain open and remain in a position to deliver an education program.

General Statement: Real Estate Requirements from TDSB Property

The aforementioned comments relate to situations where there is no request for acquisition (temporary or permanent) of any TDSB real estate. In reviewing the reports provided by Metrolinx, it does not appear that the property requirements for the Ontario Line have been identified at this point. That said, TLC understands that property requirements for the Ontario Line may be requested and could include:

- Surface and sub-surface easements for the subway track and related components;
- Temporary working easements for construction staging;

- Fee simple acquisition for subway stations, ventilation shafts, traction power stations, and Emergency Exit Buildings.

Please be advised that should a request for a full, partial or strata property acquisition of land be initiated, the disposition of real estate will invoke Ont. Regulation 444/98 that specifically provides for the sale of property. Public consultation and TLC/TDSB Board approvals in accordance with section 193 of the Education Act are required as part of the disposition process. Metrolinx will be required to participate in public meetings in this regard. Any and all costs associated with an acquisition (temporary working easement or construction staging or permanent taking) will be at the sole expense of Metrolinx and in accordance with the Regulation, any potential sale (permanent or temporary) will be at market value.

The permanent or temporary request to acquire lands for the Ontario Line on any TDSB site will increase the project impacts to a school and the delivery of the educational program, including potential significant impact on the school playgrounds or sports fields. While it may appear from aerial views or property size that TDSB sites have open space, please understand that the open areas, playgrounds and sportsfields, are actively used all day from 8 a.m. to 6 p.m. for student educational requirements. For these reasons, TLC strongly recommends that the use of TDSB property be minimized wherever possible.

Construction management plans, traffic reports and any other documentation that may impact the construction at these school locations should be a public document and available to the TLC/TDSB. Communication and information sharing of reports will be beneficial to all parties.

These projects provide an opportunity for student learning in multiple education areas. TLC would look to the Metrolinx project leads to provide an educational component to students where a direct link to the actual project and a professional skill set or professional trade could be highlighted and allow students insight to potential careers and on-site demonstrations in these unique situations.

Should you have any questions or if Metrolinx requires access to the school properties, please contact to make the appropriate arrangements. At this time, with the potential for significant impacts at some of the TDSB schools, TLC requests that Metrolinx identify the schools that will be severely impacted and have a site meeting with each of these school communities or a webinar presentation. In addition, please continue to keep TLC posted as to project updates such as construction scheduling and future public webinars.

Sincerely,

Anita Cook

Subject: RE: Ontario Line – Environmental Conditions and Early Works Draft Report Review
Date: Friday, June 05, 2020 5:24:28 PM

Good afternoon Anita,

In addition to the reports sent yesterday, the following Ontario Line documents are available for your review. The reports and corresponding comment tracking sheets can be accessed [REDACTED].

- Draft Early Works Report; and
- Draft Cultural Heritage Early Works Report.

Please provide any comments on the above draft reports by end of day **July 3rd**. Let me know if you have any questions or issues with accessing the files.

Thank you,

Kuru Satkunanathan

Subject: RE: Ontario Line – Environmental Conditions and Early Works Draft Report Review

Good afternoon Anita,

Please find [REDACTED] the following Ontario Line draft reports and memorandums, and corresponding comment tracking sheet for your review:

Ontario Line Existing Conditions (EC)

- Natural Environment Report
- Noise and Vibration Report
- Socio-Economic Report

Ontario Line Early Works (EW)

- Air Quality Impact Assessment Memo
- Natural Environment Report

- Noise and Vibration Report
- Traffic Memo

If you could please provide your comments on the above draft reports and memorandums **by end of day July 2nd**, that would be greatly appreciated.

Let me know if you have any questions or issues with accessing the files.

Sincerely,

Kuru Satkunanathan

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Kuru Satkunanathan

ITEM	DESCRIPTION	DOCUMENT	TRCA COMMENTS – Preliminary Design (August 10, 2021)	METROLINX RESPONSE – Preliminary Design (September 23, 2021)	TRCA COMMENTS – Draft Early Works Report (October 22, 2021)	Metrolinx Response (October 22, 2021)
	Project Overview	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	<p>a) It is TRCA staff's understanding that an Early Works Report will be prepared for the Lakeshore East Joint Corridor. Please provide further information regarding the anticipated timeline for this report, and when TRCA can expect to receive this report for review.</p> <p>b) Please provide further information regarding the overall timelines/schedules for this project, and when TRCA can expect future submissions related to the Lakeshore East Joint Corridor.</p> <p>c) Please consolidate all submissions regarding the Lakeshore East Joint Corridor when submitting to TRCA for review and please also ensure complete comprehensive submissions, including responses to all comments identifying how they have been addressed within the submission.</p>	<p>a) The draft Early Works (EW) Report to be published on Sep. 23, 2021 and provided to TRCA for review by Metrolinx; the final EW report is anticipated to be published in November 2021, with the exact timeline to be determined.</p> <p>b) Detailed design will be completed by February 11, 2022 as per the current Project Schedule. Metrolinx intends to submit a final VPR submission in early 2022 to align with the design schedule.</p> <p>c) Acknowledged; Metrolinx to comply as best possible with this request.</p>	Thank you for this information.	
	City of Toronto Council	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	It is TRCA staff's understanding that on April 7 and 8, 2021, the City of Toronto Council adopted a motion to request that the above ground section of the Ontario Line traversing through Riverside and Leslieville (Lakeshore East Joint Corridor) be designated for a Federal Environmental Assessment. Please provide an update on this request and please ensure ongoing coordination with the City of Toronto.	On April 16, 2021 the Minister of Environment and Climate Change has determined that the Ontario Line Project proposed by Metrolinx does not warrant designation under the Impact Assessment Act. Details can be found here: https://iaac-aeic.gc.ca/050/evaluations/proj/81350	Thank you for this information – no further comment.	
	Sustainable Infrastructure	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	<p>TRCA has an advocacy role in relation to the development of sustainable infrastructure. As such, TRCA staff recommends that the design for the proposed project components include mechanisms for water conservation, energy conservation and waste management, such as:</p> <ul style="list-style-type: none"> Eco-Efficiency: Ensure the facility equipment and operations can minimize energy and water use and GHG emissions; Solid Waste Management: Ensure that construction of the facility minimizes the generation of solid waste and; Stormwater: Ensure that the project minimizes runoff using LID's where appropriate and enhances the urban tree canopy. 	Acknowledged; however, certain components of this request do not apply to the design for the Early Works (EW) scope as the Early Works will not include Ontario Line infrastructure such as stations which will be constructed as part of the main Ontario Line contracts. Early Works stormwater designs will include LID features and infiltration will be the primary method of quality, quantity and water balance control within the Early Works project footprint. The first two components (i.e., Eco-Efficiency and Solid Waste Management) do not apply to this project since Hatch is not designing any such facilities within the project footprint.	No further comment.	
	Future VPR Requirements	Lakeshore East Joint Corridor Preliminary	TRCA staff advise that as this submission is quite preliminary and that further studies/assessments will be required as the project progresses. In addition,	Acknowledged; most requirements will be met with the possible exception of a full EIS per TRCA guidelines (see below response to	Please advise why construction method drawings will not be provided as part of the VPR submission.	Construction drawings will be provided; however, certain construction methods will

		Design, prepared by Hatch, dated July 7, 2021	<p>Metrolinx has requested further insight to the anticipated requirements for the Voluntary Project Review (VPR) stage of this project. Please be advised that the following items are anticipated to be required at the VPR stage; please note this list is preliminary and further items may be required as the project design progresses, and as further information is provided:</p> <ul style="list-style-type: none"> • TRCA Voluntary Project Review Application Form • Cover letter outlining project scope, duration, list of plans and documents • Land-owner authorization for any works outside of Metrolinx’s right-of-way • Site Plan and engineered drawings • Existing site conditions, including property boundaries, construction limits, flood hazard limits, proposed vegetation removals • Construction staging and phasing plan, including construction schedule, erosion and sediment controls, access plans, dewatering plans, restoration plans, and construction timing window • Detailed design brief outlining where TRCA requirements and technical commitments made within the EA stage have been fulfilled within the VPR submission. • Design detail drawings for all proposed works, including proposed retaining walls and tracks • Geotechnical investigations and designs for all retaining walls, earthworks and grading, to identify design recommendations and global stability • Stormwater Management Report which addresses all comments made within the EA stage • Scoped Environmental Impact Study consistent with TRCA’s EIS Guidelines <p>Please note further information can be found within the TRCA’s Initial Submission Checklist for Infrastructure Projects and TRCA’s Technical Report Guidelines for Infrastructure Projects.</p>	comment #13) and drawing details requiring construction methods. Further discussion on EIS scope is required before proceeding.	Please see response to comment 13.	be determined by the Contractor (e.g., type of equipment).
Geotechnical Engineering	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	The drawings show that earthworks and grading will be required as part of the proposed retaining wall and track works. A geotechnical review will be required for these elements, to provide geotechnical design recommendations and to ensure global stability.	Acknowledged. A Geotechnical Report is currently in development as part of the design process and will provide design recommendations, including but not limited to, global stability.	TRCA will review the Geotechnical Report once available. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.	Commitment for completion of a geotechnical report has been added to Table 6-2 of the EWR. Metrolinx is intending to follow the VPR (Voluntary Project Review) process with TRCA and will submit the Geotechnical Report to TRCA as part of this process, once available.	
Geotechnical Engineering	Lakeshore East Joint Corridor	The drawings for the retaining walls are conceptual at this stage; the details of the retaining walls must be	Acknowledged. The detailed design of retaining walls will be further progressed /	The detailed design of the retaining walls will be provided at the detailed design process.	Specific deliverables/submittals such as design drawings associated with detailed	

		Preliminary Design, prepared by Hatch, dated July 7, 2021	developed in the next submission when further designs have been completed.	developed and will be included in the subsequent VPR submission(s).	Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.	design project phase are outside of the environmental assessment scope . Therefore, this commitment is not applicable to the EWR. Metrolinx will circulate the detailed design of retaining walls to TRCA once available, as part of the VPR process.
	Water Resources	Stormwater Management Technical Memorandum, prepared by Hatch, dated July 7, 2021	Please be advised the review of quantity control is deferred to the City.	Acknowledged and noted.	No further comment.	
	Water Resources	Stormwater Management Technical Memorandum, prepared by Hatch, dated July 7, 2021	Please provide the details of the proposed Surface Level pre-treatment confirming the required 80% TSS removal will be provided, in your next submission.	80% TSS removal will be achieved through pre-treatment and infiltration. Tabular results will be provided for additional clarity with the final Stormwater Management Report for the VPR submission.	TRCA staff will review the stormwater management report when it becomes available at the detailed design stage. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.	Commitment for completion of a stormwater management report is included in Table 6-3. Metrolinx will circulate the stormwater management report to TRCA once available, as part of the VPR process.
	Water Resources	Stormwater Management Technical Memorandum, prepared by Hatch, dated July 7, 2021	As stated in the report, there is potential for permanent infiltration galleries to be used within the acquired parking lot adjacent to the corridor at Dickens St and Thackery Ave. If this option is selected to be used for providing infiltration, please provide further details of the proposed facility when they become available.	Acknowledged; however, these locations are outside of the TRCA regulatory limit. Information on impacts within the TRCA regulatory limits will be provided for the VPR submission.	Noted. Providing permanent infiltration galleries at the subject parking lot will improve the water balance condition of the area. We strongly recommend the applicant to consider the proposed infiltration facility at the parking lot.	Noted.
	Water Resources	Stormwater Management Technical Memorandum, prepared by Hatch, dated July 7, 2021	Please provide further details of the proposed infiltration facilities for each segment, including exact locations, areas, discharge points, and detailed calculations when this information becomes available.	Acknowledged; this information will be provided as necessary with the subsequent VPR submission.	To be reviewed at detailed design. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.	Specific deliverables/submittals such as design drawings associated with detailed design project phase are outside of the environmental assessment scope. Therefore, this commitment is not applicable to the EWR. Metrolinx will circulate details to TRCA once available.
	Flood Risk	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	It is staff's understanding that the proposed retaining walls will not impact flood depths in the area as the proposed retaining walls are minor and this area does not convey flow. In addition, TRCA staff advise that there are two flood protection projects in the Lower Don area (Portlands Flood Protection Project and the Broadview-Eastern Flood Protection Project) which will remove the flood plain in this area upon completion.	Acknowledged and noted.	No further comment.	
	Flood Risk	Lakeshore East Joint Corridor Preliminary Design,	Please include the flood plain on the drawings, to confirm the location of the proposed works in relation to the flood plain.	Acknowledged and noted.	To be reviewed once available. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.	Specific deliverables/submittals such as design drawings associated with detailed design project phase are outside of the environmental assessment scope .

		prepared by Hatch, dated July 7, 2021				Metrolinx will circulate detailed design to TRCA once available.
Ecology		Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	Please be advised a scoped EIS consistent with TRCA's EIS Guidelines , will be required. Scoping of the EIS should be identified by the ecological consultants, as they are the experts on both the site and the project. TRCA is happy to review a TOR outlining that scope and to provide comments on any refinements that would be required to the scope of work through the TOR.	Acknowledged; Metrolinx has reviewed the EIS guidelines and based on the results of the Early Works (EW) Report, it is noted that many of the guideline requirements are not applicable (i.e. this project is not within any designated Natural Heritage areas or other designated protected areas). Results from the EW Report should capture most of the guideline requirements to 'screen out' the need for a comprehensive EIS. Metrolinx requests that TRCA review the draft EW Report to confirm whether this assessment is valid and then further discuss the requirement for a complete EIS before proceeding with this requirement. In addition, a tree inventory/Arborist Report will be completed during detailed design to assess impacts to vegetation for the project (will be provided to TRCA for review as part of the VPR submission).	<p>Please be advised that the Draft EWR focuses on mitigation related to construction practices but does not include in-depth mitigation in regard to operation, habitat removal or cumulative effects.</p> <p>Please provide an EIS that assesses the impacts based on the existing conditions and outlines mitigation strategies beyond just construction related impacts. This should consider the effects of implementation, operation and, importantly, impacts to adjacent habitat function and any habitat removals. Cumulative effects should also be considered.</p>	<p>The Draft Lakeshore East Joint Corridor (LSE JC) Early Works Report (EWR) was completed in accordance with Ontario Regulation 341/20 and documents the construction impacts of the LSE JC early works. The regulation defines early works as any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process. Impacts to habitat have been evaluated and mitigation measures and monitoring activities have been proposed in the EWR to reduce any impacts as a result of early works. This information is documented in the LSE JC Early Works Natural Environment Report.</p> <p>The forthcoming Ontario Line Draft Environmental Impact Assessment Report (EIAR) will assess operational impacts of the entire Ontario Line project, as well as construction of components not covered by previously published Early Works Reports. The EIAR is anticipated to be published in January 2022 for review.</p> <p>As per the TRCA's EIS guidelines, the purpose of the EIS is to determine potential impacts on the natural heritage system of an area (e.g., watercourses, wetlands, woodlands, wildlife habitat, TRCA's natural heritage system, Environmentally Sensitive Areas (ESAs), vegetation communities, Areas of Natural and Scientific Interest (ANSIs), etc.). The LSE JC Study Area does not contain any ESAs, ANSIs, wetlands, areas within the City of Toronto Natural Heritage System or areas within TRCA's natural heritage system) or watercourses. An EIS is also required for development that are not already associated with a higher-level planning processes (i.e., EAs). The environmental impacts of the LSE JC early works have been evaluated in-detail as per O.Reg. 341/20. The EWR and the Natural Environment Report in Appendix A1 provides the following:</p> <ul style="list-style-type: none"> - Documentation of a biophysical inventory of natural heritage features or lack thereof;

						<ul style="list-style-type: none"> - Identification of constraints and opportunities; and - Detailed and appropriate mitigation/future monitoring requirements with respect to the natural heritage features (i.e., generally disturbed vegetation communities and low-quality wildlife habitats) present within the study area. <p>The EWR is specifically intended for Early Works scope and not operations. Impacts to habitat have been evaluated and addressed in the EWR in the Natural Environment Report. For the reasons above, an EIS is not deemed to be required.</p>

NEW COMMENTS

ITEM	DESCRIPTION	DOCUMENT			TRCA COMMENTS – Draft Early Works Report (October 22, 2021)	Metrolinx Response (October 22, 2021)
	Coordination with East Harbour Station				Please ensure coordination with the East Harbour Station project team.	Acknowledged.
	Jimmie Simpson Park				The Draft Early Works Report notes potential impacts to parks, including Jimmie Simpson Park. TRCA staff recommend that Metrolinx ensure adequate public consultation and communication regarding impacts to parks. In addition, staff recommend ensuring adequate signage regarding any potential impacts and/or park closures.	Public engagement is ongoing and will continue as project planning progresses. Signage and other pedestrian navigation mitigation measures are included as part of the mitigation measures included in Section 6.6 (Socio-Economic and Land Use Characteristics) and Section 6.9 (Traffic and Transportation) of the EWR.
	Ecology				The Early Works Report identifies that Significant Wildlife Habitat (SWH) is present related to Eastern wood pewee. It indicates that 2.24 ha of habitat will be lost. The mitigation strategy indicates that tree removals will avoid the breeding window and when this is not possible, nest surveys will be conducted to avoid removing active nests. These are suitable mitigation measures for impacts related to typical construction methodologies, but they do not mitigate the removal of the habitat itself. Please clarify how 2.24 ha of SWH habitat related to Eastern wood pewee will be mitigated/compensated for.	Several ELC ecosites within the LSE JC study area were identified as candidate habitat for Eastern Wood-pewee but have not been confirmed, as described in Appendix A1 – NER, Section 5.0. Habitat for Eastern Wood-pewee is not limited to the LSC JC study area, and there are other, higher quality patches of natural areas available in the City of Toronto. Therefore, removal of up to approx. 2.06 ha of disturbed woodlots within the rail corridor that may provide only marginal habitat for Eastern Wood-pewee is not anticipated to have a significant effect on the species on a larger geographical scale. Metrolinx intends to follow the mitigation requirements currently set forth within the EWR for this species. Removal of trees will be compensated in accordance with the Metrolinx Vegetation Guideline (2020).

						Construction areas will also be investigated prior to commencing or resuming construction activities for wildlife and wildlife habitat that may have established following the completion of previous surveys.
	Hydrogeology				No hydrogeologic information has been provided at this early stage. Please provide technical details of the proposed infiltration facilities once available. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.	<p>Commitment for hydrogeological studies to be completed has been added to Table 6-3.</p> <p>Hydrogeologic studies are ongoing within the Geotechnical scope for the project. Further technical details will be provided when all Geotechnical studies have been completed, as part of the VPR process.</p>

Dear Merlin Yuen

**Re: Draft Lakeshore East Joint Corridor Early Works Report
Transit Project Assessment Process (TPAP)
Metrolinx Ontario Line – between Ontario Science Centre and Ontario Place
Don River Watershed; City of Toronto – Toronto and East York**

Toronto and Region Conservation Authority (TRCA) received the Draft Lakeshore East Joint Corridor Early Works Report, dated September 2021, on September 23, 2021.

PROJECT OVERVIEW

The Ontario Line Project is being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project, under the Environmental Assessment Act. This regulation outlines a project-specific environmental assessment process which requires the development of an Environmental Conditions Report, Environmental Impact Assessment Report and Early Works Reports.

Ontario Line Early Works are components of the project that are proposed to proceed prior to the completion of the Ontario Line environmental impact assessment process. It is staff's understanding that the Lakeshore East Joint Corridor Early Works are being advanced where the project interfaces with the GO Expansion and the East Harbour Station.

The Lakeshore East Joint Corridor Early Works are located along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. The proposed works consist of the following:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure (shifting the existing GO tracks 1, 2 and 3 by approximately 10 metres to the south to accommodate the two new Ontario Line tracks which will be located to the north, as well as a future fourth southern-most GO track);
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and,

- Construction of noise barriers, including east of Pape Avenue.

A portion of the proposed works are located within TRCA Regulated areas, from Eastern Avenue to approximately 200 metres north of Eastern Avenue, along the existing rail corridor.

PROJECT REVIEW

As stipulated in TRCA's 2014 "The Living City Policies for Planning and Development in the Watersheds of the TRCA" (LCP), these technical comments are being provided as part of TRCA's review and commenting roles under the *Ontario Environmental Assessment Act*. Staff have reviewed the above-noted submission and detailed comments are provided in **Appendix A**.

Environmental Impact Statement

TRCA staff advise that the Draft Early Works Report focuses on mitigation related to construction practices but does not include an in-depth mitigation strategy in regard to operation, habitat removal or cumulative effects. As such, staff request that Metrolinx provide an EIS that assesses the impacts based on the existing conditions and outlines mitigation strategies beyond just construction related impacts. This should consider the effects of implementation, operation, and impacts to adjacent habitat function and any habitat removals. Cumulative effects should also be considered.

Flood Plain

As previously noted, it is staff's understanding that the proposed retaining walls will not impact flood depths in the area as the proposed retaining walls are minor and this area does not convey flow. This will be further confirmed once details are provided through the next phase of work. In addition, TRCA staff advise that there are two flood protection projects in the Lower Don area (Portlands Flood Protection Project and the Broadview-Eastern Flood Protection Project) which will remove the flood plain in this area upon completion. TRCA staff review will continue upon receipt of additional retaining wall details.

NEXT STEPS

TRCA staff advise that the majority of TRCA comments will be addressed through detailed design. Please include commitments within the Draft Early Works Report for TRCA comments to be addressed at detailed design.

In your next submission for the Draft Lakeshore East Joint Corridor Early Works Report, please ensure all comments and commitments within **Appendix A** have been addressed within the report and updated supporting documentation has been provided to address TRCA comments.

Please consolidate submissions to TRCA, as such, please coordinate this re-submission with upcoming Ontario Line submissions. Subsequent submissions will be deemed incomplete if responses to previous comments have not been provided and supporting information updated as needed based on those responses.

Should you have any questions or require any additional information please contact me at alannah.slattery@trca.ca.

Regards,

Alannah Slattery

Please provide further information regarding the anticipated timeline for this report, and when TRCA can expect to receive this report for review.</p> <p>b) Please provide further information regarding the overall timelines/schedules for this project, and when TRCA can expect future submissions related to the Lakeshore East Joint Corridor.</p> <p>c) Please consolidate all submissions regarding the Lakeshore East Joint Corridor when submitting to TRCA for review and please also ensure complete comprehensive submissions, including responses to all comments identifying how they have been addressed within the submission.</p>	<p>a) The draft Early Works (EW) Report to be published on Sep. 23, 2021 and provided to TRCA for review by Metrolinx; the final EW report is anticipated to be published in November 2021, with the exact timeline to be determined.</p> <p>b) Detailed design will be completed by February 11, 2022 as per the current Project Schedule. Metrolinx intends to submit a final VPR submission in early 2022 to align with the design schedule.</p> <p>c) Acknowledged; Metrolinx to comply as best possible with this request.</p>	Thank you for this information.
2	City of Toronto Council	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	It is TRCA staff's understanding that on April 7 and 8, 2021, the City of Toronto Council adopted a motion to request that the above ground section of the Ontario Line traversing through Riverside and Leslieville (Lakeshore East Joint Corridor) be designated for a Federal Environmental Assessment. Please provide an update on this request and please ensure ongoing coordination with the City of Toronto.	On April 16, 2021 the Minister of Environment and Climate Change has determined that the Ontario Line Project proposed by Metrolinx does not warrant designation under the Impact Assessment Act. Details can be found here: https://iaac-aeic.gc.ca/050/evaluations/proj/81350	Thank you for this information – no further comment.
3	Sustainable Infrastructure	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	<p>TRCA has an advocacy role in relation to the development of sustainable infrastructure. As such, TRCA staff recommends that the design for the proposed project components include mechanisms for water conservation, energy conservation and waste management, such as:</p> <ul style="list-style-type: none"> Eco-Efficiency: Ensure the facility equipment and operations can minimize energy and water use and GHG emissions; Solid Waste Management: Ensure that construction of the facility minimizes the generation of solid waste and; Stormwater: Ensure that the project minimizes runoff using LID's where appropriate and enhances the urban tree canopy. 	Acknowledged; however, certain components of this request do not apply to the design for the Early Works (EW) scope as the Early Works will not include Ontario Line infrastructure such as stations which will be constructed as part of the main Ontario Line contracts. Early Works stormwater designs will include LID features and infiltration will be the primary method of quality, quantity and water balance control within the Early Works project footprint. The first two components (i.e., Eco-Efficiency and Solid Waste Management) do not apply to this project since Hatch is not designing any such facilities within the project footprint.	No further comment.
4	Future VPR Requirements	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	<p>TRCA staff advise that as this submission is quite preliminary and that further studies/assessments will be required as the project progresses. In addition, Metrolinx has requested further insight to the anticipated requirements for the Voluntary Project Review (VPR) stage of this project. Please be advised that the following items are anticipated to be required at the VPR stage; please note this list is preliminary and further items may be required as the project design progresses, and as further information is provided:</p> <ul style="list-style-type: none"> TRCA Voluntary Project Review Application Form Cover letter outlining project scope, duration, list of plans and documents Land-owner authorization for any works outside of Metrolinx's right-of-way Site Plan and engineered drawings Existing site conditions, including property boundaries, construction limits, flood hazard limits, proposed vegetation removals 	Acknowledged; most requirements will be met with the possible exception of a full EIS per TRCA guidelines (see below response to comment #13) and drawing details requiring construction methods. Further discussion on EIS scope is required before proceeding.	<p>Please advise why construction method drawings will not be provided as part of the VPR submission.</p> <p>Please see response to comment 13.</p>

			<ul style="list-style-type: none"> Construction staging and phasing plan, including construction schedule, erosion and sediment controls, access plans, dewatering plans, restoration plans, and construction timing window Detailed design brief outlining where TRCA requirements and technical commitments made within the EA stage have been fulfilled within the VPR submission. Design detail drawings for all proposed works, including proposed retaining walls and tracks Geotechnical investigations and designs for all retaining walls, earthworks and grading, to identify design recommendations and global stability Stormwater Management Report which addresses all comments made within the EA stage Scoped Environmental Impact Study consistent with TRCA's EIS Guidelines <p>Please note further information can be found within the TRCA's Initial Submission Checklist for Infrastructure Projects and TRCA's Technical Report Guidelines for Infrastructure Projects.</p>		
5	Geotechnical Engineering	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	The drawings show that earthworks and grading will be required as part of the proposed retaining wall and track works. A geotechnical review will be required for these elements, to provide geotechnical design recommendations and to ensure global stability.	Acknowledged. A Geotechnical Report is currently in development as part of the design process and will provide design recommendations, including but not limited to, global stability.	TRCA will review the Geotechnical Report once available. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.
6	Geotechnical Engineering	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	The drawings for the retaining walls are conceptual at this stage; the details of the retaining walls must be developed in the next submission when further designs have been completed.	Acknowledged. The detailed design of retaining walls will be further progressed / developed and will be included in the subsequent VPR submission(s).	The detailed design of the retaining walls will be provided at the detailed design process. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.
7	Water Resources	Stormwater Management Technical Memorandum, prepared by Hatch, dated July 7, 2021	Please be advised the review of quantity control is deferred to the City.	Acknowledged and noted.	No further comment.
8	Water Resources	Stormwater Management Technical Memorandum, prepared by Hatch, dated July 7, 2021	Please provide the details of the proposed Surface Level pre-treatment confirming the required 80% TSS removal will be provided, in your next submission.	80% TSS removal will be achieved through pre-treatment and infiltration. Tabular results will be provided for additional clarity with the final Stormwater Management Report for the VPR submission.	TRCA staff will review the stormwater management report when it becomes available at the detailed design stage. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.
9	Water Resources	Stormwater Management Technical Memorandum, prepared by Hatch, dated July 7, 2021	As stated in the report, there is potential for permanent infiltration galleries to be used within the acquired parking lot adjacent to the corridor at Dickens St and Thackery Ave. If this option is selected to be used for providing infiltration, please provide further details of the proposed facility when they become available.	Acknowledged; however, these locations are outside of the TRCA regulatory limit. Information on impacts within the TRCA regulatory limits will be provided for the VPR submission.	Noted. Providing permanent infiltration galleries at the subject parking lot will improve the water balance condition of the area. We strongly recommend the applicant to consider the proposed infiltration facility at the parking lot.
10	Water Resources	Stormwater Management Technical Memorandum, prepared by Hatch, dated July 7, 2021	Please provide further details of the proposed infiltration facilities for each segment, including exact locations, areas, discharge points, and detailed calculations when this information becomes available.	Acknowledged; this information will be provided as necessary with the subsequent VPR submission.	To be reviewed at detailed design. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.
11	Flood Risk	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	It is staff's understanding that the proposed retaining walls will not impact flood depths in the area as the proposed retaining walls are minor and this area does not convey flow. In addition, TRCA staff advise that there are two flood protection projects in the Lower Don area (Portlands Flood Protection Project and the Broadview-Eastern Flood Protection Project) which will remove the flood plain in this area upon completion.	Acknowledged and noted.	No further comment.

12	Flood Risk	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	Please include the flood plain on the drawings, to confirm the location of the proposed works in relation to the flood plain.	Acknowledged and noted.	To be reviewed once available. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.
13	Ecology	Lakeshore East Joint Corridor Preliminary Design, prepared by Hatch, dated July 7, 2021	Please be advised a scoped EIS consistent with TRCA's EIS Guidelines , will be required. Scoping of the EIS should be identified by the ecological consultants, as they are the experts on both the site and the project. TRCA is happy to review a TOR outlining that scope and to provide comments on any refinements that would be required to the scope of work through the TOR.	Acknowledged; Metrolinx has reviewed the EIS guidelines and based on the results of the Early Works (EW) Report, it is noted that many of the guideline requirements are not applicable (i.e. this project is not within any designated Natural Heritage areas or other designated protected areas). Results from the EW Report should capture most of the guideline requirements to 'screen out' the need for a comprehensive EIS. Metrolinx requests that TRCA review the draft EW Report to confirm whether this assessment is valid and then further discuss the requirement for a complete EIS before proceeding with this requirement. In addition, a tree inventory/Arborist Report will be completed during detailed design to assess impacts to vegetation for the project (will be provided to TRCA for review as part of the VPR submission).	Please be advised that the Draft EWR focuses on mitigation related to construction practices but does not include in-depth mitigation in regard to operation, habitat removal or cumulative effects. Please provide an EIS that assesses the impacts based on the existing conditions and outlines mitigation strategies beyond just construction related impacts. This should consider the effects of implementation, operation and, importantly, impacts to adjacent habitat function and any habitat removals. Cumulative effects should also be considered.

NEW COMMENTS

ITEM	DESCRIPTION	DOCUMENT			TRCA COMMENTS – Draft Early Works Report (October 22, 2021)
14	Coordination with East Harbour Station				Please ensure coordination with the East Harbour Station project team.
15	Jimmie Simpson Park				The Draft Early Works Report notes potential impacts to parks, including Jimmie Simpson Park. TRCA staff recommend that Metrolinx ensure adequate public consultation and communication regarding impacts to parks. In addition, staff recommend ensuring adequate signage regarding any potential impacts and/or park closures.
16	Ecology				The Early Works Report identifies that Significant Wildlife Habitat (SWH) is present related to Eastern wood peewee. It indicates that 2.24 ha of habitat will be lost. The mitigation strategy indicates that tree removals will avoid the breeding window and when this is not possible, nest surveys will be conducted to avoid removing active nests. These are suitable mitigation measures for impacts related to typical construction methodologies, but they do not mitigate the removal of the habitat itself. Please clarify how 2.24 ha of SWH habitat related to Eastern wood peewee will be mitigated/compensated for.
17	Hydrogeology				No hydrogeologic information has been provided at this early stage. Please provide technical details of the proposed infiltration facilities once available. Please include a commitment within the Draft EPR to have this information provided to TRCA for review once available.

Good afternoon,

Can you kindly advise where these reports can be found on Metrolinx's website? They do not appear to be located under "Milestones", where the other Early Works Reports have been previously published.

Kind regards,
Alannah

Subject: Ontario Line - Notice of Draft Lakeshore East Joint Corridor EWR and East Harbour Station EWR

Good afternoon Beth,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any

questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Beth Williston,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment

Attachment 2 - Notice of Publication of Draft East Harbour Station Early Works Report

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: [EXTERNAL] RE: MX ON Line - Draft Lakeshore East Joint Corridor Early Works (EW)
Date: Tuesday, September 21, 2021 3:33:54 PM
Attachments: [REDACTED]

Good afternoon Alannah,

Ahead of the draft publication of the draft Lakeshore East Joint Corridor (LSE-JC) Early Works Report, please see attached a revised comment response sheet to the TRCA's comments (dated July 6, 2020) on the previously circulated draft early works report with applicable responses to the LSE-JC study area revised. The team looks forward to the TRCA's review and comments on this report anticipated to be published and shared with the TRCA in the coming days.

Regards,

MERLIN YUEN

RE: Ontario Line Project - Response to Toronto Region Conservation Authority Letter on the Draft Early Works Report Comments (July 6, 2020)

Dear Alannah Slattery,

Thank you for the Toronto Region Conservation Authority's (TRCA) letter dated July 6, 2020 outlining TRCA's feedback on the initial draft Early Works Report (EWR) for the Ontario Line Project. We appreciate the detailed review and feedback. Ahead of the publication of the Draft Lakeshore East Joint Corridor Early Works Report, we have revisited the comments that TRCA provided on the draft Early Works Report. Our responses to the draft Early Works Reports comments with regards to the Lakeshore East Joint Corridor early works are provided in **Attachment 1**.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure,
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue,
- Construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks,
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track,
- Construction of retaining walls, and
- Construction of noise barriers, including east of Pape Avenue.

Further details regarding the Lakeshore East Joint Corridor early works will be provided in the Draft Lakeshore East Joint Corridor Early Works Report, which will be shared with the TRCA for review.

In the letter from TRCA dated July 6, 2020, a copy of TRCA's feedback on the conceptual design from May 15, 2020 was also provided, with a note that those comments have yet to be addressed. Metrolinx notes that those comments were based on the previous Ontario Line design which has since been updated and shared with TRCA for review and feedback. Metrolinx confirms that comments from TRCA on the updated design have been received and is working on addressing those comments. Metrolinx will continue to work with TRCA as part of the ongoing Ontario Line planning and design development.

Please do not hesitate to contact me if you have any questions.

Regards,

A handwritten signature in black ink, appearing to be 'M. Zintchenko', with a stylized flourish at the end.

APPENDIX A: TRCA COMMENTS AND PROPONENT RESPONSES

TRCA staff received the draft Early Works and Draft Natural Environment Early Works Reports for the above-noted project on June 5th, 2020. TRCA staff provided comments on the reports on July 6th, 2020. On November 27th, 2020, Metrolinx provided comment responses to TRCA comments which have been reviewed by TRCA staff.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROponent RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
1.	Draft Early Works Report (July 2020)	<p>We had expected that our comprehensive feedback provided on the conceptual design on April 15, 2020, as well as previous studies, like SmartTrack, would be incorporated into these reports. Since those comments have yet to be addressed, they are being re-iterated in this table. Where applicable, we have incorporated and responded to Metrolinx responses to TRCA's conceptual design comments.</p> <p>Ideally our comments will be incorporated into the documents prior to public review; however, if this is not possible due to time constraints, please confirm how our comments on the draft Early Works Reports will be addressed. If Metrolinx is unable to address TRCA comments at this stage, commitments to address comments should be added to the reports or provided in a separate memo. TRCA support and sign-off is based on addressing, or committing to address, our comments to the satisfaction of TRCA. Please identify in your responses where changes have been incorporated in the analysis or design.</p>	<p>Comment noted. TRCA feedback has been applied to the draft Early Works Reports where applicable.</p> <p>Metrolinx looks forward to continued engagement with TRCA as project planning progresses.</p>	<p>TRCA staff look forward to reviewing the updated Early Works reports. Please identify in your responses where changes have been incorporated in the analysis or design.</p> <p>As previously mentioned, if Metrolinx is unable to address TRCA comments at this stage, commitments to address comments should be added to the reports or provided in a separate memo. TRCA support and sign-off is based on addressing, or committing to address, our comments to the satisfaction of TRCA.</p>	Comment noted.
2.	Draft Early Works Report (July 2020)	<p>It is our understanding that these Early Works documents are the only documentation proposed for these works; however, TRCA staff do not have sufficient details of the proposed works. The design of the East Harbour Station, for example, is not described; instead, reference is made to previous studies with the assumption that agencies have the details of that study. Considering that this EA is not an addendum to the Smart Track project, it is imperative that the full extent of the works be described in detail in the current reports.</p>	<p>Additional detail has been provided in updated draft reports, including conceptual design plans for Exhibition Station early works. Assessment of early works at the Lower Don Bridges and East Harbour Station is now documented in separate reports.</p>	<p>TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will incorporate the feedback TRCA has provided to Metrolinx and will describe the full extent of the works in detail.</p> <p>TRCA staff note that we are receipt of the draft Exhibition Place Early Works review and will be providing comments under separate cover.</p>	Comment noted. Not applicable to LSE-JC.
3.	Draft Early Works Report (July 2020)	<p>The Early Works document does not incorporate the significant feedback TRCA has already provided regarding the Lower Don Crossings and East Harbour Station. Both the Lower Don Crossing and the East Harbour Station are located</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from</p>	<p>This comment remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will incorporate the feedback TRCA has provided to Metrolinx and will describe how the Lower Don Crossings and East</p>	Comment noted. Not applicable to LSE-JC.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		<p>in the existing and future floodplain of the Lower Don. It is critical that the design and implementation of the Early Works does not negatively impact the implementation of flood protection in the Lower Don. There are multiple projects being simultaneously designed in parallel in this area. The Early Works document needs to describe how the Lower Don Crossings and East Harbour Station interfaces with these projects, which include the Port Lands Flood Protection project, Broadview and Eastern Flood Protection EA, and Broadview and Commissioners Class EA.</p>	<p>TRCA will be incorporated in updated draft reports.</p>	<p>Harbour Station will interface with the multiple projects being simultaneously designed in this area.</p>	
4.	<p>Draft Early Works Report (July 2020)</p>	<p>Staff strongly recommends a joint meeting with Metrolinx, TRCA, Waterfront Toronto and the City of Toronto early in the process as there are currently numerous major City building and infrastructure projects in the vicinity of the Lower Don River crossing. One of TRCA’s strategic objectives is to help our partners channel joint efforts and implement projects that are efficient and mutually cost-beneficial. Bearing in mind the varying project timelines, costs of flood proofing, duplication of efforts and shared benefits, it may be worthwhile for the Metrolinx, the City, TRCA, Waterfront Toronto and other affected agencies to join efforts to address the current flooding issues in a timely manner and achieve shared benefits.</p> <p>While preliminary hydraulic models suggests it is feasible to provide flood protection on the north side of the tracks, there is currently no approval or funding for this proposal and, as such, there is no proposed timeline for implementation of flood protection. The flood protection solution would also require approval through a Class Environmental Assessment (EA) process among other studies prior to implementation.</p> <p>We acknowledge that Metrolinx’s design team is in the process of setting up a series of meetings. TRCA staff look forward to future meetings, particularly one prior to the release of these reports to the public.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. Metrolinx will continue to engage with TRCA to ensure collaboration between projects in vicinity of the Lower Don Bridges and East Harbour. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.</p>	<p>TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will incorporate the feedback TRCA has provided to Metrolinx. TRCA staff look forward to continuing to collaborate with Metrolinx, Waterfront Toronto and the City of Toronto.</p>	<p>Comment noted. Not applicable to LSE-JC.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
5.	Draft Early Works Report (July 2020)	The East Harbour Station is located in the Don River Valley, Special Policy Area (SPA) and flood plain. TRCA completed the Don Mouth Naturalization and Port Lands Flood Protection Project EA (DMNP EA (2015)) that identified a preferred alternative for flood protection on the eastside of the Don River which will address current flooding on the First Gulf Property and into the South Riverdale communities to the east by implementing flood protection measures on the south side of the elevated railway embankment. Depending on the timelines for the station construction, Metrolinx will be required to address existing flood plain management requirements if the station is developed and implemented prior to implementation of the flood protection at this location. It is also important to note that although the rail embankment and areas south of the rail corridor may no longer be subject to flooding once the implementation of the Port Lands flood protection works, areas north of the tracks will remain in the flood plain and vulnerable to flooding even with a complete implementation of the preferred alternative in the DMNP EA (2015).	Comment noted.	No further comment.	Comment noted. Not applicable to LSE-JC.
6.	Draft Early Works Report (July 2020)	Please discuss the timing of constructing the Lower Don River Crossing and the proposed construction of the Lower Don River Crossing, and East Harbour Station. If the timing of construction of the Lower Don River Crossing and East Harbour Station is before the proposed flood remediation works, then the updated and improved floodplain can be used in all future analysis.	Metrolinx will continue to engage with TRCA to ensure collaboration between projects in vicinity of the Lower Don Bridges and East Harbour. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.	This comment remains outstanding. Please update the Early Works reports to discuss the timing of construction for the Lower Don River Crossing and the East Harbour Station.	Comment noted. Not applicable to LSE-JC.
7.	Draft Early Works Report (July 2020)	Depending on the timing of Early Works, if they are built prior to the Gardiner and flood protection infrastructure, the impact of flooding must be considered. It should be identified who will be affected if there is a flood and who will be responsible for dealing with flood conditions during that time. This should be discussed at the requested joint meeting and/or added as a commitment in the report.	Potential impacts to floodplain and appropriate mitigation measures will be included in the updated draft reports. Metrolinx will continue to consult with TRCA as the design advances and construction details become available.	This comment remains outstanding. TRCA staff look forward to receiving the updated reports which will include potential impacts to floodplain and appropriate mitigation measures.	Comment noted. Not applicable to LSE-JC.
8.	Draft Early Works Report (July 2020)	There was no mention of potential effects and mitigation measures based on the following items: a) Approved Don Mouth Naturalization and Port	The assessment of early works at the Lower Don Bridges and East Harbour Station has	This comment remains outstanding. TRCA staff look forward to receiving the separate early works reports for	The Lakeshore East Joint Corridor Early Works Report references the Don Mouth Naturalization and Port Lands

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		<p>Lands Flood Protection Project: Key flood protection measures have been authorized to tie-in with the existing railway embankment at Don Roadway and Eastern Avenue Underpass; b) Completed Lower Don River West Remedial Flood Protection Project: Flood Protection Landform in West Don Lands has specific tie-in and grading requirements that must be retained where the railway meets the flood protection; c) Port Lands and South of Eastern Master Plan Class EA - requires a new Broadview underpass with expanded flood protection tie-ins and drainage with the railway embankment; and, d) Gardiner Expressway EA - requires opening of bridge crossing on east side of Don River through railway embankment to accommodate Hybrid 3 option. Please update this chapter to add this information.</p>	<p>been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be revised to include the list of studies reviewed.</p>	<p>the Lower Don Bridges and East Harbour Station. Please ensure that the reports address the potential effects and mitigation measures in regard to items a-d listed in the original comment.</p>	<p>Flood Protection Project, Lower Don River West Remedial Flood Protection Project, and Port Lands and South of Eastern Master Plan Class EA and other projects and commits to consulting and coordinating with TRCA, City of Toronto and Waterfront Toronto. Metrolinx has been and will continue to hold and attend technical and coordination meetings and workshops as project planning and design progress for successful integration with the interfacing projects.</p>
9.	Draft Early Works Report (July 2020)	<p>Considering the biggest concern at the three Early Works locations is surface flooding, Section 4 of the report should be updated to include a discussion of surface flooding, similar to what is included for soils, groundwater, or other environmental conditions.</p>	<p>An additional section on surface water, groundwater, and soils has been included in the revised report to present predicted impacts and prescribe mitigation.</p>	<p>This comment remains outstanding. TRCA staff look forward to reviewing the revised section of surface flooding in the updated reports.</p>	<p>A surface water and hydrology section has been added to the LSE JC EWR. Table 6-3 of the EWR includes impacts and mitigation measures associated with surface water and hydrology.</p>
10.	Draft Early Works Report (July 2020)	<p>TRCA staff understand that the Early Works are proposed to be undertaken at four locations: Exhibition Station, Lower Don River Crossing, East Harbour Station, and along the Lakeshore East Joint Corridor between Eastern Avenue and Carlaw Avenue. While the Exhibition Station study area is not regulated by TRCA, the other three locations are regulated and will be the focus of our comments.</p> <p>Figure 1-3 shows that the footprint of the Lower Don River Crossing ends south of the Richmond Hill Corridor tracks. As such, impacts to the West Don Flood Protection Landform were not included in this review. However, TRCA staff will need to see the impact study for the Richmond Hill Corridor works to confirm that there are no impacts to the West Don Flood Protection Landform. The hydraulic assessment will need to show that the floodplain impacts resulting from</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. Text regarding the West Don Flood Protection Landform will be included in the Lower Don Bridges EWR. Commitment to future SWM report can be added to the EWR.</p>	<p>This comment remains outstanding. TRCA staff look forward to reviewing the Lower Don Bridges Early Works report when available. Please ensure that text regarding the West Don Flood Protection Landform is included.</p>	<p>A commitment for a future stormwater management report has been added to Table 6-3 of the EWR. Section 5.3 notes that the Lakeshore East Joint Corridor Hydrology and Surface Water Study Area overlaps with the boundaries of the West Don Lands Flood Protection Landform; however, the West Don Lands Flood Protection Landform is outside of the Lakeshore East Joint Corridor Early Works Project Footprint. Metrolinx will consult with TRCA during detail design to avoid potential infrastructure conflicts and impacts to adjacent flood protection measures / initiatives.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		the Lower Don Crossing Early Works will not negatively impact the function of the West Don FPL. Please confirm when we can expect to see these works.			
11.	Draft Early Works Report (July 2020)	Section 3.3 identifies that the “initial preferred design (IPD)” for the station was developed as part of the SmartTrack Stations EPR and that a number of changes are being proposed to integrate Ontario Line with the station. However, the IPD is not provided as part of the report and therefore cannot be reviewed. Critical information, like the design of the station, should be provided for review and TRCA staff await further details on the station design.	East Harbour Station is not included in the current Early Works Report, however, the concept design plan will be included in the updated draft report documenting impacts and mitigation at East Harbour.	This comment remains outstanding. TRCA staff look forward to receiving the concept design plan within the update draft report documenting impacts and mitigation at East Harbour.	Noted. This comment is not applicable to the LSE JC EWR.
12.	Draft Early Works Report (July 2020)	Please note that there is a possibility that sections of this line will still be susceptible to flooding. Our preference is to avoid locating the main station entrances in flood vulnerable areas, and that those entrances are subject to flood proofing requirements. Ingress and egress for new buildings should ensure that vehicular and pedestrian movement is not prevented during times of flooding.	A SWM report will be developed to understand potential flood impacts. A future commitment has been added to the EWR to address this.	This concern remains outstanding. TRCA staff look forward to receiving the Stormwater Management Report in the future.	A commitment for a future stormwater management report has been added to Table 6-3 of the LSE JC EWR.
13.	Draft Early Works Report (July 2020)	The Lower Don River Crossing and East Harbour Station are located within the Lower Don Special Policy Area. As such: <ul style="list-style-type: none"> a) Ingress and egress for all buildings within the flood plain lands shall be “safe.” Pursuant to provincial floodproofing standards, and/or achieve the maximum level of flood protection determined to be feasible and economically viable such as at grade with street related access points; b) Developments must be floodproofed to the Regional floodplain if possible. If that is not possible, an iterative approach will be accepted to a minimum floodproofing standard of the 350-year storm event; c) The Lower Don floodplain is modelled in Mike Flood 2D. Any fill and floodproofing that is proposed to be undertaken within the floodplain must undergo an offsite impact assessment in Mike Flood 2D. TRCA will not accept development that results in offsite floodplain impacts. 	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be updated to include text regarding the Lower Don Special Policy Area. Future commitment to confirming impacts within this policy area can be added.	These concerns remain outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will address comments a,b,c in the original comment.	Noted. This comment is not applicable to the LSE JC EWR.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
14.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	Various references are made in the report to the limited habitat and connectivity functions of the Lower Don River. However, it should be noted that within a highly urbanized context these communities have a greater significance and value than they would in a less urban landscape. While this may not impact the project's viability, its importance based on landscape level considerations should be considered and a compensation strategy will be required that reflects the increased importance of anthropogenic urban ecological communities. Please update the report accordingly to reflect the important functions of the existing features.	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be updated to include description of the importance of the Don River valley as a wildlife corridor and compensation for potential effects on the Urban River Valley and mitigation to address potential effects on habitat connectivity.	This concern remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will incorporate the feedback TRCA has provided to Metrolinx regarding wildlife and the importance of the connectivity functions of the Lower Don river.	Noted. This comment is not applicable to the LSE JC EWR.
15.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	Similar to the previous comment, the Don Valley provides an important function as a wildlife corridor within the highly urban local landscape. Design considerations should be analyzed within this local landscape context and should not impair ecological connectivity.	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be updated to include description of the importance of the Don River valley system in an urban setting, and considerations for maintaining or enhancing connectivity during Detailed Design. Design considerations will be discussed during the Detailed Design phase.	This comment remains outstanding and we note that MX has deferred this requirement to detailed design. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will incorporate the feedback TRCA has provided to Metrolinx regarding ecological connectivity.	Comment noted and addressed as part of the Lower Don Bridge and Don Yard as well as East Harbour Station Early Works Reports. Lakeshore East Joint Corridor early works location is east of the Don Valley.
16.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	The effects tables indicate that compensation will be coordinated with the City of Toronto. Please ensure that TRCA is included in these discussions. It is important to note that TRCA will only consider compensation if it has been demonstrated that losses are unavoidable. Should no other alternatives be feasible, these losses will need to be quantified. In the absence of a finalized Metrolinx compensation strategy, ecological compensation should be based on TRCA's Guideline for Determining Ecosystem Compensation.	Metrolinx looks forward to developing potential vegetation compensation opportunities in discussion with TRCA.	Wherever impacts to natural heritage system cannot be avoided, TRCA will work with MX to identify options for compensation to ensure no net loss as a result of this project through the TRCA Guidelines for Determining Ecosystem Compensation or through Metrolinx's Vegetation Management Guidelines.	Comment noted. The EWR notes that compensation will be undertaken in accordance with the provisions outlined in the Metrolinx Vegetation Guideline (2020).

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
17.	Draft Early Works Report (July 2020)	<p>Please note that our objective at TRCA is to minimize the required number of crossings through valley corridors. The Early Works component of the Ontario Line project includes the Lower Don River Crossing at the GO tracks. For each crossing, Metrolinx must demonstrate that there are no significant impacts to flooding as a result of the crossing. The TRCA Stormwater Management Criteria (TRCA, 2012) must be met - documents are available online at http://sustainabletechnologies.ca/wp/wp-content/uploads/2013/01/SWM-Criteria-2012.pdf</p> <p>TRCA received feedback from Metrolinx indicating that the studies will be undertaken. Please conduct a hydraulic assessment in Mike Flood 2D for the Lower Don Crossing.</p> <p>In order to obtain TRCA support, we require not just that the study be conducted, but that it demonstrates no floodplain impacts, and that all necessary project design changes will be made to demonstrate this.</p>	<p>During detailed design and prior to construction, a Stormwater Management Report will be completed to determine potential effects and mitigation measures. The report will be completed in consultation with TRCA and the MECP. Stormwater management design will consider guidance provided by the MOECC Stormwater Management Planning and Design Manual (2003) and MTO Drainage Management Manual (2008), TRCA Storm Water Management Criteria (2012), and the Low Impact Development Stormwater Management Planning and Design Guide (TRCA/Credit Valley Conservation, 2010).</p>	<p>This comment remains outstanding and we note that MX has deferred this requirement to detailed design. TRCA staff look forward to receiving the Stormwater Management Report. Please conduct a hydraulic assessment in Mike Flood 2D for the Lower Don Crossing.</p> <p>In order to obtain TRCA support, we require not just that the study be conducted, but that it demonstrates no floodplain impacts, and that all necessary project design changes will be made to demonstrate this.</p>	Comment noted. This comment is not applicable to the LSE JC EWR.
18.	Draft Early Works Report (July 2020)	<p>We recommend that Metrolinx situate and design the works appropriately in line with the necessary technical studies - fluvial geomorphic processes (cross perpendicular to the stream, cross on as straight a reach as possible), meander belt and erosion studies (100 year erosion limit where meander belt is not possible), geotechnical (grading and retaining walls for tracks), etc. All crossings including their grading and earthworks needs geotechnical and slope stability assessment. The geotechnical design will be also be needed in support of the proposed crossings.</p>	<p>A future commitment will be added to the Early Works Reports and Environmental Impact Assessment Report for these requested studies to be completed during detailed design, as required.</p>	<p>This comment remains outstanding and we note that MX has deferred this requirement to detailed design. TRCA staff look forward to receiving the geotechnical and slope stability assessments for all crossings.</p>	Comment noted. This comment is not applicable to the LSE JC EWR.
19.	Draft Early Works Report (July 2020)	<p>2 new bridge spans are proposed over the Don Valley Parkway and Don River on either side of the existing CN bridge for the Ontario Line tracks, including pedestrian/cycling facilities. It is understood that the existing bridge abutments will be expanded on both sides to accommodate these additional spans.</p> <p>a) Please confirm the widths of the proposed bridges, as well as the total width of the crossing once complete. We understand</p>	<p>The design details referenced are currently being advanced and will be shared with TRCA as they become available.</p>	<p>This comment remains outstanding. TRCA staff look forward to receiving the design details of the proposed bridges.</p>	Noted. This comment is not applicable to the LSE JC EWR.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		<p>that as of June 25, 2020 these details have not yet been finalized. TRCA staff will need to see these details to confirm that there are no adverse impacts to the floodplain.</p>			
		<p>b) Please confirm any modification/changes/extensions to the abutments, piers, wingwalls and their potential impacts. We understand that as of June 25, 2020 these details have not yet been finalized. TRCA staff will need to see these details to confirm that there are no adverse impacts to the floodplain.</p>	<p>The design details referenced are currently being advanced and will be shared with TRCA as they become available.</p>	<p>This comment remains outstanding. TRCA staff look forward to receiving the design details of the abutments, piers, wingwalls and their potential impacts.</p>	<p>Noted. This comment is not applicable to the LSE JC EWR.</p>
		<p>c) The geotechnical design is needed for the abutments, foundations, earthworks for the approach embankment as well as any other means and methods (both temporary and permanent) to facilitate the works, which can result in the alteration of the surrounding area. We appreciate that geotechnical investigations will be undertaken and the results will inform the design. We reiterate that this should be done at this stage of the study.</p>	<p>Metrolinx design teams are advancing geotechnical field investigations as required to inform design decisions at this location and results can be shared with TRCA as they become available.</p>	<p>This comment remains outstanding. TRCA staff will continue the geotechnical review once we receive the results of the geotechnical field investigations as they become available.</p>	<p>Noted. This comment is not applicable to the LSE JC EWR.</p>
		<p>d) The proposed bridge abutments appear to increase flood elevations in the hydraulic model in some critical locations. In particular, expanding the spill extents in the east don lands is problematic. Metrolinx should design the bridge structures to maintain base flood elevations and extents in the key areas. Key areas include the West Don Lands FPL tie off point, BEFP FPL Phase 1, spill through Eastern Ave, BMW Lands, Metrolinx bridge soffits, and Unilever FPL. We understand that the Waterfront Toronto model will be used as the base condition, and that the proposed condition model will incorporate bridge abutments and rail corridor embankments. As indicated in the June 25, 2020 response, we look forward to reviewing the model and flood elevation</p>	<p>The design details referenced are currently being advanced and will be shared with TRCA as they become available.</p>	<p>This comment remains outstanding. TRCA staff look forward to receiving the design details of the proposed bridges when available.</p>	<p>Noted. This comment is not applicable to the LSE JC EWR.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		<p>difference map between the base condition and proposed condition within the entire floodplain.</p> <p>e) The proposed FPLs on the east side of the Don River (both south and north of the tracks) and the Port Lands sediment control area on the southwest side of the bridge need to be considered in the development of options. Metrolinx has acknowledged this comment but TRCA would like to see a commitment to this effect in the report. For TRCA to support these works, we must confirm that there are no adverse impacts to these flood protection initiatives.</p> <p>f) We understand that property needs will be assessed as part of detail design, but the abutments for these structures should avoid encroaching on TRCA property.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to include a future commitment to consider the proposed FPLs on the east side of the Don River, and the Portlands sediment control area.</p> <p>Metrolinx will seek to avoid encroachment to the extent possible.</p>	<p>This comment remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station.</p> <p>Please ensure that these reports are updated to include a commitment from Metrolinx to consider the proposed FPLs on the east side of the Don River, and the Portlands sediment control area. For TRCA to support these works, we must confirm that there are no adverse impacts to these flood protection initiatives.</p> <p>No further comment.</p>	<p>Noted. This comment is not applicable to the LSE JC EWR.</p> <p>Noted. This comment is not applicable to the LSE JC EWR.</p>
20.	Draft Early Works Report (July 2020)	<p>With regards to utility and other infrastructure relocation, staff notes that there are several other infrastructure and utilities including watermains, hydro utilities, etc., owned by other agencies that may need to be relocated to facilitate this project. Please confirm if this infrastructure and utility works will be undertaken by Metrolinx (or contractor) as part of this project as well as the timelines for these works. We understand that consultation with the various stakeholders is ongoing.</p> <p>It is important to note all early/enabling works, and if some of the works will be undertaken by other proponents (municipalities and companies) as these other proponents may be subject to TRCA Regulatory requirements. In addition, it will be important to confirm these details to provide adequate time for permitting and implementation to avoid overall project delays. Please include this item in the future commitments section within the report.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to include a future commitment will be added to review utility relocations and continue coordination with TRCA and other affected stakeholders.</p>	<p>This comment remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station.</p> <p>Please ensure these reports include details regarding utility relocations and infrastructure relocation within the future commitments section of the report.</p>	<p>Table 6-10 in the EWR includes utility potential impacts and mitigation measures. Details will be confirmed as project planning progresses.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
21.	Draft Early Works Report (July 2020)	<p>A multi-use path and pedestrian crossing is proposed as part of the two new bridges crossing the Lower Don. TRCA questions the need for the bridge on the south side. Our preference is to avoid multiple crossings in close proximity to each other over watercourses.</p> <p>In line with TRCAs <i>The Living City Policies</i>, in order to support the proposed new, replacement, or expanded infrastructure, it must be demonstrated through technical studies completed by a qualified professional in accordance with TRCA standards and to the satisfaction of TRCA that:</p> <ul style="list-style-type: none"> • there will be no increase in risk associated with flood hazards and erosion hazards to upstream or downstream properties within valley and stream corridors; • infrastructure has been designed in a manner that minimizes the number of crossings and areas to be disturbed by infrastructure within valley and stream corridors, maintains the predevelopment configuration of the flood plain, valley or stream corridors, and does not prevent access for maintenance, evacuation or during an emergency; • the works will not result in unacceptable impacts to flood storage and conveyance upstream or downstream of the site; and, • considerable effort is put towards alleviating the current erosion and flood risk to affected properties through innovative means including possible acquisition of floodplain lands for remediation and or re-naturalization of the valley. <p>Metrolinx indicated that design investigations will include a review of floodplain and slope impacts. TRCA staff will need to see these details to confirm that there are no adverse impacts.</p>	Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment.	This concern remains outstanding. TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges. Comments on the latest update of the Lower Don Bridges will be provided under separate cover.	Noted. This comment is not applicable to the LSE JC EWR.
22.	Draft Early Works Report (July 2020)	Stairs/ramps will be necessary for pedestrians/cyclists to exit the new crossings over the Lower Don. We appreciate that infrastructure conflicts will be reviewed as part of detail design	Design options for the Lower Don Bridges are under development in collaboration	This concern remains outstanding. TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges. Comments on the latest update	Noted. This comment is not applicable to the LSE JC EWR.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		(and should be included in the commitments section). TRCA staff will need to see details on how the stairs/ramps for these pathways, west of the Don River, will interface with the West Don FPL and the future Wilson Yard. Our preference is to avoid siting additional infrastructure in this area as there are already essential project needs (sediment management area, Gardiner Expressway relocation, Wilson Yard improvements) that have not been designed and/or implemented, and this proposal could pose conflicts. Space in this area for additional infrastructure is already limited and will be more so once the above-noted initiatives are built.	with TRCA and will continue to be shared with TRCA for review and comment.	of the Lower Don Bridges will be provided under separate cover.	
23.	Draft Early Works Report (July 2020)	<p>Similar to the previous comment, the location of the pathway exits on the east side of the Don River could be potentially in-line with the future flood protection options. When considering design options for the pedestrian/cycling crossings, please ensure that exits are placed east of the crest to ensure it is on the dry-sided slope of the feature and away from the clay core.</p> <p>It was indicated at a workshop for the previous study (SmartTrack) that there is interest in repositioning the Don pathway further east so as to match up with site lines between future buildings. This will minimize risk and reduce footprints on the potential flood protection options.</p> <p>Moving the pathway further to the east will make space for the repositioning of the PS as indicated above.</p> <p>Metrolinx indicated that infrastructure conflicts will be reviewed as part of detailed design. Please include this in the commitments section.</p>	Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment. A future commitment regarding a review of infrastructure conflicts will be added to Lower Don Bridges EWR mitigation table.	This concern remains outstanding. TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges. Comments on the latest update of the Lower Don Bridges will be provided under separate cover.	Noted. This comment is not applicable to the LSE JC EWR.
24.	Draft Early Works Report (July 2020)	<p>Metrolinx will need to demonstrate that the potential stairs/ramps will not cause negative offsite hydraulic impacts.</p> <p>In addition, any features that require filling or re-grading to achieve compliance with flood depth and velocity criteria shall not be permitted unless it has been demonstrated in an environmental study or technical report that can satisfy TRCA</p>	Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment.	<p>This concern remains outstanding. Metrolinx will need to demonstrate that the potential stairs/ramps will not cause negative offsite hydraulic impacts.</p> <p>TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges.</p>	Noted. This comment is not applicable to the LSE JC EWR.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		staff that this filling or grading will not result in adverse impacts on the flooding and erosion, or increase the risk to public safety, or the susceptibility to natural hazards is not increased and no new hazards are created.			
25.	Draft Early Works Report (July 2020)	<p>There are existing and proposed flood protection initiatives surrounding the Lower Don River Crossing that will result in limitations to development and additional monitoring requirements:</p> <ul style="list-style-type: none"> • West Don Flood Protection Landform in Corktown Commons • Port Lands Flood Protection and Enabling Infrastructure Project (including East Harbour Flood Protection Landform) • Broadview and Eastern Flood Protection <p>Significant developments are relying on the elimination of flood risk provided by these initiatives. Bridge abutments and connections to the Lower Don trail system should not impact the proposed flooding infrastructure. Depending on the timelines for construction, Metrolinx will be required to address existing flood plain management requirements if the works are developed and implemented prior to implementation of the flood protection at this location.</p> <p>The schedule for Ontario Line should bear in mind other projects/schedules in the immediate area. Regular joint meetings between all affected parties should be facilitated.</p>	Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment. Metrolinx will continue to engage with TRCA to ensure collaboration between projects in vicinity of the Lower Don Bridges and East Harbour. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.	<p>This concern remains outstanding. The following information remains outstanding: information and assessments regarding the potential impacts to the existing FPL, mitigation measures, restoration and remediation works, commitments from Metrolinx for the development and implementation of mitigative measures, restoration and repairs for the existing FPL, as well as the commitment from Metrolinx to develop and undertake an appropriate monitoring program of FPL both during construction and in the long-term.</p> <p>TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges. Comments on the latest update of the Lower Don Bridges will be provided under separate cover.</p>	Noted. This comment is not applicable to the LSE JC EWR.
26.	Draft Early Works Report (July 2020)	This comment should inform the current geotechnical investigations that are underway. Any modifications to the CN embankment would trigger additional flood protection requirements as it would become part of the flood protection works for the site and the overall East Don Lands. The proponent needs to demonstrate that the design meets the definition of a Valley Wall Feature (VWF) or Flood Protection Landform (FPL) and how it interfaces with the adjacent flood protection infrastructure (tie in points). This will include the requirement to conduct all relevant geotechnical and structural studies to confirm the	Comment noted.	<p>This concern remains outstanding. The following information remains outstanding: information and assessments regarding the potential impacts to the existing FPL, mitigation measures, restoration and remediation works, commitments from Metrolinx for the development and implementation of mitigative measures, restoration and repairs for the existing FPL, as well as the commitment from Metrolinx to develop and undertake an appropriate monitoring program of FPL both during construction and in the long-term.</p> <p>TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges.</p>	Noted. This comment is not applicable to the LSE JC EWR.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		<p>proposed design can withstand the hydrostatic forces of the Regional Storm event and address long-term concerns such as settling. The report should have a section discussing the proposed flood protection initiatives and how the Ontario Line will incorporate with these. TRCA staff will need to see these details to confirm that there are no adverse impacts to the flood protection initiatives in order to support the proposed works.</p>		<p>Comments on the latest update of the Lower Don Bridges will be provided under separate cover.</p>	
27.	<p>Draft Early Works Report (July 2020)</p>	<p>Please note that since the completion of the DMNP EA, TRCA has undertaken several preliminary hydraulic modeling scenarios for flood protection of this area. The results of this modeling suggest that alternative flood protection solutions could be viable in the proximity to the BMW/Talisker site north of the railway tracks.</p> <p>However, these alternatives are preliminary in nature, and are subject to the resolution of several significant technical challenges that have not been investigated. Since an Environmental Assessment to eliminate flooding in the area of the proposed East Harbour station (north) area has not formally started, until that EA is complete and funding is secured to implement a permanent flood solution, Metrolinx would be required to respond to the current flood risk.</p> <p>It is likely that the station proposal will be subject to the requirements of the SPA and flood proofing requirements. Please refer to Section 7.4 of the Living City Policies regarding requirement for development in a SPA, particularly relating to flood proofing elevations, safe egress and ingress, permitted uses, liability and public safety, infrastructure damage and emergency preparedness.</p> <p>If there are station tunnels as previously proposed for SmartTracks, due to the connectivity to the north side of the rail embankment, TRCA will require that the station be flood proofed to the Regulatory flood elevation plus 30 cm of freeboard.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to reference the Living City. A commitment to undertake future studies to address floodplain risk will be included in these updated draft reports.</p>	<p>These concerns remain outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will be updated to address Section 7.4 of the Living City Policies regarding requirement for development in a SPA.</p>	<p>This comment is not applicable to the LSE JC EWR.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
28.	Draft Early Works Report (July 2020)	Another requirement for locating any entrance or public spaces within the proposed station facility located within flood plain north of the rail embankment will be the requirement to have a comprehensive public safety protocol in place for egress and ingress, emergency preparedness and service access for evacuation purposes in case of a flood. Any underground parking facilities must be flood proofed to the level of the required flood elevation set by TRCA and the owner / operator will have to ensure that vehicles can safely be removed during that flood event, and take on full responsibility for life and property impacts due to flooding.	Comment noted.	This concern remains outstanding. Please ensure the updated reports address the concerns laid out in the original comment regarding a comprehensive public safety protocol in place for egress and ingress, emergency preparedness and service access for evacuation purposes in case of a flood.	This comment is not applicable to the LSE JC EWR.
29.	Draft Early Works Report (July 2020)	Please ensure that the construction of the retaining walls is in line with TRCA LCP requirements and based on the necessary technical studies (geotechnical, natural heritage). The location of these features should have the necessary setback requirements from the erosion hazards that have been assessed through appropriate technical studies. Please ensure the design of the facing of the retaining walls consider and incorporate natural heritage elements and sustainable features.	Design options are under development and will continue to be shared with TRCA for review and comment.	This concern remains outstanding. The geotechnical review will continue once further information and assessments become available to TRCA.	A commitment has been made in the LSE JC EWR in Table 6-3 noting that applicable TRCA's Living City Policies will be followed during detailed design.
30.	Draft Early Works Report (July 2020)	For future siting of ancillary features, such as TPSSs and EEBs, please note that they should not be sited in the floodplain or areas that are prone to slope failure as this poses a risk to staff, nearby properties and the general public.	Comment noted.	This concern remains outstanding. The geotechnical review will continue once further information and assessments become available to TRCA.	This comment is not applicable to the LSE JC EWR.
31.	Draft Natural Environment Early Works Report (July 2020)	Noise barriers and walls have been proposed as part of the track expansion. Staff notes that these features affect TRCA regulated areas. Please confirm and indicate how the long-term maintenance associated with these features (noise barriers/walls) will be performed on site. Please note that alternative designs should be considered during the detailed design phase for areas where maintenance is anticipated to occur within a natural feature, where feasible. Please add a note in the relevant section of the report that TRCA staff will be included in the discussions associated with the design of these walls/barriers.	Design options are under development and will continue to be shared with TRCA for review and comment. A commitment to ongoing consultation with the TRCA will be included in environmental assessment reports where the Project footprint overlaps the TRCA regulated area.	TRCA staff look forward to reviewing the updated reports which include a commitment to on-going consultation with the TRCA regarding discussions associated with the design of these walls/barriers.	Design options are under development and will continue to be shared with TRCA for review and comment. A commitment to ongoing consultation with the TRCA will be included in environmental assessment reports where the Project footprint overlaps the TRCA regulated area.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
32.	Draft Early Works Report (July 2020)	TRCA as an organization is very supportive of transit development and encourages agencies and municipalities to develop sustainable transportation options in their planning and development of sustainable communities. The TRCA Living City Policies (LCP Section 6.4, 6.7 and 6.8) promotes and advocates the incorporation of sustainable transportation policies, green infrastructure and ecological design into community development and infrastructure building.	Comment noted.	No further comment.	TRCA's Living City Policies document is referenced in the EWR.
33.	Draft Early Works Report (July 2020)	Generally, TRCA does not support the placement of a new outfall if an existing storm service system is available. If an outfall placement is not avoidable, then the following from TRCA's Living City Policies must be met: 8.9.8 That development, interference and alterations associated with infrastructure that supports stormwater management (SWM) facilities (e.g. outfall structures, etc.) shall generally be: a) located outside of the meander belt wherever possible; b) placed as close to the base of slope as possible, and at a grade above the 25-year floodline where feasible; c) avoid disturbance to natural features, areas and systems contributing to the conservation of land to the extent possible; and d) d) designed to reduce erosive velocities and mitigate thermal impacts (in the case of outfalls and outfall channels).	Comment noted.	No further comment. Original comment remains withstanding.	This comment is not applicable to the LSE JC EWR.
34.	Draft Early Works Report (July 2020)	Please note that TRCA's stormwater management criteria for the additional impervious areas (i.e. the expanded crossing, East Harbour Station and amenities) are as follows: a) Erosion Control: Retention of the 5 mm storm onsite with the use of LIDs (Green roofs, permeable pavers, bioswales, etc.) b) Quantity Control: No quantity control for direct watercourse discharge to the Don and West Don Rivers. If discharging to a	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be updated to include TRCA's stormwater management criteria for impervious areas and a	This comment remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will be updated to include TRCA's stormwater management criteria for impervious areas. We note that MX has deferred the requirement to submit designs and calculations of all stormwater management measures in TRCA's regulated area to detailed design.	Noted. This comment is not applicable to the LSE JC EWR.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		<p>City sewer, then the City’s criteria would govern.</p> <p>c) Quality Control: 80% TSS removal. Please note that TRCA only credits oil-grit separators to provide 50% TSS removal when sized for 80% TSS removal. They must be placed in a treatment train to be credited the full 80% TSS removal. If there are space constraints, TRCA accepts a filtration system (e.g. Jellyfish) when sized correctly to provide 80% TSS removal.</p> <p>Please submit designs and calculations of all stormwater management measures in TRCA’s regulated area demonstrating that the above-mentioned criteria are met.</p>	<p>commitment for MX/design team to consult with TRCA during detailed design.</p>		
35.	<p>Draft Natural Environment Early Works Report (July 2020)</p>	<p>As this project will likely require dewatering, it is important to note that any construction dewatering discharge that will negatively affect flooding, erosion, or natural features upstream or downstream will not be supported by TRCA.</p> <p>If it is identified during preliminary/detail design that dewatering is required, the proponent should provide information on dewatering volume, zone of influence, discharge plan, impact assessment (impact on surface water features, environmental sensitive area, etc.) as well as monitoring, mitigation and contingency plan. The proponent should provide TRCA a copy of the hydrogeological investigations reports for review when complete.</p> <p>Our preference is to discharge into nearby municipal sanitary and storm systems. Upon careful evaluation of the alternatives and potential impacts, should discharge into the watercourse be determined as the only feasible option, a staged-approach must be considered, such as on-site storage in ponds and reservoirs, evaporation ponds, and staged-release into the watercourse. Please refer to the TRCA Technical Guidelines for the Development of Environmental Management Plans for Dewatering (September 2013): https://s3-ca-central-1.amazonaws.com/trcaca/app/uploads/2016/02/1</p>	<p>Comment noted.</p>	<p>Please note our original comment remains withstanding.</p>	<p>Metrolinx remains committed to consulting and sharing technical studies and design details with TRCA as design and planning progress. Dewatering will be assessed in accordance with the Toronto and Region Conservation Authority Technical Guidelines for the Development and Environmental Management Plans for Dewatering (Toronto and Region Conservation Authority, 2013b) and Ontario Regulations 64/16 and 387/04, as amended under the Ontario Water Resources Act, as required.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		7185417/TRCA Technical Guidelines for the Development of EMPs for Dewatering.pdf			
36.	Draft Natural Environment Early Works Report (July 2020)	Please note that while the proposed works are located on, or adjacent to, areas of the watercourse (main and West Don River) identified as warm water, efforts should be taken to prevent temperature spikes in all watercourses as these spikes create a harsh environment for fish and other aquatic species. This is because the impact of asphalt heat islands on creeks can have negative effects and change the community species composition.	Comment noted. The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.	TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station.	Noted. This comment is not applicable to the LSE JC EWR.
37.	Draft Natural Environment Early Works Report (July 2020)	Please note that aquatic ecosystems include the hydrologic regime such as water quality, quantity, temperatures, sediment loads, and seasonal and daily flow variations. Thus, an increase in development area in already highly urban areas often tends to impact these ecosystems in the aforementioned ways. Thus, we recommend that effort be taken to assess and address the above items with appropriate Low Impact Development options and other mitigation techniques. Staff recognizes that some of these impacts are unavoidable, so we will work with the team to provide addition technical guidance relating to these items.	Comment noted. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.	Please ensure updated reports discuss Low Impact Development and mitigation options to reduce impacts on aquatic ecosystems, including the hydrologic regime such as water quality, quantity, temperatures, sediment loads, and seasonal and daily flow variations.	Noted. This comment is not applicable to the LSE JC EWR.
38.	Draft Natural Environment Early Works Report (July 2020)	In addition, as you are aware, migratory birds and insects have a strong need and use of natural wildlife corridors. Thus, we often find in urbanized areas such as these sites that linkages and connected corridors tend to provide habitat for these species to facilitate resting and feeding, and would like to ensure that species are able to continue on their migratory journey without encountering large gaps of unsuitable habitat. Our policies and watershed plans identify the importance of protecting and enhancing our natural systems which serve as wildlife corridors. Climate change and development place pressures on these connections. So similar to the comment above, please ensure that the report assesses the form and function of the existing rail tracks and surrounding areas as wildlife corridors.	The draft Early Works Reports have been updated to describe the importance of existing rail corridors for wildlife, and mitigation has been proposed to address potential effects on habitat connectivity.	TRCA staff look forward to receiving the updated reports which assesses the form and function of the existing rail tracks and surrounding areas as wildlife corridors and mitigation strategies. Wherever impacts to natural heritage system cannot be avoided, TRCA will work with MX to identify options for compensation to ensure no net loss as a result of this project through the TRCA Guidelines for Determining Ecosystem Compensation or through Metrolinx's Vegetation Management Guidelines.	Comment noted. Metrolinx looks forward to continuing discussions with TRCA as project planning and design progress.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)	September 2021 Lakeshore East Joint Corridor (LSE JC) Early Works Report - Revised Response
		<p>There may be opportunities, for example along the edges of the station construction areas, to enhance the natural environment and provide a connection to the surrounding natural areas.</p>			
39.	<p>Draft Natural Environment Early Works Report (July 2020)</p>	<p>While TRCA recognizes that trees and large wildlife species are not encouraged in close proximity to rail tracks; we believe that it is important to identify other opportunities to provide dense shrub plantings and a diverse native seed mix with species that support pollinators https://cvc.ca/wp-content/uploads/2017/04/17-unionnativeplantsforpollinators-booklet-v8-web.pdf.</p> <p>The migration of pollinators, including monarch butterflies and some bat and hummingbird species, is a significant phenomenon. Certain species migrate over paths that stretch thousands of miles while pursuing blooming plants. To ensure the survival of migratory pollinators, three types of habitat needs must be considered. These are: summer breeding and foraging areas; secure overwintering sites; and nectar corridors and rest stops. Nectar corridors are patches of nectar-rich plant habitat, which act as stepping-stones for the pollinators on their long migratory journeys. Due to development and land use changes within Toronto and the GTA, many nectar corridors are no longer intact. Migrating pollinators must attempt to survive their journey through scattered habitats that contain little food.</p> <p>Thus, the planting of pollen rich herbaceous species within long corridors such as rail corridors will likely address this need and serve as a net benefit for the project while avoiding the risks associated with larger trees.</p>	<p>Comment noted. Metrolinx looks forward to developing potential vegetation compensation opportunities in discussion with TRCA.</p>	<p>TRCA staff look forward to reviewing vegetation compensation opportunities with Metrolinx. Wherever impacts to natural heritage system cannot be avoided, TRCA will work with MX to identify options for compensation to ensure no net loss as a result of this project through the TRCA Guidelines for Determining Ecosystem Compensation or through Metrolinx's Vegetation Management Guidelines.</p>	<p>Comment noted.</p>

Good afternoon Alannah,

Thank you for providing your comments to the Exhibition Station Early Works Report. Please see attached a response letter that addresses the TRCA's comments provided on January 11, 2021. Note that our team will be providing an updated comment response sheet for the other comment response sheet also circulated January 11, 2021 – the comments on that sheet pertain to the Lakeshore East and Lower Don Bridges EWRs and we will respond as part of the circulation of those reports at a later date.

Let me know if there are any outstanding comments following this circulation, otherwise we'd appreciate if your team can document this set as closed off. We look forward to continuing to work collaboratively with the TRCA as the project progresses.

Regards,

MERLIN YUEN

RE: Ontario Line Project - Response to Toronto Region Conservation Authority Comments on the Draft Exhibition Station Early Works Report

Dear Alannah Slattery,

Thank you for your letter dated January 12, 2021 outlining the Toronto Region Conservation Authority's (TRCA) comments on the Draft Exhibition Station Early Works Report (EWR) for the Ontario Line Project. We appreciate the detailed review and feedback.

Metrolinx acknowledges TRCA's design recommendations related to eco-efficiency, solid waste management and stormwater. As Exhibition Station early works do not include the future Ontario Line Exhibition Station itself, these recommendations will be considered as part of the ongoing Ontario Line Exhibition Station planning and design development. The "Low Impact Development Stormwater Management Planning & Design Guide (2010)" has been included in the mitigation measures for hydrology and surface water-related impacts outlined in the Exhibition Station Early Works EWR.

Metrolinx also acknowledges the general geotechnical requirements that TRCA provided and will consider these as part of ongoing early works and Ontario Line Exhibition Station design development.

The Exhibition Station early works project footprint will be confined largely to the existing rail corridor) and portions of immediately adjacent properties to the north. As a result, no impacts to the Lake Ontario shoreline are anticipated and coastal assessment is not required.

Metrolinx looks forward to working with the TRCA as Project planning and design continue. Please do not hesitate to contact me if you have any questions.

Regards,

Rodney Yee

APPENDIX A: TRCA COMMENTS AND PROPONENT RESPONSES

TRCA staff received the draft Early Works and Draft Natural Environment Early Works Reports for the above-noted project on June 5th, 2020. TRCA staff provided comments on the reports on July 6th, 2020. On November 27th, 2020, Metrolinx provided comment responses to TRCA comments which have been reviewed by TRCA staff.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROponent RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
1.	Draft Early Works Report (July 2020)	<p>We had expected that our comprehensive feedback provided on the conceptual design on April 15, 2020, as well as previous studies, like SmartTrack, would be incorporated into these reports. Since those comments have yet to be addressed, they are being re-iterated in this table. Where applicable, we have incorporated and responded to Metrolinx responses to TRCA's conceptual design comments.</p> <p>Ideally our comments will be incorporated into the documents prior to public review; however, if this is not possible due to time constraints, please confirm how our comments on the draft Early Works Reports will be addressed. If Metrolinx is unable to address TRCA comments at this stage, commitments to address comments should be added to the reports or provided in a separate memo. TRCA support and sign-off is based on addressing, or committing to address, our comments to the satisfaction of TRCA. Please identify in your responses where changes have been incorporated in the analysis or design.</p>	<p>Comment noted. TRCA feedback has been applied to the draft Early Works Reports where applicable.</p> <p>Metrolinx looks forward to continued engagement with TRCA as project planning progresses.</p>	<p>TRCA staff look forward to reviewing the updated Early Works reports. Please identify in your responses where changes have been incorporated in the analysis or design.</p> <p>As previously mentioned, if Metrolinx is unable to address TRCA comments at this stage, commitments to address comments should be added to the reports or provided in a separate memo. TRCA support and sign-off is based on addressing, or committing to address, our comments to the satisfaction of TRCA.</p>
2.	Draft Early Works Report (July 2020)	<p>It is our understanding that these Early Works documents are the only documentation proposed for these works; however, TRCA staff do not have sufficient details of the proposed works. The design of the East Harbour Station, for example, is not described; instead, reference is made to previous studies with the assumption that agencies have the details of that study. Considering that this EA is not an addendum to the Smart Track project, it is imperative that the full extent of the works be described in detail in the current reports.</p>	<p>Additional detail has been provided in updated draft reports, including conceptual design plans for Exhibition Station early works. Assessment of early works at the Lower Don Bridges and East Harbour Station is now documented in separate reports.</p>	<p>TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will incorporate the feedback TRCA has provided to Metrolinx and will describe the full extent of the works in detail.</p> <p>TRCA staff note that we are receipt of the draft Exhibition Place Early Works review and will be providing comments under separate cover.</p>
3.	Draft Early Works Report (July 2020)	<p>The Early Works document does not incorporate the significant feedback TRCA has already provided regarding the Lower Don Crossings and East Harbour Station. Both the Lower Don Crossing and the East Harbour Station are located in the existing and future floodplain of the Lower Don. It is critical that the design and implementation of the Early Works does not negatively impact the implementation of flood protection in the Lower Don. There are multiple projects being simultaneously designed in parallel in this area. The Early Works document needs to describe how the Lower Don Crossings and East Harbour Station interfaces with these projects, which include the Port Lands Flood Protection project, Broadview and Eastern Flood Protection EA, and Broadview and Commissioners Class EA.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p>	<p>This comment remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will incorporate the feedback TRCA has provided to Metrolinx and will describe how the Lower Don Crossings and East Harbour Station will interface with the multiple projects being simultaneously designed in this area.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
4.	Draft Early Works Report (July 2020)	<p>Staff strongly recommends a joint meeting with Metrolinx, TRCA, Waterfront Toronto and the City of Toronto early in the process as there are currently numerous major City building and infrastructure projects in the vicinity of the Lower Don River crossing. One of TRCA's strategic objectives is to help our partners channel joint efforts and implement projects that are efficient and mutually cost-beneficial. Bearing in mind the varying project timelines, costs of flood proofing, duplication of efforts and shared benefits, it may be worthwhile for the Metrolinx, the City, TRCA, Waterfront Toronto and other affected agencies to join efforts to address the current flooding issues in a timely manner and achieve shared benefits.</p> <p>While preliminary hydraulic models suggests it is feasible to provide flood protection on the north side of the tracks, there is currently no approval or funding for this proposal and, as such, there is no proposed timeline for implementation of flood protection. The flood protection solution would also require approval through a Class Environmental Assessment (EA) process among other studies prior to implementation.</p> <p>We acknowledge that Metrolinx's design team is in the process of setting up a series of meetings. TRCA staff look forward to future meetings, particularly one prior to the release of these reports to the public.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. Metrolinx will continue to engage with TRCA to ensure collaboration between projects in vicinity of the Lower Don Bridges and East Harbour. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.</p>	<p>TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will incorporate the feedback TRCA has provided to Metrolinx. TRCA staff look forward to continuing to collaborate with Metrolinx, Waterfront Toronto and the City of Toronto.</p>
5.	Draft Early Works Report (July 2020)	<p>The East Harbour Station is located in the Don River Valley, Special Policy Area (SPA) and flood plain. TRCA completed the Don Mouth Naturalization and Port Lands Flood Protection Project EA (DMNP EA (2015)) that identified a preferred alternative for flood protection on the eastside of the Don River which will address current flooding on the First Gulf Property and into the South Riverdale communities to the east by implementing flood protection measures on the south side of the elevated railway embankment. Depending on the timelines for the station construction, Metrolinx will be required to address existing flood plain management requirements if the station is developed and implemented prior to implementation of the flood protection at this location. It is also important to note that although the rail embankment and areas south of the rail corridor may no longer be subject to flooding once the implementation of the Port Lands flood protection works, areas north of the tracks will remain in the flood plain and vulnerable to flooding even with a complete implementation of the preferred alternative in the DMNP EA (2015).</p>	<p>Comment noted.</p>	<p>No further comment.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
6.	Draft Early Works Report (July 2020)	Please discuss the timing of constructing the Lower Don River Crossing and the proposed construction of the Lower Don River Crossing, and East Harbour Station. If the timing of construction of the Lower Don River Crossing and East Harbour Station is before the proposed flood remediation works, then the updated and improved floodplain can be used in all future analysis.	Metrolinx will continue to engage with TRCA to ensure collaboration between projects in vicinity of the Lower Don Bridges and East Harbour. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.	This comment remains outstanding. Please update the Early Works reports to discuss the timing of construction for the Lower Don River Crossing and the East Harbour Station.
7.	Draft Early Works Report (July 2020)	Depending on the timing of Early Works, if they are built prior to the Gardiner and flood protection infrastructure, the impact of flooding must be considered. It should be identified who will be affected if there is a flood and who will be responsible for dealing with flood conditions during that time. This should be discussed at the requested joint meeting and/or added as a commitment in the report.	Potential impacts to floodplain and appropriate mitigation measures will be included in the updated draft reports. Metrolinx will continue to consult with TRCA as the design advances and construction details become available.	This comment remains outstanding. TRCA staff look forward to receiving the updated reports which will include potential impacts to floodplain and appropriate mitigation measures.
8.	Draft Early Works Report (July 2020)	There was no mention of potential effects and mitigation measures based on the following items: a) Approved Don Mouth Naturalization and Port Lands Flood Protection Project: Key flood protection measures have been authorized to tie-in with the existing railway embankment at Don Roadway and Eastern Avenue Underpass; b) Completed Lower Don River West Remedial Flood Protection Project: Flood Protection Landform in West Don Lands has specific tie-in and grading requirements that must be retained where the railway meets the flood protection; c) Port Lands and South of Eastern Master Plan Class EA - requires a new Broadview underpass with expanded flood protection tie-ins and drainage with the railway embankment; and, d) Gardiner Expressway EA - requires opening of bridge crossing on east side of Don River through railway embankment to accommodate Hybrid 3 option. Please update this chapter to add this information.	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be revised to include the list of studies reviewed.	This comment remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station. Please ensure that the reports address the potential effects and mitigation measures in regard to items a-d listed in the original comment.
9.	Draft Early Works Report (July 2020)	Considering the biggest concern at the three Early Works locations is surface flooding, Section 4 of the report should be updated to include a discussion of surface flooding, similar to what is included for soils, groundwater, or other environmental conditions.	An additional section on surface water, groundwater, and soils has been included in the revised report to present predicted impacts and prescribe mitigation.	This comment remains outstanding. TRCA staff look forward to reviewing the revised section of surface flooding in the updated reports.
10.	Draft Early Works Report (July 2020)	TRCA staff understand that the Early Works are proposed to be undertaken at four locations: Exhibition Station, Lower Don River Crossing, East Harbour Station, and along the Lakeshore East Joint Corridor between Eastern Avenue and Carlaw Avenue. While the Exhibition Station study area is not regulated by TRCA, the other three locations are regulated and will be the focus of our comments. Figure 1-3 shows that the footprint of the Lower Don River Crossing ends south of the Richmond Hill Corridor tracks. As such, impacts to the West Don Flood Protection Landform were not included in this review. However, TRCA staff will need to see the impact study for the Richmond Hill Corridor works to confirm that	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. Text regarding the West Don Flood Protection Landform will be included in the Lower Don Bridges EWR. Commitment to future SWM report can be added to the EWR.	This comment remains outstanding. TRCA staff look forward to reviewing the Lower Don Bridges Early Works report when available. Please ensure that text regarding the West Don Flood Protection Landform is included.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
		there are no impacts to the West Don Flood Protection Landform. The hydraulic assessment will need to show that the floodplain impacts resulting from the Lower Don Crossing Early Works will not negatively impact the function of the West Don FPL. Please confirm when we can expect to see these works.		
11.	Draft Early Works Report (July 2020)	Section 3.3 identifies that the "initial preferred design (IPD)" for the station was developed as part of the SmartTrack Stations EPR and that a number of changes are being proposed to integrate Ontario Line with the station. However, the IPD is not provided as part of the report and therefore cannot be reviewed. Critical information, like the design of the station, should be provided for review and TRCA staff await further details on the station design.	East Harbour Station is not included in the current Early Works Report, however, the concept design plan will be included in the updated draft report documenting impacts and mitigation at East Harbour.	This comment remains outstanding. TRCA staff look forward to receiving the concept design plan within the update draft report documenting impacts and mitigation at East Harbour.
12.	Draft Early Works Report (July 2020)	Please note that there is a possibility that sections of this line will still be susceptible to flooding. Our preference is to avoid locating the main station entrances in flood vulnerable areas, and that those entrances are subject to flood proofing requirements. Ingress and egress for new buildings should ensure that vehicular and pedestrian movement is not prevented during times of flooding.	A SWM report will be developed to understand potential flood impacts. A future commitment has been added to the EWR to address this.	This concern remains outstanding. TRCA staff look forward to receiving the Stormwater Management Report in the future.
13.	Draft Early Works Report (July 2020)	The Lower Don River Crossing and East Harbour Station are located within the Lower Don Special Policy Area. As such: <ul style="list-style-type: none"> a) Ingress and egress for all buildings within the flood plain lands shall be "safe." Pursuant to provincial floodproofing standards, and/or achieve the maximum level of flood protection determined to be feasible and economically viable such as at grade with street related access points; b) Developments must be floodproofed to the Regional floodplain if possible. If that is not possible, an iterative approach will be accepted to a minimum floodproofing standard of the 350-year storm event; c) The Lower Don floodplain is modelled in Mike Flood 2D. Any fill and floodproofing that is proposed to be undertaken within the floodplain must undergo an offsite impact assessment in Mike Flood 2D. TRCA will not accept development that results in offsite floodplain impacts. 	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be updated to include text regarding the Lower Don Special Policy Area. Future commitment to confirming impacts within this policy area can be added.	These concerns remain outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will address comments a,b,c in the original comment.
14.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	Various references are made in the report to the limited habitat and connectivity functions of the Lower Don River. However, it should be noted that within a highly urbanized context these communities have a greater significance and value than they would in a less urban landscape. While this may not impact the project's viability, its importance based on landscape level considerations should be considered and a compensation strategy will be required that reflects the increased importance of anthropogenic urban ecological communities. Please update the report accordingly to reflect the important functions of the existing	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be updated to include description of the importance of the Don River valley as a wildlife corridor and compensation for potential effects on the Urban River Valley and mitigation to address potential	This concern remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will incorporate the feedback TRCA has provided to Metrolinx regarding wildlife and the importance of the connectivity functions of the Lower Don river.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
		features.	effects on habitat connectivity.	
15.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	Similar to the previous comment, the Don Valley provides an important function as a wildlife corridor within the highly urban local landscape. Design considerations should be analyzed within this local landscape context and should not impair ecological connectivity.	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be updated to include description of the importance of the Don River valley system in an urban setting, and considerations for maintaining or enhancing connectivity during Detailed Design. Design considerations will be discussed during the Detailed Design phase.	This comment remains outstanding and we note that MX has deferred this requirement to detailed design. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will incorporate the feedback TRCA has provided to Metrolinx regarding ecological connectivity.
16.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	The effects tables indicate that compensation will be coordinated with the City of Toronto. Please ensure that TRCA is included in these discussions. It is important to note that TRCA will only consider compensation if it has been demonstrated that losses are unavoidable. Should no other alternatives be feasible, these losses will need to be quantified. In the absence of a finalized Metrolinx compensation strategy, ecological compensation should be based on TRCA's Guideline for Determining Ecosystem Compensation.	Metrolinx looks forward to developing potential vegetation compensation opportunities in discussion with TRCA.	Wherever impacts to natural heritage system cannot be avoided, TRCA will work with MX to identify options for compensation to ensure no net loss as a result of this project through the TRCA Guidelines for Determining Ecosystem Compensation or through Metrolinx's Vegetation Management Guidelines.
17.	Draft Early Works Report (July 2020)	Please note that our objective at TRCA is to minimize the required number of crossings through valley corridors. The Early Works component of the Ontario Line project includes the Lower Don River Crossing at the GO tracks. For each crossing, Metrolinx must demonstrate that there are no significant impacts to flooding as a result of the crossing. The TRCA Stormwater Management Criteria (TRCA, 2012) must be met - documents are available online at http://sustainabletechnologies.ca/wp/wp-content/uploads/2013/01/SWM-Criteria-2012.pdf TRCA received feedback from Metrolinx indicating that the studies will be undertaken. Please conduct a hydraulic assessment in Mike Flood 2D for the Lower Don Crossing. In order to obtain TRCA support, we require not just that the study be conducted, but that it demonstrates no floodplain impacts, and that all necessary project design changes will be made to demonstrate this.	During detailed design and prior to construction, a Stormwater Management Report will be completed to determine potential effects and mitigation measures. The report will be completed in consultation with TRCA and the MECP. Stormwater management design will consider guidance provided by the MOECC Stormwater Management Planning and Design Manual (2003) and MTO Drainage Management Manual (2008), TRCA Storm Water Management Criteria (2012), and the Low Impact Development Stormwater Management Planning and Design Guide (TRCA/Credit Valley Conservation, 2010).	This comment remains outstanding and we note that MX has deferred this requirement to detailed design. TRCA staff look forward to receiving the Stormwater Management Report. Please conduct a hydraulic assessment in Mike Flood 2D for the Lower Don Crossing. In order to obtain TRCA support, we require not just that the study be conducted, but that it demonstrates no floodplain impacts, and that all necessary project design changes will be made to demonstrate this.
18. 1	Draft Early Works Report (July 2020)	We recommend that Metrolinx situate and design the works appropriately in line with the necessary technical studies - fluvial geomorphic processes (cross perpendicular to the stream, cross on as straight a reach as possible), meander belt and erosion studies (100 year erosion limit where meander belt is not possible),	A future commitment will be added to the Early Works Reports and Environmental Impact Assessment Report for these requested studies to be completed during detailed design, as required.	This comment remains outstanding and we note that MX has deferred this requirement to detailed design. TRCA staff look forward to receiving the geotechnical and slope stability assessments for all crossings.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
		geotechnical (grading and retaining walls for tracks), etc. All crossings including their grading and earthworks needs geotechnical and slope stability assessment. The geotechnical design will be also be needed in support of the proposed crossings.		
19.	Draft Early Works Report (July 2020)	2 new bridge spans are proposed over the Don Valley Parkway and Don River on either side of the existing CN bridge for the Ontario Line tracks, including pedestrian/cycling facilities. It is understood that the existing bridge abutments will be expanded on both sides to accommodate these additional spans. a) Please confirm the widths of the proposed bridges, as well as the total width of the crossing once complete. We understand that as of June 25, 2020 these details have not yet been finalized. TRCA staff will need to see these details to confirm that there are no adverse impacts to the floodplain.	The design details referenced are currently being advanced and will be shared with TRCA as they become available.	This comment remains outstanding. TRCA staff look forward to receiving the design details of the proposed bridges.
b) Please confirm any modification/changes/extensions to the abutments, piers, wingwalls and their potential impacts. We understand that as of June 25, 2020 these details have not yet been finalized. TRCA staff will need to see these details to confirm that there are no adverse impacts to the floodplain.		The design details referenced are currently being advanced and will be shared with TRCA as they become available.	This comment remains outstanding. TRCA staff look forward to receiving the design details of the abutments, piers, wingwalls and their potential impacts.	
c) The geotechnical design is needed for the abutments, foundations, earthworks for the approach embankment as well as any other means and methods (both temporary and permanent) to facilitate the works, which can result in the alteration of the surrounding area. We appreciate that geotechnical investigations will be undertaken and the results will inform the design. We reiterate that this should be done at this stage of the study.		Metrolinx design teams are advancing geotechnical field investigations as required to inform design decisions at this location and results can be shared with TRCA as they become available.	This comment remains outstanding. TRCA staff will continue the geotechnical review once we receive the results of the geotechnical field investigations as they become available.	
d) The proposed bridge abutments appear to increase flood elevations in the hydraulic model in some critical locations. In particular, expanding the spill extents in the east don lands is problematic. Metrolinx should design the bridge structures to maintain base flood elevations and extents in the key areas. Key areas include the West Don Lands FPL tie off point, BEFP FPL Phase 1, spill through Eastern Ave, BMW Lands, Metrolinx bridge soffits, and Unilever FPL. We understand that the Waterfront Toronto model will be used as the base condition, and that the proposed condition model will incorporate bridge abutments and rail corridor embankments. As indicated in the June 25, 2020 response, we look forward to reviewing the model and flood elevation difference map between the base condition and proposed condition within the entire		The design details referenced are currently being advanced and will be shared with TRCA as they become available.	This comment remains outstanding. TRCA staff look forward to receiving the design details of the proposed bridges when available.	

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
		floodplain.		
		e) The proposed FPLs on the east side of the Don River (both south and north of the tracks) and the Port Lands sediment control area on the southwest side of the bridge need to be considered in the development of options. Metrolinx has acknowledged this comment but TRCA would like to see a commitment to this effect in the report. For TRCA to support these works, we must confirm that there are no adverse impacts to these flood protection initiatives.	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be updated to include a future commitment to consider the proposed FPLs on the east side of the Don River, and the Portlands sediment control area.	This comment remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station. Please ensure that these reports are updated to include a commitment from Metrolinx to consider the proposed FPLs on the east side of the Don River, and the Portlands sediment control area. For TRCA to support these works, we must confirm that there are no adverse impacts to these flood protection initiatives.
		f) We understand that property needs will be assessed as part of detail design, but the abutments for these structures should avoid encroaching on TRCA property.	Metrolinx will seek to avoid encroachment to the extent possible.	No further comment.
20.	Draft Early Works Report (July 2020)	With regards to utility and other infrastructure relocation, staff notes that there are several other infrastructure and utilities including watermains, hydro utilities, etc., owned by other agencies that may need to be relocated to facilitate this project. Please confirm if this infrastructure and utility works will be undertaken by Metrolinx (or contractor) as part of this project as well as the timelines for these works. We understand that consultation with the various stakeholders is ongoing. It is important to note all early/enabling works, and if some of the works will be undertaken by other proponents (municipalities and companies) as these other proponents may be subject to TRCA Regulatory requirements. In addition, it will be important to confirm these details to provide adequate time for permitting and implementation to avoid overall project delays. Please include this item in the future commitments section within the report.	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be updated to include a future commitment will be added to review utility relocations and continue coordination with TRCA and other affected stakeholders.	This comment remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station. Please ensure these reports include details regarding utility relocations and infrastructure relocation within the future commitments section of the report.
21.	Draft Early Works Report (July 2020)	A multi-use path and pedestrian crossing is proposed as part of the two new bridges crossing the Lower Don. TRCA questions the need for the bridge on the south side. Our preference is to avoid multiple crossings in close proximity to each other over watercourses. In line with TRCAs <i>The Living City Policies</i> , in order to support the proposed new, replacement, or expanded infrastructure, it must be demonstrated through technical studies completed by a qualified professional in accordance with TRCA standards and to the satisfaction of TRCA that: <ul style="list-style-type: none"> there will be no increase in risk associated with flood hazards and erosion hazards to upstream or downstream 	Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment.	This concern remains outstanding. TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges. Comments on the latest update of the Lower Don Bridges will be provided under separate cover.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
		<p>properties within valley and stream corridors;</p> <ul style="list-style-type: none"> • infrastructure has been designed in a manner that minimizes the number of crossings and areas to be disturbed by infrastructure within valley and stream corridors, maintains the predevelopment configuration of the flood plain, valley or stream corridors, and does not prevent access for maintenance, evacuation or during an emergency; • the works will not result in unacceptable impacts to flood storage and conveyance upstream or downstream of the site; and, • considerable effort is put towards alleviating the current erosion and flood risk to affected properties through innovative means including possible acquisition of floodplain lands for remediation and or re-naturalization of the valley. <p>Metrolinx indicated that design investigations will include a review of floodplain and slope impacts. TRCA staff will need to see these details to confirm that there are no adverse impacts.</p>		
22.	Draft Early Works Report (July 2020)	<p>Stairs/ramps will be necessary for pedestrians/cyclists to exit the new crossings over the Lower Don. We appreciate that infrastructure conflicts will be reviewed as part of detail design (and should be included in the commitments section). TRCA staff will need to see details on how the stairs/ramps for these pathways, west of the Don River, will interface with the West Don FPL and the future Wilson Yard. Our preference is to avoid siting additional infrastructure in this area as there are already essential project needs (sediment management area, Gardiner Expressway relocation, Wilson Yard improvements) that have not been designed and/or implemented, and this proposal could pose conflicts. Space in this area for additional infrastructure is already limited and will be more so once the above-noted initiatives are built.</p>	<p>Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment.</p>	<p>This concern remains outstanding. TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges. Comments on the latest update of the Lower Don Bridges will be provided under separate cover.</p>
23.	Draft Early Works Report (July 2020)	<p>Similar to the previous comment, the location of the pathway exits on the east side of the Don River could be potentially in-line with the future flood protection options. When considering design options for the pedestrian/cycling crossings, please ensure that exits are placed east of the crest to ensure it is on the dry-sided slope of the feature and away from the clay core.</p> <p>It was indicated at a workshop for the previous study (SmartTrack) that there is interest in repositioning the Don pathway further east so as to match up with site lines between future buildings. This will minimize risk and reduce footprints on the potential flood</p>	<p>Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment. A future commitment regarding a review of infrastructure conflicts will be added to Lower Don Bridges EWR mitigation table.</p>	<p>This concern remains outstanding. TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges. Comments on the latest update of the Lower Don Bridges will be provided under separate cover.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
		<p>protection options. Moving the pathway further to the east will make space for the repositioning of the PS as indicated above.</p> <p>Metrolinx indicated that infrastructure conflicts will be reviewed as part of detailed design. Please include this in the commitments section.</p>		
24.	Draft Early Works Report (July 2020)	<p>Metrolinx will need to demonstrate that the potential stairs/ramps will not cause negative offsite hydraulic impacts. In addition, any features that require filling or re-grading to achieve compliance with flood depth and velocity criteria shall not be permitted unless it has been demonstrated in an environmental study or technical report that can satisfy TRCA staff that this filling or grading will not result in adverse impacts on the flooding and erosion, or increase the risk to public safety, or the susceptibility to natural hazards is not increased and no new hazards are created.</p>	<p>Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment.</p>	<p>This concern remains outstanding. Metrolinx will need to demonstrate that the potential stairs/ramps will not cause negative offsite hydraulic impacts.</p> <p>TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges.</p>
25.	Draft Early Works Report (July 2020)	<p>There are existing and proposed flood protection initiatives surrounding the Lower Don River Crossing that will result in limitations to development and additional monitoring requirements:</p> <ul style="list-style-type: none"> • West Don Flood Protection Landform in Corktown Commons • Port Lands Flood Protection and Enabling Infrastructure Project (including East Harbour Flood Protection Landform) • Broadview and Eastern Flood Protection <p>Significant developments are relying on the elimination of flood risk provided by these initiatives. Bridge abutments and connections to the Lower Don trail system should not impact the proposed flooding infrastructure. Depending on the timelines for construction, Metrolinx will be required to address existing flood plain management requirements if the works are developed and implemented prior to implementation of the flood protection at this location.</p> <p>The schedule for Ontario Line should bear in mind other projects/schedules in the immediate area. Regular joint meetings between all affected parties should be facilitated.</p>	<p>Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment. Metrolinx will continue to engage with TRCA to ensure collaboration between projects in vicinity of the Lower Don Bridges and East Harbour. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.</p>	<p>This concern remains outstanding. The following information remains outstanding: information and assessments regarding the potential impacts to the existing FPL, mitigation measures, restoration and remediation works, commitments from Metrolinx for the development and implementation of mitigative measures, restoration and repairs for the existing FPL, as well as the commitment from Metrolinx to develop and undertake an appropriate monitoring program of FPL both during construction and in the long-term.</p> <p>TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges. Comments on the latest update of the Lower Don Bridges will be provided under separate cover.</p>
26.	Draft Early Works Report (July 2020)	<p>This comment should inform the current geotechnical investigations that are underway. Any modifications to the CN embankment would trigger additional flood protection requirements as it would become part of the flood protection works for the site and the overall East Don Lands. The proponent needs to demonstrate that the design meets the definition of a Valley Wall Feature (VWF) or Flood Protection Landform (FPL) and</p>	<p>Comment noted.</p>	<p>This concern remains outstanding. The following information remains outstanding: information and assessments regarding the potential impacts to the existing FPL, mitigation measures, restoration and remediation works, commitments from Metrolinx for the development and implementation of mitigative measures, restoration and repairs for the existing FPL, as well as the commitment from Metrolinx to develop and undertake an appropriate monitoring program of FPL both during construction and in the long-term.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
		<p>how it interfaces with the adjacent flood protection infrastructure (tie in points). This will include the requirement to conduct all relevant geotechnical and structural studies to confirm the proposed design can withstand the hydrostatic forces of the Regional Storm event and address long-term concerns such as settling. The report should have a section discussing the proposed flood protection initiatives and how the Ontario Line will incorporate with these. TRCA staff will need to see these details to confirm that there are no adverse impacts to the flood protection initiatives in order to support the proposed works.</p>		<p>TRCA staff look forward to continuing to collaborate with Metrolinx on the design for the Lower Don Bridges. Comments on the latest update of the Lower Don Bridges will be provided under separate cover.</p>
27.	Draft Early Works Report (July 2020)	<p>Please note that since the completion of the DMNP EA, TRCA has undertaken several preliminary hydraulic modeling scenarios for flood protection of this area. The results of this modeling suggest that alternative flood protection solutions could be viable in the proximity to the BMW/Talisker site north of the railway tracks.</p> <p>However, these alternatives are preliminary in nature, and are subject to the resolution of several significant technical challenges that have not been investigated. Since an Environmental Assessment to eliminate flooding in the area of the proposed East Harbour station (north) area has not formally started, until that EA is complete and funding is secured to implement a permanent flood solution, Metrolinx would be required to respond to the current flood risk.</p> <p>It is likely that the station proposal will be subject to the requirements of the SPA and flood proofing requirements. Please refer to Section 7.4 of the Living City Policies regarding requirement for development in a SPA, particularly relating to flood proofing elevations, safe egress and ingress, permitted uses, liability and public safety, infrastructure damage and emergency preparedness.</p> <p>If there are station tunnels as previously proposed for SmartTracks, due to the connectivity to the north side of the rail embankment, TRCA will require that the station be flood proofed to the Regulatory flood elevation plus 30 cm of freeboard.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to reference the Living City. A commitment to undertake future studies to address floodplain risk will be included in these updated draft reports.</p>	<p>These concerns remain outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will be updated to address Section 7.4 of the Living City Policies regarding requirement for development in a SPA.</p>
28.	Draft Early Works Report (July 2020)	<p>Another requirement for locating any entrance or public spaces within the proposed station facility located within flood plain north of the rail embankment will be the requirement to have a comprehensive public safety protocol in place for egress and ingress, emergency preparedness and service access for evacuation purposes in case of a flood.</p> <p>Any underground parking facilities must be flood proofed to the level of the required flood elevation set by TRCA and the owner /</p>	Comment noted.	<p>This concern remains outstanding. Please ensure the updated reports address the concerns laid out in the original comment regarding a comprehensive public safety protocol in place for egress and ingress, emergency preparedness and service access for evacuation purposes in case of a flood.</p>

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
		operator will have to ensure that vehicles can safely be removed during that flood event, and take on full responsibility for life and property impacts due to flooding.		
29.	Draft Early Works Report (July 2020)	Please ensure that the construction of the retaining walls is in line with TRCA LCP requirements and based on the necessary technical studies (geotechnical, natural heritage). The location of these features should have the necessary setback requirements from the erosion hazards that have been assessed through appropriate technical studies. Please ensure the design of the facing of the retaining walls consider and incorporate natural heritage elements and sustainable features.	Design options are under development and will continue to be shared with TRCA for review and comment.	This concern remains outstanding. The geotechnical review will continue once further information and assessments become available to TRCA.
30.	Draft Early Works Report (July 2020)	For future siting of ancillary features, such as TPSSs and EEBs, please note that they should not be sited in the floodplain or areas that are prone to slope failure as this poses a risk to staff, nearby properties and the general public.	Comment noted.	This concern remains outstanding. The geotechnical review will continue once further information and assessments become available to TRCA.
31.	Draft Natural Environment Early Works Report (July 2020)	Noise barriers and walls have been proposed as part of the track expansion. Staff notes that these features affect TRCA regulated areas. Please confirm and indicate how the long-term maintenance associated with these features (noise barriers/walls) will be performed on site. Please note that alternative designs should be considered during the detailed design phase for areas where maintenance is anticipated to occur within a natural feature, where feasible. Please add a note in the relevant section of the report that TRCA staff will be included in the discussions associated with the design of these walls/barriers.	Design options are under development and will continue to be shared with TRCA for review and comment. A commitment to ongoing consultation with the TRCA will be included in environmental assessment reports where the Project footprint overlaps the TRCA regulated area.	TRCA staff look forward to reviewing the updated reports which include a commitment to on-going consultation with the TRCA regarding discussions associated with the design of these walls/barriers.
32.	Draft Early Works Report (July 2020)	TRCA as an organization is very supportive of transit development and encourages agencies and municipalities to develop sustainable transportation options in their planning and development of sustainable communities. The TRCA Living City Policies (LCP Section 6.4, 6.7 and 6.8) promotes and advocates the incorporation of sustainable transportation policies, green infrastructure and ecological design into community development and infrastructure building.	Comment noted.	No further comment.
33.	Draft Early Works Report (July 2020)	Generally, TRCA does not support the placement of a new outfall if an existing storm service system is available. If an outfall placement is not avoidable, then the following from TRCA's Living City Policies must be met: 8.9.8 That development, interference and alterations associated with infrastructure that supports stormwater management (SWM) facilities (e.g. outfall structures, etc.) shall generally be: a) located outside of the meander belt wherever possible; b) placed as close to the base of slope as possible, and at a grade above the 25- year floodline where feasible;	Comment noted.	No further comment. Original comment remains withstanding.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
		<ul style="list-style-type: none"> c) avoid disturbance to natural features, areas and systems contributing to the conservation of land to the extent possible; and d) d) designed to reduce erosive velocities and mitigate thermal impacts (in the case of outfalls and outfall channels). 		
34.	Draft Early Works Report (July 2020)	<p>Please note that TRCA's stormwater management criteria for the additional impervious areas (i.e. the expanded crossing, East Harbour Station and amenities) are as follows:</p> <ul style="list-style-type: none"> a) Erosion Control: Retention of the 5 mm storm onsite with the use of LIDs (Green roofs, permeable pavers, bioswales, etc.) b) Quantity Control: No quantity control for direct watercourse discharge to the Don and West Don Rivers. If discharging to a City sewer, then the City's criteria would govern. c) Quality Control: 80% TSS removal. Please note that TRCA only credits oil-grit separators to provide 50% TSS removal when sized for 80% TSS removal. They must be placed in a treatment train to be credited the full 80% TSS removal. If there are space constraints, TRCA accepts a filtration system (e.g. Jellyfish) when sized correctly to provide 80% TSS removal. <p>Please submit designs and calculations of all stormwater management measures in TRCA's regulated area demonstrating that the above-mentioned criteria are met.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to include TRCA's stormwater management criteria for impervious areas and a commitment for MX/design team to consult with TRCA during detailed design.</p>	<p>This comment remains outstanding. TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station which will be updated to include TRCA's stormwater management criteria for impervious areas.</p> <p>We note that MX has deferred the requirement to submit designs and calculations of all stormwater management measures in TRCA's regulated area to detailed design.</p>
35.	Draft Natural Environment Early Works Report (July 2020)	<p>As this project will likely require dewatering, it is important to note that any construction dewatering discharge that will negatively affect flooding, erosion, or natural features upstream or downstream will not be supported by TRCA.</p> <p>If it is identified during preliminary/detail design that dewatering is required, the proponent should provide information on dewatering volume, zone of influence, discharge plan, impact assessment (impact on surface water features, environmental sensitive area, etc.) as well as monitoring, mitigation and contingency plan. The proponent should provide TRCA a copy of the hydrogeological investigations reports for review when complete.</p> <p>Our preference is to discharge into nearby municipal sanitary and storm systems. Upon careful evaluation of the alternatives and potential impacts, should discharge into the watercourse be determined as the only feasible option, a staged-approach must be considered, such as on-site storage in ponds and reservoirs,</p>	Comment noted.	Please note our original comment remains withstanding.

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
		evaporation ponds, and staged-release into the watercourse. Please refer to the TRCA Technical Guidelines for the Development of Environmental Management Plans for Dewatering (September 2013): https://s3-ca-central-1.amazonaws.com/trcaca/app/uploads/2016/02/17185417/TRCA_Technical_Guidelines_for_the_Development_of_EMPs_for_Dewatering.pdf		
36.	Draft Natural Environment Early Works Report (July 2020)	Please note that while the proposed works are located on, or adjacent to, areas of the watercourse (main and West Don River) identified as warm water, efforts should be taken to prevent temperature spikes in all watercourses as these spikes create a harsh environment for fish and other aquatic species. This is because the impact of asphalt heat islands on creeks can have negative effects and change the community species composition.	Comment noted. The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.	TRCA staff look forward to receiving the separate early works reports for the Lower Don Bridges and East Harbour Station.
37.	Draft Natural Environment Early Works Report (July 2020)	Please note that aquatic ecosystems include the hydrologic regime such as water quality, quantity, temperatures, sediment loads, and seasonal and daily flow variations. Thus, an increase in development area in already highly urban areas often tends to impact these ecosystems in the aforementioned ways. Thus, we recommend that effort be taken to assess and address the above items with appropriate Low Impact Development options and other mitigation techniques. Staff recognizes that some of these impacts are unavoidable, so we will work with the team to provide additional technical guidance relating to these items.	Comment noted. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.	Please ensure updated reports discuss Low Impact Development and mitigation options to reduce impacts on aquatic ecosystems, including the hydrologic regime such as water quality, quantity, temperatures, sediment loads, and seasonal and daily flow variations.
38.	Draft Natural Environment Early Works Report (July 2020)	In addition, as you are aware, migratory birds and insects have a strong need and use of natural wildlife corridors. Thus, we often find in urbanized areas such as these sites that linkages and connected corridors tend to provide habitat for these species to facilitate resting and feeding, and would like to ensure that species are able to continue on their migratory journey without encountering large gaps of unsuitable habitat. Our policies and watershed plans identify the importance of protecting and enhancing our natural systems which serve as wildlife corridors. Climate change and development place pressures on these connections. So similar to the comment above, please ensure that the report assesses the form and function of the existing rail tracks and surrounding areas as wildlife corridors. There may be opportunities, for example along the edges of the station construction areas, to enhance the natural environment and provide a connection to the surrounding natural areas.	The draft Early Works Reports have been updated to describe the importance of existing rail corridors for wildlife, and mitigation has been proposed to address potential effects on habitat connectivity.	TRCA staff look forward to receiving the updated reports which assesses the form and function of the existing rail tracks and surrounding areas as wildlife corridors and mitigation strategies. Wherever impacts to natural heritage system cannot be avoided, TRCA will work with MX to identify options for compensation to ensure no net loss as a result of this project through the TRCA Guidelines for Determining Ecosystem Compensation or through Metrolinx's Vegetation Management Guidelines.
39.	Draft Natural Environment Early Works Report (July 2020)	While TRCA recognizes that trees and large wildlife species are not encouraged in close proximity to rail tracks; we believe that it is important to identify other opportunities to provide dense shrub	Comment noted. Metrolinx looks forward to developing potential vegetation compensation opportunities in discussion with TRCA.	TRCA staff look forward to reviewing vegetation compensation opportunities with Metrolinx. Wherever impacts to natural heritage system cannot be avoided, TRCA will

ITEM	DOCUMENT	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE (November 27 2020)	TRCA Comments (January 11, 2021)
	2020)	<p>plantings and a diverse native seed mix with species that support pollinators https://cvc.ca/wp-content/uploads/2017/04/17-uonativeplantsforpollinators-booklet-v8-web.pdf.</p> <p>The migration of pollinators, including monarch butterflies and some bat and hummingbird species, is a significant phenomenon. Certain species migrate over paths that stretch thousands of miles while pursuing blooming plants. To ensure the survival of migratory pollinators, three types of habitat needs must be considered. These are: summer breeding and foraging areas; secure overwintering sites; and nectar corridors and rest stops. Nectar corridors are patches of nectar-rich plant habitat, which act as stepping-stones for the pollinators on their long migratory journeys. Due to development and land use changes within Toronto and the GTA, many nectar corridors are no longer intact. Migrating pollinators must attempt to survive their journey through scattered habitats that contain little food.</p> <p>Thus, the planting of pollen rich herbaceous species within long corridors such as rail corridors will likely address this need and serve as a net benefit for the project while avoiding the risks associated with larger trees.</p>		<p>work with MX to identify options for compensation to ensure no net loss as a result of this project through the TRCA Guidelines for Determining Ecosystem Compensation or through Metrolinx’s Vegetation Management Guidelines.</p>

Subject: RE: MX ON Line - Draft Early Works (EW) and NER EW Reports - TRCA Comments (CFN 62384)

Good evening Margie and Renee,

Thank you for providing comments to the Ontario Line Draft Early Works Report and Draft Natural Heritage Early Works Report. Please see attached comment responses to the comments provided. Please review and let us know if any additional questions on the responses, or if we can consider this set as closed-out.

We look forward to continuing to engage the TRCA as the project progresses to share details on project planning.

Regards,

MERLIN YUEN

Project Coordinator, Environmental Programs and Assessment
130 Adelaide Street West | Toronto | Ontario | M5H 0A1

APPENDIX A: TRCA COMMENTS AND PROPONENT RESPONSES

Metrolinx met with TRCA staff in April 15, 2020 to provide an overview of the project. TRCA staff provided detailed comments on the proposed design in a May 15, 2020 letter and comment table. Responses to TRCA comments were received on June 25, 2020. Comments that are still applicable to the Early Works have been included, and those with responses have been modified where necessary.

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROponent RESPONSE
1.	Draft Early Works Report (July 2020)	Comments Not Addressed	<p>We had expected that our comprehensive feedback provided on the conceptual design on April 15, 2020, as well as previous studies, like SmartTrack, would be incorporated into these reports. Since those comments have yet to be addressed, they are being re-iterated in this table. Where applicable, we have incorporated and responded to Metrolinx responses to TRCA's conceptual design comments.</p> <p>Ideally our comments will be incorporated into the documents prior to public review; however, if this is not possible due to time constraints, please confirm how our comments on the draft Early Works Reports will be addressed. If Metrolinx is unable to address TRCA comments at this stage, commitments to address comments should be added to the reports or provided in a separate memo. TRCA support and sign-off is based on addressing, or committing to address, our comments to the satisfaction of TRCA. Please identify in your responses where changes have been incorporated in the analysis or design.</p>	<p>Comment noted. TRCA feedback has been applied to the draft Early Works Reports where applicable.</p> <p>Metrolinx looks forward to continued engagement with TRCA as project planning progresses.</p>
2.	Draft Early Works Report (July 2020)	Insufficient Detail	<p>It is our understanding that these Early Works documents are the only documentation proposed for these works; however, TRCA staff do not have sufficient details of the proposed works. The design of the East Harbour Station, for example, is not described; instead, reference is made to previous studies with the assumption that agencies have the details of that study. Considering that this EA is not an addendum to the Smart Track project, it is imperative that the full extent of the works be described in detail in the current reports.</p>	<p>Additional detail has been provided in updated draft reports, including conceptual design plans for Exhibition Station early works. Assessment of early works at the Lower Don Bridges and East Harbour Station is now documented in separate reports.</p>
3.	Draft Early Works Report (July 2020)	Previous Feedback	<p>The Early Works document does not incorporate the significant feedback TRCA has already provided regarding the Lower Don Crossings and East Harbour Station. Both the Lower Don Crossing and the East Harbour Station are located in the existing and future floodplain of the Lower Don. It is critical that the design and implementation of the Early Works does not negatively impact the implementation of flood protection in the Lower Don. There are multiple projects being simultaneously designed in parallel in this area. The Early Works document needs to describe how the Lower Don Crossings and East Harbour Station interfaces with these projects, which include the Port Lands Flood Protection project, Broadview and Eastern Flood Protection EA, and Broadview and Commissioners Class EA.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p>
4.	Draft Early Works Report (July 2020)	Joint Effort to Address Common Issues	<p>Staff strongly recommends a joint meeting with Metrolinx, TRCA, Waterfront Toronto and the City of Toronto early in the process as there are currently numerous major City building and infrastructure projects in the vicinity of the Lower Don River crossing. One of TRCA's strategic objectives is to help our partners channel joint efforts and implement projects that are efficient and mutually cost-beneficial. Bearing in mind the varying project timelines, costs of flood proofing, duplication of efforts and shared benefits, it may be worthwhile for the Metrolinx, the City, TRCA, Waterfront Toronto and other affected agencies to join efforts to address the current flooding issues in a timely manner and achieve shared benefits.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. Metrolinx will continue to engage with TRCA to ensure collaboration between projects in vicinity of the Lower Don Bridges and East Harbour. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.</p>

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
			<p>While preliminary hydraulic models suggests it is feasible to provide flood protection on the north side of the tracks, there is currently no approval or funding for this proposal and, as such, there is no proposed timeline for implementation of flood protection. The flood protection solution would also require approval through a Class Environmental Assessment (EA) process among other studies prior to implementation.</p> <p>We acknowledge that Metrolinx's design team is in the process of setting up a series of meetings. TRCA staff look forward to future meetings, particularly one prior to the release of these reports to the public.</p>	
5.	Draft Early Works Report (July 2020)	East Harbour Station: Flood Protection Infrastructure	<p>The East Harbour Station is located in the Don River Valley, Special Policy Area (SPA) and flood plain. TRCA completed the Don Mouth Naturalization and Port Lands Flood Protection Project EA (DMNP EA (2015)) that identified a preferred alternative for flood protection on the eastside of the Don River which will address current flooding on the First Gulf Property and into the South Riverdale communities to the east by implementing flood protection measures on the south side of the elevated railway embankment. Depending on the timelines for the station construction, Metrolinx will be required to address existing flood plain management requirements if the station is developed and implemented prior to implementation of the flood protection at this location. It is also important to note that although the rail embankment and areas south of the rail corridor may no longer be subject to flooding once the implementation of the Port Lands flood protection works, areas north of the tracks will remain in the flood plain and vulnerable to flooding even with a complete implementation of the preferred alternative in the DMNP EA (2015).</p>	Comment noted.
6.	Draft Early Works Report (July 2020)	Proposed Flood Remediation Works	<p>Please discuss the timing of constructing the Lower Don River Crossing and the proposed construction of the Lower Don River Crossing, and East Harbour Station. If the timing of construction of the Lower Don River Crossing and East Harbour Station is before the proposed flood remediation works, then the updated and improved floodplain can be used in all future analysis.</p>	<p>Metrolinx will continue to engage with TRCA to ensure collaboration between projects in vicinity of the Lower Don Bridges and East Harbour. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.</p>
7.	Draft Early Works Report (July 2020)	Flood Contingency	<p>Depending on the timing of Early Works, if they are built prior to the Gardiner and flood protection infrastructure, the impact of flooding must be considered. It should be identified who will be affected if there is a flood and who will be responsible for dealing with flood conditions during that time. This should be discussed at the requested joint meeting and/or added as a commitment in the report.</p>	<p>Potential impacts to floodplain and appropriate mitigation measures will be included in the updated draft reports. Metrolinx will continue to consult with TRCA as the design advances and construction details become available.</p>
8.	Draft Early Works Report (July 2020)	Potential Effects Based on Other Studies	<p>There was no mention of potential effects and mitigation measures based on the following items: a) Approved Don Mouth Naturalization and Port Lands Flood Protection Project: Key flood protection measures have been authorized to tie-in with the existing railway embankment at Don Roadway and Eastern Avenue Underpass; b) Completed Lower Don River West Remedial Flood Protection Project: Flood Protection Landform in West Don Lands has specific tie-in and grading requirements that must be retained where the railway meets the flood protection; c) Port Lands and South of Eastern Master Plan Class EA - requires a new Broadview underpass with expanded flood protection tie-ins and drainage with the railway embankment; and, d) Gardiner Expressway EA - requires opening of bridge crossing on east side of Don River through railway embankment to accommodate Hybrid 3 option. Please update this chapter to add this</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. These updated draft reports will be revised to include the list of studies reviewed.</p>

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
			information.	
9.	Draft Early Works Report (July 2020)	Surface Flooding	Considering the biggest concern at the three Early Works locations is surface flooding, Section 4 of the report should be updated to include a discussion of surface flooding, similar to what is included for soils, groundwater, or other environmental conditions.	An additional section on surface water, groundwater, and soils has been included in the revised report to present predicted impacts and prescribe mitigation.
10.	Draft Early Works Report (July 2020)	West Don FPL	<p>TRCA staff understand that the Early Works are proposed to be undertaken at four locations: Exhibition Station, Lower Don River Crossing, East Harbour Station, and along the Lakeshore East Joint Corridor between Eastern Avenue and Carlaw Avenue. While the Exhibition Station study area is not regulated by TRCA, the other three locations are regulated and will be the focus of our comments.</p> <p>Figure 1-3 shows that the footprint of the Lower Don River Crossing ends south of the Richmond Hill Corridor tracks. As such, impacts to the West Don Flood Protection Landform were not included in this review. However, TRCA staff will need to see the impact study for the Richmond Hill Corridor works to confirm that there are no impacts to the West Don Flood Protection Landform. The hydraulic assessment will need to show that the floodplain impacts resulting from the Lower Don Crossing Early Works will not negatively impact the function of the West Don FPL. Please confirm when we can expect to see these works.</p>	The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports. Text regarding the West Don Flood Protection Landform will be included in the Lower Don Bridges EWR. Commitment to future SWM report can be added to the EWR.
11.	Draft Early Works Report (July 2020)	East Harbour Station, Section 3.3	Section 3.3 identifies that the "initial preferred design (IPD)" for the station was developed as part of the SmartTrack Stations EPR and that a number of changes are being proposed to integrate Ontario Line with the station. However, the IPD is not provided as part of the report and therefore cannot be reviewed. Critical information, like the design of the station, should be provided for review and TRCA staff await further details on the station design.	East Harbour Station is not included in the current Early Works Report, however, the concept design plan will be included in the updated draft report documenting impacts and mitigation at East Harbour.
12.	Draft Early Works Report (July 2020)	Infrastructure Flooding	Please note that there is a possibility that sections of this line will still be susceptible to flooding. Our preference is to avoid locating the main station entrances in flood vulnerable areas, and that those entrances are subject to flood proofing requirements. Ingress and egress for new buildings should ensure that vehicular and pedestrian movement is not prevented during times of flooding.	A SWM report will be developed to understand potential flood impacts. A future commitment has been added to the EWR to address this.
13.	Draft Early Works Report (July 2020)	Floodproofing	<p>The Lower Don River Crossing and East Harbour Station are located within the Lower Don Special Policy Area. As such:</p> <ol style="list-style-type: none"> Ingress and egress for all buildings within the flood plain lands shall be "safe." Pursuant to provincial floodproofing standards, and/or achieve the maximum level of flood protection determined to be feasible and economically viable such as at grade with street related access points; Developments must be floodproofed to the Regional floodplain if possible. If that is not possible, an iterative approach will be accepted to a minimum floodproofing standard of the 350-year storm event; The Lower Don floodplain is modelled in Mike Flood 2D. Any fill and floodproofing that is proposed to be undertaken within the floodplain must undergo an offsite impact assessment in Mike Flood 2D. TRCA will not accept development that results in offsite floodplain impacts. 	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to include text regarding the Lower Don Special Policy Area. Future commitment to confirming impacts within this policy area can be added.</p>

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
14.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	Importance of Limited Vegetation/Wildlife	Various references are made in the report to the limited habitat and connectivity functions of the Lower Don River. However, it should be noted that within a highly urbanized context these communities have a greater significance and value than they would in a less urban landscape. While this may not impact the project's viability, its importance based on landscape level considerations should be considered and a compensation strategy will be required that reflects the increased importance of anthropogenic urban ecological communities. Please update the report accordingly to reflect the important functions of the existing features.	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to include description of the importance of the Don River valley as a wildlife corridor and compensation for potential effects on the Urban River Valley and mitigation to address potential effects on habitat connectivity.</p>
15.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	Wildlife Connectivity	Similar to the previous comment, the Don Valley provides an important function as a wildlife corridor within the highly urban local landscape. Design considerations should be analyzed within this local landscape context and should not impair ecological connectivity.	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to include description of the importance of the Don River valley system in an urban setting, and considerations for maintaining or enhancing connectivity during Detailed Design. Design considerations will be discussed during the Detailed Design phase.</p>
16.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	Compensation	The effects tables indicate that compensation will be coordinated with the City of Toronto. Please ensure that TRCA is included in these discussions. It is important to note that TRCA will only consider compensation if it has been demonstrated that losses are unavoidable. Should no other alternatives be feasible, these losses will need to be quantified. In the absence of a finalized Metrolinx compensation strategy, ecological compensation should be based on TRCA's Guideline for Determining Ecosystem Compensation.	Metrolinx looks forward to developing potential vegetation compensation opportunities in discussion with TRCA.
17.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing	<p>Please note that our objective at TRCA is to minimize the required number of crossings through valley corridors. The Early Works component of the Ontario Line project includes the Lower Don River Crossing at the GO tracks. For each crossing, Metrolinx must demonstrate that there are no significant impacts to flooding as a result of the crossing. The TRCA Stormwater Management Criteria (TRCA, 2012) must be met - documents are available online at http://sustainabletechnologies.ca/wp/wp-content/uploads/2013/01/SWM-Criteria-2012.pdf</p> <p>TRCA received feedback from Metrolinx indicating that the studies will be undertaken. Please conduct a hydraulic assessment in Mike Flood 2D for the Lower Don Crossing.</p>	During detailed design and prior to construction, a Stormwater Management Report will be completed to determine potential effects and mitigation measures. The report will be completed in consultation with TRCA and the MECP. Stormwater management design will consider guidance provided by the MOECC Stormwater Management Planning and Design Manual (2003) and MTO Drainage Management Manual (2008), TRCA Storm Water Management Criteria (2012), and the Low Impact Development Stormwater Management Planning and Design Guide (TRCA/Credit Valley Conservation, 2010).

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
			<p>In order to obtain TRCA support, we require not just that the study be conducted, but that it demonstrates no floodplain impacts, and that all necessary project design changes will be made to demonstrate this.</p>	
18. 1.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Technical Studies	<p>We recommend that Metrolinx situate and design the works appropriately in line with the necessary technical studies - fluvial geomorphic processes (cross perpendicular to the stream, cross on as straight a reach as possible), meander belt and erosion studies (100 year erosion limit where meander belt is not possible), geotechnical (grading and retaining walls for tracks), etc. All crossings including their grading and earthworks needs geotechnical and slope stability assessment. The geotechnical design will be also be needed in support of the proposed crossings.</p>	<p>A future commitment will be added to the Early Works Reports and Environmental Impact Assessment Report for these requested studies to be completed during detailed design, as required.</p>
19.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: 2 Bridge Spans	<p>2 new bridge spans are proposed over the Don Valley Parkway and Don River on either side of the existing CN bridge for the Ontario Line tracks, including pedestrian/cycling facilities. It is understood that the existing bridge abutments will be expanded on both sides to accommodate these additional spans.</p> <p>a) Please confirm the widths of the proposed bridges, as well as the total width of the crossing once complete. We understand that as of June 25, 2020 these details have not yet been finalized. TRCA staff will need to see these details to confirm that there are no adverse impacts to the floodplain.</p> <p>b) Please confirm any modification/changes/extensions to the abutments, piers, wingwalls and their potential impacts. We understand that as of June 25, 2020 these details have not yet been finalized. TRCA staff will need to see these details to confirm that there are no adverse impacts to the floodplain.</p> <p>c) The geotechnical design is needed for the abutments, foundations, earthworks for the approach embankment as well as any other means and methods (both temporary and permanent) to facilitate the works, which can result in the alteration of the surrounding area. We appreciate that geotechnical investigations will be undertaken and the results will inform the design. We reiterate that this should be done at this stage of the study.</p> <p>d) The proposed bridge abutments appear to increase flood elevations in the hydraulic model in some critical locations. In particular, expanding the spill extents in the east don lands is problematic. Metrolinx should design the bridge structures to maintain base flood elevations and extents in the key areas. Key areas include the West Don Lands FPL tie off point, BEFP FPL Phase 1, spill through Eastern Ave, BMW Lands, Metrolinx bridge soffits, and Unilever FPL. We understand that the Waterfront Toronto model will be used as the base condition, and that the proposed condition model will incorporate bridge abutments and rail corridor embankments. As indicated in the June 25, 2020 response, we look forward to reviewing the model and flood elevation difference map between the base condition and proposed condition within the entire floodplain.</p> <p>e) The proposed FPLs on the east side of the Don River (both south and north of the tracks) and the Port Lands sediment control area on the southwest side of the bridge need to be considered in the development of options. Metrolinx has</p>	<p>The design details referenced are currently being advanced and will be shared with TRCA as they become available.</p> <p>The design details referenced are currently being advanced and will be shared with TRCA as they become available.</p> <p>Metrolinx design teams are advancing geotechnical field investigations as required to inform design decisions at this location and results can be shared with TRCA as they become available.</p> <p>The design details referenced are currently being advanced and will be shared with TRCA as they become available.</p> <p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments</p>

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
			<p>acknowledged this comment but TRCA would like to see a commitment to this effect in the report. For TRCA to support these works, we must confirm that there are no adverse impacts to these flood protection initiatives.</p> <p>f) We understand that property needs will be assessed as part of detail design, but the abutments for these structures should avoid encroaching on TRCA property.</p>	<p>provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to include a future commitment to consider the proposed FPLs on the east side of the Don River, and the Portlands sediment control area.</p> <p>Metrolinx will seek to avoid encroachment to the extent possible.</p>
20.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Utilities	<p>With regards to utility and other infrastructure relocation, staff notes that there are several other infrastructure and utilities including watermains, hydro utilities, etc., owned by other agencies that may need to be relocated to facilitate this project. Please confirm if this infrastructure and utility works will be undertaken by Metrolinx (or contractor) as part of this project as well as the timelines for these works. We understand that consultation with the various stakeholders is ongoing.</p> <p>It is important to note all early/enabling works, and if some of the works will be undertaken by other proponents (municipalities and companies) as these other proponents may be subject to TRCA Regulatory requirements. In addition, it will be important to confirm these details to provide adequate time for permitting and implementation to avoid overall project delays. Please include this item in the future commitments section within the report.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to include a future commitment will be added to review utility relocations and continue coordination with TRCA and other affected stakeholders.</p>
21.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Pedestrian/Multi-Use Crossings	<p>A multi-use path and pedestrian crossing is proposed as part of the two new bridges crossing the Lower Don. TRCA questions the need for the bridge on the south side. Our preference is to avoid multiple crossings in close proximity to each other over watercourses.</p> <p>In line with TRCA's <i>The Living City Policies</i>, in order to support the proposed new, replacement, or expanded infrastructure, it must be demonstrated through technical studies completed by a qualified professional in accordance with TRCA standards and to the satisfaction of TRCA that:</p> <ul style="list-style-type: none"> • there will be no increase in risk associated with flood hazards and erosion hazards to upstream or downstream properties within valley and stream corridors; • infrastructure has been designed in a manner that minimizes the number of crossings and areas to be disturbed by infrastructure within valley and stream corridors, maintains the predevelopment configuration of the flood plain, valley or stream corridors, and does not prevent access for maintenance, evacuation or during an emergency; • the works will not result in unacceptable impacts to flood storage and conveyance upstream or downstream of the site; and, • considerable effort is put towards alleviating the current erosion and flood risk to affected properties through innovative means including possible acquisition of floodplain lands for remediation and or re-naturalization of the valley. <p>Metrolinx indicated that design investigations will include a review of floodplain and slope impacts. TRCA staff will need to see these details to confirm that there are no</p>	<p>Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment.</p>

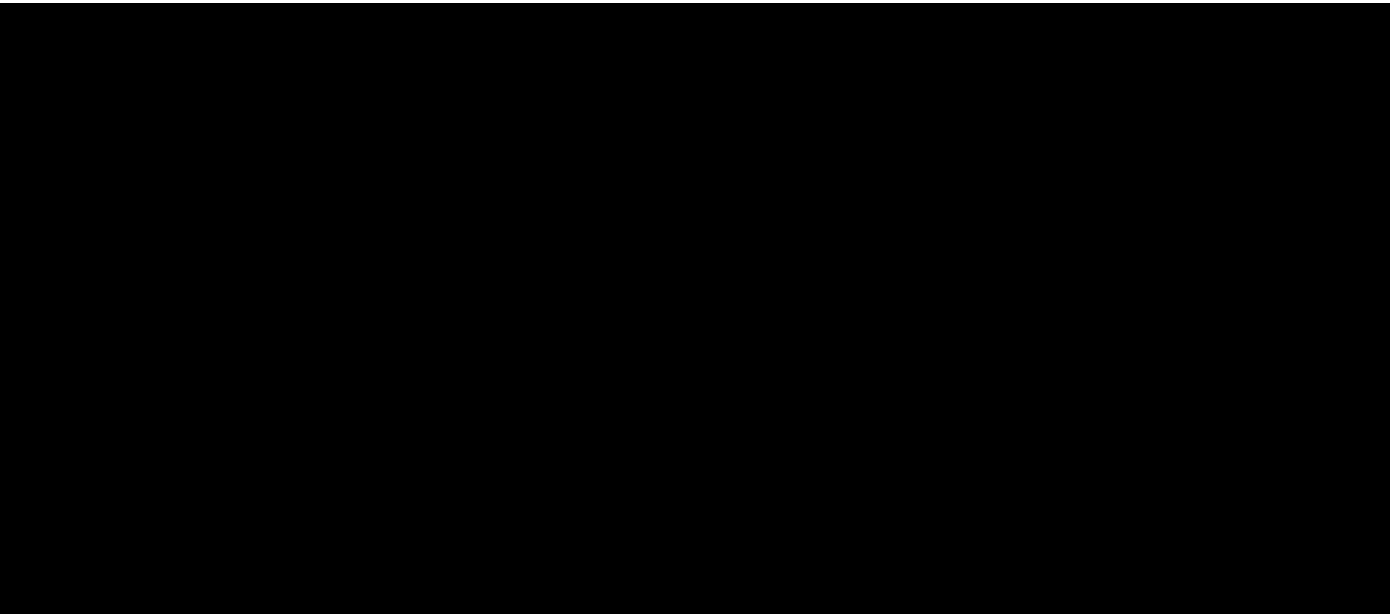

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
			adverse impacts.	
22.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Stairs/Ramps	Stairs/ramps will be necessary for pedestrians/cyclists to exit the new crossings over the Lower Don. We appreciate that infrastructure conflicts will be reviewed as part of detail design (and should be included in the commitments section). TRCA staff will need to see details on how the stairs/ramps for these pathways, west of the Don River, will interface with the West Don FPL and the future Wilson Yard. Our preference is to avoid siting additional infrastructure in this area as there are already essential project needs (sediment management area, Gardiner Expressway relocation, Wilson Yard improvements) that have not been designed and/or implemented, and this proposal could pose conflicts. Space in this area for additional infrastructure is already limited and will be more so once the above-noted initiatives are built.	Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment.
23.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Access	<p>Similar to the previous comment, the location of the pathway exits on the east side of the Don River could be potentially in-line with the future flood protection options. When considering design options for the pedestrian/cycling crossings, please ensure that exits are placed east of the crest to ensure it is on the dry-sided slope of the feature and away from the clay core.</p> <p>It was indicated at a workshop for the previous study (SmartTrack) that there is interest in repositioning the Don pathway further east so as to match up with site lines between future buildings. This will minimize risk and reduce footprints on the potential flood protection options. Moving the pathway further to the east will make space for the repositioning of the PS as indicated above.</p> <p>Metrolinx indicated that infrastructure conflicts will be reviewed as part of detailed design. Please include this in the commitments section.</p>	Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment. A future commitment regarding a review of infrastructure conflicts will be added to Lower Don Bridges EWR mitigation table.
24.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Hydraulic Impacts	<p>Metrolinx will need to demonstrate that the potential stairs/ramps will not cause negative offsite hydraulic impacts.</p> <p>In addition, any features that require filling or re-grading to achieve compliance with flood depth and velocity criteria shall not be permitted unless it has been demonstrated in an environmental study or technical report that can satisfy TRCA staff that this filling or grading will not result in adverse impacts on the flooding and erosion, or increase the risk to public safety, or the susceptibility to natural hazards is not increased and no new hazards are created.</p>	Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment.
25.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Flood Protection Initiatives	<p>There are existing and proposed flood protection initiatives surrounding the Lower Don River Crossing that will result in limitations to development and additional monitoring requirements:</p> <ul style="list-style-type: none"> • West Don Flood Protection Landform in Corktown Commons • Port Lands Flood Protection and Enabling Infrastructure Project (including East Harbour Flood Protection Landform) • Broadview and Eastern Flood Protection <p>Significant developments are relying on the elimination of flood risk provided by these initiatives. Bridge abutments and connections to the Lower Don trail system should not</p>	Design options for the Lower Don Bridges are under development in collaboration with TRCA and will continue to be shared with TRCA for review and comment. Metrolinx will continue to engage with TRCA to ensure collaboration between projects in vicinity of the Lower Don Bridges and East Harbour. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
			<p>impact the proposed flooding infrastructure. Depending on the timelines for construction, Metrolinx will be required to address existing flood plain management requirements if the works are developed and implemented prior to implementation of the flood protection at this location.</p> <p>The schedule for Ontario Line should bear in mind other projects/schedules in the immediate area. Regular joint meetings between all affected parties should be facilitated.</p>	
26.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Flood Protection Requirements	<p>This comment should inform the current geotechnical investigations that are underway. Any modifications to the CN embankment would trigger additional flood protection requirements as it would become part of the flood protection works for the site and the overall East Don Lands. The proponent needs to demonstrate that the design meets the definition of a Valley Wall Feature (VWF) or Flood Protection Landform (FPL) and how it interfaces with the adjacent flood protection infrastructure (tie in points). This will include the requirement to conduct all relevant geotechnical and structural studies to confirm the proposed design can withstand the hydrostatic forces of the Regional Storm event and address long-term concerns such as settling. The report should have a section discussing the proposed flood protection initiatives and how the Ontario Line will incorporate with these. TRCA staff will need to see these details to confirm that there are no adverse impacts to the flood protection initiatives in order to support the proposed works.</p>	Comment noted.
27.	Draft Early Works Report (July 2020)	East Harbour Station: Areas North of Rail Embankment	<p>Please note that since the completion of the DMNP EA, TRCA has undertaken several preliminary hydraulic modeling scenarios for flood protection of this area. The results of this modeling suggest that alternative flood protection solutions could be viable in the proximity to the BMW/Talisker site north of the railway tracks.</p> <p>However, these alternatives are preliminary in nature, and are subject to the resolution of several significant technical challenges that have not been investigated. Since an Environmental Assessment to eliminate flooding in the area of the proposed East Harbour station (north) area has not formally started, until that EA is complete and funding is secured to implement a permanent flood solution, Metrolinx would be required to respond to the current flood risk.</p> <p>It is likely that the station proposal will be subject to the requirements of the SPA and flood proofing requirements. Please refer to Section 7.4 of the Living City Policies regarding requirement for development in a SPA, particularly relating to flood proofing elevations, safe egress and ingress, permitted uses, liability and public safety, infrastructure damage and emergency preparedness.</p> <p>If there are station tunnels as previously proposed for SmartTracks, due to the connectivity to the north side of the rail embankment, TRCA will require that the station be flood proofed to the Regulatory flood elevation plus 30 cm of freeboard.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to reference the Living City. A commitment to undertake future studies to address floodplain risk will be included in these updated draft reports.</p>
28.	Draft Early Works Report	East Harbour Station: Public Safety	<p>Another requirement for locating any entrance or public spaces within the proposed station facility located within flood plain north of the rail embankment will be the requirement to have a comprehensive public safety protocol in place for egress and</p>	Comment noted.

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
	(July 2020)	Protocol	ingress, emergency preparedness and service access for evacuation purposes in case of a flood. Any underground parking facilities must be flood proofed to the level of the required flood elevation set by TRCA and the owner / operator will have to ensure that vehicles can safely be removed during that flood event, and take on full responsibility for life and property impacts due to flooding.	
29.	Draft Early Works Report (July 2020)	Lakeshore East Joint Corridor: Retaining Walls and Grading	Please ensure that the construction of the retaining walls is in line with TRCA LCP requirements and based on the necessary technical studies (geotechnical, natural heritage). The location of these features should have the necessary setback requirements from the erosion hazards that have been assessed through appropriate technical studies. Please ensure the design of the facing of the retaining walls consider and incorporate natural heritage elements and sustainable features.	Design options are under development and will continue to be shared with TRCA for review and comment.
30.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Ancillary Feature Siting	For future siting of ancillary features, such as TPSSs and EEBs, please note that they should not be sited in the floodplain or areas that are prone to slope failure as this poses a risk to staff, nearby properties and the general public.	Comment noted.
31.	Draft Natural Environment Early Works Report (July 2020)	Anticipated Construction Works: Noise Barriers/Walls	Noise barriers and walls have been proposed as part of the track expansion. Staff notes that these features affect TRCA regulated areas. Please confirm and indicate how the long-term maintenance associated with these features (noise barriers/walls) will be performed on site. Please note that alternative designs should be considered during the detailed design phase for areas where maintenance is anticipated to occur within a natural feature, where feasible. Please add a note in the relevant section of the report that TRCA staff will be included in the discussions associated with the design of these walls/barriers.	Design options are under development and will continue to be shared with TRCA for review and comment. A commitment to ongoing consultation with the TRCA will be included in environmental assessment reports where the Project footprint overlaps the TRCA regulated area.
32.	Draft Early Works Report (July 2020)	Support for Transit	TRCA as an organization is very supportive of transit development and encourages agencies and municipalities to develop sustainable transportation options in their planning and development of sustainable communities. The TRCA Living City Policies (LCP Section 6.4, 6.7 and 6.8) promotes and advocates the incorporation of sustainable transportation policies, green infrastructure and ecological design into community development and infrastructure building.	Comment noted.
33.	Draft Early Works Report (July 2020)	Detail Design/Outfall Placement	Generally, TRCA does not support the placement of a new outfall if an existing storm service system is available. If an outfall placement is not avoidable, then the following from TRCA's Living City Policies must be met: 8.9.8 That development, interference and alterations associated with infrastructure that supports stormwater management (SWM) facilities (e.g. outfall structures, etc.) shall generally be: a) located outside of the meander belt wherever possible; b) placed as close to the base of slope as possible, and at a grade above the 25-year floodline where feasible; c) avoid disturbance to natural features, areas and systems contributing to the conservation of land to the extent possible; and d) designed to reduce erosive velocities and mitigate thermal impacts (in the case of outfalls and outfall channels).	Comment noted.

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
34.	Draft Early Works Report (July 2020)	Detail Design/SWM Criteria	<p>Please note that TRCA's stormwater management criteria for the additional impervious areas (i.e. the expanded crossing, East Harbour Station and amenities) are as follows:</p> <ul style="list-style-type: none"> a) Erosion Control: Retention of the 5 mm storm onsite with the use of LIDs (Green roofs, permeable pavers, bioswales, etc.) b) Quantity Control: No quantity control for direct watercourse discharge to the Don and West Don Rivers. If discharging to a City sewer, then the City's criteria would govern. c) Quality Control: 80% TSS removal. Please note that TRCA only credits oil-grit separators to provide 50% TSS removal when sized for 80% TSS removal. They must be placed in a treatment train to be credited the full 80% TSS removal. If there are space constraints, TRCA accepts a filtration system (e.g. Jellyfish) when sized correctly to provide 80% TSS removal. <p>Please submit designs and calculations of all stormwater management measures in TRCA's regulated area demonstrating that the above-mentioned criteria are met.</p>	<p>The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.</p> <p>These updated draft reports will be updated to include TRCA's stormwater management criteria for impervious areas and a commitment for MX/design team to consult with TRCA during detailed design.</p>
35. D	Draft Natural Environment Early Works Report (July 2020)	Anticipated Construction Works: Site Preparation/ Dewatering	<p>As this project will likely require dewatering, it is important to note that any construction dewatering discharge that will negatively affect flooding, erosion, or natural features upstream or downstream will not be supported by TRCA.</p> <p>If it is identified during preliminary/detail design that dewatering is required, the proponent should provide information on dewatering volume, zone of influence, discharge plan, impact assessment (impact on surface water features, environmental sensitive area, etc.) as well as monitoring, mitigation and contingency plan. The proponent should provide TRCA a copy of the hydrogeological investigations reports for review when complete.</p> <p>Our preference is to discharge into nearby municipal sanitary and storm systems. Upon careful evaluation of the alternatives and potential impacts, should discharge into the watercourse be determined as the only feasible option, a staged-approach must be considered, such as on-site storage in ponds and reservoirs, evaporation ponds, and staged-release into the watercourse.</p> <p>Please refer to the TRCA Technical Guidelines for the Development of Environmental Management Plans for Dewatering (September 2013): https://s3-ca-central-1.amazonaws.com/trcaca/app/uploads/2016/02/17185417/TRCA_Technical_Guidelines_for_the_Development_of_EMPs_for_Dewatering.pdf</p>	Comment noted.
36.	Draft Natural Environment Early Works Report (July 2020)	Water Temperature	Please note that while the proposed works are located on, or adjacent to, areas of the watercourse (main and West Don River) identified as warm water, efforts should be taken to prevent temperature spikes in all watercourses as these spikes create a harsh environment for fish and other aquatic species. This is because the impact of asphalt heat islands on creeks can have negative effects and change the community species composition.	Comment noted. The assessment of early works at the Lower Don Bridges and East Harbour Station has been split into separate reports and will be documented under separate cover. Applicable comments provided to-date from TRCA will be incorporated in updated draft reports.
37.	Draft Natural Environment Early	Hydrologic Regimes	Please note that aquatic ecosystems include the hydrologic regime such as water quality, quantity, temperatures, sediment loads, and seasonal and daily flow variations. Thus, an increase in development area in already highly urban areas often tends to impact these ecosystems in the aforementioned ways. Thus, we recommend that effort be taken to	Comment noted. Metrolinx looks forward to continued close collaboration with TRCA as project planning advances.

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
	Works Report (July 2020)		assess and address the above items with appropriate Low Impact Development options and other mitigation techniques. Staff recognizes that some of these impacts are unavoidable, so we will work with the team to provide additional technical guidance relating to these items.	
38.	Draft Natural Environment Early Works Report (July 2020)	Migratory Birds and Insects	<p>In addition, as you are aware, migratory birds and insects have a strong need and use of natural wildlife corridors. Thus, we often find in urbanized areas such as these sites that linkages and connected corridors tend to provide habitat for these species to facilitate resting and feeding, and would like to ensure that species are able to continue on their migratory journey without encountering large gaps of unsuitable habitat.</p> <p>Our policies and watershed plans identify the importance of protecting and enhancing our natural systems which serve as wildlife corridors. Climate change and development place pressures on these connections. So similar to the comment above, please ensure that the report assesses the form and function of the existing rail tracks and surrounding areas as wildlife corridors.</p> <p>There may be opportunities, for example along the edges of the station construction areas, to enhance the natural environment and provide a connection to the surrounding natural areas.</p>	The draft Early Works Reports have been updated to describe the importance of existing rail corridors for wildlife, and mitigation has been proposed to address potential effects on habitat connectivity.
39.	Draft Natural Environment Early Works Report (July 2020)	Planting Opportunities	<p>While TRCA recognizes that trees and large wildlife species are not encouraged in close proximity to rail tracks; we believe that it is important to identify other opportunities to provide dense shrub plantings and a diverse native seed mix with species that support pollinators https://cvc.ca/wp-content/uploads/2017/04/17-uronativeplantsforpollinators-booklet-v8-web.pdf.</p> <p>The migration of pollinators, including monarch butterflies and some bat and hummingbird species, is a significant phenomenon. Certain species migrate over paths that stretch thousands of miles while pursuing blooming plants. To ensure the survival of migratory pollinators, three types of habitat needs must be considered. These are: summer breeding and foraging areas; secure overwintering sites; and nectar corridors and rest stops. Nectar corridors are patches of nectar-rich plant habitat, which act as stepping-stones for the pollinators on their long migratory journeys. Due to development and land use changes within Toronto and the GTA, many nectar corridors are no longer intact. Migrating pollinators must attempt to survive their journey through scattered habitats that contain little food.</p> <p>Thus, the planting of pollen rich herbaceous species within long corridors such as rail corridors will likely address this need and serve as a net benefit for the project while avoiding the risks associated with larger trees.</p>	Comment noted. Metrolinx looks forward to developing potential vegetation compensation opportunities in discussion with TRCA.

Subject: MX ON Line - Draft Early Works (EW) and NER EW Reports - TRCA Comments (CFN 62384)

Hi Rodney,

Please find attached TRCA staff's comments on the draft *Early Works Report* and *Draft Natural Environment Early Works Report (July 2020)* for the above-noted project. For your convenience, a WORD version of our comment table is also attached.

Please contact me if you have any questions.

Dear Mr. Yee,

**Re: Draft Early Works Report and Draft Natural Environment Early Works Report – Review
Transit Project Assessment Process (TPAP)
Metrolinx Ontario Line – between Ontario Science Centre and Ontario Place
Don River Watershed; City of Toronto – Toronto and East York**

Toronto and Region Conservation Authority (TRCA) staff received the draft Early Works and Draft Natural Environment Early Works Reports (July 2020) for the above-noted project on June 5th, 2020.

PROJECT OVERVIEW

TRCA staff understands that this undertaking involves building on the previous TTC Relief Line South concept, by expanding north of Pape Station to the Ontario Science Centre, and west of Osgoode Station to Exhibition/Ontario Place. The proposed project is a new approximately 16 km subway line along a dedicated right-of-way with a combination of elevated, tunneled and at-grade segments. The Early Works components of the project are proposed to proceed before the completion of the Ontario Line assessment process. Early Work are considered to be of strategic importance to enabling the timely implementation of the Project. The Early Works are proposed to be undertaken at four locations, three of which are regulated: Exhibition Station (not regulated), Lower Don River Crossing, East Harbour Station, and along the Lakeshore East Joint Corridor between Eastern Avenue and Carlaw Avenue.

The Lower Don Crossing Early Works will include construction of two new rail bridges north and south of the existing rail bridge over the Don River. The East Harbour Station is a multi-modal transit hub that will serve several modes of public transit. The Early Works will include two cross platforms situated between the Don Valley Parkway and Eastern Avenue, station access points to the north, south, and west (via the crossing), expansion of the Eastern Avenue rail bridge to accommodate the six-tracks, and an interim service road on the north side of the station for construction and emergency access. The Lakeshore East Joint Corridor Early Works will primarily consist of Lakeshore East rail corridor expansion to accommodate six tracks (two for the proposed Ontario Line and four for heavy rail), noise walls, retaining walls, two new bridges on either side of the existing Queen Street East, Dundas Street East, and Logan Avenue rail bridges (totaling 6), and utility relocations.

It is our understanding that these Early Works documents are the only documentation proposed for these works; however, TRCA staff do not have sufficient details of the proposed works. The design of the East Harbour Station, for example, is not described; instead, reference is made to previous studies with the assumption that agencies have the details of that study. Considering that this EA is not an addendum to the Smart Track project, it is imperative that the full extent of the works be described in detail in the current reports.

PROJECT REVIEW

The purpose of the draft Early Works Report is to summarize the local environmental conditions within the Early Works Study Area. It also provides an assessment and evaluation of the impacts that Early Works might have on the environment. Based on the potential impacts, a description of mitigation measures and monitoring activities is outlined. The purpose of the draft Natural Environment Early Works Report is to address construction natural environment effects from the early works. As indicated above, the Exhibition Station area is not regulated by TRCA and was not included in our review. Additionally, Figure 1-3 shows that the footprint of the Lower Don River Crossing ends south of the Richmond Hill Corridor tracks. As such, impacts to the West Don Flood Protection Landform were not included in this review. However, the bridge work cannot be assessed in isolation from the West Don FPL and its floodplain. TRCA staff will need to see the impact study for the Richmond Hill Corridor works to confirm that there are no impacts.

TRCA has completed a comprehensive review of the above-noted report in accordance with the policies and objectives of **Ontario Regulation 166/06**, as required through our voluntary project review process in order to confirm impacts to flooding, erosion, pollution, conservation of land or dynamic beaches have been addressed. Our concerns with this proposal are attached in **Appendix A**.

We had expected that our comprehensive feedback provided on the conceptual design on April 15, 2020 (**Appendix B**), as well as previous studies, like SmartTrack, would be incorporated into these subsequent reports. Since those comments have yet to be addressed, they are being re-iterated in our comments on the Early Works. Where applicable, we have incorporated and responded to Metrolinx responses to TRCA's conceptual design comments. Ideally our comments will be incorporated into the document prior to public review; however, if Metrolinx is unable to address TRCA comments at this stage, commitments to address comments should be added to the reports or provided in a separate memo. TRCA support and sign-off is based on addressing, or committing to address, our comments to the satisfaction of TRCA.

Should these comments be addressed later, we strongly recommend that Metrolinx and their consultants contact TRCA early in the next phase to discuss these comments and project design to ensure that there are no delays in the project and to ensure effective incorporation of these comments into design plans.

Should you have any questions or require any additional information please contact me at extension 5925 or at margie.akins@trca.ca.

Regards,

Margie Akins
Planner, Infrastructure Planning and Permits
Development and Engineering Services

APPENDIX A: TRCA COMMENTS AND PROPONENT RESPONSES

Metrolinx met with TRCA staff in April 15, 2020 to provide an overview of the project. TRCA staff provided detailed comments on the proposed design in a May 15, 2020 letter and comment table. Responses to TRCA comments were received on June 25, 2020. Comments that are still applicable to the Early Works have been included, and those with responses have been modified where necessary.

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROponent RESPONSE
1.	Draft Early Works Report (July 2020)	Comments Not Addressed	<p>We had expected that our comprehensive feedback provided on the conceptual design on April 15, 2020, as well as previous studies, like SmartTrack, would be incorporated into these reports. Since those comments have yet to be addressed, they are being re-iterated in this table. Where applicable, we have incorporated and responded to Metrolinx responses to TRCA's conceptual design comments.</p> <p>Ideally our comments will be incorporated into the documents prior to public review; however, if this is not possible due to time constraints, please confirm how our comments on the draft Early Works Reports will be addressed. If Metrolinx is unable to address TRCA comments at this stage, commitments to address comments should be added to the reports or provided in a separate memo. TRCA support and sign-off is based on addressing, or committing to address, our comments to the satisfaction of TRCA. Please identify in your responses where changes have been incorporated in the analysis or design.</p>	
2.	Draft Early Works Report (July 2020)	Insufficient Detail	<p>It is our understanding that these Early Works documents are the only documentation proposed for these works; however, TRCA staff do not have sufficient details of the proposed works. The design of the East Harbour Station, for example, is not described; instead, reference is made to previous studies with the assumption that agencies have the details of that study. Considering that this EA is not an addendum to the Smart Track project, it is imperative that the full extent of the works be described in detail in the current reports.</p>	
3.	Draft Early Works Report (July 2020)	Previous Feedback	<p>The Early Works document does not incorporate the significant feedback TRCA has already provided regarding the Lower Don Crossings and East Harbour Station. Both the Lower Don Crossing and the East Harbour Station are located in the existing and future floodplain of the Lower Don. It is critical that the design and implementation of the Early Works does not negatively impact the implementation of flood protection in the Lower Don. There are multiple projects being simultaneously designed in parallel in this area. The Early Works document needs to describe how the Lower Don Crossings and East Harbour Station interfaces with these projects, which include the Port Lands Flood Protection project, Broadview and Eastern Flood Protection EA, and Broadview and Commissioners Class EA.</p>	
4.	Draft Early Works Report (July 2020)	Joint Effort to Address Common Issues	<p>Staff strongly recommends a joint meeting with Metrolinx, TRCA, Waterfront Toronto and the City of Toronto early in the process as there are currently numerous major City building and infrastructure projects in the vicinity of the Lower Don River crossing. One of TRCA's strategic objectives is to help our partners channel joint efforts and implement projects that are efficient and mutually cost-beneficial. Bearing in mind the varying project timelines, costs of flood proofing, duplication of efforts and shared benefits, it may be worthwhile for the Metrolinx, the City, TRCA, Waterfront Toronto and other affected agencies to join efforts to address the current flooding issues in a timely manner and achieve shared benefits.</p> <p>While preliminary hydraulic models suggests it is feasible to provide flood protection on the north side of the tracks, there is currently no approval or funding for this proposal and, as such, there is no proposed timeline for implementation of flood protection. The flood protection solution would also require approval through a Class Environmental Assessment (EA) process among other studies prior to implementation.</p> <p>We acknowledge that Metrolinx's design team is in the process of setting up a series of meetings. TRCA staff look forward to future meetings, particularly one prior to the release of these reports to the public.</p>	

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROONENT RESPONSE
5.	Draft Early Works Report (July 2020)	East Harbour Station: Flood Protection Infrastructure	The East Harbour Station is located in the Don River Valley, Special Policy Area (SPA) and flood plain. TRCA completed the Don Mouth Naturalization and Port Lands Flood Protection Project EA (DMNP EA (2015)) that identified a preferred alternative for flood protection on the eastside of the Don River which will address current flooding on the First Gulf Property and into the South Riverdale communities to the east by implementing flood protection measures on the south side of the elevated railway embankment. Depending on the timelines for the station construction, Metrolinx will be required to address existing flood plain management requirements if the station is developed and implemented prior to implementation of the flood protection at this location. It is also important to note that although the rail embankment and areas south of the rail corridor may no longer be subject to flooding once the implementation of the Port Lands flood protection works, areas north of the tracks will remain in the flood plain and vulnerable to flooding even with a complete implementation of the preferred alternative in the DMNP EA (2015).	
6.	Draft Early Works Report (July 2020)	Proposed Flood Remediation Works	Please discuss the timing of constructing the Lower Don River Crossing and the proposed construction of the Lower Don River Crossing, and East Harbour Station. If the timing of construction of the Lower Don River Crossing and East Harbour Station is before the proposed flood remediation works, then the updated and improved floodplain can be used in all future analysis.	
7.	Draft Early Works Report (July 2020)	Flood Contingency	Depending on the timing of Early Works, if they are built prior to the Gardiner and flood protection infrastructure, the impact of flooding must be considered. It should be identified who will be affected if there is a flood and who will be responsible for dealing with flood conditions during that time. This should be discussed at the requested joint meeting and/or added as a commitment in the report.	
8.	Draft Early Works Report (July 2020)	Potential Effects Based on Other Studies	There was no mention of potential effects and mitigation measures based on the following items: a) Approved Don Mouth Naturalization and Port Lands Flood Protection Project: Key flood protection measures have been authorized to tie-in with the existing railway embankment at Don Roadway and Eastern Avenue Underpass; b) Completed Lower Don River West Remedial Flood Protection Project: Flood Protection Landform in West Don Lands has specific tie-in and grading requirements that must be retained where the railway meets the flood protection; c) Port Lands and South of Eastern Master Plan Class EA - requires a new Broadview underpass with expanded flood protection tie-ins and drainage with the railway embankment; and, d) Gardiner Expressway EA - requires opening of bridge crossing on east side of Don River through railway embankment to accommodate Hybrid 3 option. Please update this chapter to add this information.	
9.	Draft Early Works Report (July 2020)	Surface Flooding	Considering the biggest concern at the three Early Works locations is surface flooding, Section 4 of the report should be updated to include a discussion of surface flooding, similar to what is included for soils, groundwater, or other environmental conditions.	
10.	Draft Early Works Report (July 2020)	West Don FPL	TRCA staff understand that the Early Works are proposed to be undertaken at four locations: Exhibition Station, Lower Don River Crossing, East Harbour Station, and along the Lakeshore East Joint Corridor between Eastern Avenue and Carlaw Avenue. While the Exhibition Station study area is not regulated by TRCA, the other three locations are regulated and will be the focus of our comments. Figure 1-3 shows that the footprint of the Lower Don River Crossing ends south of the Richmond Hill Corridor tracks. As such, impacts to the West Don Flood Protection Landform were not included in this review. However, TRCA staff will need to see the impact study for the Richmond Hill Corridor works to confirm that there are no impacts to the West Don Flood Protection Landform. The hydraulic assessment will need to show that the floodplain impacts resulting from the Lower Don Crossing Early Works will not negatively impact the function of the West Don FPL. Please confirm when we can expect to see these works.	
11.	Draft Early Works Report (July 2020)	East Harbour Station, Section 3.3	Section 3.3 identifies that the "initial preferred design (IPD)" for the station was developed as part of the SmartTrack Stations EPR and that a number of changes are being proposed to integrate Ontario Line with the station. However,	

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROONENT RESPONSE
			the IPD is not provided as part of the report and therefore cannot be reviewed. Critical information, like the design of the station, should be provided for review and TRCA staff await further details on the station design.	
12.	Draft Early Works Report (July 2020)	Infrastructure Flooding	Please note that there is a possibility that sections of this line will still be susceptible to flooding. Our preference is to avoid locating the main station entrances in flood vulnerable areas, and that those entrances are subject to flood proofing requirements. Ingress and egress for new buildings should ensure that vehicular and pedestrian movement is not prevented during times of flooding.	
13.	Draft Early Works Report (July 2020)	Floodproofing	The Lower Don River Crossing and East Harbour Station are located within the Lower Don Special Policy Area. As such: a) Ingress and egress for all buildings within the flood plain lands shall be "safe." Pursuant to provincial floodproofing standards, and/or achieve the maximum level of flood protection determined to be feasible and economically viable such as at grade with street related access points; b) Developments must be floodproofed to the Regional floodplain if possible. If that is not possible, an iterative approach will be accepted to a minimum floodproofing standard of the 350-year storm event; c) The Lower Don floodplain is modelled in Mike Flood 2D. Any fill and floodproofing that is proposed to be undertaken within the floodplain must undergo an offsite impact assessment in Mike Flood 2D. TRCA will not accept development that results in offsite floodplain impacts.	
14.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	Importance of Limited Vegetation/Wildlife	Various references are made in the report to the limited habitat and connectivity functions of the Lower Don River. However, it should be noted that within a highly urbanized context these communities have a greater significance and value than they would in a less urban landscape. While this may not impact the project's viability, its importance based on landscape level considerations should be considered and a compensation strategy will be required that reflects the increased importance of anthropogenic urban ecological communities. Please update the report accordingly to reflect the important functions of the existing features.	
15.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	Wildlife Connectivity	Similar to the previous comment, the Don Valley provides an important function as a wildlife corridor within the highly urban local landscape. Design considerations should be analyzed within this local landscape context and should not impair ecological connectivity.	
16.	Draft Early Works Report (July 2020)/ Draft Natural Environment Early Works Report (July 2020)	Compensation	The effects tables indicate that compensation will be coordinated with the City of Toronto. Please ensure that TRCA is included in these discussions. It is important to note that TRCA will only consider compensation if it has been demonstrated that losses are unavoidable. Should no other alternatives be feasible, these losses will need to be quantified. In the absence of a finalized Metrolinx compensation strategy, ecological compensation should be based on TRCA's Guideline for Determining Ecosystem Compensation.	
17.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing	Please note that our objective at TRCA is to minimize the required number of crossings through valley corridors. The Early Works component of the Ontario Line project includes the Lower Don River Crossing at the GO tracks. For each crossing, Metrolinx must demonstrate that there are no significant impacts to flooding as a result of the crossing. The TRCA Stormwater Management Criteria (TRCA, 2012) must be met - documents are available online at http://sustainabletechnologies.ca/wp-content/uploads/2013/01/SWM-Criteria-2012.pdf TRCA received feedback from Metrolinx indicating that the studies will be undertaken. Please conduct a hydraulic assessment in Mike Flood 2D for the Lower Don Crossing.	

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROONENT RESPONSE
			In order to obtain TRCA support, we require not just that the study be conducted, but that it demonstrates no floodplain impacts, and that all necessary project design changes will be made to demonstrate this.	
18.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing; Technical Studies	We recommend that Metrolinx situate and design the works appropriately in line with the necessary technical studies - fluvial geomorphic processes (cross perpendicular to the stream, cross on as straight a reach as possible), meander belt and erosion studies (100 year erosion limit where meander belt is not possible), geotechnical (grading and retaining walls for tracks), etc. All crossings including their grading and earthworks needs geotechnical and slope stability assessment. The geotechnical design will be also be needed in support of the proposed crossings.	
19.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing; 2 Bridge Spans	<p>2 new bridge spans are proposed over the Don Valley Parkway and Don River on either side of the existing CN bridge for the Ontario Line tracks, including pedestrian/cycling facilities. It is understood that the existing bridge abutments will be expanded on both sides to accommodate these additional spans.</p> <p>a) Please confirm the widths of the proposed bridges, as well as the total width of the crossing once complete. We understand that as of June 25, 2020 these details have not yet been finalized. TRCA staff will need to see these details to confirm that there are no adverse impacts to the floodplain.</p> <p>b) Please confirm any modification/changes/extensions to the abutments, piers, wingwalls and their potential impacts. We understand that as of June 25, 2020 these details have not yet been finalized. TRCA staff will need to see these details to confirm that there are no adverse impacts to the floodplain.</p> <p>c) The geotechnical design is needed for the abutments, foundations, earthworks for the approach embankment as well as any other means and methods (both temporary and permanent) to facilitate the works, which can result in the alteration of the surrounding area. We appreciate that geotechnical investigations will be undertaken and the results will inform the design. We reiterate that this should be done at this stage of the study.</p> <p>d) The proposed bridge abutments appear to increase flood elevations in the hydraulic model in some critical locations. In particular, expanding the spill extents in the east don lands is problematic. Metrolinx should design the bridge structures to maintain base flood elevations and extents in the key areas. Key areas include the West Don Lands FPL tie off point, BEFP FPL Phase 1, spill through Eastern Ave, BMW Lands, Metrolinx bridge soffits, and Unilever FPL. We understand that the Waterfront Toronto model will be used as the base condition, and that the proposed condition model will incorporate bridge abutments and rail corridor embankments. As indicated in the June 25, 2020 response, we look forward to reviewing the model and flood elevation difference map between the base condition and proposed condition within the entire floodplain.</p> <p>e) The proposed FPLs on the east side of the Don River (both south and north of the tracks) and the Port Lands sediment control area on the southwest side of the bridge need to be considered in the development of options. Metrolinx has acknowledged this comment but TRCA would like to see a commitment to this effect in the report. For TRCA to support these works, we must confirm that there are no adverse impacts to these flood protection initiatives.</p> <p>f) We understand that property needs will be assessed as part of detail design, but the abutments for these structures should avoid encroaching on TRCA property.</p>	
20.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing; Utilities	<p>With regards to utility and other infrastructure relocation, staff notes that there are several other infrastructure and utilities including water mains, hydro utilities, etc., owned by other agencies that may need to be relocated to facilitate this project. Please confirm if this infrastructure and utility works will be undertaken by Metrolinx (or contractor) as part of this project as well as the timelines for these works. We understand that consultation with the various stakeholders is ongoing.</p> <p>It is important to note all early/enabling works, and if some of the works will be undertaken by other proponents (municipalities and companies) as these other proponents may be subject to TRCA Regulatory requirements. In</p>	

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
21.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Pedestrian/Multi-Use Crossings	<p>addition, it will be important to confirm these details to provide adequate time for permitting and implementation to avoid overall project delays. Please include this item in the future commitments section within the report.</p> <p>A multi-use path and pedestrian crossing is proposed as part of the two new bridges crossing the Lower Don. TRCA questions the need for the bridge on the south side. Our preference is to avoid multiple crossings in close proximity to each other over watercourses.</p> <p>In line with TRCAs <i>The Living City Policies</i>, in order to support the proposed new, replacement, or expanded infrastructure, it must be demonstrated through technical studies completed by a qualified professional in accordance with TRCA standards and to the satisfaction of TRCA that:</p> <ul style="list-style-type: none"> • there will be no increase in risk associated with flood hazards and erosion hazards to upstream or downstream properties within valley and stream corridors; • infrastructure has been designed in a manner that minimizes the number of crossings and areas to be disturbed by infrastructure within valley and stream corridors, maintains the predevelopment configuration of the flood plain, valley or stream corridors, and does not prevent access for maintenance, evacuation or during an emergency; • the works will not result in unacceptable impacts to flood storage and conveyance upstream or downstream of the site; and, • considerable effort is put towards alleviating the current erosion and flood risk to affected properties through innovative means including possible acquisition of floodplain lands for remediation and or re-naturalization of the valley. <p>Metrolinx indicated that design investigations will include a review of floodplain and slope impacts. TRCA staff will need to see these details to confirm that there are no adverse impacts.</p>	
22.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Stairs/Ramps	<p>Stairs/ramps will be necessary for pedestrians/cyclists to exit the new crossings over the Lower Don. We appreciate that infrastructure conflicts will be reviewed as part of detail design (and should be included in the commitments section). TRCA staff will need to see details on how the stairs/ramps for these pathways, west of the Don River, will interface with the West Don FPL and the future Wilson Yard. Our preference is to avoid siting additional infrastructure in this area as there are already essential project needs (sediment management area, Gardiner Expressway relocation, Wilson Yard improvements) that have not been designed and/or implemented, and this proposal could pose conflicts. Space in this area for additional infrastructure is already limited and will be more so once the above-noted initiatives are built.</p>	
23.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Access	<p>Similar to the previous comment, the location of the pathway exits on the east side of the Don River could be potentially in-line with the future flood protection options. When considering design options for the pedestrian/cycling crossings, please ensure that exits are placed east of the crest to ensure it is on the dry-sided slope of the feature and away from the clay core.</p> <p>It was indicated at a workshop for the previous study (SmartTrack) that there is interest in repositioning the Don pathway further east so as to match up with site lines between future buildings. This will minimize risk and reduce footprints on the potential flood protection options.</p> <p>Moving the pathway further to the east will make space for the repositioning of the PS as indicated above.</p> <p>Metrolinx indicated that infrastructure conflicts will be reviewed as part of detailed design. Please include this in the commitments section.</p>	

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROONENT RESPONSE
24.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing; Hydraulic Impacts	Metrolinx will need to demonstrate that the potential stairs/ramps will not cause negative offsite hydraulic impacts. In addition, any features that require filling or re-grading to achieve compliance with flood depth and velocity criteria shall not be permitted unless it has been demonstrated in an environmental study or technical report that can satisfy TRCA staff that this filling or grading will not result in adverse impacts on the flooding and erosion, or increase the risk to public safety, or the susceptibility to natural hazards is not increased and no new hazards are created.	
25.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing; Flood Protection Initiatives	<p>There are existing and proposed flood protection initiatives surrounding the Lower Don River Crossing that will result in limitations to development and additional monitoring requirements:</p> <ul style="list-style-type: none"> West Don Flood Protection Landform in Corktown Commons Port Lands Flood Protection and Enabling Infrastructure Project (including East Harbour Flood Protection Landform) Broadview and Eastern Flood Protection <p>Significant developments are relying on the elimination of flood risk provided by these initiatives. Bridge abutments and connections to the Lower Don trail system should not impact the proposed flooding infrastructure. Depending on the timelines for construction, Metrolinx will be required to address existing flood plain management requirements if the works are developed and implemented prior to implementation of the flood protection at this location.</p> <p>The schedule for Ontario Line should bear in mind other projects/schedules in the immediate area. Regular joint meetings between all affected parties should be facilitated.</p>	
26.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing; Flood Protection Requirements	This comment should inform the current geotechnical investigations that are underway. Any modifications to the CN embankment would trigger additional flood protection requirements as it would become part of the flood protection works for the site and the overall East Don Lands. The proponent needs to demonstrate that the design meets the definition of a Valley Wall Feature (VWF) or Flood Protection Landform (FPL) and how it interfaces with the adjacent flood protection infrastructure (tie in points). This will include the requirement to conduct all relevant geotechnical and structural studies to confirm the proposed design can withstand the hydrostatic forces of the Regional Storm event and address long-term concerns such as settling. The report should have a section discussing the proposed flood protection initiatives and how the Ontario Line will incorporate with these. TRCA staff will need to see these details to confirm that there are no adverse impacts to the flood protection initiatives in order to support the proposed works.	
27.	Draft Early Works Report (July 2020)	East Harbour Station: Areas North of Rail Embankment	<p>Please note that since the completion of the DMNP EA, TRCA has undertaken several preliminary hydraulic modeling scenarios for flood protection of this area. The results of this modeling suggest that alternative flood protection solutions could be viable in the proximity to the BMW/Talisker site north of the railway tracks.</p> <p>However, these alternatives are preliminary in nature, and are subject to the resolution of several significant technical challenges that have not been investigated. Since an Environmental Assessment to eliminate flooding in the area of the proposed East Harbour station (north) area has not formally started, until that EA is complete and funding is secured to implement a permanent flood solution, Metrolinx would be required to respond to the current flood risk.</p> <p>It is likely that the station proposal will be subject to the requirements of the SPA and flood proofing requirements. Please refer to Section 7.4 of the Living City Policies regarding requirement for development in a SPA, particularly relating to flood proofing elevations, safe egress and ingress, permitted uses, liability and public safety, infrastructure damage and emergency preparedness.</p>	

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROONENT RESPONSE
			If there are station tunnels as previously proposed for SmartTracks, due to the connectivity to the north side of the rail embankment, TRCA will require that the station be flood proofed to the Regulatory flood elevation plus 30 cm of freeboard.	
28.	Draft Early Works Report (July 2020)	East Harbour Station: Public Safety Protocol	Another requirement for locating any entrance or public spaces within the proposed station facility located within flood plain north of the rail embankment will be the requirement to have a comprehensive public safety protocol in place for egress and ingress, emergency preparedness and service access for evacuation purposes in case of a flood. Any underground parking facilities must be flood proofed to the level of the required flood elevation set by TRCA and the owner / operator will have to ensure that vehicles can safely be removed during that flood event, and take on full responsibility for life and property impacts due to flooding.	
29.	Draft Early Works Report (July 2020)	Lakeshore East Joint Corridor: Retaining Walls and Grading	Please ensure that the construction of the retaining walls is in line with TRCA LCP requirements and based on the necessary technical studies (geotechnical, natural heritage). The location of these features should have the necessary setback requirements from the erosion hazards that have been assessed through appropriate technical studies. Please ensure the design of the facing of the retaining walls consider and incorporate natural heritage elements and sustainable features.	
30.	Draft Early Works Report (July 2020)	Previous Comments on Lower Don Crossing: Ancillary Feature Siting	For future siting of ancillary features, such as TPSSs and EEBs, please note that they should not be sited in the floodplain or areas that are prone to slope failure as this poses a risk to staff, nearby properties and the general public.	
31.	Draft Natural Environment Early Works Report (July 2020)	Anticipated Construction Works: Noise Barriers/Walls	Noise barriers and walls have been proposed as part of the track expansion. Staff notes that these features affect TRCA regulated areas. Please confirm and indicate how the long-term maintenance associated with these features (noise barriers/walls) will be performed on site. Please note that alternative designs should be considered during the detailed design phase for areas where maintenance is anticipated to occur within a natural feature, where feasible. Please add a note in the relevant section of the report that TRCA staff will be included in the discussions associated with the design of these walls/barriers.	
32.	Draft Early Works Report (July 2020)	Support for Transit	TRCA as an organization is very supportive of transit development and encourages agencies and municipalities to develop sustainable transportation options in their planning and development of sustainable communities. The TRCA Living City Policies (LCP Section 6.4, 6.7 and 6.8) promotes and advocates the incorporation of sustainable transportation policies, green infrastructure and ecological design into community development and infrastructure building.	
33.	Draft Early Works Report (July 2020)	Detail Design/Outfall Placement	Generally, TRCA does not support the placement of a new outfall if an existing storm service system is available. If an outfall placement is not avoidable, then the following from TRCA's Living City Policies must be met: 8.9.8 That development, interference and alterations associated with infrastructure that supports stormwater management (SWM) facilities (e.g. outfall structures, etc.) shall generally be: a) located outside of the meander belt wherever possible; b) placed as close to the base of slope as possible, and at a grade above the 25- year floodline where feasible; c) avoid disturbance to natural features, areas and systems contributing to the conservation of land to the extent possible; and d) designed to reduce erosive velocities and mitigate thermal impacts (in the case of outfalls and outfall channels).	
34.	Draft Early Works Report (July 2020)	Detail Design/SWM Criteria	Please note that TRCA's stormwater management criteria for the additional impervious areas (i.e. the expanded crossing, East Harbour Station and amenities) are as follows: a) Erosion Control: Retention of the 5 mm storm onsite with the use of LIDs (Green roofs, permeable pavers, bioswales, etc.)	

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROONENT RESPONSE
			<p>b) Quantity Control: No quantity control for direct watercourse discharge to the Don and West Don Rivers. If discharging to a City sewer, then the City's criteria would govern.</p> <p>c) Quality Control: 80% TSS removal. Please note that TRCA only credits oil-grit separators to provide 50% TSS removal when sized for 80% TSS removal. They must be placed in a treatment train to be credited the full 80% TSS removal. If there are space constraints, TRCA accepts a filtration system (e.g. Jellyfish) when sized correctly to provide 80% TSS removal.</p> <p>Please submit designs and calculations of all stormwater management measures in TRCA's regulated area demonstrating that the above-mentioned criteria are met.</p>	
35.	Draft Natural Environment Early Works Report (July 2020)	Anticipated Construction Works: Site Preparation/ Dewatering	<p>As this project will likely require dewatering, it is important to note that any construction dewatering discharge that will negatively affect flooding, erosion, or natural features upstream or downstream will not be supported by TRCA.</p> <p>If it is identified during preliminary/detail design that dewatering is required, the proponent should provide information on dewatering volume, zone of influence, discharge plan, impact assessment (impact on surface water features, environmental sensitive area, etc.) as well as monitoring, mitigation and contingency plan. The proponent should provide TRCA a copy of the hydrogeological investigations reports for review when complete.</p> <p>Our preference is to discharge into nearby municipal sanitary and storm systems. Upon careful evaluation of the alternatives and potential impacts, should discharge into the watercourse be determined as the only feasible option, a staged-approach must be considered, such as on-site storage in ponds and reservoirs, evaporation ponds, and staged-release into the watercourse.</p> <p>Please refer to the TRCA Technical Guidelines for the Development of Environmental Management Plans for Dewatering (September 2013): https://s3-ca-central-1.amazonaws.com/trcaca/app/uploads/2016/02/17185417/TRCA_Technical_Guidelines_for_the_Development_of_EMPs_for_Dewatering.pdf</p>	
36.	Draft Natural Environment Early Works Report (July 2020)	Water Temperature	<p>Please note that while the proposed works are located on, or adjacent to, areas of the watercourse (main and West Don River) identified as warm water, efforts should be taken to prevent temperature spikes in all watercourses as these spikes create a harsh environment for fish and other aquatic species. This is because the impact of asphalt heat islands on creeks can have negative effects and change the community species composition.</p>	
37.	Draft Natural Environment Early Works Report (July 2020)	Hydrologic Regimes	<p>Please note that aquatic ecosystems include the hydrologic regime such as water quality, quantity, temperatures, sediment loads, and seasonal and daily flow variations. Thus, an increase in development area in already highly urban areas often tends to impact these ecosystems in the aforementioned ways. Thus, we recommend that effort be taken to assess and address the above items with appropriate Low Impact Development options and other mitigation techniques. Staff recognizes that some of these impacts are unavoidable, so we will work with the team to provide additional technical guidance relating to these items.</p>	
38.	Draft Natural Environment Early Works Report (July 2020)	Migratory Birds and Insects	<p>In addition, as you are aware, migratory birds and insects have a strong need and use of natural wildlife corridors. Thus, we often find in urbanized areas such as these sites that linkages and connected corridors tend to provide habitat for these species to facilitate resting and feeding, and would like to ensure that species are able to continue on their migratory journey without encountering large gaps of unsuitable habitat.</p> <p>Our policies and watershed plans identify the importance of protecting and enhancing our natural systems which serve as wildlife corridors. Climate change and development place pressures on these connections. So similar to the comment above, please ensure that the report assesses the form and function of the existing rail tracks and surrounding areas as wildlife corridors.</p>	

ITEM	DOCUMENT	DESCRIPTION	TRCA COMMENTS (July 6, 2020)	PROPONENT RESPONSE
39.	Draft Natural Environment Early Works Report (July 2020)	Planting Opportunities	<p>There may be opportunities, for example along the edges of the station construction areas, to enhance the natural environment and provide a connection to the surrounding natural areas.</p> <p>While TRCA recognizes that trees and large wildlife species are not encouraged in close proximity to rail tracks; we believe that it is important to identify other opportunities to provide dense shrub plantings and a diverse native seed mix with species that support pollinators https://cvc.ca/wp-content/uploads/2017/04/17-uonativeplantsforpollinators-booklet-v8-web.pdf.</p> <p>The migration of pollinators, including monarch butterflies and some bat and hummingbird species, is a significant phenomenon. Certain species migrate over paths that stretch thousands of miles while pursuing blooming plants. To ensure the survival of migratory pollinators, three types of habitat needs must be considered. These are: summer breeding and foraging areas; secure overwintering sites; and nectar corridors and rest stops. Nectar corridors are patches of nectar-rich plant habitat, which act as stepping-stones for the pollinators on their long migratory journeys. Due to development and land use changes within Toronto and the GTA, many nectar corridors are no longer intact. Migrating pollinators must attempt to survive their journey through scattered habitats that contain little food.</p> <p>Thus, the planting of pollen rich herbaceous species within long corridors such as rail corridors will likely address this need and serve as a net benefit for the project while avoiding the risks associated with larger trees.</p>	

APPENDIX A: TRCA COMMENTS ON CONCEPTUAL DESIGN PRESENTATION

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
CROSSINGS – GENERAL (<i>Comments 1-6</i>)		
1.	<p>Please note that our objective at TRCA is to minimize the required number of crossings through valley corridors. It appears that the preferred alignment will have three crossings:</p> <ul style="list-style-type: none"> • Lower Don River Crossing at the GO tracks • Upper Don Valley – Millwood Crossing • Upper Don Valley – Overlea Crossing (N5) <p>For each crossing, Metrolinx must demonstrate that there are no significant impacts to flooding as a result of the crossing. The TRCA Stormwater Management Criteria (TRCA, 2012) must be met - documents are available online at http://sustainabletechnologies.ca/wp/wp-content/uploads/2013/01/SWM-Criteria-2012.pdf.</p>	
2.	We recommend that Metrolinx situate and design the crossings appropriately in line with the necessary technical studies - fluvial geomorphic processes (cross perpendicular to the stream, cross on as straight a reach as possible) meander belt and erosion studies etc. (100 year erosion limit where meander belt is not possible).	
3.	For all new crossings hydraulic modelling will be required to demonstrate no or minimal changes to floodplain elevations.	
4.	<p>Long term implications for managing features located within the flood plain will be an issue within the Don River Valley at the various crossings:</p> <p>a) Please note that the final design of bridge piers at the Millwood and Overlea crossings needs to also address implications to river flows, specifically for piers within the watercourse, to ensure that the potential for scour and erosion locally is fully understood and addressed.</p> <p>b) For abutment and pier works within the Don River Valley, isolation of the construction areas from flows is required, and staff request consideration of the use of a more robust method for isolation (i.e. coffer dam or similar vs. silt fencing and filter socks). The proposed isolation measure will need to tie into the existing bridge abutments.</p> <p>c) Please note that it will be important that pier locations for the Millwood and Overlea crossings be designed in a such a way as to avoid any sensitive natural features. This includes wetlands along with the placement of piers within watercourses. Please ensure that the design is coordinated with the consulting ecologist to ensure any sensitive ecological areas are avoided.</p>	

ITEM	TRCA COMMENTS (May 15, 2020)	PROONENT RESPONSE
Ancillary Features Site Location: (<i>Comments 5-6</i>)		
5.	For future siting of ancillary features, such as TPSSs and EEBs, please note that they should not be sited in the floodplain or areas that are prone to slope failure as this poses a risk to staff, nearby properties and the general public.	
6.	Evaluation Criteria: Natural hazards, especially flooding and erosion, should be a determining factor used in assessing location/sites for infrastructure (i.e. TPSSs, EEBs, MSFs). These factors should be included in the evaluation table and given the same weight/importance in the siting of infrastructure as other factors like constructability, cost, and user experience, etc. Please confirm that this will be assessed as part of this TPAP stage and documented accordingly. TRCA will need to see these assessments.	
LOWER DON RIVER CROSSING (<i>Comments 7-20</i>)		
Proposed Bridge Plan (<i>Slides 18-21</i>): (<i>Comments 7-14</i>)		
7.	Staff strongly recommends a joint meeting with Metrolinx, TRCA, Waterfront Toronto and the City of Toronto early in the process as there are currently numerous major City building and infrastructure projects in the vicinity of the Lower Don River crossing. One of TRCA’s strategic objectives is to help our partners channel joint efforts and implement projects that are efficient and mutually cost-beneficial. Bearing in mind the varying project timelines, costs of flood proofing, duplication of efforts and shared benefits, it may be worthwhile for the Metrolinx, the City, TRCA, Waterfront Toronto and other affected agencies to join efforts to address the current flooding issues in a timely manner and achieve shared benefits.	
8.	Existing and future critical flood infrastructure may result in design limitations. Flood protection initiatives and associated requirements are discussed in further detail in the next sub-section (starting with Comment 15). These initiatives can also be discussed in further detail at the above-noted joint meeting.	
9.	<p>2 new bridge spans are proposed over the Don Valley Parkway and Don River on either side of the existing CN bridge for the Ontario Line tracks, including pedestrian/cycling facilities (slide 18). It is understood that the existing bridge abutments will be expanded on both sides to accommodate these additional spans.</p> <p>a) Please confirm the widths of the proposed bridges, as well as the total width of the crossing once complete.</p> <p>b) Please confirm any modification/changes/extensions to the abutments, piers, wingwalls and their potential impacts.</p>	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
	<p>c) The geotechnical design is needed for the abutments, foundations, earthworks for the approach embankment as well as any other means and methods (both temporary and permanent) to facilitate the works, which can result in the alteration of the surrounding area.</p> <p>d) The proposed bridge abutments appear to increase flood elevations in the hydraulic model in some critical locations. In particular, expanding the spill extents in the east don lands is problematic. Metrolinx should design the bridge structures to maintain base flood elevations and extents in the key areas. Key areas include the West Don Lands FPL tie off point, BEFP FPL Phase 1, spill through Eastern Ave, BMW Lands, Metrolinx bridge soffits, and Unilever FPL. Future submissions should also create difference files to examine changes to flood elevations within the entire floodplain. Please share the hydraulic model for TRCA review as well.</p> <p>e) The proposed FPLs on the east side of the Don River (both south and north of the tracks) and the Port Lands sediment control area on the southwest side of the bridge need to be considered in the development of options.</p> <p>f) The abutments for these structures should not cross onto TRCA property.</p>	
10.	<p>With regards to utility and other infrastructure relocation, staff notes that there are several other infrastructure and utilities including watermains, hydro utilities, etc., owned by other agencies that may need to be relocated to facilitate this project. Please confirm if this infrastructure and utility works will be undertaken by Metrolinx (or contractor) as part of this project as well as the timelines for these works.</p> <p>It is important to note all early/enabling works, and if some of the works will be undertaken by other proponents (municipalities and companies) as these other proponents may be subject to TRCA Regulatory requirements. In addition, it will be important to confirm these details to provide adequate time for permitting and implementation to avoid overall project delays. Please include this item in the future commitments section within the EPR.</p>	
11.	<p>Pedestrian/Multi-Use Crossings: Slides 18 and 21 of the presentation indicates that work is underway to also incorporate a multi-use path and pedestrian crossing on both bridges. TRCA questions the need for the bridge on the south side. Our preference is to avoid multiple crossings in close proximity to each other over watercourses.</p> <p>In line with TRCAs <i>The Living City Policies</i>, in order to support the proposed new, replacement, or expanded infrastructure, it must be demonstrated through technical studies completed by a qualified professional in accordance with TRCA standards and to the satisfaction of TRCA that:</p> <ul style="list-style-type: none"> • there will be no increase in risk associated with flood hazards and erosion hazards to upstream or downstream properties within valley and stream corridors; 	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
	<ul style="list-style-type: none"> • infrastructure has been designed in a manner that minimizes the number of crossings and areas to be disturbed by infrastructure within valley and stream corridors, maintains the predevelopment configuration of the flood plain, valley or stream corridors, and does not prevent access for maintenance, evacuation or during an emergency; • the works will not result in unacceptable impacts to flood storage and conveyance upstream or downstream of the site; and, • considerable effort is put towards alleviating the current erosion and flood risk to affected properties through innovative means including possible acquisition of floodplain lands for remediation and or re-naturalization of the valley. 	
12.	<p>Stairs/ramps will be necessary for pedestrians/cyclists to exit the new crossings over the Lower Don. Please provide additional information on how the stairs/ramps for these pathways, west of the Don River, will interface with the West Don FPL and the future Wilson Yard. Our preference is to avoid siting additional infrastructure in this area as there are already essential project needs (sediment management area, Gardiner Expressway relocation, Wilson Yard improvements) that have not been designed and/or implemented, and this proposal could pose conflicts. Space in this area for additional infrastructure is already limited and will be more so once the above-noted initiatives are built.</p>	
13.	<p>Similar to the previous comment, the location of the pathway exits on the east side of the Don River could be potentially in-line with the future flood protection options (discussed further in the next section). When considering design options for the pedestrian/cycling crossings, please ensure that exits are placed east of the crest to ensure it is on the dry-sided slope of the feature and away from the clay core.</p>	
14.	<p>Metrolinx will need to demonstrate that the potential stairs/ramps will not cause negative offsite hydraulic impacts.</p> <p>In addition, any features that require filling or re-grading to achieve compliance with flood depth and velocity criteria shall not be permitted unless it has been demonstrated in an environmental study or technical report that can satisfy TRCA staff that this filling or grading will not result in adverse impacts on the flooding and erosion, or increase the risk to public safety, or the susceptibility to natural hazards is not increased and no new hazards are created.</p>	
<p>Flood Protection Initiatives: (<i>Comments 15-20</i>)</p>		
15.	<p>There are several flood protection initiatives surrounding the Lower Don River Crossing (and/or the Don Yard Relocation) that will result in limitations to development and additional monitoring requirements:</p> <ul style="list-style-type: none"> • West Don Flood Protection Landform in Corktown Commons • Port Lands Flood Protection and Enabling Infrastructure Project 	

ITEM	TRCA COMMENTS (May 15, 2020)	PROONENT RESPONSE
	<ul style="list-style-type: none"> Broadview and Eastern Flood Protection <p>Significant developments are relying on the elimination of flood risk provided by these initiatives. Bridge abutments and connections to the Lower Don trail system should not impact the proposed flooding infrastructure. Depending on the timelines for construction, Metrolinx will be required to address existing flood plain management requirements if the works are developed and implemented prior to implementation of the flood protection at this location.</p> <p>The schedule for Ontario Line should bear in mind other projects/schedules in the immediate area. Regular joint meetings between all affected parties will be important.</p>	
16.	<p>Any modifications to the CN embankment would trigger additional flood protection requirements as it would become part of the flood protection works for the site and the overall East Don Lands. The proponent needs to demonstrate that the design meets the definition of a Valley Wall Feature (VWF) or Flood Protection Landform (FPL) and how it interfaces with the adjacent flood protection infrastructure (tie in points). This will include the requirement to conduct all relevant geotechnical and structural studies to confirm the proposed design can withstand the hydrostatic forces of the Regional Storm event and address long-term concerns such as settling.</p>	
17.	<p><u>West Don Flood Protection Landform (WDFPL):</u> Also known as the Corktown Commons, the WDFPL is in the northwest quadrant of the proposed Lower Don Crossing (immediately north of the Metrolinx property limits). The WDFPL cannot be compromised in any way as it provides flood protection to approximately 210 hectares of land west of the lower Don River.</p> <p>The following comments are prefaced with the understanding that TRCA cannot support any design that negatively impacts the WDFPL:</p> <p>a) Please note that the FPL tie off point extends into Metrolinx property. Comments regarding the protection and avoidance of the FPL should apply to the southernmost tie-off area as well. If this is not possible then Metrolinx will be responsible for modifying and reconstructing the tie-off point to the original design standards.</p> <p>b) The proposed work is to avoid the disturbance or adverse impacts to the existing FPL by both permanent structures, facilities and earthworks as well as the temporary works to facilitate the construction. It is required that all proposed works including any temporary means and methods needed for the construction (i.e. construction access, temporary excavations, backfilling, stockpiling, staging and storage areas) stay entirely away from the FPL footprint along with an adequate additional buffer (no less than 10 m).</p>	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
	<p>c) Any dewatering or temporary excavation in this area is to be limited due to the presence of compressible soft soil in the area where the FPL sits, which may negatively impact the FPL.</p> <p>d) The details of tie-in the proposed abutments, etc. need to be properly designed with respect to the footprint of the FPL and to ensure that the tie-in details as well as any permanent and temporary means and methods to facilitate the works do not adversely impact the FPL.</p> <p>e) A settlement monitoring program should be developed and implemented by a geotechnical engineer for the WDFPL and the areas in its proximity, including the settlement measurements for the selected points of the FPL, regular monitoring during construction and for a sufficient period after completion of construction, establishing thresholds for alert and immediate action.</p> <p>The details of the settlement monitoring program for the WDFPL are required to be provided within the geotechnical report along with a site plan to show the location of the monitoring stations. TRCA staff will need to sign-off on this plan prior to issuing the VPR. The monitoring program would apply to any works on the west side of the Don River.</p> <p>f) All the above-mentioned items need to be appropriately demonstrated on the drawings and reports. TRCA will provide the as-builts of the WDFPL (following a data sharing agreement) for all relevant site plans and cross-sections to be accurately plotted.</p> <p>g) The earthworks and structures are also needed to be designed by geotechnical engineer as well as structural engineer. Furthermore, the design needs to consider the potential impact to the FPL.</p>	
18.	<p>Port Lands Flood Protection and Enabling Infrastructure: The Port Lands Flood Protection and Enabling Infrastructure project (PLFPEI) is one of the most significant urban renewal opportunities in Toronto. It is a comprehensive plan for flood protecting southeastern portions of downtown Toronto. Some components of flood proofing are already underway, and the project is expected to be complete in 2024, at which time the property will be removed from flood risk. There are critical PLFP infrastructure in the vicinity of the proposed crossing and approach that are to be protected and/or coordinated with, including the East Harbour Flood Protection Landform, the Sediment and Debris Management Area (SDMA), and Eastern Avenue Flood Protection.</p> <p>The railway embankment will need to act as part of the flood protection; therefore, close consideration of the geotechnical conditions in the embankment as well as the tie-off points on both sides of the embankment will need to occur.</p>	
19.	<p>Broadview and Eastern Flood Protection: Intended to address the remaining flood risk (approximately 8 hectares of land north of the rail embankment) following implementation of the PLFPEI project. Potential flood proofing of lands bounded by Don Valley Parkway in the west, the Metrolinx elevated railway embankment to the</p>	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
	<p>south, Eastern Avenue in the north, and the future extension of Broadview Avenue in the east. The preliminary preferred alternative design for the FPL has been completed and the EA is in progress.</p> <p>The infrastructure required for this flood proofing effort should be considered in the design of the Lower Don crossing and associated works. The railway embankment may need to act as part of the flood protection infrastructure for this initiative. The pedestrian crossings will need to exit on the dry side of this future infrastructure. Coordination with this project will be essential.</p>	
20.	<p>Unilever Precinct: The Unilever Precinct Planning Study proposes a significant new employment node at the foot of the Don River on the east side of the Don Valley Parkway terminus, north of the Port Lands. The entire site lies within the Lower Don River flood plain, and is in the Lower Don Special Policy Area, resulting in limitations on development permissions linked to current flood risk. Development of this area is only permitted provided it is flood protected to at least the 1:350-year level.</p> <p>The future of the precinct will depend on significant infrastructure investment in flood protection - the development of the East Harbour FPL (between the rail corridor and Lakeshore Boulevard) and the Broadview and Eastern FPL (between Eastern Avenue and the rail corridor). The design of the Lower Don Crossing and associated track and station works must not negatively impact this flood proofing infrastructure. Coordination with these projects will be important in the design process for the Lower Don works.</p>	
DON YARD RELOCATION (<i>Comments 21-27</i>)		
21.	<p>Although the relocation of the Don Yard is not anticipated to impact the West Don FPL, please refer to the requirements outlined for the West Don Land FPL (Comment #17) regarding FPL protection against the adverse impacts by both temporary means and measures for construction as well as permanent structures, facilities, and earthworks. Notable elements of concern are the cut and cover portal construction (e.g. excavation, dewatering, vibrations), launch pits, and the shift of the Richmond Hill GO corridor (including potential retaining/crash walls plus foundations and the new access under the tracks). TRCA cannot support any design that negatively impacts the WDFPL.</p>	
22.	<p>We are currently in the VPR process for the USRC East Track Enhancement project, which includes a retaining wall and underground drainage system in proximity to the WDFPL. We are aware that the drainage system is temporary and to be removed for installation of the future Track E0; however, please confirm whether the retaining wall will be temporary or permanent. As previously stated, TRCA cannot support any design that negatively impacts the WDFPL.</p>	
23.	<p>TRCA is in agreement with the proposed approach to keep the realigned Richmond Hill track (outlined in blue on slide 15) within the existing corridor and to keep on top of the embankment if possible, with no retaining walls. As</p>	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
	previously stated, TRCA will not support temporary or permanent infrastructure, such as retaining walls and associated foundations, within 10 m of the WDFPL footprint. For example, the cross-section on slide 16 shows the foundation of the retaining/crash wall crossing the existing property line.	
24.	We recommend that Metrolinx assess and utilize subway construction technology that is less intrusive and minimizes/avoids impacts to the river and groundwater resources.	
Conceptual Extraction Site Layout (Comments 25-27)		
25.	Slide 17 shows segment storage on the FPL. This will not be supported by TRCA and should be relocated.	
26.	<p>Bala Underpass: Slide 17 shows a “new access to be built from under the realigned track” from the workshop and offices to the WDFPL:</p> <p>a) Please confirm whether this new access is in addition to the existing Bala Underpass or meant to replace the Bala Underpass. Additionally, please provide the rationale for this new access as this has implications to property within the flood hazard.</p> <p>b) This underpass is a major constriction to flow in existing conditions and raises flood elevations spilling over the rail tracks. It is strongly recommended to increase the size of this underpass to reduce flood risk to the rail line in this area, and to lower flood elevations at the WDFPL tie-off point. Impacts to Hydro connections associated with the existing underpass will need to be examined if relocation is required.</p>	
27.	<p>Don Landing Restoration Area: The workshop, office space, and construction laydown area 2 on slide 17 are within the Don Landing Restoration area. The Don Landing Restoration area is an active flood conveyance zone of the Regional floodplain:</p> <p>a) The location of the workshops and offices is within the floodplain of the Don River. This would unnecessarily expose people and property to flood risk. As such, the workshops and offices need to be moved away from the floodplain.</p> <p>b) The construction laydown area should be removed from the floodplain. TRCA will not support any installations in this area, which is also TRCA property.</p> <p>c) Any negative impact to flood conveyance by the project is not supported. Hydraulic modelling will be required to demonstrate the proposed plan will not negatively impact flooding elsewhere.</p>	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
	d) The Lower Don Trail system crossing through this area must remain open at all times. The City of Toronto should be consulted about works in proximity to the trail system.	
	e) Please ensure early coordination with the various utilities in this area.	
RICHMOND HILL GO CORRIDOR REALIGNMENT (<i>Comments 28-31</i>)		
28.	On Slide 15 it appears the permanent shift of the Richmond Hill GO Corridor further north may be close to the existing West Don FPL. Though Metrolinx does not anticipate impacts to the FPL, in order to ensure that the proposed works (both permanent or temporary) do not negatively impact the existing FPL, please refer to Comment #17 for the FPL requirements. As previously stated, TRCA cannot support any design that negatively impacts the WDFPL.	
29.	All lands between the Don River and the West Don FPL, where the GO Corridor is located, are within an active flood conveyance zone. Design of the realigned corridor will need to consider impacts to/from flooding.	
30.	The appropriate geotechnical design is needed to be completed for various elements of the proposed work.	
31.	The majority of lands adjacent to the Richmond Hill GO Corridor are owned by TRCA. TRCA uses land securement as a tool to protect environmentally significant natural heritage lands and to provide relief from flood and erosion hazard. As such, it is important to avoid encroachment on TRCA property. If encroachment is unavoidable, the property requirements will need to be confirmed early in the process to begin the easement process.	
UPPER DON CROSSINGS – MILLWOOD AND N5 OVERLEA (<i>Comments 32-35</i>)		
32.	The alignments (N1 and N5 as labelled in the April 2020 presentation) as well as the crossings shown on the presentation will need significant earth work in the form of cutting the slopes and or placement of fill. The slope stability of cuts and valleys are required to be studied by a geotechnical engineer. The study also needs to consider the impact of the proposed alterations in the valley slope stability. It is required that the stability of the slopes to be achieved within the proposed work. It is also required that the slope stability assessment provide the recommendations to ensure the stability is achieved, and there is no risk of triggering erosion hazards in the long-term	
33.	The impact of the loads from the bridge pier and foundations are also to be taken into account for the slope stability assessment and developing the solutions.	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
34.	<p>Slide 33 states that 6-8 piers are proposed within the valley system for the Millwood Crossing. Considerations identified under the “Crossings – General” section will apply to the bridge work. There should be a conscious effort to reduce the number of piers and avoid placement within the watercourse and active flood zone.</p> <p>Considering the constraints (i.e. floodplain, slope) and sensitive features in the valley, we would suggest utilizing the existing Millwood Avenue structure. Please comment as to why this option was not considered.</p>	
35.	<p>Although conceptual in nature, it appears that the portal for the Millwood Crossing exits in, or adjacent, to TRCA property (slides 33 and 34). Works for this portal and crossing will require an archaeological assessment by TRCA staff at an extra cost to Metrolinx. Please refer to Comment 53 for additional details.</p>	
MAINTENANCE AND STORAGE FACILITY (MSF) (Comments 36-46)		
36.	<p>It is our understanding, based on the May 12, 2020 teleconference, that approximately 800 m of slope reconstruction would be required for the MSF yard. TRCA cannot support an alternative that introduces new erosion hazards on TRCA regulated lands. In line with TRCAs <i>The Living City Policies</i>, in order to support proposed new, replacement, or expanded infrastructure, it must be demonstrated through technical studies completed by a qualified professional in accordance with TRCA standards and to the satisfaction of TRCA that:</p> <ul style="list-style-type: none"> • there will be no increase in risk associated with flood hazards and erosion hazards to upstream or downstream properties within valley and stream corridors; • infrastructure has been designed in a manner that minimizes the number of crossings and areas to be disturbed by infrastructure within valley and stream corridors, maintains the predevelopment configuration of the flood plain, <i>valley</i> or stream corridors, and does not prevent access for maintenance, evacuation or during an emergency; • the ecological and hydrological functions of the valley or stream corridor are maintained by considering the valley or stream corridor form; • considerable effort is put towards alleviating the current erosion and flood risk to affected properties through innovative means including possible acquisition of floodplain lands for remediation and or re-naturalization of the valley. <p>We are giving these preliminary comments with the understanding that they are at the concept design level and more design options will be provided later following discussions with TRCA.</p>	
37.	<p>TRCA recommends further examining alternatives for reducing the size of the site. As per <i>The Living City Policies</i>, new infrastructure must demonstrate that all feasible alternative sites and configurations have been explored and</p>	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
	where unavoidable, it can be demonstrated that infrastructure has been designed in a manner that minimizes areas to be disturbed within valley corridors.	
38.	TRCA recommends exploring additional measures to reduce the impacts of the site, such as reconfiguring buildings, reducing spacing between tracks, and reducing the size of the stormwater pond.	
39.	The MSF site appears to encroach into the natural heritage system (NHS) and ESA along with the associated buffers. Included in the NHS is the West Don River Valley ANSI. The proposal does not seem to be consistent with TRCA's Living City Policies. Please ensure that the MSF site, including any required grading, is located outside of the natural features or hazard (whichever is greater) along with a minimum 10 metre buffer.	
40.	<p>Please also note that the MSF site may require an OPA/ZBLA and Site Plan application and may not be consistent with the City's natural heritage policies under the Official Plan.</p> <p>As part of TRCA's commenting role under the Planning Act, we have the delegated responsibility of representing the provincial interest on natural hazards encompassed by Section 3.1 of the Provincial Policy Statement, 2014 (PPS). Furthermore, in accordance with the TRCA Memorandum of Understanding (MOU) with the City of Toronto, TRCA is responsible for providing technical environmental advice on Planning Act applications.</p>	
41.	<p>The slide presented for the conceptual lay-out showed an area very close to the top of steep slope. The slide refers to "slope reinforcement might be required at the edge of the top of crest of slope".</p> <p>As a summary of slope site based on TRCA screening tools, the slope is 25 to 30 m high (closer to 30 m high as the shown area on the slide). The slope is very steep in general particularly the upper 5 m (close to 1.2H:1V) and still steep for the rest of the slope in the middle and lower portion. Furthermore, the aerial photo shows that the watercourse is meandering in the location close to the concerned area, and that means that there may be a chance that the toe erosion process in the long-term will aggravate the slope stability. It is expected that the available setback of 10 m between the building and Top-of-Bank is not enough to ensure that the proposed work is entirely behind the Long-Term Stable Top of Slope (LTSTOS) as the erosion hazard limit. This means the engineered stabilization work will be needed to facilitate such work within the proximity of the hazardous slope. The engineering of the slope based on its height and steepness may need to be a very robust work with significant disturbance and slope reconstruction. Furthermore, the presence of watercourse where is currently located close to the toe of slope, may trigger long-term hazard to any potential slope stabilization means planned by Metrolinx in absence some channel works (to be verified by slope stability study after more detailed review of the site condition).</p> <p>Notwithstanding the policy and ecological concerns for development in such proximity of the hazardous slope and potential encroachment to the erosion hazard limit determined by the Long-Term Stable Top of Slope (LTSTOS) by</p>	

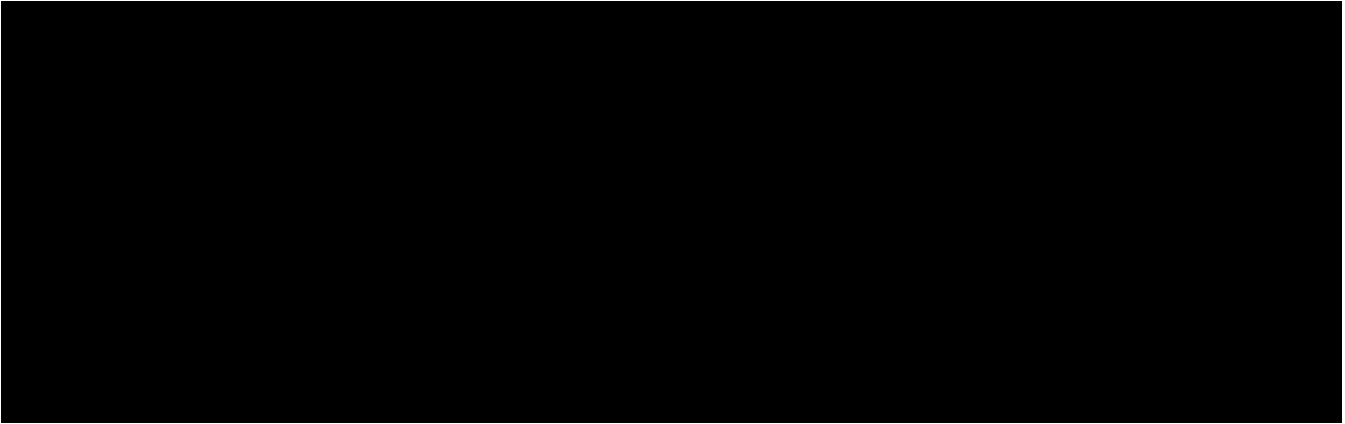

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
	<p>a geotechnical study, there are the following geotechnical concerns for the feasibility of the potential development in the erosion hazard area, which needs to rely on slope stabilization to facilitate such work:</p> <ul style="list-style-type: none"> • The extent of the slope stabilization can be significant depending in the extent of the areas, which is steep enough to be considered hazardous and to require the stabilization. Depending on the position of the Long-Term Stable Top of Slope, the required stabilization needs to be developed, and this may result in a significant slope stabilization based on the steepness of the upper slope and middle slope, the reinforcement may required alterations of significant portion of slope to facilitate a safe development against erosion hazard; • Additionally, for the areas that the watercourse is located close to the toe of slope, the future toe erosion process will also impact the slope stability and potentially results in greater safe setback (greater setbacks from the existing Top-of-Bank for the position of the Long-Term Stable Top of Slope (LTSTOS)) needed against the slope hazards. In that case, then the slope stabilization at the upper slope will also need some channel works against toe erosion to ensure its longevity against being potentially undermined in the long-term by toe erosion. Such channel work if deemed to be needed as per the detailed studies, to avoid impacting the upper slope will result in significant disturbance for access and other needed works. <p>Provided those above, as per the feasibility of the proposed works at MSF, it is required that a slope stability study to be undertaken to determine the position of the Long-Term Stable Top of Slope (LTSTOS) for a minimum factor of safety of 1.5 (http://www.trca.on.ca/dotAsset/40047.pdf).</p> <p>Based on the outcome of the study and position of the LTSTOS line, then the development for the MSF and potential solution needed to be presented to TRCA including the extent of the upper slope areas needs the stabilization, potential disturbance needed for such solutions including their implementation, the need for channel works against toe erosion and the potential disturbance, etc.</p> <p>It should be mentioned that the slope stability study to inform the feasibility study and to develop the options is needed to be conducted at this stage of feasibility study.</p>	
42.	<p>The MSF slide for the conceptual layout of the south slope (Slide 43) proposed slope alteration/regrading. Additional information is needed to show the proposed grading on site plan and adequate cross-sections, provisions to facilitate such regarding/alterations in a long-term stable manner and the extent of disturbed areas including those needed for both permanent and temporary means and methods. Additionally, the stability study by a geotechnical engineer is also needed to demonstrate that the proposed works meet a long-term stable slope with a minimum factor of safety of 1.5.</p>	

ITEM	TRCA COMMENTS (May 15, 2020)	PROONENT RESPONSE
43.	<p>The CP Spur, booths, accesses, TPSS and all other elements in proximity of the steep slopes need to be located behind the Long-Term Stable Top of Slope (LTSTOS) with a minimum factor of safety of 1.50 (http://www.trca.on.ca/dotAsset/40047.pdf).</p> <p>It should be mentioned that the slope stability study to inform the feasibility study and to develop the options is needed to be conducted at this stage of feasibility study.</p>	
44.	<p>Please refer to TRCA's Stormwater Management Criteria document for the applicable stormwater criteria to be followed for the MSF sites.</p>	
45.	<p>Details for the temporary bridge, access or any other disturbance as means and methods for construction need to be developed and presented on a site plan and cross-sections. A geotechnical engineer needs to review the designs and ensure their stability and confirm that they do not create hazard during their use. Furthermore, the details of proper restoration and/or reconstruction of the disturbed areas for the temporary access, bridges, etc. should be developed and reviewed by a geotechnical engineer to ensure the long-term stability of the restored areas as a result of the proposed temporary works. Additionally, it needs to be determined who will maintain the slope in the long-term.</p>	
46.	<p>The land on the northwest edge of the MSF site is owned by TRCA. TRCA uses land securement as a tool to protect environmentally significant natural heritage lands and to provide relief from flood and erosion hazard. As such, it is important to avoid encroachment on TRCA property. If encroachment is unavoidable, the property requirements will need to be confirmed early in the process to begin the easement process.</p>	
SETBACK REQUIREMENTS		
47.	<p>The alignment traverses the valley at the area of Millwood Road and north of Overlea Road. The valley slope is steep and located in close proximity of the watercourse with further risks of toe erosion to aggravate the slope stability.</p> <p>The safe setback against the long-term erosion hazard is needed to be determined by a geotechnical study to delineate the Long-Term Stable Top of Slope (LTSTOS) corresponding to a minimum factor of safety of 1.50 to ensure that there is adequate setback against the erosion hazards for all component of the proposed works including the stations, emergency structures, etc. Please refer to the <i>TRCA Geotechnical Design Submissions and Requirements (November 2007)</i> (http://www.trca.on.ca/dotAsset/40047.pdf).</p> <p>We strongly recommend that the slope assessment be done early to inform the siting of structures, preferably during the EA stage. If setbacks are not determined at this stage, TRCA is concerned whether there will be enough flexibility at later stages to make the necessary modifications to meet TRCA setback requirements.</p>	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
ECOLOGY		
48.	An EIS should be completed for the purposes of determining ecological viability of alternatives to better inform decision making. It is unclear how ecological sensitivity and impacts were taken into consideration for the purposes of weighing alternatives. Impacts to the natural environment should be a determining factor used in assessing location/sites for infrastructure and should be identified in an evaluation table. Please provide an EIS demonstrating that no negative ecological impact will result from the proposal. If studies have not already been completed to support the decisions made, a Terms of Reference should be submitted to TRCA for comment prior to conducting studies.	
49.	TRCA will only consider compensation if it has been demonstrated that losses are unavoidable. Should no other alternatives be feasible, these losses will need to be quantified. In the absence of a finalized Metrolinx compensation strategy, ecological compensation should be based on TRCA's Guideline for Determining Ecosystem Compensation.	
STORMWATER MANAGEMENT		
50.	<p>Please note that TRCA's stormwater management criteria for the additional impervious areas (i.e. crossings, Don Yard, MSF Yard) are as follows:</p> <ul style="list-style-type: none"> a) <u>Erosion Control</u>: Retention of the 5 mm storm onsite with the use of LIDs (Green roofs, permeable pavers, bioswales, etc.) b) <u>Quantity Control</u>: No quantity control for direct watercourse discharge to the Don and West Don Rivers. If discharging to a City sewer, then the City's criteria would govern. c) <u>Quality Control</u>: 80% TSS removal. Please note that TRCA only credits oil-grit separators to provide 50% TSS removal when sized for 80% TSS removal. They must be placed in a treatment train to be credited the full 80% TSS removal. If there are space constraints, TRCA accepts a filtration system (e.g. Jellyfish) when sized correctly to provide 80% TSS removal. 	
51.	Please update the HEC-RAS model to include any grading and structures that are proposed in the floodplain and demonstrate that there will be no floodplain impacts (no increase in floodplain elevation) upstream or downstream of the site. Impacts to the floodplain cannot be supported and design modifications may be necessary to address this requirement to the satisfaction of TRCA. A commitment to undertake these analyses should be included in the EPR commitment table.	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
GROUNDWATER		
52.	<p>As this project will likely require dewatering, it is important to note that any construction dewatering discharge that will negatively affect flooding, erosion, or natural features upstream or downstream will not be supported by TRCA.</p> <p>If it is identified during preliminary/detail design that dewatering is required, the proponent should provide information on dewatering volume, zone of influence, discharge plan, impact assessment (impact on surface water features, environmental sensitive area, etc.) as well as monitoring, mitigation and contingency plan. The proponent should provide TRCA a copy of the hydrogeological investigations reports for review when complete.</p> <p>Our preference is to discharge into nearby municipal sanitary and storm systems. Upon careful evaluation of the alternatives and potential impacts, should discharge into the watercourse be determined as the only feasible option, a staged-approach must be considered, such as on-site storage in ponds and reservoirs, evaporation ponds, and staged-release into the watercourse.</p> <p>Please refer to the <i>TRCA Technical Guidelines for the Development of Environmental Management Plans for Dewatering (September 2013)</i>: https://s3-ca-central-1.amazonaws.com/trcaca/app/uploads/2016/02/17185417/TRCA_Technical_Guidelines_for_the_Development_of_EMPs_for_Dewatering.pdf</p>	
GENERAL		
53.	<p><u>Archaeology</u></p> <p>It appears that the Lower Don River crossing, the Upper Don Millwood crossing, the Overlea crossing, and the MSF yard are surrounded by TRCA lands. Please note that these TRCA lands are currently managed by the City of Toronto parks division. Works on our property may require an easement and will trigger a need for Archaeological Review by TRCA at the expense of Metrolinx. Please ensure that these property requirements are confirmed early on in the detailed design stage to ensure that the appropriate TRCA property requirements are met. To avoid project delays, it is recommended that an Application for Archaeological Review be submitted early in the VPR process: https://s3-ca-central-1.amazonaws.com/trcaca/app/uploads/2018/10/17172439/Application-for-Archaeological-Review-06-26-2017.pdf</p>	
<u>Low Impact Development (LIDs):</u>		
54.	<p>Staff recommends that Metrolinx incorporate Low Impact Development options into the design of the stations. These LIDs construction methodologies could be used to reduce impacts of the proposed expansion on the natural environment. Information pertaining to the LIDs could be found in the 2010, TRCA and area Conservation</p>	

ITEM	TRCA COMMENTS (May 15, 2020)	PROPONENT RESPONSE
	<p>Authorities - Low Impact Development Guidelines for Storm Water Management Design document. This document was prepared to provide engineers, ecologists and planners with up-to-date information and direction on how to plan and design storm water management facilities that will eventually have relatively low impacts on the environment. The purpose of the guidelines was to help ensure the continued health of the streams, rivers, lakes, fisheries and terrestrial habitats in our respective watersheds. Please refer to the TRCA Sustainable Technologies Evaluation Program website for the report. - www.sustainabletechnologies.ca</p>	
<p><u>Design Opportunities:</u></p>		
<p>55.</p>	<p>Please explore opportunities to incorporate into various designs some natural heritage features, integrated art, environmental education and stewardship into wayfinding character, such as design graphics and sign elements into the station designs, entrances and pedestrian access points.</p> <p>TRCA often encourages that as a minimum, Metrolinx should incorporate simple educational ecological materials/information/monuments into station entrance design that portray and inform local communities of the nearby natural heritage assets wherever possible. The planting of pollen rich herbaceous species and dense shrub plantings with diverse native seed mix with species that support pollinators at key locations could serve as a net benefit for the project https://cvc.ca/wp-content/uploads/2017/04/17-uo-nativeplantsforpollinators-booklet-v8-web.pdf.</p>	
<p><u>Multi-Use Connection Opportunities:</u></p>		
<p>56.</p>	<p>Please consider opportunities for connectivity with other transportation modes at station locations. For example, there is an opportunity for developing a trailhead where trails are in proximity to stations.</p>

Subject: RE: OL - Early Works Draft Report Review

Hi Laura,

Thanks for the reminder email. My apologies but I won't be able to submit comments until Monday. I appreciate your understanding.

Regards,
Margie

I am currently working remotely 7:30 am – 3:30 pm Monday to Friday.

Good Afternoon Margie,

This is a friendly reminder that we are looking for comments to be provided for the following draft Ontario Line Early Works and Environmental Conditions Reports by end of day tomorrow, July 3rd:

- Early Works Report; and
- Natural Environment Early Works Report

Feel free to contact me if you have any questions.

Thank you,

Laura Witherow

Good Afternoon Margie,

We're now able to share the Draft Early Works Natural Environment Report for your review and comment.

Download here: 

Please note that we will still be sending the Draft Environmental Conditions Report and Draft Early Works Report once they become available.

As always, please let me know if you have any questions or concerns.

Thank you,

Laura Witherow

Good afternoon Michael,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Project Coordinator, Environmental Programs and Assessment

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Michael Vallins,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

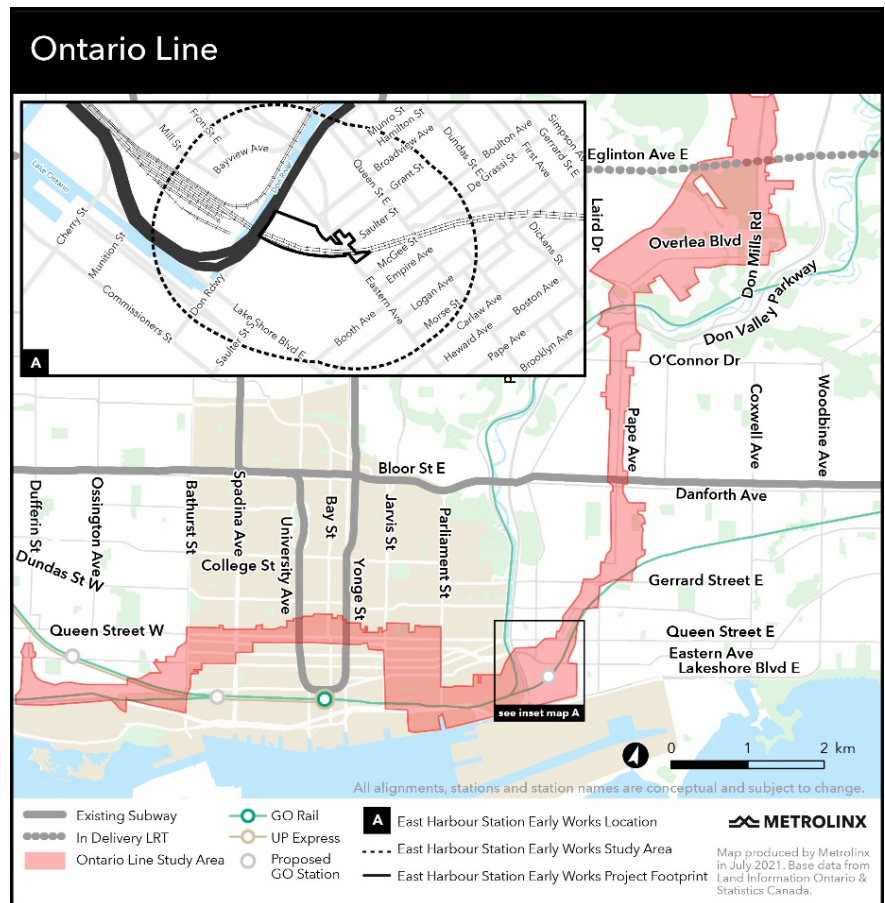

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Kuru Satkunanathan

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Tony Porter,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Good afternoon,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Project Coordinator, Environmental Programs and Assessment

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Sir/Madam,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Kuru Satkunanathan

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Sir/Madam,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Subject: RE: Ontario Line – Environmental Conditions and Early Works Draft Report Review

Good morning Laura – apologies I missed your email yesterday. Please see the files requested located here:

- 
 - Ontario Line Existing Conditions
 - Natural Environment Report
 - Noise and Vibration Report
 - Socio-Economic Report
 - Ontario Line Early Works
 - Air Quality Impact Assessment Memo
 - Natural Environment Report
 - Noise and Vibration Report
 - Traffic Memo
- 
 - Ontario Line Early Works
 - Early Works Report
 - CH Report
- 
 - Ontario Line Existing Conditions
 - Stage 1 AA
 - CH Report

Please let me know if you need anything else, I'm good for a call this morning.

MERLIN YUEN

Subject: RE: Ontario Line – Environmental Conditions and Early Works Draft Report Review

Hi Merlin,

Currently putting together the comments for the 06.04 OL existing conditions reports. Can you resend the OL early works reports from 06/04? I believe I'm having trouble unzipping the subfolder from that submission.

In addition, can you resend the links for the following reports:

- 06/25 OL Environmental Conditions Report: Stg 1 AA and CH report
- 06/05 OL Early Works: Early Works Report and CH Report

Please see Matey's note regarding the 06/15 submission documents. We are currently working on the 06/23 document review.

Regards,

Laura Dimand, B.Sc., GIT

Good afternoon Merlin,

We have reviewed the Draft Environmental Conditions Report which was attached and note that the document provided is incomplete.

The relevant section for Utilities is empty as well as other sections.

Your email also stated that an Early Works Draft Report is to be included, however there was no such document attached.

Could you please advise when will the Early Works Draft Report be available as well as relevant details be provided so that we can review and provide feedback?

Thanks

Matey

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Sir/Madam,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager

Attachments: Attachment 1 - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report
Attachment 2 - Notice of Publication of Draft East Harbour Station Early Works Report

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Elise Brunet,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Good afternoon Jeannie,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Jeannie Snell,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Wayne Kelly,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

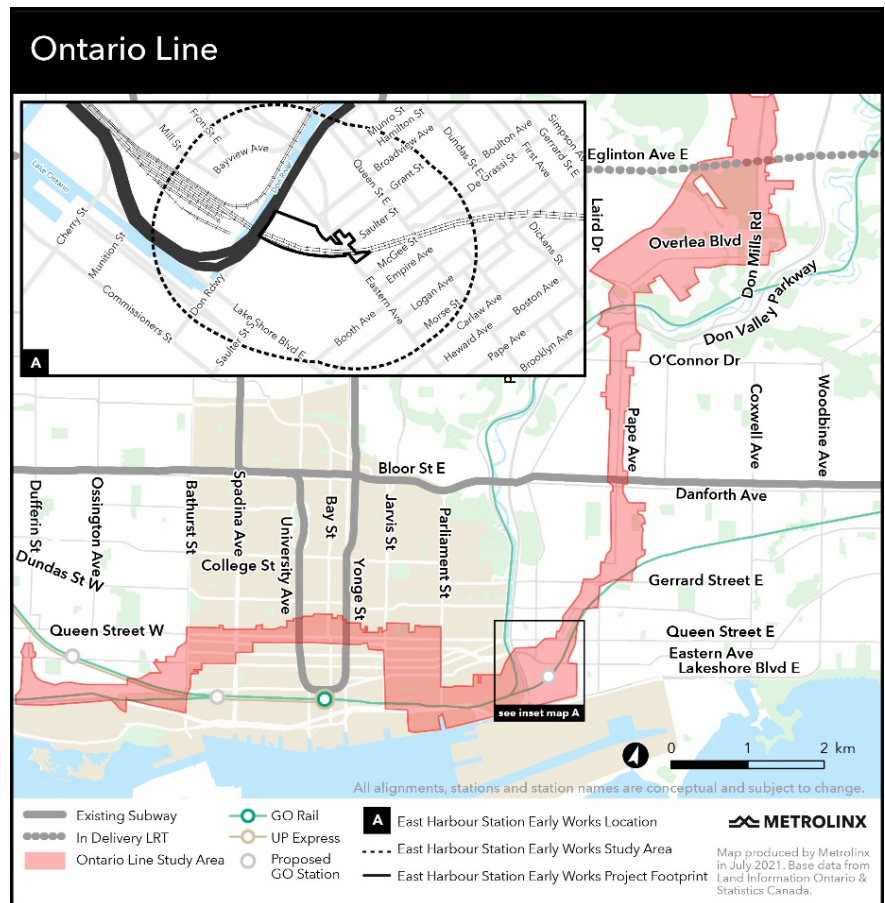

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line - Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report
Date: Tuesday, July 27, 2021 3:01:53 PM

Good afternoon,

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the following Dropbox link for review:

[REDACTED]
[REDACTED]

The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and GO rail where Ontario Line runs in parallel to GO tracks between the Ontario Line Don Yard Portal and Gerrard Portal.

Metrolinx welcomes any comments or feedback on the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Please provide these in writing no later than **August 24, 2021**.

Thank-you,

Crystal Ho

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line
Metrolinx: connecting our communities

Subject: Update on Ontario Line Early Works scheduling

Hello Councillor Fletcher and MPP Tabuns,

Great to see both of you on the call with the Riverside BIA earlier today. In follow up, I am writing to provide an update on the Ontario Line early works environmental assessment, procurement and construction timelines.

In late 2020, Metrolinx completed the environmental assessment for Ontario Line early works at Exhibition Station. This was the first of three early works packages that had been identified at the outset of the project.

Our team is continuing studies for the early works reports for the Lower Don Bridges and Lakeshore East Joint Corridor, allowing additional time for detailed design work and coordination required with GO Expansion plans. We expect to release the draft reports for a 30-day public consultation in Summer 2021 (Lower Don Bridges) and Fall 2021 (Lakeshore East Joint Corridor). Procurement for both of these packages of work will advance only after the environmental assessment is completed. No construction will begin until 2022.

We have posted an update project timeline on our [website](#).

We are taking this extra time to conduct further due diligence and refine initial designs so that we minimize impacts throughout the corridor as much as possible. These schedule adjustments do not impact the overall timeline for early works completion or the larger P3 construction packages.

Metrolinx will be setting up community meetings in March and April to discuss proposed noise walls in the joint corridor and provide a project update. I'll reach out to both of your offices to coordinate. Please let me know if you have any questions in the interim.

Stay safe and well,

Josh

Subject: RE: Ontario Line and 791 Queen St E

Hi Daryl,

Based on the latest information, we do not anticipate that the Ontario Line will direct impact the properties along the west side of Strange Street, including Fontbonne Place at 791 Queen Street East. We are in regular contact with Ben Vozzolo, Fontbonne's Executive Director, and other staff to discuss anticipated impacts and how they can be mitigated to ensure that Fontbonne's drop-in and residential programs can continue to support vulnerable clients in the neighbourhood. We will keep your office and the community informed as the designs for the Ontario Line are advanced and we are able to confirm property impacts.

We anticipate that early works construction in the Riverside area will begin in late 2021, following public consultation on a robust environmental report. You can also let the resident know that Metrolinx has committed to installing noise barriers along this section of the shared rail corridor. Our preliminary analysis shows that, when combined with other measures we are putting in place, these mitigations would effectively eliminate noticeable noise and vibration impacts from the Ontario Line and reduce the noise and vibration profiles of the GO trains that currently use the corridor.

Let us know if there is anything else we can do to support your office.

Have a good weekend.

Josh

Hi David and Josh,

Not sure who can help me with this one. A resident of 791 Queen St E [REDACTED] has called in to ask:

- are there any plans to demolish 791 Queen East building because of the Ontario :Line?
- If not, when would they start construction in the area? (Read in beaches news that construction would be in the night)

Please advise.

Thanks,

Dear MP Dabrusin,

Re: Metrolinx blog post

Thank you for your letter dated June 8 regarding the questions and concerns you are hearing from your community about the Ontario Line. I appreciate the opportunity to respond to your questions.

It's fantastic to have the support of the Federal Government for the Ontario Line, as well as the other subway projects in the Greater Toronto Area. The Subway program is incredibly exciting and will be transformative for the GTA with each project playing an important role in building a network connecting our entire region. I look forward to our ongoing partnership with the Federal Government to bring these projects to reality. That starts with our commitment to an ongoing process of engagement with communities in a manner that is as transparent and inclusive as possible.

On June 2, we shared a post on Metrolinx News to share facts about the Ontario Line project and its impacts on Riverside and Leslieville. As our community discussions about the project continue, we feel it is important to clarify incorrect information and speculation so we can make these conversations more meaningful and productive.

We appreciate that the community is eager for more specific answers and through our process of community consultation, we aim to share information in real-time as planning and design work continues. We want to be clear about our proposals and the current level of design, avoid providing any numbers built on incomplete work, and allow community input to help us further refine our plans.

As an example, adjustments were made to the alignment as they relate to rail bridge requirements. In compliance with City of Toronto and Transportation Association of Canada standards, we are planning to increase the clearance of the rail bridges over major roads.

This will necessitate raising the grade of the rail corridor above what currently exists. This work is in very early phases, and we will share more details when we are able.

I appreciate that you've had the chance to meet with our project team recently for a detailed briefing, but I would still like to answer your questions in as much detail as possible, given this project is still in the planning and design phase.

Q: The post claims that the rail corridor will not extend into park and neighbourhood spaces and be contained entirely within the property boundary. Can you please provide a scale map that details proposed changes in the corridor?

A: It is correct that the Ontario Line will be confined almost entirely within the boundaries of the existing rail corridor. While a few parcels of land outside the corridor will be needed, the community will end up with even more park space than they have today. The maps you have requested are attached to the end of this letter as an appendix, and more details on additional park space can be found in the response to your question about park impacts.

Q: What are the differences in changes to the corridor due to the GO RER versus the Ontario Line?

A: With GO Expansion, the three existing GO tracks would have remained on their current alignments, with a fourth track added on the south side. We would have made use of the existing bridges at Queen, Dundas and Logan and the entire expansion project would have stayed within the existing rail corridor.

With the addition of the Ontario Line, we will still add a fourth GO track on the south side and will also shift the three existing GO tracks south to make room for the two new Ontario Line tracks on the north side of the corridor. With the Ontario Line plans and the construction phasing we will be undertaking, we have determined this will be an excellent opportunity to replace the old GO bridges at Queen Street, Dundas Street and Logan Avenue (instead of only rehabilitation), in addition to building the new bridges to carry the Ontario Line. The new vertical clearance at all three bridge locations will meet the City of Toronto Standards of 5.0 metres. This will improve the existing vertical clearances above the roadways, provide a better experience for the community at street level, and invest in new and improved bridges that will last another generation. The improved vertical clearance will require raising of the existing corridor grade by approximately 1 metre.

Q: How many trees are expected to be removed on current plans for the joint corridor? What is the plan, if any, for replanting trees?

A: I'd like to begin with your second question and clarify that any tree that is disturbed will be compensated for, whether it is found within the Metrolinx corridor, or on City property. For every tree we need to remove from City land, we will work with City partners to ensure three new ones are planted in the community. We will also work with the community on the design and materials for new noise walls which we will

make more attractive with newly planted trees and greenery. We have every intention of maintaining and improving tree cover.

We cannot fully answer the question of numbers yet. Vegetation removals were required and reported on as part of the GO Expansion program. With the introduction of the Ontario Line project within the joint corridor, an update to the original report indicating the amount of required vegetation removal is currently underway. We are also currently completing a thorough tree inventory and arborist report to get a better understanding of the number of trees in the area and their state. The report will tell us if a tree is healthy, diseased, or dead, and what our options are for protection or removal. Our plans will be built off this inventory, the revised requirements, and arborist report.

Q: What is the difference between the number of trees that would be removed from the corridor because of the Ontario Line and those that were already expected to be removed because of the GO RER?

A: GO Expansion alone would have required significant tree removal on this corridor due to the electric catenary system being installed. Vegetation removals were required and reported on as part of the GO Expansion program. With the introduction of the Ontario Line project within the joint corridor, an update to the original report indicating the amount of required vegetation removal is currently underway. While the addition of the Ontario Line will require additional removals, it will be a smaller requirement than for GO Expansion. We will share a precise number once we have the final tree inventory and arborist report.

All trees that are disturbed will be compensated for regardless of whether they fall on Metrolinx or City land. Metrolinx will replace native trees removed as part of this work through a compensation program based on the Metrolinx Vegetation Guideline (2020).

Q: What potential impacts could there be on our parks and where will they occur? Do you anticipate that access to the park amenities will be restricted in any way during construction? What are your mitigation plans?

A: Once the Ontario Line is complete, each of the four parks in the area - Jimmie Simpson Park, Bruce Mackey Park, McCleary Playground and the Gerrard-Carlaw Parkette - will be larger. In total, there will be approximately 2,600 square metres of added green space lining these parks. The new green space is possible because new noise and retaining walls we will be building in this area will fit almost entirely within the existing GO rail corridor and will be even closer to the tracks than the fence that borders them today.

- McCleary Playground will be approximately 300 square metres bigger because we are able to build our retaining walls within Metrolinx land, closer to the tracks than the current fence is. The same is true for Jimmie Simpson Park, where approximately 700 square metres of new green space will be accessible to the public thanks to a slimmer rail corridor footprint.

- In Bruce Mackey Park, a small sliver of land extending about two metres beyond the rail corridor at the south end of the park is needed for the new station. This will be more than made up for by the release of additional green space in the northern section of the park, resulting in approximately 1,100 square metres of net new green space.
- A property next to the Gerrard-Carlaw Parkette and dog park is needed to support the construction of a new station at the intersection, but once complete, it will be added to the parkette. Though some space from the existing parkette will be needed to accommodate the new station, there will be approximately 500 square metres of extra space in the reconfigured park when the neighbouring land is factored in.

Q: In reviewing services that will be running through the corridor, including Ontario Line and GO RER, what percentage will be electrified?

A: This question is difficult to answer precisely, as service plans are commonly adjusted every few months. While the corridor is exclusively diesel today, we can commit that after this work is complete, a majority of GO trains will be electric rather than diesel powered, and all Ontario Line trains will be electric as well.

Q: What are the noise impacts of all services that will be running on this track-cumulatively and broken down by service?

A: We are currently completing a noise study that assesses combined noise along the joint corridor (GO trains, VIA trains, Ontario Line, and freight trains). Results will be shared as part of the Lakeshore East Joint Corridor Early Works Report, which we expect to publish in the fall of this year. However, we are able to share that overall noise levels in the community will be lower than they are today.

Q: How will the wall height, width, configuration be different as between those planned for the GO RER and proposed because of the inclusion of the Ontario Line?

A: Noise walls were included in the 2017 Environmental Assessment for this section of corridor as part of GO Expansion. The Ontario Line will feature electric powered trains that are much smaller and quieter than the larger, louder GO Trains. When the environmental assessment was updated in 2020 to include the Ontario Line, the smaller anticipated change in noise levels did not prompt us to re-examine existing plans for noise walls. Therefore, we don't anticipate any changes in noise wall configuration with the addition of the Ontario Line.

The exact size, configuration, and appearance of the noise walls has not yet been determined and will be part of our ongoing consultations with stakeholders and the community. The electrification of the corridor as well as noise mitigation (such as noise walls) will lead to lower overall noise levels in the community than exists presently.

Q: Metrolinx indicates that they will seek community feedback on the designs of noise walls. What are the options, and how do you plan to engage the community in this conversation?

A: We will work with the City and local community on landscaping, grading options, streetscaping and street furniture opportunities to animate spaces and minimize the visual impact of any wall. Consultation with the community is planned to begin later this summer through facilitated virtual engagement sessions, as well as focused community tables and regular in person touch points when safe to do so.

Q: As asked earlier, please provide details of the expected tree removals, the options, and the planting plans and options. What are the details of the proposed compensation plan referred to in the blog post?

A: Metrolinx takes our responsibility for vegetation renewal very seriously and we are making significant investments in this area. We are committed to working with the City of Toronto, the Toronto and Region Conservation Authority, and local communities to develop plans where trees can be planted in the local community or elsewhere in the City on a three to one basis, as required by the City.

I hope I have been able to clarify the current state of planning and design for this section of corridor, and to answer your questions as best as possible. I understand our Ontario Line community relations team has already been in contact with your office about many of these issues, and I have asked them to reach out to you again in case this letter prompts further discussions.

Thank you for your support in bringing Ontario Line to life, and for giving voice to the concerns of your community. We look forward to a strong partnership as the project moves forward over the coming years.

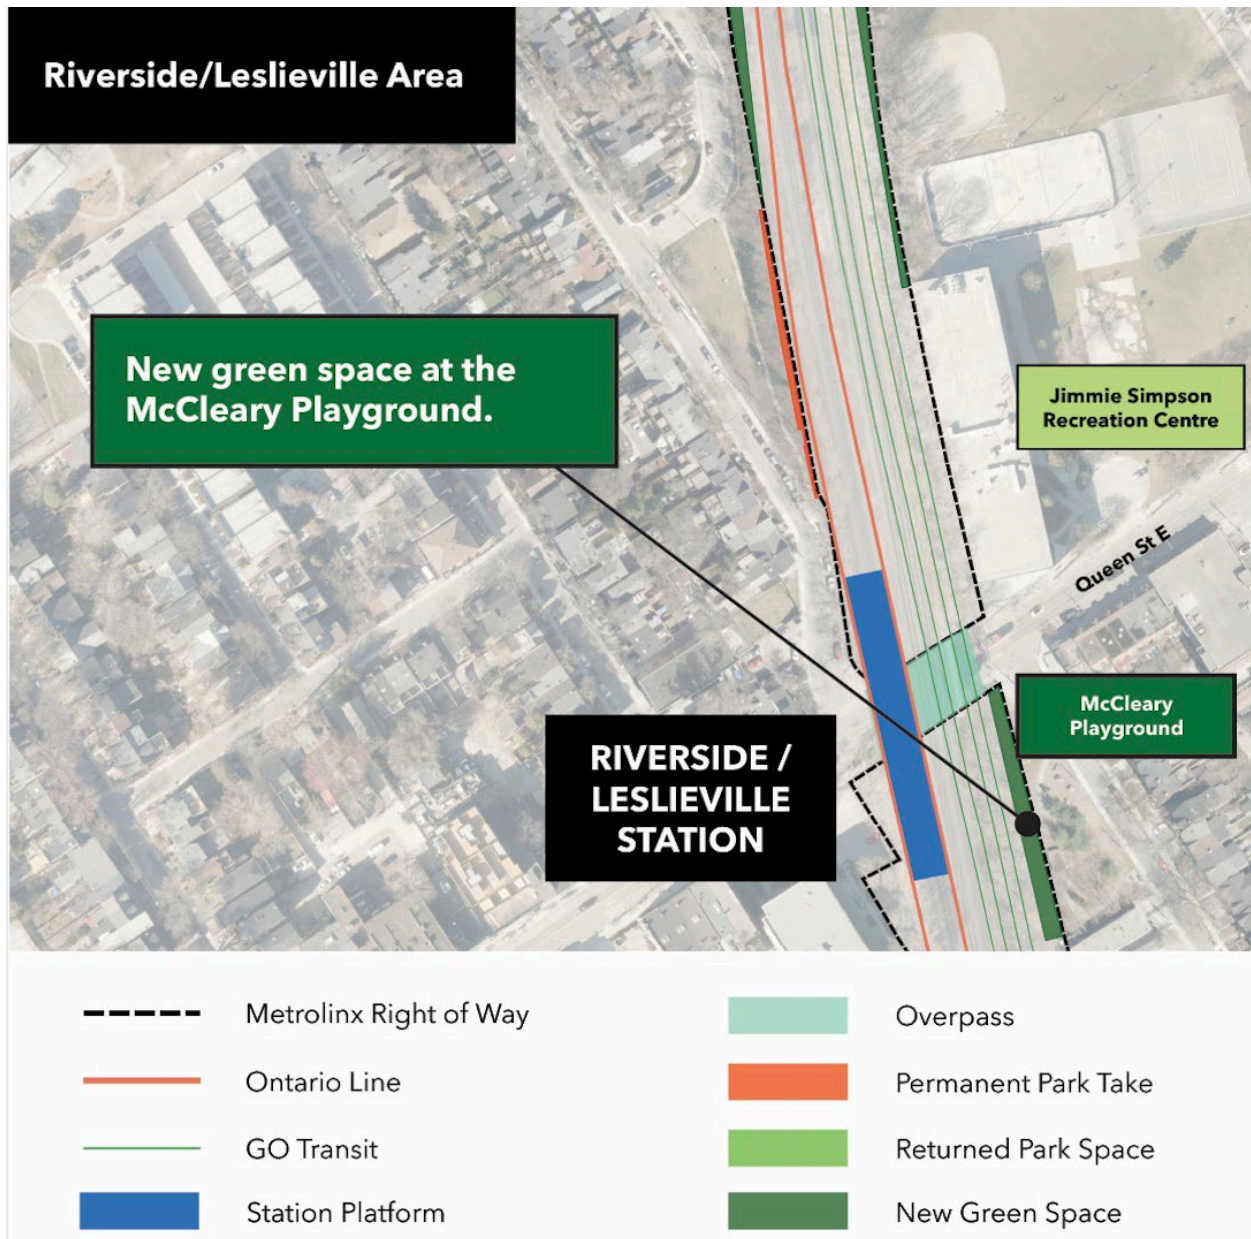

Sincerely,

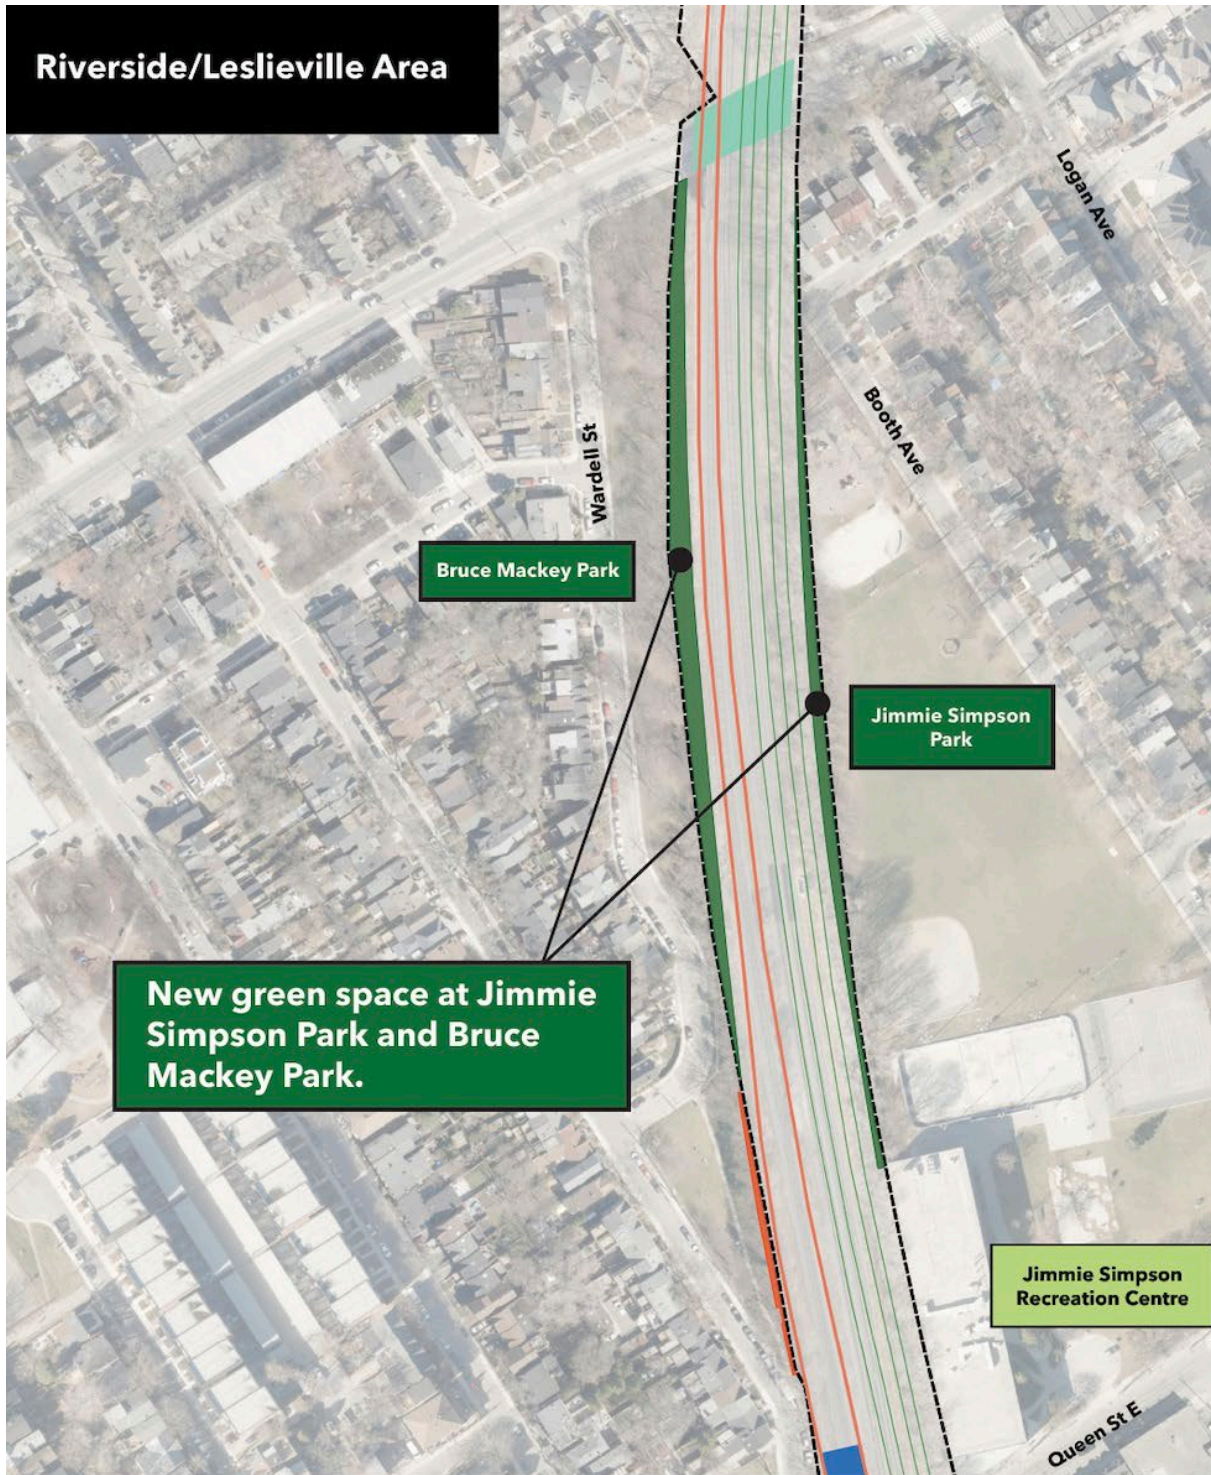

Phil Verster
President and CEO

Re: Metrolinx blog post

Dear Mr. Verster,

Last month our government announced a historic partnership to expand public transit in the GTHA. These investments will reduce car trips, bring us closer to meeting global greenhouse gas emissions targets, and help secure a more equitable future for our communities. As part of this agreement, our government included funding conditions on consultation, among significant others. My correspondence today is in respect of the consultation condition which states: “Engagement processes that enable early community involvement inclusive of local communities and diverse voices and stakeholders, and opportunities to access decision-makers and influence decisions.”

I have recently seen a blog post from Metrolinx which states that it is dispelling myths on the above ground portion of the Ontario Line which would run south of Gerrard. The post states that it is pushing back against inaccuracies in the current community conversation but does not elaborate on details that could help us better understand and evaluate the options. An essential part of this consultation process must be the sharing of information by Metrolinx, rather than having the community simply told that they are wrong.

I have talked with local community members and advocacy groups that have questions and concerns about this project. I understand that they have tried on multiple occasions to gather further and better information on the Ontario Line. In reviewing the Metrolinx blog post, perhaps it could help to set out the information sought in respect of the assertions made.

Myth: Running the Ontario Line above ground means widening the rail corridor and extending far into parks and other important neighbourhood spaces.

- The post claims that the rail corridor will not extend into park and neighbourhood spaces and be contained entirely within the property boundary. Can you please provide a scale map that details proposed changes in the corridor?
- What are the differences in changes to the corridor due to the GO RER versus the Ontario Line?

Myth: The Ontario Line will destroy neighbourhood parks.

- How many trees are expected to be removed on current plans for the joint corridor? What is the plan, if any, for replanting trees?
- What is the difference between the number of trees that would be removed from the corridor because of the Ontario Line and those that were already expected to be removed because of the GO RER?

In this respect, it would be helpful for the community to see this information, and to have input into the plans.

Myth: Important community spaces like the hockey rink and basketball court at Jimmie Simpson Park will be wiped out to make room for the Ontario Line.

- What potential impacts could there be on our parks and where will they occur? Do you anticipate that access to the park amenities will be restricted in any way during construction? What are your mitigation plans?

Myth: Noise and vibration from passing trains and new noise walls along the rail corridor will ruin the quality of life in surrounding neighbourhoods.

- In reviewing services that will be running through the corridor, including Ontario Line and GO RER, what percentage will be electrified?
- What are the noise impacts of all services that will be running on this track- cumulatively and broken down by service?
- How will the wall height, width, configuration be different as between those planned for the GO RER and proposed because of the inclusion of the Ontario Line?
- Metrolinx indicates that they will seek community feedback on the designs of noise walls. What are the options, and how do you plan to engage the community in this conversation?

Myth: Ontario Line work will eliminate all tree cover in neighbouring green spaces

- As asked earlier, please provide details of the expected tree removals, the options, and the planting plans and options
- What are the details of the proposed compensation plan referred to in the blog post?

Qualitative statements that lack data are no longer sufficient to substantively address our community concerns. Detailed plans will help to start a meaningful dialogue in a transparent consultation process.

I will be reaching out with other questions and concerns that have been raised by the community, on the full distance of the line within my community. However, I appreciate the opportunity to begin with the clarifications sought in respect of this blog post.

I look forward to the community receiving this more detailed information and seeing a fulsome consultation process.

As I stated in my meeting with Metrolinx staff, we must have a better understanding of combined impacts. I am looking forward to meeting with the GO Expansion and Ontario Line team along with Infrastructure Ontario to make sure that we can get full answers to questions raised by the community.

Hi Greg,

Not sure if we got back to you on the email below but just in case, happy to answer.

The stakes and digital media will illustrate the locations of the future retaining/noise walls which will be the outer pieces of infrastructure that enclose and support the rail corridor (rail tracks).

We have also released these technical drawings to the public which can be found [here](#).

Feel free to reach out should you have any further questions. Happy to take a call on this as well.

Thanks Jackie, that's a helpful tool to visualize. Just to confirm – stakes and digital media will indicate the total anticipated project footprint (rail lines, noise walls and embankments) as depicted in this [blog post](#) from April?

Subject: Surveying from Queen to Dundas starting as early as June 17

Hello MP Dabrusin and Greg,

Due to feedback from the community and current level of design, we have engaged a professional surveying consultant to place physical markers to represent the future location of the new retaining/noise walls from Queen Street East to Dundas Street East.

These visual markers will enable the community to see for themselves how the rail corridor will change with Ontario Line and GO Expansion plans around Bruce Mackey and Jimmie Simpson Park. For markers within the Metrolinx property boundary (within the rail corridor), we will be using wooden stakes (4' height with orange tips) placed in 10 metre intervals. Due to safety concerns and advice from City of Toronto staff, some locations that fall slightly outside our property line will not be marked. We will use digital media to communicate what these areas will look like in order to provide Riverside and Leslieville residents with the all the information.

Some notes about this project:

- This work will begin as early as Thursday, June 17 and extend as late as Sunday, June 20, 2021 from the hours of 8am to 5pm.
- The surveying consultant will only place markers inside the rail corridor (within the existing fence)
- Metrolinx teams will be taking photos and video to communicate the look and feel of the rail corridor in the future.

Let us know if you have any questions or concerns,

JACKIE CZAJKA

Subject: RE: Metrolinx Questions

Hello MPP Tabuns,

I understand that you're looking for a hard number, however, we are unable to reveal projected costs for projects that will be going forward for procurement so that we can ensure competitive tension and get the best possible value for the taxpayers dollar. These are commercially confidential costs that are not available through Freedom of Information (FOI) requests.

Having said that, it's important that the shift of the Ontario Line tracks to the north side of the GO tracks has significant long-term operational and cost saving benefits. It also has cost savings benefits by making the constructability and operation of both Ontario Lines and GO Expansion easier through the joint corridor and allowing the majority of the construction to happen in corridor.

Our overall expectation is that the costs of raising the railbed and replacement of bridges will be more than offset by the bridge work that would have been needed for the original straddle alignment, decreased risk through constructability of the two programs, eliminating maintenance costs of aging bridges, and the long-term increase of operational capacity. While recognizing the disruption bridge replacement will have during construction, it will be far less than disruption than underground options, and will improve the infrastructure through the corridor for generations to come

Best,

Ms. Czajka,

Thank you for this. I have been asking for the cost from the beginning. You are right the cost is not mentioned except for the comment that there are some savings but no numbers.

You note that there is a cost comparison which implies that numbers were generated but no number is provided.

So, if you won't give me the number for the changes - three new bridges and a raising of the rail bed by more than a metre over 2 km for the whole project, please confirm that you won't and tell me which documents I have to submit a Freedom of Information request for. Alternatively, who in your organization is authorized to answer my question.

Ms. Czajka,

Thanks for your email. I still haven't heard a response on my question 4. I am assuming that the option was priced before the decision was made. If it wasn't, that is news on its own. If it was, the number should be available. Please provide me with the information.

Thank you,

Peter Tabuns

Hi MPP Tabuns/Rob,

Thank you for your comments. We'll re-connect in a week or two with some additional information regarding what we've been able to garner related to property value conversations we've had.

I hope you both had a wonderful weekend,
Jackie

Hi Rob,

Not a problem. Here is what we have so far. The remaining answer for #4 is pending, and I will follow-up as soon as I hear back from the team on this one.

1) I understand that there will be a program of assessing houses close to the actual tracks or tunnels before construction to ensure that pre-conditions are properly documented in case vibration from construction or transit operation cause damage. Can you tell me the criteria in terms of location or age of the buildings that will be used to determine which buildings will be subject to a pre-construction inspection? Can you tell me the number of buildings you expect to assess in my riding before construction begins? Lastly, do you plan to advise people in advance of construction what steps they should take to gather documentation on their own that Metrolinx would accept as valid evidence of pre-construction conditions?

The extent of the pre-conditions surveys will be based on whether the homes/buildings fall within the zone of influence of the construction work. This will be established through a construction vibration assessment and will be included in our Early Works Report that will be made available for review Fall 2021. As more detail on the constructor's means and methods

become available, this zone of influence will be further refined. If homeowners have any concerns about potential or perceived impacts to their homes, they will be encouraged to connect with Metrolinx who will walk residents through any issue they may have.

You have answered my first two questions - effectively we have to wait for the Early Works Report. I assume from your answer that there will be a map showing the homes that Metrolinx considers at risk for vibration damage. My third question relates to pre-construction documentation to prove any claims. It doesn't appear you will be advising people en masse as to how to document. You say people will be encouraged to connect with MX for a review of their home. There is no indication of a program informing people of this.

2) I understood from the meeting last night that the Transit Corridor and buffer zone notice on title would persist until the end of the construction of the whole Ontario Line project. Since this could be a decade or more and since in any one location I would think actual construction would for the most part only be live for a few years – why not have a shorter period for notice on title?

Currently, the Act applies to planning and construction. We are currently in the planning/design phases now, with the formal designation of the land by way of the OIC on June 1, and the notice on title registered shortly after. We will convey the concerns to the Ministry and as we progress into construction, it is something we can and will continue to bring up.

I will explore this further as well. For residents I think a more transient notice on property would give them comfort and for MX it would reduce animosity.

3) Last night we were told that the notice on title would not affect property values. Can you provide me with the studies that validate that opinion?

Although there are no specific studies that we are aware of, Metrolinx's opinion relies on expertise from other real estate lawyers, industry experience and other examples of where notice is on title. Some of these examples were shared at the Thursday virtual open house (i.e.: airports zones, subdivisions). We would be happy to re-connect in a few weeks to share the expertise we collect.

I generally don't have a lot of confidence in verbal opinions on major matters. Let's reconnect as you offer.

4) The news that MX will be raising the railbed about 1.5 m for about 2 km and that you will be rebuilding new bridges from Gerrard and Carlaw down to Eastern was a shock when I first heard it. I asked last night what the cost would be for this revised plan. I know initially you were planning to effectively build new bridges on either side of the existing bridges to accommodate the new subway lines rather than demolish and rebuild the bridges. Last night I wasn't able to get a cost either for this new approach, raised railbed and new bridges or, related costs like disruption to the GO service and accommodations that would be required. Since I find it hard to believe that you would decide on such a substantial change to the project without doing a budget and presenting it to decision makers I ask again if I can have the cost for this revision. If not, what documents would I ask for through

Freedom of Information.

Response pending and will be shared shortly.

Thanks,

JACKIE CZAJKA

Hi Rob/MPP Tabuns -

Very happy you could join us last night for the live portion of the virtual open house.

I'm taking your questions below and connecting with our technical and property teams to get you an answer as soon as we can. I hope for some of these today, but want to be transparent that some

information may take longer to pull together and may only come on Monday.

A quick side note that the ontarioline@metrolinx.ca email is incorrect - it should read ontarioline@metrolinx.com. Just want to make sure you have the right one to share with constituents if need be.

Thank you!

Peter's questions and comments.

Dear Ms. Czajka,

Thank you for your email and your offer of a pre-meeting briefing. As I was out of town I didn't see your email in time to respond.

As a follow-up to the meeting itself I have a few questions that I would like answered in a timely way.

1)I understand that there will be a program of assessing houses close to the actual tracks or tunnels before construction to ensure that pre-conditions are properly documented in case vibration from construction or transit operation cause damage. Can you tell me the criteria in terms of location or age of the buildings that will be used to determine which buildings will be subject to a pre-construction inspection? Can you tell me the number of buildings you expect to assess in my riding before construction begins?

Lastly, do you plan to advise people in advance of construction what steps they should take to gather documentation on their own that Metrolinx would accept as valid evidence of pre-construction conditions?

2) I understood from the meeting last night that the Transit Corridor and buffer zone notice on title would persist until the end of the construction of the whole Ontario Line project. Since this could be a decade or more and since in any one location I would think actual construction would for the most part only be live for a few years – why not have a shorter period for notice on title?

3) Last night we were told that the notice on title would not affect property values. Can you provide me with the studies that validate that opinion?

4) The news that MX will be raising the railbed about 1.5 m for about 2 km and that you will be rebuilding new bridges from Gerrard and Carlaw down to Eastern was a shock when I first heard it. I asked last night what the cost would be for this revised plan. I know initially you were planning to effectively build new bridges on either side of the existing bridges to accommodate the new subway lines rather than demolish and rebuild the bridges. Last night I wasn't able to get a cost either for this new approach, raised railbed and new bridges or, related costs like disruption to the GO service and accommodations that would be required. Since I find it hard to believe that you would decide on such a substantial change to the project without doing a budget and presenting it to decision makers I ask again if I can have the cost for this revision. If not, what documents would I ask for through Freedom of Information.

Thanks for your help.

Subject: Thursday East Segment Ontario Line Virtual Open House - Pre-Brief

Hello MPP Tabuns and Rob,

As you may know, the East segment virtual open house is taking place this Thursday, from 6:30pm - 8pm. Details can be found [here](#).

Please feel free to let your residents know and encourage them to register to participate. There will also be a zoom room which allows residents to ask questions live should they prefer that option.

As part of this open house, we will be sharing new information to the community. Given this, we would like to connect with you before the meeting on Thursday, to provide you with a short overview of the new information before the public sees it.

Please let me know if you would be interested in us setting this up.

Best,

JACKIE CZAJKA

Subject: Update on Ontario Line Early Works scheduling

Hello Councillor Fletcher and MPP Tabuns,

Great to see both of you on the call with the Riverside BIA earlier today. In follow up, I am writing to provide an update on the Ontario Line early works environmental assessment, procurement and construction timelines.

In late 2020, Metrolinx completed the environmental assessment for Ontario Line early works at Exhibition Station. This was the first of three early works packages that had been identified at the outset of the project.

Our team is continuing studies for the early works reports for the Lower Don Bridges and Lakeshore East Joint Corridor, allowing additional time for detailed design work and coordination required with GO Expansion plans. We expect to release the draft reports for a 30-day public consultation in Summer 2021 (Lower Don Bridges) and Fall 2021 (Lakeshore East Joint Corridor). Procurement for both of these packages of work will advance only after the environmental assessment is completed. No construction will begin until 2022.

We have posted an update project timeline on our [website](#).

We are taking this extra time to conduct further due diligence and refine initial designs so that we minimize impacts throughout the corridor as much as possible. These schedule adjustments do not impact the overall timeline for early works completion or the larger P3 construction packages.

Metrolinx will be setting up community meetings in March and April to discuss proposed noise walls in the joint corridor and provide a project update. I'll reach out to both of your offices to coordinate. Please let me know if you have any questions in the interim.

Stay safe and well,

Josh

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Chief Mowat,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We appreciate the size of these documents. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

We acknowledge that this letter does not replace meaningful engagement. We welcome an opportunity to meet with your Nation and discuss this project in more detail. If you have any questions or concerns, please do not hesitate to contact the

Indigenous Relations Office at any time.

Thank you,

Jaimi O'Hara

Delivered by email

Dear Chief Mowat,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Alderville First Nation.

Metrolinx wishes to build a strong and respectful relationship with Alderville First Nation. Metrolinx appreciates and respects Alderville First Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Alderville First Nation's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable

service. More information on the Project can be found on our website:
www.metrolinx.com/ontarioline

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Alderville First Nation with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Alderville First Nation in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works

Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.

- Lower Don Bridge & Don Yard Early Works

Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.

- Corktown Station Early Works

The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes

demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Alderville First Nation review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Alderville First Nation.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

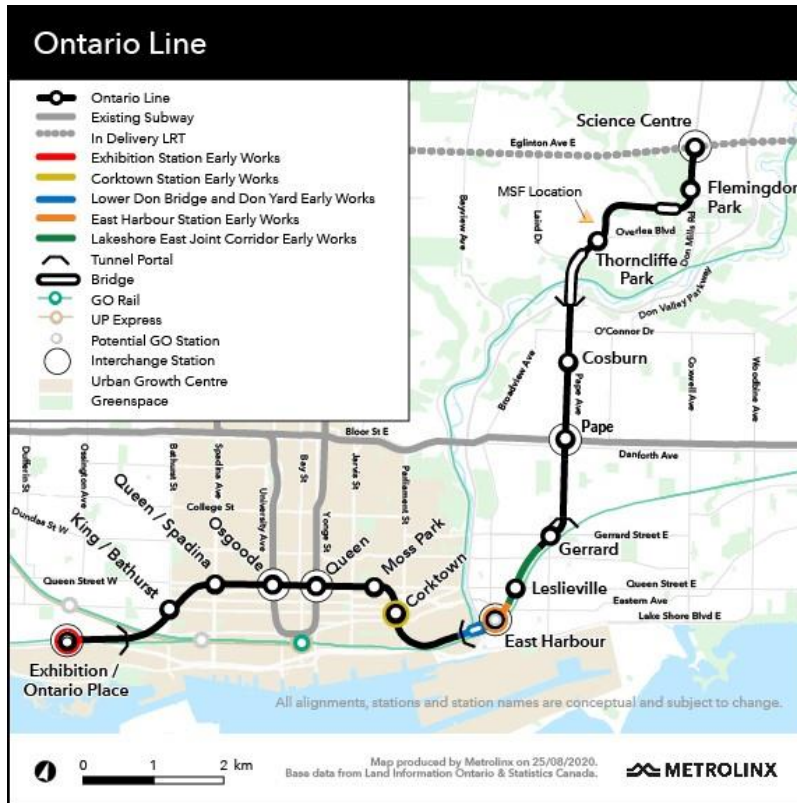

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Alderville First Nation. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Alderville First Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Alderville First Nation in June 2020.

To aid in review for Alderville First Nation, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Alderville First Nation. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Alderville First Nation.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Alderville First Nation should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Alderville First Nation in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Alderville First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Alderville First Nation. We are happy to assist in the review of these documents by meeting with Alderville First Nation. Metrolinx is willing to address any questions that Alderville First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Alderville First Nation. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a large, sweeping flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> ■ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ■ Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. ■ Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ■ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ■ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ■ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> ■ Wetlands and Waterbodies ■ Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> ■ None Required 	<ul style="list-style-type: none"> ■ None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential: <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 4:56:29 PM
Attachments: [REDACTED]

Dear Chief Mowat,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Delivered by email

Dear Chief Mowat,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Alderville First Nation. Metrolinx appreciates and respects Alderville First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Alderville First Nation information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Alderville First Nation in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Alderville First Nation:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	June 5, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Alderville First Nation in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Alderville First Nation's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Alderville First Nation. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Alderville First Nation. We are happy to address any questions that Alderville First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a large, sweeping flourish at the end.

Good afternoon Chief Dave Mowat,

This is just a friendly reminder that we are looking for comments be provided for the draft Ontario Line Natural Environment Early Works Report by end of day today, July 2nd. We are also looking for comments to be provided for the draft Ontario Line Early Works Report by end of day tomorrow, July 3rd:

Feel free to contact me if you have any questions.

Thank-you,

Crystal Ho

Subject: Ontario Line - Draft Early Works Report

Good afternoon Chief Dave Mowat,

As per the document distribution schedule presented in Metrolinx's June 3rd letter, please find the Ontario Line Draft Early Works Report  via Dropbox. Any comments on the report are requested by **July 3rd**.

As previously communicated, Metrolinx acknowledges the current climate of uncertainty as Indigenous communities are impacted by the COVID-19 pandemic. Please let us know if there are any ways that we can make the review process easier or more accommodating during this time.

Please let us know if you have any questions or have trouble accessing the document.

Thank you,

Kuru Satkunanathan

Subject: Ontario Line - Draft Early Works, Natural Environment Report

Good afternoon Chief Dave Mowat,

As discussed in our June 3rd correspondence, Metrolinx would like to share the draft Ontario Line Early Works Natural Environment Report with your community for review. The report may be accessed via Dropbox .

We are requesting comments on the report by July 2nd, 2020. However, as mentioned previously, Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Good morning Chief Dave Mowat,

Please find attached a letter detailing the report distribution schedule for the Ontario Line. The Ontario Line Environmental Conditions Natural Environment Report, discussed in the letter, can be found via the Dropbox link 

Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. We recognize that community offices may be closed or have reduced capacity at this time. We are making efforts to ensure that communities can continue to be engaged and included in projects, while balancing the need to adhere to regulatory timelines. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Good Afternoon,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. More details about the project can be accessed here:
[REDACTED]

I have attached a letter to this email that provides high level details of the project, which has also been sent to you by registered mail.

Metrolinx would appreciate any interest that your First Nation may have in these projects. We would welcome the opportunity to meet with you to provide more information and discuss any interests or questions that you may have.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Chief Sandy,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We appreciate the size of these documents. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

We acknowledge that this letter does not replace meaningful engagement. We welcome an opportunity to meet with your Nation and discuss this project in more detail. If you have any questions or concerns, please do not hesitate to contact the

Indigenous Relations Office at any time.

Thank you,

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Beausoleil First Nation with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Beausoleil First Nation in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if

they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works
Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.
- Lower Don Bridge & Don Yard Early Works
Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.
- Corktown Station Early Works
The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation

where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Beausoliel First Nation review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Beausoliel First Nation.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Beausoliel First Nation. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Beausoliel First Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Beausoliel First Nation in June 2020.

To aid in review for Beausoleil First Nation, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Beausoleil First Nation. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Beausoleil First Nation.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Beausoleil First Nation should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Beausoleil First Nation in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Beausoleil First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Beausoleil First Nation. We are happy to assist in the review of these documents by meeting with Beausoleil First Nation. Metrolinx is willing to address any questions that Beausoleil First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Beausoleil First Nation. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> Wetlands and Waterbodies Fish and Fish Habitat 	<ul style="list-style-type: none"> There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
<p>Archaeological Potential</p>	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential: <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
<p>Archaeological Resources</p>	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive ‘D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.	<ul style="list-style-type: none"> All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use Introduction or spread of invasive species 	<ul style="list-style-type: none"> A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. Refuelling of equipment will occur at least 30 metres away from any watercourse. Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat - Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat - Monarch	<ul style="list-style-type: none"> Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat - Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

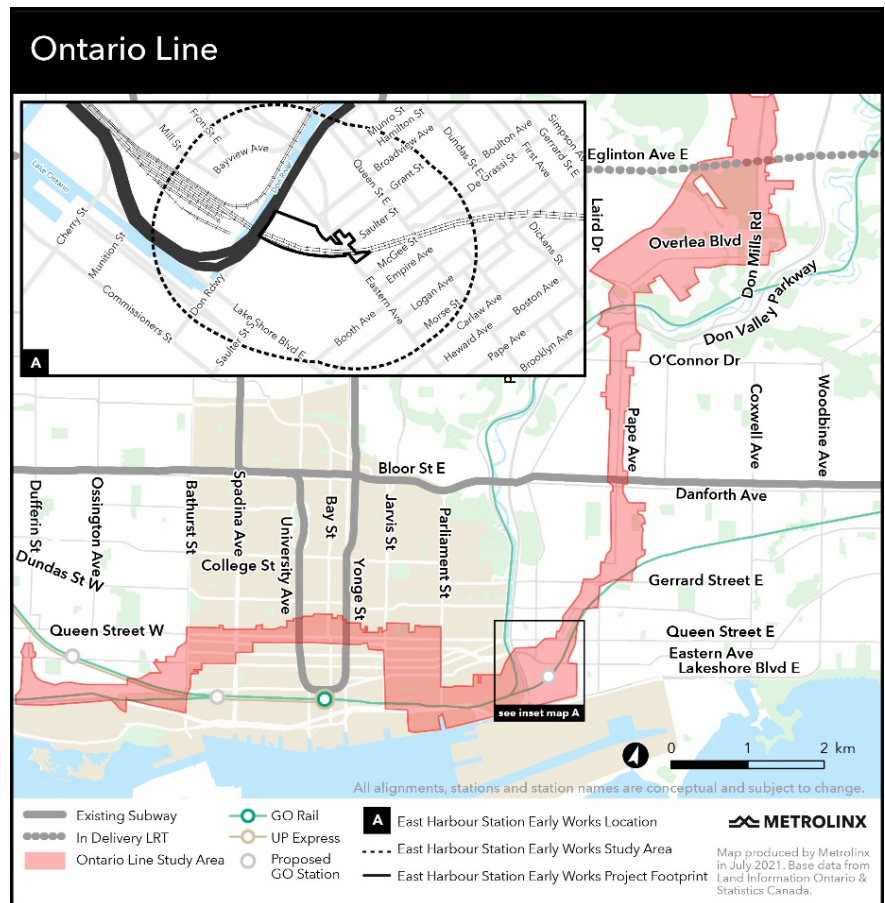

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 4:56:53 PM
Attachments: [REDACTED]

Dear Chief Monague,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

July 28, 2021

Chief Guy Monague
Beausoleil First Nation
11 O'Gemaa Miikaan
Christian Island, ON L9M 0A9
Delivered by Email

Dear Chief Monague,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Beausoleil First Nation. Metrolinx appreciates and respects Beausoleil First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Beausoleil First Nation information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Beausoleil First Nation in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Beausoleil First Nation:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	June 5, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Beausoleil First Nation in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Beausoleil First Nation's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Beausoleil First Nation. Please provide these in writing no later than **August 24, 2021**.

10 Bay Street 416.202.4967
Toronto, ON M5J 2N8 metrolinx.com

Engagement

Metrolinx is committed to an open and respectful relationship with Beausoleil First Nation. We are happy to address any questions that Beausoleil First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a long, sweeping flourish extending to the right.

Good afternoon Chief Guy Monague,

This is just a friendly reminder that we are looking for comments be provided for the draft Ontario Line Natural Environment Early Works Report by end of day today, July 2nd. We are also looking for comments to be provided for the draft Ontario Line Early Works Report by end of day tomorrow, July 3rd:

Feel free to contact me if you have any questions.

Thank-you,

Crystal Ho

Date: Friday, June 05, 2020 4:59:00 PM

Good afternoon Chief Guy Monague,

As per the document distribution schedule presented in Metrolinx's June 3rd letter, please find the Ontario Line Draft Early Works Report [REDACTED] via Dropbox. Any comments on the report are requested by **July 3rd**.

As previously communicated, Metrolinx acknowledges the current climate of uncertainty as Indigenous communities are impacted by the COVID-19 pandemic. Please let us know if there are any ways that we can make the review process easier or more accommodating during this time.

Please let us know if you have any questions or have trouble accessing the document.

Thank you,

Subject: Ontario Line - Draft Early Works, Natural Environment Report

Good afternoon Chief Guy Monague,

As discussed in our June 3rd correspondence, Metrolinx would like to share the draft Ontario Line Early Works Natural Environment Report with your community for review. The report may be accessed via Dropbox [REDACTED]

We are requesting comments on the report by July 2nd, 2020. However, as mentioned previously, Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Subject: Ontario Line - Draft Environmental Conditions, Natural Environment Report

Good morning Chief Guy Monague,

Please find attached a letter detailing the report distribution schedule for the Ontario Line. The Ontario Line Environmental Conditions Natural Environment Report, discussed in the letter, can be found via the Dropbox link 

Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. We recognize that community offices may be closed or have reduced capacity at this time. We are making efforts to ensure that communities can continue to be engaged and included in projects, while balancing the need to adhere to regulatory timelines. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Subject: Ontario Line Subway Project
Date: February 12, 2020 1:34:16 PM
Attachments: [REDACTED]

Good Afternoon,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. More details about the project can be accessed here:
[REDACTED]

I have attached a letter to this email that provides high level details of the project, which has also been sent to you by registered mail.

Metrolinx would appreciate any interest that your First Nation may have in these projects. We would welcome the opportunity to meet with you to provide more information and discuss any interests or questions that you may have.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Miigwetch,

Fallon

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Chief Big Canoe

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We appreciate the size of these documents. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

We acknowledge that this letter does not replace meaningful engagement. We welcome an opportunity to meet with your Nation and discuss this project in more detail. If you have any questions or concerns, please do not hesitate to contact the

Indigenous Relations Office at any time.

Thank you,

Jaimi O'Hara

Chief Donna Big Canoe
Chippewas of Georgina Island
RR #2, Box 13
Sutton West, ON L0E 1R0

Delivered by Email

Dear Chief Big Canoe,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Chippewas of Georgina Island.

Metrolinx wishes to build a strong and respectful relationship with Chippewas of Georgina Island. Metrolinx appreciates and respects Chippewas of Georgina Island's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Chippewas of Georgina Island's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website:

www.metrolinx.com/ontarioline

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Chippewas of Georgina Island with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Chippewas of Georgina Island in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if

they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works
Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.
- Lower Don Bridge & Don Yard Early Works
Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.
- Corktown Station Early Works
The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation

where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station

was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Chippewas of Georgina Island review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Chippewas of Georgina Island.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Chippewas of Georgina Island. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Chippewas of Georgina Island has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Chippewas of Georgina Island in June 2020.

To aid in review for Chippewas of Georgina Island, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Chippewas of Georgina Island. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Chippewas of Georgina Island.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Chippewas of Georgina Island should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Chippewas of Georgina Island in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Chippewas of Georgina Island. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Chippewas of Georgina Island. We are happy to assist in the review of these documents by meeting with Chippewas of Georgina Island. Metrolinx is willing to address any questions that Chippewas of Georgina Island may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Chippewas of Georgina Island. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> Wetlands and Waterbodies Fish and Fish Habitat 	<ul style="list-style-type: none"> There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential: <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

**Metrolinx
130 Adelaide Street West
Toronto, Ontario

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 4:56:15 PM
Attachments: [REDACTED]

Dear Chief Big Canoe,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Chief Donna Big Canoe
Chippewas of Georgina Island
RR #2, Box 13
Sutton West, ON L0E 1R0
Delivered by Email

Dear Chief Big Canoe,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Chippewas of Georgina Island. Metrolinx appreciates and respects Chippewas of Georgina Island's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Chippewas of Georgina Island information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Chippewas of Georgina Island in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Chippewas of Georgina Island:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	June 5, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Chippewas of Georgina Island in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Chippewas of Georgina Island's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Chippewas of Georgina Island. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Chippewas of Georgina Island. We are happy to address any questions that Chippewas of Georgina Island may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a long, sweeping underline.

Good afternoon Chief Donna Big Canoe,

This is just a friendly reminder that we are looking for comments be provided for the draft Ontario Line Natural Environment Early Works Report by end of day today, July 2nd. We are also looking for comments to be provided for the draft Ontario Line Early Works Report by end of day tomorrow, July 3rd:

Feel free to contact me if you have any questions.

Thank-you,

Crystal Ho

Date: Friday, June 05, 2020 5:04:00 PM

Good afternoon Chief Donna Big Canoe,

As per the document distribution schedule presented in Metrolinx's June 3rd letter, please find the Ontario Line Draft Early Works Report [REDACTED] via Dropbox. Any comments on the report are requested by **July 3rd**.

As previously communicated, Metrolinx acknowledges the current climate of uncertainty as Indigenous communities are impacted by the COVID-19 pandemic. Please let us know if there are any ways that we can make the review process easier or more accommodating during this time.

Please let us know if you have any questions or have trouble accessing the document.

Thank you,

Kuru Satkunanathan

Good afternoon Chief Donna Big Canoe,

As discussed in our June 3rd correspondence, Metrolinx would like to share the draft Ontario Line Early Works Natural Environment Report with your community for review. The report may be accessed via Dropbox [REDACTED].

We are requesting comments on the report by July 2nd, 2020. However, as mentioned previously, Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Good morning Chief Donna Big Canoe,

Please find attached a letter detailing the report distribution schedule for the Ontario Line. The Ontario Line Environmental Conditions Natural Environment Report, discussed in the letter, can be found via the Dropbox link 

Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. We recognize that community offices may be closed or have reduced capacity at this time. We are making efforts to ensure that communities can continue to be engaged and included in projects, while balancing the need to adhere to regulatory timelines. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Good Afternoon,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. More details about the project can be accessed here:
[REDACTED]

I have attached a letter to this email that provides high level details of the project, which has also been sent to you by registered mail.

Metrolinx would appreciate any interest that your First Nation may have in these projects. We would welcome the opportunity to meet with you to provide more information and discuss any interests or questions that you may have.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Sharday,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We appreciate the size of these documents. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

We acknowledge that this letter does not replace meaningful engagement. We welcome an opportunity to meet with your Nation and discuss this project in more

detail. If you have any questions or concerns, please do not hesitate to contact the Indigenous Relations Office at any time.

Thank you,

Dear Ms. James,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Chippewas of Rama First Nation.

Metrolinx wishes to build a strong and respectful relationship with Chippewas of Rama First Nation. Metrolinx appreciates and respects Chippewas of Rama First Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Chippewas of Rama First Nation's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable

service. More information on the Project can be found on our website:
www.metrolinx.com/ontarioline

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Chippewas of Rama First Nation with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Chippewas of Rama First Nation in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works

Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.

- Lower Don Bridge & Don Yard Early Works

Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.

- Corktown Station Early Works

The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes

demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Chippewas of Rama First Nation review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Chippewas of Rama First Nation.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Chippewas of Rama First Nation. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Chippewas of Rama First Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Chippewas of Rama First Nation in June 2020.

To aid in review for Chippewas of Rama First Nation, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Chippewas of Rama First Nation. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Chippewas of Rama First Nation.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Chippewas of Rama First Nation should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Chippewas of Rama First Nation in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Chippewas of Rama First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Chippewas of Rama First Nation. We are happy to assist in the review of these documents by meeting with Chippewas of Rama First Nation. Metrolinx is willing to address any questions that Chippewas of Rama First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Chippewas of Rama First Nation. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a stylized flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> ■ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ■ Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. ■ Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ■ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ■ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ■ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> ■ Wetlands and Waterbodies ■ Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> ■ None Required 	<ul style="list-style-type: none"> ■ None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
<p>Archaeological Potential</p>	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential: <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
<p>Archaeological Resources</p>	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.</p>	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 5:02:34 PM
Attachments: [REDACTED]

Dear Sharday,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Rama, ON L3V 6H6
Delivered by Email

Dear Ms. James,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Chippewas of Rama First Nation. Metrolinx appreciates and respects Chippewas of Rama First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Chippewas of Rama First Nation information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Chippewas of Rama First Nation in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Chippewas of Rama First Nation:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	June 5, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Chippewas of Rama First Nation in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Chippewas of Rama First Nation's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Chippewas of Rama First Nation. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Chippewas of Rama First Nation. We are happy to address any questions that Chippewas of Rama First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a long, sweeping underline.

Good afternoon Ms. Sharday James,

This is just a friendly reminder that we are looking for comments be provided for the draft Ontario Line Natural Environment Early Works Report by end of day today, July 2nd. We are also looking for comments to be provided for the draft Ontario Line Early Works Report by end of day tomorrow, July 3rd:

Feel free to contact me if you have any questions.

Thank-you,

Crystal Ho

Subject: Ontario Line - Draft Early Works Report

Good afternoon Ms. Sharday James,

As per the document distribution schedule presented in Metrolinx's June 3rd letter, please find the Ontario Line Draft Early Works Report  via Dropbox. Any comments on the report are requested by **July 3rd**.

As previously communicated, Metrolinx acknowledges the current climate of uncertainty as

Indigenous communities are impacted by the COVID-19 pandemic. Please let us know if there are any ways that we can make the review process easier or more accommodating during this time.

Please let us know if you have any questions or have trouble accessing the document.

Thank you,

Kuru Satkunanathan

Good afternoon Ms. Sharday James,

As discussed in our June 3rd correspondence, Metrolinx would like to share the draft Ontario Line Early Works Natural Environment Report with your community for review. The report may be accessed via Dropbox ██████.

We are requesting comments on the report by July 2nd, 2020. However, as mentioned previously, Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Good afternoon Ms. Sharday James,

Please find attached a letter detailing the report distribution schedule for the Ontario Line. The Ontario Line Environmental Conditions Natural Environment Report, discussed in the letter, can be found via the Dropbox link [REDACTED].

Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. We recognize that community offices may be closed or have reduced capacity at this time. We are making efforts to ensure that communities can continue to be engaged and included in projects, while balancing the need to adhere to regulatory timelines. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Subject: Ontario Line Subway Project
Date: February 12, 2020 1:30:02 PM
Attachments: [REDACTED]

Good Afternoon,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. More details about the project can be accessed here:
[REDACTED]

I have attached a letter to this email that provides high level details of the project, which has also been sent to you by registered mail.

Metrolinx would appreciate any interest that your First Nation may have in these projects. We would welcome the opportunity to meet with you to provide more information and discuss any interests or questions that you may have.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Miigwetch,

Fallon

Chippewas of Rama First Nation Meeting

The Subway Program December 2020

AGENDA

1. Introductions
2. Subway Program Overview
3. Environmental Assessments for the Subway Program
4. Environmental Assessment Highlights
 - a) Ontario Line
 - [REDACTED]
 - [REDACTED]
5. Subway Program - EA Next Steps
6. Questions/Discussion on Engagement

Subway Program Overview

METROLINX - THE SUBWAY PROGRAM

Metrolinx and its partners are delivering on a bold, forward-looking transportation plan. The goals of the 2041 Regional Transportation Plan (RTP) are to create strong connections, complete travel experiences and sustainable communities. The Subway Program is a key component of this plan.

The Subway Program consists of four (4) transit projects:

1. The Ontario Line

- [REDACTED]
- [REDACTED]
- [REDACTED]

[REDACTED]

Environmental Assessments for the Subway Program

TRANSIT PROJECT ASSESSMENT PROCESS (TPAP) - ADDENDUM PROCESS

[REDACTED] will follow the TPAP addendum process in accordance with O. Reg. 342/20 that amended O. Reg. 231/08. This regulation came into effect on June 30 2020.

The regulation applies to [REDACTED]

- Objections to be addressed through an Issues Resolution Process (IRP) led by MX; and
- Post-IRP update of the EPR Addendum.

The Minister may impose conditions on the EPR Addendum if:

- The Minister believes MX's approach to addressing a concern in the IRP would cause unreasonable delay to the implementation of the Project, and the conditions modify the way in which the concern is addressed without causing unreasonable delay to the implementation of the Project; or
- The Minister believes the proposed changes may have an adverse impact on existing aboriginal or treaty rights of the aboriginal peoples of Canada, and the conditions may prevent, mitigate or remedy the impact.

THE ONTARIO LINE EA REGULATION

The Ontario Line is being assessed in accordance with the new Ontario Regulation 341/20: Ontario Line Project under the Environmental Assessment Act.

This regulation came into effect on June 30 2020.

The regulation outlines a Project-specific EA process that requires:

- Public, regulatory agency and Indigenous communities notification and consultation;
- Environmental Conditions and Environmental Impact Assessment Report(s), and provides opportunity for Early Works Report(s) for assessment of works that are planned to proceed in advance of main works; and
- Metrolinx to address concerns through an issues resolution process (IRP).

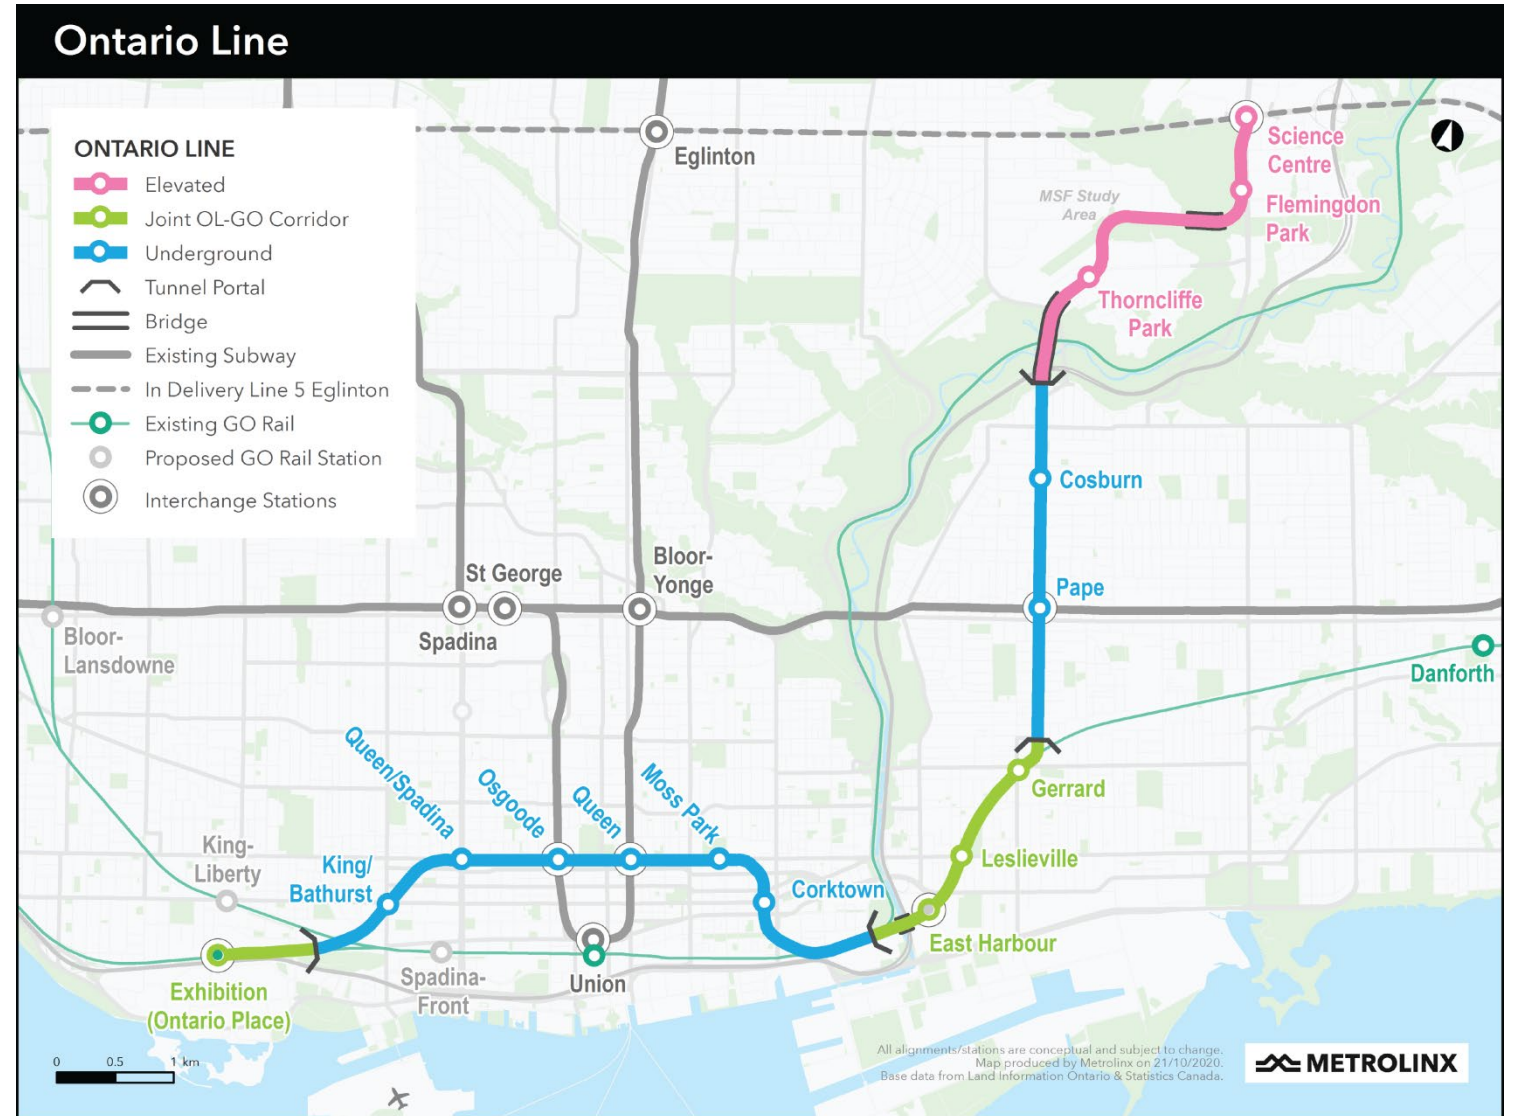

Similar to O. Reg. 342/20, the Minister can take action if there is a potential for negative impact on a matter of provincial importance that relates to the natural environment or has cultural heritage value or interest; or, on a constitutionally protected Aboriginal or treaty right.

EA Highlights - Ontario Line

ONTARIO LINE (OL)

The Ontario Line will be approximately 16 kilometres long and will stretch across the city, from the Ontario Science Centre in the northeast to Ontario Place in the southwest.

Current plans include 15 proposed stations, including six interchange stations and 17 new connections to GO train lines and existing subway and streetcar lines.

OL - EARLY WORKS

Early Works Locations	Scope of Work
Exhibition Station	<ul style="list-style-type: none"> Existing passenger tunnel extension and new north station entrance Temporary pedestrian bridge New north GO trains platform and minor shift of the two northern-most GO tracks
Lower Don Bridges	<ul style="list-style-type: none"> Two (2) new bridges for the tracks and multi-use trail connection
Lakeshore East Joint Corridor	<ul style="list-style-type: none"> Rail corridor widening Bridge work at Dundas St E, Queen St E and Logan Ave Retaining and Noise Walls, as appropriate

OL - ENVIRONMENTAL ASSESSMENT MILESTONES

- Environmental Conditions Report (ECR)
 - Draft ECR - September 17, 2020
 - Final ECR - November 30, 2020
- Exhibition Station Early Works Report (EWR)
 - Draft EWR - November 30, 2020
 - Final EWR - January 25, 2021 or earlier
 - Notice of Completion - March 1, 2021 or earlier
- Remaining EWRs
 - Draft - Q1/Q2 2021
 - Final & Notice of Completion - Q2/Q3 2021
- Environmental Impact Assessment Report
 - Draft - Q 2/Q3 2021
 - Final & Notice of Completion - Q3/Q4 2021

OL - ARCHAEOLOGICAL WORK AND ENGAGEMENT

Archaeological assessments were conducted in three distinct sections:

- Ontario Line North (OLN)
- Ontario Line South (OLS)
- Ontario Line West (OLW)

Stage 1 Archaeological Assessment

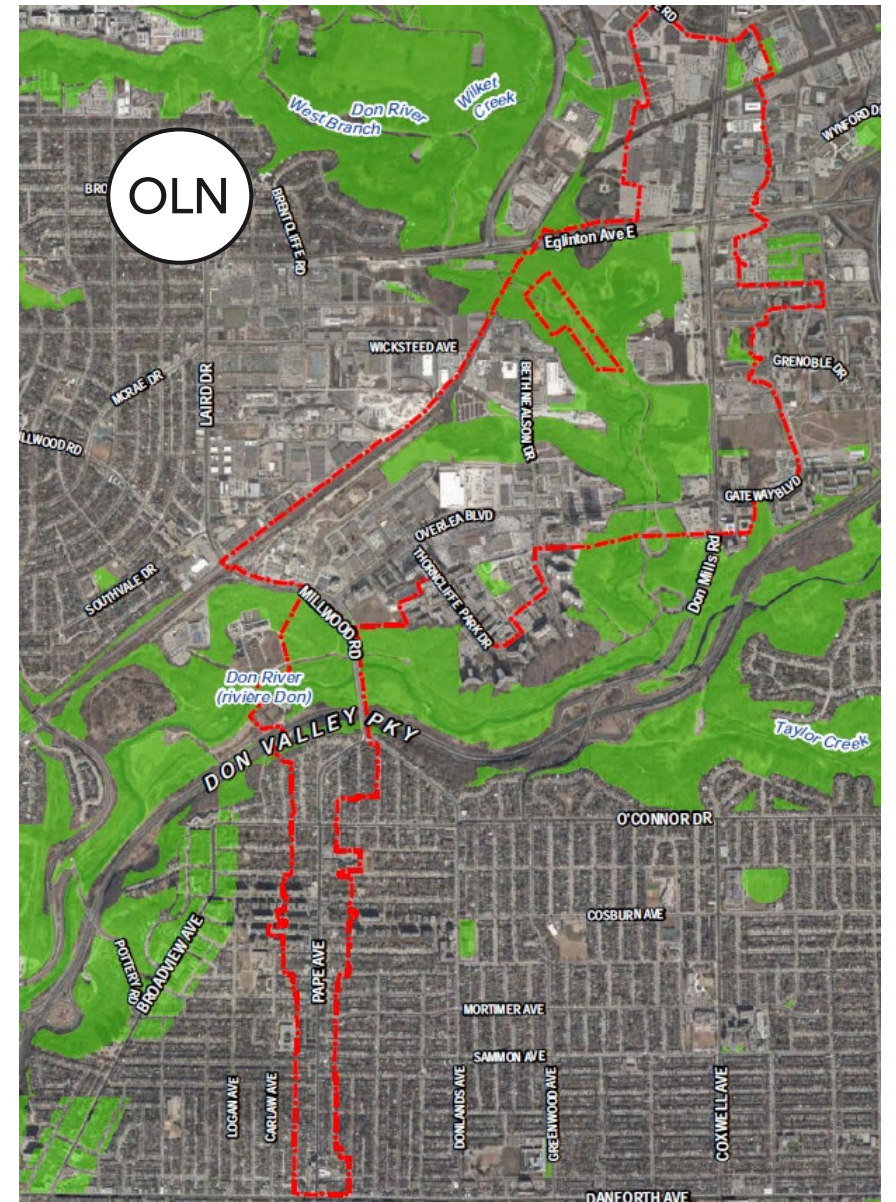

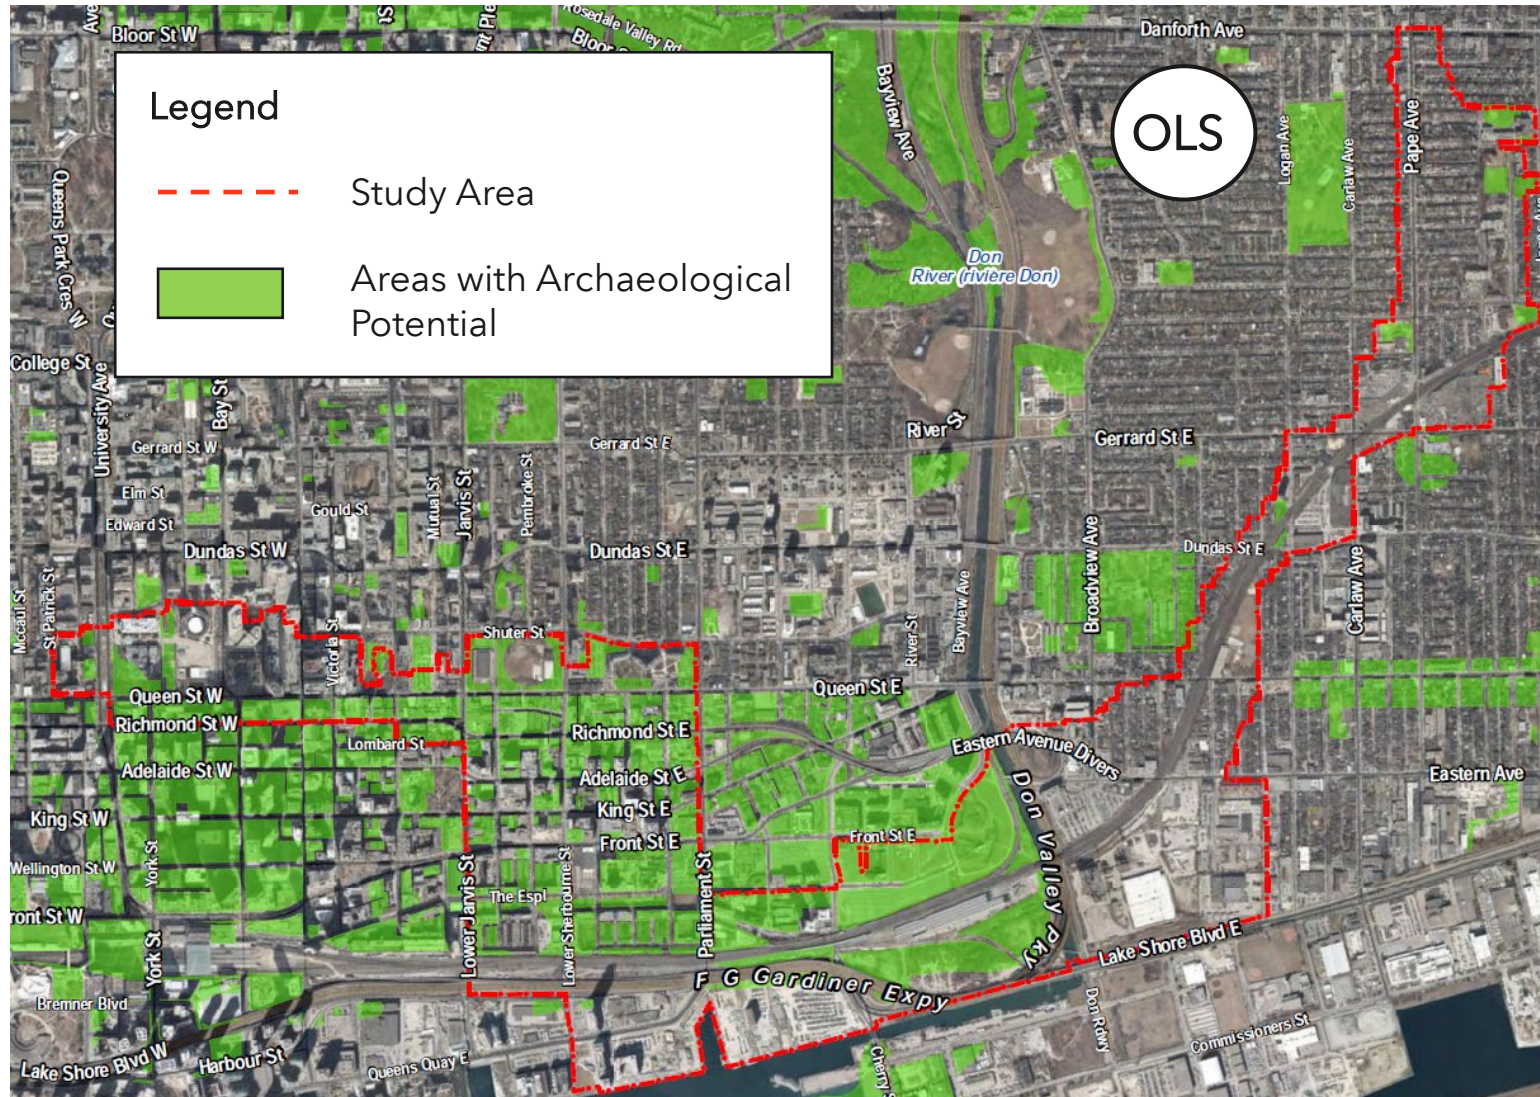

- Assessments were conducted for all three sections, with field review completed on October 30th, 2019
- Stage 1 reports were shared with Indigenous Communities on March 26th, 2020
- Stage 1 reports were submitted to the MHSTCI on May 29th, 2020 and included in the Environmental Conditions Report

Stage 2 Archaeological Assessment

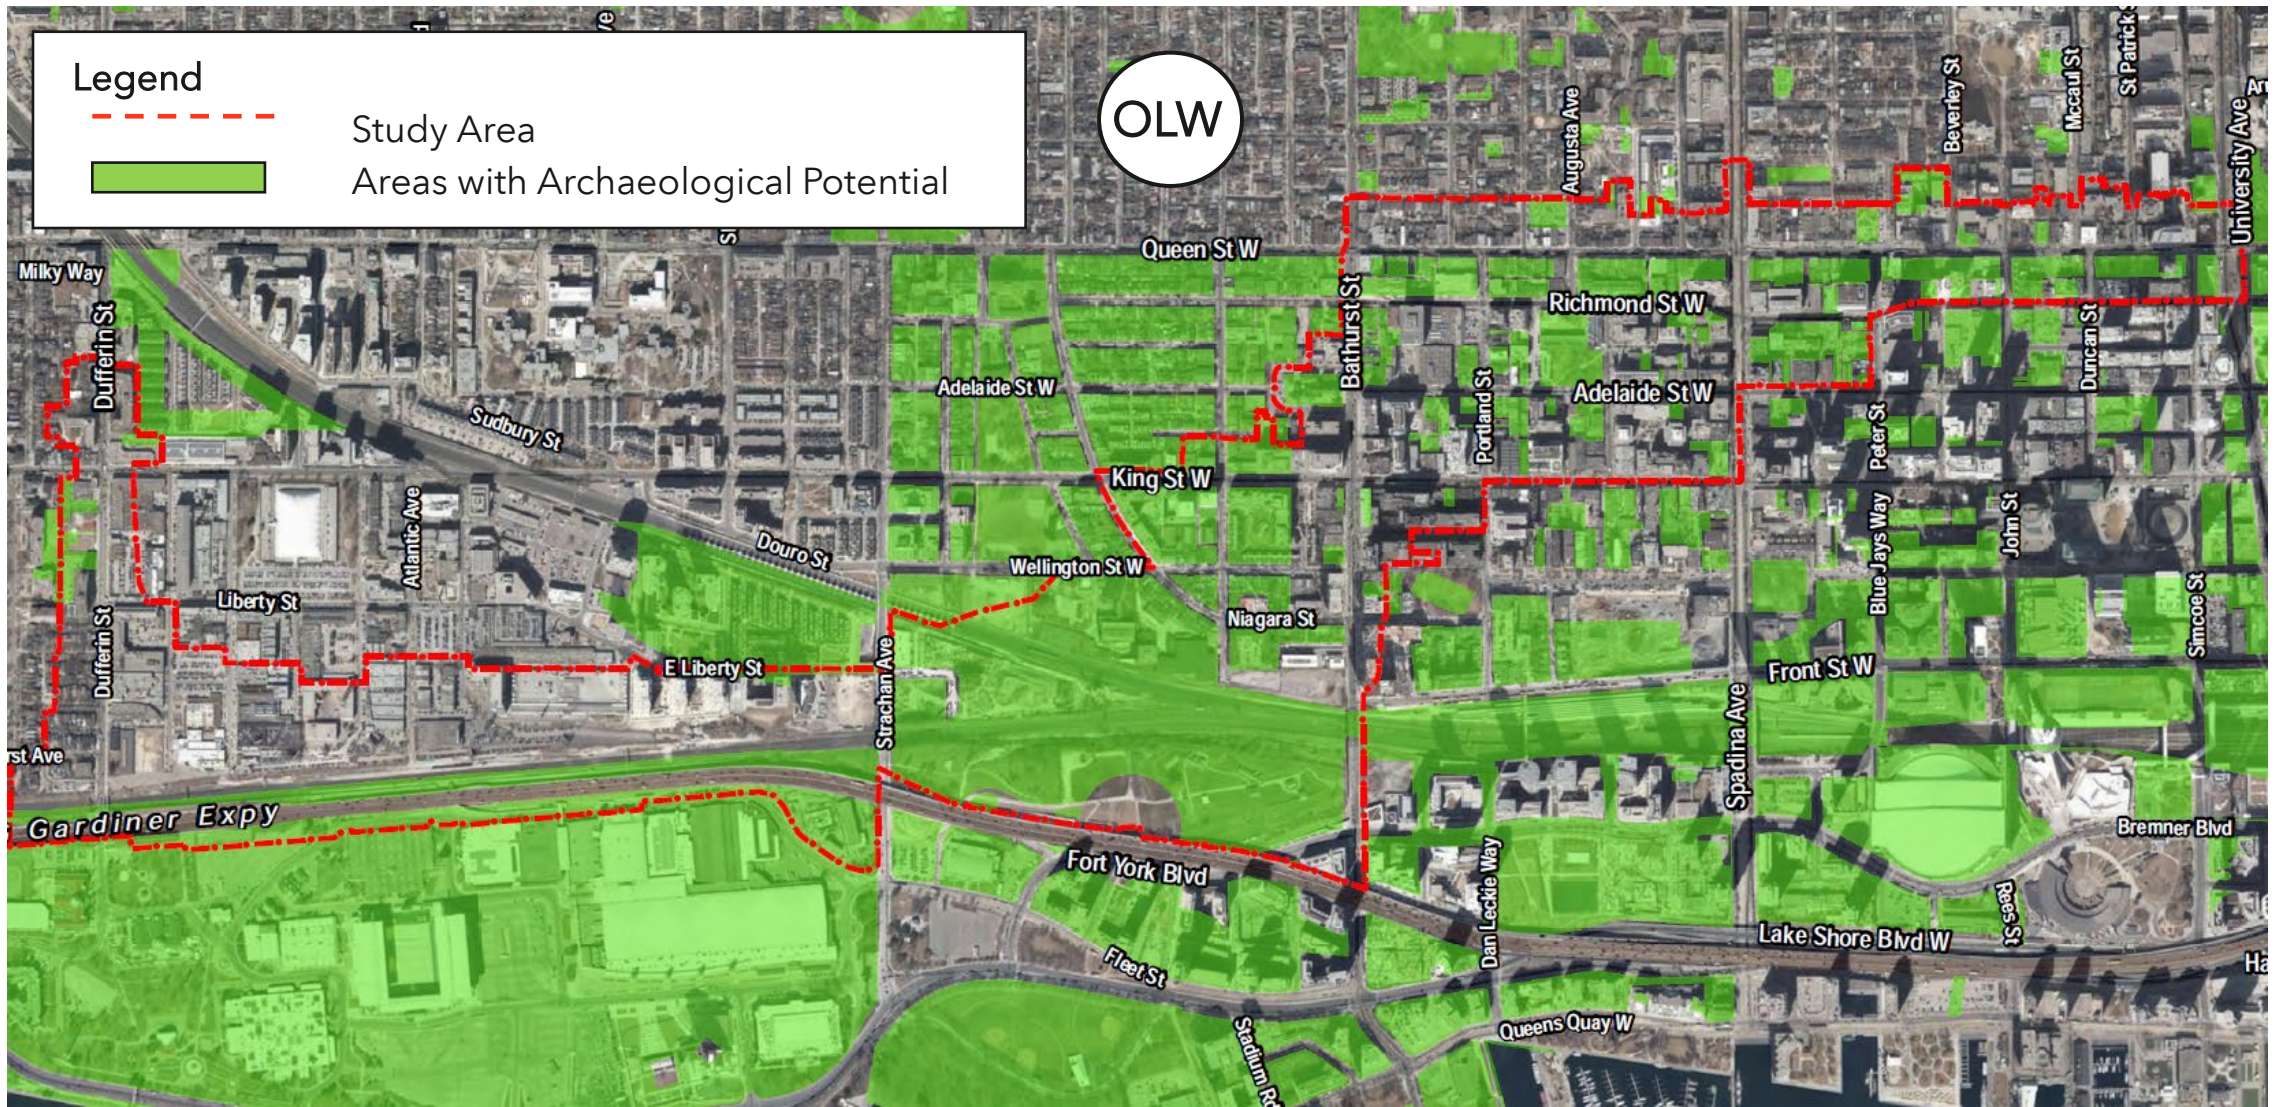

- Stage 2 assessments for areas with archaeological potential that are anticipated to be impacted are planned to start in 2021

OL - ARCHAEOLOGICAL WORK AND ENGAGEMENT

OL - ARCHAEOLOGICAL WORK AND ENGAGEMENT

OL - NATURAL ENVIRONMENT STUDIES

Existing data review and field studies to conduct:

- Ecological land classification, and plant and wildlife inventories
- Fish habitat assessments
- Species at risk habitat screening and surveys

Environmental Conditions Natural Environment Report:

- Report shared with Indigenous Communities on June 3rd, 2020
- Report published as part of the Environmental Conditions Report

Early Works Natural Environment Report:

- Report shared with Indigenous Communities on June 4th, 2020
- Findings relevant to Exhibition Station early works included in the Draft Exhibition Station EWR

Crossing of the Lower Don River Valley at Millwood Road Overpass Bridge

- Early Works Components:**
- Existing Unopened Passenger Tunnel Extension and Tunnel Entrance Building
 - New North Entrance
 - New North GO Platform
 - Shifted GO Track 1 and 2
 - Temporary Pedestrian Bridge

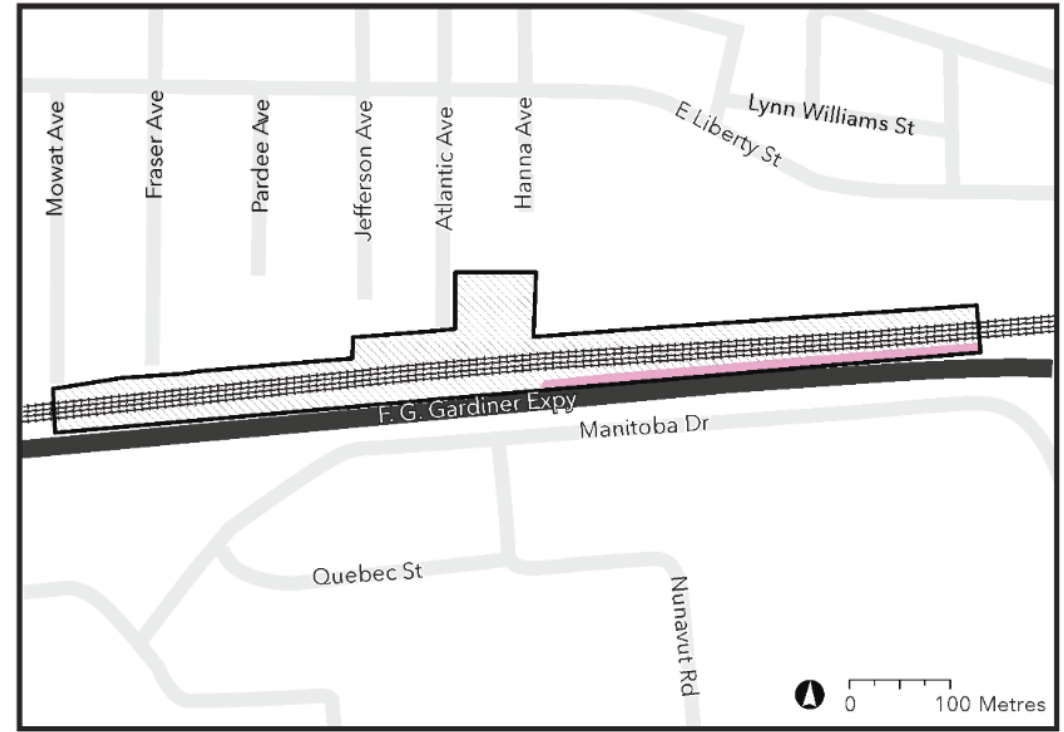

2020-11-19 | DRAFT FOR ILLUSTRATIVE PURPOSES ONLY

EXHIBITION STATION EARLY WORKS - ARCHAEOLOGICAL RESOURCES

Key Findings:

- Most of the study area has been cleared of archaeological concerns.
- A small section between the Gardiner Expressway and the Lakeshore West rail corridor still retains moderate to high archaeological potential associated with past historical activities and landmarks.
- Where there is archaeological potential and disturbance is anticipated, further archaeological assessment(s) will be completed.

Legend

- Existing Rail
- Roads
- F.G. Gardiner Expressway
- Exhibition Station Early Works Project Footprint
- Previously Assessed - Cleared of Archaeological Concerns
- Moderate to High Archaeological Potential - Deeply Buried Potential

EXHIBITION STATION EARLY WORKS - ARCHAEOLOGICAL RESOURCES

Potential Effects:

- Potential for disturbance of deeply buried archaeological resources (e.g., historical structure remnants) due to construction activities at Exhibition Station.

Mitigation Measures:

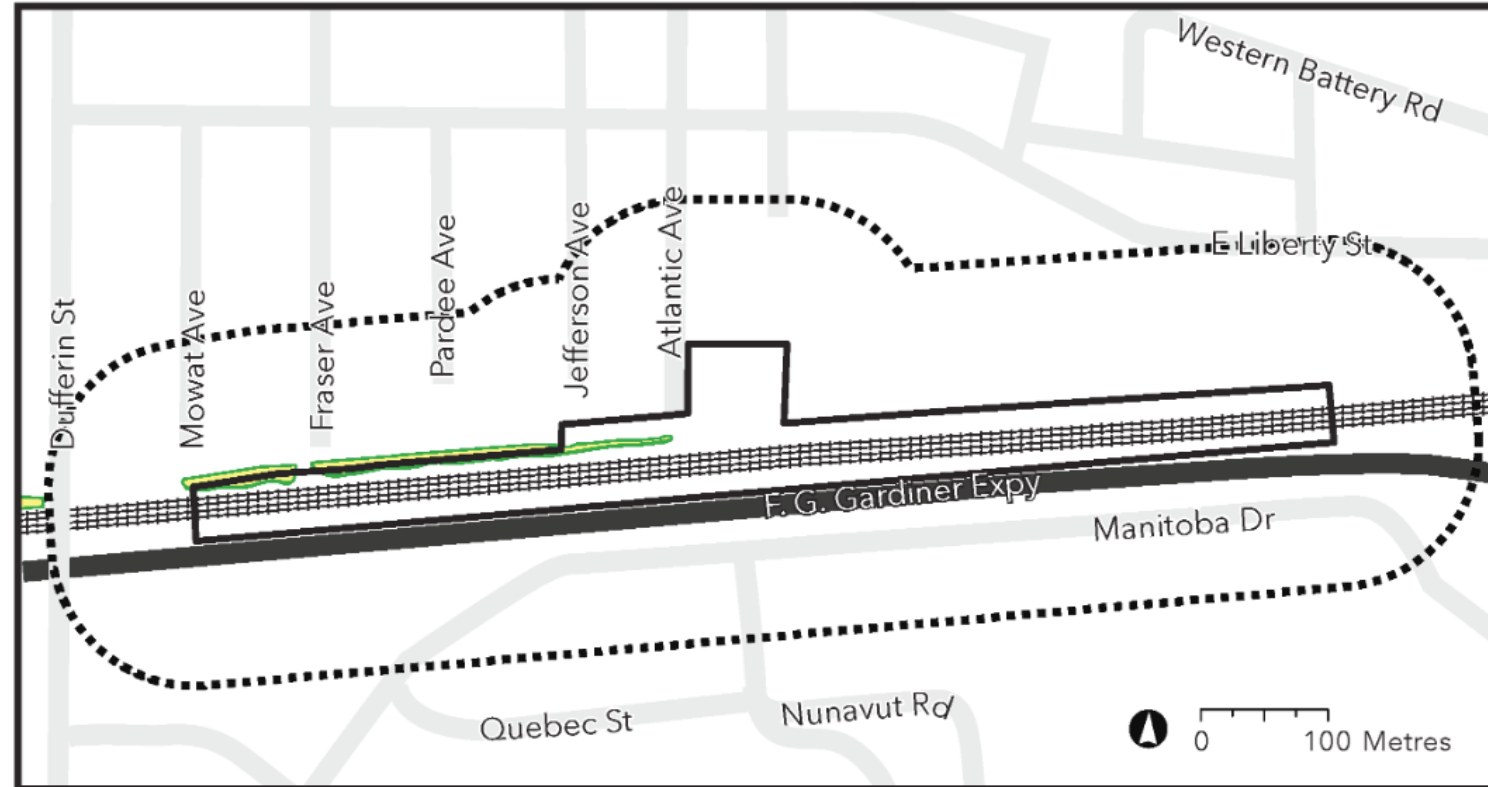

- Complete additional archaeological assessments, where required, as early as possible and in advance of any ground disturbance.
- If archaeological materials are encountered (or suspected) during construction, all work will stop. The site will be protected from impact and additional assessment will be undertaken.

EXHIBITION STATION EARLY WORKS - NATURAL ENVIRONMENT

Key Findings

- Vegetation is limited to streetscapes (street trees, treed fence line or manicured lawns) and treed hedges (hedgerows).
- The study area provides limited wildlife habitat given its urbanized nature.
- The study area does not feature any provincially or locally significant wetlands, watercourses, areas of natural and scientific interest, woodlands, valleylands, environmentally significant areas or municipal or conservation authority policy areas.
- Species at risk are not anticipated to be affected by construction activities.

Ecological Land Classification* within the Exhibition Station Early Works Natural Environment Study Area

Legend

- Existing Rail
- Roads
- F.G. Gardiner Expressway

- Exhibition Station Early Works Project Footprint
- Study Area
- Ecological Land Classification - Cultural Hedgerows**

**Cultural hedgerows are narrow strips or rows of trees, either planted or naturally growing as remnants of old vegetation communities that were removed in the past, with minimal vegetative cover underneath.

EXHIBITION STATION EARLY WORKS - NATURAL ENVIRONMENT

Potential Effects

- Disturbance or displacement of wildlife.
- Removal of/damage to trees, terrestrial vegetation and wildlife habitat, including migratory breeding bird habitat.

Mitigation Measures

- Sensitive wildlife timing restrictions for construction activities (e.g., removal of vegetation outside of the breeding bird season).
- Prior to construction, a Common Nighthawk (Species of Conservation Concern) candidate nesting habitat survey will be completed to confirm nesting habitat presence/absence at 1 Atlantic Avenue and, if habitat is found to be present, appropriate mitigation measures will be implemented (e.g., conducting building demolition outside of breeding bird window).
- Tree/vegetation removals will be kept to a minimum and limited to within the construction footprint.
- Tree removal compensation will be provided in accordance with the [Metrolinx Vegetation Guideline \(2020\)](#).

Questions / Discussion on Engagement

Metrolinx & Chippewas of Rama First Nation

DATE/TIME: December 4th, 2020 / 2:30pm – 4:00pm
LOCATION: Microsoft Teams
PREPARED BY: Metrolinx

IN ATTENDANCE

- Sharday James – Chippewas of Rama First Nation
- Maria Zintchenko – Environmental Project Manager, Metrolinx
- James Francis – Environmental Manager, Metrolinx
- Jaimi O’Hara – Senior Advisor, Indigenous Relations Office, Metrolinx
- Fallon Melander – Manager, Indigenous Relations Office, Metrolinx

TOPIC / COMMENTS

Welcome/Introductions

- [REDACTED]
- [REDACTED]
- [REDACTED]
- Sharday indicated that there was support for the Subways because more transportation in the GTHA is needed

Subways Program

- James Francis provided an overview of the subways program including:
 - Ontario Line
 - [REDACTED]
- [REDACTED]
- James indicated that Ontario Line environmental assessment will be completed in accordance with a separate regulation – O. Reg. 341/20, which provides opportunity for early works reports and which includes an issues resolution process where Mx publishes all comments and feedback it receives on the EA reports and outlines how comments were addressed.
- Sharday raised concerns about the Species at Risk Act. She wanted to know if there are changes being made to this, especially as it relates to Metrolinx projects.
- James indicated that subway projects will conform with all applicable Species at Risk legislation requirements. Further in-depth conversations about Species at Risk could be held at future meetings.
- [REDACTED]

Ontario Line

- Maria provided an overview of the Ontario Line project
 - Environmental assessments are underway for early works.
 - Early works are those works that are ready to proceed prior to the completion of the Ontario Line environmental assessment process. Early works include station construction, rail corridor expansion, bridge replacement etc. and are needed to enable timely implementation of the main works

- James indicated that currently planned early works include locations where Ontario Line interfaces with existing GO stations and rail corridors
- Sharday asked if the Ontario Line will have a dedicated track
- Maria confirmed that Ontario Line trains will operate on dedicated tracks and that in some areas Ontario Line tracks are planned to be located next to the existing GO tracks, so that the subway can travel along existing Mx Right-of-Way
- Maria provided an overview of the Early works timeline
- Fallon asked about the Species at Risk, do we know when this will be assessed.
- Maria indicated that this will be covered in the reports
- Fallon asked if CRFN would like Mx to pull out the Species at Risk assessments
- Sharday agreed that this would be helpful
- [REDACTED]
- Maria provided an update on archaeology
- Fallon inquired as to whether CRFN had any interest in Indigenous monitoring and what process or protocols might be in place?
- Sharday indicated that there are only 2 individuals who are trained and so CRFN is pretty selective about where they are deployed. She asked the Mx continue to send invitations for participation and updates specific to archaeology.
- Fallon offered to let CRFN know when Curve Lake First Nation is present and/or to provide fieldnotes
- Sharday asked if the Ontario Line goes into the Don Valley
- Maria indicated that the Ontario Line includes works within the Don Valley River System, and that this work is above ground, and includes 4 crossings.
- Sharday asked if there would be lots of disturbance.
- Maria indicated that in some areas Mx looked at a bigger area than needed in environmental study areas, and that the actual crossings will have a smaller footprint
- Maria provided an overview of the natural environmental studies, including Species at Risk surveys
 - She indicated that the Species at Risk data were obtained via project-specific surveys as well as from TRCA. Species at Risk that have the potential to be present in the Ontario Line Study Area include Barn Swallow, Chimney Swift, bats, Blanding's Turtle and Butternut trees
- She indicated that any further studies will be based on the final alignment
- Maria provided a review of Exhibition Station Early Works
- Sharday asked if Exhibition will remain open
- Maria indicated that it will remain open
- Maria provided an overview of the Exhibition Station early works Stage 1 archaeological assessment results and indicated that the majority of the project footprint has been cleared of archaeological concerns, however a few small areas containing archaeological potential remain
- Sharday was surprised that there are areas that retain archaeological potential given the high level of disturbance
- Sharday inquired as to what would happen if archaeological resources were discovered during construction
- Maria indicated that work would stop, and an archaeologist would be engaged to carry out fieldwork. Indigenous Nations would be notified and consulted, including invitation to participate in fieldwork. . She confirmed that the likelihood of encountering archaeological resources is low for Exhibition as most of the area is cleared of archaeological concerns. In contrast, a lot of areas in the Don Valley have not been cleared, and additional archaeological assessments will be conducted where disturbance is anticipated. When it comes to Species at Risk discovery during construction, contractors are required to recognize them and ensure no negative impacts.
- Maria indicated that there may be one species at Exhibition that is of conservation concern despite not being a species at risk which is Common Nighthawk. Nighthawks nest on gravel roofs. Mx will confirm presence of gravel on the roof of the building that will be demolished and ensure there are no impacts.
- Sharday indicated that this is a concern of CRFN – that the Species at Risk Act is no longer a full list and many of the Species of conservation concern used to be designated Species at Risk. Sharday asked if Mx impacted the Common Nighthawk, would Mx find a new home or habitat for that Species and mitigate those impacts that this project would have.

- James indicated that whenever we can't avoid an impact, we seek to compensate.
- Sharday asked if Mx would help a specific species rather than pay into a fund or help generally
- Maria indicated that this is true for bat Species at Risk and Barn Swallow – for instance if a project results in bat habitat removal, bat boxes nearby are installed

Closing Remarks

- The meeting was adjourned due to time constraints
- [REDACTED]

*Please contact Metrolinx (IndigenousRelations@metrolinx.com) within seven (7) days of issuance of these minutes for any errors or omissions.

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Julie and Team,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback.

We appreciate that you have informed us this project lies outside of your territory, but still have an interest in being informed. To that end I will upload the attached to our shared dropbox as well as the draft Early Works Report.

In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We appreciate the size of these documents. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

We acknowledge that this letter does not replace meaningful engagement. We welcome an opportunity to meet with your Nation and discuss this project in more detail. If you have any questions or concerns, please do not hesitate to contact the Indigenous Relations Office at any time.

Thank you,

Jaimi O'Hara

Delivered by email

Dear Dr. Kapyrka,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Curve Lake First Nation.

Metrolinx wishes to build a strong and respectful relationship with Curve Lake First Nation. Metrolinx appreciates and respects Curve Lake First Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Curve Lake First Nation's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable

service. More information on the Project can be found on our website:
www.metrolinx.com/ontarioline

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Curve Lake First Nation with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Curve Lake First Nation in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works

Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.

- Lower Don Bridge & Don Yard Early Works

Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.

- Corktown Station Early Works

The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes

demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Curve Lake First Nation review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Curve Lake First Nation.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Curve Lake First Nation. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Curve Lake First Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Curve Lake First Nation in June 2020.

To aid in review for Curve Lake First Nation, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Curve Lake First Nation. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Curve Lake First Nation.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Curve Lake First Nation should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Curve Lake First Nation in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Curve Lake First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Curve Lake First Nation. We are happy to assist in the review of these documents by meeting with Curve Lake First Nation. Metrolinx is willing to address any questions that Curve Lake First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Curve Lake First Nation. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> Wetlands and Waterbodies Fish and Fish Habitat 	<ul style="list-style-type: none"> There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
<p>Archaeological Potential</p>	<p>■ Potential for the disturbance of unassessed or documented archaeological resources.</p>	<p>■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential:</p> <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. <p>■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment.</p>	<p>■ None identified.</p>
<p>Archaeological Resources</p>	<p>■ Potential recovery of archaeological resources during construction.</p>	<p>■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered.</p>	<p>■ None identified.</p>

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.</p>	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 5:01:39 PM
Attachments: 

Dear Julie & Team

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for in our dropbox within the Ontario Line folder.

We acknowledge that you have informed us that this project is outside CLFN territory, but we are sharing for information purposes.

Should you have any comments or feedback please share with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Delivered by email

Dear Dr. Kapyrka,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Curve Lake First Nation. Metrolinx appreciates and respects Curve Lake First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Curve Lake First Nation information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Curve Lake First Nation in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Curve Lake First Nation:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	June 5, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Curve Lake First Nation in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Curve Lake First Nation's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Curve Lake First Nation. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Curve Lake First Nation. We are happy to address any questions that Curve Lake First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

Subject: Ontario Line - Draft Early Works Report
Date: Friday, June 05, 2020 5:02:00 PM

Good afternoon Chief Emily Whetung,

As per the document distribution schedule presented in Metrolinx's June 3rd letter, please find the Ontario Line Draft Early Works Report [REDACTED] via Dropbox. Any comments on the report are requested by **July 3rd**.

As previously communicated, Metrolinx acknowledges the current climate of uncertainty as Indigenous communities are impacted by the COVID-19 pandemic. Please let us know if there are any ways that we can make the review process easier or more accommodating during this time.

Please let us know if you have any questions or have trouble accessing the document.

Thank you,

Kuru Satkunanathan

Subject: Ontario Line - Draft Early Works, Natural Environment Report

Good afternoon Chief Emily Whetung,

As discussed in our June 3rd correspondence, Metrolinx would like to share the draft Ontario Line Early Works Natural Environment Report with your community for review. The report may be accessed via Dropbox [REDACTED].

We are requesting comments on the report by July 2nd, 2020. However, as mentioned previously, Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Good morning Chief Emily Whetung,

Please find attached a letter detailing the report distribution schedule for the Ontario Line. The Ontario Line Environmental Conditions Natural Environment Report, discussed in the letter, can be found via the Dropbox link .

Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. We recognize that community offices may be closed or have reduced capacity at this time. We are making efforts to ensure that communities can continue to be engaged and included in projects, while balancing the need to adhere to regulatory timelines. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Subject: Ontario Line Subway Project
Date: February 12, 2020 1:28:27 PM
Attachments: [REDACTED]

Good Afternoon,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. More details about the project can be accessed here:
[REDACTED]

I have attached a letter to this email that provides high level details of the project, which has also been sent to you by registered mail.

Metrolinx would appreciate any interest that your First Nation may have in these projects. We would welcome the opportunity to meet with you to provide more information and discuss any interests or questions that you may have.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Miigwetch,

Fallon

Curve Lake First Nation & Metrolinx Meeting

July 15, 2020

Indigenous Relations @ Metrolinx

INDIGENOUS RELATIONS AT METROLINX

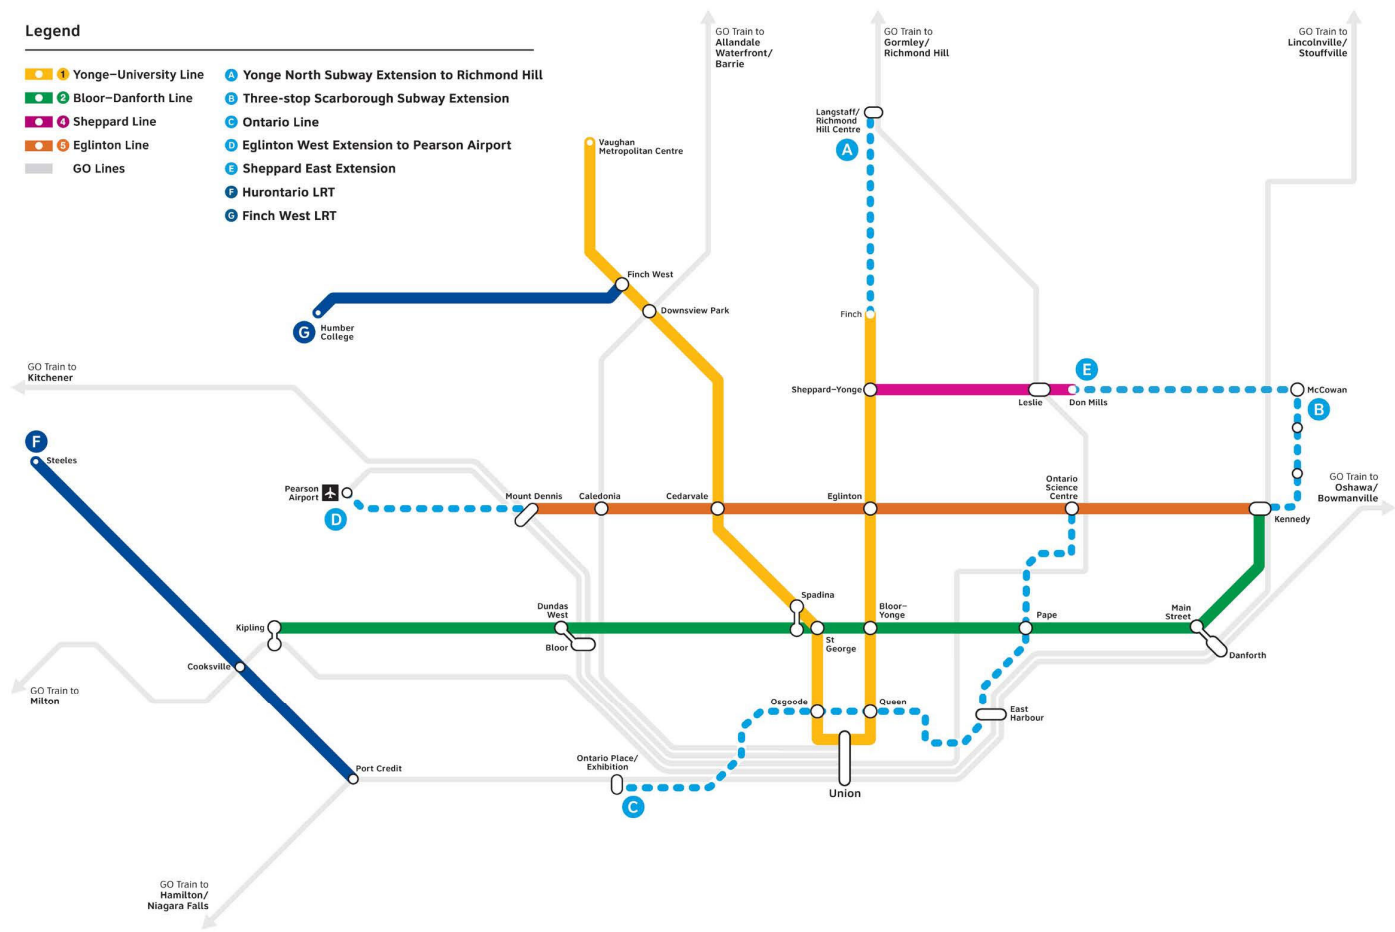

- Commitment to building positive and meaningful relationships with Indigenous Peoples, communities and customers
- Established an Indigenous Relations Office (2019) which will guide Metrolinx through the implementation of an **Indigenous Relations Action Plan** that focuses on:
 - **Cultivating Relationships**
 - Tailored engagement and meaningful relations
 - **Support Business and Corporate Objectives**
 - Identify business efficiencies and develop KPIs to ensure transparent, timely and accountable actions
 - **Facilitating Awareness and Supporting Inclusion**

INDIGENOUS RELATIONS OFFICE

- Provide guidance and support for the development and implementation of organizational-wide policies, processes, and engagement with Indigenous communities, businesses, employees, and customers
- Staffed by Manager, Senior Advisor and Indigenous Relations Specialist

Subway Program

ONTARIO'S SUBWAY PLAN FOR THE GTHA

METROLINX - THE SUBWAY PROGRAM

Metrolinx and its partners are delivering on a bold, forward-looking transportation plan. The goals of the 2041 Regional Transportation Plan (RTP) are to create strong connections, complete travel experiences and sustainable communities. The Subway Program is a key component of this plan.

The Subway Program consists of four (4) transit projects:

1. The Ontario Line

- [REDACTED]
- [REDACTED]
- [REDACTED]

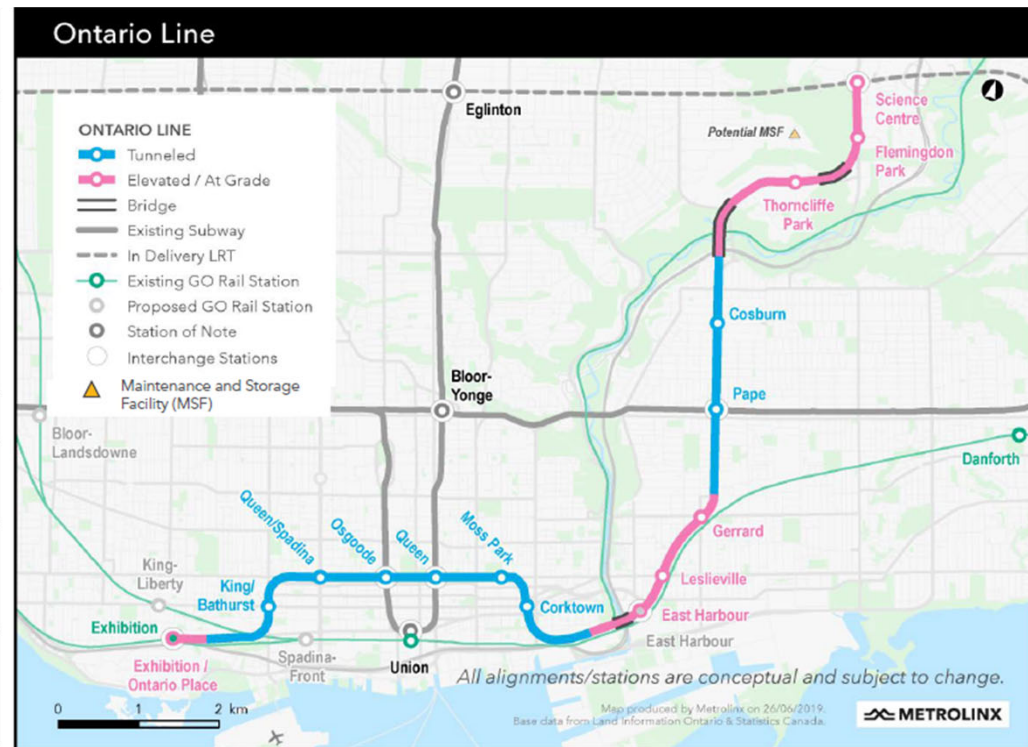

Metrolinx is the sole proponent of all four (4) projects.

Ontario Line

What is the Ontario Line?

The Ontario Line will make it faster and easier for hundreds of thousands of people to get where they need to be each day, whether they ride the line or not. It will be more than just a subway to alleviate crowding on TTC Line 1 - it will be a link to communities across Toronto. From east to west, north to south, from Ontario Place to the Ontario Science Centre, there's never been a connection in the heart of the city like this one will be. Getting downtown from previously underserved areas such as Thorncliffe Park and Flemingdon Park will be a breeze, travel times across the city will be shorter and trains will arrive more frequently. When every minute counts, getting this time back will free up time in people's schedules for the things that matter.

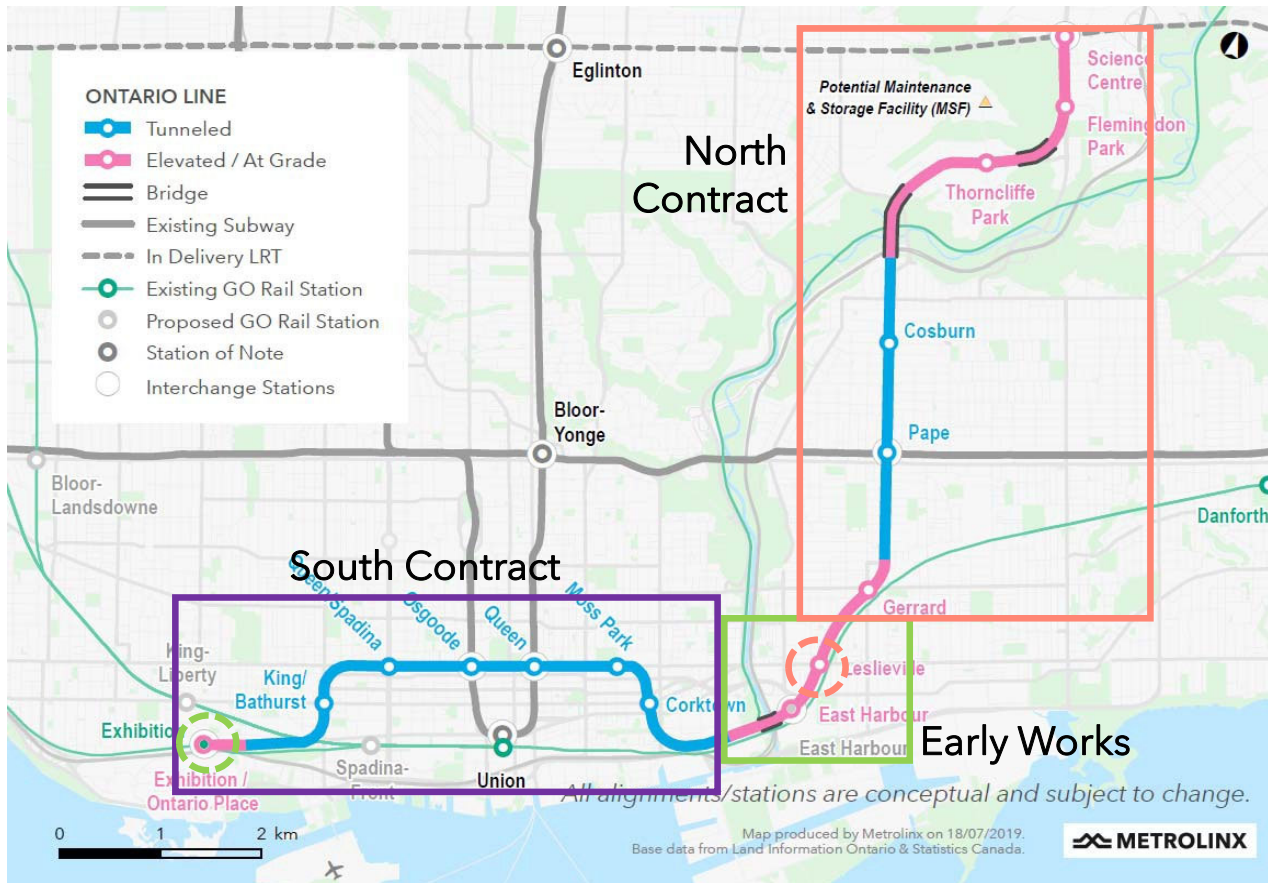

Number of proposed stations	15
Number of connections to other transit options	17 <ul style="list-style-type: none"> • 3 GO lines • 4 connections to Line 1, 2 and 5 (Eglinton Crosstown) • 10 connections to King, Queen, Bathurst, Spadina, Harbourfront and Gerrard/Carlton streetcars
Approximate number of route kilometres	15.5 km
Ridership	389,000 daily boardings
Frequency	As frequent as every 90 seconds
Access to transit	154,000 more people within walking distance to transit
Access to jobs	53,000 more jobs accessible in 45 minutes or less for Toronto residents

PROJECT STATUS UPDATE

- Planning for the project continues, including surveying and geotechnical investigation, to further refine the design and engineering options.
- Environmental investigations are underway, including studies on noise and vibration for joint corridor
- Further information, including more details about the alignment and stations as well as initial environmental reports, will be available in the summer. Public engagement will be held online.
- Pending procurement decisions and final environmental reports, Early Works in the joint corridor are anticipated to begin in 2021.

ONTARIO LINE PROCUREMENT PACKAGES

First two Ontario Line Request for Qualifications released in early June.

Request for Proposals are anticipated to be released in the Fall.

Three main procurement packages: North, South and the Rolling Stock, Systems, Operations and Maintenance Contract.

In addition to the three main P3 contracts, there will also be a series of Early Works projects for bridge, track and other preparatory activities to help advance the delivery of the Ontario Line.

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Mr. Detlor,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. The additional attachments provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

Metrolinx remains open to working with HDI and is committed to coming to a mutually acceptable agreement and establishing processes to support a respectful and amenable relationship as we move forward, including capacity funding to monitors. Metrolinx would be pleased to schedule a meeting with HDI to discuss the details of such an agreement.

If you have any questions or concerns, please feel free to reach out to me at any time.

Thank you,

Jaimi O'Hara

Ohsweken, ON N0A 1M0

Delivered by Email

Dear Ms. General,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Haudenosaunee Confederacy Chiefs Council.

Metrolinx wishes to build a strong and respectful relationship with Haudenosaunee Confederacy Chiefs Council. Metrolinx appreciates and respects Haudenosaunee Confederacy Chiefs Council's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Haudenosaunee Confederacy Chiefs Council's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable

service. More information on the Project can be found on our website:
www.metrolinx.com/ontarioline

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Haudenosaunee Confederacy Chiefs Council with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Haudenosaunee Confederacy Chiefs Council in July 2021 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works

Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.

- Lower Don Bridge & Don Yard Early Works

Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.

- Corktown Station Early Works

The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes

demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Haudenosaunee Confederacy Chiefs Council review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Haudenosaunee Confederacy Chiefs Council.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Haudenosaunee Confederacy Chiefs Council. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Haudenosaunee Confederacy Chiefs Council has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Haudenosaunee Confederacy Chiefs Council in June 2020.

To aid in review for Haudenosaunee Confederacy Chiefs Council, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Haudenosaunee Confederacy Chiefs Council. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Haudenosaunee Confederacy Chiefs Council.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Haudenosaunee Confederacy Chiefs Council should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Haudenosaunee Confederacy Chiefs Council in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Haudenosaunee Confederacy Chiefs Council. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Haudenosaunee Confederacy Chiefs Council. We are happy to assist in the review of these documents by meeting with Haudenosaunee Confederacy Chiefs Council. Metrolinx is willing to address any questions that Haudenosaunee Confederacy Chiefs Council may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Haudenosaunee Confederacy Chiefs Council. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a stylized flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> ■ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ■ Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. ■ Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ■ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ■ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ■ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> ■ Wetlands and Waterbodies ■ Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> ■ None Required 	<ul style="list-style-type: none"> ■ None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential: <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.</p>	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 5:03:55 PM
Attachments: [REDACTED]

Dear Mr. Detlor,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with HDI. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with HDI and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Delivered by Email

Dear Ms. General,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Haudenosaunee Confederacy Chiefs Council. Metrolinx appreciates and respects Haudenosaunee Confederacy Chiefs Council's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Haudenosaunee Confederacy Chiefs Council information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Haudenosaunee Confederacy Chiefs Council in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Haudenosaunee Confederacy Chiefs Council:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	July 30, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Haudenosaunee Confederacy Chiefs Council in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: *Map of Ontario Line Early Works*

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Haudenosaunee Confederacy Chiefs Council's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Haudenosaunee Confederacy Chiefs Council. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Haudenosaunee Confederacy Chiefs Council. We are happy to address any questions that Haudenosaunee Confederacy Chiefs Council may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a large, sweeping flourish extending to the right.

Good Morning Ms. General,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. I have attached a letter to this email that provides high level details of the project.

As detailed within the letter, Early Works Reports are available for your review at the following links:

- Early Works Report [REDACTED]
- Early Works Natural Environment Report: [REDACTED]

If you have any comments on these reports, please share them by August 31, 2020.

Metrolinx would appreciate any interest that your First Nation may have in this project and would welcome the opportunity to meet with you to provide more information and discuss any interests or questions that you may have.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Miigwetch,

Fallon

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Chief Carr,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We appreciate the size of these documents. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

We acknowledge that this letter does not replace meaningful engagement. We

welcome an opportunity to meet with your Nation and discuss this project in more detail. If you have any questions or concerns, please do not hesitate to contact the Indigenous Relations Office at any time.

Thank you,

Jaimi O'Hara

Dear Chief Carr,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Hiawatha First Nation.

Metrolinx wishes to build a strong and respectful relationship with Hiawatha First Nation. Metrolinx appreciates and respects Hiawatha First Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Hiawatha First Nation's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable

service. More information on the Project can be found on our website:
www.metrolinx.com/ontarioline

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Hiawatha First Nation with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Hiawatha First Nation in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works

Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.

- Lower Don Bridge & Don Yard Early Works

Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.

- Corktown Station Early Works

The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes

demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Hiawatha First Nation review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Hiawatha First Nation.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Hiawatha First Nation. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Hiawatha First Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Hiawatha First Nation in June 2020.

To aid in review for Hiawatha First Nation, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Hiawatha First Nation. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Hiawatha First Nation.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Hiawatha First Nation should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Hiawatha First Nation in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Hiawatha First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Hiawatha First Nation. We are happy to assist in the review of these documents by meeting with Hiawatha First Nation. Metrolinx is willing to address any questions that Hiawatha First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Hiawatha First Nation. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a stylized flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> ■ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ■ Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. ■ Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ■ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ■ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ■ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> ■ Wetlands and Waterbodies ■ Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> ■ None Required 	<ul style="list-style-type: none"> ■ None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
<p>Archaeological Potential</p>	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential: <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
<p>Archaeological Resources</p>	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.</p>	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

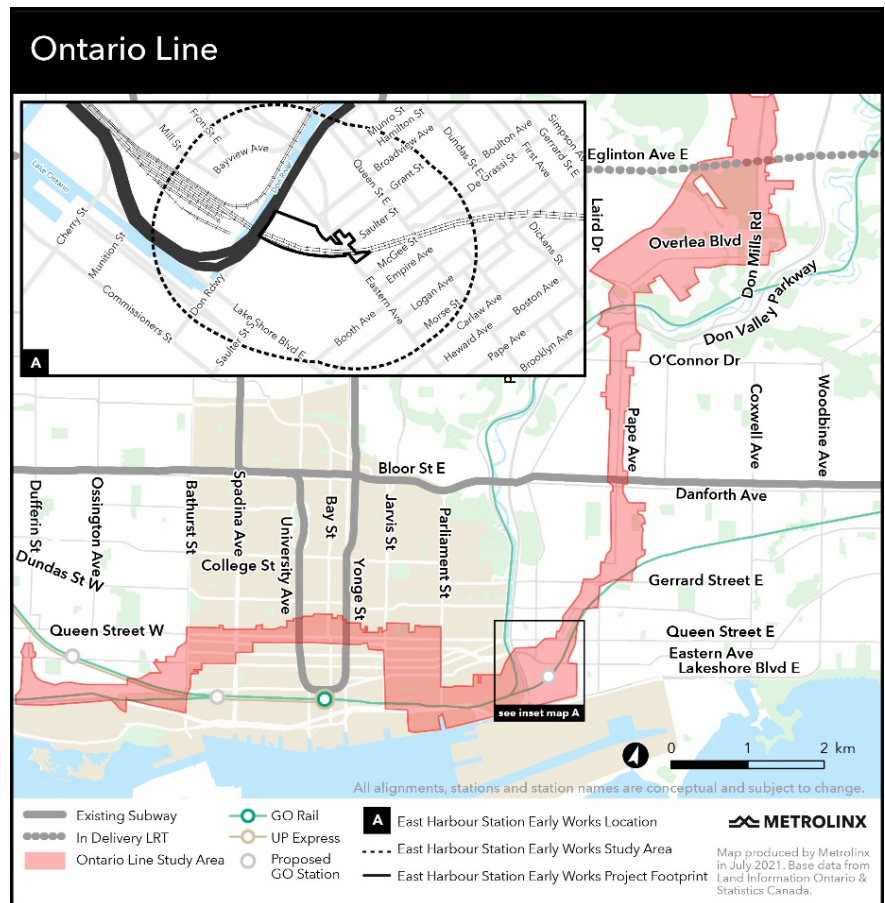

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 5:04:47 PM
Attachments: [REDACTED]

Dear Chief Carr,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Chief Laurie Carr
Hiawatha First Nation
123 Paudash Street
RR #2
Hiawatha, ON K9J 0E6
Delivered by email

Dear Chief Carr,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Hiawatha First Nation. Metrolinx appreciates and respects Hiawatha First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Hiawatha First Nation information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Hiawatha First Nation in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Hiawatha First Nation:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	June 5, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Hiawatha First Nation in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Hiawatha First Nation's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Hiawatha First Nation. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Hiawatha First Nation. We are happy to address any questions that Hiawatha First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a long, sweeping underline.

Good afternoon Chief Laurie Carr,

This is just a friendly reminder that we are looking for comments be provided for the draft Ontario Line Natural Environment Early Works Report by end of day today, July 2nd. We are also looking for comments to be provided for the draft Ontario Line Early Works Report by end of day tomorrow, July 3rd:

Feel free to contact me if you have any questions.

Thank-you,

Crystal Ho

Good afternoon Chief Laurie Carr,

As per the document distribution schedule presented in Metrolinx's June 3rd letter, please find the Ontario Line Draft Early Works Report [REDACTED] via Dropbox. Any comments on the report are requested by **July 3rd**.

As previously communicated, Metrolinx acknowledges the current climate of uncertainty as Indigenous communities are impacted by the COVID-19 pandemic. Please let us know if there are any ways that we can make the review process easier or more accommodating during this time.

Please let us know if you have any questions or have trouble accessing the document.

Thank you,

Kuru Satkunanathan

Good afternoon Chief Laurie Carr,

As discussed in our June 3rd correspondence, Metrolinx would like to share the draft Ontario Line Early Works Natural Environment Report with your community for review. The report may be accessed via Dropbox [REDACTED]

We are requesting comments on the report by July 2nd, 2020. However, as mentioned previously, Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Good morning Chief Laurie Carr,

Please find attached a letter detailing the report distribution schedule for the Ontario Line. The Ontario Line Environmental Conditions Natural Environment Report, discussed in the letter, can be found via the Dropbox link 

Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. We recognize that community offices may be closed or have reduced capacity at this time. We are making efforts to ensure that communities can continue to be engaged and included in projects, while balancing the need to adhere to regulatory timelines. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Subject: Ontario Line Subway Project

Good Afternoon,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. More details about the project can be accessed here:

I have attached a letter to this email that provides high level details of the project, which has also been sent to you by registered mail.

Metrolinx would appreciate any interest that your First Nation may have in these projects. We would welcome the opportunity to meet with you to provide more information and discuss any interests or questions that you may have.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Miigwetch,

Grand Chief Rémy Vincent
Huron-Wendat Nation
255 Place Chef Michel Laveau

Delivered by email

Dear Grand Chief Vincent,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Huron-Wendat Nation.

Metrolinx wishes to build a strong and respectful relationship with Huron-Wendat Nation. Metrolinx appreciates and respects Huron-Wendat Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Huron-Wendat Nation's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website:

www.metrolinx.com/ontarioline

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Huron-Wendat Nation with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Huron-Wendat Nation in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if they are in close proximity. Each Early Works Report provides a description of the

early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works

Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.

- Lower Don Bridge & Don Yard Early Works

Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.

- Corktown Station Early Works

The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due

diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Huron-Wendat Nation review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Huron-Wendat Nation.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Huron-Wendat Nation. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Huron-Wendat Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Huron-Wendat Nation in June 2020.

To aid in review for Huron-Wendat Nation, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Huron-Wendat Nation. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Huron-Wendat Nation.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Huron-Wendat Nation should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Huron-Wendat Nation in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Huron-Wendat Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Huron-Wendat Nation. We are happy to assist in the review of these documents by meeting with Huron-Wendat Nation. Metrolinx is willing to address any questions that Huron-Wendat Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Huron-Wendat Nation. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> ■ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ■ Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. ■ Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ■ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ■ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ■ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> ■ Wetlands and Waterbodies ■ Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> ■ None Required 	<ul style="list-style-type: none"> ■ None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential: <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.</p>	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

**Metrolinx
130 Adelaide Street West

Objet : Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021

Dear M. Gros-Louis,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link: 

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Grand Chief Rémy Vincent
Huron-Wendat Nation
255 Place Chef Michel Laveau

Delivered by email

Dear Grand Chief Vincent,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Huron-Wendat Nation. Metrolinx appreciates and respects Huron-Wendat Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Huron-Wendat Nation information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station

construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Huron-Wendat Nation in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Huron-Wendat Nation:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	July 30, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Huron-Wendat Nation in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Huron-Wendat Nation's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Huron-Wendat Nation. Please provide these in writing no later than **August 24, 2021**.

10 Bay Street 416.202.4967
Toronto, ON M5J 2N8 metrolinx.com

Engagement

Metrolinx is committed to an open and respectful relationship with Huron-Wendat Nation. We are happy to address any questions that Huron-Wendat Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

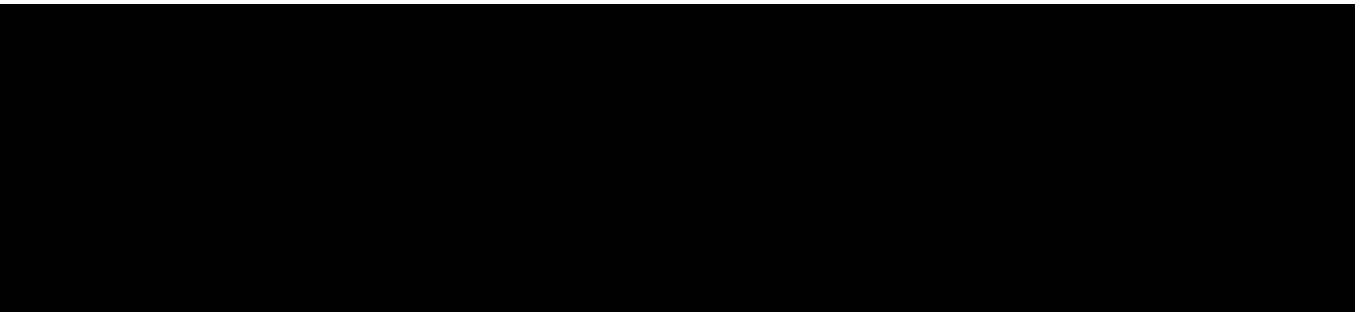

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a long, sweeping underline.

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment
Metrolinx

Subject: Ontario Line Natural Environment Early Works Report Comments - Reminder Email

Hi Maxime,

This is just a friendly reminder that we are looking for comments be provided for the draft Ontario Line Natural Environment Early Works Report by end of day today, July 2nd. We are also looking for comments to be provided for the draft Ontario Line Early Works Report by end of day tomorrow, July 3rd:

Feel free to contact me if you have any questions.

Miigwetch,

Fallon

Objet: Ontario Line Draft Early Works Report

Hi Maxime,

I hope you are well and enjoying the beautiful weather. As I follow up to my email and letter last week sent to you on June 4th please find the Ontario Line Draft Early Works Report [REDACTED] via Dropbox.

We are requesting comments on the report by July 2nd, 2020 if possible,

Miigwetch,

Fallon

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Subject: Ontario Line Draft Natural Environment Reports - Early Works

Hi Maxime,

As I follow up to my email and letter yesterday I have included the Ontario Line Early Works Natural Environment Report for your review. The report may be accessed via Dropbox [REDACTED].

We are requesting comments on the report by July 2nd, 2020 if possible,

Miigwetch,

Fallon

Morning Maxime,

I have attached a letter for the Ontario Line Draft Existing Conditions Natural Environment Reports. The reports can be found via the Dropbox link [REDACTED]. This does not include archaeological assessments, as you have reviewed the ones to date. [REDACTED]
[REDACTED]

Please let us know if you would like to review these or if you have any questions or concerns.

Miigwetch,

Fallon

Good afternoon Fallon,

Thanks for the information on the New Ontario Line Subway Project.

In order for us to start our analysis could you please provide us with the GIS shapefiles of the study area ?

Best regards,

Maxime

Good Afternoon Maxime,

As mentioned in a phone call and email to you Metrolinx, in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. More details about the project can be accessed here:
[REDACTED]

I have attached a letter to this email that provides high level details of the project, which has also been sent to you by registered mail.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community by following our engagement protocol.

Please do not hesitate to contact me.

Miigwetch,

Fallon

Overview of Metrolinx Projects 2019

November 13, 2019

Ontario Line Overview

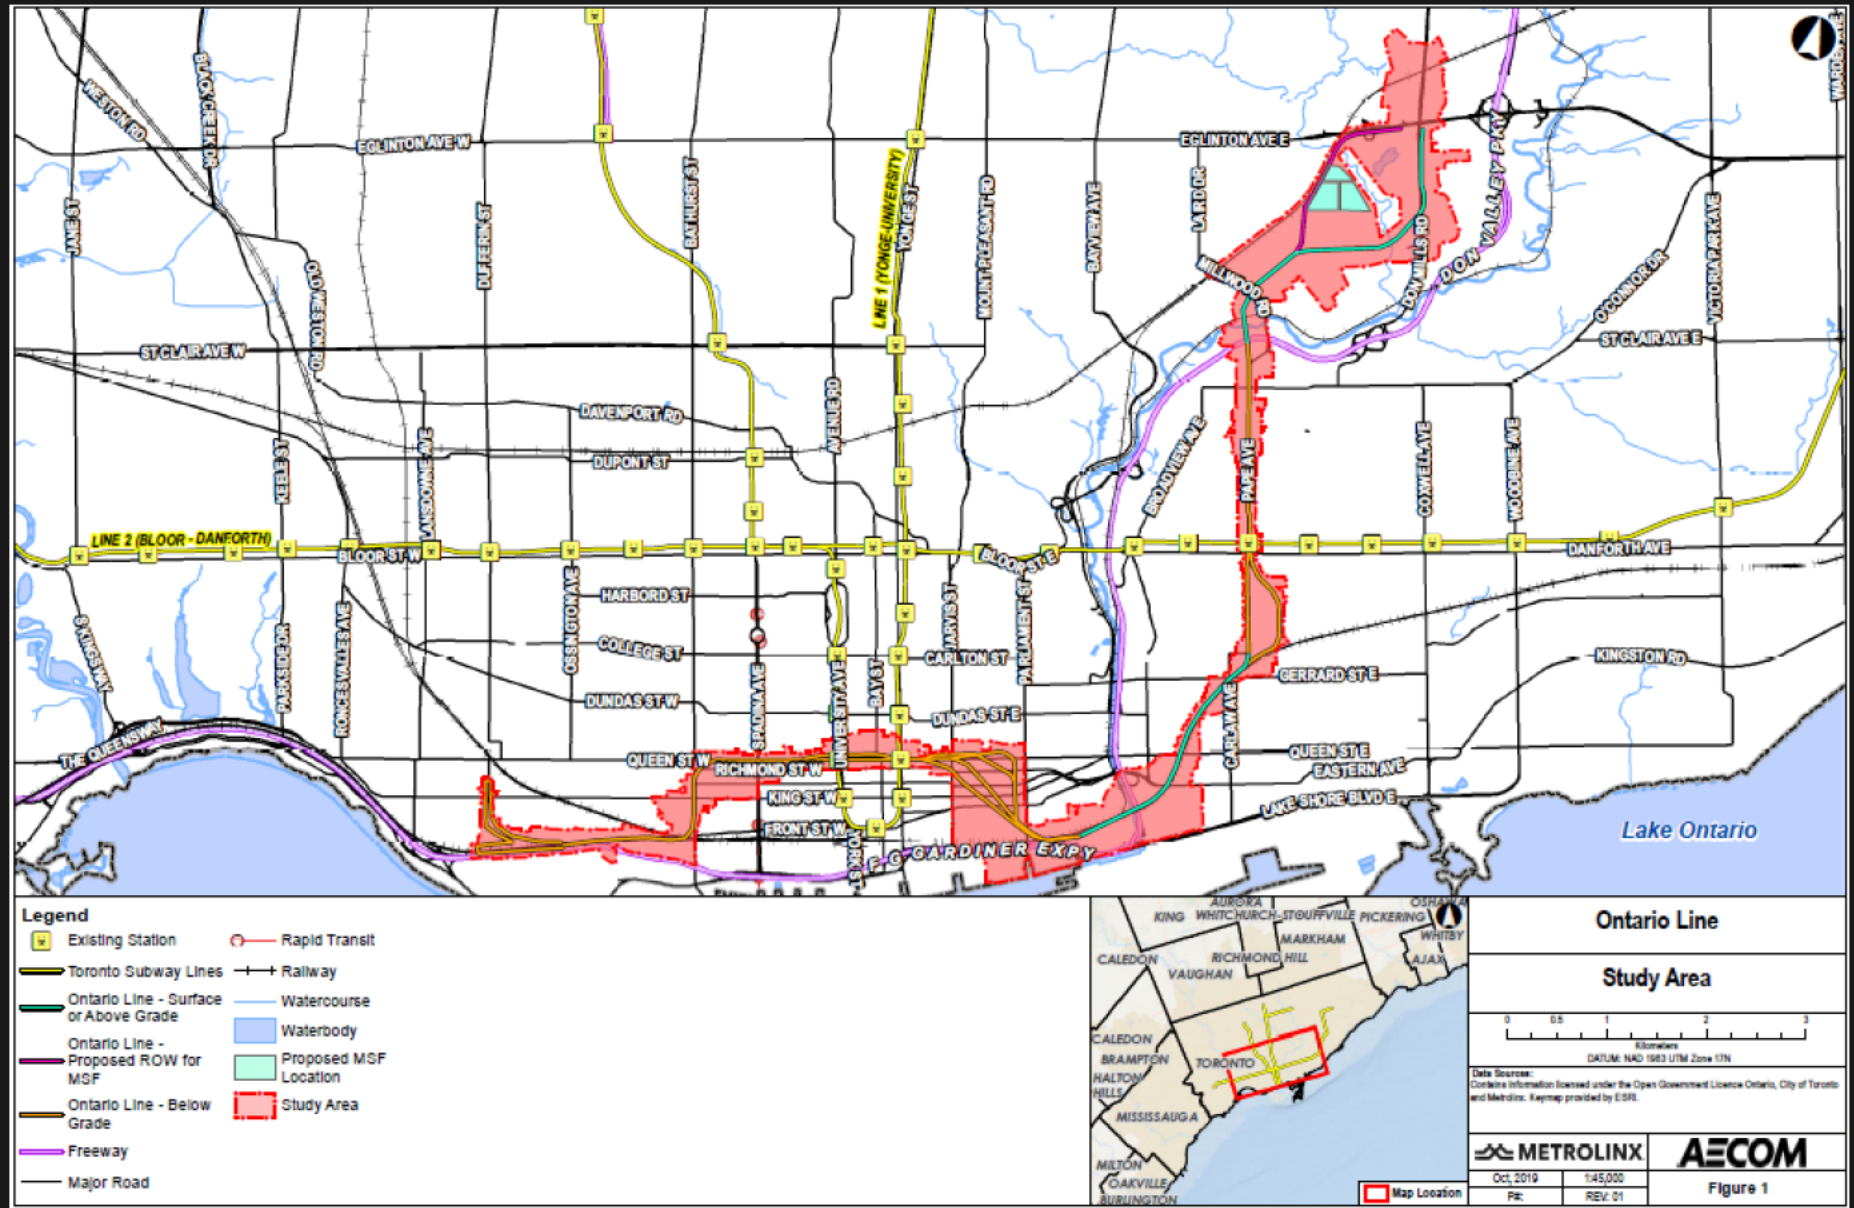

November, 2019

Project Background

- The Ontario Line is an approximately 16km free-standing subway, connecting Ontario Place/Exhibition through downtown Toronto to the Ontario Science Centre. This new line is part of the Province's directive that Metrolinx and Infrastructure Ontario lead the way in building more subways for the region.
- It features 15 potential stations, including six interchange stations adding 17 new connections to GO Transit, existing subways and surface transit.
- An Initial Business Case (IBC) was completed and released in July 2019. Metrolinx and Infrastructure Ontario continue to work with the City of Toronto to advance a Preliminary Design Business Case that will bring greater definition to the design, cost, and benefits of the project.

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Chief Nahrgang,

MetroLinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We know that your First Nation does not have capacity as per emails received from [REDACTED]. We would be happy to address a way to assist you with capacity for these projects and welcome an opportunity to speak further about what we can do. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

[REDACTED]
[REDACTED]

If you have any questions or concerns, please do not hesitate to contact the

Indigenous Relations Office at any time.

Thank you,

Jaimi O'Hara

Jaimi O'Hara

Delivered by email

Dear Chief Nahrgang,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Kawartha Nishnawbe First Nation.

Metrolinx wishes to build a strong and respectful relationship with Kawartha Nishnawbe First Nation. Metrolinx appreciates and respects Kawartha Nishnawbe First Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Kawartha Nishnawbe First Nation's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website:

www.metrolinx.com/ontarioline

10 Bay Street
Toronto, ON M5J 2N8

metrolinx.com

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Kawartha Nishnawbe First Nation with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Kawartha Nishnawbe First Nation in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if

they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works
Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.
- Lower Don Bridge & Don Yard Early Works
Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.
- Corktown Station Early Works
The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation

where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Kawartha Nishnawbe First Nation review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Kawartha Nishnawbe First Nation.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Kawartha Nishnawbe First Nation. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Kawartha Nishnawbe First Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Kawartha Nishnawbe First Nation in June 2020.

To aid in review for Kawartha Nishnawbe First Nation, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Kawartha Nishnawbe First Nation. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Kawartha Nishnawbe First Nation.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Kawartha Nishnawbe First Nation should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Kawartha Nishnawbe First Nation in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Kawartha Nishnawbe First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Kawartha Nishnawbe First Nation. We are happy to assist in the review of these documents by meeting with Kawartha Nishnawbe First Nation. Metrolinx is willing to address any questions that Kawartha Nishnawbe First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Kawartha Nishnawbe First Nation. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a stylized flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> ■ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ■ Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. ■ Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ■ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ■ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ■ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> ■ Wetlands and Waterbodies ■ Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> ■ None Required 	<ul style="list-style-type: none"> ■ None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
<p>Archaeological Potential</p>	<p>■ Potential for the disturbance of unassessed or documented archaeological resources.</p>	<p>■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential:</p> <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. <p>■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment.</p>	<p>■ None identified.</p>
<p>Archaeological Resources</p>	<p>■ Potential recovery of archaeological resources during construction.</p>	<p>■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered.</p>	<p>■ None identified.</p>

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.</p>	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

**Metrolinx
130 Adelaide Street West
Toronto, Ontario

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 5:08:16 PM
Attachments: [REDACTED]

Dear Chief Nahrgang,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We know that your First Nation does not have capacity as per emails received from [REDACTED]. We would be happy to address a way to assist you with capacity for these projects and welcome an opportunity to speak further about what we can do.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

July 28, 2021

Chief Kris Nahrgang
Kawartha Nishnawbe First Nation
Box 1432 RR#4
Lakefield, ON K0L 2H0
Delivered by email

Dear Chief Nahrgang,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Kawartha Nishnawbe First Nation. Metrolinx appreciates and respects Kawartha Nishnawbe First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Kawartha Nishnawbe First Nation information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Kawartha Nishnawbe First Nation in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Kawartha Nishnawbe First Nation:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	June 5, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Kawartha Nishnawbe First Nation in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Kawartha Nishnawbe First Nation's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Kawartha Nishnawbe First Nation. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Kawartha Nishnawbe First Nation. We are happy to address any questions that Kawartha Nishnawbe First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a long, sweeping underline.

Good afternoon Chief Kris Nahrgang,

This is just a friendly reminder that we are looking for comments be provided for the draft Ontario Line Natural Environment Early Works Report by end of day today, July 2nd. We are also looking for comments to be provided for the draft Ontario Line Early Works Report by end of day tomorrow, July 3rd:

Feel free to contact me if you have any questions.

Thank-you,

Crystal Ho

Good afternoon Chief Kris Nahrgang,

As per the document distribution schedule presented in Metrolinx's June 3rd letter, please find the Ontario Line Draft Early Works Report [REDACTED] via Dropbox. Any comments on the report are requested by **July 3rd**.

As previously communicated, Metrolinx acknowledges the current climate of uncertainty as Indigenous communities are impacted by the COVID-19 pandemic. Please let us know if there are any ways that we can make the review process easier or more accommodating during this time.

Please let us know if you have any questions or have trouble accessing the document.

Thank you,

Kuru Satkunanathan

Good afternoon Chief Kris Nahrgang,

As discussed in our June 3rd correspondence, Metrolinx would like to share the draft Ontario Line Early Works Natural Environment Report with your community for review. The report may be accessed via Dropbox [REDACTED].

We are requesting comments on the report by July 2nd, 2020. However, as mentioned previously, Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and

Indigenous communities, in particular, are impacted by the COVID-19 pandemic. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Good afternoon Chief Kris Nahrgang,

Please find attached a letter detailing the report distribution schedule for the Ontario Line. The Ontario Line Environmental Conditions Natural Environment Report, discussed in the letter, can be found via the Dropbox link [REDACTED].

Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. We recognize that community offices may be closed or have reduced capacity at this time. We are making efforts to ensure that communities can continue to be engaged and included in projects, while balancing the need to adhere to regulatory timelines. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

We know that your First Nation does not have capacity as per emails received from [REDACTED]. We would be happy to address a way to assist you with capacity for these projects and welcome an opportunity to speak further about what we can do. Please feel free to email Fallon Melander, Manager of Indigenous Relations at IndigenousRelations@metrolinx.com

Thank you,

Hello Mr. Mellander,

Please appreciate that the Chief and Councillors of Kawartha Nishnawbe FN are all volunteers. Each of them is busy making a living to support their families while also devoting countless volunteer hours to their duties as leaders of their community. They have no funding whatsoever and no office or staff. In order to participate in your consultations they will either have to miss work or sacrifice evening and weekend time that they would otherwise spend working on the many critical issues facing their community every day. Under the circumstances they have had to make the difficult choice to not participate in consultations such as this.

Sincerely,

[REDACTED]

Subject: Ontario Line Subway Project

Good Afternoon,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. More details about the project can be accessed here:
[REDACTED]

I have attached a letter to this email that provides high level details of the project, which has also been sent to you by registered mail.

Metrolinx would appreciate any interest that your First Nation may have in these projects. We would

welcome the opportunity to provide more information and discuss any interests or questions that you may have. We understand that you may not have capacity to meet based on the last letter received from your counsel [REDACTED] on February 11th but are happy to support any engagement we can.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Miigwetch,

Fallon

Fallon Melander

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Sir/Madam,

Metrolix continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We appreciate the size of these documents. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

We acknowledge that this letter does not replace meaningful engagement. We welcome an opportunity to meet with your Nation and discuss this project in more detail. If you have any questions or concerns, please do not hesitate to contact the Indigenous Relations Office at any time.

Thank you,

Jaimi O'Hara

Delivered by Email

Dear Sir/Madam,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Métis Nation of Ontario.

Metrolinx wishes to build a strong and respectful relationship with Métis Nation of Ontario. Metrolinx appreciates and respects Métis Nation of Ontario's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Métis Nation of Ontario's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website:

www.metrolinx.com/ontarioline

10 Bay Street
Toronto, ON M5J 2N8

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Métis Nation of Ontario with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Métis Nation of Ontario in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if

they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works
Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.
- Lower Don Bridge & Don Yard Early Works
Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.
- Corktown Station Early Works
The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation

where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Métis Nation of Ontario review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Métis Nation of Ontario.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

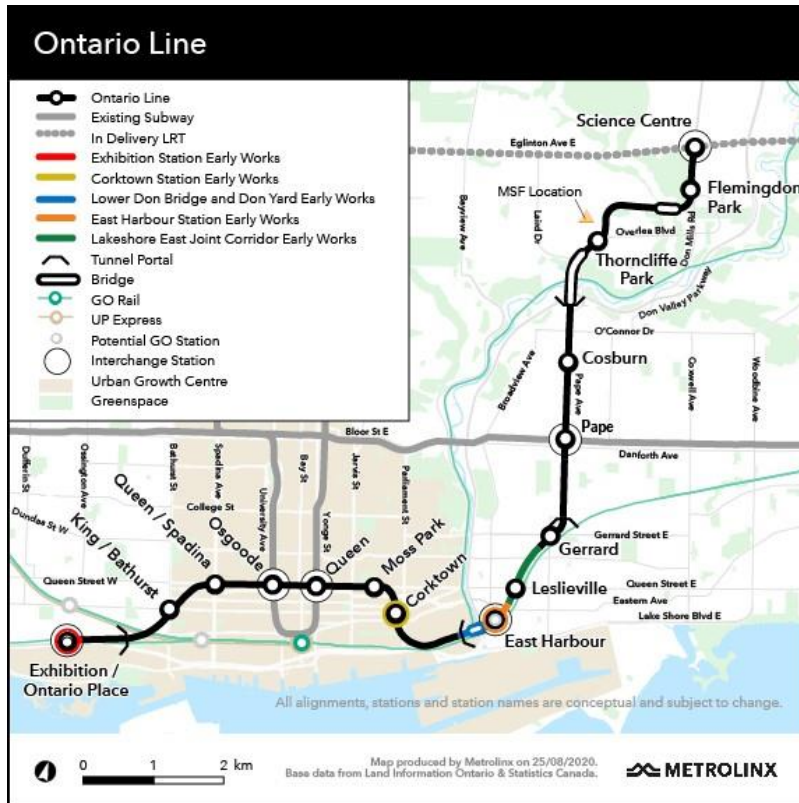

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Métis Nation of Ontario. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Métis Nation of Ontario has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Métis Nation of Ontario in June 2020.

To aid in review for Métis Nation of Ontario, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Métis Nation of Ontario. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Métis Nation of Ontario.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Métis Nation of Ontario should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Métis Nation of Ontario in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Métis Nation of Ontario. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Métis Nation of Ontario. We are happy to assist in the review of these documents by meeting with Métis Nation of Ontario. Metrolinx is willing to address any questions that Métis Nation of Ontario may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Métis Nation of Ontario. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a large, sweeping flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> ■ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ■ Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. ■ Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ■ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ■ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ■ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> ■ Wetlands and Waterbodies ■ Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> ■ None Required 	<ul style="list-style-type: none"> ■ None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential: <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> ▪ Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> ▪ City and private tree removal 	<ul style="list-style-type: none"> ▪ An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. ▪ The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. ▪ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ▪ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ▪ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ▪ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> ▪ Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ▪ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ▪ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive ‘D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ▪ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ▪ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ▪ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 5:10:32 PM
Attachments: [REDACTED]

Dear Sir/Madam,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with MNO. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with MNO to discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Ottawa, ON K1N 9G4
Delivered by Email

Dear Sir/Madam,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Métis Nation of Ontario. Metrolinx appreciates and respects Métis Nation of Ontario's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Métis Nation of Ontario information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Métis Nation of Ontario in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Métis Nation of Ontario:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	July 30, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Métis Nation of Ontario in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Métis Nation of Ontario's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Métis Nation of Ontario. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Métis Nation of Ontario. We are happy to address any questions that Métis Nation of Ontario may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a long, sweeping underline.

Good afternoon,

This is just a friendly reminder that we are looking for comments be provided for the draft Ontario Line Natural Environment Early Works Report by end of day today, July 2nd. We are also looking for comments to be provided for the draft Ontario Line Early Works Report by end of day tomorrow, July 3rd:

Feel free to contact me if you have any questions.

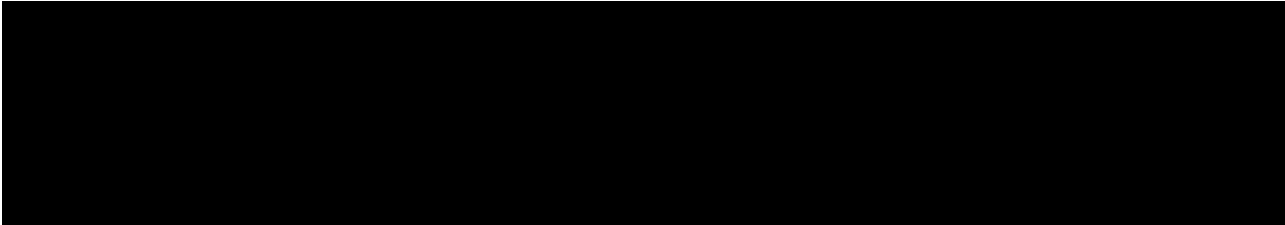

Thank-you,

Crystal Ho

Subject: Ontario Line - Draft Early Works Report

Good afternoon,

As per the document distribution schedule presented in Metrolinx's June 3rd letter, please find the Ontario Line Draft Early Works Report  via Dropbox. Any comments on the report are requested by **July 3rd**.

As previously communicated, Metrolinx acknowledges the current climate of uncertainty as Indigenous communities are impacted by the COVID-19 pandemic. Please let us know if there are any ways that we can make the review process easier or more accommodating during this time.

Please let us know if you have any questions or have trouble accessing the document.

Thank you,

Kuru Satkunanathan

Subject: Ontario Line - Draft Early Works, Natural Environment Report

Good afternoon,

As discussed in our June 3rd correspondence, Metrolinx would like to share the draft Ontario Line Early Works Natural Environment Report with your community for review. The report may be accessed via Dropbox .

We are requesting comments on the report by July 2nd, 2020. However, as mentioned previously, Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Subject: Ontario Line - Draft Environmental Conditions, Natural Environment Report

Good afternoon,

Please find attached a letter detailing the report distribution schedule for the Ontario Line. The Ontario Line Environmental Conditions Natural Environment Report, discussed in the letter, can be found via the Dropbox link [REDACTED].

Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. We recognize that community offices may be closed or have reduced capacity at this time. We are making efforts to ensure that communities can continue to be engaged and included in projects, while balancing the need to adhere to regulatory timelines. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Fawn and Mark,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We appreciate the size of these documents. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

We acknowledge that this letter does not replace meaningful engagement. We welcome an opportunity to meet with your Nation and discuss this project in more detail. If you have any questions or concerns, please do not hesitate to contact the

Indigenous Relations Office at any time.

Thank you,

Dear Ms. Sault,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Mississaugas of the Credit First Nation.

Metrolinx wishes to build a strong and respectful relationship with Mississaugas of the Credit First Nation. Metrolinx appreciates and respects Mississaugas of the Credit First Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Mississaugas of the Credit First Nation's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable

service. More information on the Project can be found on our website:
www.metrolinx.com/ontarioline

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Mississaugas of the Credit First Nation with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Mississaugas of the Credit First Nation in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works
Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.
- Lower Don Bridge & Don Yard Early Works
Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.
- Corktown Station Early Works
The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes

demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Mississaugas of the Credit First Nation review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Mississaugas of the Credit First Nation.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Mississaugas of the Credit First Nation. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Mississaugas of the Credit First Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Mississaugas of the Credit First Nation in June 2020.

To aid in review for Mississaugas of the Credit First Nation, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Mississaugas of the Credit First Nation. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Mississaugas of the Credit First Nation.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Mississaugas of the Credit First Nation should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Mississaugas of the Credit First Nation in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Mississaugas of the Credit First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Mississaugas of the Credit First Nation. We are happy to assist in the review of these documents by meeting with Mississaugas of the Credit First Nation. Metrolinx is willing to address any questions that Mississaugas of the Credit First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Mississaugas of the Credit First Nation. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a large, sweeping flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> Wetlands and Waterbodies Fish and Fish Habitat 	<ul style="list-style-type: none"> There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
<p>Archaeological Potential</p>	<p>■ Potential for the disturbance of unassessed or documented archaeological resources.</p>	<p>■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential:</p> <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. <p>■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment.</p>	<p>■ None identified.</p>
<p>Archaeological Resources</p>	<p>■ Potential recovery of archaeological resources during construction.</p>	<p>■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered.</p>	<p>■ None identified.</p>

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line - Notice of Final Lower Don Bridges and Don Yard Early Works Report - August 25, 2021

Dear Fawn,

Metrolinx recently prepared a Draft Lower Don Bridges and Don Yard Early Works Report in support of the Ontario Line Project, which was available for public review from June 22, 2021 to July 22, 2021. In accordance with Ontario Regulation 341/20: Ontario Line Project, Metrolinx updated the Draft Lower Don Bridges and Don Yard Early Works Report and published the Final Lower Don Bridges and Don Yard Early Works Report on August 25, 2021.

The full Final Report can be found at the following link:

Of note in the Final EWR, is the addition of a marine archaeological assessment as part of the mitigation measures for in-water works. We acknowledge that in-water works may be of significant interest to your Nation, and as such we will be sharing additional details and engagement on proposed in-water works and a copy of the draft marine archaeological assessment in the coming weeks. We recognize that your Nation may wish to participate in any required in water works and we will ensure that an invitation to participate will be included in the forthcoming communication.

Within 35 days after receipt of the Notice of Final Lower Don Bridges and Don Yard Early Works Report, the Minister of the Environment, Conservation and Parks may issue a notice to Metrolinx imposing conditions related to the early works. Once the Minister gives Notice, confirms that no notice will be given, or the 35-day Minister's review period is complete, Metrolinx will proceed with early works as described in the Final Lower Don Bridges and Don Yard Early Works Report, subject to any conditions imposed by the Minister.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 5:09:18 PM
Attachments: [REDACTED]

Dear Fawn & Mark,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Métis Consultation Unit
Métis Nation of Ontario
500 Old St. Patrick Street, Unit D
Ottawa, ON K1N 9G4
Delivered by Email

Dear Sir/Madam,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Métis Nation of Ontario. Metrolinx appreciates and respects Métis Nation of Ontario's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Métis Nation of Ontario information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Métis Nation of Ontario in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Métis Nation of Ontario:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	July 30, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Métis Nation of Ontario in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Métis Nation of Ontario's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Métis Nation of Ontario. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Métis Nation of Ontario. We are happy to address any questions that Métis Nation of Ontario may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a long, sweeping underline.

Good afternoon Ms. Fawn Sault,

This is just a friendly reminder that we are looking for comments be provided for the draft Ontario Line Natural Environment Early Works Report by end of day today, July 2nd. We are also looking for comments to be provided for the draft Ontario Line Early Works Report by end of day tomorrow, July 3rd:

Feel free to contact me if you have any questions.

Thank-you,

Crystal Ho

Good afternoon Ms. Fawn Sault,

As per the document distribution schedule presented in Metrolinx's June 3rd letter, please find the Ontario Line Draft Early Works Report  via Dropbox. Any comments on the report are requested by **July 3rd**.

As previously communicated, Metrolinx acknowledges the current climate of uncertainty as Indigenous communities are impacted by the COVID-19 pandemic. Please let us know if there are any ways that we can make the review process easier or more accommodating during this time.

Please let us know if you have any questions or have trouble accessing the document.

Thank you,

Kuru Satkunanathan

Good afternoon Ms. Fawn Sault,

As discussed in our June 3rd correspondence, Metrolinx would like to share the draft Ontario Line Early Works Natural Environment Report with your community for review. The report may be

accessed via Dropbox [REDACTED].

We are requesting comments on the report by July 2nd, 2020. However, as mentioned previously, Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Good morning Ms. Fawn Sault,

Please find attached a letter detailing the report distribution schedule for the Ontario Line. The Ontario Line Environmental Conditions Natural Environment Report, discussed in the letter, can be found via the Dropbox link [REDACTED].

Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. We recognize that community offices may be closed or have reduced capacity at this time. We are making efforts to ensure that communities can continue to be engaged and included in projects, while balancing the need to adhere to regulatory timelines. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Subject: Ontario Line Subway Project
Date: February 12, 2020 12:59:02 PM
Attachments: [REDACTED]

Good Afternoon Mark and Fawn,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. More details about the project can be accessed here:
[REDACTED]

I have attached a letter to this email that provides high level details of the project, which has also been sent to you and Chief LaForme's office by registered mail.

Metrolinx would appreciate any interest that the Mississaugas of the Credit First Nation may have in these projects. We look forward to setting up a meeting in the near future as discussed.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Miigwetch,

Fallon

- G Finch West LRT

METROLINX - THE SUBWAY PROGRAM

MetroLinx and its partners are delivering on a bold, forward-looking transportation plan. The goals of the 2041 Regional Transportation Plan (RTP) are to create strong connections, complete travel experiences and sustainable communities. The Subway Program is a key component of this plan.

The Subway Program consists of four (4) transit projects:

1. The Ontario Line

- [REDACTED]
- [REDACTED]
- [REDACTED]

Metrolinx is the sole proponent of all four (4) projects.

Environmental Assessments for the Subway Program

METROLINX - ENVIRONMENTAL ASSESSMENT

- Today we will discuss the Subway program, with a focus on the Ontario Line.
- Typically, project impact assessment follow the Transit Project Assessment Process (TPAP) - a type of environmental assessment. An Environmental Project Report (EPR) documents the TPAP and is circulated for review.
- The [REDACTED] and [REDACTED] will be following the addendum process outlined in the TPAP.
- Project-specific notification letters are sent to the Mississaugas of the Credit First Nation at study milestones. The letters share project details and request feedback regarding interest in projects and the approach to engagement.

TRANSIT PROJECT ASSESSMENT PROCESS (TPAP) - ADDENDUM PROCESS

[REDACTED] and [REDACTED] projects currently underway will be making significant updates to existing EPRs. This significant addendum process will follow O. Reg. 231/08:

- Metrolinx releases Notice of Significant Addendum
- 30-Day Public Review Process to make any Objections

- [REDACTED]
- 35-Day Minister's Review of Objections

- [REDACTED]

- [REDACTED]

THE PROPOSED ONTARIO LINE EA REGULATION

The Ontario Line is planned to be assessed in accordance with the new Ontario Line Environmental Assessment Regulation.

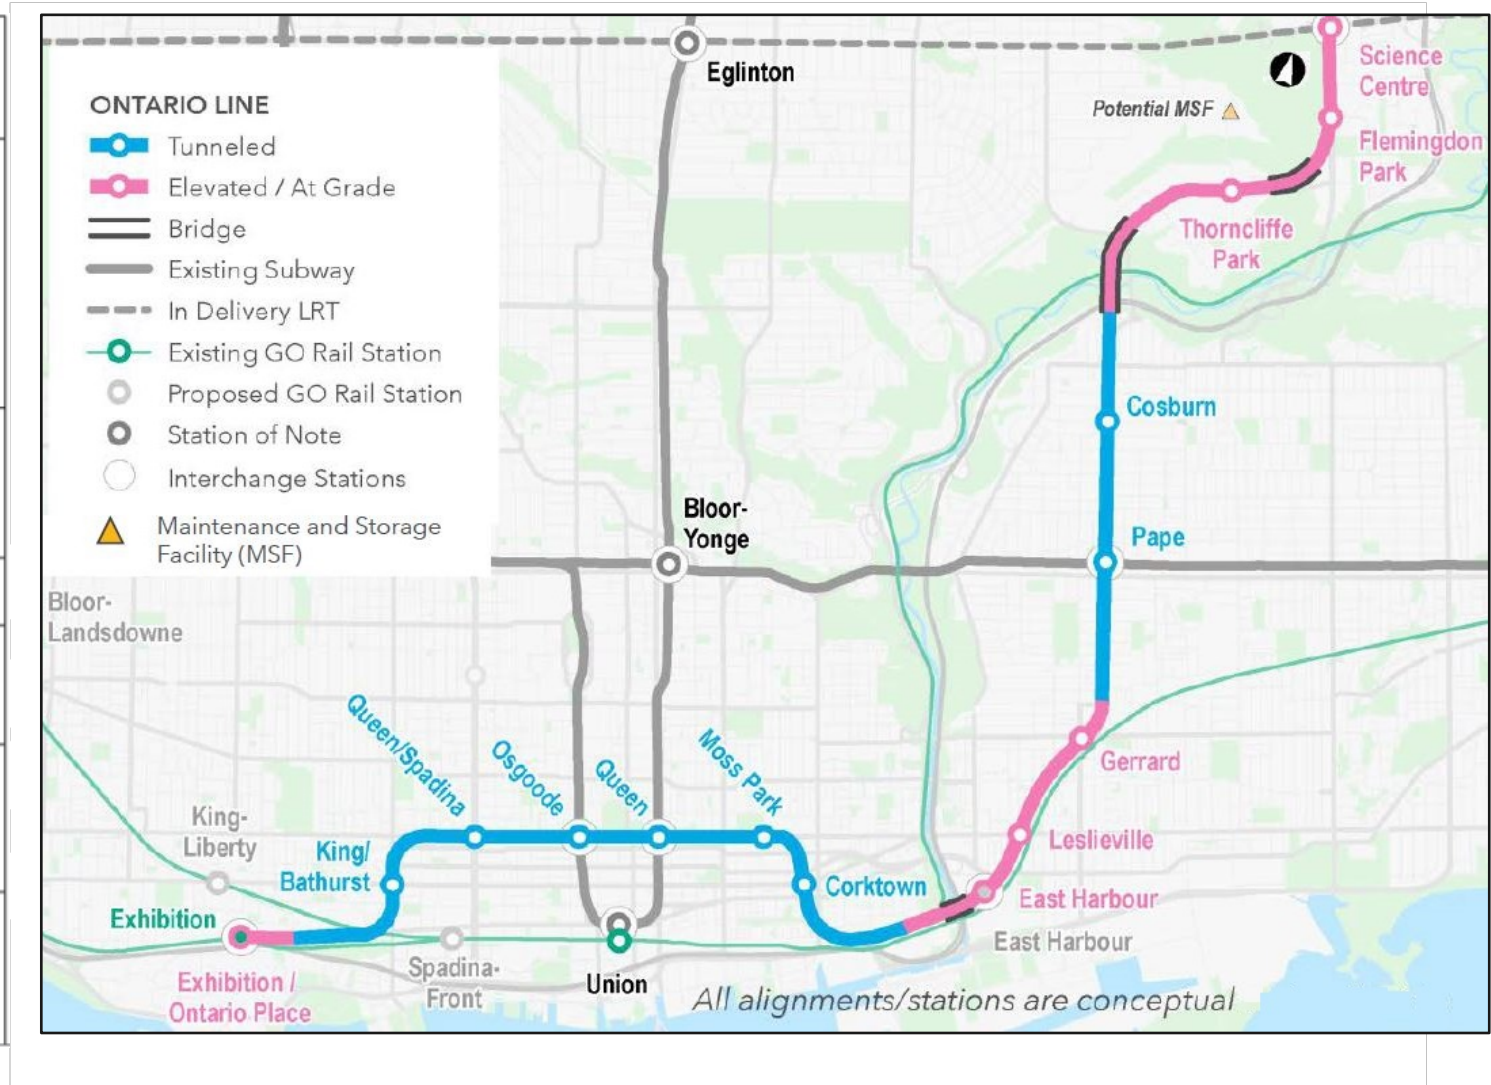

This regulation was available for review from February 18th, 2020 to March 19th, 2020 on the Environmental Registry of Ontario. The regulation outlines a Project-specific EA process that requires:

- Public, regulatory agency and Indigenous communities notification and consultation;
- Environmental Conditions and Environmental Impact Assessment Report(s), and provides opportunity for Early Works Report(s) for assessment of works that are planned to proceed in advance of main works; and
- Metrolinx to address concerns through an issues resolution process (IRP).

EA Highlights - Ontario Line

ONTARIO LINE (OL)

Number of proposed stations	15
Number of connections to other transit options	17 <ul style="list-style-type: none"> • 3 GO lines • 4 connections to Line 1, 2 and 5 (Eglinton Crosstown) • 10 connections to King, Queen, Bathurst, Spadina, Harbourfront and Gerrard/Carlton streetcars
Approximate number of route kilometres	15.5 km
Ridership	389,000 daily boardings
Frequency	As frequent as every 90 seconds
Access to transit	154,000 more people within walking distance to transit
Access to jobs	53,000 more jobs accessible in 45 minutes or less for Toronto residents

OL - ARCHAEOLOGICAL WORK AND ENGAGEMENT

Archaeological assessments were conducted in three distinct sections:

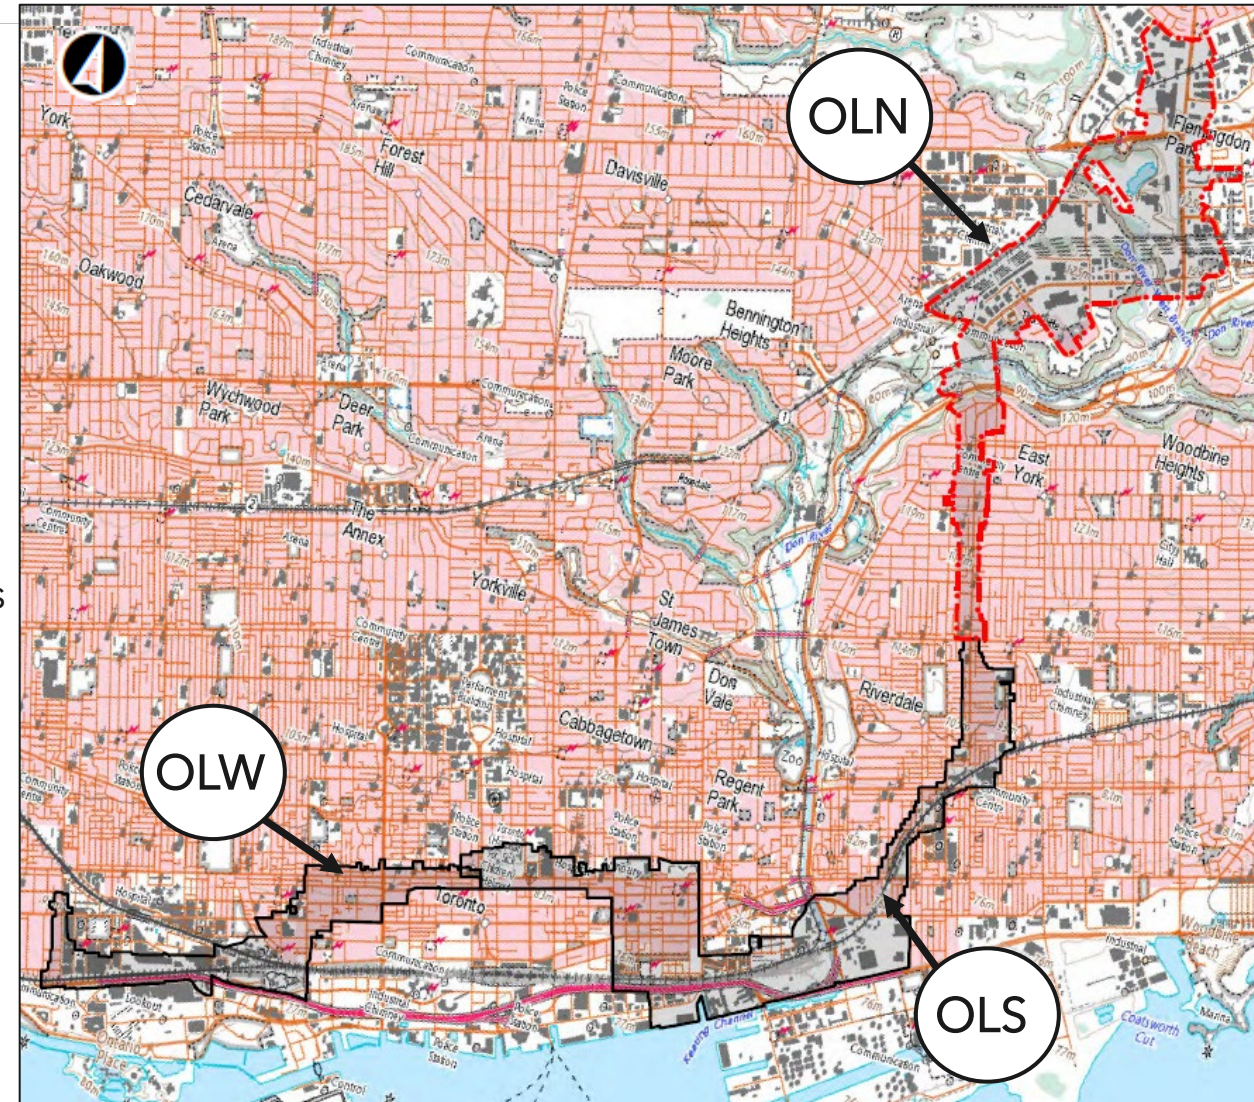

- Ontario Line North (OLN)
- Ontario Line South (OLS)
- Ontario Line West (OLW)

Stage 1 Archaeological Assessment

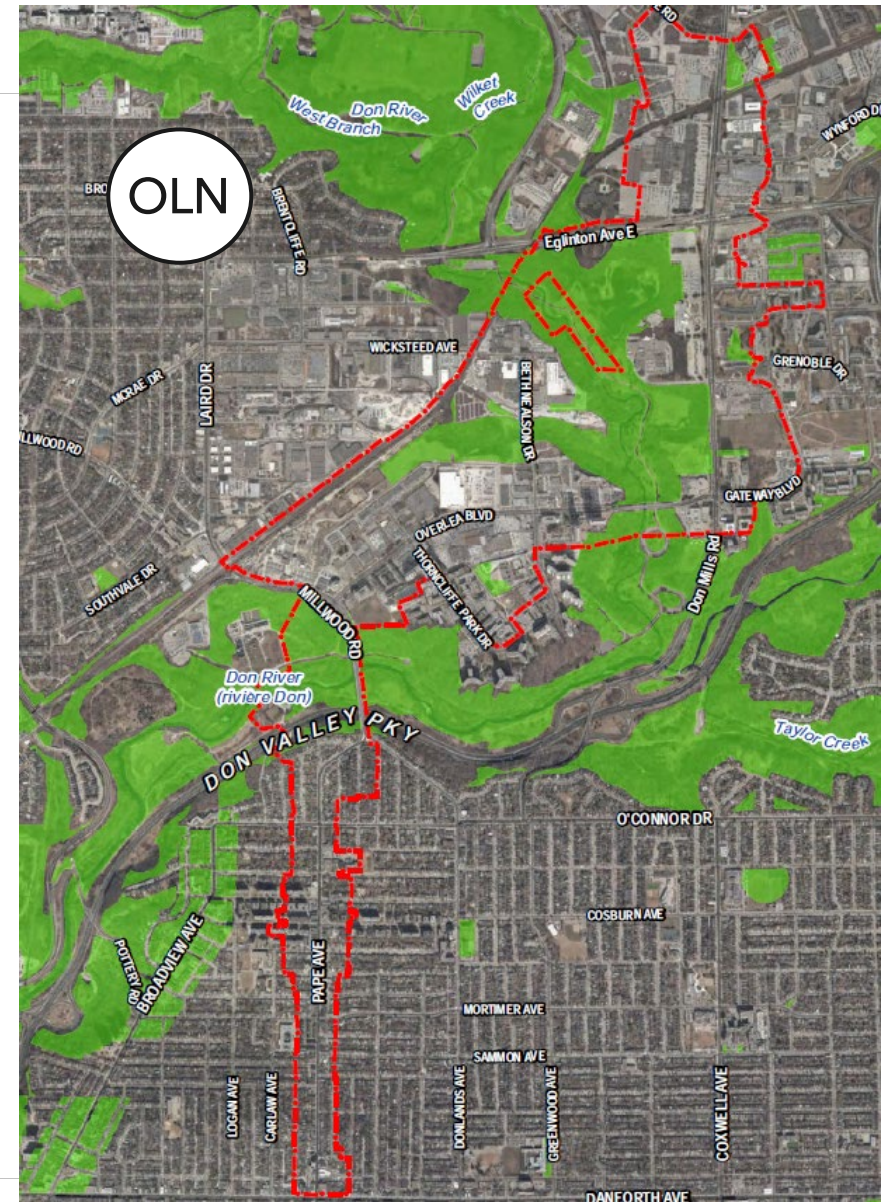

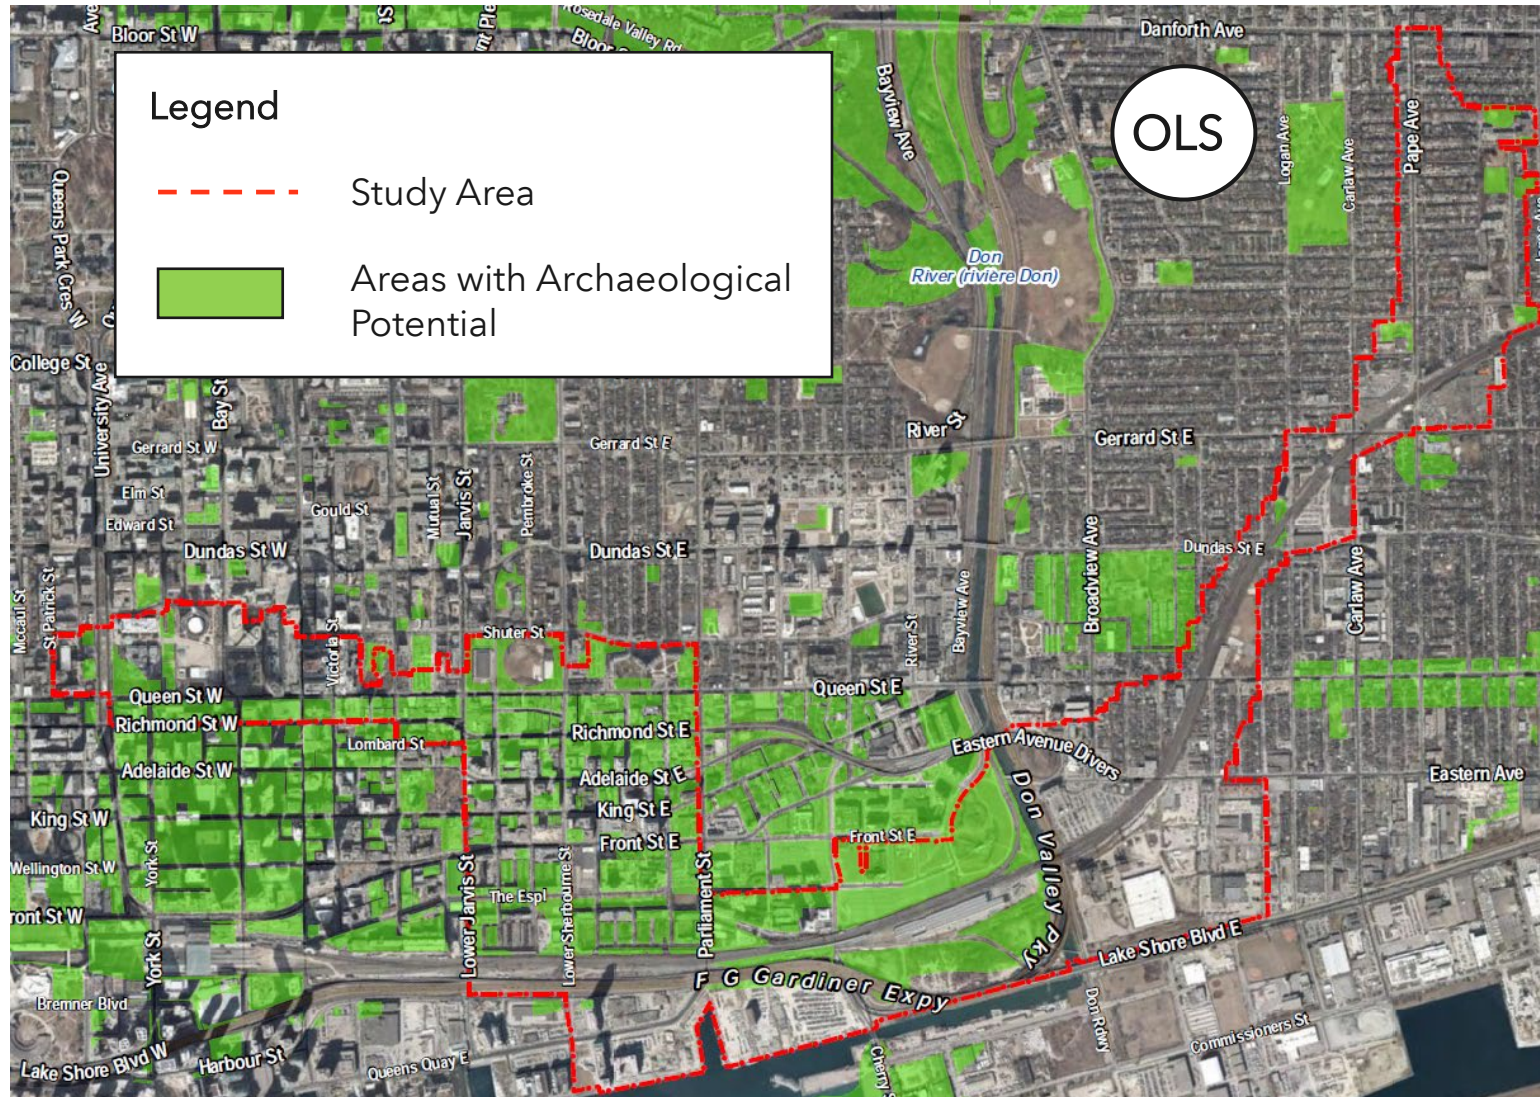

- Assessments were conducted for all three sections, with field review completed on October 30th, 2019
- Stage 1 reports were shared with Indigenous Communities on March 26th, 2020
- Stage 1 reports were submitted to the MHSTCI on May 29th, 2020

Stage 2 Archaeological Assessment

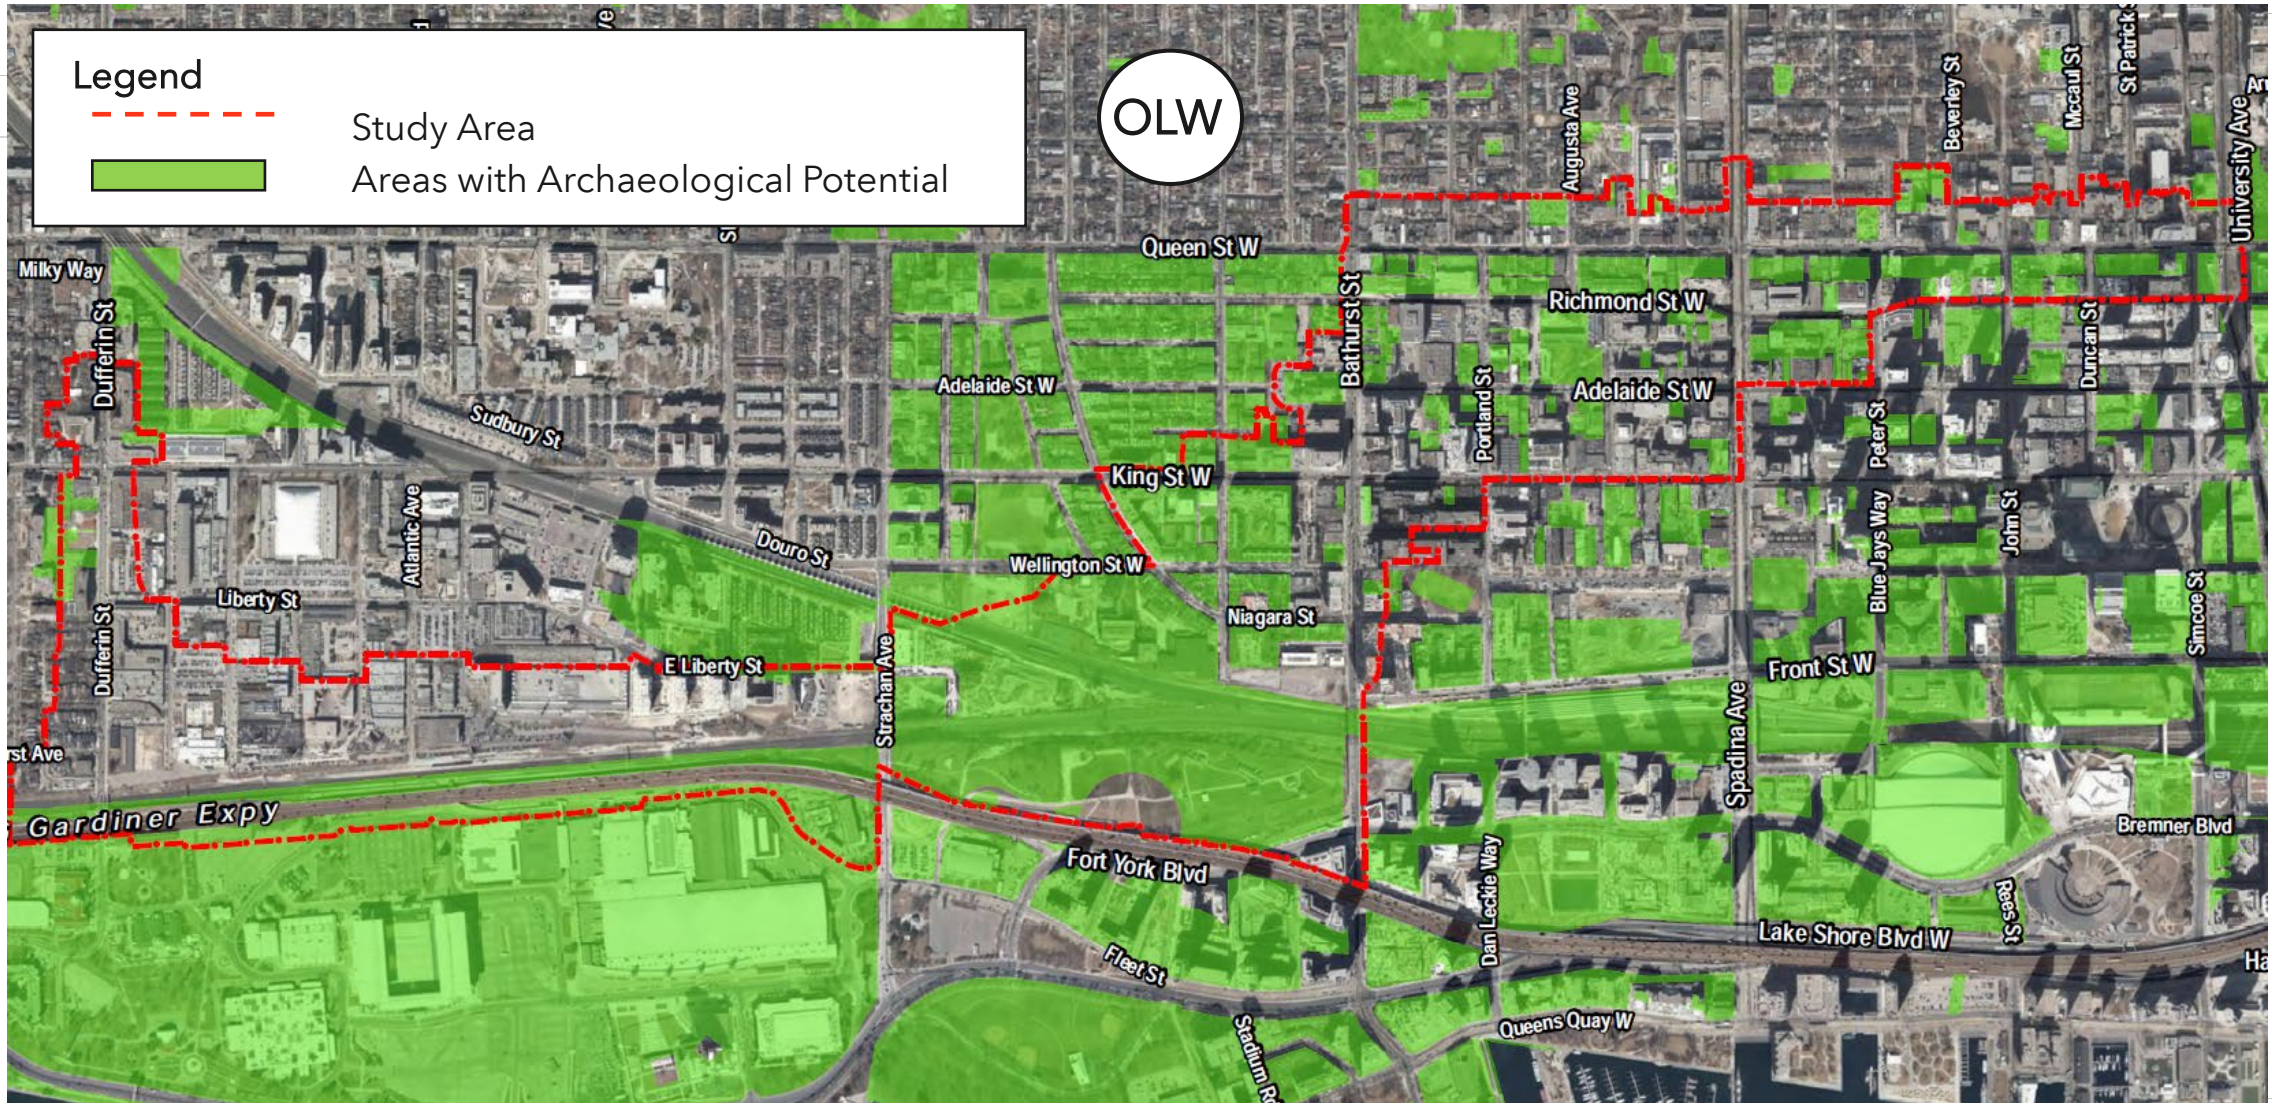

- Stage 2 assessments for areas with archaeological potential will start as early as summer 2020

OL - ARCHAEOLOGICAL WORK AND ENGAGEMENT

OL - ARCHAEOLOGICAL WORK AND ENGAGEMENT

OL - NATURAL ENVIRONMENT STUDIES

- Existing data review and field studies to conduct:
 - Ecological land classification, and plant and wildlife inventories
 - Fish habitat assessments
 - Species at risk habitat screening and surveys

Environmental Conditions Natural Environment Report:

- Report sent to Indigenous Communities on June 3rd, 2020
- Comments requested by June 30th, 2020

Early Works Natural Environment Report:

- Report sent to Indigenous Communities on June 4th, 2020
- Comments requested by July 2nd, 2020

Crossing of the Lower Don River Valley at Millwood Road Overpass Bridge

Millwood Road Overpass Bridge crossing the Don River

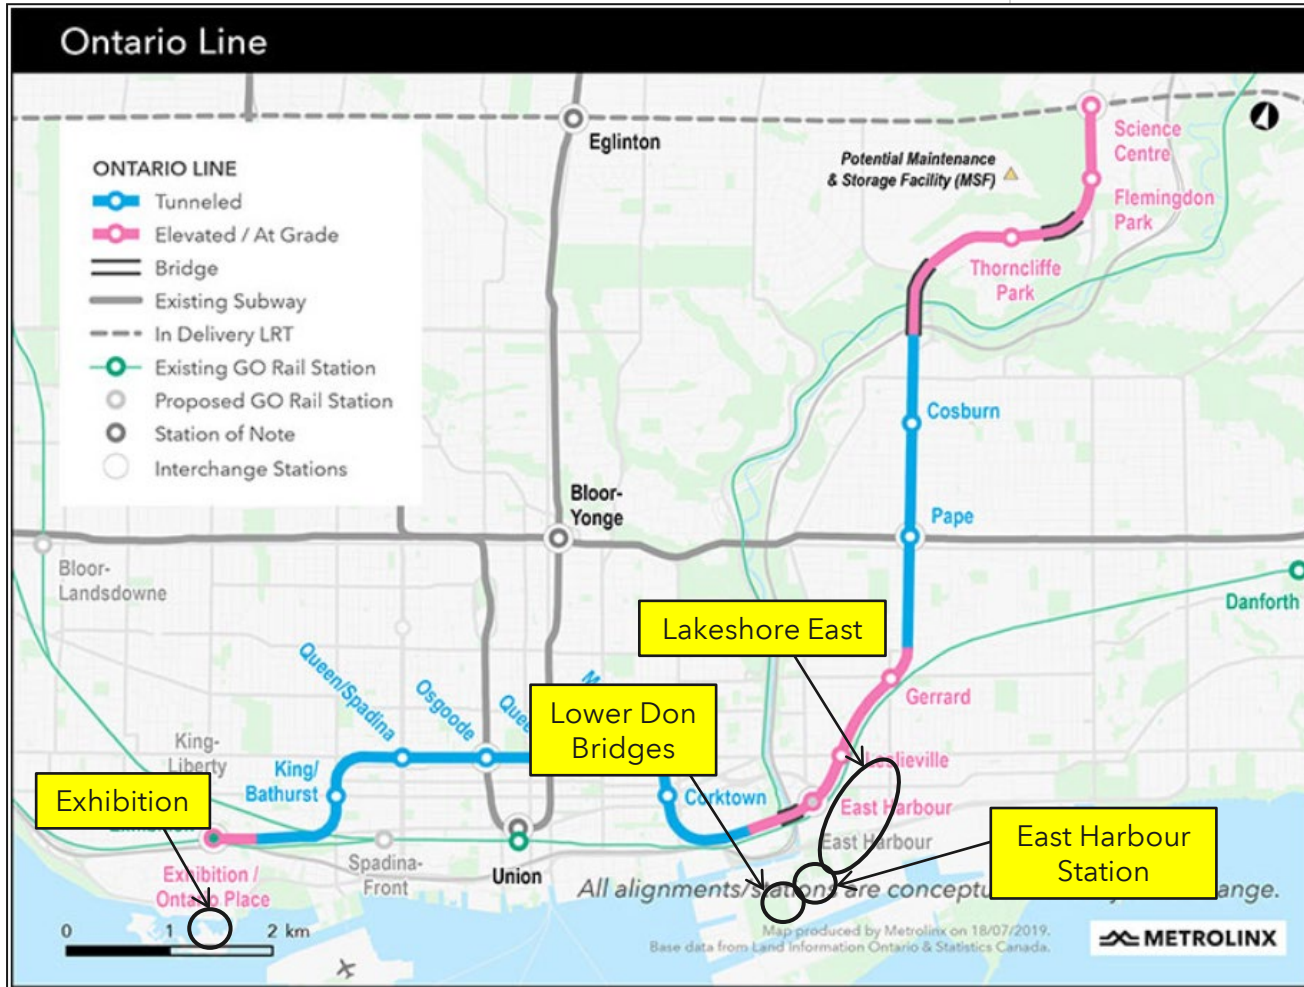

Don River West Branch north of Overlea Boulevard

OL - DRAFT REPORTS REVIEW

Report	Technical Report/Memorandum	Tentative date to Reviewer	Business Days for Review	Date comments sent to Metrolinx
Environmental Conditions	Draft Environmental Conditions Natural Environment Report	June 3	20	June 30
	Draft Environmental Conditions Report (Interim Draft)	June 15	20	July 10
Early Works	Draft Early Works Natural Environment Report	June 4	20	July 2
	Draft Early Works Report	June 5	20	July 3

OL - EARLY WORKS

Early Works Locations	Scope of Work
Exhibition	<ul style="list-style-type: none"> • New passenger tunnels and vertical accesses • Platform improvements
Lower Don Bridges	<ul style="list-style-type: none"> • Two (2) new OL bridges for the OL tracks and multi-use access
East Harbour Station	<ul style="list-style-type: none"> • Two (2) island platforms • Platform access tunnels and vertical accesses • Eastern Ave bridge replacement and expansion
Lakeshore East	<ul style="list-style-type: none"> • Rail corridor widening • Two (2) bridges at Dundas St E, Queen St E and Logan Ave (total of 6) • Noise Walls

OL - EARLY WORKS

The Early Works report details the existing conditions, predicted impacts, and potential mitigation measures on the Early Works Study Area:

- Exhibition Station
- Lower Don River Crossing
- East Harbour Station
- Lakeshore East Joint Corridor

Future commitments include:

- Nest checks for protected birds for any structures anticipated to be modified, disturbed, or replaced to facilitate the construction of the Early Works
- Assessment of potential impacts on fish and fish habitat within the Don River in support of a Fisheries and Oceans Canada (DFO) Request for Review (RfR)
- Complete all Stage 2 Archaeological Assessments (and Stage 3 if applicable), prior to completion of detailed design, and well in advance of any ground disturbance

SUBWAY PROGRAM EA SUMMARY - NEXT STEPS

	The Ontario Line	
Completed Environmental Assessment Work	<p>Draft Early Works Report</p> <p>Draft Environmental Conditions Report</p>	[Redacted Content]
Upcoming Milestone	Notice of Early Works and Environmental Conditions Report	
Estimated Milestone Date	Mid-late July	

Metrolinx and Mississaugas of the Credit First Nation Subways Program Meeting		
DATE/TIME:	June 11th, 2020 / 1:00 pm – 3:00pm	
LOCATION:	Videoconference	
PREPARED BY:	Metrolinx	
IN ATTENDANCE (by phone)		
<ul style="list-style-type: none"> • Mark LaForme – MCFN • Fawn Sault – MCFN • Megan DeVries - MCFN • Fallon Melander – Metrolinx 	<ul style="list-style-type: none"> • Aaron McMillan – Metrolinx • Franca Di Giovanni – Metrolinx • Carrie Sheaffer – Metrolinx • James Francis - Metrolinx 	<ul style="list-style-type: none"> • Jaimi O’Hara – Metrolinx • Rodney Yee – Metrolinx • Malcom Mackay – Metrolinx • Paul Ritchie – Stantec

MINUTES	
TOPIC / COMMENTS	ACTION BY
Welcome and Introductions	
<ul style="list-style-type: none"> • The purpose of this meeting was to discuss the Subways Program, and specifically the Ontario Line project. The meeting was chaired by Fallon Melander, Manager of Indigenous Relations at Metrolinx. • Mark LaForme and Megan DeVries provided an overview of the Mississaugas of the Credit First Nation, the Department of Consultation and Accommodation and the Archaeological Field Liaison Representatives program. • Metrolinx’s Environmental Programs and Assessments (EPA) group presented an overview of the Subways program, associated environmental assessments, as well as an overview of archaeology that has been completed to date. 	MX – Indigenous Relations
Overview of MCFN, DOCA and the FLR Program	
<ul style="list-style-type: none"> • Mark LaForme, Director of the Department of Consultation and Accommodation provided an overview of the history and role of DOCA and the treaty and traditional lands of MCFN • Mark LaForme expressed an interest in having Darren, the Traditional Land Use Coordinator and Band historian to provide a comprehensive presentation on the history of MCFN to Metrolinx – ACTION ITEM: IRO to work with MCFN to set up an opportunity in the future • Mark LaForme noted that the COVID-19 pandemic has impacted DOCA’s capacity to review reports and hire new staff • Megan DeVries the provided an overview of the involvement of DOCA and FLRs in projects – she indicated that all Stage 2 Archaeological Mx project work would require the involvement of FLRs. She also indicated that the reports that have been sent to MCFN on the Subways have not been reviewed due to the COVID-19 crisis and the direction by the MCFN Chief and Council. • Mark LaForme commented that including field monitors in project work is considered a small ‘a’ accommodation; mentioned that project notification letters should come to Fawn, with only Mark being cc’d and not the chief as it presents an inefficiency ACTION ITEM: Mx to note that Chief LaForme should not be cc’d on Metrolinx correspondence in the future 	
Overview of Subway Program	

<ul style="list-style-type: none"> • Malcom Mackay, Sponsor for the Subway Program at Metrolinx, provided an overview of the Subways Projects and specifically the Ontario Line. • James Francis, Senior Manager, Environmental Programs and Assessments at Metrolinx provided an overview of the Transit Project Assessment Process and new proposed Ontario Line Regulation. He reviewed the new Metrolinx-led process for objections under this new regulation. • Fawn Sault, Consultation Coordinator, DOCA, asked what happens if objections are not resolved by Metrolinx – is there another process or way to have objections addressed or resolved? • James Francis confirmed that the new regulation will be administered by Metrolinx, and as such Metrolinx will work through all objections and hopefully will be ahead of any concerns through continuous engagement and meaningfully addressing any issues 	
--	--

Ontario Line

<ul style="list-style-type: none"> • Paul Ritchie, Stantec, provided an overview of the archaeological assessment completed to date for Ontario Line • Mark LaForme asked specifically about the Portlands and what interactions, if any, had occurred between Metrolinx and Waterfront Toronto • Malcom Mackay noted that Metrolinx had had meetings with Waterfront Toronto to inform them of planning and alignment as well as the environmental works. He confirmed that the project design footprint does not go through the Portlands, but the furthest southern portion of the project footprint is in the Don Yards. • Megan DeVries noted that a primary concern for MCFN is findings within archaeological assessments of having archaeological potential vs areas of excessive disturbance, especially in Toronto, with the position that too often archaeologists declare areas as too excessively disturbed to have archaeological potential, when this may not be the case. [REDACTED] • Rodney Yee, Project Coordinator for Ontario Line at Metrolinx provided an overview of the Natural Environmental Reports and Early Works Natural Environment Report • Mark LaForme asked if any amphibian surveys had been done. ACTION ITEM: Rodney Yee to follow up and confirm regarding amphibian studies • Megan DeVries identified that MCFN was interested in Species At Risk Surveys and other environmental surveys, and asked that they be sent to MCFN so they can have an internal conversation to discuss the approach to review and opportunities to be involved. ACTION ITEM: Rodney Yee to send all surveys and a report list to MCFN for the Subways Program • James Francis provided information on the Draft Environmental Reports, noting that the review period had begun. He acknowledged that the time for review is short, and that it may not be feasible. • Mark LaForme commented that MCFN does not currently have capacity to review all environmental reports. The main concern for MCFN is ensuring that there is engagement during surveys and assessments, and that MCFN is provided lists. He noted that if Metrolinx requires comment for MCFN, and the lack of comment is causing a delay in moving the project forward in the regulatory process, that Metrolinx can notify MCFN and they will make every effort to expedite comment, but may not have capacity to review in detail. 	
--	--

<p>[REDACTED]</p>	
-------------------	--

[REDACTED]	
<div style="display: flex;"> <div style="width: 20px; height: 20px; background-color: black; margin-right: 5px;"></div> <div style="width: 100%; height: 100%; background-color: black; border: 1px solid black;"></div> </div>	
Next Steps	
<ul style="list-style-type: none"> • Mark LaForme thanked Metrolinx for the presentation and reiterated that MCFN would like to be involved in any archaeology. He commented on future environmental assessments work, and expressed interest in being involved. He noted that DOCA is working on a process to issue notice of receipt on project notification letters, but until that time, they do not mind follow up calls.

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Chief LaRocca,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We appreciate the size of these documents. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

We acknowledge that this letter does not replace meaningful engagement. We welcome an opportunity to meet with your Nation and discuss this project in more

detail. If you have any questions or concerns, please do not hesitate to contact the Indigenous Relations Office at any time.

Thank you,

Jaimi O'Hara

Port Perry, ON L9L 1B6

Delivered by Email

Dear Chief LaRocca,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Mississaugas of Scugog Island First Nation.

Metrolinx wishes to build a strong and respectful relationship with Mississaugas of Scugog Island First Nation. Metrolinx appreciates and respects Mississaugas of Scugog Island First Nation's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Mississaugas of Scugog Island First Nation's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website:

www.metrolinx.com/ontarioline

10 Bay Street

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Mississaugas of Scugog Island First Nation with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Mississaugas of Scugog Island First Nation in June 2020 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if

they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works
Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.
- Lower Don Bridge & Don Yard Early Works
Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.
- Corktown Station Early Works
The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation

where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station

was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Mississaugas of Scugog Island First Nation review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Mississaugas of Scugog Island First Nation.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Mississaugas of Scugog Island First Nation. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Mississaugas of Scugog Island First Nation has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Mississaugas of Scugog Island First Nation in June 2020.

To aid in review for Mississaugas of Scugog Island First Nation, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early

works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Mississaugas of Scugog Island First Nation. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Mississaugas of Scugog Island First Nation.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Mississaugas of Scugog Island First Nation should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Mississaugas of Scugog Island First Nation in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Mississaugas of Scugog Island First Nation. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Mississaugas of Scugog Island First Nation. We are happy to assist in the review of these documents by meeting with Mississaugas of Scugog Island First Nation. Metrolinx is willing to address any questions that Mississaugas of Scugog Island First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Mississaugas of Scugog Island First Nation. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a stylized flourish at the end.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> ■ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ■ Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. ■ Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ■ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ■ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ■ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ■ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> ■ Wetlands and Waterbodies ■ Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> ■ None Required 	<ul style="list-style-type: none"> ■ None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential: <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.</p>	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 5:11:21 PM
Attachments: [REDACTED]

Dear Chief LaRocca,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Chief Kelly LaRocca
Mississaugas of Scugog Island First Nation
22521 Island Road, RR#5
Port Perry, ON L9L 1B6
Delivered by Email

Dear Chief LaRocca,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Mississaugas of Scugog Island First Nation. Metrolinx appreciates and respects Mississaugas of Scugog Island First Nation's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Mississaugas of Scugog Island First Nation information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with Mississaugas of Scugog Island First Nation in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Mississaugas of Scugog Island First Nation:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	June 5, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Mississaugas of Scugog Island First Nation in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Mississaugas of Scugog Island First Nation's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Mississaugas of Scugog Island First Nation. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Mississaugas of Scugog Island First Nation. We are happy to address any questions that Mississaugas of Scugog Island First Nation may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a long horizontal flourish extending to the right.

Good afternoon Chief Kelly LaRocca,

This is just a friendly reminder that we are looking for comments be provided for the draft Ontario Line Natural Environment Early Works Report by end of day today, July 2nd. We are also looking for comments to be provided for the draft Ontario Line Early Works Report by end of day tomorrow, July 3rd:

Feel free to contact me if you have any questions.

Thank-you,

Crystal Ho

Subject: Ontario Line - Draft Early Works Report

Good afternoon Chief Kelly LaRocca,

As per the document distribution schedule presented in Metrolinx's June 3rd letter, please find the Ontario Line Draft Early Works Report  via Dropbox. Any comments on the report are requested by **July 3rd**.

As previously communicated, Metrolinx acknowledges the current climate of uncertainty as Indigenous communities are impacted by the COVID-19 pandemic. Please let us know if there are any ways that we can make the review process easier or more accommodating during this time.

Please let us know if you have any questions or have trouble accessing the document.

Thank you,

Kuru Satkunanathan

Subject: Ontario Line - Draft Early Works, Natural Environment Report

Good afternoon Chief Kelly LaRocca,

As discussed in our June 3rd correspondence, Metrolinx would like to share the draft Ontario Line Early Works Natural Environment Report with your community for review. The report may be accessed via Dropbox .

We are requesting comments on the report by July 2nd, 2020. However, as mentioned previously, Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Good afternoon Chief Kelly LaRocca,

Please find attached a letter detailing the report distribution schedule for the Ontario Line. The Ontario Line Environmental Conditions Natural Environment Report, discussed in the letter, can be found via the Dropbox link [REDACTED].

Metrolinx acknowledges the current climate of uncertainty as communities across Ontario, and Indigenous communities, in particular, are impacted by the COVID-19 pandemic. We recognize that community offices may be closed or have reduced capacity at this time. We are making efforts to ensure that communities can continue to be engaged and included in projects, while balancing the need to adhere to regulatory timelines. As such, please let us know if there are any ways that we can make this process easier or more accommodating.

Thank you,

Kuru Satkunanathan

Good Afternoon,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. More details about the project can be accessed here:

[REDACTED]

I have attached a letter to this email that provides high level details of the project, which has also been sent to you by registered mail.

Metrolinx would appreciate any interest that your First Nation may have in these projects. We would welcome the opportunity to meet with you to provide more information and discuss any interests or questions that you may have.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Miigwetch,

Fallon

Subject: Ontario Line Project: Draft Lakeshore East Joint Corridor and Draft East Harbour Station Early Works Review

Dear Lonny and Team,

Metrolinx continues to progress its environmental studies for the Ontario Line Project as part of the Subways Program. Attached you will find a letter outlining the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report prepared for the Ontario Line Project and provide a continued invitation for feedback. In an effort to streamline your review, we draw your attention to the attachments which provide an overview of the expected environmental impacts and proposed mitigations, as we know this may be of specific interest to you.

We appreciate the size of these documents. Please let us know if you would like a meeting to review the project with our environmental teams. We ask that your Nation provide any comments no later than October 24, 2021.

The reports are available at the following link:

We acknowledge that this letter does not replace meaningful engagement. We welcome an opportunity to meet with your Nation and discuss this project in more

detail. If you have any questions or concerns, please do not hesitate to contact the Indigenous Relations Office at any time.

Thank you,

Jaimi O'Hara

Delivered by Email

Dear Mr. Bomberry,

RE: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of new subway service to Toronto. The purpose of this letter is to share information regarding the Ontario Line project with Six Nations of the Grand River.

Metrolinx wishes to build a strong and respectful relationship with Six Nations of the Grand River. Metrolinx appreciates and respects Six Nations of the Grand River's desire to be appropriately informed and aware of projects. Metrolinx wishes to share information regarding the Lakeshore East Joint Corridor and East Harbour Station early works. We invite Six Nations of the Grand River's feedback on the Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report, prepared for the Ontario Line Project.

Project Description

The Ontario Line which will bring 15.6 kilometres of subway service to Toronto. The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable

service. More information on the Project can be found on our website:
www.metrolinx.com/ontarioline

Ontario Line Environmental Assessment Process and Reports

In 2020, Metrolinx provided Six Nations of the Grand River with an outline of the Ontario Line environmental assessment process. The environmental assessment for the Ontario Line Project is being completed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) made under the *Environmental Assessment Act*. The regulation outlines a Project-specific environmental assessment that includes an Environmental Conditions Report, an Environmental Impact Assessment Report and provides opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of the Environmental Impact Assessment Report. An overview of the reports is outlined below and their anticipated publication timeline is provided in **Attachment 1**.

Environmental Conditions Report

The Environmental Conditions Report characterizes existing environmental conditions within the Ontario Line study area through a combination of desktop review and field studies and was finalized in November 2020. The report also summarizes potential impacts and mitigation measures for consideration during project planning and design. Potential impacts and mitigation measures identified in the Environmental Conditions Report will be confirmed and refined within the Early Works Reports and the Environmental Impact Assessment Report.

Early Works Reports

Metrolinx is assessing several early works components to support the main construction of the Ontario Line project. Early works are components of the Ontario Line Project that are anticipated to be ready to proceed before completion of the Environmental Impact Assessment Report, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion, as defined in O. Reg. 341/20.

Initially, the early works required to support the Ontario Line project were assessed in a single report, which was shared with Six Nations of the Grand River in July 2021 and included Exhibition Station, Lower Don Bridges, Lakeshore East Joint Corridor and East Harbour Station early works.

Since then, the single Early Works Report has been split into several Early Works Reports, each covering either a single early works location or multiple locations if they are in close proximity. Each Early Works Report provides a description of the early works and alternatives considered, documents local environmental conditions, and outlines early works-specific environmental impacts, mitigation measures, monitoring activities, potentially required permits and approvals and other components.

Previously completed early-works reports have been summarized below:

- Exhibition Station Early Works

Ontario Line trains will be above ground at Exhibition Station, which currently accommodates GO Train and VIA rail services as well as freight rail operations. GO Expansion plans call for more GO train services and, as a result, supporting infrastructure (e.g., electrification) and system upgrades at Exhibition Station. Therefore, Metrolinx is carrying out early works for the Ontario Line in this area to ensure both of these important transit expansion projects are properly coordinated and completed in a timely manner. The Exhibition Station early works will include modifications and improvements to the existing Exhibition GO Station, including extension of the existing passenger tunnel, construction of vertical accesses, construction of new north platform, shifting of the two northern-most GO tracks, construction of a temporary pedestrian bridge, and relocating utilities. The Exhibition Station early works report was finalized on March 9, 2021.

- Lower Don Bridge & Don Yard Early Works

Lower Don Bridge early works have been documented in the Lower Don Bridge and Don Yard Early Works Report. This report also included early works in the Don Yard, early works component that was not included in the initial Early Works Report draft. Don Yard early works include shift of the GO tracks in the Don Yard area to accommodate future Ontario Line infrastructure located in this area. The Lower Don Bridge and Don Yard early works report was finalized on August 25, 2021.

- Corktown Station Early Works

The Corktown Station site has been identified for launching tunnel excavation equipment for the downtown and Don Yard segments of the proposed Ontario Line alignment, as well as the location for the Corktown Station. The First Parliament site, located within the Corktown Station area, is a known archaeological site which requires additional archaeological study ahead of any ground disturbance activities. Corktown Station early works includes

demolition of existing buildings, removal of other structures and asphalt where required, decommissioning of utilities, and soil removal and/or remediation where required. These activities will enable completion of environmental due diligence investigations, including archaeological assessments. Corktown Station Early Works Report was finalized on July 15, 2021.

Environmental Impact Assessment Report

The main report produced as part of this process is the Environmental Impact Assessment Report. It will cover operation of the Ontario Line as well as construction of the Ontario Line components not assessed via the early works process. The report will include a final description of the Ontario Line Project, environmental impact evaluation results, mitigation measures, monitoring activities, potentially required permits and approvals and other components as outlined in O. Reg. 341/20.

Lakeshore East Joint Corridor Early Works

The Lakeshore East Joint Corridor early works are being advanced where the Project interfaces with GO Expansion and the East Harbour Station (East Harbour Station is situated immediately to the west of the Lakeshore East Joint Corridor early works). Advancing early works and supporting environmental and technical studies in this area provides planning and design efficiencies for the Project, GO Expansion and the East Harbour Station and facilitates the timely implementation of these projects.

The Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue and will include:

- Reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- Replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- Construction of new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- Construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track;
- Construction of retaining walls; and
- Construction of noise barriers, including east of Pape Avenue.

East Harbour Station Early Works

East Harbour Station is a multi-modal transit hub that will provide seamless connectivity with GO service and the Ontario Line, as well as protect for connectivity with the planned extension of the Broadview Avenue streetcar. East Harbour Station was previously assessed through the SmartTrack program in 2018 and since the completion of that assessment, a number of changes have been made to the project to accommodate the Ontario Line, documented within this Report.

Advancing East Harbour Station early works and supporting environmental and technical studies in this area provides planning and design efficiencies for East Harbour Station, GO Expansion and the Ontario Line Lakeshore East Joint Corridor and Lower Don Bridge early works, and facilitates the timely implementation of these projects.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and
- completing site preparation activities such as grading, demolition of existing structures where required, and relocating or protecting utilities.

Metrolinx is sharing the Draft Lakeshore East Joint Corridor Report and Draft East Harbour Early Works Report, via the Dropbox link enclosed in the email for Six Nations of the Grand River review. These Early Works Reports document the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record. **Attachment 1** provides a summary and update of the Ontario Line Reports that have been shared, or will be shared with Six Nations of the Grand River.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Potential Impacts and Mitigation Measures

The tables found enclosed in **Attachment 2 and 3** provide a summary of natural environment and archaeology potential impacts and mitigation measures identified as part of the Draft Early Works Reports that may be of interest to Six Nations of the Grand River. **Attachment 2** contains information in support of the Lakeshore East Joint Corridor early works, and **Attachment 3** in support of the East Harbour Station early works. If Six Nations of the Grand River has any feedback about these potential impacts and/or mitigation strategies, or any other aspects of the Ontario Line, we welcome the opportunity to discuss further.

Revisions to the draft Early Works Report

Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the original draft Early Works Report for the entirety of the Ontario Line project, shared with Six Nations of the Grand River in June 2020.

To aid in review for Six Nations of the Grand River, a summary of revisions to the draft Lakeshore East Joint Corridor and East Harbour Station early works as outlined in the initial Early Works Report draft since the circulation of the initial draft is as follows:

- Revisions to address grammatical and syntax errors and updates to reflect comments received from technical stakeholders
- Updates to the Lakeshore East Joint Corridor and East Harbour Station early works project description and project footprint to reflect early works planning progress and evolved construction approach understanding.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor and East Harbour Early Works Reports from Six Nations of the Grand River. Please provide these in writing no later than **October 24, 2021**. The Notices of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report are provided in **Attachment 4 and 5**, respectively. The Draft Early Works Reports will be updated following the review period, and the Final Early Works Reports will be published on the Project webpage (www.metrolinx.com/ontarioline) and shared with Six Nations of the Grand River.

Archaeology

The Ontario Line South Stage 1 Archaeological Assessment Addendum Report (AECOM, 2021) includes both the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprints and was entered into the Ontario Public Register of Archaeological Reports on July 5, 2021, in support of the Ontario Line Final Environmental Conditions Report.

As per the results of the Stage 1 archaeological assessment developed for the Project, the majority of the Lakeshore East Joint Corridor and East Harbour Station Early Works Project Footprint has been cleared of archaeological concerns by previous archaeological assessments completed by multiple consultants, including AECOM (2016; 2020) and ASI (2017). However, there are a few areas retaining high to moderate archaeological potential within the northwest portion of the East Harbour Station Early Works Project Footprint, and several areas retaining high to moderate archaeological potential within the Lakeshore East Joint Corridor Early Works Project Footprint for the recovery of Indigenous artifacts and 19th century sites related to the City of Toronto expansion. Where archaeological potential is present and disturbance is anticipated, further archaeological assessment(s) will be completed prior to construction.

Metrolinx acknowledges that Six Nations of the Grand River should be aware of and engaged regarding any future archaeological work, especially the discovery and preservation of Indigenous artifacts and sacred burial grounds. Metrolinx will ensure that future archaeological assessments are provided to Six Nations of the Grand River in draft form, prior to submission to MHSTCI.

Engagement

Metrolinx is committed to an open and respectful relationship with Six Nations of the Grand River. We appreciate the significant volume of documents related to the Ontario Line Project that have been shared with Six Nations of the Grand River. We are happy to assist in the review of these documents by meeting with Six Nations of the Grand River. Metrolinx is willing to address any questions that Six Nations of the Grand River may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Metrolinx welcomes any comments or feedback on the Draft Early Works Reports from Six Nations of the Grand River. Please provide these in writing no later than **October 24, 2021**. Comments and information regarding these draft reports will be collected to assist in meeting the requirements of the *Environmental Assessment Act* and may be included in study documentation. With the exception of personal information, all comments will become part of the public record. Kindly note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*, except where information is provided to Metrolinx in confidence, pursuant to section 15.1.

Thank you for your time in reviewing this letter.

Yours Truly,

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the Lakeshore East Joint Corridor early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the Lakeshore East Joint Corridor early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Natural Heritage System is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the City of Toronto Ravine and Natural Feature Protection area is outside of the Lakeshore East Joint Corridor Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Tree Removal under Vegetation Communities. Further consideration to minimize potential effects within regulated areas to the extent possible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the Lakeshore East Joint Corridor early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Provide compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed. Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the Lakeshore East Joint Corridor early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory.</p> <ul style="list-style-type: none"> ■ Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016a) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. ■ Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). ■ Pruning of branches will be conducted through the implementation of proper arboricultural techniques. ■ Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<p>Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.</p> <ul style="list-style-type: none"> ■ If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> ■ Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> ■ Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive ‘D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> ■ Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> ■ Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the Lakeshore East Joint Corridor early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities. ■ Stockpiled materials or equipment will be stored within the Lakeshore East Joint Corridor early works construction areas. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
Vegetation Communities	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Wildlife and Wildlife Habitat – General	<ul style="list-style-type: none"> Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> Prior to construction, investigation of the Lakeshore East Joint Corridor early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Significant Wildlife Habitat: Eastern Wood-pewee	<ul style="list-style-type: none"> Removal of up to 2.24 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Significant Wildlife Habitat: Monarch	<ul style="list-style-type: none"> Removal of up to 0.53 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
Significant Wildlife Habitat: Common Nighthawk	<ul style="list-style-type: none"> Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Migratory Breeding Birds and Nests. Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: <ul style="list-style-type: none"> The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest. 	<ul style="list-style-type: none"> Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). If activities (i.e. vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> During detailed design, opportunities to enhance the natural environment and provide a connection to the surrounding natural areas will be explored to the extent feasible. 	<ul style="list-style-type: none"> Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
			<ul style="list-style-type: none"> Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> Field surveys will be undertaken prior to construction to confirm the number of nests present at the known locations and whether the nests remain active. Where loss or disturbance cannot be avoided (e.g., due to work on bridges), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.
Aquatic Environment – <ul style="list-style-type: none"> Wetlands and Waterbodies Fish and Fish Habitat 	<ul style="list-style-type: none"> There are no wetlands or watercourses within the Lakeshore East Joint Corridor Natural Environment Study Area and therefore no potential effects on these features or fish and fish habitat are anticipated. 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-8 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the Lakeshore East Joint Corridor early works.

It should be noted that the Lakeshore East Joint Corridor Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-8: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the Lakeshore East Joint Corridor Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. The following mitigation measures will be applied for areas with archaeological potential: <ul style="list-style-type: none"> – Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. – Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries’ Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

6. Potential Impacts, Mitigation Measures and Monitoring Activities

In accordance with Sections 8(2)6, 8(2)7 and 8(2)8 of Ontario Regulation 341/20: Ontario Line Project, this section describes the potential impacts, mitigation measures, and monitoring activities to verify the effectiveness of mitigation measures associated with the East Harbour Station early works.

6.1 Natural Environment

Table 6-1 outlines mitigation measures and monitoring activities to address the potential natural environment impacts that may result from the East Harbour Station early works.

Table 6-1: Potential Impacts, Mitigation Measures and Monitoring Activities – Natural Environment

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Designated Natural Areas	<ul style="list-style-type: none"> No potential impacts as there are no Designated Natural Areas within 120 metres of the East Harbour Station Early Works Project Footprint 	<ul style="list-style-type: none"> None Required 	<ul style="list-style-type: none"> None Required
Policy Area – City of Toronto Natural Heritage System	<ul style="list-style-type: none"> Vegetation removal within the City of Toronto Natural Heritage System 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities. Consultation with City of Toronto. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities.
Policy Area – City of Toronto Ravine and Natural Feature Protection	<ul style="list-style-type: none"> No potential impacts as the East Harbour Station Early Works Project Footprint is located outside of the City of Toronto Ravine and Natural Feature Protection By-Law Area. 	<ul style="list-style-type: none"> None Required. 	<ul style="list-style-type: none"> None Required.
Policy Area – Toronto and Region Conservation Authority Regulation Areas	<ul style="list-style-type: none"> Vegetation removal within Toronto and Region Conservation Authority Regulated Areas 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Migratory Breeding Birds and Nests, Significant Wildlife Habitat, Species at Risk and Aquatic Environment. Further consideration to reduce potential impacts within the Toronto and Region Conservation Authority Regulated Areas to the extent feasible will be undertaken during detailed design. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities. Recommendations for additional monitoring related to vegetation removal within regulated areas may be determined through consultation with Toronto and Region Conservation Authority.
Policy Area – Urban River Valley under the Greenbelt Plan	<ul style="list-style-type: none"> Vegetation removal within the Urban River Valley 	<ul style="list-style-type: none"> Refer below to mitigation measures described for Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. Compensation for the removal of vegetation in accordance with Metrolinx’s Vegetation Guideline (2020) approach will consider maintaining or enhancing connectivity along the Lower Don River to the extent feasible. 	<ul style="list-style-type: none"> Refer below to monitoring described for Vegetation Communities, Wildlife and Wildlife Habitat and Aquatic Environment.
Vegetation Communities	<ul style="list-style-type: none"> Removal of vegetation communities Damage to adjacent vegetation or Ecological Land Classification communities as a result of accidental intrusion 	<ul style="list-style-type: none"> Vegetation removal will be reduced and limited to within the East Harbour Station early works construction areas. Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. Compensation for the removal of vegetation will be provided in accordance with Metrolinx’s Vegetation Guideline (2020). Temporarily disturbed areas will be re-vegetated using non-invasive, preferably native plantings and/or seed mix appropriate to the site 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Monitoring will include inspection of construction fencing/silt fencing to confirm appropriate installation, maintenance and rehabilitation to prevent accidental damage to vegetation or Ecological Land Classification communities outside of the work construction area. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx’s Vegetation Guideline (2020).

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>conditions and adjacent vegetation communities. Seed mixes will be used in conjunction with an appropriate non-invasive cover crop as needed.</p> <ul style="list-style-type: none"> Vegetation removals will also consider and mitigate potential impacts to sensitive species (e.g., migratory birds) and features (e.g., Significant Wildlife Habitat). Refer to the wildlife and wildlife habitat and Species at Risk mitigation measures described below. 	
Vegetation Communities	<ul style="list-style-type: none"> City and private tree removal 	<ul style="list-style-type: none"> An Arborist Report by an International Society of Arboriculture Certified Arborist will be prepared in accordance with the Ontario Forestry Act R.S.O. 1990, and other regulations and best management practices as applicable. The Arborist Report will include, but not be limited to the individual identification of all trees within the East Harbour Station early works construction areas including those that require removal or preservation, or trees that may be injured. Trees to be identified may include those on Metrolinx property, trees on public and private lands, and boundary trees. City of Toronto by-laws dictate the minimum area buffers to be inventoried and Diameter at Breast Height which requires inventory. Prior to the undertaking of tree removals, a Tree Removal Strategy/Tree Preservation Plan will be developed during detailed design to document tree protection and mitigation measures that follow the City of Toronto Tree Protection Policy and Specifications for Construction Near Trees Guidelines (2016) and adherence with best practices, standards and regulations on safety, environmental and wildlife protections. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). Pruning of branches will be conducted through the implementation of proper arboricultural techniques. Tree Protection Zone fencing will be established to protect and prevent tree injuries. Tree Protection Zones will be clearly staked prior to construction using barriers in accordance with local by-law requirements. 	<ul style="list-style-type: none"> Regular inspection in areas of vegetation removal will be undertaken as required during construction to ensure that fencing is intact, only specified trees are removed and no damage is caused to the remaining trees and adjacent vegetation communities. On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. If required, the approach to compensation monitoring will be developed in accordance with Metrolinx's Vegetation Guideline (2020).
Vegetation Communities	<ul style="list-style-type: none"> Potential for the spread of emerald ash borer, associated with removal, handling and transport of ash trees 	<ul style="list-style-type: none"> Removal of ash trees, or portions of ash trees, will be carried out in compliance with the Canada Food and Inspection Agency Directive 'D-03-08: Phytosanitary Requirements to Prevent the Introduction into and Spread within Canada of the emerald ash borer. To comply with this Directive, all Ash trees requiring removal, including any wood, bark or chips, will be restricted from being transported outside of the emerald ash borer regulated areas of Canada. 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
Vegetation Communities	<ul style="list-style-type: none"> Increased soil erosion and sedimentation 	<ul style="list-style-type: none"> Construction fencing and/or silt fencing, where appropriate, will be installed and maintained to clearly define the East Harbour Station early works construction areas and prevent accidental damage or intrusion to adjacent vegetation or Ecological Land Classification communities. An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region 	<ul style="list-style-type: none"> On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		<p>Conservation Authority, 2019), will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the vegetation communities.</p>	<ul style="list-style-type: none"> ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.
<p>Vegetation Communities</p>	<ul style="list-style-type: none"> ■ Soil or water contamination as a result of spills (e.g., grease and/or fuel) from equipment use ■ Introduction or spread of invasive species 	<ul style="list-style-type: none"> ■ A Spill Prevention and Contingency Plan will be developed and adhered to. Spills will be immediately contained and cleaned up in accordance with provincial regulatory requirements and the contingency plan. ■ Refuelling of equipment will occur at least 30 metres away from any watercourse. ■ Refuelling shall be done within refuelling stations lined with appropriate material to prevent seepage and fuel discharge. ■ All machinery, construction equipment and vehicles arriving on-site should be in clean condition (e.g., free of fluid leaks, soils containing seeds of plant material from invasive species) and be inspected and washed in accordance with the Clean Equipment Protocol for Industry (Halloran et al., 2013). 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Wildlife and Wildlife Habitat – General</p>	<ul style="list-style-type: none"> ■ Disturbance, displacement or mortality of wildlife 	<ul style="list-style-type: none"> ■ Prior to construction, investigation of the East Harbour Station early works construction areas for wildlife and wildlife habitat that may have established following the completion of previous surveys will be undertaken, as appropriate. ■ If wildlife is encountered, measures will be implemented to avoid destruction, injury, or interference with the species, and/or its habitat. For example, construction activities will cease or be reduced, and wildlife will be encouraged to move off-site and away from the construction area on its own. 	<ul style="list-style-type: none"> ■ Regular on-site inspection by on-site environmental workers or construction staff should occur within the construction area to ensure that no wildlife is trapped within the construction area. ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts.
<p>Significant Wildlife Habitat - Eastern Wood-pewee</p>	<ul style="list-style-type: none"> ■ Removal of up to 1.5 hectares of candidate habitat for Eastern Wood-pewee 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.
<p>Significant Wildlife Habitat - Monarch</p>	<ul style="list-style-type: none"> ■ Removal of up to 0.32 hectares of candidate habitat for Monarchs 	<ul style="list-style-type: none"> ■ Identify opportunities to promote pollinator species and habitat in accordance with the Metrolinx Vegetation Guideline (2020). This may include planting or seeding native flowering plants in temporarily disturbed areas. 	<ul style="list-style-type: none"> ■ Regular monitoring (site inspections) will be undertaken during construction to prevent unauthorized impacts to habitat used by Monarch.
<p>Significant Wildlife Habitat - Common Nighthawk</p>	<ul style="list-style-type: none"> ■ Removal of candidate nesting habitat for Common Nighthawk 	<ul style="list-style-type: none"> ■ Refer below to mitigation measures described for Migratory Breeding Birds and Nests. ■ Demolition of buildings should be scheduled outside of the breeding bird season of April 1 to August 31. If this is not possible and buildings must be demolished during this period, the following will be completed: ■ The roofs will be checked for presence of gravel. If gravel is not present, then the building is unlikely to provide suitable nesting habitat for Common Nighthawk. If gravel is present, a search for eggs and nesting activity for Common Nighthawk on the roof will be conducted. If nests or nesting 	<ul style="list-style-type: none"> ■ Refer below for monitoring requirements described for Migratory Breeding Birds and Nests.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
		activity of Common Nighthawk are confirmed, the building cannot be demolished until it is confirmed by a Qualified Biologist that young have fully fledged and left the nest.	
Migratory Breeding Birds and Nests	<ul style="list-style-type: none"> ▪ Disturbance or destruction of migratory bird nests 	<ul style="list-style-type: none"> ▪ All works must comply with the Migratory Birds Convention Act, including timing windows for the nesting period (April 1 to August 31 in Ontario). ▪ If activities (i.e., vegetation clearing and building demolition) are proposed to occur during the general nesting period, a breeding bird and nest survey will be undertaken prior to required activities. Nest searches by an experienced searcher are required and will be completed by a qualified Biologist no more than 48 hours prior to vegetation removal. ▪ If a nest of a migratory bird is found outside of this nesting period (including a ground nest) it still receives protection. 	<ul style="list-style-type: none"> ▪ Regular monitoring will be undertaken to confirm that activities do not encroach into nesting areas or disturb active nesting sites.
Wildlife Habitat Connectivity	<ul style="list-style-type: none"> ▪ Decrease of habitat connectivity for wildlife 	<ul style="list-style-type: none"> ▪ Refer to the mitigation measures described above for Urban River Valley under the Greenbelt Plan, Vegetation Communities, Wildlife and Wildlife Habitat, Significant Wildlife Habitats, Migratory Breeding Birds and Nests, Species at Risk and Aquatic Environment. ▪ During detailed design, considerations for maintaining or enhancing connectivity opportunities will be explored to the extent feasible. 	<ul style="list-style-type: none"> ▪ Refer to monitoring described for Vegetation Communities.
Species at Risk – General	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Species-specific mitigation measures will be implemented, as required, in consultation with Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. ▪ Species-specific monitoring activities will be developed in accordance with any registration and/or permitting requirements under the Endangered Species Act.
Species at Risk – Barn Swallow	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Barn Swallow 	<ul style="list-style-type: none"> ▪ Field surveys will be undertaken prior to construction to confirm presence of any Barn Swallow nests on buildings that will be demolished ▪ Where loss or disturbance cannot be avoided (e.g., building demolition), all requirements under the Endangered Species Act will be met, including any registration, compensation, replacement structures and/or permitting requirements. ▪ If disturbance to structures confirmed to provide Barn Swallow habitat is scheduled during the nesting season for Barn Swallow (April 1 to August 31), a nest search will be undertaken to confirm that no Barn Swallow are nesting on structures that may be affected by construction activities on or near these areas. Exclusion measures will be implemented prior to nesting season to dissuade use of these areas for nesting. 	<ul style="list-style-type: none"> ▪ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed with the Ministry of the Environment, Conservation and Parks, if required.
Species at Risk – Bats	<ul style="list-style-type: none"> ▪ Habitat loss, disturbance and/or mortality to Species at Risk Bats 	<ul style="list-style-type: none"> ▪ All requirements of the Endangered Species Act will be met. Additional monitoring, mitigation and compensation for removal of suitable treed or anthropogenic roosting habitat may be required based on the results of additional surveys and consultation with the Ministry of the Environment, Conservation and Parks. 	<ul style="list-style-type: none"> ▪ If mitigation is required, on-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions if required. Corrective actions may include additional site maintenance and alteration of activities to reduce impacts. Additional monitoring measures will be developed in consultation with Ministry of the Environment, Conservation and Parks, if required.

Environmental Component	Potential Impacts	Mitigation Measure(s)	Monitoring Activities
Aquatic Environment – <ul style="list-style-type: none"> • Wetlands and Waterbodies • Fish and Fish Habitat 	<ul style="list-style-type: none"> ■ The East Harbour Station Early Works Project Footprint is located 30 metres away from the Lower Don River and east of the Don Valley Parkway and no in-water works are proposed in the Lower Don River. Potential effects on fish and fish habitat are not anticipated, provided that best management practices are implemented. 	<ul style="list-style-type: none"> ■ Construction activities will maintain the buffers established during the design phase to reduce potential negative impacts to the Lower Don River. ■ An Erosion and Sediment Control Plan, in accordance with the Erosion and Sediment Control Guide for Urban Construction (Toronto and Region Conservation Authority, 2019), as amended from time to time, will be prepared prior to and implemented during construction to reduce the risk of sedimentation to the waterbody. ■ A Spill Prevention and Response Plan will be developed before work commences to ensure procedures and policies are in place during construction to reduce impacts to watercourses. ■ Any temporary mitigation measures will be installed prior to the commencement of any site clearing, grubbing, excavation, filling or grading works and will be inspected and maintained on a regular basis. ■ To the extent feasible, schedule work to avoid wet, windy and rainy periods that may result in high flow volumes and/or increase erosion and sedimentation. ■ Stockpiled materials or equipment will be stored within the East Harbour Station early works construction areas but shall be kept at least 30 metres away from any watercourse to the extent possible. ■ All equipment fuelling and maintenance will be done at a safe distance from the water (i.e., 30 metres or more) to ensure that no deleterious substances enter the waterway. 	<ul style="list-style-type: none"> ■ On-site inspection will be undertaken to confirm the implementation of the mitigation measures and identify corrective actions, if required. Corrective actions may include alteration of activities to reduce impacts and enhance mitigation measures. ■ All erosion and sediment control measures should be inspected weekly, after every rainfall and significant snow melt event, and daily during periods of extended rain or snow melt. ■ All damaged erosion and sediment control measures will be repaired and/or replaced within 48 hours of the inspection.

Notes: Regulations, standards and guidance documents referenced herein are current as of the time of writing and may be amended from time to time. If clarification is required regarding regulatory requirements, the appropriate regulatory agencies will be consulted.

6.8 Archaeological Resources

Early works are anticipated to result in a combination of surface/above grade and below grade impacts. Areas with determined impacts requiring further archaeological assessment will dictate the type of archaeological assessment strategy that should be employed. Further archaeological assessment that could be required for early works include standard surface level testing, a combination of mechanical and hand excavation for deeply buried contexts, and a requirement for archaeological monitoring during construction. The type of impact could also remove the requirement for certain types of archaeological assessment.

Table 6-7 outlines mitigation measures and monitoring activities to address the potential impacts to archaeological resources that may result from the East Harbour Station early works.

It should be noted that the East Harbour Station Early Works Project Footprint may include lands that will not require ground disturbing activities during early works construction. As planning progresses and specific areas of ground disturbing activities are confirmed, only those areas will require further archaeological assessment.

Table 6-7: Potential Impacts, Mitigation Measures and Monitoring Activities - Archaeological Resources

Environmental Component	Potential Impact	Mitigation Measure(s)	Monitoring Activities
Archaeological Potential	<ul style="list-style-type: none"> ■ Potential for the disturbance of unassessed or documented archaeological resources. 	<ul style="list-style-type: none"> ■ Areas identified as retaining archaeological potential in the East Harbour Station Early Works Project Footprint, as per the Ontario Line South Stage 1 Archaeological Assessment Report (AECOM, 20204), are shown on Figure 5-19. Should ground disturbing activities be planned within these areas, further archaeological assessment must be completed prior to any ground disturbing activities. ■ Any additional Archaeological Assessments (e.g., Stage 2, Stage 3 if recommended by the Stage 2) shall be completed as early as possible, and prior to the ground disturbing activities. This work shall be done in accordance with the Ministry of Heritage, Sport, Tourism and Culture Industries' Standards and Guidelines for Consultant Archaeologists (2011) to identify any archaeological resources that may be present. ■ Indigenous Nations will be invited to participate in any subsequent archaeological work. All future archaeological assessment findings will be shared with the Indigenous Nations that were engaged during the Stage 1 archaeological assessment. 	<ul style="list-style-type: none"> ■ None identified.
Archaeological Resources	<ul style="list-style-type: none"> ■ Potential recovery of archaeological resources during construction. 	<ul style="list-style-type: none"> ■ Should previously unknown or unassessed deeply buried archaeological resources be uncovered during construction activities, they may be a new archaeological site and therefore subject to Section 48(1) of the Ontario Heritage Act. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed archaeologist to carry out archaeological field work, in compliance with Section 48 (1) of the Ontario Heritage Act. Any person discovering human remains must immediately notify the police or coroner and the Registrar of Cemeteries, Ministry of Government Services. In addition, consultation with relevant Indigenous Nations will be initiated in the event that archaeological resources or human remains are discovered. 	<ul style="list-style-type: none"> ■ None identified.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

**Metrolinx
130 Adelaide Street West

Subject: Ontario Line: Project Update & Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report for Review - Please share feedback by August 24, 2021
Date: Wednesday, July 28, 2021 5:12:58 PM
Attachments: [REDACTED]

Dear Lonny and Team,

Metrolinx wishes to provide an update for the Ontario Line project. The attached letter provides an outline of the scope of Early Works Reports that have been prepared and shared with your Nation. The letter includes an update on the Lakeshore East Joint Corridor and East Harbour Early Works Reports. Additionally we are providing a copy of the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report which is available for review at the following link:

[REDACTED]

We ask that any comments or feedback you may have on this report be shared with us no later than **August 24, 2021**.

We would welcome an opportunity to meet with your Nation and discuss these reports, or the Ontario Line project as a whole. If you have any questions or concerns, please do not hesitate to contact our office.

Thank you,

Jaimi O'Hara

Delivered by Email

Dear Mr. Bomberry,

RE: Ontario Line Project - Lakeshore East Joint Corridor Early Works Report, East Harbour Station Early Works Report and Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx, a regional transportation agency, is helping to transform the way the Greater Golden Horseshoe region moves by building a fast, convenient, and integrated transit network. As part of this work, Metrolinx is proceeding with the Ontario Line which will bring 15.6 kilometres of subway service to Toronto.

Metrolinx wishes to build a strong and meaningful relationship with the Six Nations of the Grand River. Metrolinx appreciates and respects Six Nations of the Grand River's desire to be appropriately informed and aware of projects. To that end Metrolinx wishes to share with Six Nations of the Grand River information regarding the forthcoming Lakeshore East Joint Corridor Early Works Report and East Harbour Early Works Report and invite feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report.

Project Description

The Ontario Line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service. More information on the Project can be found on our website: www.metrolinx.com/ontarioline.

Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report

As outlined in the letter shared in June 2020, environmental impacts of the Ontario Line Project are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*.

10 Bay Street 416.202.4967
Toronto, ON M5J 2N8 metrolinx.com

Early works are components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion. The reports will document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works and outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures, and a consultation record.

A draft Early Works Report and a letter outlining the Ontario Line Project were shared with *Six Nations of the Grand River* in June 2020. The draft Early Works Report included Lower Don Bridges, Exhibition Station, East Harbour Station and Lakeshore East Joint Corridor. The different early works locations presented in the draft Early Works Report sent in June 2020 have now been reorganized into separate reports. Below is a summary of the Early Works Reports that have been shared, or will be shared with Six Nations of the Grand River:

Report	Date Sent to/to be Sent to Nations
Draft Early Works Report (included Exhibition Station, Lower Don Bridge, Lakeshore East Joint Corridor and East Harbour)	July 30, 2020
Draft Exhibition Station EWR	November 30, 2020
Final Exhibition Station EWR	February 1, 2021
Initial draft of Corktown Station EWR	March 22, 2021
Draft Corktown Station EWR	May 12, 2021
Final Corktown Station EWR	July 15, 2021
Draft Lower Don Bridge and Don Yard EWR	June 22, 2021
Final Lower Don Bridge and Don Yard EWR	August 25, 2021*
Draft Lakeshore East Joint Corridor EWR	September 8, 2021*
Final Lakeshore East Joint Corridor EWR	November 12, 2021*
Draft East Harbour Station EWR	September 8, 2021*
Final East Harbour Station EWR	November 12, 2021*

*Date is subject to change.

METROLINX

Metrolinx is currently preparing the Draft Lakeshore East Joint Corridor and the Draft East Harbour Station Early Works Reports, anticipated to be published and shared with Six Nations of the Grand River in September 2021 for review. This letter provides information on the Lakeshore East Joint Corridor Early Works Report and East Harbour Station Early Works Report for your information.

The Lakeshore East Joint Corridor and East Harbour Station early works locations are shown in **Figure 1** below.

Figure 1: Map of Ontario Line Early Works

Summary of Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor Early Works will include rearranging tracks in the corridor between Eastern Avenue and Logan Avenue to accommodate four GO rail tracks and two Ontario Line tracks, including:

- grading;
- installation or upgrading of vegetated slopes or retaining walls and noise barriers next to the corridor, where appropriate;
- relocation or protection of utilities;
- new bridges at Dundas and Logan to support future Ontario Line tracks and
- bridge work at the existing Lakeshore East rail corridor bridges at Queen, Dundas and Logan.

Summary of East Harbour Station Early Works

East Harbour Station early works will include construction of the East Harbour transit hub. This will be an important transfer point, serving GO operations, protection for a planned extension of the Broadview streetcar, and Ontario Line service. The Transit Hub is located in a corner of the city that is poised for growth. The future East Harbour transit hub will be a vital connection for customers transferring between the Ontario Line and GO train services, connecting with local transit via Broadview, and ultimately helping to reduce crowding at Union Station. With a proposed shared concourse providing easy access to all the rail and local transit that will serve East Harbour, more customers will be able to transfer from the GO train to the City's subway and local network and travel to more places.

Lakeshore East Joint Corridor Noise and Vibration Operations Report

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the Dropbox link enclosed in the email for Six Nations of the Grand River's review. The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20 and will support the East Harbour and Lakeshore East Joint Corridor Early Works Reports, as well as the Ontario Line Environmental Impact Assessment Report planned to be published in early 2022. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and Lakeshore East rail corridor where Ontario Line runs in parallel to GO tracks.

The Study Area assessed in the report encompasses segments of the Lakeshore East and Union Station rail corridor and surrounding noise and vibration sensitive areas. The west boundary of the Study Area is approximately at the Ontario Line tunnel portal in the Union Station rail corridor and near the Don Yard, west of the Don River, east of Tannery Road. The east boundary of the Study Area is at Pape Avenue, east of the Ontario Line tunnel portal located north-east of Gerrard Street East and Carlaw Avenue. Assessment of other segments of the Ontario Line will be documented under a separate cover.

Metrolinx welcomes any comments or feedback on the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report from Six Nations of the Grand River. Please provide these in writing no later than **August 24, 2021**.

Engagement

Metrolinx is committed to an open and respectful relationship with Six Nations of the Grand River. We are happy to address any questions that Six Nations of the Grand River may have about the early works in the Lakeshore East Joint Corridor and East Harbour Station, the noise and vibration operations report, or the Ontario Line Project as a whole. If you require additional information or materials or if you wish to discuss these Projects in more detail or set up a meeting, please contact Jaimi O'Hara, Acting Manager in Metrolinx's Indigenous Relations Office at IndigenousRelations@metrolinx.com.

Please note that any information you provide to Metrolinx, or its delegates, will be subject to the *Freedom of Information and Protection of Privacy Act*.

Thank you for your time in reviewing this letter.

Yours Truly,

Good Morning Mr. Bomberry,

Metrolinx in partnership with Infrastructure Ontario is proposing to build a 16km subway line in downtown Toronto which will expand and build upon the existing and planned transit network. I have attached a letter to this email that provides high level details of the project.

As detailed within the letter, Early Works Reports are available for your review at the following links:

- Early Works Report: [REDACTED]
- Early Works Natural Environment Report: [REDACTED]

If you have any comments on these reports, please share them by August 31, 2020.

Metrolinx would appreciate any interest that your First Nation may have in this project and would welcome the opportunity to meet with you to provide more information and discuss any interests or questions that you may have.

I am happy to speak in person or by telephone if you require further information as I hope to make this process as open and respectful for your community.

Please do not hesitate to contact me.

Miigwetch,

Fallon
