14	Save Jimmie Simpson	Noise and Vibration	<p>RWDI, which carried out noise and impact assessment near receptor 1 (South of Mill St between Tannery Road and Bayview Ave) recommends the following warning be provided to all prospective buyers for 125R Mill St condo under development:</p> <ul style="list-style-type: none"> - "Purchasers/tenants are advised that despite the inclusion of noise control features in the development and within the building units, sound levels due to increasing road traffic / rail traffic may on occasions interfere with some activities of the dwelling occupants as the sound levels exceed the sound level limits of the Municipality and the Ministry of the Environment." - We wonder what type of warning should be provided to the existing residents who live close to the rail corridor by Metrolinx and AECOM? 	<p>Warnings are typically provided for new dwellings and it is the responsibility of the residential developer to include warning clauses in purchase agreements, and noise mitigation in order to provide suitable conditions and/or expectations for residents within these spaces.</p> <p>In cases where infrastructure is being added/upgraded near existing residential dwellings, such as with the Ontario Line Project and GO Expansion, it is up to the infrastructure developer to mitigate for changes in noise levels as per the assessment criteria as applicable to the projects. In this case, noise barriers are proposed to be implemented along both sides of the joint corridor.</p>
15	Save Jimmie Simpson	Noise and Vibration	<p>Health Canada states in its Guidance, "the determination of %HA is a widely accepted indicator of the human health effects of long-term noise exposure." It stipulates "a calculation of baseline percent highly annoyed (%HA) at receptors" be provided in environmental assessment. We are baffled as to why Metrolinx continues to dismiss environmental and health standards; these need to be applied to this project</p>	<p>%HA was not assessed at receptors as per the MOEE/GO and MOEE/TTC protocol criteria as they are outside of the provincial assessment framework and thus not applicable to the Lakeshore East Joint Corridor assessment.</p>
16	Save Jimmie Simpson	Noise and Vibration	<p>Health Canada says if the change in %HA exceeds 6.5%, "community consultation is important to establish mutually agreeable work schedules and is an acceptable means of informing the public of the time and duration of noisy activities." Although Metrolinx constantly insists it 'consults', their offerings bear no resemblance to real consultation. The community must be meaningfully engaged to meet this guideline.</p> <ul style="list-style-type: none"> - Despite Metrolinx's claim that it will minimize overnight work, the reality is much of this construction, expected to last a minimum of 8 years, will be mostly overnight. Metrolinx urgently needs to clarify the duration of overnight construction work required and the consequent public health risks as a result of this. 	<p>%HA was not assessed at receptors as per the MOEE/GO and MOEE/TTC protocol criteria as they are outside of the provincial assessment framework and thus not applicable to the Lakeshore East Joint Corridor assessment.</p> <p>Metrolinx will restrict construction hours to daytime hours where feasible. If nighttime construction is necessary, the activities with the highest noise levels will be conducted during daytime hours, and Metrolinx will inform local residents of the work in advance.</p>

17	Save Jimmie Simpson	Noise and Vibration	<p>Some receptors show extremely high predicted noise levels even with the sound barrier – levels associated with hearing loss, according to the CDC.³ There is not a single mention of “health” anywhere in this report. The potential health risks for tens of thousands of residents who live in Riverside and Leslieville must be addressed.</p>	<p>Metrolinx recognizes that existing noise levels along Lakeshore East Joint Corridor, an urban area, are high, which is why we have committed to providing mitigation above and beyond what is required by the current provincial protocols. Noise levels documented in the Lakeshore East Joint Corridor Operational Noise and Vibration Report are not high enough to be associated with hearing loss. Ontario occupational health and safety standards for noise exposure are 85 dBA for 8 hours, with a 3 dB exchange rate (88 dBA for 4 hours, 91 dBA for 2 hours, 94 dBA for 1 hour, etc., or in the other direction, 82 dBA for 16 hours). The noise levels documented within this report would not be expected to produce hearing damage, especially since the levels documented are outdoor levels and would be significantly lower indoors. Metrolinx is committed to limiting noise in the area to the greatest extent feasible. Our assessment shows that, with noise barriers in place, average noise levels in the area will remain the same or improve at the majority of assessed locations along the joint corridor. Noise barriers will also reduce the noise associated with each passing GO and Ontario Line train.</p>
18	Save Jimmie Simpson	Noise and Vibration	<p>The vibration study is done assuming single-track traffic. The cumulative impact of multiple trains passing by simultaneously was not studied. Metrolinx says “in the rare occurrence of additive vibration, such as during a simultaneous GO train and Ontario Line vehicle pass-by, sample calculations indicate that overall vibration levels would not be significantly higher than that of the dominant individual source. Therefore, the results within this report are based on the worst-case single pass-bys of trains operating on GO or Ontario Line tracks.”</p> <ul style="list-style-type: none"> - With Ontario Line trains expected to travel every 45 seconds, there will almost certainly be simultaneous pass-by somewhere along the 1.5km stretch on Joint Corridor – as there are now with much fewer trains. It won't be a 'rare' occurrence at all. - Metrolinx should use the higher vibration levels from additive vibration, even if not 'significantly higher.' Further, the report is silent on what the vibration profile looks like when there are three, four or five trains passing by simultaneously. 	<p>It is standard practice to assess changes to vibration based on single passby events, but as mentioned, in the occurrence of additive vibration during a simultaneous passby event, the overall level would not be significantly higher (and the change in vibration would be unlikely to be perceptible) than the dominant individual source (e.g., a GO train travelling along the GO track closest to a given receptor), partially because secondary sources would be relatively further away (e.g., Ontario Line train travelling along Ontario Line track further away from that receptor). Additional simultaneous pass-by events would have diminishing incremental cumulative impact for the same reason.</p>

19	Save Jimmie Simpson	Data Inconsistencies	<p>Metrolinx predicts noise levels without barrier4 will decrease at 8 locations in our neighbourhood. Most of these locations are within 35 metres of the existing corridor, some as close as 15 metres. It's inconceivable that the cumulative impact of GO expansion and the Ontario Line will somehow result in noise decrease for receptors in such close proximity to the rail line. As a point of reference, GO Environmental Assessment (May 2021) shows an average noise increase of 2.5 dB for receptors within 40m of the corridor as a result of GO expansion alone.</p>	<p>As explained in Section 3.3 within the report, these specific locations where future noise was predicted to be reduced without a proposed noise barrier benefited from the following:</p> <p>1) A heightened retaining wall moved closer to the receptor. As these locations were all outdoor locations and at ground level, many received shielding from the direct noise path from several of the GO tracks. Picture light sources on the 4 GO tracks and you could expect the retaining wall to cast a "shadow" over the backyards closest to the tracks. Notice that the plane of window receptors (higher up closer to track level) within the corresponding noise sensitive areas were not predicted to receive the same benefit.</p> <p>2) 6 of 8 of these locations were on the west side of the OL tracks. As such, in addition to retaining walls providing shielding, the GO tracks (the dominant noise sources at most receptors) were moved further away from these receptors.</p> <p>For an audio example of this phenomenon, it is recommended to visit Ontariolinesoundstudio.ca and compare the "without the project" and "with the project and no barrier" scenarios for Queen and Degrossi Street and First Avenue locations.</p>
20	Save Jimmie Simpson	Data Inconsistencies	<p>Despite the projected noise decrease during the day at a number of locations, no receptor is anticipated to have noise reduction at night. This bizarre phenomenon of day-time noise reduction and night-time noise increase occurs at eight receptors out of 24. The idea that 1,573 trains (581 GO and 992 OL) during the day will reduce noise levels, while 248 night trains (110 GO and 138 OL) will increase noise levels at the same location defies logic.</p>	<p>Train volumes are not the only aspect at play within the noise model, as geometry and alignment changes are considered as well.</p> <p>As mentioned in Section 3.3 within the report, these specific locations where future noise was predicted to be reduced without a proposed noise barrier were all outdoor receptors (at 1.5 m above ground level within yards) and benefited from shielding from the retaining wall of the direct noise path from several GO tracks.</p> <p>The reason this effect didn't also apply to night-time receptors is that night-time (and day-time receptors without a corresponding yard) were assessed at the most exposed plane of window, typically from the 2nd to 4th storey level. As these receptors were higher up, they did not receive as much (if any) shielding from the track retaining walls, and noise levels would be expected to increase due to increased volumes.</p>
21	Save Jimmie Simpson	Data Inconsistencies	<p>444 Logan Ave (McCleary Towers) abuts the rail corridor. Yet the noise increase is projected to be less than that at 345 Carlaw or 1189 Dundas St E, which are more than 200 metres away. Given that high rises do not benefit at all from the noise barrier, we cannot believe this is possible.</p>	<p>As presented in Table 3-3, GO tracks are the dominant noise source at these locations as the trains operating on these tracks are considerably louder than what is predicted for Ontario Line trains. As the GO tracks moves closer to 345 Carlaw or 1189 Dundas St E and further away from 444 Logan Ave, it can be expected that the condos to the east would see higher noise impacts (i.e. increase in noise level) than those to the west, although the absolute noise levels are still lower here.</p>

22	Save Jimmie Simpson	Data Inconsistencies	<p>Noise wall effectiveness appears to have been manipulated. We assess how many dB reduction is predicted from the noise barrier by looking at the difference between 'Future – with barriers' and 'Future – with project.'</p> <p>- In the case of four residential home receptors located at similar distances to the rail corridor, a dB reduction from the barrier varies from 2.6 dB (31 Saulter) to 9.8 dB (88 Wardell). A 3 dB decrease is a halving of sound energy; a 10 dB decrease is sound energy decreased by a factor of 10 – perceived by the human ear to be half as loud. How can there be such huge discrepancies at receptors with similar conditions?</p> <p>- The most striking anomaly is at 2 Paisley and 8 Paisley, located east of the corridor. These locations are almost next to each other, yet noise wall provides only a 1 dB reduction at 2 Paisley, while a 10 dB reduction is projected for 8 Paisley.</p>	<p>31 Saulter Street is one of the locations predicted to see a noise reduction at the outdoor location before a noise barrier is introduced, as the direct noise path from several tracks is being shielded by the retaining wall between the tracks and yard below. As such, the barrier will not add as much additional noise reduction as this direct path is already blocked/reflected and the diffracted noise is being given a longer path. In contrast, introducing a noise barrier at 88 Wardell blocks the direct path and would be expected to have a much bigger effect from "future no barrier" to "future with barrier". Note that there is not a large discrepancy between plane of window receptors.</p> <p>A similar effect is observable at 2 and 8 Paisley. 2 Paisley is much closer to the tracks and as such receives shielding from the direct train noise path from several tracks, even before barrier introduction. This effect is not as apparent at 8 Paisley as this location is further away.</p>
23	Save Jimmie Simpson	Data Inconsistencies	<p>Noise wall effectiveness during the day and night differs wildly.</p> <p>- At 22 De Grassi, the noise wall provides comparable reduction during the day and at night (7 dB). A few metres away at 14 De Grassi, the noise wall is much more effective at night (11 dB) than during the day (4 dB).</p> <p>- At 881 Gerrard St E, the opposite is true. The noise wall is much more effective during the day (13 dB) than at night (6 dB).</p> <p>We were not able to ask Metrolinx about these inconsistencies as they would not coordinate a meeting with their acoustics engineer. If the Metrolinx noise model yields such a wide margin of error, it is obvious that its output cannot be used to claim compliance with a 5 dB threshold.</p>	<p>As mentioned in Section 3.1 of the report, day-time receptors are assessed at outdoor locations such as back/front yards unless none exists for a property (in which case the receptor is assessed at the plane of window), and night-time receptors are assessed at the plane of window. Outdoor receptors are marked as _OUT and plane of window as _POW.</p> <p>It is to be expected that barrier reductions would then be different as plane of window receptors range from 2nd storey to 4th storey or even higher windows, whereas outdoor receptors are set to 1.5 metres above ground level. These are not inconsistencies, and it is to be expected that reductions would generally be higher during the day-time as the point of assessment was closer to ground level, except where there is screening attenuation provided by the retaining walls before noise walls are introduced as described in the response to Comment #22.</p> <p>The acoustic engineer has attended 2 public meetings and one community group meeting that took place within the public review period of the Lakeshore East Joint Corridor early works report, and has been responding to written comment forms and enquiries (including this one).</p>

24	Save Jimmie Simpson	Independent verification of Metrolinx/AECOM noise predictions	<p>Given the magnitude of irregularities, we cannot help but question whether this data has been deliberately manipulated.</p> <p>We believe an independent verification of their predicted noise data is in order – to be carried by a 3rd party unaffiliated with Metrolinx. Once verified, the early works reports must be re-released and the public consulted with sufficient time to review the information.</p> <p>We also believe AECOM and Metrolinx employees who signed off on the report have questions to answer. This includes those who prepared, reviewed and approved the report: Brian Bulnes, Alan Oldfield, and Nicole Cooke. We wonder if acoustics engineers were pressured to arrive at a foregone conclusion. Given the potential noise and vibration impact on health and safety of thousands of residents in Riverside and Leslieville including children, seniors and vulnerable populations, we believe any malfeasance, if it exists, warrants inquiry.</p> <p>We are also concerned that AECOM, as the potential engineering contractor for the project, has a conflict of interest when it also provides data to support the project.</p>	<p>AECOM wholly rejects the premise of manipulation. Responses to SJS's comments been provided, and commentary to explain the differences between results at various receptor locations was included within the report released in September 2021. AECOM and Metrolinx have been available during the public review period to answer questions, including several public meetings and smaller group meetings with community groups and the local BIAs.</p> <p>The Metrolinx Environmental group and AECOM express concern at the assertion that there has been a professional breach of ethics that has led to manipulating numbers or attempting any other sort of breach of ethics. In addition, the report is submitted by accredited members of a regulated professional body and have no incentive in terms of professional reputation, workload or financial reward between recommended barrier heights. Metrolinx has committed to raise noise barriers to a minimum height of 5 metres, regardless of the minimum noise barrier heights recommended by AECOM in the Draft Lakeshore East Joint Corridor N&V Operations Report.</p> <p>In addition, the noise model for both the existing and future scenarios were sent to the Ministry of the Environment, Conservation and Parks (MECP) as part of their review of the reports, which is documented in the early works report. In accordance with the Professional Engineers Ontario (PEO) code of ethics, AECOM is obliged to produce honest analysis, act with professional integrity, and to produce work without other interests prejudicing our professional judgement.</p>

Metrolinx Early Works Reports - Lakeshore East Joint Corridor and East Harbour				Revised By: Save Jimmie Simpson
				Date In:
				Date Out:
Item No.	Reviewer Name	Description	Review Comment	Response & Details (Authors -)
1	Save Jimmie Simpson	Health Impact Assessment	Along with other community members & groups, SJS is concerned about potential health impacts of the proposed above-ground section of the Ontario Line on people living & working near the route, and in the broader community. Unfortunately, Metrolinx has neither the interest nor the obligation to properly assess these impacts. (In a letter to SJS member Eon Song, dated February 26, 2021, Metrolinx said their environmental assessment will not look at potential health risks as it is "not standard Metrolinx practice.")	<p>In accordance with Ontario Regulation 341/20 made under the Environmental Assessment Act, Lakeshore East Joint Corridor Early Works Report includes an assessment and evaluation of the impacts that the early works might have on the environment, a description of proposed measures for mitigating any negative impacts of the early works on the environment and proposed monitoring activities. Environmental impacts assessed include those associated with the natural environment, air quality, noise and vibration, soil and groundwater, surface water and hydrogeology, archaeology, built heritage resources and cultural heritage landscapes, traffic and transportation, and socio-economic and land use characteristics. Metrolinx also published the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report along with the Early Works Report, which documented noise and vibration operational impacts in the joint corridor and identified appropriate mitigation measures including noise barriers. Metrolinx is committed to the community during both construction and operation.</p> <p>The Ontario Line will have tremendous benefits, as outlined in the Preliminary Design Business Case for the project (available here: http://www.metrolinx.com/en/regionalplanning/projectevaluation/benefitscases/2020-12-08-Ontario-Line-PDBC-Summary-Public-Final.pdf). These benefits include:</p> <ul style="list-style-type: none"> •Improved Quality of Life and Public Health: The Ontario Line could improve local air quality and reduce collisions by up to 1,200 over the project life cycle by taking over 28,000 cars off the road each day and encouraging use of active travel to access transit. Travellers who switch to rapid transit from driving tend to walk more and realize health benefits from a more active lifestyle. •Unlocking Jobs and Economic Development: The Ontario Line is expected to support over 4,700 jobs per year between 2020 and 2030, with continued employment after 2030 for the operations and maintenance of the line. •Moving People with Less Energy and Reduced Emissions: The Ontario Line could reduce overall energy expended for transport by up to 7.2 million litres of automobile fuel every year. This is the same as nearly 120,000 fill ups at the pump per year. This reduction in automobile travel is estimated to amount to over 14,000 tonnes of greenhouse gas emission reductions per year. <p>The Ontario Line will strengthen connections between people and jobs within Toronto and the surrounding region by improving the speed, frequency, reliability and overall footprint of rapid transit service. It will bring rapid transit to new communities in the east end, north of Danforth Avenue, and surrounding Exhibition/Ontario Place, providing residents with greater access to transit options and economic opportunities in closer proximity to their homes.</p>
2	Save Jimmie Simpson	Health Impact Assessment	SJS has therefore partnered with South Riverdale Community Health Centre, along with the many community members who donated to fund it, to commission a health impact study. It compares the health impacts of the proposed above-ground proposal in Riverside/Leslieville to a community-supported underground design that builds on the previously approved Relief Line subway which was abruptly cancelled by the Ford government.	Thank-you for sharing the health impact study with Metrolinx.
3	Save Jimmie Simpson	Health Impact Assessment	SJS believes that well-planned, evidence-based, public transit is critical for the health of all Toronto residents. However, we also think that the Metrolinx above-ground design for the Ontario Line through Riverside/Leslieville is deeply flawed. In spite of their many glossy brochures and "open houses", Metrolinx has made little effort to present useful information about the OL in a way that people can easily access or understand. Because we are unable to get sufficient reliable information from Metrolinx, community members have not had access to detailed plans that clearly identify impacts on trees, park lands, home expropriations, noise & vibration levels, cumulative effects, potential health risks, etc.	<p>Metrolinx held two virtual open houses on September 23 and October 5 to provide summaries of the report and answer questions from the community. We have also met with are community groups including Save Jimmie Simpson and Lakeshore East Community Advisory Committee, Business Improvement Areas and residents throughout the review period to explain the methodology behind the studies and findings in the Early Works Report. Metrolinx has also responded to written questions received from community groups directly and provided summaries of the Early Works Reports on the Metrolinx Engage webpage.</p> <p>Metrolinx continues to provide updates to the public on the Ontario Line project relating to tree, park and property impacts as planning progresses. As planning and detailed design are still underway, impacts are still being confirmed and plans are still in progress. Updates will be provided to the community as project planning and detailed design progresses. Metrolinx has also released the Environmental Conditions Report, several Early Works Reports, and the Lakeshore East Joint Corridor N&V Operations Report, in accordance with Ontario Regulation 341/20. These reports documented impacts and proposed mitigation measures and monitoring activities of several environmental components including noise and vibration and air quality. The Environmental Impact Assessment Report will assess operations of the entire project as well as construction of components not covered by previously published Early Works Reports. It is anticipated to be shared with the community in January 2022 for review.</p>
4	Save Jimmie Simpson	Health Impact Assessment	Opposition to plans for the OL from numerous neighbourhoods along its proposed route continues to grow. There has been no meaningful community engagement, in which options are presented, input is solicited, and proposals are altered based on that input. SJS is concerned that that Metrolinx's topdown, developer-friendly 'design & defend' process, plus the lack of accurate and unbiased impact studies, will foster further opposition, undermine required political and financial support and ultimately delay needed public transit improvements. We have already seen the sad result of poor and politically motivated decision-making in Scarborough where, since at least 2007 (Transit City), people have been waiting for more adequate public transit to be built.	Engaging communities is essential as we advance the Ontario Line in Riverside and Leslieville. Metrolinx has held physical and online open houses, maintains an online engagement hub, door knocked on local streets, distributed literature, met with community groups and organized community walkthroughs to get local feedback on project plans. Feedback has been incorporated in the construction approach for the Joint Corridor and Metrolinx has continuously refined project design to reduce the permanent infrastructure footprint. This has been reflected in the Lakeshore East Joint Corridor Early Works Report which presents various studies on potential impacts and proven solutions in accordance with the provincial protocols. As we move forward to deliver transit in Riverside and Leslieville, we have also opened a community office at 770 Queen Street East that residents can visit to ask questions or provide feedback.

5	Save Jimmie Simpson	Health Impact Assessment	<p>SJS is further concerned that development interests are dictating the OL transit design. Under Premier Ford's majority, the Ontario government passed Bill 171, "The Building Transit Faster" Act which removed requirements for environmental assessments and meaningful public engagement. Changes to the Environmental Assessment Act were rebuked by the Ontario Auditor General as a violation of the provincial Environmental Bill of Rights.</p>	<p>The Building Transit Faster Act, 2020, provides the Province with tools needed to support the accelerated completion of priority transit projects. As part of the Act, land that may be needed for the construction of transit projects is designated as transit corridor lands. This designation will ultimately help Metrolinx streamline the construction of priority transit projects.</p> <p>The Building Transit Faster Act does not remove requirements for environmental assessments and meaningful public engagement.</p> <p>Metrolinx is completing an environmental assessment for the Ontario Line project in accordance with Ontario Regulation 341/20 made under the Environmental Assessment Act. The regulation outlines a project specific environmental assessment that includes: public, regulatory agency and Indigenous Nation notification and consultation; an Environmental Conditions Report and an Environmental Impact Assessment Report; an opportunity for Early Works Reports for assessment of works that are ready to proceed in advance of Environmental Impact Assessment Report completion; and Metrolinx addressing concerns through an issues resolution process. The Project may only proceed if no notice is received within the 35-day period from the Minister of the Environment, Conservation and Parks, the Minister informs Metrolinx that no notice will be issued, or if the requirements of the Minister's notice have been satisfied.</p>
6	Save Jimmie Simpson	Health Impact Assessment	<p>Following Bill 171, the province passed the "Transit Oriented Communities Act" (TOCA). TOCA takes municipal planning controls (density, heights, study requirements, etc.) away from the City of Toronto and gives that control to the province and their real estate development "partners". This affects land around all 15 proposed OL stations. Taking planning controls away from the City of Toronto will result in market-driven real estate development seeking to maximize profits for developers with no discernable benefits to City of Toronto residents.</p>	<p>Infrastructure Ontario (IO) is leading a Transit-Oriented Communities program for the Subway Program that focuses on development for the land requirements that are needed to support the construction and operation of certain Ontario Line stations. Together with the Ministry of Transportation, IO has announced a proposal for a transit-oriented communities developments at Exhibition, King/Bathurst, Queen/Spadina Stations, Corktown and East Harbour. It's important to note there are no Transit Oriented Community for the station serving Riverside and Leslieville.</p> <p>Redevelopment plans will require extensive consultation with municipal partners, communities and developers to ensure we're getting the right fit and achieving shared objectives to build transit-oriented communities. These kinds of plans will be the subject of further community discussions. Please visit EngageIO.ca to learn more about these proposals and upcoming engagement opportunities.</p> <p>Please note that Metrolinx's focus is on building and operating the infrastructure needed for the Ontario Line, such as the station entrance buildings, tunnels, and tracks.</p>
7	Save Jimmie Simpson	Health Impact Assessment	<p>In May of 2021, the Federal government announced funding for the Ontario Line and other transit infrastructure. This funding was, they said, dependent on satisfying a number of conditions including:</p> <ul style="list-style-type: none"> • Undergoing a substantive environmental review and approval process including an analysis of impacts on the environment and a description of mitigation measures; • Engagement processes that enable early community involvement inclusive of local communities and diverse voices and stakeholders, and opportunities to access decision-makers and influence decisions <p>We believe it is unacceptable that Metrolinx does not meets these stated conditions.</p>	<p>The Draft Lakeshore East Joint Corridor Early Works Report was completed in accordance with Ontario Regulation 341/20. The regulation defines early works as any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process. Ontario Line early works, including the Lakeshore East Joint Corridor early works, are being advanced where the Project interfaces with other concurrently planned transit projects (i.e., GO Expansion) and where portions of the alignment run in parallel to the existing Lakeshore East and Lakeshore West GO rail corridors. Advancing work in these areas will facilitate timely implementation of the Ontario Line Project and provides planning, design and implementation efficiencies for ongoing projects such as GO Expansion. The forthcoming Ontario Line Environmental Impact Assessment Report is anticipated to be shared with the community in January 2022 for review. This report will assess operations of the entire project as well as construction of components not covered by previously published Early Works Reports.</p> <p>The Lakeshore East Joint Corridor Early Works Report includes an assessment and evaluation of the impacts that the early works might have on the environment, a description of proposed measures for mitigating any negative impacts of the early works on the environment and proposed monitoring activities. Environmental impacts assessed include those associated with the natural environment, air quality, noise and vibration, soil and groundwater, surface water and hydrogeology, archaeology, built heritage resources and cultural heritage landscapes, traffic and transportation, and socio-economic and land use characteristics. Metrolinx also published the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report along with the Early Works Report, which documented noise and vibration operational impacts in the joint corridor and identified appropriate mitigation measures including noise barriers.</p>

8	Save Jimmie Simpson	Health Impact Assessment	<p>SJS worked with the Lakeshore East Community Advisory Committee (LSECAC) and well-known transit advocate Steve Munro to consider what an alternate underground plan for the OL in Riverside/Leslieville might look like. Based on Steve's wide-ranging expertise, this is the viable and reasonable plan that emerged:</p>  <p>Ontario Line Hybrid Riverside Plan - Underground Plan developed by Steve Munro in consultation with the LSECAC and Save Jimmie Simpson</p> <ul style="list-style-type: none"> Analysis and consultation complete for section under Carlton Ave. No tunnelling under the Don River - considerable cost savings. Utilizes industrial land not park land. <p>Legend: ● Proposed Station — Ontario Line Above Ground — Ontario Line Under Ground — GO Regional Express Rail — Route of Previously Approved Downtown Relief Line</p> <p>This design addresses many of the problems with the above-ground plan identified by SJS and others. In spite of community urging and motions passed by City Council, Metrolinx refuses to evaluate this option. Of course, SJS is aware that tunnelling for an underground line is will be disruptive and present challenges to the neighbourhood, but we believe this option causes fewer issues in both the short & long-term.</p>	<p>Metrolinx has explored similar alignment options (specifically the Relief Line South) through the Initial Business Case and decided that an underground alignment in this area would not be advantageous to the reference alignment that utilizes the existing rail corridor. The decision to not pursue a fully underground or partial underground alignment is based on the following main reasons: customer experience, fewer community impacts and property impacts. By utilizing the existing rail corridor where GO Expansion work has already been planned, we can streamline construction to minimize community impacts by reducing our project footprint. We have acted on community feedback by protecting important neighbourhood parks and ensured noise is controlled via noise barriers.</p>
9	Save Jimmie Simpson	Health Impact Assessment	<p>The HIA report finds that this underground option offers better public health outcomes for the community. It offers strong evidence that a complete Environmental Assessment (EA) that evaluates alternative alignments should be completed before any final decisions about the alignment of the Ontario Line are made, and before any more work that might limit those decisions is done. EAs provide baseline information and model potential impacts and are an ideal source of site-specific information that can be used to evaluate the impact of the proposal on health. Because of this, integration of HIAs into EAs is a recommended practice. Metrolinx needs to follow best practices and provide the quantitative data that compares the two options in a transparent & unbiased way using evaluation criteria that include health.</p> <p>We believe findings of this HIA highlight the urgent need for Metrolinx to seriously consider the underground option put forward by community members.</p>	<p>The Ontario Line Project environmental assessment (EA) is being conducted in accordance with Ontario Regulation 341/20 made under the Environmental Assessment Act. Similar to other previously completed transit projects, the EA studies the preferred alignment/concept. Assessment of alternative alignments/concepts is documented in the publicly available Initial Business Case and Preliminary Design Business Case.</p> <p>In accordance with the O. Reg. 341/20 requirements, Lakeshore East Joint Corridor Early Works Report includes an assessment and evaluation of the impacts that the early works might have on the environment, a description of proposed measures for mitigating any negative impacts of the early works on the environment and proposed monitoring activities. Environmental impacts assessed include those associated with the natural environment, air quality, noise and vibration, soil and groundwater, surface water and hydrogeology, archaeology, built heritage resources and cultural heritage landscapes, traffic and transportation, and socio-economic and land use characteristics. Metrolinx also published the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report along with this Early Works Report, which documented combined noise and vibration operational impacts in the joint corridor and identified appropriate mitigation measures including noise barriers.</p> <p>While a health impact assessment may be completed as part of EAs for large-scale projects with potential for significant impacts that may be challenging to avoid or mitigate using conventional mitigation solutions, it is not a typical component of transit or municipal project EAs that have predictable impacts that can be managed using proven mitigation solutions. Note that, on April 16 2021, the Minister of Environment and Climate Change has determined that the Ontario Line Project proposed by Metrolinx does not warrant designation under the Impact Assessment Act. The reasons for the Minister's determination are provided in the Minister's response (https://iaac-aeic.gc.ca/050/evaluations/document/138638?culture=en-CA). As a result, Metrolinx will continue to proceed with the EA process outlined in the O. Reg. 341/20.</p> <p>The Ontario Line will have tremendous benefits, as outlined in the Preliminary Design Business Case for the project (available here: http://www.metrolinx.com/en/regionalplanning/projectevaluation/benefitscases/2020-12-08-Ontario-Line-PDBC-Summary-Public-Final.pdf). These benefits include:</p> <ul style="list-style-type: none"> •Improved Quality of Life and Public Health: The Ontario Line could improve local air quality and reduce collisions by up to 1,200 over the project life cycle by taking over 28,000 cars off the road each day and encouraging use of active travel to access transit. Travellers who switch to rapid transit from driving tend to walk more and realize health benefits from a more active lifestyle. •Unlocking Jobs and Economic Development: The Ontario Line is expected to support over 4,700 jobs per year between 2020 and 2030, with continued employment after 2030 for the operations and maintenance of the line. •Moving People with Less Energy and Reduced Emissions: The Ontario Line could reduce overall energy expended for transport by up to 7.2 million litres of automobile fuel every year. This is the same as nearly 120,000 fill ups at the pump per year. This reduction in automobile travel is estimated to amount to over 14,000 tonnes of greenhouse gas emission reductions per year. <p>The Ontario Line will strengthen connections between people and jobs within Toronto and the surrounding region by improving the speed, frequency, reliability and overall footprint of rapid transit service. It will bring rapid transit to new communities in the east end, north of Danforth Avenue, and surrounding Exhibition/Ontario Place, providing residents with greater access to transit options and economic opportunities in closer proximity to their homes.</p> <p>Metrolinx is currently pursuing Ontario Line plans that will make use of the existing rail corridor through Riverside and Leslieville because it improves the customer experience, results in fewer community impacts, and minimizes property impacts. Coordinating Ontario Line and GO Expansion plans within the existing rail boundary streamlines construction work that would have otherwise been spread out into separate areas. While many aspects of the Ontario Line's design are still being worked on, Metrolinx will not be revisiting the decision to run this section anywhere else but within the existing rail boundary in our right of way, also where the expansion of GO transit will take place. We are moving forward with this decision, and the Early Works Report is one step in the process.</p>

Malcolm Mackay, Program Sponsor, Ontario Line
Donald Wright, Chair, Metrolinx Board of Directors
By e-mail to: Malcolm.MacKay1@metrolinx.com and chair@metrolinx.com

November 10 2021

Dear Mr. Mackay and Mr. Wright,

Save Jimmie Simpson's response to the recent Lakeshore East Joint Corridor Early Works report, submitted October 24, 2021, included a copy of [Towards a Healthier Riverside and Leslieville: A Health Impact Assessment of the Ontario Line](#). This HIA was commissioned by SJS and South Riverdale Community Health Centre and authored by independent HIA specialist, Ronald Macfarlane. Unfortunately, it had to be paid for by crowd-sourced funding, along with a small grant from SRCHC, rather than by Metrolinx or the provincial government.

We are writing now to draw this report to your attention since we are unaware of the process of considering Early Works report responses and are uncertain you will see it otherwise.

The HIA determines that the above-ground alignment being put forward by Metrolinx has far more deleterious impacts on the health of our community than the underground option developed by [REDACTED] and proposed by the LSECAC and our group. In particular, it concludes:

While an aboveground alignment is often chosen because of its lower construction cost, to ensure the right decision is made, it is important to accurately include the long-term economic, social and environmental benefits that accrue from an underground option as these benefits are important contributors to health. Available evidence suggests that an underground alignment would have fewer negative impacts on health. The underground option would:

- *Cause less disturbance to the current urban fabric as well as various homes, schools and businesses adjacent to the line*
- *Have negligible impact on the tree canopy, parks and other green spaces*

RE: Metrolinx 'Early Works' Reports – Lakeshore East Joint Corridor and East Harbour

Attached please find comments from *Save Jimmie Simpson* on the Lakeshore East Joint Corridor and East Harbour Early Works reports. We cannot submit these without making some comments on the process for response to the report which we hope you will seriously consider.

As you are aware, two Metrolinx early works reports (East Harbour and Lakeshore East Joint Corridor), both of which concern Riverside and Leslieville, were released on the same day. Together they total over 3,000 pages of dense, often very technical, content. Despite this huge amount of material, Metrolinx only gave the public concurrent 30-day comment periods for responding to them. One would need to read & understand over 100 pages each day just to review all the information in the time allotted, let alone to compose cogent reactions.

Save Jimmie Simpson, as well as the LSE Community Advisory Committee and the Toronto Board of Health, requested Metrolinx to extend the comment period beyond Oct 24, 2021. Following 'the letter of the law', these requests were not granted. However, nowhere in O. Reg. 341/20 does it prescribe issuing two early works reports on the same day.

We cannot but conclude that this was a purposeful strategy to limit public participation.

Of course, SJS members (community volunteers who are not engineering or technical professionals) were unable to review these reports in full in the available timeframe. Our comments are unfortunately therefore limited to noise and vibration (section A) and health impacts (section B). We reiterate that we would welcome the opportunity for more time to review the information in full and provide meaningful feedback and other aspects.

We would also like to provide input on some related issues.

We are disturbed by the scope of what Metrolinx considers 'early works.' Early works are generally defined as *preliminary* works carried out in advance of the main works – activities like site preparation, creation of access routes, installation of security fencing, ramps and the like, placement of signage, etc. These enable construction workers and materials to access sites and begin work securely, as well as keeping neighbouring areas safe and free of impediments for others. Although permitted under the current draconian provincial legislation, building bridges and stations for the Ontario Line hardly

SAVE!
JIMMIE
SIMPSON

qualifies as what most would consider early works. The works proposed by Metrolinx cement the continuance of the specific (and disputed) OL design being imposed on the host communities.

Given the complete lack of true community engagement and the amount of opposition to aspects of the Ontario Line, this is completely offensive, but, not unlike the comment period for the 2 reports, seems a purposeful tactic to ensure opposition to the proposed design will be unlikely to succeed as construction will be too far along to substantively change it. This is shameful!

We also want to discuss what feels like chicanery regarding Metrolinx's claimed approval for vegetation clearance. Metrolinx states that tree clearance has been approved via the GO EA, released in 2017 plus the EA more recently released in May 2021. The current Ontario Line plan in Riverside & Leslieville requires lifting an in-use GO track, raising the entire track bed by up to 1.6 m and replacing or rebuilding 6 bridges in order to accommodate an above-ground alignment. None of this was even imagined in 2017 and certainly it was not sufficiently developed in early 2021 to have been properly factored into an EA that was released in May. We therefore believe the claim for approval under these EAs is at best disingenuous and at worst a falsehood.

Further, we have yet to see the promised arborist report for the line. Like other community groups, we do not accept that any vegetation clearance should be carried out before this and municipal approvals are publicly circulated and discussed.

We do not, of course, expect any of our input or concerns to be seriously addressed. Nevertheless, we feel it is important to state them clearly for the record.

Sincerely,
Save Jimmie Simpson

JIMMIE
SIMPSON!

SECTION A: Noise and Vibration

In addition to the impossible timeline, our ability to respond to the noise and vibration section was further hampered by Metrolinx's tardiness. We sent a set of questions to clarify their noise methodology on Oct 4. We did not receive complete responses until October 20. This gave us just four days before the Oct 24 deadline to review the data in light of some of the clarification provided. Many of Metrolinx's written responses were perfunctory. Further, Metrolinx would not coordinate a meeting between our members and its sound engineer, so we were unable to discuss our deep reservations about the noise data.

Issues with noise and vibration data

- Future noise levels with barrier exceed recommended guidelines set by Ontario Ministry of the Environment (55 dB during the day, 50 dB at night) and the World Health Organization. Early Works reports also indicate vibration levels exceed guidelines at a number of receptors. The community funded Health Impact Assessment (submitted as part of this package) found that the underground Ontario Line results in less noise and vibration for our neighbourhood. SJS strongly believes the hybrid underground route must be seriously considered.
- Metrolinx is following MOEE/GO and MOEE/TTC Protocols from 1995 and 1993, respectively. These standards are 30 years out of date and do not reflect the latest scientific understanding about impact of noise and vibration on health. Therefore, we believe they are inadequate measures for this project.
- When noise and vibrations exceed recommended guidelines, Metrolinx is only required to 'investigate mitigation.' It is under no obligation to keep noise and vibration levels deemed to be healthy and safe. This is unacceptable.
- Current noise levels were predicted, as opposed to measured. In essence, Metrolinx data is comparing predicted data to predicted data. Using only predicted data does not follow the preferred approach by Canadian Transportation Agency to rely on the results of actual field measurements of the railway sound levels.¹ Given the significant irregularities outlined below, we urge Metrolinx to carry out proper field measurements to accurately assess the current noise levels.

¹ Canadian Transportation Agency, [Railway Noise Measurement and Reporting Methodology \(Aug 2021\)](#)

- Ambient noise sources were not included in the noise modeling. This contrasts with the methodology used for environmental assessment for GO expansion and Ontario Line Environmental Conditions Report, which appears to have included the ambient sound level.
- Community members pointed out that there were no vibration studies in our neighbourhood in Metrolinx Environmental Conditions Report last year; the report was released without any vibration study. In early works, Metrolinx 'predicts' existing vibration levels with no field measurements.
- Metrolinx says detailed vibration analysis, including vibration propagation testing, will be conducted at some future time. This should be done prior to any 'early works' construction so that the route alignment can be modified if environmental impacts cannot be mitigated for homes along the corridor?
- In [Guidance for Evaluating Human Health Impacts in Environmental Assessment](#), Health Canada recommends "construction noise lasting longer than 1 year be assessed as operational noise." Metrolinx's planned schedule shows a minimum [8 years of construction](#). The Early Works report does not show noise impact from construction as part of its operational noise. This should be added.

Noise & vibration aspects missing from early works report

- Metrolinx provides projected noise levels as average for 16h (day time) and 8h (night time). People do not experience noise like this. As CTA explains "several railway activities, including train pass-bys, emit repetitive noises of a significant level for brief periods of time that can interfere with sleep, communications, and the well being of the residents of neighbouring properties (WHO 1999)."

CTA recommends the following metrics to be considered as part of the assessment procedures to supplement the noise assessment: Maximum events sound level (Lmax dBA) and Sound Exposure Level due to single events (SEL in dBA). Metrolinx has provided neither measurements in its early works report.

Given the number of residential homes in close proximity of the proposed project, it is incumbent on Metrolinx to carry out additional noise studies to ensure the projected noise profile not interfere with everyday activities for the host community.

- Metrolinx provides L peak only for Ontario Line pass-by. It refuses to provide L peak for the simultaneous pass-by from multiple trains (GO, VIA, freight and Ontario Line). With a 10-fold

increase in train frequency, our community expects numerous disturbances from the simultaneous pass-bys from GO, VIA, freight and Ontario Line trains. Worse yet, Metrolinx claims it has no obligation beyond what is prescribed in protocols that are 30 years old. Given that this six-lane rail corridor is being dropped in the middle of residential neighbourhood, Metrolinx planning must be more sensitive to community concerns and provide Leq max and L peak from all train sources before this project proceeds.

- Metrolinx does not indicate when the GO electrification and conversion of motive power would occur. It means we could face service increases using more diesels than assumed in this noise and vibration study. Therefore, predicted noise and vibration levels underestimate the true impacts.
- There are no indoor noise measurements at all for homes facing the rail corridor. This omission was pointed out in our response to Environmental Conditions Report (Oct 2020). Metrolinx continues to fall short of best practices.
- For a new development in proximity of rail corridor, detailed recommendations have been made specifying sound proofing materials to be used to make the living area hospitable. 125R Mill St condo for instance has been advised that exterior wall construction be made with sound isolation performance of minimum STC-45 and window glazing between STC-28 to STC-39.

This underlines the fact that the 100-year-old houses and 40-year-old apartment buildings close to the track are woefully deficient in their sound-proofing for the amount of rail traffic expected. Who bears the responsibility to upgrade sound proofing for these hundreds of homes along the rail line?

And if sound proofing doesn't resolve adverse impacts of rail expansion on nearby homes (according to early works reports, there are 365 homes within 30 metres of their project footprint), what recourse do local residents have?

- RWDI, which carried out noise and impact assessment near receptor 1 (South of Mill St between Tannery Road and Bayview Ave) recommends the following warning be provided to all prospective buyers for 125R Mill St condo under development:

*"Purchasers/tenants are advised that despite the inclusion of noise control features in the development and within the building units, sound levels due to increasing road traffic / rail traffic may on occasions interfere with some activities of the dwelling occupants as the sound levels exceed the sound level limits of the Municipality and the Ministry of the Environment."*²

² Excerpt from Noise and Vibration Impact Study - RWDI #2001211 (April 2020) - is attached.

We wonder what type of warning should be provided to the existing residents who live close to the rail corridor by Metrolinx and AECOM?

- Health Canada states in its [Guidance](#), “the determination of %HA is a widely accepted indicator of the human health effects of long-term noise exposure.” It stipulates “a calculation of baseline percent highly annoyed (%HA) at receptors” be provided in environmental assessment. We are baffled as to why Metrolinx continues to dismiss environmental and health standards; these need to be applied to this project
- Health Canada says if the change in %HA exceeds 6.5%, “community consultation is important to establish mutually agreeable work schedules and is an acceptable means of informing the public of the time and duration of noisy activities.” Although Metrolinx constantly insists it ‘consults’, their offerings bear no resemblance to real consultation. The community must be meaningfully engaged to meet this guideline.

Despite Metrolinx’s claim that it will minimize overnight work, the reality is much of this construction, expected to last a minimum of 8 years, will be mostly overnight. Metrolinx urgently needs to clarify the duration of overnight construction work required and the consequent public health risks as a result of this.

- Some receptors show extremely high predicted noise levels even with the sound barrier – levels associated with hearing loss, according to the CDC.³ There is not a single mention of “health” anywhere in this report. The potential health risks for tens of thousands of residents who live in Riverside and Leslieville must be addressed.
- The vibration study is done assuming single-track traffic. The cumulative impact of multiple trains passing by simultaneously was not studied. Metrolinx says “in the rare occurrence of additive vibration, such as during a simultaneous GO train and Ontario Line vehicle pass-by, sample calculations indicate that overall vibration levels would not be significantly higher than that of the dominant individual source. Therefore, the results within this report are based on the worst-case single pass-bys of trains operating on GO or Ontario Line tracks.”

With Ontario Line trains expected to travel every 45 seconds, there will almost certainly be simultaneous pass-by somewhere along the 1.5km stretch on Joint Corridor – as there are now with much fewer trains. It won’t be a ‘rare’ occurrence at all.

³ Centre for Disease Control and Prevention:
https://www.cdc.gov/nceh/hearing_loss/what_noises_cause_hearing_loss.html

Metrolinx should use the higher vibration levels from additive vibration, even if not ‘significantly higher.’ Further, the report is silent on what the vibration profile looks like when there are three, four or five trains passing by simultaneously.

Data inconsistencies

There are significant inconsistencies in the projected noise data. These cast doubt on the legitimacy of the prediction model and whether it can be used to claim compliance with even the 1993 and 1995 protocols.

1. Metrolinx predicts noise levels without barrier⁴ will *decrease* at 8 locations in our neighbourhood. Most of these locations are within 35 metres of the existing corridor, some as close as 15 metres. It’s inconceivable that the cumulative impact of GO expansion and the Ontario Line will somehow result in noise decrease for receptors in such close proximity to the rail line. As a point of reference, [GO Environmental Assessment](#) (May 2021) shows an average noise increase of 2.5 dB for receptors within 40m of the corridor as a result of GO expansion alone.
2. Despite the projected noise decrease during the day at a number of locations, no receptor is anticipated to have noise reduction at night. This bizarre phenomenon of day-time noise reduction and night-time noise increase occurs at eight receptors out of 24. The idea that 1,573 trains (581 GO and 992 OL) during the day will reduce noise levels, while 248 night trains (110 GO and 138 OL) will increase noise levels at the same location defies logic.
3. [REDACTED] abuts the rail corridor. Yet the noise increase is projected to be less than that at [REDACTED] or [REDACTED], which are more than 200 metres away. Given that high rises do not benefit at all from the noise barrier, we cannot believe this is possible.
4. Noise wall effectiveness appears to have been manipulated. We assess how many dB reduction is predicted from the noise barrier by looking at the difference between ‘Future – with barriers’ and ‘Future – with project.’
 - In the case of four residential home receptors located at similar distances to the rail corridor, a dB reduction from the barrier varies from 2.6 dB ([REDACTED]) to 9.8 dB ([REDACTED]). A 3 dB decrease is a halving of sound energy; a 10 dB decrease is sound energy decreased by a factor of 10 – perceived by the human ear to be half as loud. How can there be such huge discrepancies at receptors with similar conditions?

⁴ ‘Future – With Barriers’ in Table 3-4: Predicted “With Barrier” Noise Impacts in [Appendix A3](#) of Ontario Line Lakeshore East Joint Corridor Early Works Report.

- The most striking anomaly is at [REDACTED] and [REDACTED], located east of the corridor. These locations are almost next to each other, yet noise wall provides only a 1 dB reduction at [REDACTED], while a 10 dB reduction is projected for [REDACTED].
5. Noise wall effectiveness during the day and night differs wildly.
- At [REDACTED], the noise wall provides comparable reduction during the day and at night (7 dB). A few metres away at [REDACTED], the noise wall is much more effective at night (11 dB) than during the day (4 dB).
 - At [REDACTED], the opposite is true. The noise wall is much more effective during the day (13 dB) than at night (6 dB).

We were not able to ask Metrolinx about these inconsistencies as they would not coordinate a meeting with their acoustics engineer. If the Metrolinx noise model yields such a wide margin of error, it is obvious that its output cannot be used to claim compliance with a 5 dB threshold.

Independent verification of Metrolinx/AECOM noise predictions

Given the magnitude of irregularities, we cannot help but question whether this data has been deliberately manipulated.

We believe an independent verification of their predicted noise data is in order – to be carried by a 3rd party unaffiliated with Metrolinx. Once verified, the early works reports must be re-released and the public consulted with sufficient time to review the information.

We also believe AECOM and Metrolinx employees who signed off on the report have questions to answer. This includes those who prepared, reviewed and approved the report: Brian Bulnes, Alan Oldfield, and Nicole Cooke. We wonder if acoustics engineers were pressured to arrive at a foregone conclusion. Given the potential noise and vibration impact on health and safety of thousands of residents in Riverside and Leslieville including children, seniors and vulnerable populations, we believe any malfeasance, if it exists, warrants inquiry.

We are also concerned that AECOM, as the potential engineering contractor for the project, has a conflict of interest when it also provides data to support the project.

SECTION B: Health Impact Assessment

Along with other community members & groups, SJS is concerned about potential health impacts of the proposed above-ground section of the Ontario Line on people living & working near the route, and in the broader community. Unfortunately, Metrolinx has neither the interest nor the obligation to properly assess these impacts. (In a letter to SJS member [REDACTED], dated February 26, 2021, Metrolinx said their environmental assessment will *not* look at potential health risks as it is “not standard Metrolinx practice.”)

SJS has therefore partnered with South Riverdale Community Health Centre, along with the many community members who donated to fund it, to commission a health impact study. It compares the health impacts of the proposed *above-ground* proposal in Riverside/Leslieville to a community-supported *underground* design that builds on the previously approved Relief Line subway which was abruptly cancelled by the Ford government.

SJS believes that well-planned, evidence-based, public transit is critical for the health of all Toronto residents. However, we also think that the Metrolinx above-ground design for the Ontario Line through Riverside/Leslieville is deeply flawed. In spite of their many glossy brochures and “open houses”, Metrolinx has made little effort to present useful information about the OL in a way that people can easily access or understand. Because we are unable to get sufficient reliable information from Metrolinx, community members have not had access to detailed plans that clearly identify impacts on trees, park lands, home expropriations, noise & vibration levels, cumulative effects, potential health risks, etc.

Opposition to plans for the OL from numerous neighbourhoods along its proposed route continues to grow. There has been no meaningful community engagement, in which options are presented, input is solicited, and proposals are altered based on that input. SJS is concerned that that Metrolinx’s top-down, developer-friendly ‘design & defend’ process, plus the lack of accurate and unbiased impact studies, will foster further opposition, undermine required political and financial support and ultimately delay needed public transit improvements. We have already seen the sad result of poor and politically motivated decision-making in Scarborough where, since at least 2007 (*Transit City*), people have been waiting for more adequate public transit to be built.

SJS is further concerned that development interests are dictating the OL transit design. Under Premier Ford’s majority, the Ontario government passed [Bill 171, “The Building Transit Faster” Act](#) which removed requirements for environmental assessments and meaningful public engagement. Changes to the Environmental Assessment Act were rebuked by the Ontario [Auditor General](#) as a violation of the provincial Environmental Bill of Rights.

Following Bill 171, the province passed the [“Transit Oriented Communities Act” \(TOCA\)](#). TOCA takes municipal planning controls (density, heights, study requirements, etc.) away from the City of Toronto and gives that control to the province and their real estate development “partners”. This affects land

SAVE!
JIMMIE
SIMPSON

[REDACTED]

around all 15 proposed OL stations. Taking planning controls away from the City of Toronto will result in market-driven real estate development seeking to maximize profits for developers with no discernable benefits to City of Toronto residents.

In May of 2021, the Federal government announced funding for the Ontario Line and other transit infrastructure. This funding was, they said, dependent on satisfying a number of conditions including:

- Undergoing a substantive environmental review and approval process including an analysis of impacts on the environment and a description of mitigation measures;
- Engagement processes that enable early community involvement inclusive of local communities and diverse voices and stakeholders, and opportunities to access decision-makers and influence decisions

We believe it is unacceptable that Metrolinx does not meet these stated conditions.

SJS worked with the Lakeshore East Community Advisory Committee (LSECAC) and well-known transit advocate Steve Munro to consider what an alternate underground plan for the OL in Riverside/Leslieville might look like. Based on Steve’s wide-ranging expertise, this is the viable and reasonable plan that emerged:

Ontario Line Hybrid Riverside Plan - Underground

Plan developed by Steve Munro in consultation with the LSECAC and Save Jimmie Simpson

- Analysis and consultation complete for section under Carlaw Ave.
- No tunneling under the Don River – considerable cost savings
- Utilizes industrial land not park land

- Proposed Station
- Ontario Line Above Ground
- Ontario Line Under Ground
- GO Regional Express Rail
- Route of Previously Approved Downtown Relief Line

This design addresses many of the problems with the above-ground plan identified by SJS and others. In spite of community urging and motions passed by City Council, Metrolinx refuses to evaluate this option.

Of course, SJS is aware that tunnelling for an underground line is will be disruptive and present challenges to the neighbourhood, but we believe this option causes fewer issues in both the short & long-term.

The HIA report finds that this underground option offers better public health outcomes for the community. It offers strong evidence that a complete Environmental Assessment (EA) that evaluates alternative alignments should be completed before any final decisions about the alignment of the Ontario Line are made, and before any more work that might limit those decisions is done. EAs provide baseline information and model potential impacts and are an ideal source of site-specific information that can be used to evaluate the impact of the proposal on health. Because of this, integration of HIAs into EAs is a recommended practice. Metrolinx needs to follow best practices and provide the quantitative data that compares the two options in a transparent & unbiased way using evaluation criteria that include health.

We believe findings of this HIA highlight the urgent need for Metrolinx to seriously consider the underground option put forward by community members.

3.5.1.4 Proximity to Rail Line

Due to the proximity to the CN/Metrolinx Rail Line, a warning clause would be required.

3.5.2 Stationary Sources

Based on a high-level review, stationary sources are expected to comply with the applicable NPC-300 sound level criteria. Due to the mixed-use nature of the proposed development, we recommend that prospective purchasers and tenants be informed via a warning clause "Type E".

3.5.3 Don Layover Site (Rail)

An assumed potential worst-case scenario of nine idling locomotives at the Don Layover Yard is predicted to exceed the NPC-300 sound level criterion during the nighttime period. We recommend that Metrolinx comment on the assumptions presented in this assessment, as it may be the case that the layover site is used only between the morning and afternoon rush hour periods (daytime), and idling locomotives are generally not present at the layover yard during the nighttime period, or it may be the case that trains generally do not idle for a full one-hour period during layover, particularly during the nighttime period.

3.5.4 Rail Vibration

The measurements demonstrated that the vibration produced by streetcar passes is well within acceptable limits. Therefore, vibration mitigation is not required for the proposed development.

3.5.5 Warning Clauses

Warning clauses are recommended to be included on all development agreements, offers of purchase and agreements of purchase and sale or lease. Warning clauses may be used individually or in combination.

The following warning clauses are recommended; however, wording may be modified/customized during consultation with the planning authority to best suit the proposed development:

NPC-300 Type B: Recommended to address transportation noise in OLAs if the sound level is in the range of 56-60 dBA

"Purchasers/tenants are advised that despite the inclusion of noise control features in the development and within the building units, sound levels due to increasing road traffic / rail traffic may on occasions interfere with some activities of the dwelling occupants as the sound levels exceed the sound level limits of the Municipality and the Ministry of the Environment."

NPC-300 Type D: Recommended to address transportation noise in indoor spaces

"This dwelling unit has been supplied with a central air conditioning system which will allow windows and exterior doors to remain closed, thereby ensuring that the indoor sound levels are within the sound level limits of the Municipality and the Ministry of the Environment."

NPC-300 Type E: Recommended to address nearby commercial/industrial land-use

“Purchasers/tenants are advised that due to the proximity of the adjacent industrial/commercial land-uses, noise from the industrial/commercial land-uses may at times be audible.”

Metrolinx/CN/CP Warning Clause for developments that are within 300 metres of the right-of-way:

“Warning: Metrolinx / GO or its assigns or successors in interest has or have a right-of-way within 300 metres from the land the subject hereof. There may be alterations to or expansions of the rail facilities on such right-of-way in the future including the possibility that the railway or its assigns or successors as aforesaid may expand its operations, which expansion may affect the living environment of the residents in the vicinity, notwithstanding the inclusion of any noise and vibration attenuating measures in the design of the development and individual dwelling(s). Metrolinx/GO will not responsible for any complaints or claims arising from use of such facilities and/or operations on, over or under the aforesaid right-of-way.”

4 IMPACT OF THE PROPOSED DEVELOPMENT ON ITS SURROUNDINGS AND ON ITSELF

4.1 Applicable Criteria

The noise produced by stationary noise sources associated with the development itself would be evaluated based on the NPC-300 Environmental Noise Guideline.

4.2 Recommendations

On-site stationary sources for the development are expected to consist of HVAC related equipment in the roof-top mechanical penthouse as well as various exhaust fans. Further, consideration should be given to control airborne and structure-borne noise generated within the proposed development.

Within the development itself the main sources of noise that are likely to affect the uses of the building are the mechanical systems. The potential noise impact of the commercial component of the development is recommended to be reviewed during detailed design, to ensure the applicable criteria will be met.

Provided that best practices for the acoustical design of the building are followed, noise from building services equipment associated with the development are expected to be feasible to meet the applicable sound level criteria due to the nature (residential) of the proposed development.

We recommend that the potential noise impact of the proposed development is reviewed during detailed design to ensure the applicable sound level criteria will be achieved.

5 CONCLUSIONS

RWDI was retained to complete a Noise and Vibration Impact Study (NVIS) for the proposed West Don Lands Block 20 development in Toronto, Ontario.

The following is recommended for the proposed development:

1. Upgraded suite and podium/office window glazing ranging from STC-28 to STC-39 (refer to **Table 10**).
2. Exterior door (living rooms) with sound isolation performance of minimum STC-28.
3. Exterior wall construction with sound isolation performance of minimum STC-45.
4. Installation of central air-conditioning so that residential suite windows can remain closed.
5. Construction of perimeter noise barriers along the outdoor amenity areas.
6. Comment from Metrolinx regarding the conservative assumptions regarding the potential noise impact of the Don Yard Layover site.
7. The inclusion of noise warning clauses related to:
 - o Transportation sound levels in outdoor amenity areas (OLAs) and at the building façade
 - o Proximity to railway lines
 - o Proximity to commercial facilities

The potential for vibration influences on the site due to the adjacent TTC 504A King line and Metrolinx corridor was evaluated. Measured levels of streetcar passes were below the applicable limits. Thus, vibration mitigation measures are not required for the proposed development.

At this stage in design the impact of the development on itself and its surroundings could not be quantitatively assessed. However, the impact on both the building itself and its surroundings is expected to be feasible to meet the applicable criteria.

We recommend that the building design is evaluated prior during detailed design to ensure that the acoustical design is adequately implemented in order to meet the applicable criteria.

Towards a Healthier Riverside and Leslieville: A Health Impact Assessment of the Ontario Line

Recommendations to maximise the health-related benefits of transit-oriented communities 84

Summary and Conclusions

Save Jimmie Simpson, in conjunction with the South Riverdale Community Health Centre, commissioned a health impact assessment (HIA) to better understand the health impacts that the proposed Ontario Line could have on the residents of Riverside and Leslieville and to compare them to the impacts of an underground option. This document provides background information on the impacts of new transit lines on communities they run through as well as the transit-oriented development that is encouraged around stations. The HIA fills a gap in the current process to design and build the Ontario Line and the East Harbour transit-oriented community.

The HIA is a qualitative assessment of the potential impacts of an overground and underground alignment for the Ontario Line through Riverside and Leslieville. It was constrained by the lack of a complete environmental assessment by Metrolinx that compares various options including an underground alignment. Also missing is a cumulative assessment of the three undertakings affecting the neighbourhood: the Ontario Line, GO rail service expansion and rail electrification.

Many factors, referred to as determinants of health, influence a person's health. An HIA considers all of them and highlights sub-populations who are more likely to experience either the benefits or adverse effects of a proposal. The Toronto Public Health screening list was used to identify factors relevant to the Ontario Line proposal and refined for this project with input from members of Save Jimmie Simpson and the South Riverdale Community Health Centre staff. Seventeen factors plus construction were selected. Two workshops were held in September to get input from community stakeholders. Participants highlighted what was most important to them and what they thought was missing. These observations were used to revise the draft report.

Conclusions

The Ontario Line provides benefits to residents and businesses of Toronto. However, people who live near the proposed line and stations experience more of the potential negative effects that come with this new development. This HIA concludes that when it comes to health, the underground alignment is the better option (Table 1).

Input received during the workshop indicated that overall, environmental factors were of most concern to the community, especially noise, vibration and green space. Second in importance were impacts due to construction, including impacts on business viability, noise, vibration, air quality and access to green space.

While an aboveground alignment is often chosen because of its lower construction cost, to ensure the right decision is made, it is important to accurately include the long-term economic, social and environmental benefits that accrue from an underground option as these benefits are important contributors to health. Available evidence suggests that an underground alignment would have fewer negative impacts on health. The underground option would:

- Cause less disturbance to the current urban fabric as well as various homes, schools and businesses adjacent to the line
- Have negligible impact on the tree canopy, parks and other green spaces

- Result in less exposure to noise for people living near the line
- Have less impact on the quality of spaces used for recreation and leisure, making them more attractive to users
- Have fewer negative impacts on children, seniors, people living on low income, and people who do not speak either of the official languages, and
- With the use of tunnelling equipment for the line and mining techniques for stations, cause less disruption to both residents and businesses during construction.

Three factors are anticipated to have a positive impact on health. One of them is greenhouse gas emissions; there is likely no difference between the two options for this factor. When it comes to the other two, air quality and transport, the underground option is likely to have greater benefits.

There are several factors where the negative impacts of both options are likely to be the same. Many are related to the differential impacts of gentrification that a new transit line and transit-oriented development will encourage. While both the Ontario Line and the East Harbour development will increase access to employment overall, experience elsewhere shows that people on low-income and minority populations are not as likely to benefit from these new opportunities and may even experience a loss of income.

The evidence from other cities suggests that people on low income and equity-deserving groups, including Indigenous peoples, who currently live in Riverside and Leslieville are likely to benefit less from the opportunities that arise from this transit improvement and investment in East Harbour. In addition, they are more likely to experience negative impacts related to increased rents and cost of living, displacement, social isolation, and a loss of belonging. While these factors are independent of the choice made for the alignment they must not be ignored. To create a healthy city for all, the potential for these factors to increase health risks for people who already experience poorer health must be addressed.

An important limitation of this HIA is the lack of a completed rigorous environmental assessment that compares various options. A reliable environmental assessment would compare options, integrate a health impact assessment, include meaningful community engagement, and be completed before work starts. Nevertheless, the conclusion of this HIA is that the underground line is the best option when it comes to promoting the health of residents and businesses in Riverside and Leslieville.

Table 1 summarises the impacts of the two options on the determinants included in this report, and indicates whether these are negative, positive or neutral.

Table 1. Summary of the differences in health impact between the overground and underground alignment for the Ontario Line.

Legend:

Determinant	Overground alignment	Underground alignment
Environmental factors		
1. Noise	 Potential for increase in annoyance and sleep disturbance from noise exposure	 Least noise exposure
2. Vibration	 Potential for annoyance from vibrations	 Unlikely to result in annoyance due to vibration
3. Green space	 Greater loss of green space and/or tree canopy along the whole corridor and related to construction	 Possible loss of green space and/or tree canopy around stations or related to construction
4. Air quality	 Small difference between options Some improvement as more people use transit or active travel Potential for higher release of toxic metals into the ambient environment	 Small difference between options. Some improvement as more people use transit or active travel Release of toxic metals would occur inside the tunnel
5. Greenhouse gas emissions	 No significant difference between options Some reduction as more people use transit or active travel	 No significant difference between options Some improvement as more people use transit or active travel

Determinant	Overground alignment	Underground alignment
6. Community design	 <p>More impact on land-uses adjacent to the line</p>	 <p>Potential impact on land-use only along East Harbour</p>
7. Transit-oriented development	 <p>Potential positive overall impact on health</p> <p>Negative due to gentrification pressures on neighbouring community</p>	 <p>Potential overall positive impact on health</p> <p>Negative due to gentrification pressures on neighbouring community</p>
Access to services		
8. Transport	 <p>Health benefits from improved access to employment, services, and recreation and increase physical activity due to taking transit</p> <p>Transfer at Riverside/Leslieville station to the Queen Street streetcar only</p>	 <p>Health benefits from improved access to employment, services, and recreation and increase physical activity due to taking transit</p> <p>Station at Queen and Carlaw offers transfer to multiple surface transit lines</p>
9. Recreation/Leisure	 <p>Greater impact on green space affecting the quality and desirability of space used for recreation, leisure and as playgrounds</p>	 <p>Minimal impact on green space and the quality and desirability of space used for recreation, leisure and as playgrounds</p>
10. Health & social services	 <p>Likely no difference between options</p> <p>Some potential negative impacts related to gentrification</p>	 <p>Likely no difference between options</p> <p>Some potential negative impacts related to gentrification</p>
Social equity		
11. Indigenous populations	 <p>Insufficient information to assess, but likely negative</p>	 <p>Insufficient information to assess, but likely negative</p>

Determinant	Overground alignment	Underground alignment
12. People living on low-income	 <p>Potential negative impact including displacement due to rising rents and taxes</p> <p>More likely to be adversely impacted by loss of green space, noise and vibration</p>	 <p>Potential negative impact including displacement due to rising rents and taxes</p>
13. Language and cultural diversity	 <p>Likely larger negative impacts on social capital due to greater disruption during construction</p>	 <p>Possible negative impacts on social capital</p>
14. Seniors	 <p>Greater disruption during construction and larger impact on green space and potentially higher exposure to noise likely to result in more negative impacts on support networks</p>	 <p>Displacement could result in negative impacts on support networks</p>
15. Children	 <p>Exposure to noise and air pollution and reduced access to green space during construction is especially of concern.</p>	 <p>Potential for localised impacts due to noise and air pollution during construction</p>
16. Gentrification	 <p>Potential differential negative impacts on low-income and minority populations</p>	 <p>Potential differential negative impacts on low-income and minority populations</p>
17. Employment	 <p>Increased access to employment but potential negative differential impacts on low-income and minority populations</p>	 <p>Increased access to employment but potential negative differential impacts on low-income and minority populations</p>
Construction		

Determinant	Overground alignment	Underground alignment
18. Community impacts during construction	 <p>Greater disruption to the community during construction, affecting viability of businesses and increasing the risk of displacement.</p> <p>Higher degree of annoyance from disruption caused by construction including work happening overnight.</p>	 <p>Tunnelling and the use of mining techniques for the building of stations will reduce disruption to the community during construction</p>

Summary of the results

When comparing the proposed Ontario Line surface alignment to an underground alternative, the results of this HIA are as follows:

Environmental factors

1. **Noise:** Noise can cause annoyance and sleep disturbance, both of which are detrimental to health and well-being. While the noise modelling completed for the joint rail corridor suggests that, with noise barriers installed, some residences would experience less noise in future compared to today, there are other residences where noise levels are expected to increase. Overall, an underground option is expected to result in lower exposure to noise, including less noise at night.
2. **Vibration:** Vibration can cause annoyance and sleep disturbance, both of which are detrimental to health and well-being. Data from the vibration assessment for the joint-corridor identifies properties that could be adversely affected by vibrations. While the assessment suggests that mitigation measures are available to reduce these, there is a higher likelihood of vibration impacts from the overground alignment as compared to an underground option.
3. **Green space:** Living in an area close to a park or with green space including trees is associated with better health, including lower risk of dying from heart and lung disease. Green space reduces stress, improves mental health and is linked to increased physical activity. Green space has been found to reduce exposure to air pollution. It also increases resilience to climate change by reducing the urban heat island effect, lowering the risk of flooding, and acting as a carbon sink.

The overground option will be removing most of the existing tree canopy along the rail corridor. This will reduce the health benefits associated with trees and have negative consequences for climate. Even if trees are replanted, it will take many years before they

mature and provide the same climate benefits as the existing ones both as a carbon sink and reduction of the urban heat island effect. Given that an underground option can be expected to have less impact on current green space in this neighbourhood, from the point of view of health, an underground alignment is preferred.

4. **Air quality:** Both short- and long-term exposure to air pollution can lead to adverse health outcomes. It contributes to many different adverse health outcomes, including various lung and heart diseases, cancer, adverse birth outcomes, neurodevelopmental issues, reduced cognitive function, dementia, and diabetes. If more people opt for travel by transit rather than car, an overall reduction in air pollution can be expected.

The community has expressed concerns about impacts on air quality. While GO Transit will increase train frequency and continue to use some diesel-powered trains, the Ontario Line will use electric ones. Ontario Line air pollution impacts would be more regional and related to the source of the electricity. There are some releases of metals and other pollutants from the friction between moving parts, brakes, and contact between the wheel and the rail. If state-of-the-art technology and station design are used, one would not expect a significant difference of exposure to these pollutants between options, although the overground option could result in dispersion of some toxic elements into the ambient environment.

5. **Greenhouse gas emissions:** If fewer people opt for travel by transit rather than car, an overall reduction in greenhouse gas emissions can be expected for Toronto as a whole. The Ontario Line will use electric trains. Greenhouse gas emissions would depend on the source of electricity. With potential expansion of gas-powered generation, this would increase the carbon footprint of electricity generation in Ontario. Overall though, there is likely no difference between the options when it comes to greenhouse gas emissions.
6. **Community design:** Urban design refers to the look and feel – form, shape, and character – of a group of buildings or a neighbourhood which is the result of the layout of buildings, public spaces, roads, amenities and services. Certain design aspects are known to increase the likelihood of people walking, cycling and taking transit. This helps reduce the use of motor vehicles and their associated pollution, including greenhouse gas emissions. It also contributes to health due to increased physical activity and reduced exposure to air pollution.

When it comes to community design, the most important difference between the options is the impact on land-use adjacent to the line. The overground option will have more impact on the existing community along the whole portion of the corridor starting from the portal just south of the Pape Avenue Junior Public School at the corner of Riverdale and Pape Avenues to East Harbour. Whereas, the underground alignment proposed by the community would only affect a section south of Eastern Avenue near the proposed East Harbour development. Not only does the underground option reduce the extent of impact on the community, since East Harbour is still at the design stage, any negative impact can more easily be mitigated.

7. **Transit-oriented development (TOD):** TODs that are appropriately designed can encourage people to walk, cycle and take transit more; thus, they have a positive impact on health due

to more physical activity and lower pollution. While studies show that TODs can have positive impacts overall, people on low-income, seniors, and other vulnerable populations may not share in the benefits equally and may be adversely affected due to displacement. While there are likely no differences between the options, impacts are identified as negative because of the potential adverse impact to groups who are already more vulnerable to poor health outcomes.

There is a proposal to add residential buildings in the East Harbour development. As proposed, this would increase the building density by about one third (33%). If approved, this can be expected to result in even greater gentrification pressures in the areas around this site. As well, there is a concern that allowing residential development on this site would have negative repercussions on other employment lands in Toronto, and thus access to employment in the city over the long run.

Access to services:

8. **Transport:** Both options provide improved access to employment, services, and recreation in the community and further afield. They also have a potential to result in increased physical activity related to greater use of transit. These factors contribute to better health from lower emissions of pollutants and greenhouse gases, increased active travel, and improved employment options.

The underground alignment as proposed by the community would see a station at the intersection of Queen Street and Carlaw Avenue, which is a transfer point to surface transit that runs on both of these streets. In comparison, the overground alignment places a station at Queen St and De Grassi Street which would provide an easy transfer only to the Queen Street streetcar.

Most cities that have opted for an underground alignment for transit near and adjacent to the city centre do not regret making that choice. This suggests that an underground alignment would provide more benefit overall.

9. **Recreation/Leisure:** Recreation is known to confer physical and mental health benefits. The combined health and social benefits make parks and recreation facilities one of the most cost-effective public services.

The Ontario Line will improve access to recreation and leisure activities that are outside of the community, which will benefit residents who can afford to take part in these activities. The overground alignment will have greater impact on tree cover and green spaces in the neighbourhood compared to the underground option. As well, it is likely to result in higher exposure to noise and possibly also vibration from trains in the joint corridor. These factors will reduce the quality of spaces used as for recreation, leisure, and as playgrounds. The underground alignment is therefore preferred.

10. **Health & social services:** Transit improves access to health and social services, especially for people on low income or who do not drive. These services help maintain health, prevent disease, restore function, and improve well-being.

There is likely no difference between the overground and underground options on access to health and social services in the neighbourhood. However, as described in the gentrification section, displacement of businesses could decrease access to services that cater to existing residents, especially people who have less facility in speaking English.

Social Equity:

The impacts described under social equity can affect anyone in the neighbourhood. However, the purpose of this section is to highlight the impacts that disproportionately affect people who are already at risk to poor health due to various social factors.

11. **Indigenous populations:** There is insufficient information to assess the impact of the Ontario Line on Indigenous residents in the study area. However, given that a high prevalence of people with low-income in Indigenous populations, they will face similar risks as others on low income, but likely exacerbated by the trauma related to systemic influences such as historical oppression and marginalization. There is likely no difference in the impact of the two options.
12. **People living on low-income:** People on low income have poorer health than the rest of the population. Improved transit has a positive impact on access to employment, education, and other services for people living on low income. Negative impacts are mostly related to gentrification (see below). In the case of the overground alignment, due to the number of people living in non-profit apartment buildings within metres of the railway line, seniors and people living on lower income may be disproportionately affected by increased noise and vibration as well as loss of green space.
13. **Language and cultural diversity:** Compared to Toronto as a whole, the proportion of people who speak neither official language is higher in South Riverdale. The transformation of the neighbourhood can result in the displacement of people and businesses that cater to their needs. This increases the risk of social isolation and related health consequences.

Greater neighbourhood disruption is expected to occur during the construction of an overground alignment. This is likely to result in larger negative impact on the viability of small businesses that serve the local community. This would compound the risk of social isolation among equity deserving groups living in the neighbourhood.
14. **Seniors:** 30% of seniors in South Riverdale live alone. This increases the risk of social isolation. Socially isolated seniors are at more likely to experience poorer health and earlier death.

There are 3 seniors apartment buildings close to the existing rail line. In addition to potential noise and vibration impacts, greater disruption to the neighbourhood from the construction of the overground option could result in negative impacts on the viability of businesses and

contribute to a higher level of displacement. This could affect access to services used by older adults in the neighbourhood and lead to increased social isolation.

An overground option would also have greater negative impact on the quality of public and private green spaces, which are regularly used by older adults. By making these spaces less attractive this could result in a higher risk of social isolation and decrease in physical activity among this population.

15. **Children:** Children are often more vulnerable to environmental stressors. Exposure to noise and air pollution and reduced access to green space during construction is especially of concern.
16. **Gentrification:** The impacts of gentrification are mixed. On a macro level, gentrification is associated with positive economic and social impacts. However, the benefits are not equally shared. People living on low income and equity seeking groups are more likely to be adversely affected by the higher cost of living, displacement and a loss of belonging. Small independent businesses are also more at risk of displacement.

Both options are likely to lead to similar gentrification pressures, with a negative impact on groups that are more at risk of ill health. The best way to minimise inequitable outcomes is to engage with the populations likely to be negatively impacted and give careful consideration to these concerns at the planning stage of either a new transit line or transit-oriented community.

17. **Employment:** There is likely no difference between the two options on access to employment opportunities. Improved transit facilitates travel to employment without needing to rely on a car, which reduces the cost of travel. People who are less skilled and have a lower income are not as likely to benefit from the quality employment opportunities that may occur in new development that accompanies better transit. Service employment in restaurants and retail may be available, but possibly at a lower wage than previous employment. Due to this differential negative impact on more susceptible populations, the impact is rated as negative for health.
18. **Construction:** Long-term disruptions can affect the viability of local businesses and result in either displacement or closure, with detrimental impact on the community and the health of those most affected. Evidence available suggests that the underground alignment (as proposed by the community) is likely to have the least disruption during construction. In addition, the underground option is expected have less impact on health due to reduced exposure to noise and air pollution and less disturbance of green space, especially if state-of-the-art construction methods are used. It is important to accurately include the long-term social and environmental benefits in the assessment of impacts before deciding on the preferred option.

1. Introduction

Prompted by the absence of a completed environmental assessment (EA) of the Ontario Line, including consideration of possible alternatives, Save Jimmie Simpson and South Riverdale Community Health Centre commissioned this health impact assessment (HIA) to better understand the impacts the proposed Ontario Line could have on the health of residents of Riverside and Leslieville. In particular, they wanted to compare the proposed alignment along the existing rail lines to an underground one as had been the plan for the Relief Line which the Ontario Line replaces.

As Dalhousie University professor Ingrid Waldron said: “Consultation has to be done in a culturally specific way. In the Indigenous way of thinking, when you desecrate our land, you harm me, you harm my body, my community and my nation” (Keung 2021).

As well, Save Jimmie Simpson noted the absence of meaningful community consultation in the design process and that the commencement of early works construction before a study of the alternatives has been completed. Generally speaking, this can undermine support for transit projects.

“Without local support built through meaningful engagement and transparent responses to concerns, transit projects may not move forward” (Wiginton 2017).

What is an HIA?

A health impact assessment is a process that studies a proposal to better understand its potential positive and negative effects on health of a community, including the distribution of these impacts on various groups within society (Health Impact Project 2019; WHO 2005).

Health impact assessments are often conceptualised as a process similar to an environmental assessment with a screening phase, scoping phase, assessment phase, reporting phase that includes making recommendations, and finally a monitoring and evaluation phase (Health Impact Project 2021). However, there is no one way to conduct an HIA and they can use different methods or approaches (WHO 2005).

Health impact assessments also come in different degrees of depth or detail. There are rapid HIAs that can be conducted in a matter of days or weeks. Desktop HIAs rely on existing information to highlight potential impacts. In-depth or comprehensive HIAs will often include the gathering of project-specific data. The choice of the approach is influenced by several factors including: time and resources available; complexity of the proposal; potential degree of harm; level of controversy; and regulatory requirements (WHO 2005).

Community involvement can strengthen HIAs. An inclusive process helps build trust and can ensure that the recommendations are broadly supported and implemented (Health Impact Project 2019, 2021). Involvement can occur in different ways. HIAs can be community led or led by project teams that include representatives of the different stakeholders. Another way is to hold workshops where the project is discussed, concerns identified, and recommendations developed. These workshops could be attended by experts, stakeholders, community members, or a mix of these. It is also possible to get feedback through expert review or public consultation.

A person's health is influenced by many different factors called the determinants of health (Braveman & Gottlieb; WHO 2005).¹ Health impact assessments consider how a proposal will affect all relevant determinants. It pays particular attention to people who are most at risk of adverse impact due to socio-economic factors, existing health conditions or belonging to an equity-deserving group.

Why do an HIA?

Health impact assessments bring health evidence up front in the decision-making process. They identify the potential health effects of a decision on different groups and highlight the potential health outcomes including how these may affect different groups disproportionately. The findings of the HIA are then used to make recommendations that will enhance the benefits of the proposal and minimise potential adverse effects, such as chronic disease and injuries. They encourage a collaborative process between communities and decision-makers to ensure the best possible outcome (Health Impact Project 2019; WHO 2005). When conducted well, an HIA process increases stakeholders' understanding of how a project may impact health and equity, ensures those affected have a say in the decision, and promotes the necessary systemic change that will improve health for all (Health Impact Project 2019). Further, meaningful engagement in decisions has a positive health impact in and of itself as outlined in the Canadian Index of Wellbeing (University of Waterloo 2014).²

How was this HIA conducted?

This HIA is a desktop assessment. Using the screening tool developed by Toronto Public Health (2014), The scope of the HIA was refined in collaboration with members of Save Jimmie Simpson and staff of the South Riverdale Community Health Centre. Information on the proposed Ontario Line and East Harbour transit-oriented community was consulted and an internet search was performed to identify literature on the health impacts of introducing a new transit line to a community and the building of transit-oriented developments (TODs). With guidance from the project advisory group, this report was written as a background document to inform residents of Riverside and Leslieville and help them make recommendations on the option for the Ontario Line that would result in the least harm to health and the most benefit to their community. Save Jimmie Simpson and the South Riverdale Community Health Centre held two workshops in September to obtain input from community residents and stakeholders which included health professionals and academics. This input was used to revise the draft report.

Study Area

The focus of this health impact assessment (HIA) is the section along the Lakeshore East rail corridor from Gerrard Street East at Carlaw Avenue to the Don River. The study area of this HIA is bounded to the north by Riverdale Avenue, to the east by Jones Avenue, to the south by Lakeshore Boulevard East and

¹ Health Canada has identified the following determinants of health: Income and social status; Employment and working conditions; Education and literacy; Childhood experiences; Physical environments; Social supports and coping skills; Healthy behaviours; Access to health services; Biology and genetic endowment; Gender; Culture; and Race/Racism. <https://www.canada.ca/en/public-health/services/health-promotion/population-health/what-determines-health.html> (Accessed 2021-08-08)

² The Canadian Index of Wellbeing states, "Wellbeing is supported when. . . governments build relationships, trust, shared responsibility and participation opportunities with citizens; and democratic values are sustained by citizens, government and civil society at a local, national and global level."

to the West by the Don Valley Parkway. This area corresponds closely to the area known as South Riverdale. Depending on the context, this report also uses the historical and recently adopted names of Riverside/Leslieville.

Limitations

There are several limitations to this HIA. Due to time and resource constraints, it was not possible to make this a fully community-driven assessment nor to involve experts on the various topics addressed. The largest constraint was the absence of a completed environmental assessment (EA) for the Ontario Line and associated transit-oriented communities, including the assessment of possible alternatives and of cumulative impacts of the Ontario Line, GO service expansion, and GO electrification. EAs provide baseline information and model potential impacts and are an ideal source of site-specific information that can be used to evaluate the impact of the proposal on health. Because of this, integration of HIAs into EAs is a recommended practice (Bhatia & Wernham 2008; Health Impact Project 2021; Mahboubi et al. 2015).

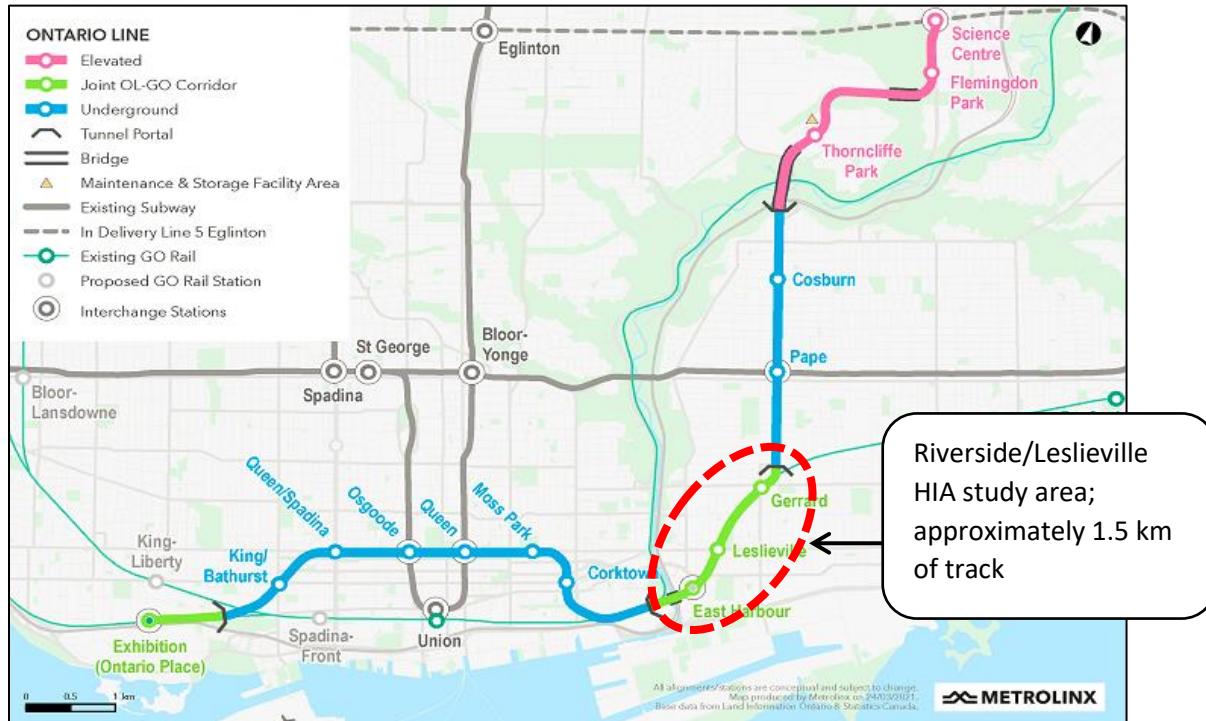

This HIA focussed on the longer-term impacts of the Ontario Line on the community. There will be impacts on the community during construction, and these have been identified as a high concern by residents and businesses. These impacts – such as disrupting access to services, and noise and vibration from construction equipment – are important but require a separate assessment and have not been included in detail.

The Ontario Line proposal

On April 10, 2019, the government of Ontario announced that it would build a new transit line called the Ontario Line (See Figure 1-1). This new line would run from the Ontario Science Centre, south through Thorncliffe Park (shown in pink) and then south under Pape Avenue (shown in blue). The line would then emerge to the surface through a portal near Pape Avenue School to run above ground for about 1.5 km south to the East Harbour development site (the former Unilever factory) along the existing train tracks (in green). The Line would then go back underground and continue west to Ontario Place (in green and blue). There are 15 stations proposed along the route. The projected number of trains is 912 per day in 2030, and 1,130 by 2060 (Munro 2021a).³

³ <https://steveemunro.ca/category/transit/a-grand-plan/subways/downtown-relief-ontario-line/>

Figure 1-1: Alignment of the Ontario Line as proposed by Metrolinx running between the Ontario Science Centre and Exhibition Station (Ontario Place).

The Ontario Line replaces and extends the previously approved Relief Line which was to run underground from Pape Station to Queen and Osgoode Stations.

The Joint Corridor

Two other Metrolinx projects are occurring – the GO service expansion and GO rail network electrification. The Lakeshore East GO train expansion, between Toronto and Oshawa includes electrification of the tracks and the installation of a fourth track. The GO expansion will see an increase in rail volumes in the corridor from 169 (GO and other trains) today to 593 at full expansion. In Riverside/Leslieville, the Ontario Line is proposed to join the other trains within the same corridor, creating a section with a total of six tracks (Figure 1-2). This means a total of 1505 or more daily trains could travel along this portion of the Lakeshore East rail corridor. Figure 1-3 shows the existing corridor as seen from the pedestrian bridge near Gerrard Street East and Pape Avenue, and Figure 1-4 illustrates the widening of the rail bed that will need to occur to accommodate the three extra tracks, which will require retaining walls along the edge of the railway corridor. Figure 1-5 shows a cross section of the line at Queen Street - note the tracks would be raised by about 1.5 metres to clear the roadways below.

Figure 1-2: Overview of the Metrolinx proposed Ontario Line along the current GO tracks emerging around Pape and Riverdale Avenues and continuing across the Don River to Corktown

Note: Figure 1-2 shows the addition of north and south-bound Ontario Lines (yellow) and the GO line (green). At the top middle of the map, the Ontario Line emerges from a portal just south of Pape Avenue School. Jimmie Simpson Park is in the upper middle. The yellow circles show the approximate location of the planned stations. The station at East Harbour would serve both the Ontario Line and GO train service.

Figure 1-3: The existing track bed running through Leslieville/Riverside as seen looking west from the Pape Avenue pedestrian bridge near Gerrard Street East and Pape Avenue

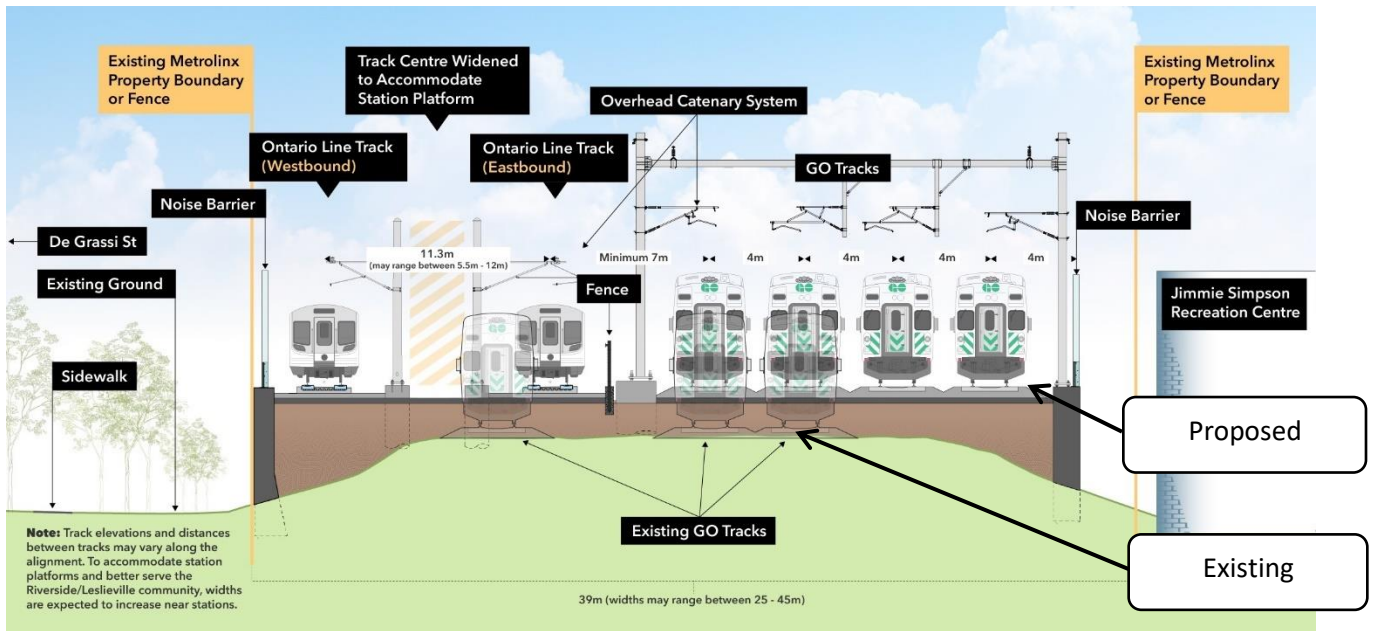

Figure 1-4: What the joint corridor could look like when the fourth GO rail and two Ontario Line rails are added.

Note: Ontario Lines will split and widen further at proposed station locations.

Figure 1-5: Conceptual drawing of the cross section of the joint corridor north of Queen Street with noise barriers.

Note: The track bed is to be raised approximately 1.5 m (Source: Metrolinx, [accessed 2021-06-19](#))

Figure 1-6: An alternative underground alignment for the Ontario Line as proposed by the Riverside and Leslieville communities

Ontario Line Hybrid Riverside Plan - Underground

Plan developed by Steve Munro in consultation with the LSECAC and Save Jimmie Simpson

- Analysis and consultation complete for section under Carlaw Ave.
- No tunneling under the Don River – considerable cost savings
- Utilizes industrial land not park land

The community-supported underground proposal

On February 2, 2021, Toronto City Council reiterated its support for a below ground subway in the segment of the former Relief Line from Pape to the Don Yards (City of Toronto 2021c). Save Jimmie Simpson worked with the Lakeshore East Community Advisory Committee and transit advocate [Steve Munro](#) to develop a viable alternate underground plan (Figure 1-6). Similar to the Relief Line, this alignment would continue underground under Carlaw Avenue to Queen Street. After that point it would veer west and emerge south of Eastern Avenue before reaching East Harbour at grade on the south side of the GO tracks.

The changing face of South Riverdale

Riverdale was annexed to the City of Toronto in 1884, which resulted in rapid development of the area. By 1923 the area was essentially built out. Development in North Riverdale targeted more to middle to high income families, while South Riverdale had a greater concentration of working-class households, whose members were employed in the industries that established themselves in the area due to the proximity to the port. Between 1945 and 1970, few changes occurred. South Riverdale continued to be characterised as a predominantly working-class neighbourhood, with lower income and higher unemployment than other parts of Toronto. There was however a high degree of home ownership, that

contributed to the stability of the neighbourhood which remained predominantly of Anglo-Saxon descent (Walks & August 2008).

The working-class residents of South Riverdale were considered a vestige of the past, and not considered as part of the neighbourhood's future. As such the area was affected by the slum clearance and urban renewal craze of the 1960s. The first redevelopment occurred east of Broadview Avenue and south of Dundas Street. Work on a new housing project the Don Mount Court begun in 1965.⁴ The plan was to extend this initiative, which would have seen 800 homes demolished and replaced by 10,000 high-rise housing units (Walks & August 2008).

The Riverdale Community Organisation (RCO) was created to fight further "slum clearance." It empowered the working-class community and helped form the vision for South Riverdale: "strengthen the residential character of the area" and "to protect the industrial function of the area" (City of Toronto Planning Board, 1977, as cited in Walks & August 2008).

In 1968, a few Chinese businesses were established in the neighbourhood, which started to grow quickly as a cheaper alternative to the Chinatown in downtown Toronto. The first immigrants were from Hong Kong, followed by Chinese from Vietnam, and then from the Chinese mainland. By 2001, people of Chinese ancestry made up a quarter of the population of South Riverdale. The Chinese became part of the social fabric holding a large proportion of the housing stock and establishing businesses and institutions catering to members of their community (Walks & August 2008).

In the 1970s, escalating house prices on the west side of the Don Valley in the community now known as Cabbagetown put pressure on prices in Riverdale. In 1974 and 1975 a developer bought about 40 houses on three streets in the centre of the South Riverdale. These were renovated and sold for a good profit. However, South Riverdale did not experience the degree of gentrification that occurred in North Riverdale, likely due to the presence of heavy industry and related environmental concerns (The South Riverdale Community Health Centre 2020). As prices rose in North Riverdale, in the 1980's the business interests promoted South Riverdale as a cheaper alternative and local improvements were made along Queen Street East. which became known as Queen Broadview Village. The improvements included the cleaning of 40 historical facades (Walks & August 2008).

Starting in the 1980s, incomes of North Riverdale residents started to increase while those in South Riverdale remained more stable. This is likely because North Riverdale attracted an influx of higher income households. The discovery of termites in South Riverdale, followed by identification of widespread lead contamination, and the proposal for a new incinerator meant that the neighbourhood was less attractive as a place to invest or buy homes. This resulted in South Riverdale remaining quite stable between 1981 and 2001 (Walks & August 2008). Since then, South Riverdale has become an attractive community due to its greater affordability. A 2014 survey of residents indicated that people living on a low income were concerned about gentrification of their neighbourhood, as expensive shops replaced more affordable ones. This change has eliminated places where they could socialise, and there is now a need to travel out of the neighbourhood to find more affordable options (Planning South Riverdale 2014).

⁴ Don Mount Court was redeveloped in the 2000s and is now Rivertowne.

2. Health factors assessed

2.1 Transport

Riverside and Leslieville are already very walkable with good access to transit. Walk Score® ranks South Riverdale as the 14th most walkable neighbourhood in Toronto with a Walk Score of 87 (very walkable, most errands can be accomplished on foot), Transit Score of 93 (rider's paradise, world-class public transportation), and Bike Score of 91 (biker's paradise, daily errands can be accomplished on a bicycle) (Walkscore.com, accessed 2021-07-05).

Health benefits of improved transit

Improving public transit is a cost-effective way to improve health, and these improvements are one of the largest benefits of transit investments (Litman 2020).

Public transit, including the subway system, contributes to better health in many ways. In addition to reducing traffic-related injuries, improved transit results in increased walking and cycling to work, school and other activities such as shopping. This increase in physical activity helps prevent premature deaths and various chronic diseases such as diabetes. Transit also improves social connectivity and mental health. It contributes to improved equity by offering better access to employment, schooling and social/community services for people with low income and an aging population. And there are also the benefits that come with lower traffic-related air pollution and fewer greenhouse gas emissions (Mowatt et al 2014; TPH 2019b).

Transit offers mobility at lower cost than travel by private automobile. This reduces household transportation-related costs. The lower amount of income devoted to paying for transportation means more resources can go to pay housing, food, health and other essential services. Improved access is especially important for people on low income, with disabilities or who are not able to drive (Litman 2020; TPH 2013).

Good transit has many health benefits. Transit improves access to opportunities and services that contribute to health (for example, employment, education, health services, food, and recreation/social activities). Because transit improves access to economic, social and recreational opportunities, it contributes to mental health. Not only does employment provide a source of income, it contributes to a sense of identity and gives structure to daily life, which in turn promotes mental health. Being able to access health services also allows people to prevent illness and to improve their health and well-being (TPH, 2013).

Poor diets are linked to chronic illnesses such as heart disease, diabetes, high blood pressure, and poor self-rated health. Transit has an important role in improving access to healthy foods, especially for people who do not have access to a car. In addition, participation in recreation and cultural activities promotes social relationships and contributes to positive mental health (TPH 2013).

Transit also contributes to increased physical activity which is critical to good health. People who use transit walk and cycle more, not only to get to transit, but also for doing errands and getting to and from other activities. Compared to non-transit users, people who travel by transit are more likely to meet recommended physical activity guidelines (Litman 2020). Physical activity can lower the risk of chronic

health conditions such as cardiovascular disease, stroke, hypertension, diabetes, colon cancer, breast cancer, and osteoporosis (TPH, 2013).

Transit, especially when it is electrified, reduces both traffic-related pollution and greenhouse gas emissions as fewer people travel in private vehicles than otherwise would be the case. Studies have shown lower per capita traffic-related injuries and deaths in communities with better transit: transit has about one-twentieth the passenger fatality rate of automobile travel. As well, many commuters report they find traveling by transit less stressful than driving (Litman 2020).

The proposal

The proposal (Metrolinx [accessed 2021-07-19](#)) envisages the Ontario Line as a faster and easier way for people to travel to and from Leslieville, Riverside and Riverdale: It will mean shorter travel times for people travelling to the Exhibition, downtown, the Danforth and the Ontario Science Centre. In addition, the Line will make it easier for people to get to community spaces like the Jimmie Simpson Park and recreation centre as well as the unique shops and restaurants in the area. Three stations are planned, one at Gerrard and Carlaw, a second at Queen and De Grassi (Leslieville/Riverside), and a third south of Eastern Avenue (East Harbour). By 2041 these stations will serve approximately 27,000 people living within walking distance of these stations.

Advantages of an underground alignment

“Aboveground or underground” is not a simple choice. It involves the consideration of many factors including planning, urban design, engineering, construction, economic and social aspects. There is a balance of advantage that may differ between the urban core and more suburban areas of a city. The environmental and social benefits of an underground line need to be considered when making the choice, rather than focussing primarily on upfront cost of construction (ITA 2004).

While there may be little difference in ridership potential between an overground and underground alignment, social, aesthetic and environmental considerations generally favour an underground system in city centres. In terms of noise, underground alignments result in less noise as compared to either an at-grade or elevated route. Though the costs and benefits may be hard to quantify, when long-term benefits are taken into account, this generally favours an underground alignment in dense urban areas. Most cities that have opted for an underground alignment for transit near and adjacent to the city centre do not regret making that choice (ITA 2004).

Transport – underground compared to overground rail

Metrolinx (2021c) notes that an underground line would result in stations deep underground that could add four to five minutes to travel time and discourage people from using the Ontario Line. It also suggests that an underground alignment would require the permanent closure of either Eastern Avenue or Queen Street.

As noted above, the Lakeshore East Community Advisory Committee and Save Jimmie Simpson have endorsed a revised alignment which would see the Ontario line continue underground beneath Carlaw Avenue and emerge south of Eastern Avenue just before East Harbour (see figure 1-6 above). This option would not require tunnelling under the Don River, and it would impinge on industrial land rather than park land or residential properties. The consultation and analysis for the portion under Carlaw has

already been completed (Steve Munro, [accessed 2021-07-21](#)). It also would not require the permanent closure of either Queen Street or Eastern Avenue. The underground option as proposed by the community would have a station at the intersection of Queen Street and Carlaw Avenue, which would provide a better transfer point to other transit routes, compared to a stop at De Grassi Street in the overground alignment.

Improved transit provides many health benefits. Overall, there is likely little difference between the underground and overground rail options when it comes to improving access to jobs, education, food, recreation and various services that contribute to health and well-being. While an underground option could be more expensive to build, it would minimise impact on the character of the neighbourhood, including green space and heritage.

2.2 Noise

Noise in Toronto⁵

In 2017 Toronto Public Health released a study on noise in Toronto (TPH 2017b). The results of the noise monitoring showed the overall average noise levels in Toronto were 64.1 dBA during the day (7:00 am – 11:00 pm) and 57.5 dBA (11:00 pm – 7:00 am) at night. These differed by location with daytime levels ranging from 51.6 to 79.5 dBA and nighttime levels from 42.6 to 74.4 dBA (Oiamo 2017). Noise levels were higher during the week than the weekend. Presence of railways is a predictor of total noise levels and has a small but significant contribution to measured noise levels (Oiamo et al. 2017)

Noise measurements taken as part of the preparation of the Ontario Line Environmental Conditions Report (AECOM 2020) indicate that existing average daytime, evening, and night-time noise levels in the vicinity of the proposed alignment to be as follows:

- Daytime (7 AM to 7 PM) Leq (1hr): 48 dBA to 73 dBA;
- Evening (7 PM to 11 PM) Leq (1hr): 48 dBA to 71 dBA;
- Night-time (11 PM to 7 AM) Leq (1hr): 43 dBA to 70 dBA;
- Daytime (7 AM to 11 PM) Leq (16hr): 53 dBA to 67 dBA; and

⁵ Sound levels are reported in decibels (**dB**) or A-weighted decibels (**dBA**) which take into account the human perceptions of loudness to different frequencies. The loudness of sound (L) may be expressed in different ways:

- **Leq**: The equivalent continuous level, which is the average level of sound over a period of time (for example hour, day, or year)
- **Leq 24**: The equivalent continuous level, which is the average level of sound over a period of 24 hours
- **Ldn**: the average equivalent sound level over a 24-hour period with a penalty added for noise during the night-time hours
- **Lden**: the average equivalent sound level over a 24-hour period with a penalty added for noise during the evening and night-time hours
- **Lmax**: the maximum level of sound that occurs in a period of time
- **Lnight**: average level during the night (usually 8-hours, for example 11pm to 7 am)

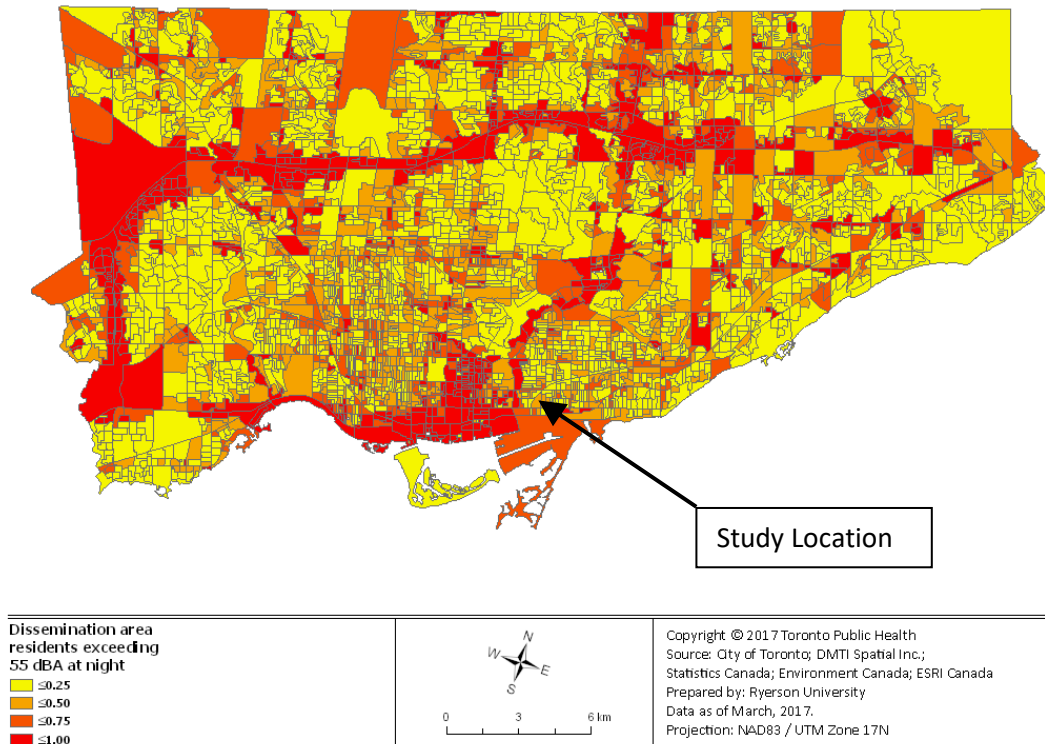

Other terms: **Plane** of door or of window is the centre of an exterior window or door opening in a building; **SEL** is the sound exposure level measured over one second.

- Night-time (11 PM to 7 AM) Leq (8hr): 49 dBA to 62 dBA.

Noise was measured at two locations in the study area: one at Pape/Riverdale Avenues and the other on Wardell Street south of Dundas St. These showed a daytime average level of noise of 64 dBA (16-hr Leq) and night-time average of 55-56 dBA (8-hr Leq) (AECOM 2020). No indoor noise measurements have been made in properties near the rail corridor to document the current exposures in people’s homes.

While levels of noise in Toronto are typical of large cities, they are higher than the World Health Organization (WHO) guidelines for community noise – 55 dBA Leq daytime average and 40 dBA nighttime average – as well as the Ontario noise thresholds for sensitive land uses near transportation sources – 55 dBA Leq daytime and 50 dBA nighttime (TPH 2017b). A large proportion of the population is exposed to average levels of above 55 dB at night (Figure 2-1). This points to the need to make efforts to reduce exposure to noise in Toronto, which means it is essential that new undertakings do not result in increased exposure to noise.

Figure 2-1: Percentage of residents exceeding 55 dBA at night (11 AM to 7 AM) by census tract
(Source: Oiamo et al. 2017)

Noise and health

The available evidence shows that exposure to levels of environmental noise commonly experienced in urban environments can impact cognition, result in sleep disturbance, affect mental health and contribute to cardiovascular illness. These health impacts can occur when outdoor levels are between 42 and 60 dBA (TPH 2017b). The biological effects of traffic noise have been observed in laboratory studies, field investigations and epidemiological research. “Effects range from acute reactions to short-term loud noise, occurring within seconds or minutes from the initiation of a noise stimulus, to chronic

effects of long-term exposure to more moderate noise levels, which may develop over years of exposure” (Eriksson & Pershagen 2018). There is evidence to suggest that risk to health increases when people are exposed to multiple sources of noise (Pyko 2018).

Most studies that have looked at the relationship between environmental noise and health have looked at noise from road traffic (Clark & Paunovic 2018). Fewer studies have looked at railway noise. Studies that have looked at annoyance⁶ have found differences in the response to noise depending on the source (Schreckenbergr 2018). There is no threshold for annoyance as it increases steadily with noise level (Fields 1979). In residential areas, reports of annoyance are more often related to noise from through-trains, maintenance activities and vibration. At the same noise levels, electrified trains appear to be less annoying than diesel ones. However, the degree of annoyance experienced is likely underestimated when the effects of vibration and all the various sources of railway noise are not taken into account (Janssen & Hong 2017).

In urban areas, the noise from the interaction between the rotating wheel and the rail (rolling noise) dominates (Kouroussis et al. 2021). A study of railway noise (Gidlöf-Gunnarsson et al. 2012) found that level of annoyance was related not only to the level of noise but also to the number of trains and presence of ground-borne vibrations. To compensate for this effect, noise levels would need to be kept 5-7 dB lower in areas with ground-borne vibrations and large number of trains. The researchers also found that residents in dwellings with a balcony or patio oriented towards the railway were twice as likely to report being annoyed; annoyance among residents with bedroom windows facing the railway as opposed to the quiet facade was 1.5 times higher.

The World Health Organization (WHO 2018) considers annoyance and self-reported sleep disturbance as health outcomes due to the evidence that these factors are possible causal pathways of noise-induced cardiovascular and metabolic diseases. Maximum sound pressure levels (SPLs) as low as 33 dBA have been shown to induce physiological reactions during sleep (Basner & McGuire 2018). Hahad and colleagues (2018) found an association between railway noise annoyance during sleep and atrial fibrillation, which can increase the risk of stroke, heart failure and other heart-related complications. While noise guidelines usually set exposure limits on the average sound level (Leq), the number and characteristic of noise events during the night are a better predictor of sleep disturbance (Basner & McGuire 2018).

Measures to mitigate noise

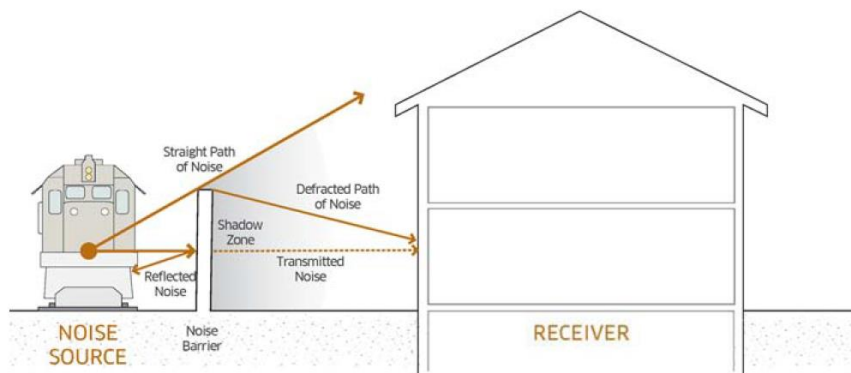

Many available measures to reduce noise are most feasible during the development of new railway tracks. Rail pads, bi-bloc sleepers, small noise barriers and tunnels, cuttings or earthwork barriers can be used. Other interventions include acoustic rail grinding, noise barriers built alongside the tracks, construction of quieter locomotives and railcars, and replacement of brakes on freight trains (WHO 2018).

A noise barrier can provide noise reduction of up 15 dBA when it blocks the line of sight between the train and the receiver, although it is typically less than that (FCM & RAC 2013). However, as can be

⁶ Annoyance is linked to adverse health effects. The World Health Organization (2018) defines annoyance as a feeling of displeasure, nuisance, disturbance or irritation caused by a specific sound or vibration. Studies use self-reported annoyance from surveys or number of reports of complaints.

deduced from Figure 2-2, sound barriers may not be effective in reducing noise impacts on upper floors of multi-storey buildings near the rail line. Underground trains are the quietest option especially when track isolation measures are used (ITA 2004).

Figure 2-2: Effect of a noise barrier on the path of noise (Source: FCM & RAC 2013)

Proposed noise mitigation

The Ontario Line environmental assessment is to study the combined noise impacts from the GO trains and Ontario Line operations along the segment of the rail corridor from East Harbour to Carlaw Avenue (Metrolinx 2021a). Appendix C of the Draft Early Works Report for the Lakeshore East Joint Corridor Early Works (AECOM 2021) provides the results of the noise assessment. Metrolinx followed the 1994 GO protocol with the Ontario Ministry of the Environment and Energy (now, Ministry of the Environment Conservation and Parks) for Noise and Vibration Assessment, the 1993 Ministry-TTC protocol, and the US Federal Transit Administration Manual (AECOM 2020, Appendix 3). The reference exposure limits Metrolinx used in its assessment are shown in Table 2-1.

Table 2-1: Rail Noise Limits for Residences used by Metrolinx (Metrolinx 2020)

Parameter	Measure	Exposure Criterion*
Airborne Noise	Daytime Adjusted Noise Impact (16-hour average, 7 a.m. to 11 p.m.)	5 dB relative to the higher of pre-project sound levels or 55 dBA
Airborne Noise	Night-time Adjusted Noise Impact (8-hour average, 11 p.m. to 7 a.m.)	5 dB relative to the higher of pre-project sound levels or 50 dBA
Airborne Noise	Subway vehicle L_{passby} **	80 dBA
Ground-borne Noise	Subway vehicle L_{passby}	35 dBA

* Limits apply outside building, except for ground borne noise

** L_{passby} The allowable noise level associated with a train passing by

Metrolinx has proposed noise walls along the existing GO rail corridor through the Riverside and Leslieville areas (Figure 2-3). Other noise mitigation approaches are being considered such as rail dampers, continuously-welded rail, ballast mats, floating slabs, resiliently supported rail ties and highly resilient fasteners. “Once the trains are running, there will be continual track and vehicle maintenance, combined with timely monitoring and inspections (Winterburn 2020).”

Figure 2-3: Recommended noise walls and vibration mitigation for GO service expansion between Greenwood and the Don Valley (Source: GO Expansion Program Public Consultation Meeting 3rd Round November-December 2020, [accessed 2021-06-19](#))

Noise – underground compared to overground rail

Available evidence shows when it comes to noise, underground trains cause less disturbance than either elevated or at grade alignments (ITA 2004; US FTA 2018).

A noise impact assessment was done for the underground Relief Line (IEC 2018). The potential sources of operational noise identified were 1) subway stations 2) traction power substations 3) tunnel ventilation and 4) emergency exit buildings. These stationary sources of noise are readily mitigated. The plan was to assess these at the final design stage when seeking an Environmental Compliance Approval, which would ensure they comply with the Ontario noise guidelines for stationary sources.

The Early Works report (AECOM 2021) provides an assessment of the noise impact of the expanded GO service and the Ontario Line. The main contributor to noise exposures are the GO trains. With noise barriers the modelling suggests that noise levels at many of the selected receptors would be lower than it is today (between 0.4 and 10 dBA less). A predicted increase in noise levels was noted for five high-rise buildings (327 and 345 Carlaw Avenue, 1189 Dundas Street E., 444 Logan Avenue and 369 Pape Avenue). These were estimated to be below 5 dBA, which are characterised as being either noticeable or negligible in the Ontario noise guidelines and do not require mitigation measures. Station-related noise was not assessed.

The community is very concerned about the impact of the planned service and large increase in frequency of trains on the level of noise residents along the railway corridor will experience. Agincourt Village Community Association reports that residents were devastated by the removal of mature trees that used to form both an acoustic and aesthetic barrier. They note that the noise barriers that were installed have not been effective at reducing exposure to noise. Residents continue to be disturbed by engine, brake, and whistle sounds (Potter 2021). Given the experience of the Agincourt community,

residents of Riverside and Leslieville question the effectiveness of the proposed mitigation measures and how well the noise assessment takes into account deflected and refracted noise.

While proposed mitigation measures would meet Ontario noise guidelines, it is worth noting that there are several limitations to these guidelines from a point of view of health.

The Ontario (2013) guidelines set 50 dBA L_{night} as the acceptable outdoor noise limit at night. This is higher than the recommended limit of 44 dBA L_{night} for railway noise established by the WHO (2018). WHO's limit is based on adverse effects on sleep and corresponds to levels at which 3% of people reported to be highly disturbed by railway noise. This criterion is consistent with Health Canada (2017)'s guidance, which considers the change in percent highly annoyed (%HA) an appropriate indicator of noise-induced human health effects from exposure to noise during the operational phase of a project. Health Canada also indicates that noise levels for susceptible populations in particular not exceed the WHO outdoor annual average 40 dBA L_{night} . Further, Health Canada suggests that WHO's ideal background noise level of 35 dBA be used as a reference level to determine the potential impact and the need for mitigation in the event of potential impacts on schools.

While guideline levels are set using equivalent noise levels (Leq), other characteristics of the noise, including peak noise, multiple sources of noise and simultaneous occurrence of vibration are known to influence perception of noise, annoyance, sleep and well-being (Basner & McGuire 2018; Cerletti et al. 2020; Guski et al. 2017; Lercher et al. 2017).

Another consideration is that when existing outdoor levels are above the guideline levels of 55 dBA L_{day} or 55 dBA L_{night} , the Ontario guidelines allow for an increase in noise of up to 5 dBA above current levels before mitigation is required. This 5 dBA threshold is based on perception – that is a person is unlikely to notice a difference in sound levels. It is not a health-based criterion. It in effect allows background noise to increase. As indicated above, background noise levels in Toronto, including in this neighbourhood, are already at levels associated with adverse health impacts.

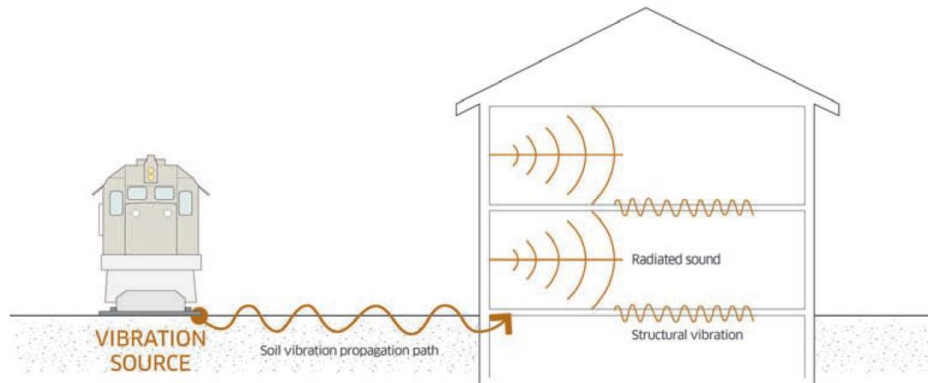

The available evidence therefore indicates that, from a point of view of health, the underground alignment is preferred as it would minimise any additional exposure to noise for people living near the rail corridor in this neighbourhood.

2.3 Vibration

Vibrations from trains

Vibration travels from the source through the transit structure and excites the adjacent ground, creating vibration waves that travel through the layers of soil and rock to the foundations of nearby buildings (Figure 2-4). The vibration then spreads from the foundation throughout the remainder of the building structure. Soil and subsurface conditions influence the levels of ground-borne vibration. The effects of ground-borne vibration can include perceptible movement of floors in buildings, rattling of windows, shaking of items on shelves or hanging on walls, and low-frequency noise (ground-borne noise). The vibration of the building structure and room surfaces can emit a low-frequency rumble called ground-borne noise (US FTA 2018).

Figure 2-4: Ground-borne vibration propagation (Source: FCM & RAC 2013)

The major sources of vibration from moving trains are 1) the moving load effect,⁷ 2) track unevenness, 3) defects on the rail surface, and 4) defects on the wheel surface (Kouroussis et al. 2021). Of the factors that contribute to ground-borne vibration and noise from rail, the most important one is the track support system. Special vibration control systems such as resilient fasteners, ballast mats, and floating slabs are effective in reducing vibrations. Heavier transit structures will lower vibration levels. Higher train speed will increase vibration, with a doubling speed resulting in an increase in approximately 4 to 6 VdB. Wheel flats and wheel roughness are major sources of vibration from steel wheel/steel rail systems. Rough tracks contribute to vibration, therefore maintaining a smooth surface is important. Stiff suspension systems will also contribute to higher vibration levels (US FTA 2018). Airborne noise at low frequencies (such as those caused by locomotives) can also induce vibration in lightweight elements of a building and can be perceived as ground-borne vibration (FCM & RAC 2013).

Vibration and health⁸

Vibration is perceived through complex physiological mechanisms. The magnitude, frequency, duration, and temporal characteristics of the vibration affect the way it is perceived. Available data suggest that

⁷ The effect of a moving load – in this case the railcar – on a structure.

⁸ There are different ways to measure and report vibrations. Ground-borne vibration can be expressed as root-mean square (RMS) velocity either in decibels or mm/sec, and ground-borne noise as A-weighted sound levels (dBA) (US FTA 2018). Another measure is the vibration dose value (VDV).

- **RMS (m/s)**: the frequency-weighted root-mean-square velocity measured in metres per second. In the US it is measured in inches per second
- **RMS (m/s²)**: the frequency-weighted root-mean-square acceleration is the preferred measure of vibration in the ISO standard (Peris et al. 2012)
- **RMS W_k (m/s²)**: The root-mean square acceleration for whole-body vertical vibration
- **VdB**: The vibration velocity level expressed in the decibel scale
- **VDV (m/s^{1.75})**: the vibration dose value is a measure of the cumulative exposure to vibration during a period or time using two frequency weighting curves for vertical and horizontal vibrations based on the human perception thresholds of vibration. VDV takes into account the number of events, their duration, and their vibration level and RMS takes account of the number of events and their level (Peris et al. 2012). The use of the fourth power method makes VDV more sensitive to peaks in the

people react differently depending on the source of vibration, including the type of train (Waddington et al. 2014). Factors that influence the degree of annoyance include:

- Time of day – lowest annoyance when vibration occurs during the day, higher annoyance during the evening and most annoyance at night
- Visibility – greater annoyance when the source of vibration is visible
- Time spent at home – higher annoyance among people who are at home less than 10 hours a day
- Property damage – people who are concerned about property damage report higher annoyance
- Future expectations – people who anticipate vibrations will get worse in future express more annoyance
- Noise sensitivity – people who describe themselves as noise sensitive report a higher degree of annoyance (Woodcock et al. 2014).

Table 2-2 below summaries the human response to different levels of vibration and accompanying sound.

A study in Sweden found that freight and diesel trains were more annoying than electric passenger trains. A statistically significant increase in annoyance was observed at a distance of up to 200 m for passenger trains (electric), 300 m for diesel trains, and 400 m for freight trains (Maclachlan et al. 2018).

Vibration from trains can reach 0.4mm/sec RMS or occasionally more (FCM & RAC 2013). Typically, humans will not notice vibrations at levels 0.1 mm/s RMS. Strength of vibrations from rail depend on the distance, soil structure, and type of infrastructure. However, the human response to vibration in buildings cannot be explained by the magnitude of the vibration alone. Some complaints are associated with vibration levels lower than the human perception threshold. This is because factors such as ground-borne noise, rattling, movement of hanging objects, and time of day all play a role in how individuals respond to vibration (US FTA 2018). Levels of vibration close to the tracks of rapid transit or light rail are around 70 VdB but can sometimes be more. Vibration levels from the heavier locomotives used on diesel commuter trains are 5 to 10 VdB higher than those from light rail. Experience shows that few complaints occur when vibration levels are below 72 VdB (US FTA 2018).

Ground-borne vibrations contribute to annoyance (Janssen & Hong, 2017). Annoyance has been found to be higher when residents can hear trains every day and when objects in the home rattle (Janssen et al. 2015). People report greater annoyance during the night. A study in England found that with the same vibration exposure [measured as 24-h RMS W_k of 0.004 m/s^2 or vertical vibration dose value (VDV_v) of 0.05 $m/s^{1.75}$] 4% of residents report being highly annoyed during the day, 7% during the evening, and 15% during the night (Peris et al. 2011; Peris et al. 2012). Night-time disturbances were better correlated with horizontal vibration exposure (VDV_d) (Peris et al. 2011). At an average exposure level (from 7:00 a.m. to 7:00 p.m.) of VDV_v of 0.01 $m/s^{1.75}$, about 2% of the respondents reported being

-
- acceleration waveform. VDV accumulates the vibration energy received over the daytime and night-time periods (NSW 2006).
- **VDV_v** ($m/s^{1.75}$): The vibration dose value for vibration in the vertical direction
 - **VDV_d** ($m/s^{1.75}$): The vibration dose value for vibration in the horizontal direction

highly annoyed. In the same survey, 50% of 931 respondents reported being able to feel railway induced vibration at exposures of VDV of 0.0082 m/s^{1.75} (Waddington et al. 2014). While vibration standards are usually set as time-weighted averages, the authors note this may not be the best measure to assess annoyance.

Table 2-2: Human Response to Different Levels of Ground-Borne Vibration and Noise (Source: US FTA 2018, p. 120)

Vibration Velocity Level	Noise Level Low frequency*	Noise Level Mid frequency**	Human Response
65 VdB	25 dBA	40 dBA	Approximate threshold of perception for many humans. Low-frequency sound: usually inaudible. Mid-frequency sound: excessive for quiet sleeping areas.
75 VdB***	35 dBA	50 dBA	Approximate dividing line between barely perceptible and distinctly perceptible. Many people find transit vibration at this level annoying. Low-frequency noise: tolerable for sleeping areas. Mid-frequency noise: excessive in most quiet occupied areas.
85 VdB	45 dBA	60 dBA	Vibration tolerable only if there are an infrequent number of events per day. Low-frequency noise: excessive for sleeping areas. Mid-frequency noise: excessive even for infrequent events for some activities.

* Approximate noise level when vibration spectrum peak is near 30 Hz.

** Approximate noise level when vibration spectrum peak is near 60 Hz.

*** Few complaints occur when vibration levels are below 72 VdB. Vibrations impact sleep quality. Vibrations may cause people to wake up in the night or to wake up too early, and to have greater difficulty of going back to sleep. Exposure to vibration results in more reported sleep disturbance. As well, fewer people indicate feeling restored (Woodcock et al. 2014). Vibrations have been found to increase the heart rate and affect sleep structure (for example, reduction in REM sleep, shorter period of time between falling asleep and first awakening, and shorter uninterrupted time in slow wave sleep).

Both noise and vibration affect the natural rhythm of sleep. Evidence indicates sleep disturbance is more likely when noise occurs along with vibrations, such as with railway noise (Basner & McGuire 2018). Smith and colleagues (2013, 2014, 2016, 2017) undertook various experiments simulating exposure to train noise and vibration. Strength of vibration, number of trains and level of noise were found to contribute to the likelihood of sleep disruption. When vibrations were stronger and trains more frequent, sleep was more fragmented (Smith et al. 2013). Stronger vibrations also resulted in an increase in heart rate (Croy et al. 2013; Smith et al. 2013). Given that arousal from sleep is more likely during shallower sleep stages, older adults may be more sensitive to noise and vibration (Smith et al. 2017). As children need more sleep, it is also possible that they are also more vulnerable.

A study in the Netherland found that awakenings were associated with the vertical maximum vibration (Vmax). Increases of Vmax levels from freight trains of 0.1 mm/s were associated with about a 4% increase in reported severe sleep disturbance (Van Kamp et al. 2017). Factors related to higher disturbance included sleeping on a higher floor, with an open window or when vibrations were accompanied with rattling of objects within the home.

Measures to mitigate vibration

Metrolinx uses a vibration velocity of 0.1 mm/s RMS as its benchmark to decide if mitigation measures are needed (Table 2-3). Vibrations from underground trains can be an issue, but low-cost measures are available to reduce these to acceptable levels. A study of annoyance that looked at three rail lines, reported a very low level of annoyance from vibration along the line that had been covered (Janssen et al. 2015).

Many of the measures used to reduce noise are also used to reduce vibration (US FTA 2018). Special track support systems such as floating slabs, resiliently supported ties, high-resilience fasteners, ballast mats and tire-derived aggregates can be used. In addition, preventative maintenance such as rail grinding and wheel truing to remove wheel flats.

Table 2-3: Rail Vibration Limits for Residences used by Metrolinx (Metrolinx 2020)

Parameter	Measure	Exposure criterion outside building
Ground-borne Vibration	Vibration Velocity RMS	0.1 mm/s RMS (equivalent to 72 VdB)

Vibration – underground compared to overground rail

While complaints of ground-borne vibration are more common in underground trains than those at grade, this is not because the vibrations are greater, but because underground rails are often closer to building foundations. As well, since they tend to be of higher frequency, they are more noticeable than those from at-grade tracks (US FTA 2018).

Typically, humans will not notice vibrations at levels 0.1 mm/s. The Relief Line noise and vibration assessment estimated vibrations to be between 12 and 14 percent of the Ministry-TTC protocol criterion of 0.1 mm/s along this segment of the line (IEC 2018). The Early Works report for the joint corridor identified nine receptors where vibration levels were estimated to be between 12 and 128 percent above the Ministry-GO protocol. Metrolinx indicates that further investigation will be needed before determining the required mitigation. In all but one location, the excess vibration was attributed to GO trains. The estimated level of vibration at the other receptors varied between 28 and 92 percent of the Ministry-GO criterion.

Hundreds of homes and apartments are well within 100 metres of the proposed OL and GO lines. This includes 365 properties, three of which are senior’s apartment buildings, that are less than 30 metres from the proposed rail lines (Metrolinx 2021). As noted above, complaints can be associated with vibration levels lower than the human perception threshold (US FTA 2018). So, even if the Ministry protocol limits are met, complaints related to vibration may still occur. While the difference between

the options is likely small, the available information suggests that the underground option is likely to result in a lower likelihood of sleep disruption and fewer complaints related to vibration.

2.4 Green space

Green space in Toronto

There are more than 1,500 parks in Toronto with a total area of 8,000 hectares, or about 13% of the land area of Toronto (Toronto 2019a). The degree of access to parks varies across the city (Figure 2-5). As Toronto's population grows and more people live in apartment buildings, the need for park space will increase, including in South Riverdale (Figure 2-6). Toronto's parkland strategy has identified the need for additional parks in the study area, particularly on the north-west side of the existing railway corridor (Figure 2-7). With about 11.5 million trees, Toronto's tree canopy covers about 30% of the city (Toronto 2020). While the tree canopy has increased, it is still below the 40% target set out in Toronto's Strategic Forest Management Plan (Toronto 2013). South Riverdale is one area of the city with the lowest tree canopy (Figure 2-8).

The benefits of Toronto's trees include improving air quality by trapping 1,905 tonnes of air pollutants a year. They also store about 1.1 million tonnes of carbon, the equivalent annual carbon dioxide emissions from 733,000 cars (City of Toronto 2015).

Figure 2-5: Park area per person in Toronto (Source: Toronto 2019a)

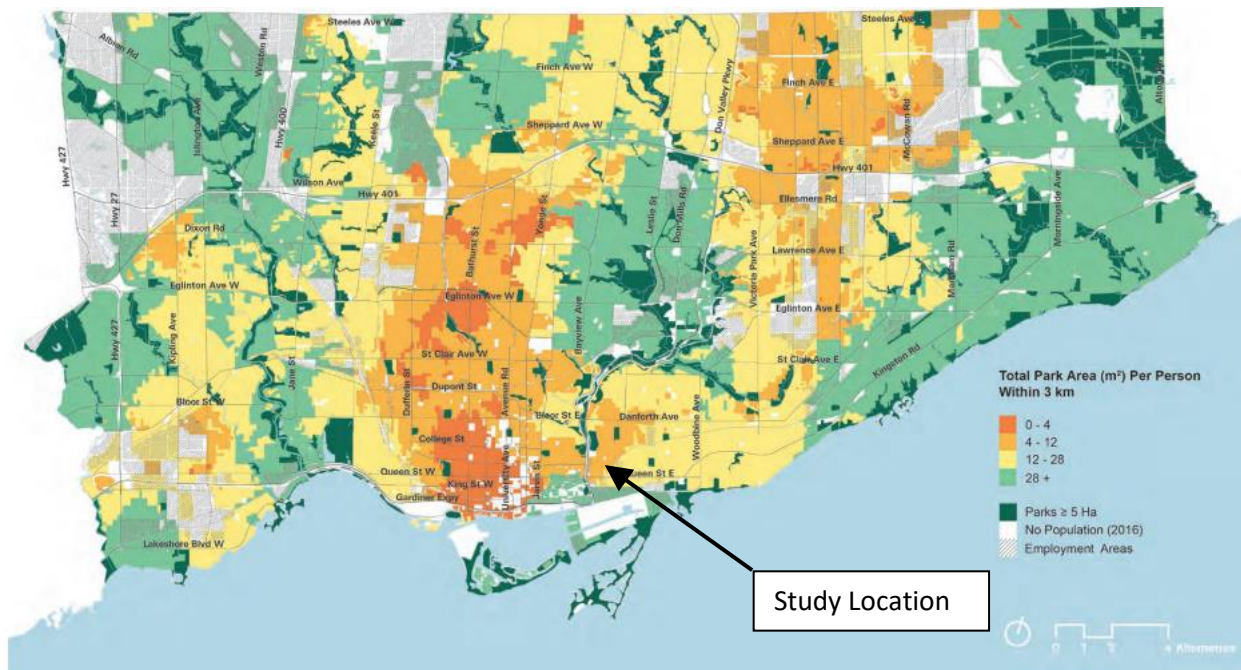

Figure 2-6: Percent change in available parkland supply in Toronto between 2016 and 2033 due to anticipated growth in population (Source: Toronto 2019a)

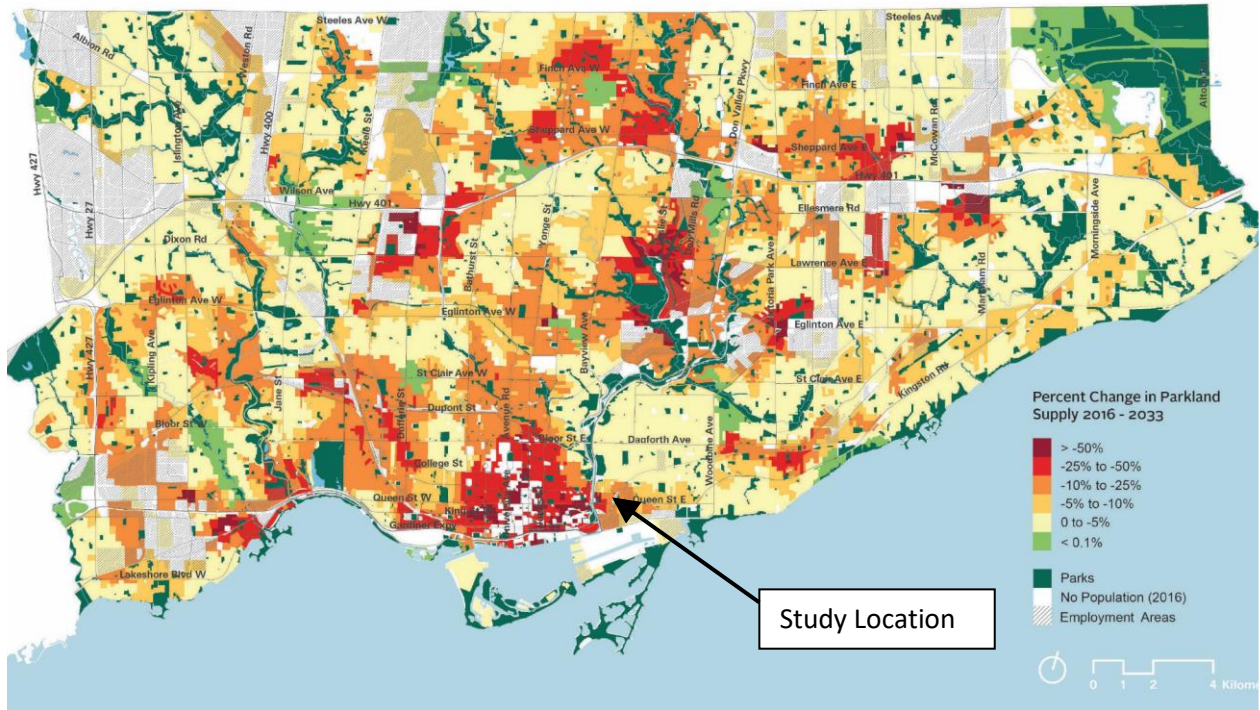

Figure 2-7: Areas of parkland need in Toronto (Source: Toronto 2019a)

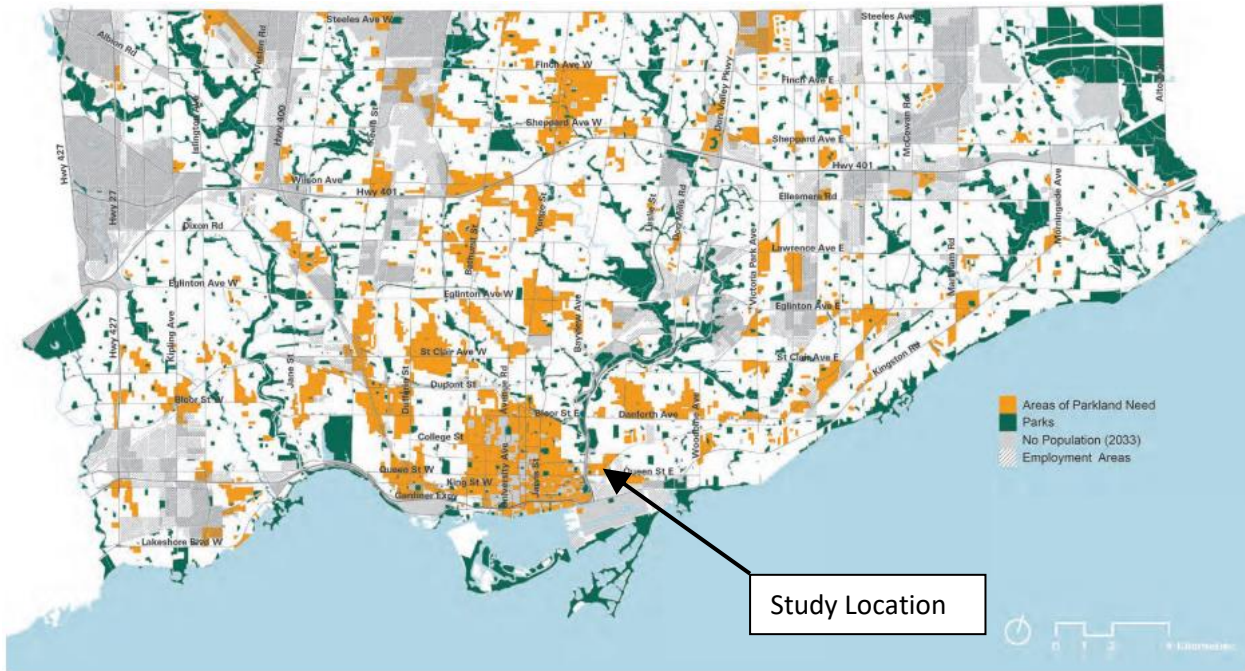

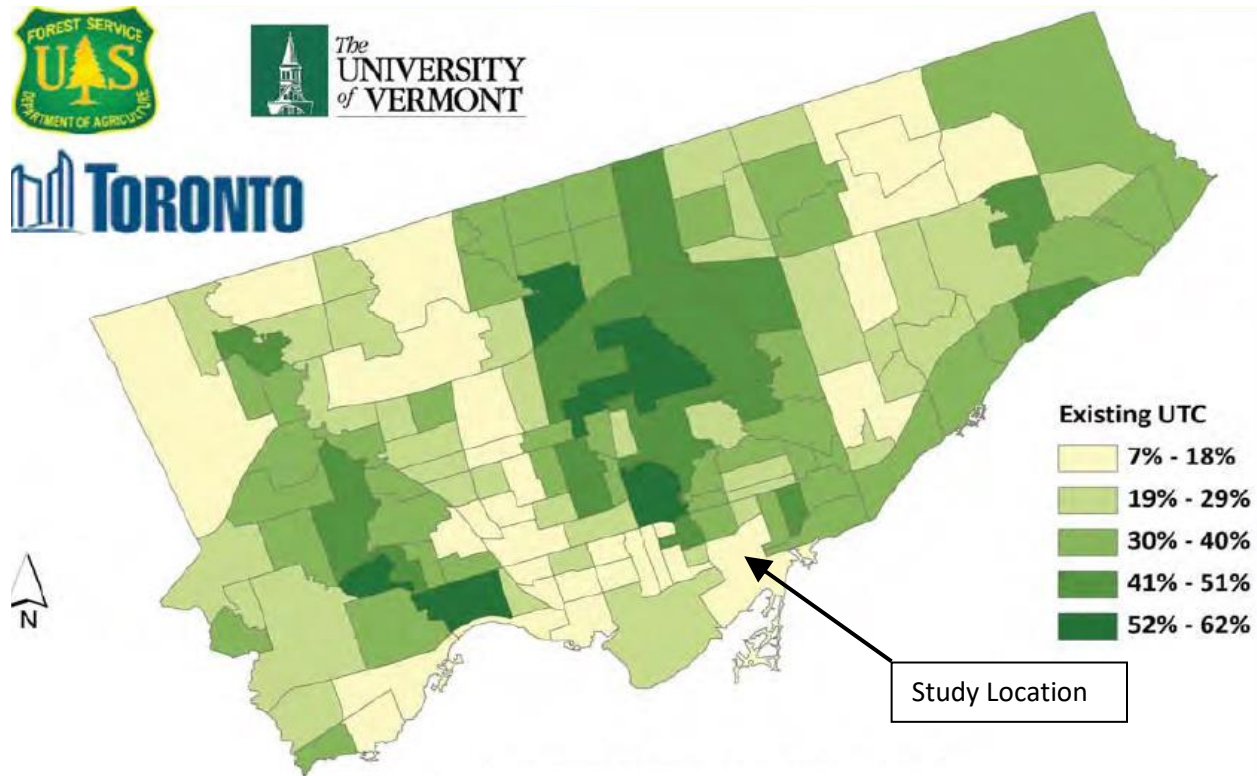

Figure 2-8: Average tree canopy by Toronto neighbourhoods (Source: Toronto 2013)

Green space and health

The contribution of green space to health is being recognised more and more (PHE 2020). In its review of the evidence, Toronto Public Health concluded that green space improves physical health, mental health and well-being of urban residents. It also noted that frequent access to nearby green space is important, especially for children and people living on low-income (TPH 2015a). Studies have found that living in greener communities reduces health disparities. Green space also reduces the negative effects of air pollution, excessive noise, heat and flooding (PHE 2020).

Studies have shown that people who live in greener neighbourhoods and have better access to green spaces have better health outcomes. A study that looked at greenness near a person's home and deaths among Canadian-born residents of 30 cities found that people living in areas with more green space had an 8 to 12% lower risk of dying from heart and lung disease (Crouse et al 2017). A health impact assessment estimated that increasing the tree canopy in Philadelphia from 20% to 30% would lead to a 3% reduction in death (Kondo et al 2020). Greenery helps people recover from illness and managing poor health. Green environments also contribute to improved mental health, including less depression, anxiety, and fatigue. They enhance the quality of life for both children and adults, help bind communities together, reduce loneliness, all of which result in an improved sense of well-being (PHE 2020). Studies have also found higher levels of physical activity among people who have more access to green space (Billings et al 2020; Glazener et al 2021). Green space reduces the urban heat island effect and lowers the levels of pollutants in the air (Zupancic et al, 2015).

The health benefits of green space include decreased risk of many different health outcomes: all-cause mortality, stroke and other cardiovascular diseases, respiratory diseases, premature mortality, stress, anxiety, type-2 diabetes, and high blood pressure. Green space is also associated with improved cognitive function, immune function, sleep patterns, pregnancy outcomes, and self-reported health (Glazener et al 2021). Green space is associated with longer sleep in both adults and children (Billings et al 2020). The more you are exposed to green space, the greater the mental health benefits (Engemann et al 2019). In an increasingly urban society, it is important to provide sufficient access to green spaces to protect children's and adolescents' mental health (Vanaken and Danckaerts 2018). Green spaces also provide a home for birds. A study in Europe found that when an area had a higher number of bird species, people indicated a higher level of life satisfaction, showing the importance of maintaining biodiverse green spaces (Methorst et al 2021).

How green spaces benefit health is still not fully understood. The health benefits could be related to the fact that green spaces encourage exercise, provide spaces for socializing, reduce exposure to heat, noise and air pollution, improve immune function and help to reduce stress. In addition, green spaces contribute to greater climate resiliency. Psychological restoration may be green space's strongest protective mechanism (Engemann et al 2019; Wilson et al 2020).

Green space and climate

Green space provides many benefits when it comes to reducing the impacts of climate change on health. The tree canopy and other greenspaces keep outdoor spaces cooler and reduce the urban heat island effect, which will become more important as Toronto experiences more hot days in a warming climate (Demuzere et al. 2014; Zupancic et al 2015). In addition, trees sequester carbon as they grow. The larger the tree and greater the leaf density, the greater the benefit. Compared to a tree with a 15 cm trunk, a 75 cm tree can store up to 90 times more carbon and adds up to 100 times more leaf area to the tree canopy. Green spaces also have an important role in reducing urban flood risks by reducing runoff and as flood plains next to rivers, streams and other bodies of water (Demuzere et al. 2014; PHE 2020).

Green space and noise

Green spaces mitigate the adverse effects of harmful, transportation-related environmental exposures like noise (Glazener et al 2021). A study that compared the noise levels from trains running on tracks using concrete or wooden rail sleepers in both green and open spaces found that the average noise levels from rail traffic were lower in green areas and when tracks had wooden sleepers (Aleknaitė and Grubliauskas 2018). Increasing residential green is associated with reduced road traffic and railway noise annoyance with an equivalent level of 3 dB reduction of railway noise (Schäffer et al 2020).

Figure 2-9: Satellite view of the rail corridor from the Don River to Jones Avenue (Source: Google Maps, accessed 2021-06-19)

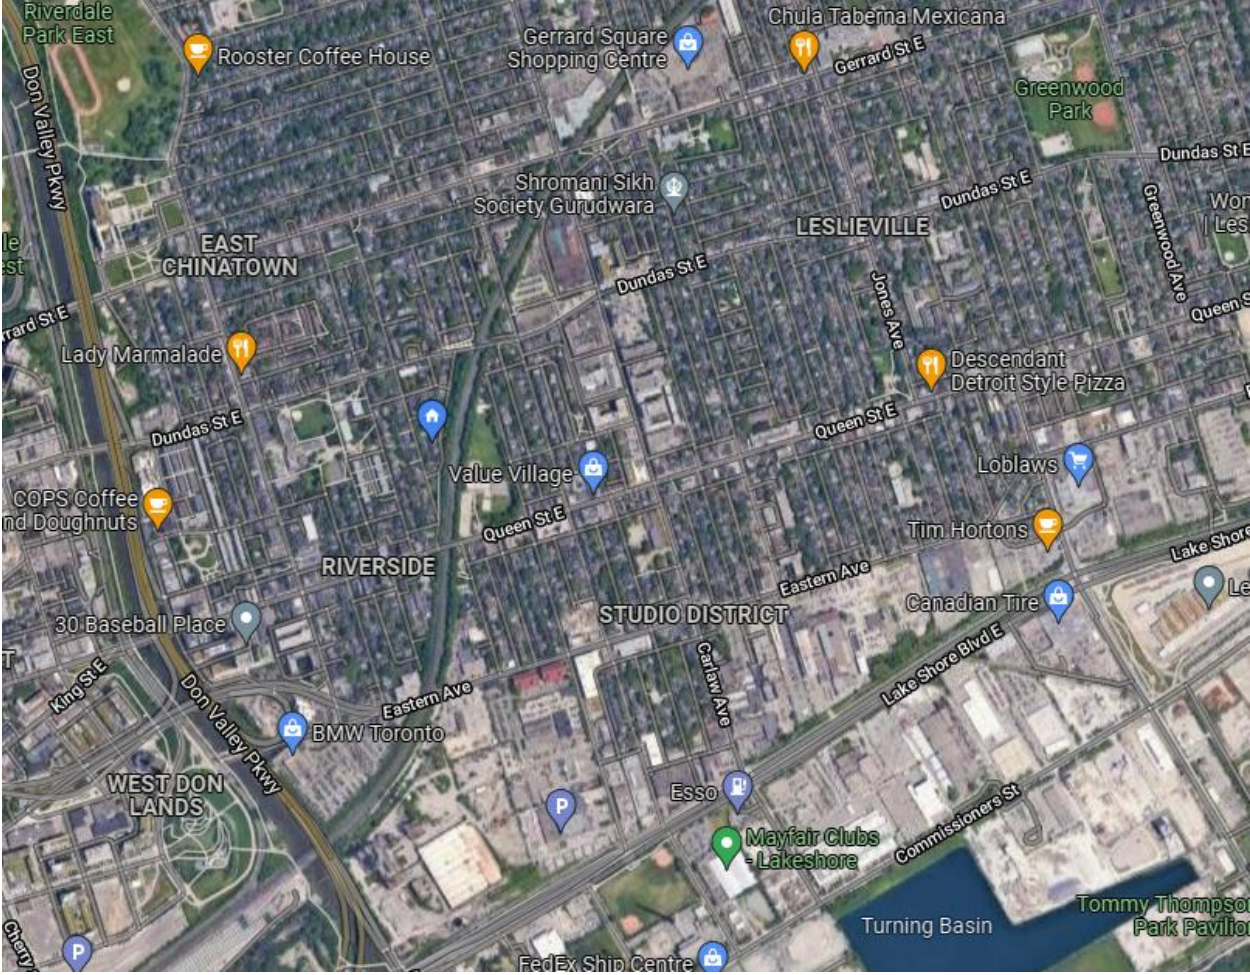

Figure 2-10: Satellite view of the rail corridor showing the potential canopy loss related to tree removal along the rail corridor (view next to the Jimmie Simpson Recreation Centre) (Courtesy of the South Riverdale Community Health Centre, referenced cross section drawing by Metrolinx)

Ontario Line – impact on green space and proposed mitigation

A large portion of the current rail corridor is lined by trees (Figure 2-9). To install additional tracks, Metrolinx will need to remove much of this natural barrier (Figure 2-10). The Early Works report (AECOM 2021) notes Metrolinx will remove vegetation along the existing corridor. An expected 2.24 hectares of woodland, about 0.53 hectares meadow and up to 0.86 hectares of cultural hedgerow are anticipated to be removed. There will also be an impingement on Bruce Mackey Park and the Gerrard-Carlaw Parkette.

Metrolinx has noted that it will consider vegetation, landscaping and streetscaping to enhance noise walls so they fit well with surrounding spaces, like parks (Wilbur 2021). Specifically, Metrolinx has indicated that it will limit impact on green space by building new noise and retaining walls almost entirely within the existing rail corridor. They note that building the walls closer to the tracks than the current fence will allow more land to be accessible to the community. It has also indicated that green space will be added to the four park spaces in the area – Jimmie Simpson Park, Bruce Mackey Park, McCleary Playground and the Gerrard-Carlaw Parkette – increasing the area of park space by nearly 2,600 m² or 0.26 hectares (by comparison Jimmie Simpson Park is 2.4 ha in size).

Green space – underground compared to overground rail

South Riverdale is a neighbourhood with lower-than-average tree cover and a park deficiency. Removing the existing trees along the existing rail line will reduce the tree canopy in a neighbourhood where tree cover is well below the city average. It will also remove greenery which contributes to the character of the area and acts as a carbon sink. While Metrolinx has indicated that it will plant trees for every tree removed for the construction of the line, it will take many years for these new trees to achieve the same aesthetic and climate value as the existing mature trees. Still unknown is where these trees will be planted and what will be done to ensure they thrive. The removal of trees in the railway corridor will also eliminate the cooling effect these currently provide the neighbourhoods.

A decrease in green space will be detrimental to health. As of the date of writing, there are insufficient details to accurately assess the impact of an overland alignment on green space, including tree cover along the rail corridor. Some trees may need to be removed as part of the GO rail expansion and electrification, but how much more will need to occur to accommodate the Ontario Line is unclear.

An examination of the maps provided (Winterburn 2021) shows that, except for the addition to 500 square metres to the Gerrard-Carlaw Parkette, much of the additional park space that Metrolinx will make available is within portions of the rail corridor that are already green space. Therefore, it will not result in new green space in the community. As well, with the proximity of the retaining walls and noise barriers, the quality of this space is still unknown (Munro 2021b).

Given that an underground option can be expected to have less impact on current green space in this neighbourhood, from the point of view of health, an underground alignment is preferred.

2.5 Recreation/Leisure

Amenities in the community include:

- Three libraries (Jones, Queen & Saulter, Riverdale)
- Two recreation centres (Matty Eckler Community Recreation Centre, Jimmie Simpson Recreation Centre)
- Twenty parks including parkettes and playgrounds (see Figure 2-11)

A range of sports amenities are located in Jimmie Simpson Park. These include a ball hockey pad/ice rink, an outdoor basketball court, two outdoor tennis courts, and a sports field.

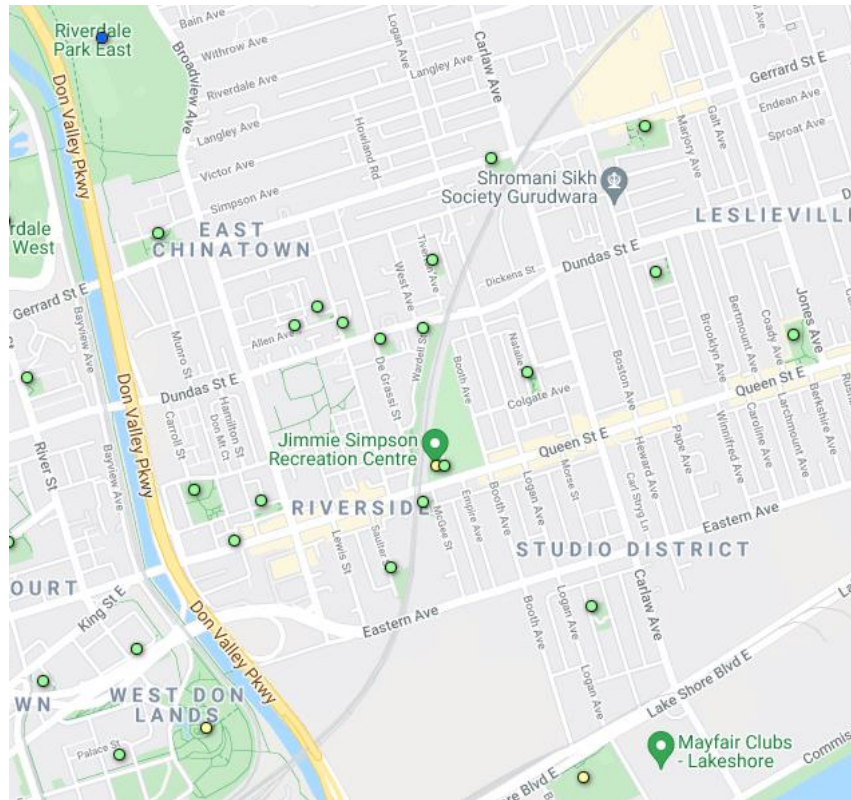

Health benefits of recreation and leisure

The combined health and social benefits make parks and recreation facilities one of the most cost-effective public services (California 2005). Recreation is known to confer physical and mental health benefits. Some of these benefits can be attributed to physical activity which reduces the risk of disease, boosts the immune system, helps maintain a healthy weight and results in overall increase in life expectancy. Access to playgrounds is important for children's health (TPH 2015a).

Recreational activities contribute to quality of life and improved mental health as well as provide social benefits. These include promoting social bonds and strengthening community ties. Youth who are

engaged in recreational activities are less prone to exhibiting negative behaviours and show improved educational outcomes (California 2005). Participants in a consultation undertaken by Planning South Riverdale (2014) noted that “the absence of places where low-income people can meet and socialize was identified as limiting opportunities to connect with friends and neighbours.”

Figure 2-11: Locations of park, parkettes, playgrounds in the study area (Source City of Toronto Maps, accessed 2021-07-23)

Park Size: ● less than 25,000 square metres ● 25,000 to 75,000 square metres
 ● more than 75,000 square metres

Recreation and leisure – underground compared to overground rail

The advantage of an underground alignment compared to an overground one is that it would reduce the impact on surface land-use, include park and recreational spaces.

As mentioned in the section on green space, except for the additional space at the Gerrard-Carlaw Parkette, much of the additional park space that Metrolinx will make available is within portions of the rail corridor that are already green space. Access to recreational amenities is essential for health and well-being. Members of the community have expressed concerns that an over ground Ontario Line would adversely impact the quality of green space both during and after construction in an area that already has a limited supply of parks and recreation facilities. They also noted the particular importance of recreational spaces for children. And, as the population continues to increase, the need for these amenities will become more critical.

2.6 Air quality

There are four air quality monitors in Toronto. The downtown station is the one closest to Riverside/Leslieville. For the 10-year period between 2009 and 2018 the levels of fine particles and ozone in downtown Toronto have remained fairly stable (Table 2-4). During that same period, concentrations of nitrogen dioxide, which comes primarily from the combustion of fossil fuels, have declined about 27 percent. The largest source of air pollution released within Toronto is transportation (City of Toronto 2017).

Table 2-4: Trends in annual average concentrations of selected air pollutants in downtown Toronto between 2009 and 2018. (Source: Air quality in Ontario 2018 report, accessed 2021-06-30)

Pollutant	Concentrations (2009)	Concentrations (2018)	Trend	Canadian Ambient Air Quality Standards (2020)
Fine particles (PM _{2.5})	7.06 ug/m ³ (estimate)	7.94 ug/m ³	None	8.8 µg/m ³
Ozone (O ₃)	24.64 ppb	25.8 ppb	None	62 ppb
Nitrogen dioxide (NO ₂)	14.36 ppb	10.99 ppb	-27%	17 ppb (NO ₂)

Air pollution and health

Both short- and long-term exposure to air pollution can lead to adverse health outcomes. It contributes to various lung and heart diseases. These include the onset and exacerbation of respiratory disease, particularly asthma, wheezing, reduced lung function, hypertension, stroke, and heart attack. Air pollution is also associated with increased risk of childhood cancer, lung cancer, adverse birth outcomes, neurodevelopmental issues, reduced cognitive function, dementia, and diabetes (City of Toronto 2017; Manisalidis et al. 2020).

In Canada, air pollution is a major risk factor for premature death and disability with an estimated economic cost of \$120 billion in 2016 or approximately 6% of Canada's real gross domestic product (Health Canada, 2021). In Toronto, air pollution gives rise to around 1,300 premature deaths and 3,550 hospitalizations from respiratory and cardiovascular illness each year (City of Toronto 2017). Particulate matter (PM_{2.5}) ozone (O₃) contribute the most to cardiovascular and respiratory ill health, accounting for about 96% of premature death and about 97% of hospitalizations.

Ontario Line – impact on air quality

The Ontario Line will use electric trains. Air pollution and greenhouse gas emissions from running these trains will come from the source of the electricity used – the cleaner the source, the less the pollution. In addition, the friction generated between the brakes and the wheels, the friction between the wheels and the rail, and maintenance activities release particles into the air. These are rich in metals including, barium, chromium, copper, iron, and manganese (TPH 2019b). Lower levels of fine particle matter have

been found in the Montreal metro system compared to those in Toronto and Vancouver. This could be because the trains in Montreal run on rubber wheels and have wooden brake pads (Ryswyk et al. 2017).

The community has raised concern about reduced air quality as the result of the transit expansion that is affecting the neighbourhood. Although this is a legitimate concern, this impact is related to the GO rail service rather than the Ontario Line. Impact on air quality from construction is discussed in the section on impacts of construction below.

Air quality – underground compared to overground rail

The emission profile between an underground and overground Ontario Line is not expected to be significantly different. Where there is a difference is in the release of metals and other particles due to friction. Underground, these are released in a more closed environment, and could result in higher exposure for passengers using the system. The Medical Officer of Health (TPH 2019a) identified various measures, including platform edge doors, as ways that could be used to reduce exposure to particulate matter in Toronto’s subway system. Such doors are planned for the Ontario Line. A study conducted in Italy found particulate matter concentrations in a “high-quality” metro system to be lower than the ones measured in “traditional” railways, as well as lower than outdoors (Carteni & Cascetta 2018). This suggests that, with appropriate measures in place (for example, rubber tires, platform screen doors, advanced ventilation system and a variable slope of the longitudinal profile of the line), an underground option would not result in an increase exposure to pollutants to passengers, but might even result in lower exposure to pollutants than an overground alignment, where these pollutants would be directly released into the wider environment.

2.7 Health & social services

Transit improves access to health and social services, especially for people on low income or who do not drive. These services help maintain health, prevent disease, restore function, and improve well-being (TPH 2013). There is likely no difference between the overground and underground options on access to health and social services in the neighbourhood. However, as described in the gentrification section, displacement of businesses could decrease access to services that cater to existing residents, especially people who have less facility in speaking English.

2.8 Social equity

The social and economic circumstances of Toronto residents, and the area where they live, work, learn and play, influence how healthy they are. A person’s social-economic circumstance is the most influential factor. Some people are more likely to experience poor health or be at higher risk of illness (PAHO 2013; TPH 2015b; WHO 2005). These include:

- Children, older adults, people with a health condition and/or who are socially isolated
- People living on low-income and people who are unemployed or not working due to disability
- People who live in areas with lower access to goods and services, including parks and recreational facilities

- People who face discrimination, including Indigenous Peoples, Black and people of colour, refugees, migrant and undocumented workers, single-parent families, LGBTQ2S+ people, people with a disability, and women
- People with a lower level of formal education, homeless people and those who live in inadequate or unaffordable housing, and people who work in hazardous conditions

The impact of urban development is not equally distributed among the population (Tehrani et al 2019). For this reason, health impact assessments pay particular attention to equity to ensure that people who are already at higher risk of ill health do not experience an even greater burden to their health.

Vulnerable groups living in South Riverdale

Table A-4 in the Appendix summarises a few demographic parameters for South Riverdale, which corresponds closely to the study area (City of Toronto, 2018). When it comes to vulnerable populations, the proportion of the population that identifies as Indigenous is about twice that of Toronto as a whole (1.9% vs 0.9%). While the proportion of people of colour is lower than that of the city as a whole, a higher proportion (8.1%) of the population does not speak either of the official languages. The rate of poverty (20.7%) and the percentage of households with income less than \$20,000 (14%) is similar to that of Toronto as a whole. The proportion of single-person households (35.9%) and of seniors living alone (29.1%) is higher than the city average. Compared to Toronto as a whole, a larger proportion of households own their homes, while fewer households live in apartments. The proportion of people living in unsuitable (5.9%) or unaffordable housing (31.1%) is slightly lower than the city average, but when it comes to living in inadequate housing, the proportion (7.7%) is slightly higher than for Toronto as a whole.

Indigenous populations

An estimated 34,000 to 69,000 Indigenous People make Toronto their home, the largest and most diverse Indigenous population in Ontario. Seventy three percent were born outside of Toronto. Compared to the National Health Survey, the results of the *Our Health Counts Toronto* survey of Indigenous Peoples showed a much higher percentage Indigenous Peoples in Toronto live under the low-income cut-off (LICO) – 90% vs 26%. Indigenous Peoples also have a lower formal education attainment – 25% are without a certificate, diploma or college degree. About 16% are homeless (TIHAC 2016).

There is little data on Indigenous People's health in Toronto. However, available data show that they have poorer health compared to non-Indigenous populations (TIHAC 2016). Diseases that occur at increased rates in Indigenous Peoples of Canada include: infectious diseases, cancer, cardiovascular disease, type 2 diabetes, and mental illness (Park et al. undated). Indigenous Peoples experience higher rates of poverty, unemployment, homelessness, involvement with child welfare, food insecurity and challenges within the education system, all factors that contribute to poor health outcomes (TIHAC 2016). There is insufficient information to assess the impact of the Ontario Line on Indigenous residents in the study area. However, given the level of low-income among members of this community, they will face similar risks as other people on low income in general, but likely exacerbated by the trauma related to systemic influences such as historical oppression and marginalization (Park et al. undated).

People living on low-income

While family or household income in South Riverdale is higher than the city average, the number of people on low-income is similar to the city average (City of Toronto 2018). People on lower income are more likely to live in inadequate, substandard or unaffordable housing which is a stressor that contributes to poor health.

There is a well documented gradient between income and health – the higher your income, the better your health (TPH 2015b). An analysis of different indicators showed significant inequities between people living on low-income in Toronto compared to those on high-income. More people in the lowest income bracket (quintile) rated their health as poor or fair. Negative health outcomes included: lower life expectancy; higher premature mortality; as well as higher rates of cardiovascular disease, diabetes, lung cancer, low birth weight, teen pregnancy, and certain sexually transmitted infections in youth. The following risk factors were also more prevalent: lower readiness to learn; less physical activity and higher smoking rates (TPH 2015b). “When compared to the health status of the highest income group:

- Men in the lowest income group are 50% more likely to die before age 75
- Women in the lowest income group are 85% more likely to have diabetes
- Young women aged 15 to 24 in the lowest income group are twice as likely to be reported with chlamydia infection
- Babies in the lowest income group are 40% more likely to be born with a low birth weight” (TPH 2015b).

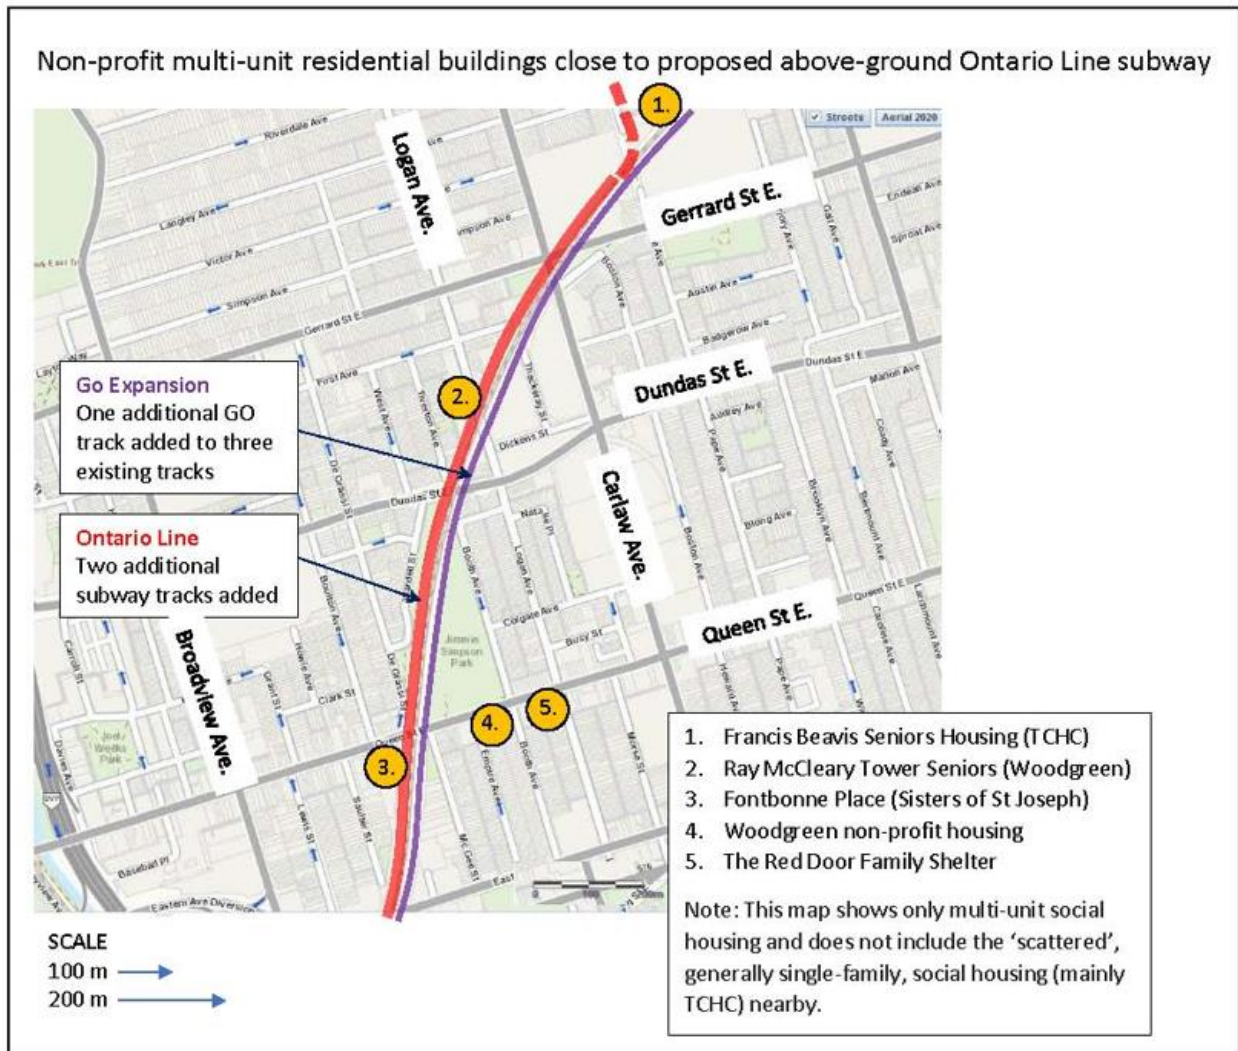

Improved transit has a positive impact on access to employment, education, and other services for people living on low income. Negative impacts are mostly related to gentrification (see section below). There are several buildings housing people with low-income near the proposed overground alignment of the Ontario Line. Three such non-profit residential buildings are immediately adjacent to the corridor (Figure 2-12). People living in these buildings can be expected to experience higher exposure to noise and vibration. It will also reduce the tree canopy near their homes. This will negatively impact the health of people who are already at higher risk of poor health due to their socio-economic status.

Language and cultural diversity

About two thirds of people living in South Riverdale report English as their mother-tongue. Of the 31% who report a non-official mother tongue the top three are Cantonese, Mandarin, and Vietnamese (City of Toronto 2018). While the proportion of people who indicate a non-official language as mother tongue or language spoken at home is lower than Toronto’s average, the proportion of people who speak neither official language is higher: 8.1% compared to 4.9% for Toronto as a whole. This increases the risk of social isolation when the community ties are broken as people and businesses that cater to their needs are displaced by gentrification and the transformation of the neighbourhood (Tehrani et al 2019).

Greater disruption to the neighbourhood is expected to occur during the construction of an overground alignment. This is likely to result in larger negative impact on the viability of small businesses that serve the local community. This would compound the risk of social isolation among equity deserving groups living in the neighbourhood.

Figure 2-12: Non-profit multi-unit residential buildings close to the proposed above-ground Ontario Line (Prepared by the South Riverdale Community Health Centre)

Seniors

The number of seniors in Toronto is growing. The 2016 census estimated that 11% of residents of South Riverdale were 65 or over, with nearly 30% of them living alone (City of Toronto 2018). With living alone comes a higher risk of social isolation. Socially isolated seniors are at more likely to be hospitalized. They are also more likely to have poor eating habits, to be less physically active, and more prone to falls and depression. They are at higher risk of death from suicide, heart disease and stroke and may also suffer from elder abuse and neglect (TPH 2017a). Changes in the neighbourhood are more likely to be detrimental to their health and well-being as social ties are affected by outward migration of family, neighbours and local businesses (Tehrani et al 2019).

Greater neighbourhood disruption from the construction of the overground option could result in negative impact on the viability of businesses and contribute to a higher level of displacement. This could affect access to services used by older adults in the neighbourhood and lead to increased social

isolation. An overground option would also have greater negative impact on the quality of public and private green spaces, which are regularly used by older adults. By making these spaces less attractive, this could result in a higher risk of social isolation and decrease in physical activity among this population.

Children

Children are often more vulnerable to environmental stressors. Noise can impact children's ability to learn, contribute to hyperactivity, lead to negative behaviour and affect emotions (TPH 2017; WHO 2018). Children are sensitive to air pollution because: they often spend more time outdoors; their lungs are developing; and they have higher breathing rates (City of Toronto 2017). Having access to green space is also important for children's health. For children, benefits of living near parks and playgrounds includes being more active and having a healthy weight, improved cognitive function, and reduced stress (TPH 2015a). Exposure to noise and air pollution and reduced access to green space during construction is especially of concern.

2.9 Community design

Urban design has been called the art of creating and shaping cities and towns (The Center for Design Excellence, [accessed 2021-07-30](#)). It refers to the look and feel – form, shape, and character – of a group of buildings or a neighbourhood which is shaped by the layout of buildings, public spaces, roads, amenities and services.

More compact cities are more sustainable. Higher urban densities are associated with improved health as compared to lower density areas comprised of single-family dwellings on large lots (Connon et al 2018; Kimball et al. 2013; Lehmann 2016; Stevenson et al 2016). Higher densities are associated with more walking, cycling and use of transit. More compact communities reduce the amount of land needed to accommodate the residents living in a city. They also reduce the cost of infrastructure and help preserve natural areas and agricultural lands. In addition, people who live in compact communities tend to emit fewer greenhouse gases, because their homes are more energy efficient and they rely less on the use of private automobiles for transport. South Riverdale is among the most walkable neighbourhoods in Toronto where daily errands can easily be done by bicycle, and easily accessible by transit (Walkscore.com, accessed 2021-07-05).

Complete communities

That said, density by itself is not sufficient to ensure good health (Connon et al 2018; Kent et al. 2011; Lehmann 2016). The urban design elements that, when combined, create a healthy living environment are essential. These elements include: provision of sufficient pedestrian space, safe cycling infrastructure, easy access to transit, landscaping, shade, street trees, green spaces and parks, recreation facilities, open spaces, features that contribute to a sense of place and character or identity for the neighbourhood (Connon et al 2018; Lehmann 2016). Dwellings must be affordable and of sufficient size to prevent overcrowding (Connon et al 2018). They must also minimise exposure to noise that comes from both outside the building and neighbouring apartments (Connon et al 2018; Lehmann 2016).

The City of Toronto has various planning policies in place to promote complete communities and complete streets. Chapter 3 of the Toronto Official Plan (City of Toronto 2021b) outline the elements of a successful city including the public realm, built form, public art, heritage, affordable housing, community services, parks and open spaces, and natural environment. It also recognises the need for a vibrant economy and culture. The City has also various design guidelines to support the creation of healthy neighbourhoods, streets and buildings.⁹

There is no uniform measure of urban density (Towers 2013). A common way to describe it is by the floor area ratio (FAR), calculated by dividing the total area of the built floor space by the area of the land on which it is built. Given the focus on reducing urban sprawl, which is dominated by low-density single-family homes, many studies refer to number of dwellings per hectare or acre.

Various minimum densities which can support transit use and enable access to goods and services within easy walking distance have been suggested. These range from 60 to 120 dwellings per hectare (Connon et al. 2018; Lehmann, 2016). While there are examples of high-density neighbourhoods that have not been successful, no maximum densities have been identified. This is likely because other characteristics of the neighbourhood, including the level of income of the residents, may be more important determinants of health (Connon et al 2018; Haigh et al 2011; Towers 2002).

Several authors have suggested that mid-rise perimeter blocks provide an optimal approach to creating healthy density (Lehmann 2016; The Center for Design Excellence, [accessed 2021-07-30](#); Towers, 2002). Such a built form (see the centre illustration in Figure 2-13), which is typical of the older town and city centres in Europe, can achieve densities as high as 6,000 people per square kilometre (Lehmann 2016). The 105 km² central core of Paris achieves a density 20,169 people per square kilometre (Lennard, undated). This approach results in a smaller building envelope, which means the building is more energy efficient and due to shared walls, reduces summer heat gain and winter heat loss. This also results in less material being used in the construction, which lowers the amount of embodied energy in the structure (Lehmann 2016). Pomponi and colleagues (2021) looked at the life cycle greenhouse gas emissions of different urban forms and concluded that high-density low-rise development had lowest per-capita energy use compared to high-density high-rise, low-density high-rise and low-density low-rise typologies.

A perimeter block allows for retail at the street level. It is also possible to integrate an office building on one edge of the quadrangle, which could face a main street while having residences facing quieter side streets. Another feature is the inner courtyard, which provides open and green space where residents can socialise and children can play away from traffic.

An example of creating density while still fitting into the surrounding neighbourhood is Canada's first social housing project Riverdale Courts (now Bain Avenue Co-op). Built starting in 1913 and complete in the mid-1920s, it is composed of housing units of 1 to 4 bedrooms around large courtyards. It illustrates how one can increase density and also provide families with an opportunity to live in the city rather than moving to suburbs (Toronto Neighbourhood Walks, 2011).

Transit-oriented communities

Transit-oriented communities (TOCs) or transit-oriented developments (TODs) are specially zoned areas around a major transit node which permit higher building densities than would otherwise be allowed. They are created as a way to increase transit ridership by increasing the number of people living within easy walking distance to a station or transit hub (Noland et al. 2014; Padeiro et al 2019).

Mixed-use developments that are integrated with transit services contribute to a city’s “triple bottom line” – providing social, environmental and economic benefits. TODs that create compact and walkable neighbourhoods reduce distances travelled by car, traffic congestion and vehicular emissions. Less car-dependant neighbourhoods also help with climate change mitigation and adaptation (Flannery et al. 2014). However, because station areas attract people, they can also attract cars which then leads to congestion. Reducing the speed of traffic and improving the walking and cycling environment are ways to create a safer environment for pedestrians and cyclists (Noland et al 2014).

Transit-oriented development can reduce the demand for greenfield development that results in sprawl and also helps households minimise their transportation costs. Higher densities and increased land values lead to higher revenues for municipalities and thus offset part of the cost of providing improved transit. The building of transit-oriented communities is an opportunity to create affordable housing and to integrate social services (Flannery et al. 2014). Potential benefits of transit-oriented communities also include:

- Lower dependence on driving
- Allowing residents to live, work, and play in the same area
- Improved access to jobs, services, entertainment and recreational facilities
- Improved local economy, and
- Revitalisation of urban areas (Ali et al. 2021).

Transit-oriented developments aim to attract investment from private developers who will need to recover their costs for the various design elements and amenities required, such as attractive streets and open public spaces. This results in the building of dwellings that will attract higher income groups. In addition, such developments tend to attract one-person households and young professionals because of lifestyle factors, green areas, and attractive public spaces (Padeiro et al. 2019).

A study of eight train stations in New Jersey found that compared to those who lived further away, people who lived closer to the stations were more likely to walk, use transit, and drive less (Noland et al.

2014). The study also found that a denser local street network was associated with greater walking frequency. While population density around the station did not seem to impact the amount of walking, higher employment density was associated with lower frequency of both walking and transit use. People with longer daily commutes were more frequent transit users and also tended to walk more. Vehicle ownership is another factor that influences the degree of walking and transit use, with those who own cars driving more while walking and using transit less frequently than people who do not own a car.

Noland and colleagues (2014) report that residents who live close to a station appreciated the access to transit provided by the TOD, the ability to walk to destinations and the rejuvenation of the neighbourhood. These residents described the area as a good place to live and that their neighbourhood gave them a sense of community. Residents identified a need for more retail stores that would cater to their more day-to-day needs. Pedestrian safety around the stations was also mentioned as a concern.

Overall, Noland and colleagues (2014) concluded that TODs provide many benefits to individuals, municipalities, and transit authorities. TOD increases transit usage and reduces vehicle travel, which means lower commuting costs for new transit users. They also contribute to less congestion, air pollution, accidents, and noise. Living near a station was associated with higher social capital, however, people living in apartments had lower social capital than those living in single-family homes. The actual benefits associated with a TOD depend on their design features (land use, transportation, and walkability) (Vale 2015).

Community design and health

The community you live in influences your health. People who live in neighbourhoods with sustainable transportation options (walking, cycling, transit), affordable housing, fresh foods, good schools, and safe parks report better health and improved quality of life compared to people who lack access to these amenities (Malekafzali and Bergstrom 2011). By creating a community with a larger number of people living close to transit, transit-oriented communities encourage more people to travel by transit. People who take transit tend to walk more. Stations located in highly liveable neighbourhoods are associated with lower rates of obesity, cardiovascular disease, and asthma (Appleyard et al 2019).

When a community is built using Active City principles (including, a mix of land uses, density that supports the provision of local services, retail and transit, short distances to transit, bicycle and pedestrian infrastructure, interesting destinations, attractive streets and public spaces, parks, and recreation facilities), it encourages people to be more physically active by promoting more active travel (walking, cycling) and recreation (sports, running) (Appleyard et al 2019; MAPC 2020; TPH et al. 2014). This contributes to improved mental health, and a decrease in risk of chronic disease.

In their study, Noland and colleagues (2014) were not able to determine a relationship between TODs and health. This was due to confounding with age: people who lived in the TODs or near the stations tended to be younger compared to those who lived outside a TOD or further away from a station. They did find areas with higher population densities had a lower incidence of traffic-related injuries and death. The incidence of cycling injuries and deaths were higher near stations, whereas vehicle-related injuries and deaths were higher further from the stations. A higher incidence of pedestrian injuries and deaths near stations was detected, but this association was weak. Several factors are likely at play, including: lower vehicular speeds around stations and in higher density neighbourhoods; and the quality of pedestrian and cycling infrastructure around stations and in the TOD.

In their study of four residential communities in Sydney (Australia), Paine and colleagues (2014) found that positive health outcomes were often related to unplanned co-benefits of other interventions such as green features and other amenities that would attract people to the community. At the same time, when interventions planned to enhance healthy living were poorly implemented, they did not always result in the intended outcomes. The authors indicated a need for ongoing assessment of design, construction and ongoing management of urban areas to evaluate health impacts.

Gentrification and displacement impacts of transit improvements and transit-oriented communities are discussed in section 2.10.

Transit-oriented communities and social capital

While some features of transit-oriented communities promote social capital, the degree to which this happens depends on features of the community. Higher levels of employment in TODs are associated with lower levels of social capital and the perception that the neighbourhood is not the best place to raise children. People living in wealthier areas were more likely to rate their neighbourhood as good place to raise children. While residential densities do not appear to influence the degree of social capital, higher social capital is found in single family housing (Noland et al 2016).

Transit-oriented communities and noise

Noise is often a concern in high density living (Haigh et al. 2011). While there is a mix of evidence, several studies have found TODs to be noisier than single-use residential developments. A study in Dallas-Fort Worth (Texas) found that noise levels in TODs were nearly 9 dB(A) higher compared to non-TOD stations (Yildirim & Arefi 2021). Land uses that are associated with higher noise levels include commercial establishments and nightclubs. Wider streets are also associated with higher noise levels. Human activity in parks, public space and recreational areas can increase exposure to noise. Yet at the same time, trees, landscaping, and water features may attenuate noise; parks and conservation areas can provide respite.

Transit-oriented communities and climate change

Transit oriented communities are promoted as a way to reduce greenhouse gas emissions as they encourage cycling, walking and transit rather than the use of private automobiles for travel (MAPC 2020). Compact communities are generally more energy efficient, which, depending on the energy source, can result in lower climate emissions per person or household (Connon et al 2018; Lehmann 2016).

Temperatures experienced in the dense central core of cities is often hotter than those of greener and less built-up areas (Heaviside et al 2016). There is a danger that the move towards higher housing densities will result in a reduction in the extent of the urban tree canopy, which would lead to a stronger urban heat island (UHI) effect (Brown et al. 2018). A study in Brisbane (Australia) compared heat gain between TOD and non-TOD urban areas and found the UHI effect to be more pronounced in areas classified as TODs (Kamruzzaman et al. 2018). Factors that most influenced heat gain were land use diversity and the proportion of porous land. The authors suggest the use of green roofs and living walls to reduce the UHI in transit-oriented communities.

Extreme weather events can be accompanied by widespread power failures. Without adequate back-up power, heating, air conditioning, and ventilation systems will be affected. This will increase the risk of exposure to excessive heat or cold, as well as food spoilage from lack of refrigeration. This is of particular concern for people who are socially isolated (MAPC 2020).

Building complete communities

Various provincial and municipal policies guide development in Toronto. These include the Provincial Policy Statement (Ontario 2020b) under the Planning Act and A Place to Grow (Ontario 2020a), the growth plan for the Greater Golden Horseshoe. A Place to Grow describes complete communities as “communities that are well designed to meet people’s needs for daily living throughout an entire lifetime by providing convenient access to an appropriate mix of jobs, local services, public service facilities, and a full range of housing to accommodate a range of incomes and household sizes.”

The Official Plan is the overarching document that guides development in the city. It supports and implements both the provincial policy statement and the growth plan. It guides the creation of an attractive, liveable and safe city and addresses elements such as transportation, land use, housing, employment and the natural environment. It aims to ensure that Toronto grows, improves and realises its full potential (City of Toronto 2021b).

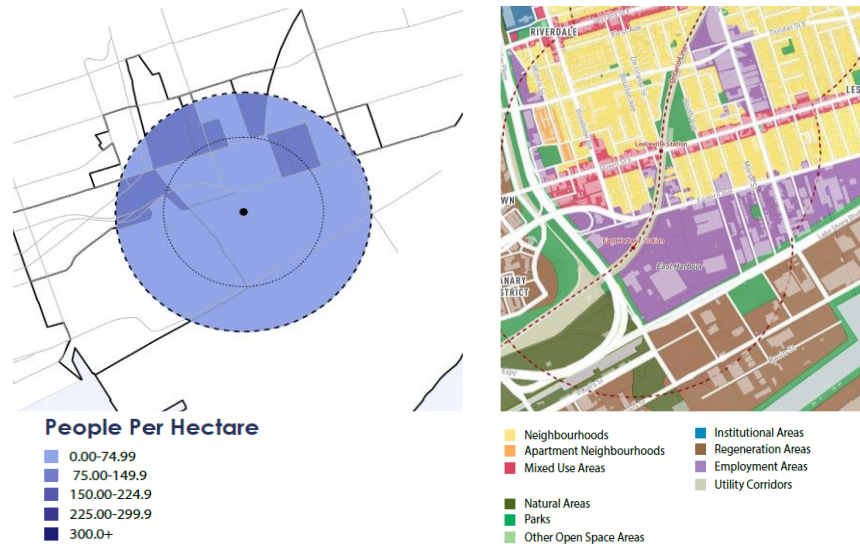

New construction is governed by various tools including Official Plan Amendments, Secondary Plans, Zoning By-laws, urban design guidelines and special area studies such as Avenue Studies. When the portion of an avenue is not subject to another instrument, the Avenues and Mid-Rise Buildings Study stipulates the as-of-right maximum height of a building is the width of the street’s right-of way (City of Toronto 2010). Design guidelines have been developed for tall and mid-rise buildings, retail design and complete streets).¹⁰ Adopted in 2020, the Planning for Children in New Vertical Communities Urban Design Guidelines set out objectives for high-rise residential buildings to include a range of unit types and sizes that are suitable for families with children as well as households of different composition and at different life stages. They also provide guidance on ensuring the building itself and the neighbourhood in which it is sited provide a favourable environment.

East Harbour – proposed transit-oriented community

The proposed East Harbour Transit Hub will provide connections between the GO Train service (Lakeshore East and the Markham/Stouffville line), SmartTrack service, future TTC light rail transit (linking the Queens Quay LRT with Broadview Avenue) and the Ontario Line. Figure 2-14 shows the current population density and land-use designations around the new transit station.

In 2016, the City of Toronto began a planning study to guide the transformation of the Unilever Precinct. This resulted in the development of the Unilever Precinct Planning Framework, Unilever Precinct Secondary Plan, and the East Harbour Zoning By-laws which were adopted by Toronto City Council in June and July 2018 (City of Toronto, [accessed 2021-09-30](#)). These documents set out the parameters for the development of the area, including allowable density, building heights, and types of uses. They also made provisions for parks, public and community spaces and outline community design elements (for example, design of streets and public realm, preservation of cultural heritage, building heights, and transition to lower density neighbours). The study incorporated significant input from members of the community, landowners and stakeholders. Conditions include preservation of listed heritage structures, and cash contribution to be allocated to building affordable rental housing in the immediate area and for the provision of community services and facilities (for example, childcare, multi-purpose community space, and/or improvements to library and recreation facilities) (City of Toronto 2018b).

The majority of land in the Unilever Precinct is currently owned by Cadillac Fairview. Consumers Gas and the City own the remainder (City of Toronto, [accessed 2021-09-30](#)). East Harbour is designated as an employment area (City of Toronto 2021a). Cadillac Fairview is now seeking changes in the zoning bylaw to allow for a mix of commercial space, residential space, retail, food, cultural uses and outdoor space. When completely built, this would create employment opportunities for 50,000 people and 4,300 units of housing (Figures 2-15 and 2-16). If approved it will provide about 1.23 million square metres of office, residential and retail space in 18 buildings. Proposed office building heights range from 143 metres (31 storeys) to 214 metres (48 storeys) and residential building heights from 75 metres (23 storeys) to 207 metres (65 storeys). The community is expected to include 15,000 square metres of parks and open spaces. This represents about one third increase in density compared to the approved East Harbour precinct secondary plan and zoning by-law amendment (Urban Strategies 2021).

Riverside/Leslieville and Gerrard Stations

The Toronto Official Plan designates Gerrard Street East (from the Don Valley to Jones Avenue) and Queen Street East (from the Don Valley to Neville Park) as Avenues (City of Toronto 2019). The City has developed urban design guidelines for the portion of Queen Street between Jimmie Simpson Park to Leslie Street (City of Toronto 2014a). The Carlaw-Dundas area which roughly bounded by Logan Avenue to the west, the rail line to the north, Boston Avenue to the east, and Queen Street East to the south is designated as an employment area. The character of this area is guided by the Carlaw + Dundas Community Initiative, which updates the 2000 Carlaw/Dundas Neighbourhood Improvement Plan (City of Toronto 2014b). Figures 2-17 and 2-18 show the current population density and land-use mix around

the proposed Riverside/Leslieville and Gerrard stations. How the Ontario Line will affect these two areas is uncertain at this time.

Community design – underground compared to overground rail

The most important difference between the underground and overground options on community design is the impact on land-use adjacent to the line. The underground option, as proposed by the community,

is less disruptive to the community. In this option, the Ontario Line would enter/exit the tunnel at a portal south of Eastern Avenue, which is currently employment land awaiting redevelopment. The line would be on the south side of the current railway tracks. While this could impinge on the development proposal for East Harbour, given that its design is yet to be finalised and construction has not begun, this could be accommodated with less interference to the existing community.

In comparison, under the overland alignment, the portal would occur on the northeast side of the vicinity of Riverdale and Pape Avenues and bring the rails to the north side of the current railway tracks. This would locate the portal near an elementary school and also result in more disturbance to the community as it impacts an existing neighbourhood, including its green space.

Transport-oriented development – underground compared to overground rail

The community has raised concerns around the pressures the Ontario Line would have on the character of the neighbourhood, including gentrification. The new transit service, whether underground or overground, will likely add to the existing forces that are leading to gentrification in Riverside and Leslieville.

Experience shows that improvements in transit infrastructure makes a neighbourhood more attractive and results in an increase in land and property values (Connon et al 2018; Tehrani et al 2019). New residential and commercial space that is built is usually more expensive. As property taxes and rents increase, this makes living less affordable and running a business less viable. This causes the current residents and businesses to move out of the area, weakening their social ties as they disperse to different areas of the city or further away. At the same time, as new businesses that cater to the new residents establish themselves, the character of the neighbourhood can change, and make the existing residents feel out of place (Tehrani et al 2019). Higher land values put pressure on existing uses and encourages change in land tenure and higher density development. This could particularly impact the areas surrounding the East Harbour development.

The introduction of residential uses in East Harbour could have implications for Toronto as a whole (Engage East Harbour 2021). As part of the downtown planning study (TOCore), the area south of Eastern, which includes East Harbour, is identified as a location that could accommodate projected demand for office and institutional space that would otherwise not find space within the core (Mathew et al 2018). The request to include residential units in East Harbour constitutes a request to convert a designated employment land to residential use. Permitting residential buildings would likely result in increased demand for employment to residential conversions in other parts of the city, which could be detrimental to retaining quality employment in Toronto and ensuring that employment grows along with its population. The Growth Plan and the City's Official Plan contain policies on how to address these requests. The City is also in the midst of a Municipal Comprehensive Review of the Official Plan. A decision on allowing residential uses in East Harbour needs to be done with consideration of city-wide implications (City of Toronto 2021a).

Inclusion of residential areas in East Harbour may have a positive impact on the degree of physical activity and social capital associated with the development, but this will depend on various design factors. These factors include: 1) building layout and design as well as materials that attenuate noise; 2) areas to socialise and encourage social interaction; 3) services such as libraries and health care providers in close proximity; and 4) for families, larger unit sizes, playgrounds close to their home and schools

within walking distance. In addition, East Harbour needs to be evaluated in the context of Toronto as whole.

Not only is the relationship between space and health complex, it is only one of the social and environmental determinants of health (Connon et al 2018). There are many lessons to be learnt from the past (see for example Easthope et al. 2017; Graham 2013; Randolph 2017; Troy et al. 2017). City planning involves taking into account various objectives with the aim of finding an optimal approach. The regular monitoring of quality of life and health of people living and working in the community would help evaluate its functioning as designed and identify any changes needed to achieve the goal of a healthy city for all (Paine et al 2016).

2.10 Gentrification

A thriving neighbourhood needs reinvestment and revitalization. However, this may lead to gentrification where those who live in the community benefit unequally (Qiang et al. 2020). There is ongoing debate about the distributive consequences of this gentrification (Lester & Hartley 2013). On one hand, supporters of gentrification focus on aggregate impact, which appears positive on balance. On the other, people who are concerned focus on the distribution of the negative impacts which fall disproportionately on the poor. Gentrification involves the balancing of modest benefits to many with the significant burden imposed on a smaller number but more vulnerable people (Holland 2016).

Gentrification is a process where investments in a community result in increasing property values and in-migration of people with higher income and education than the residents living in the neighbourhood (Tehrani et al. 2014; Zuk et al. 2017). The renovation and demolition of existing buildings that occurs in this process, and the increase in property values, which often leads to higher rents and taxes, make the area less affordable for people on lower incomes and small independent and family run businesses, who then move out of the neighbourhood.

The economic development impact, increases in property values, and enhanced liveability are considered benefits of transit-oriented development (TOD). As benefits and negative impacts of TODs are not evenly distributed, not all individuals and communities experience gentrification the same way (Tehrani et al. 2019). Gentrification may result in residential displacement, cultural displacement and/or disruption of local community ties.

Teasing out the contribution of gentrification to displacement is made more difficult given the natural rate of moving to a different home (Brummet & Reed 2019). Data from 2018 showed that 34% of Ontario residents moved in the previous 5 years (Statistics Canada 2019). Of these 20% moved within the same municipality, and 12.4% from a different place in Ontario or Canada. There are many reasons people choose to move. Over a 5-year period for example: 9.1% of households move to upgrade to a larger or better-quality dwelling; 4.9% to reduce housing costs; 6.6% to be in a more desirable neighbourhood; and 2.3% because they were forced to move by the landlord, government or financial institution.

Creating a more compact city and investing in transit are important investments in health and can promote equity when it improves access to employment, education, recreation, and services for people living on low-income (Mowatt et al. 2014). However, the benefits of transit improvements are often not equally distributed (Tehrani et al. 2019). These investments can reinforce processes of gentrification and

displacement. The higher land-use intensity and transit accessibility that result from transit investments often encourage people with higher income to move into these areas. This changes the demographic characteristic of the neighbourhood with a change in racial mix and a disproportionate increase of young, well-educated, middle- or high-income professionals and small families (Tehrani et al. 2019). Some authors have concluded that the changes associated with gentrification are mostly due to the change of population mix from in-migration to the area, rather than the result of displacement (Brummet & Reed 2019).

Looking at the period from 2000 until 2013, Richardson and colleagues (2019) found that gentrification and displacement in the US occurred mostly in the largest cities, especially those with vibrant economies. They also found that most low- to moderate-income neighbourhoods did not gentrify or revitalize rather they remained impoverished, untouched by the building booms elsewhere. This supports the hypothesis that a concentration of wealth and wealth-building investment is occurring in only a few areas of the US, while the rest of the country languishes behind.

A study of 100 US metropolitan areas prepared for Federal Reserve Bank of Philadelphia concluded that, overall, gentrification benefits residents (Brummet & Reed 2019). However, renters with lower educational attainment were likely to experience more adverse impacts. No impact was observed on employment, income, and commuting distance. Less-educated residents made up about 25% of the population in neighbourhoods that are at risk of gentrification. Of these 30% of renters and 60% of homeowners chose to remain in the neighbourhood as it gentrified. There was an increase of 4-6% in the numbers of renters with lower educational attainment who moved. This is a small increase over the background moving rates of 70-80% among renters and 40% among homeowners (Brummet and Reed 2019).

Among those people who stayed, exposure to neighbourhood poverty was reduced by 7%. No change was observed among those who moved, suggesting that the move was to a community with similar socioeconomic status. Compared to homeowners who moved away, those who remained experienced a greater increase in the value of their home, an important contributor of their overall wealth. Renters with more education did pay higher rent, but no change was observed among renters with less education (Brummet & Reed 2019). Unlike owners, not only are renters more likely to be displaced, they do not reap the rewards of rising home prices or higher rents (Brummet & Reed 2019; Richardson et al. 2020).

A study in New York City found that residents who lived in public housing next to neighbourhoods with increasing or high incomes also had higher household income (USD 3,000-4,500) compared to people living next to a lower-income neighbourhood. Similarly, children in these housing complexes performed better in school with higher math and reading test scores. At the same time, public housing residents living next to a neighbourhood with increasing income expressed concern that the improvements in the neighbourhood were for the “condo residents” and not for them. Residents that lived next to a high-income area appreciated the amenities that became available, but were concerned about being forced out. While their rents remained affordable, the higher costs of goods and services around them created pressure to move out (Dastrup et al 2015).

A study in Montreal found that over the 10-year period between 1996 and 2006, gentrification was associated with increased collective efficacy – the capacity of community members to coordinate their members to achieve collective goals (Steinmetz-Wood et al. 2017). Neighbourhoods with high levels of

collective efficacy are more likely to work together and mobilise the resources to address community concerns. High collective efficacy is associated with many health benefits including better self-rated health, lower all-cause mortality, as well as lower rates of cardiovascular disease, obesity, sexually transmitted diseases and improved mental health. However, this study does not look at the impact on people who were displaced.

Little Portugal – a case study of gentrification

The experience of the people living in Little Portugal in Toronto highlights how gentrification benefits some, but tends to affect people living on low-income more negatively (Murdie & Teixeira 2011). Portuguese immigration to Toronto began in the early 1950s and peaked in the 1970s. Many made their home in an area that became known as Little Portugal neighbourhood. By 1981 more than half of residents in the neighbourhood reported Portuguese as their mother tongue. After this, the proportion of Portuguese speaking people started to decline as families moved to other areas of Toronto and beyond, immigrants from other nationalities settled in, and the arrival of middle-class professionals.

Little Portugal became a complete community with the local Catholic Church as focal point. A whole range of Portuguese language retail and services were available: grocery stores, bakeries, restaurants, furniture stores, travel agencies and real estate agencies as examples (Walks & August, 2008). This meant people who had no or limited English could easily meet their day-to-day needs within their neighbourhood. The Portuguese community had low rates of higher education and were predominantly employed in blue-collar occupations. Many would supplement their income through renting out part of their homes – many of which were converted into apartments.

A study carried out in 2006 documented the experience of people of Portuguese descent, British descent and newcomers in and around Little Portugal (Murdie & Teixeira 2011). There was a mix of reaction to the changes happening around them among the Portuguese speaking residents. The rising property values were seen as a benefit to home or business owners who sold, but low-income residents feared they would at some point have no option but to move out as rents or taxes continued to rise. They also noted the diminishing job opportunities for people like them as industrial activity declined in the area. Some appreciated the presence of the professionals who were moving into the neighbourhood as a contribution to the future of the area. Others noted the disappearance of the shops that catered to their needs, as more up-market retailers they could not afford moved in. Some residents described the gentrifiers as an elitist group who formed their own “white-collar world” outside of their Portuguese world, which was a working-class or blue-collar one. Others saw things differently. “It’s positive the arrival of gentrifiers into Little Portugal ... it destroys the ‘ghetto’ that we had for decades.”

Gentrification and employment

Gentrification brings investments to an area, stimulates the local economy and creates new employment opportunities. It is also often accompanied by an influx of highly educated workers. Studies have found that while gentrification increases the number of high-paying jobs in the neighbourhood, it tends to result in a reduction in low and moderate wage employment opportunities, especially jobs in local services and good-producing sectors (Meltzer & Ghorbani 2015; Qiang et al. 2020).

The findings of a Working Paper from the Federal Reserve Bank of Cleveland (Lester & Hartley 2013) point to higher employment growth in gentrifying neighbourhoods compared to non-gentrifying ones.

However, there is a shift in the type of employment with lower-paying jobs in restaurants and retail replacing those in manufacturing. The authors found that, while there was little displacement overall, people with the greatest socio-economic disadvantage were most likely to move. While this move did not seem to make them economically worse off, it did incur moving costs which could be substantial for a low-income household. It also reduced social capital from the loss of proximity to friends, family, and networks.

In contrast, a study of New York City found that while there was an overall increase in jobs, local job loss could be as much as 63% (Meltzer & Ghorbani 2017). Tenants of three New York City Housing Authority developments indicated that they did not get the jobs at the new stores that established themselves in the higher income areas near them. They also said that the former local retail and services were replaced by upscale establishments that they could not afford (Dastrup et al. 2015).

A study of 100 metropolitan areas in the US found that, overall, the original residents of the affected neighbourhoods benefited from gentrification (Brummet & Reed 2019). Many of these residents were able to remain in the neighbourhood and gain from the improvements that occurred. This allowed existing residents to experience decreased neighbourhood poverty and increased education and employment opportunities, factors known to be beneficial to health and to lead to better employment prospects among people living on low income.

A study of the impacts of gentrification in Los Angeles, California (Qiang et al. 2020) found that the negative impacts of gentrification were concentrated among lower-income renters and people of colour. Low-income renters living in the gentrifying neighbourhood were more likely to change jobs, and more likely to earn less when they did. Low-income renters were also more likely to be displaced and tended to move to lower quality neighbourhoods. This move can affect their income due to changes in employment opportunities in the new locality and can also result in longer commutes.

Gentrification and health

Gentrification in urban centres can perpetuate existing health inequalities when the new development caters to single people and those with higher income (Thompson & Paine 2017). While studies have shown an improvement in health in gentrified neighbours, these studies do not necessarily look at the impact on those who were displaced (Tehrani et al. 2019). In contrast to those who have remained in a gentrified neighbourhood, people who have been displaced experience poorer health: lower life expectancy; poorer mental health; and increased rates of cancer, birth defects, infant mortality, asthma, diabetes, and cardiovascular disease (Tehrani et al. 2019).

As the neighbourhood changes and people leave, social ties with neighbours and shop keepers are weakened. This weakens social networks and sense of community, which in turn reduces resilience. As new businesses replace “mom and pop” or small family-owned stores and restaurants that were there previously, long-time residents may feel a diminished sense of place and community, and start feeling unwelcome (Tehrani et al. 2019).

When the change is perceived as negative, it increases stress, leads to unhealthy behaviours, and can impact a person’s mental health (Tehrani et al. 2019). A study in New York City, NY found that loss of cultural and historical asset, racial biases of incoming residents, and police behaviour was associated with higher stress levels among long-time residents who remained in the neighbourhood (Shmool et al.

2015 as cited in Tehrani et al. 2019). Financial and social pressures related to concern about being able to remain in their homes or potential to become homeless, lower access to affordable food and reduced access to medical care can also result in stress and feelings of disenfranchisement (Tehrani et al. 2019).

In children, gentrification has been linked to negative impacts on performance in school children, emotional difficulties; and increased rates of adolescent pregnancy (Tehrani et al 2019). When comparing children who lived in gentrified neighbourhoods, to those in ungentrified neighbourhoods of New York City, Dragan and colleagues (2019) did not find any difference in children's use of the health services, asthma or obesity among those assessed at ages 9–11. They did find an increase in anxiety or depression, particularly among children living in market-rate housing in gentrified neighbourhoods.

Older adults prefer to age in place. As the neighbourhood changes and people move away, this can reduce the sense of belonging, weaken social ties and decrease availability of social supports that are important to healthy ageing. As well, with the change in socioeconomic status of the neighbourhood, long-standing residents can face social or financial barriers to access recreational amenities and other services (Tehrani et al 2019).

Gentrification – underground compared to overground rail

As a large city with a vibrant economy, Toronto is at greater risk of gentrification and associated displacement. Increased access to transit is considered a benefit to people on a low income as it provides better access to employment, goods and services that are too far to reach by walking or cycling. It also alleviates the need for travel by motor vehicle, resulting in lower transportation costs. However, many people living on low-income, equity deserving groups, and seniors will not necessarily benefit and in some cases may be worse off due to the changes in the neighbourhood.

The gentrification pressures of the underground or overground alignments are likely to be similar given that both will improve transit access and make South Riverdale a more attractive place to live and run a business. This will likely result in increasing property prices, higher taxes, pressures for higher densities, and redeveloping the area.

Gentrification is the result of economic and social forces. Socio-economic factors such as income, immigration status, belonging to a racialized group and ability to speak English are important determinants of health. As described in the section on community design, it is possible to create a community that fosters equity, but many other boarder policies and programs are needed to ensure that new transit lines and associated transit-oriented communities do not result in inequitable impacts.

Minimising adverse health equity impacts

There is an opportunity to address equity concerns when careful consideration is given to them at the planning stage of either a new transit line or transit-oriented community. The *Community Health Impact Assessment of Transit-Oriented Development Policy in St Paul MN* (Malekafzali & Bergstrom 2011) identifies factors to consider in order to foster a healthy economy, healthy affordable housing, and safe and sustainable transportation (Appendix, Table A-5).

The Metropolitan Area Planning Council of Massachusetts performed a health impact assessment of TODs and made recommendations to minimise negative health and equity impacts (Appendix, Table A-

6). Some of the policies suggested are already in place in Toronto, which, if adhered to, should contribute to reducing adverse health impacts and enhance positive ones.

3. Impacts of construction

Constructing a new transit line will cause disruption. Long-term disruptions can affect the viability of local businesses and result in either displacement or closure, with detrimental impact on the community and the health of people most affected. It is therefore important to minimise any such disruption.

Experience elsewhere indicates that an underground alignment, which makes use of tunnelling equipment for the tunnel and mining techniques for the stations, is likely to cause the least disruption to a community (ITA 2004). In part, this is because the areas of construction impacts are more localised around specific points such as stations. While in its blog of February 21, 2021 ([accessed 2021-09-13](#)), Metrolinx counters the claim that building the Ontario Line underground would be less disruptive. The blog refers to an underground alignment along the current rail corridor, and not the community's proposal that would see the line continue south along Carlaw to Queen Street (as the previously approved design for the Relief Line). Since then, Metrolinx has indicated that in order to accommodate the above ground Ontario Line, it needs to reconfigure the rail corridor. It plans to move an in-use GO track and replace or widen the 5 existing rail bridges along this segment of the line (Metrolinx 2021d). And it will install retaining walls to raise the existing track bed by approximately 1.5 metres. These activities will also cause disruption, and need to be taken into account before making a final decision on the optimal option.

Early works

Assessing the impacts of the construction of the Ontario Line on the neighbourhood is made more difficult due to the lack of a comprehensive overview that considers the three undertakings affecting the corridor (GO expansion, GO electrification and the Ontario Line). For example, for the GO electrification project, Metrolinx is assessing the noise and vibration impacts of the construction phase of infrastructure components at a given location independently of each other (Metrolinx 2021b). The Early Works report (AECOM 2021) outlines the anticipated impacts of the initial phase of construction along the Lakeshore East Joint Corridor between approximately Eastern Avenue and Pape Avenue which does not include the impacts related to the construction of the stations or the portal near Pape Avenue. The stages of the Early Works are outlined as follows:

- reconfiguration of existing GO tracks
- replacement of the existing bridges at Queen Street East, Dundas Street East and Logan Avenue
- construction of two new bridges at Dundas Street East and Logan Avenue
- construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure for the fourth GO track
- construction of retaining walls, and
- construction of noise barriers, including part of the corridor east of Pape Avenue.

Figure 3-1. Lakeshore East joint corridor early works components (Source: [Metrolinx](https://www.metrolinx.com) accessed 2021-10-10)

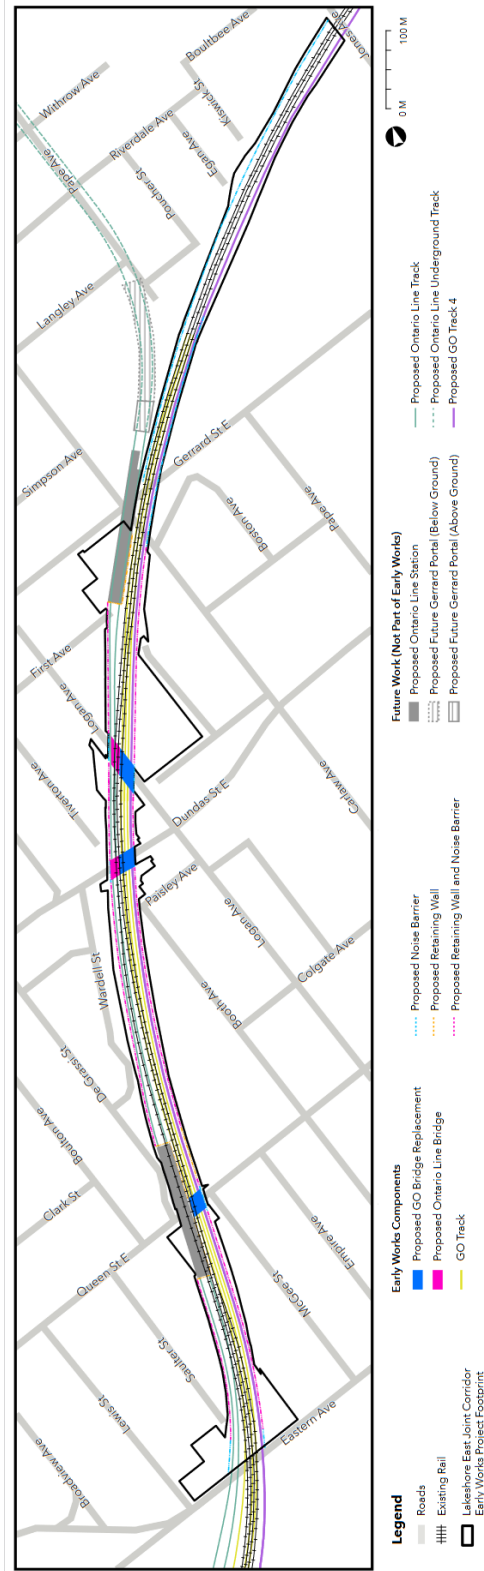

Figure 3-1 shows the footprint of the early works and identifies the location of the retaining walls, noise barrier, stations, portal as well as the project footprint. A timeline for construction of the Early Works in the joint corridor is set out in Table 3-1.

Table 3-1. Proposed timetable for the early works along the Lakeshore East joint corridor

(<https://hdr.wistia.com/medias/czrk84lfbg> accessed 2021-10-09)

Approximate timing	Activity
1. 2022	Existing conditions
2. Mid 2022	Begin Phase 1 track work and grading Begin traffic management at Queen St and Dundas Street bridges
3. Summer 2022	Construct eastern retaining wall from Eastern Avenue to Queen St; Reinforce existing Queen St bridge
4. Fall 2022	Construct eastern retaining wall from Jimmie Simpson Rec Centre to Dundas St
5. Fall 2022	Shift local Go Service lines west
6. December 2022	Begin Phase 2 track work and grading Demolish the eastern portion of existing Dundas St bridge Construct eastern retaining wall Queen St to Jimmie Simpson RC
7. 1 st quarter 2023	Demolish eastern portion of existing Queen St Bridge
8. 1 st quarter 2023	construct eastern portion of new Queen Street and Dundas St GO bridges
9. 1 st quarter 2023	construct easter noise barrier wall (Eastern Avenue to Dundas)
10. Late 2023	Shift local GO service lines east Construct western retaining wall from Eastern Avenue to future Leslieville Station
11. December 2023	Begin Phase 3 track work and grading; demolish western section of Dundas Street Bridge
12. Early 2024	demolish western portion of existing Queen Street bridge
13. Early 2024	Construct western retaining wall from future Leslieville Station to Dundas Street; Construct western portion of new Dundas St GO bridge
14. 1 st quarter 2024	Construct western portion of new Queen St bridge
15. 1 st quarter 2024	Construct retaining wall at future Leslieville Station; construct new Dundas street Ontaril Line bridge
16. 2 nd quarter 2024	Construct western noise barrier wall
17. 3 rd quarter 2024	Restart service on GO express line
18. 4 th quarter 2024	begin to construct Leslieville Station
19. 2028	Substantial complete Leslieville station
20. Mid 2029	Complete construction on Ontario Line tracks (final conditions)

Noise and vibration impacts

The Early Works assessment found that noise limits could be exceeded at some sensitive receptors within the project screening area, particularly at night. Noise mitigation measures have been identified and could be refined. These could include restricted hours of operation, improved hoarding, moveable noise barriers, use of enclosures and/or silencers. AECOM (2021) notes that noise monitoring may be required at some locations.

Vibrations are likely to be felt in a large area around the project footprint (AECOM 2021). There are 29 properties identified where vibration levels could exceed permitted levels and will require mitigation measures. These could include monitoring and pre-construction inspections, using equipment at lower vibration settings and/or the use of alternative construction methods.

The Early Works report does not go into detail of the construction phasing or schedule (AECOM 2021). The report notes that construction work will be done during day-time hours where feasible, but does not describe which work will need to be done outside of those hours. So that existing train service is not disrupted during the construction of the overground Ontario Line, it can be expected that a major portion of the construction work will need to take place at night. Noise from such activities, including movement of machinery and vehicles, will impair people's ability to sleep.

Health Canada's guidance indicates that impacts on sleep should be considered when determining the impact of short-term construction noise (Health Canada 2017). Based on the above schedule, it is possible that some locations could be affected for more than a year. Health Canada's guidance recommends that "construction noise lasting longer than 1 year be assessed as operational noise." While there would be some local impacts, in the case of an underground alignment, most construction could take place during the day or early evening, greatly minimising disturbance, especially at night when a majority of people, including children and seniors, sleep.

Air quality impacts

Current air quality data for Toronto show that the polyaromatic hydrocarbon (PAH) benzo (a) pyrene and benzene are found at levels above Ontario's ambient air quality criteria. Both of these compounds are components of vehicle diesel and gasoline exhaust (AECOM 2021). The draft Early Works report notes that construction activity will result in emissions of dust including silica, fine particles and exhaust from diesel and gasoline equipment and vehicles. The report outlines mitigation measures which reflect current good practice.

However, there are numerous references to study limitations. Due to the lack of precision, the community continues to express concerns about exposure to pollution from construction activities related to an overground alignment which is very close to existing homes. Diesel exhaust is a carcinogen and also contributes to local air pollution. Short-term exposure to air pollution can result in people experiencing breathing difficulties, asthma exacerbation, pneumonia, bronchitis and other effects on the lung as well as contribute to heart disease (Manisalidis et al 2020). People who are more susceptible to air pollution include older adults, children, people with diabetes and others with existing heart or lung disease, especially asthma. The duration of construction is outlined as 8 years assuming no delays (Table 3-1).

Given that South Riverdale was home to a number of heavy industries in the past, the potential for contamination remains a question for residents (TPH, 2005). For example, International Varnish Company, which was located north east of the intersection of Gerrard and Carlaw, sold varnishes and insecticides such as DDT and 2,4-D (Georgiou, undated; MyCo, undated). The possibility of releases of contaminated soil during construction of the proposed portal at this location has not yet been assessed.

Impacts on green space

The project footprint includes the Gerrard-Carlaw Parkette. It is still unclear what impact construction will have on other parks along the corridor. Metrolinx states: “Streamlining Ontario Line construction work with planned GO Expansion work within the existing Metrolinx-owned rail corridor means we can keep mostly within our existing property boundaries and significantly reduce impacts to surrounding neighbourhoods, including park spaces.” Without clear demonstration of how this will be achieved, and a comparison to the impacts during construction of the community’s preferred underground alignment, there will continue to be concern about what will actually happen to green space.

Community disruption

The potential impact of construction on businesses in the area is of concern. Disruption during construction can have long-term impacts on the community. Many establishments are already struggling from the impact of COVID, and further disruption would make it that much more difficult for them. Potential impacts on programs such as CaféTO (roadside dining), which have been popular and have assisted businesses to remain viable, and on sidewalk circulation need to be taken into account in order to support small businesses.

The Early Works report indicates that temporary lane restrictions/closures, travel time delays, realignment of sidewalks and bike lanes, and rail closures can be expected. A traffic impact assessment will be completed at a later date once detailed construction staging schemes become available to determine the specific mitigation measures that will reduce impacts on vehicle, bicycle and pedestrian travel. However, a thorough analysis that compares the various negative impacts – also referred to as dis-benefits or transitional effects – would help identify the optimal approach to construction (Transportation Economics Committee, undated). If such an analysis were done for both the underground and overground options, this would help in selecting a preferred option.

Principles of engagement

A good community engagement process is essential to effectively address community concerns (Health Impact Project 2019; Health Canada 2017; US FTA 2018; WHO 2005). Involving the community in the identification and selection of options makes residents and business proprietors appreciate the necessary trade-offs as well as increasing community acceptance of the project and the measures taken to minimise adverse impacts during both construction and the operation phase.

While an aboveground alignment is often chosen because of its lower construction cost, to ensure the right decision is made, it is important to accurately include the long-term social and environmental benefits that accrue from an underground option (ITA 2004) as these benefits are also important contributors to good health.

Construction – underground compared to overground rail

Long-term disruptions can affect the viability of local businesses and result in either displacement or closure, with detrimental impact on the community and the health of those most affected. Evidence available suggests that the underground alignment (as proposed by the community) is likely to have the least disruption during construction. While Metrolinx has countered this assertion, it has not presented a comparative analysis to support their view. In addition, the underground option is expected have less impact on health due to reduced exposure to noise and air pollution, traffic disruption, and less disturbance of green space during construction. It is important to accurately include the long-term social and environmental benefits in the assessment of impacts before deciding on the preferred option.

Appendix

Ontario environmental noise guidelines

When assessing noise from rail, the Ontario (2013) guidelines indicates that the “sound level should be assessed in an OLA [outdoor living area], such as a rear yard or a patio, and in indoor living areas, such as bedrooms and living rooms, and compared with MOE guidelines. Noise control measures are not required if the sound level estimated in the OLA is 55 dBA or less during the daytime [07:00 – 23:00] and 50 dBA or less in the plane of bedroom windows during daytime or night time.... The outdoor noise impact should be assessed in the OLA during daytime hours, considering a combination of only two sources of rail traffic noise, namely the locomotive and the wheel-rail interaction. Whistle noise is not included in the outdoor noise impact assessment.”

“A major characteristic of railway noise is its high pass-by sound level for short periods and a major low frequency component produced by the operation of the diesel locomotive. This special character of the sound should be taken into account, particularly when assessing the indoor sound levels. Consequently, in order to account for the special character of railway sound, the indoor sound level limits for rail noise, Table C-2 [see Table A-1], are 5 dBA lower than the indoor sound level limits for road traffic noise. This difference results in a requirement for acoustically superior architectural components such as windows and walls, for railway noise (Ontario 2013).”

Table A-1: Table C-2 “Indoor Sound Level Limits – Rail” of the Ontario Environmental noise guideline (NPC-300). (Ontario 2013)

Type of Space	Time Period	Leq (dBA) Rail
Living/dining, den areas of residences, hospitals, nursing homes, schools, daycare centres, etc.	07:00 - 23:00	40
Living/dining, den areas of residences, hospitals, nursing homes, etc. (except schools or daycare centres)	23:00 - 07:00	40
Sleeping quarters	07:00 - 23:00	40
Sleeping quarters	23:00 - 07:00	35

Note: The specified indoor sound level limits are maxima and apply to the indicated indoor spaces with windows and doors closed.

Health Canada’s noise guidance

When evaluating sleep disturbance, Health Canada’s Guidance for Evaluating Human Health Impacts in Environmental Assessment – Noise recommends the use of World Health Organization (WHO)’s noise guidelines. Health Canada notes that the WHO guideline levels should not be exceeded for susceptible populations, such as those in hospitals, or convalescent or senior homes (Health Canada 2017). It also recommends that noise levels for susceptible populations in particular not exceed the WHO annual average 40 dBA L_{night} outdoors. It also notes that it is good practice to consult with people running such facilities to determine if there is any potential for sleep disturbance during the day and to take this in consideration in the assessment. While there may be times when the sound levels are above and below 40 dBA, as long as the annual average does not exceed this value, long-term impacts on health are not expected to occur.

When a school could be affected by noise from the project, Health Canada suggests that the EA use WHO's ideal background noise level of 35 dBA in the classroom to determine the potential impact and the need for mitigation.

High annoyance is one way to estimate a community response to noise. Health Canada considers the change in percent highly annoyed (%HA) an appropriate indicator of noise-induced human health effects as the result of exposure to noise during the operational phase of a project. Because the relationship between noise and %HA is non-linear, a relatively small change in the noise level can result in a substantial increase in %HA in areas where the initial baseline noise level is high. Health Canada recommends that %HA be assessed for representative receptors. Mitigation measures should be considered when the calculated %HA at any given receptor location increases by more than 6.5%.

While Ontario's guidelines assume closed windows or doors when evaluating acceptable noise exposures, Health Canada "recognizes that in many cases, people will want to keep windows at least partially open, depending on the season." Therefore, good practice is to assess noise impact with such an assumption. Health Canada does recognise that there may be situations when baseline noise levels would not allow meeting WHO guidelines. In such cases noise mitigation measures should be considered so that project noise is kept at 75 dBA L_{dn} or less.

World Health Organization guidelines

The 2018 Environmental noise guidelines for the European Region outlines several principles including (WHO 2018: p. 105):

"The **first principle** is to reduce exposure to noise, while conserving quiet areas... existing large quiet outdoor areas should be preserved."

"The **second principle** is to promote interventions to reduce exposure to noise and improve health.... The potential health impacts from environmental noise are significant, especially when considering the widespread exposure to environmental noise across the population and the high baseline rates for various health outcomes associated with environmental noise."

The guidelines set evidence-based guidelines of different source categories of noise including rail. There are limited data available on the impacts of railway noise on health. Using a precautionary approach, recommendations for average exposure to railway noise were based on annoyance studies, since there is supportive evidence of health effects occurring from exposure to other sources of transportation noise.

The WHO (2018) strongly recommends:

- For average noise exposure: Reducing noise levels produced by railway traffic below 54 dB L_{den} ¹¹ as railway noise above this level is associated with adverse health effects. At this level, 10% of people reported that they were highly annoyed by railway noise.

¹¹ The L_{den} a weighted average equivalent sound level over a 24-hour period with a penalty added for noise occurring during the evening and night-time hours.

- For night noise exposure: Reducing noise levels produced by railway traffic during night time to below 44 dB L_{night} ¹² as night-time railway noise above this level is associated with adverse effects on sleep. At this level 3% of people reported to be highly disturbed by railway noise.
- To reduce health effects: Policymakers to implement suitable measures to reduce noise exposure from railways in the population exposed to levels above the guideline values for average and night noise exposure.

¹²The European Noise Directive defines L_{night} , as an equivalent outdoor sound pressure level, measured at the most exposed façade, associated with a particular type of noise source during night time (at least eight hours), calculated over a period of a year.

Vibration guidelines

Few studies have assessed the human response to intermittent vibrations induced by railway corridors. While there is no universally accepted approach, several organisations have developed guidelines, including: International Standard ISO 2631-2 (2003), American Standard ANSI S2.71 (2006) Australian Standard AS 2670-2 (1990), British Standard BS 6472-1 (2008), New Zealand Standard NZS/ISO 2631-2 (1989) and Norwegian Standard NS 8176.E (2005) (FCM & RAC 2013). Australian and US limit values are provided in the Tables A-2 and A-3 below.

Table A-2: Australian acceptable vibration dose values (VDV) for intermittent vibration such as rail traffic measured as $m/s^{1.75}$ (Source: NSW 2006)

Location	Daytime		Night time	
	Preferred value	Maximum value	Preferred value	Maximum value
Critical areas*	0.10	0.20	0.10	0.20
Residences	0.20	0.40	0.13	0.26
Offices, schools, educational institutions and places of worship	0.40	0.80	0.40	0.80

* Examples include hospital operating theatres and precision laboratories where sensitive operations are occurring.

Table A-3: US indoor impact levels for ground-borne vibration (GBV VdB re 1 micro-inch /sec) and ground-borne noise (GBN, dBA re 20 micro-Pascals) criteria (Source: US FTA 2018)

Land Use Category	Frequent GBV events	Occasional GBV events	Infrequent GBV Events	Frequent GBN Events	Occasional GBN Events	Infrequent GBN Events
Category 1: Buildings where vibration would interfere with interior operations.	65 VdB	65 VdB	65 VdB	N/A	N/A	N/A
Category 2: Residences and buildings where people normally sleep.	72 VdB	75 VdB	80 VdB	35 dBA	38 dBA	43 dBA
Category 3: Institutional land uses with primarily daytime use.	75 VdB	78 VdB	83 VdB	40 dBA	43 dBA	48 dBA

Notes:

1. "Frequent Events" is defined as more than 70 vibration events of the same source per day.
2. "Occasional Events" is defined as between 30 and 70 vibration events of the same source per day.
3. "Infrequent Events" is defined as fewer than 30 vibration events of the same kind per day.

Table A-4**Population characteristics of South Riverdale compared to that of Toronto**

(Source: City of Toronto, 2018)

Demographic Parameter (2016 census)	South Riverdale	Toronto
Population of South Riverdale	27,876	
Between 2011 and 2016 South Riverdale increased by about twice the rate as Toronto as a whole	8.7%	4.5%
The proportion of the population that identifies as Indigenous is about twice that of Toronto	1.9%	0.9%
There are proportionally more citizens and fewer immigrants than in Toronto	91.5% 30.3%	85.3% 51.2%
The proportion of people of colour (visible minority) is lower than the city as a whole, but a higher proportion of the population does not speak English or French	41.5% 8.1%	51.5% 4.9%
The median family income in 2015 was higher than for Toronto as a whole	\$101,037	\$82,859
Based on the market basket measure, the poverty rate in South Riverdale is slightly lower than that for Toronto	20.7%	21.9%
The percentage of households with income less than \$20,000 is a little higher than the Toronto average	14%	13%
Compared to the city as a whole, more households report an income of greater than \$125 000	29%	22%
A higher percentage of people have a university education (bachelor's degree or higher)	48.2%	44.1%
Fewer people are unemployed	6.5%	8.2%
The percentage of single-person households and of seniors living alone is higher than the city average	35.9% 29.1%	32.3% 26.7%
Compared to the city as a whole there are fewer renter households as well as many fewer households living in apartments with five or more storeys	40.1% 17.7%	47.2% 44.3%
A smaller percentage of people are living in unsuitable or unaffordable housing, but slightly more are living in inadequate housing	5.9% 31.1% 7.7%	12.1% 36.6% 7.1%
A similar proportion take public transit to work but fewer commute more than an hour to work	38.6% 10.8%	37.0% 16.2%

Table A-5

Factors to consider when planning healthy transit and transit-oriented communities.

(Adapted from Malekafzali & Bergstrom 2011)

<p>To foster a healthy economy:</p> <p>Objective 1: <i>High Quality, Healthy Jobs that Increase Wealth, Income, and Equity for All Residents</i> How will the proposal change the amount and quality of jobs that will be available to residents in the neighborhood?</p> <p>Objective 2: <i>Diverse, Local Businesses—Existing and New—Are Developed and Supported</i> How will the proposal affect small, locally and minority-owned businesses that are located along the corridor?</p> <p>To foster healthy affordable housing:</p> <p>Objective 3: <i>Protect Residents from the Negative Impacts of Gentrification</i> How will the proposal affect the likelihood of neighbourhood gentrification and the involuntary displacement of current residents?</p> <p>Objective 4: <i>Construct and Preserve Affordable and Diverse Housing in Proportion to Demand</i> How will the proposal impact the cost of housing in the neighborhood and the availability of affordable housing?</p> <p>To foster safe and sustainable transportation:</p> <p>Objective 5: <i>Maintain and Improve Affordable and Accessible Transportation</i> How will the proposal coordinate with, and affect, affordable and accessible public transportation?</p> <p>Objective 6: <i>Safe, Connected Walking Routes to, from, and across Transit Stops</i> How will the proposal coordinate with, and affect, access to safe and connected routes to, from, and around rail and bus stops</p>
--

Table A-6

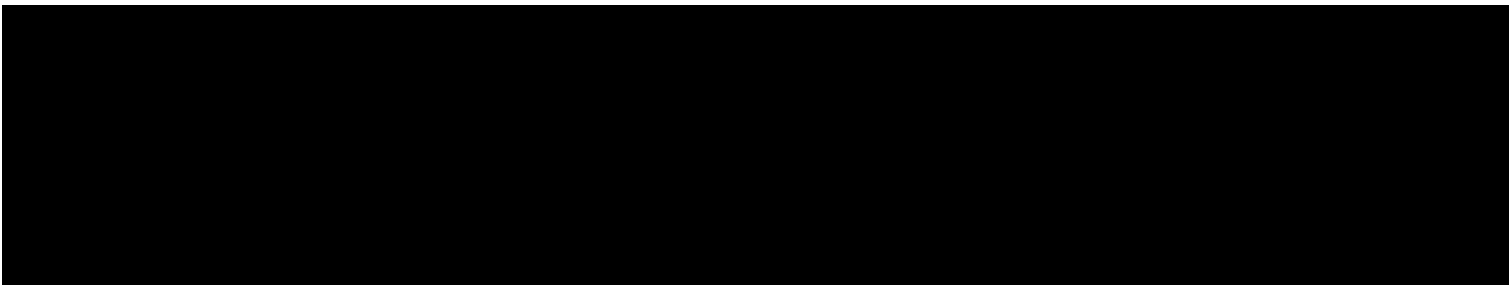

Recommendations to maximise the health-related benefits of transit-oriented communities

Adapted from MAPC 2020.

Health Pathway	Potential Health Impacts	Recommendations
Walkability/Active Transport	Physical activity Mental health Chronic disease Obesity	<ul style="list-style-type: none"> Promote density, mixed land-use, availability of destinations and amenities, short distances to transit, bicycle, and pedestrian. Accommodations, and lower ratios of on- and off-street parking into the development design.
Safety from Traffic	Injury Air quality Real and perceived safety	<ul style="list-style-type: none"> Support developments that promote a Complete Streets approach to accommodate safe bicycle, pedestrian, and transit trip-making for the new residential and/or commercial development. Encourage a context-sensitive approach for proposed roadway improvements so that new or reconstructed roads are designed with narrow travel lanes and for slower vehicular speeds.
Safety from Crime	Injury Physical activity Mental health Real and perceived safety	<ul style="list-style-type: none"> Incorporate Crime Prevention through Environmental Design (CPTED) strategies into the development design. Encourage developers to be aware of internal and external pathways/connections to other destinations, particularly for routes to a transit station.
Economic Opportunity	Economic stability and mobility Mental health	<ul style="list-style-type: none"> Require or encourage measures that result in construction-related employment opportunities (part- or full-time) for residents in the impacted neighborhood. Encourage or create job training components to assist residents to acquire skills that allow them to access job opportunities can offer higher wages and job stability. Prioritize ground floor commercial space for locally owned, minority owned, and women owned businesses.
Affordable Housing	Economic stability	<ul style="list-style-type: none"> Support developments that maintain a diverse housing stock, including affordable deed-restricted housing units for households with low incomes.

Health Pathway	Potential Health Impacts	Recommendations
Moving to Opportunity	Mental health Economic mobility Chronic disease	<ul style="list-style-type: none"> • Provide housing search and relocation assistance for families with children who desire to move away from the impacted areas to a preferred neighbourhood. • Promote neighbourhood changes that reduce neighbourhood level poverty and include housing, with potential support services, for current residents. • Include programming with new developments that provide opportunities for community building among new residents and current residents, for sharing of cultural and ethnic backgrounds, and that provide opportunities for youth leadership.
Social Cohesion	Mental health Social capital Chronic disease	<ul style="list-style-type: none"> • Promote developments that seek to enhance the social impact of the public spaces and social and cultural programming of these spaces. • Promote initiatives and programs that value inclusiveness, diversity and health promotion across all ages and backgrounds.
Displacement/Gentrification	Air quality Asthma Other respiratory diseases Cardiovascular disease	<ul style="list-style-type: none"> • Identify what types of community-level displacement forces, if any, are currently occurring in the area of the proposed development. • Promote the use of anti-displacement strategies and local regulatory changes that support existing residents right to remain and apply policies such as inclusionary zoning, prevent condominium conversion, and one for one affordable housing replacement. • Support initiatives that increase housing stability for existing residents, such as right to counsel, rental assistance, and community wellness staff.
Ownership of Neighbourhood Change	Physical health Mental health	<ul style="list-style-type: none"> • Document understanding of community vision, reflecting the needs and priorities of current residents, as part of development process. • Promote sharing of decision-making on proposed developments with residents in the impacted neighborhood.

Health Pathway	Potential Health Impacts	Recommendations
Food Access	Mental health Chronic disease Diet	<ul style="list-style-type: none"> • Encourage expanded access to healthy, affordable food through walking, bicycling and frequent transit connections. • Consider use of mobile markets and farmers market as means to expand access to local, healthy foods.
Green Space	Physical activity Mental health Thermal comfort Social cohesion Respiratory health	<ul style="list-style-type: none"> • Promote expansion, upkeep, and programming of green spaces. • Promote introduction of vegetation, including trees, low level bushes and shrubs and ground cover plants in public and private spaces. • Design sites to reduce potential for trees to restrict dispersal of air pollutants and to contribute allergens.
Air Quality	Mental health Economic stability Social cohesion	<ul style="list-style-type: none"> • Encourage air quality analyses associated with increased motor vehicle use. Consider background concentrations. • Monitor air quality during construction and after the development is complete to ensure that air quality levels do not degrade beyond projected levels. • Consider mitigation measures such as reinforcing the bicycle/pedestrian infrastructure and low-emission construction equipment.
Climate Change	Exposure to natural hazards such as heat and extreme rain events Injury	<ul style="list-style-type: none"> • Assess project vulnerability using a community exposure, sensitivity, and adaptive capacity framework. • Build resiliency in neighborhoods by addressing physical environmental risks and socioeconomic factors that increase vulnerability. • Promote use of building designs that reduce reliance on carbon-based energy sources and minimise utility costs for residents.
Residential Energy Efficiency	Exposure to environmental contaminants Economic stability Mental health Thermal comfort Chronic disease	<ul style="list-style-type: none"> • Encourage housing that meets the highest energy efficiency standards. • When applicable, retrofit existing homes to meet higher energy efficiency performance.

Subject: RE: Noise data

Hi [REDACTED]

I can look into the engineer's availability but this week may be tough. For the sake of time, can you forward me your additional questions on the data over email which I can ensure get answered ASAP?

We did have a comprehensive discussion with the LSE CAC last week and you can find the recording here: [REDACTED]

Best,

Daryl

Hi Daryl,

We'd like to set up a time to review the data with the engineer. Are you available Wednesday or Friday afternoon?

If we have an extension to respond to early works, it can be later in the month.

Thanks,

[REDACTED]

Subject: RE: SJS Request for Comment Period Extension - Early Works Reports

Hi [REDACTED],

Please see below for the answer to question 7:

- Lpeak, Lmax and the various 1-hour Leq scenarios were not assessed as per the MOE/GO and MOE/TTC protocol criteria as they are outside of the assessment framework and thus not applicable to the Lakeshore East Joint Corridor assessment.
- Lpassby is a metric applicable to a single Ontario Line train passby event, and was assessed as per the MOE/TTC protocol. Lpassby values at various receptors with and without noise barriers are outlined in the Lakeshore East Joint Corridor Noise and Vibration Operations report.
- Both Lpeak and Lmax apply to single noise events. Lpeak, the true peak or maximum value reached by a sound pressure wave, is typically used for hearing damage assessments, impulse noise or very loud noises such as blasting or hammers rather than transit projects. Neither the applicable provincial protocols nor our model incorporate this metric.
- Lmax represents the maximum value of the sound pressure during a noise event (e.g., single train passby) for a very short duration (typically, 0.125 or 1 sec). Similar to Lpeak, this metric is not used in the provincial protocols applicable to the Joint Corridor assessment and our model does not incorporate it.
- The various 1 hour Leq scenarios for various numbers of GO and Ontario Line trains are outside of the assessment framework which looks at 16 hour and 8 hour Leq's, and are thus not applicable to the project. Note that Metrolinx assessment conservatively combined the noise impacts from both GO and Ontario Line trains – rather than looking at GO and Ontario Line trains separately – as well as freight and VIA trains, and looked at the highest projected service levels for GO Expansion and Ontario Line, subsequently using this as the basis for mitigation investigation.

Best,

Daryl

Hi Daryl,

Thanks for the answers. While not complete, it gives us more context to interpret the data. We will review and follow up separately.

I am disappointed that it took Metrolinx more than 10 days to respond. I note Metrolinx did not answer Q7 concerning Leq max and peak values. This data will be crucial in understanding the impact of multiple projects in our neighbourhood.

We'll have less than a week to review the data if received on Monday, assuming no extension.

Ontario Regulation 341/20 makes no mention of releasing two separate early works reports on the same day. This appears to be an underhanded tactic by Metrolinx to deliberately discourage public participation in this process.

May I ask you to escalate this extension request to Malcolm Mackay, project sponsor?

Thanks,

[REDACTED]

On Fri., Oct. 15, 2021, 3:44 p.m. Ontario Line, <ontarioline@metrolinx.com> wrote:

Hi [REDACTED]

I appreciate your patience as we worked through your questions. Please see below for the answers. Question 7 requires more work and we will get you an answer next week.

1. **Why did Mx not measure current noise levels?** In accordance with the MOEE/GO and MOEE/TTC protocols, operational noise is assessed based on predictions. Both existing and future noise levels are predicted in order to provide an 'apples to apples' comparison, at many receptor locations. However, existing noise levels were measured in several locations within the Ontario Line study area and documented in the *Ontario Line Final Environmental Conditions Report*.

2. **What is the margin of error with these predicted noise levels? For instance, when your predicted current noise data is 65 dB, what is the realistic range that you'd expect the actual noise level to be? +/- 5dB? 10dB?** The noise prediction model is an established approach based on measurements of transit systems in North America. The predictions are typically considered conservative and where noise levels were measured in similar locations to model receptors in the Lakeshore East Joint Corridor study area, the results corresponded well (within 3 dB).

3. **How reliable are your predicted future noise levels? If we were to measure noise levels in 20 years, assuming exactly the same types of trains and frequency as used in the input, how much deviation would you expect from the predicted noise levels vs. actual noise?** The noise levels from new trains and rail vehicles will be specified as part of the procurement process, so we are confident that they will achieve similar or lower noise emissions to those modelled.

4. **What are the noise profiles for each type of train (GO diesel/GO electric/VIA/freight/OL)?** As noted in Appendix E of the *Lakeshore East Joint Corridor Noise and Vibration Operations Report*, sound level data for Lakeshore East GO, Richmond Hill GO, freight, and VIA trains are referenced from the US Federal Transit Administration's (FTA) Transit Noise and Vibration Impact Assessment Manual, and Federal Railroad Administration reference levels. All future diesel locomotives will have an exhaust silencer installed which will reduce the base sound level by 3 dB. Ontario Line vehicles were modelled based on an 80.4 dBA sound exposure level at 15 m based on a reference length of 80 m, reference speed of 80 km/h and source height of 0.6 m. Adjustments were made based on speeds, throttle settings, and track types, in accordance with the FTA manual and additional assumptions as outlined in Appendix E of the *Lakeshore East Joint Corridor Noise and Vibration Operations Report*.

5. **Did you use separate values for east bound trains vs west bound trains?** Yes, the tracks are modelled separately with assigned train volumes, throttle, and speed parameters.

6. **There's no date for electrification conversion. In the worst case scenario of continued diesel service, which is the case for the next number of years, what do the noise predictions look like?**

In May 2021, Metrolinx completed a Significant Addendum to the 2017 GO Rail Network Electrification TPAP. GO Expansion, including electrification, is part of a system wide project to design, build, operate and maintain the network, currently in the procurement phase. Once a proponent (contractor) is selected there will be further information in terms of construction scheduling and sequencing of electrification on the rail network. Community updates will be provided to the public and stakeholders prior to construction.

To achieve the GO Expansion service levels identified in the Business Case and included in the noise model, the GO rail fleet will need to be electrified to the greatest extent possible. The Ontario Line Lakeshore East Joint Corridor Noise and Vibration Operations Report modeled the future electrification scenario. A continued diesel service scenario was not modeled as Metrolinx is committed to electrification of the rail corridor. Note that the model, which forms the basis for mitigation investigation, included highest projected service levels of both GO and Ontario Line.

In the interim, Metrolinx is continuing to improve on its GO operations, for example by purchasing Tier 4 diesel trains, which is a type of train that meets more stringent air quality standards. Metrolinx's ongoing train silencer program will also install exhaust noise silencers on all diesel trains which will decrease the sound by an estimated 3dB.

8. Vibration data needs to account for multiple trains passing by. Please advise what cumulative vibration looks like for simultaneous passby from multiple trains. It is standard practice to assess vibration based on single passby events, but in the rare occurrence of additive vibration during a simultaneous passby event, the overall level would not be significantly higher than the dominant individual source (e.g., a GO train travelling along the GO track closest to a given receptor) because secondary sources would be relatively further away (e.g., Ontario Line train travelling along Ontario Line track further away from that receptor).

9. Does “Future – with project” include noise sources from all types of trains (OL, GO, VIA, Freight) and does it include cumulative impacts of simultaneous passby? Yes, all train services are included in the Future - with project scenario. The Leq,16h and Leq,8h noise levels evaluated take into account the number of cumulative pass-bys from OL, GO, VIA, and Freight trains during the day-time and night-time periods, respectively, described as an equivalent continuous sound level (the constant sound pressure level that would result in the same total sound energy as the fluctuating sound level within the same period) per the MOEE/GO and MOEE/TTC protocol. The Lpassby criteria is based on a single passby event of an Ontario Line train, as per the MOEE/TTC protocol criteria.

10. What is the difference between “Future – with project” and “Objective sound levels”? The Future - with project sound levels are the predicted sound levels with future train services operating on the proposed track infrastructure. The Objective sound levels are the higher of the predicted Existing Conditions or 55 dBA Leq,16hr (daytime) / 50 dBA Leq,8hr (night time).

11. Will you conduct indoor noise levels in bedrooms facing the rail corridor to ensure people can sleep and carry on with their daily lives? The assessment criteria are based on exterior points of reception as there may be variations in individual building facade constructions and room acoustic conditions. However, the predicted changes in noise levels would be expected to be similar indoors. For example, if the residual noise impact is noted as -2 dB based on a plane of window receptor, a similar impact would be expected in the associated interior space. Overall noise levels are expected to be significantly lower indoors than outdoors.

It's important to note we are following the timelines set out through **Ontario Regulation 341/20** under the **Environmental Assessment Act** which outlines a 30 day timeline to provide feedback. We have had two virtual open houses on September 23 and October 5 to provide summaries and answer questions. Last night, we met with the LSE CAC to answer their questions about the Lakeshore East Joint Corridor Early Works Report. We are also working to respond to the 60-70 questions the LSE CAC provided as well as respond to questions from residents directly. Public participation is very much encouraged.

Will get you the answer to number 7 once I have it. Have a good weekend,

Daryl

Hi Malcolm and Daryl,

Metrolinx released two Early Works reports on September 24: East Harbour and Joint Corridor. Both of these reports concern our neighbourhood.

It's highly unusual to release two important reports on the same day and give just 30 days to respond. Together these reports contain over 3,000 pages of dense material. One can't help but feel this is intended to discourage public participation.

While we're working diligently to meet this unreasonable timeline, Metrolinx has failed to respond to basic questions about noise methodology, hampering our ability to interpret the data. We *still* don't have answers to questions posed on Oct 4.

Noise and vibration in our neighbourhood is a key issue with the above ground Ontario Line. GO environmental assessment excluded our neighbourhood from the study area, and we're seeing the important data for the very first time. We need more time to review the cumulative impacts of multiple projects planned in our neighbourhood (above ground Ontario Line, existing GO, VIA and freight trains, GO expansion and electrification).

We are requesting an extension to respond to Early Works reports. It is crucial that we get this right, and the public is given an opportunity to provide meaningful feedback.

[REDACTED] on behalf of Save Jimmie Simpson

Hi Daryl,

We have a very limited time to respond to early works. I'm really not sure why it's taking this long for methodology questions. Can you please advise when we can expect a response?

AECOM is getting paid to do this work, unlike volunteers in our community. We're not dumping 3000 pages of technical stuff here. We really do need to insist on having answers in the next day or two.

Let me know,

[REDACTED]

Hi there,

We have some questions after reviewing the noise and vibration report for Lakeshore East Early Works report. We have a limited time window to respond to this report. Would appreciate your prompt feedback.

Thanks,

[REDACTED]

= = =

1. Why did Mx not measure current noise levels?
2. What is the margin of error with these predicted noise levels? For instance, when your predicted current noise data is 65 dB, what is the realistic range that you'd expect the actual noise level to be? +/- 5dB? 10dB?
3. How reliable are your predicted future noise levels? If we were to measure noise levels in 20 years, assuming exactly the same types of trains and frequency as used in the input, how much deviation would you expect from the predicted noise levels vs. actual noise?
4. What are the noise profiles for each type of train (GO diesel/GO electric/VIA/freight/OL)?
5. Did you use separate values for east bound trains vs west bound trains?
6. There's no date for electrification conversion. In the worst case scenario of continued diesel

- service, which is the case for the next number of years, what do the noise predictions look like?
7. Mx only shows 16 and 8 hour averages. Please provide Leq max and peak values, including effects of multiple trains passing concurrently.
 8. Vibration data needs to account for multiple trains passing by. Please advise what cumulative vibration looks like for simultaneous passby from multiple trains.
 9. Does "Future – with project" include noise sources from all types of trains (OL, GO, VIA, Freight) and does it include cumulative impacts of simultaneous passby?
 10. What is the difference between "Future – with project" and "Objective sound levels"?
 11. Will you conduct indoor noise levels in bedrooms facing the rail corridor to ensure people can sleep and carry on with their daily lives?

Subject: RE: Chat with Carrie or someone on the Noise Team?

Hi [REDACTED]
Please see below for the answers to your questions. I am also copying [REDACTED] as he had some similar questions and I think he would appreciate reading the responses to yours.

- **What does N/A mean?**
The MOEE/GO protocol for single unit dwellings with outdoor spaces assigns outdoor receptor locations as the point of assessment for the day-time period, and the building facade as the point of assessment for the night-time period. The N/A note within the result tables indicates that the receptor type is not applicable for the assessed time period (e.g., an outdoor receptor during the night-time for a house with a yard).
Please see the description of why N/A is used within the table above.
- **Why are there N/A for existing conditions? And for Project levels w or w/o barrier?**
Please see the description of why N/A is used within the table above.
- **Why would existing levels be higher when 3 tracks are being added w/o sound barriers? Single passby or cumulative?**
Noise levels are predicted to decrease at some outdoor receptor locations on ground level where the lower elevation at the receptor locations, relative to the tracks and retaining wall, results in a noise screening effect by the retaining wall, even before the addition of a barrier. This would be applicable to Leq,16h day and Leq,8h night time levels, as well as GO train pass-bys.
- **Future w Barrier levels show over 55 DBA Day & 50 DBA night - why?**
As per the MOEE/GO protocol, the noise level objective is the **higher** of existing day-time (Leq,16h) or night-time (Leq,8h) levels, or 55 dBA (day)/50 dBA (night). As existing levels were predicted to be higher than 55 dBA during the day and 50 dBA during the night time periods at all assessed receptors within the report, the existing predicted railway noise level was used as the objective noise level for the assessment. For additional reference, Leq,16h (day) and Leq,8h (night) noise levels at Wardmill and Pape Avenue were also measured above 55 dBA and 50 dBA (respectively), as documented within the August 2020 environmental conditions report.
Why aren't the levels shown in "Future w Barrier" reflected in noise contour maps? Where is that data coming from?
Noise contours can only be generated for a consistent elevation throughout the project area, and were provided within the report at a height of 1.5 metres above ground for day-time periods, and 4.5 metres above ground for night time periods to depict noise contours applicable to the majority of receptors. For receptors such as third storey windows (assessed at a height of 7.5m) or above or high rise buildings, results in the report reflect assessed levels at the specific receptor height.
- **Where barrier levels showed no decrease or rise - and DBA over 55/50 levels - what are planned further mitigations?**
All receptors within the report are predicted to meet MOEE/GO and MOEE/TTC protocol criteria with the modelled barriers implemented, and as such do not require further mitigation per the applicable protocol. Further mitigation is being implemented at Metrolinx's discretion to provide seamless noise barriers with a minimum height of 5 metres between Eastern Avenue and Pape Avenue, which are expected to provide additional noise reduction at most locations beyond the reductions presented in the report.
- **Mitigated OL - is this a single passby or both directions? What does "mitigated" mean?**
Mitigated indicates that this is during the "with barrier" scenario. This column is the Lpassby level for a single Ontario Line train pass-by (passing by on the predicted louder of the 2 tracks at each receptor), as per the MOEE/TTC protocol.
- **How are Mitigated OL DBA's different from "Future w Barrier" DBA's?**
The mitigated OL Lpassby column is for single Ontario Line train pass-bys per the Lpassby limit within the MOEE/TTC protocol with modelled noise barriers. The "Future-With Barriers" column is the 16 hour day-time Leq and 8 hour night time Leq for combined Ontario Line train and GO train impacts (includes all predicted pass-bys), with those same modelled noise barriers. Where:
Lpassby = The passby sound level, defined as the A-weighted equivalent sound level, Leq, over the passby time interval given by the total length and speed of the vehicle and
Leq = Constant sound pressure level which would result in the same total sound energy as would the measured time-varying sound pressure level over equivalent time duration.
The Leq16hr, for example, describes the equivalent continuous sound level over a 16-hour period.

Best,

Daryl

Hi Daryl;

Here are a few:

RE: TABLE 3-4: PREDICTED 'WITH BARRIER' NOISE IMPACTS

Questions:

- What does N/A mean?
- Why are there N/A for existing conditions? And for Project levels w or w/o barrier?
- Why would existing levels be higher when 3 tracks are being added w/o sound barriers? Single passby or cumulative?
- Future w Barrier levels show over 55 DBA Day & 50 DBA night - why?
- Why aren't the levels shown in "Future w Barrier" reflected in noise contour maps? Where is that data coming from?
- Where barrier levels showed no decrease or rise - and DBA over 55/50 levels - what are planned further mitigations?
- Mitigated OL - is this a single passby or both directions? What does "mitigated" mean?
- How are Mitigated OL DBA's different from "Future w Barrier" DBA's?

Thanks!

Hi Daryl: Is it possible to arrange a quick zoom chat with someone from Carrie's Team who can speak to the Operational Noise Report **data** and answer some questions about it to clarify this week? I would just need under an hour probably - maybe on my lunch break? I don't want to roll this out to the community until I have some clarification that I'm reading this right particularly "Table 3-4: Predicted "With Barrier" Noise Impacts"

Also, wanting to see the corresponding data tables that Noise Contour maps are based on - I can't seem to find that table in the report.

Thank you.

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Hi there,

Save Jimmie Simpson and South Riverdale Community Health Centre have commissioned a Health Impact Assessment in order to understand the impact of the above ground Ontario Line in our neighbourhood.

Metrolinx has confirmed that it will not consider health impacts as part of their environmental assessment. We believe the final Ontario Line design must reflect any potential impact on public health and community safety.

I understand the noise and vibration data is expected next week. I'm writing to ask if you're able to release N&V data earlier so that it can be incorporated into the HIA.

We will not publicize the data other than with the consultant who is carrying out the research. Please advise if you are able to send an advance copy of the N&V data.

Thanks,

[REDACTED]

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Hi Daryl: The big red machine is still sitting on the tracks over Dundas rail bridge, snapped this picture this evening walking by. Why is it there and what is it doing?

Subject: RE: Standards council of Canada

Hi [REDACTED],

Apologies for the delay in getting this to you. Many teams had to provide input.

I'm pleased to give you an update on some of the safety guidelines and approaches that we are taking for the GO Lakeshore and Ontario Line joint corridor.

Ensuring safety of the community, our employees and our contractors is of utmost importance to us. Metrolinx has worked together with the Standards Council of Canada (SCC) to create the *Independent Safety Assessor for Railway Systems Accreditation Program*. Following this program, SCC-accredited Independent Safety Assessors will review and provide recommendations of safety assurance during the design, build and testing & commissioning phases of the project, as well as continuing review of proposed changes to the railway once a project is in operation. Independent Safety Assessors who are accredited under the Program undergo annual assessments and witness audits by the SCC to ensure continued conformance with accreditation criteria. You can find more information about the program [here](#).

The risk assessments carried out by the contractor throughout the design, construction and operation phases of the project are based on [CSA EXP11, Canadian method for risk evaluation and assessment for railway systems \(CMREA\)](#) which Metrolinx worked with the Canadian Standards Association (CSA) to create. The CMREA sets out requirements for evaluating the significance of changes being made to a railway as well as detailed requirements for the corresponding risk management process and criteria for independent assessment by an independent safety assessor (ISA.) The Working Group for the development of the CMREA included representatives from Metrolinx, the private sector, and the Ontario Ministry of Transportation. Based on the European Union's Commission Implementing Regulations (EU) No. 402/2013 of April 30, 2013 on the common safety method for risk evaluation and assessment, CMREA introduces into Canada best practices as established and widely implemented in Europe for making any change to a railway system that is technical, operational, or organizational in nature.

The framework for SCC: accredited safety assessor reviews and evaluates safety risks in the operation of the Ontario Line provided by the contractor, including possible interactions and any proposed mitigations with adjacent railways, property and associated facilities.
Regarding set-back distances from the railway right-of way to adjacent properties: we can confirm this has been considered and reviewed. Metrolinx has carried out initial risk

assessments both for the railway system as a whole, and specifically related to the alignment of the railway through the Lakeshore East and Lakeshore West corridors. Continued evolution risk assessments are carried out by the design team throughout the design process, ensuring that if risks are discovered, mitigations are created and captured in the design and construction of the project.

The CMREA risk evaluation process will address a wide spectrum of potential risks and will include proximity of Ontario Line operations to property and other buildings, along with any mitigations proposed by the designer team, all of which the Independent Safety Assessor will review in evaluating the safety case for the Ontario Line.

On your question of noise and vibration, Metrolinx is working closely with the Ministry of the Environment on the standards which have been developed and will be incorporated into the project contract for the constructor to follow. More details will be shared in the upcoming Lakeshore East Joint Corridor Early Works Report which will be released to the public this fall.

Happy to answer any additional questions you have or organize a meeting to discuss further,

Daryl

Hi Daryl,

Could you please provide the scope of work undertaken by Standards Council of Canada (SCC)? In particular, I'd like to know if SCC will address the proximity issues.

- Will SCC carry out quantitative analysis and literature review to ascertain health concerns around noise and vibration (both during years of construction and the subsequent operational phase)?
- Will it address safety setback distance for residents who live around the rail corridor?

Thanks,

Hi 

Due to your request, the team has added property lines to the rollplot (see attached).

I checked in with our property team again on that specific retaining wall in Jimmie Simpson Park. They are still figuring it out with City staff and do not have an answer yet. I will update you when I hear something.

For the trees, if they fall within the existing fence, they are most likely Metrolinx trees. The forthcoming environmental report this fall will provide more details regarding the extent of tree removals.

Hi Daryl,

Just following up from several weeks back. Has Metrolinx determined where the property lines are and specifically who owns the retaining walls and trees that appear to be in Jimmie Simpson Park? And similarly on the opposite side, who owns the trees in Bruce Mackie Park?

Thanks,

Once I hear back, I will share what I hear with you.

The video and additional retaining wall detail is being developed to share alongside the upcoming retaining/noise wall consultation. The current estimate to hold this consultation is sometime in August and I will send you a note once we finalize a date.

Thanks Daryl,

So if the wall is in question, the trees are certainly in parks property yes? When will you know by?

And when would a retaining wall detail be available? Happy to get a drawing prior to a video being made.

Hi [REDACTED]

I inquired internally on your question of ownership of that specific retaining wall. Right now, we are investigating who is responsible for it and I will send you a note when I hear back. There was talk that it might be leftover from the old Grand Trunk Railway.

As part of the upcoming noise/retaining wall consultation, we are working with our construction team to develop a video detailing the construction sequencing for the T-wall retaining system. This will help the community understand the 'look and feel' of this work.

Best,

Daryl

Morning [REDACTED]

I hear you. Invasive trees still provide oxygen and shade despite their impacts to biodiversity and local ecosystems. In the vegetation guideline I linked previously, we have a section on invasive species (page 39).

I know the wall you are talking about. Unfortunately, I cannot provide an answer at this moment until the tree impact analysis is complete and shared with the community in the forthcoming environmental report this fall. We specifically used a T-wall construction method for the retaining wall because it minimizes impacts to trees. The report will provide details on trees that will be protected and those that will be removed/pruned.

Best,

Daryl

Thanks Daryl,

1. For the record, "invasive species", from a health standpoint still provide oxygen and much needed shade and (as I am sure you would agree) are far better than no trees when tackling climate change. The birds certainly do not discriminate.

2. More specifically, there is a very old retaining wall along the west boundary of JS Park. I presume this is the property line as you mention below. When the tire factory was converted to a park, trees were planted on the east side of the wall. I believe they are about 50 years old, providing shade, co2 sequestration, noise and visual screening. They run between JS rec centre and Paisley Ave. Will those trees be removed? Have they been identified as "to remain" in any reports?

[REDACTED]

It is an interesting question to which I do not have full understanding of the history behind it.

The property line is defined by the existing fence/berm/retaining wall. It is not perfect as these items may have shifted around the many years they existed. For areas where we are exceeding our property lines, conversations are underway with the City and individual property owners.

For the trees, I am not aware of who planted them but I do know Metrolinx is responsible for any vegetation within the rail corridor/property boundary and we have our own [vegetation guideline](#) we follow. I also believe many of the trees in the existing corridor are invasive and the tree survey in the forthcoming environmental report will provide more details.

If you did not get a chance to attend our open house, we [provided more details](#) about how future retaining wall locations will unlock more green space for the community. There is a table on Slide 11 which provides the approx. numbers for your review.

Best,

Daryl

Hi Daryl,

Mx says it will do the work (mostly) inside the property lines. I am looking at other Mx maps and wondering how the Mx property came to include parkland and many mature trees planted 50-60 years ago as well as things such as the corner of a house at Paisley and Booth.

Did the City plant trees by mistake (Jimmie Simpson, Mcleary Park and Bruce Mackey) in the rail right of way? Was the house built over the R.O.W. 100 years ago? Or is Mx taking that land from parks? I get that houses will be expropriated just don't understand the property line discrepancies.

I know at the Save Jimmie meeting on May 7, you requested a corridor width measurement and more detailed drawings.

As you may know, we provided detailed measurements for the cross section to Save Jimmie Simpson (I hope you received it). In addition, due to progress with design and property conversations, we have made the roll plot available to the public [here](#).

Hope this helps,

Daryl Gonsalves

[REDACTED]

Apologies for the delay in getting back to you. Going forward, would you be interested in a biweekly touch base with myself so we can be better connected and keep the lines of communication open? If so, please let me know and I can set it up for us.

Please see attached for our answers to your questions following our meeting on May 7. I am still working to get you the measurements you asked for and will provide them soon. In the meantime, I wanted to get back to you with the information I do have along with an updated cross section that includes the existing GO tracks.

Have a great weekend,

Metrolinx Answers to Save Jimmie Simpson Questions

Meeting: Friday May 7, 6 pm

1. What are your main decision-making criteria?

Who exactly makes final decision on alignment and design?

Metrolinx completes a series of business cases to enable government to make decisions that are informed by the best available evidence. Our goal is to ensure the best possible ridership while minimizing impacts on homes, businesses and communities. Once we identify which communities the line will serve, we're able to then reach out to them to start discussing any impacts and how we'll solve for them. Thanks to the feedback from Save Jimmie Simpson and the LSE CAC, we have found even more creative ways to avoid construction activities in the parks within your community.

When determining the Ontario Line's Route and elevation, planners balanced considerations like:

- How many people could be served,
- How much travel time could be saved
- How many connections could be made to other major rapid transit lines
- How quickly and effectively the line could be built to bring relief faster to the network
- How effectively any local impacts could be managed, and
- How to ensure maximum transit benefits within the approved budget

Like everything, there are pros and cons no matter which option you choose – but we only choose options that we know will offer maximum benefits with the least amount of impact to the community. For the sections that run above ground, we know we can significantly cut down on property requirements, introduce effective, well tested noise and vibration solutions, and build best-in-class infrastructure that is safe and attractive. That's something we are absolutely doing as we continue to engage with communities throughout the planning and design process.

At the end of the day, this approach allows us to give the people of Toronto a modern, reliable 15.6-kilometre rapid transit line that will get them to one end of the city to the other in less than 30 minutes, connecting to more than 40 other transit lines along the way. That means 28,000 fewer cars on the road each day, resulting in a 7.2-million-litre drop in fuel consumption here in Toronto. We can assure you that we've built off transit planning work that has taken place in your community over many years, and we're confident this is the right path forward. We expect the Ontario Line to be built within a similar timeframe for a similar cost at more than twice the length of the former Relief Line South proposal. This means we can bring congestion relief to transit-deprived communities sooner, putting a total of 255,000 more people within walking distance of rapid transit by 2041.

Why did you bury the Eglinton Line through Leaside but can't in Riverdale/Leslieville?

We have a unique opportunity here to make use of a space that we already own, where trains are already running and where GO Expansion work was already planned. It's not unusual for transit lines to use a combination of underground and elevated sections. Those same principals are being used on other routes in Toronto and the GTA. It's also not unusual to combine different types of trains in the same corridor. It's not about choosing one neighbourhood over another. We're able to streamline the Ontario Line work into the same place, meaning we're not spreading out across multiple construction areas in the community. Where there's an opportunity like this, it makes sense to take it – especially when we have so many solutions available to us that will effectively manage any impacts.

Tunneling the Ontario Line through this area would delay completion between 15 and 24 months – also adding to the length of time the neighbourhood would be disrupted by construction – and it would result in significantly more impacts to local businesses, homes and park space.

2. What are the actual dimensions “footprint” of the “right of way” and “corridor”? We want to know precisely where the trains are planned to run.

The Metrolinx property line is roughly the same as the existing fence or berm that help to visually define the rail corridor in Leslieville and Riverside. The Ontario Line and GO Expansion infrastructure will fit mostly within our existing rail corridor. In most areas, we simply won't extend beyond our existing property lines – we won't need to, and we don't want to. Where and if we do need to, it will be minimal for retaining walls and at stations sites.

The green line that community members have painted on the street will not be the boundary of the corridor. The boundaries will be largely unchanged.

The rail corridor between Eastern and Gerrard is between 34 to 41 metres long. We are working to get you additional measurements and will provide it soon.

What is the impact on neighbourhood parks and trees?

On parks, our latest refinements that put the Ontario Line tracks side-by-side within the corridor instead of straddling either side of it means even fewer impacts to the parks that have been developed around the active rail corridor over the years. Staying within the boundaries of our existing rail corridor will protect park space and playgrounds in the long term. It will ensure neighbouring buildings and businesses like the Jimmie Simpson Recreation Centre can continue operating during construction and beyond. The same is true for the basketball court and the hockey rink in Jimmie Simpson Park – they're nowhere close to the boundary of the rail corridor, and they won't be affected. If we do have to take small parcels of land in parks, we will work with the City of Toronto to restore them to their previous condition or better after Ontario Line work is completed. Ensuring access to greenspace and parks will be a priority as we progress with Ontario Line plans in this area.

On trees, we will be avoiding impacts to trees and park space wherever possible. It's a priority for us because we recognize the importance of green space and parks to this community, and all communities along the route.

We've completed tree inventories in the area so that we know exactly how many trees are within the study area and the type and quality of these trees. For example, are they diseased or an invasive species? Can we focus our work first on removing those types of trees? We follow City of Toronto requirements to help sustain tree canopies in areas that we work. The city has requirements for how we compensate them for tree removal, which could include planting three trees for every one tree we remove on private property or City-owned property. We're actively working with the city to find out what options are available to us for replacing trees. If we do have to remove trees on land that we own, such as the existing rail corridor, we will also replace these trees to ensure that there's no net loss of trees in the area. We're partnering with the Toronto Region Conservation Authority to do this work, since they are the subject matter experts and they know how to do this right. We'll rely on their advice and expertise to make sure the community sees the maximum benefit.

Whyever would you prefer a portal close to Pape Elementary School to a location south of Eastern Ave?

The portal at Gerrard won't affect safe access to Pape Avenue Public School because the Ontario Line will be underground by the time it reaches the school. We're working closely with the school and parent council on plans to keep the area safe for students and faculty while also protecting the building and playground. For families who choose transit, the nearby station at Gerrard will make getting to and from school much simpler.

When we looked at the most feasible tunneled approach for Riverside and Leslieville, a portal would need to be built in the area of Eastern Avenue and extend as far as Queen Street. Significant excavation to lower the levels of land would be needed to build a portal and retaining walls for the shallow tunnel structure. This would result in a permanent closure of Eastern Avenue or Queen Street, disrupting existing traffic and transit services. Worse, there would not be enough room for a station in Riverside/Leslieville. Our analysis showed a portal and tunneling in this area would require the acquisition of numerous homes along McGee and Saulter Streets and have significant impacts on the property currently home to Saulter Street Brewery, most of the parks in the area, and other small businesses and community organizations nearby.

3. We want some straight answers regarding noise, vibrations, human health impacts and costs over the life cycle of the Ontario Line.

Claim that Leslieville will be quieter after rail corridor expansion: what are the current and expected noise and vibration levels? Peak readings, not just average?

Early results show the sound of every train passing through many locations around Leslieville and Riverside will be reduced compared to today's levels. Noise levels throughout the day and night will also be lower than they currently are at many locations along this part of the route. Once studies are completed and all the findings are reviewed and verified, they will be shared with the community ahead of the Lakeshore East Joint Corridor Early Works Report this year.

Sound barrier details

It is possible to have effective noise barriers and design them so they enhance the unique character of the neighbourhood they will serve. A number of design elements will be considered to enhance noise walls so they fit well with surrounding spaces, like parks. We'll look at the type of wall, such as transparent or textured walls, and how to best deter vandalism. We will also have several options for new vegetation, landscaping and streetscaping to keep community spaces beautiful. We look forward to working closely with the community and the City on how to design these walls to enhance the neighbourhood. These conversations will start this summer.

We are committed to going above and beyond to mitigate noise during and after construction of the Ontario Line and will employ the most effective noise mitigation measures. Some of those measures might include rail dampers, continuously welded rail, ballast mats, floating slabs, and resiliently supported rail ties and high resilient fasteners.

Proximity issues and health impacts in scope of Standards Council of Canada

We hold ourselves to the highest standards when it comes to safety. The six-track joint corridor is no exception and is subject to an evaluation conducted with an Independent Safety Assessor to ensure the utmost safety standards are in place for passengers, operating and maintenance staff, and the communities that the Ontario Line will travel through. This evaluation will follow the highly

respected, well established and widely adopted European Standard the European Common Safety Method for Risk Evaluation and Assessment.

The evaluation will consider numerous safety considerations, including the following:

- separation between the Ontario Line and GO tracks;
- signal systems and operating rules;
- operations, safety, and security measures;
- emergency procedures;
- maintenance of lines/tracks; and
- traction power spacing requirements.

As a federal crown corporation and Canada's leading accreditation organization, the Standards Council of Canada mandate includes developing strategies to support sustainable development and benefit the health, safety and welfare of the public. The Independent Safety Assessor will not only play a role in ensuring safety during the design, building and commissioning phases of the Ontario Line, but also for on-going inspection once the Ontario Line is in operation.

It's important to note the rail corridor isn't expected to change at most places, and where it does, it will be minimal. In order to mitigate noise and vibration impacts, we will employ the most effective noise mitigation measures. Some of those measures might include rail dampers, continuously welded rail, ballast mats, floating slabs, and resiliently supported rail ties, high resilient fasteners and noise walls. Air quality in the community will also benefit from more people choosing transit with the Ontario Line and the use of electric trains.

4. What specifically are the anticipated staging requirements for current Ontario Line plan? (We are very mindful of the staging areas established for Eglinton Cross-town.) Where exactly are these planned to be located?

The Ontario Line is a completely different project than the Eglinton Crosstown and therefore has been planned and designed differently as well. The Ontario Line will have less road disruptions compared to Crosstown because construction of the Ontario Line will not be built along only one major road in the city. Instead, construction of the Ontario Line will be spread throughout the city from Exhibition/Ontario Place to the Ontario Science Centre at different times. In addition, road and traffic disruptions will be avoided or reduced largely due to the fact that Ontario Line stations are not being built one kilometre apart in a straight line across a major Toronto road, the way the Crosstown was designed and built.

We are still working on creative solutions to continue to reduce our requirements for staging, laydown and access. Since we are using the existing rail corridor, we have the advantage of completing some of the work within the corridor itself which reduces impacts to the community. All of these staging locations will be included in the upcoming Lakeshore East Joint Corridor Early Works Report and we will seek feedback from your community.

5. **We want to discuss the alternative underground plan developed by Steve Munro that our community supports.**

Why has Metrolinx refused to consider any alternative alignments? (City motions EX 9.1, MM 28.17, EX18.3, MM 31.12)

At the request of the community, we have already looked at the most feasible tunneled approach that preserves the most customer benefits. We have found building any underground tunnel east of the Don River would be extremely disruptive to the nearby communities and erase much of the important customer benefits along the way. Constraints in the area include longer and more disruptive construction, additional property requirements, impacts to utilities, large sewer mains and active flood protection areas. Additionally, in order for trains to go underground through here, they would have to exceed the maximum grade possible. Ultimately, we would likely have to permanently close roads and lose access to existing transit that so many in the community rely on.

We looked at the Munro alignment and we appreciate the East Harbour above ground transfer. As the plan goes east, one immediate constraint is the large Enbridge facility to get over. The alignment is about 300 metres longer than current plans and we price it at \$870 million more expensive. Similar to the other tunneled approach, it would mean a longer construction schedule and additional disruption.

We have looked at multiple alignments and we are advancing current Ontario Line plans. By using the existing rail corridor, we are confident we can significantly cut down on property requirements, introduce effective, well tested noise and vibration solutions, and build best-in-class infrastructure that is safe and attractive.

On what (details please) is your \$800M figure for an underground alignment based? Does this include cost of tunnelling under the Don? We note that the alternative plan does not require this.

No, it does not include tunneling under the Don River. The tunneled approach requires an additional \$805 million which is mostly due to the two deep stations at Leslieville and Gerrard.

What is the cost of the 6 bridge expansions?

The existing bridges carrying the GO tracks in the area are very old and are nearing the end of their service lives and will require rehabilitation in the near future. With the Ontario Line plans and the construction phasing that we will be undertaking, we have determined that this will be an excellent opportunity to replace the old GO bridges (instead of only rehabilitation), in addition to building the new bridges to carry the Ontario Line. We do not have cost estimates at the moment as we are determining the best and most efficient way to phase the construction work and design and build the new bridges. The new bridges will improve the vertical clearances above the roadways, provide a better experience for the community at street level, and also invest in new and improved bridges that will last another generation.

What will be the frequency of diesel trains in the next 5 years?

Over the next five years, service levels will increase incrementally and are based on demand. Metrolinx communicates service updates on a quarterly basis, or more frequently.

These figures below are ultimate compacity or worse-case scenarios so these are subject to change.

- Off-Peak Base service will be 6 trains per hour, two way all day service.
 - 4 will be local LSE bi-directional
 - 2 local ST bi-directional
- Peak (AM/PM) Base service will be 10 trains per hour peak direction + 6 counter-peak direction
 - 4 peak local LSE
 - 2 peak express LSE
 - 2 peak local ST
 - 2 peak express ST
 - 4 counter-peak local LSE
 - 2 counter-peak local ST (contingent on infrastructure completion in Stouffville corridor)

GO Expansion will quadruple train service, and the majority of the increase will be delivered by electric trains. Where we don't fully own the tracks, additional diesel trains will be needed.

In 2037, there will be 677 GO trains passing the LSE Corridor :

- 109 revenue diesel GO trains;
- 493 revenue electric GO trains;
- 75 non-revenue electric GO trains.

Even in the worst case scenario, GO trains will contribute less than 1% of all emissions in 2037.

Maintenance cost difference between above and underground

Since we are streamlining construction and Ontario Line infrastructure with the planned GO Expansion in the Joint Corridor, there is an advantage as we are also streamlining future maintenance as well.

Catastrophic insurance cost difference

It is extremely unlikely that insurance premiums will go up if there is already a line(s) there and rail on that line. The reason being is the house location is already on a rail line, so the risk is already present.

Train speed through residential area

Train speed is a combination of, among factors, vehicle capability and stop spacing. Just as with other vehicles, the stopping and starting of vehicles requires acceleration and deceleration that takes time. Similar to the experience on the downtown Yonge sections of the line which have very frequent stop spacings, often of less than a kilometre. As a result, the operating speeds of trains in this section is relatively slow. Whereas, along sections of track where spaces are fewer with more space in between (such as north of Lawrence on the Yonge line) the top travelling speed of the train can be accelerated. In the Joint Corridor section of the Ontario Line the relative proximity of the stations at East Harbour, Leslieville and Gerrard means that the operating speeds of the train are expected to be in the order of 30km/h.

Subject: Re: Save Jimmie Simpson

Thank you for your email sent to the Chair of Metrolinx, Donald Wright. We understand the community has concerns and want to continue the dialogue with you to explain how our plans for increasing transit capacity can be advanced while protecting the unique character of the neighbourhoods where it will operate.

Metrolinx believes that running the Ontario Line in the existing 100+ year old rail corridor through Riverside and Leslieville is not only the right approach for the community but also for an effective transit network. By building in the rail corridor in this area, we can avoid the disruption of major station excavations and dozens of utility disruptions elsewhere in the community, which would have had major impacts on homes and businesses. By building almost entirely within the existing rail corridor boundary, we are also able to limit the properties we need and protect important community destinations like the Jimmie Simpson Recreation Centre throughout construction and beyond.

The anticipated impacts of constructing and operating the Ontario Line will be comprehensively analyzed in upcoming environmental reports that will be released for public consultation over the next year. A dedicated Joint Corridor Early Works Report, that will consider the advance construction work that will take place in Riverside and Leslieville, will be released this fall. This will be followed by the Ontario Line Environmental Impact Assessment Report which is expected in early 2022. Each report is released in its draft form for public review and comment during a formal 30-day consultation period. Feedback received during the consultation is incorporated in the final reports, which guide further project plans and designs.

We recognize how important green space and local parks like Jimmie Simpson Park, Bruce Mackey Park and the many other parks are to you and other area residents. We are committed to designing infrastructure that is a good fit for your community and will work with our constructors and the City of Toronto to protect as much greenery as possible, including compensating for removed trees in accordance with our Vegetation Guideline. We will strive to keep tree removal to a bare minimum and will also take the opportunity to remove invasive foliage. By allowing people to leave their cars at home and take transit instead, the Ontario Line will be an environmentally friendly travel option

that helps protect air quality. The electric-powered Ontario Line trains will also ensure no additional emissions are introduced to the local community.

To mitigate the operational noise in the corridor, which will include expansion of the GO service to all-day two-way service, the noise specialists are currently undertaking noise impact studies and proposing mitigations. We are also sensitive to the need to provide aesthetically acceptable noise barriers. We are still developing our initial designs for noise barriers and will be bringing them forward for public feedback later this year. The goal is to use well-designed barriers to reduce sound from the corridor, supplemented by landscaping, trees and greenery to provide a pleasant aesthetic. Early study results show that a noise wall along the joint rail corridor through this area will be effective in significantly reducing noise from Ontario Line, GO Transit and VIA Rail trains. In addition to the sound barriers, Metrolinx has a variety of tools to mitigate noise and vibration that will be deployed as needed during construction and beyond.

Safety is central to everything we do at Metrolinx – we would not design or operate a service that was not safe for our customers, our communities, or our employees. Remotely operated trains that run on an automatic signalling system are currently considered to be the safest model in use. They have been adopted by subway systems around the world, including those in Vancouver, London, Paris and Singapore. Metrolinx has also partnered with the Canadian Standards Association to develop a process for assessing and evaluating risks associated with railway systems. This study will follow the Canadian Standards Association’s newly released “Canadian method of risk evaluation and assessment for railway systems.” This approach is based on the well-established and widely accepted European Common Safety Method for Risk Assessment and is more comprehensive than current safety standards in Canada for similar operating conditions.

Thank you again for taking the time to write and share your concerns. We want to continue to work with you to address them. Please take a moment to read our [latest update](#) about plans for this area. We are hosting a virtual open house for east end residents on April 22, starting at 6:30pm – you can sign up [here](#).

Re: **Save Jimmie Simpson
Keep the Ontario Line Underground**

Dear Donald Wright:

I'm deeply concerned and disturbed by the proposal for a potential construction and operation of an Above Ground Ontario Line.

I'd like to bring to your attention five (5) reasons, to please use your utmost efforts to keep the Ontario Line Underground:

- As an engineer I'm very familiar with unavoidable noise and vibrations, which I will be exposed to as an immediate resident. The expected noise and vibration levels will cause severe adverse health impacts. It's also well understood that noise walls are not nearly as effective as required.
- It appears that the proposed Ontario Line trains will be travelling about 20 meters closer from residential homes, including social housing than guidelines recommend.
- It's actually nothing less than shocking to me that any person with a healthy common sense would even consider a reduction of any parkland in downtown Toronto. I assume you are well aware that the Above Ground Ontario Line would be violating the Parkland Strategy.
- As a proud Canadian I do appreciate a healthy democratic decision making process. I'm very concerned about a potential commencement of construction prior to the release, discussion and public approval of an Environmental Impact Assessment.
- It's also apparent that any construction without the benefit of a completed environmental assessment and public consultation breach a federal funding requirement.

I appreciate your consideration of my concerns,

Subject: RE: Ontario Line update

Hi everyone,

Thank you for following up. This work will no longer be taking place this weekend, and will instead be postponed to the fall.

The planned tree and vegetation clearing in the rail corridor was approved and covered by a separate Environmental Assessment that was conducted as part of the GO Expansion project. To protect birds and wildlife, qualified avian biologists always conduct nest searches in advance of any tree removals. Metrolinx also has a voluntary program to compensate for trees that are removed – more information [here](#). This weekend, tree removals were being planned by the GO Expansion team for the area between Gerrard and Pape in order to take advantage of the upcoming closure of Lakeshore GO line, which would allow several weeks of off-hours work to be conducted in two days.

Though this GO Expansion tree removal work is separate from Ontario Line work and had its own approvals, the Ontario Line team also recognizes that we committed to the community that no work would take place in the rail corridor until after the Ontario Line Joint Corridor Early Works report is released in the fall. In light of this commitment, we have reached out to our partners on the GO Expansion team and worked with them to postpone this weekend's work to begin after the Early Works report is released.

Thank you again for reaching out to us, and have a good weekend.

Hi there,

I have in writing below that "Early works construction for the joint corridor is expected to begin in summer 2022."

I'm shocked to receive a notification that early works construction such as tree and vegetation removal is now scheduled to begin as early as August 14. This is before any public consultation has been carried out and before we have been informed of environmental impact.

Believe this is totally out of line. Please confirm the notice about tree removal was sent out in error.

Subject: Ontario Line update

To: ■

Hi ■

Hope you are enjoying the warmer weather today. I wanted to reach out and provide you with an update on a couple things and find out if you were interested in setting up a meeting between Save Jimmie Simpson and the Ontario Line team. We would welcome a chance to discuss your questions about the project and provide a bit of an update on our plans.

In terms of timelines to be aware of, I wanted to let you know that we recently updated [our website](#) to include the latest timelines for early works in the joint corridor. We expect to release the draft reports for a 30-day public consultation in Summer 2021 (Lower Don Bridges) and Fall 2021 (Lakeshore East Joint Corridor). Procurement for both of these packages of work will advance only after each respective environmental assessment is completed. Early works construction for the joint corridor is expected to begin in summer 2022. These schedule adjustments do not impact the overall timeline for early works completion or the larger P3 construction packages.

■ I appreciate your patience while we continued our initial design and environmental studies. This will help us respond to more of the concerns the community has raised and we hope that there will be many opportunities for us to connect this year.

Sincerely,

Josh

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- Work will take place on a single day either on August 31 or September 1.
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Capturing ambient sound and video information in Jimmie Simpson Park

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- Work will take place on a single day either on August 31 or September 1
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

-  15.6 kilometres of transit service
-  Making it faster and easier for hundreds of thousands of people to get where they need to be

-  Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.
-  To stay updated, sign up for our e-newsletter at [Metrolinx.com/OntarioLine](https://www.metrolinx.com/OntarioLine)

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Metrolinx: connecting our communities

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Metrolinx: connecting our communities

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Subject: East Segment Virtual Open House on October 5 at 6:30pm

Hello there,

Reaching out to let you know the registration for the October 5th East Segment virtual open house is live on Metrolinx Engage [here](#). I would appreciate if you can circulate widely using your networks. This will be an excellent opportunity to dive into the Lakeshore East Joint Corridor and East Harbour early works reports, ask questions and provide feedback.

While I have you, I also want to draw attention to the [questionnaire about the noise and retaining wall design](#). Feedback received here will shape future design choices. Please take a moment to circulate this within your community as well. This questionnaire will close on October 14. I have heard from some of you that you have completed it, thank you.

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Metrolinx: connecting our communities

Subject: Release of Draft East Harbour and Lakeshore East Joint Corridor Early Works Reports

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Community Relations & Issues Specialist – Ontario Line

Subject: Capturing sound and video information at Tiverton Parkette and Jimmie Simpson - Starting as early as August 31

Good afternoon,

Passing along two community notices for upcoming work to record sound and video information from Tiverton Parkette and Jimmie Simpson Park, starting as early as August 31. This will support public information materials being developed for the future.

There is no parking or noise impacts associated with this work. This work will take four hours to complete. Residents will still be able to enjoy the park as the work takes place.

Please let us know if you have any questions,

The Ontario Line Community Relations team

This e-mail is intended only for the person or entity to which it is addressed. If you received this in error, please contact the sender and delete all copies of the e-mail together with any attachments.

Capturing ambient sound and video information at Tiverton Parkette near the rail corridor

Starting as early as August 31, 2021

What is happening?
 Metrolinx will be capturing ambient sound and video information along the rail corridor using handheld video and recording equipment. This will support public information materials being developed for the Ontario Line project.

Timing

- **Work will take place on a single day either on August 31 or September 1.**
- **Duration:** Up to 4 hours to capture ambient sound and video
- **Hours:** 6:00 a.m. to 4:30 p.m.

What to expect

- A 1-2-person field crew will capture ambient sound and video information using handheld video and recording equipment at locations along the rail corridor.
- This work includes taking photographs and notes.
- All field crew members will be wearing high-vis vests.
- There will be no noise, pedestrian or traffic impacts.
- Work may be intermittent, delayed or rescheduled due to inclement weather or unforeseen circumstances.

The Ontario Line

15.6 kilometres of transit service

Making it faster and easier for hundreds of thousands of people to get where they need to be

Over 40 new connections to GO train lines and existing subway, streetcar, and bus lines.

Subject: Ontario Line - Notice of Draft Lakeshore East Joint Corridor EWR and East Harbour Station EWR
Date: September 23, 2021
Attachments: [REDACTED]

Good afternoon,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

[REDACTED]

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Sir/Madam,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment
Metrolinx

Attachments: Attachment 1 - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report
Attachment 2 - Notice of Publication of Draft East Harbour Station Early Works Report

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Date: Tuesday, July 27, 2021 3:03:39 PM

Good afternoon,

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the following Dropbox link for review:

[REDACTED]
[REDACTED]

The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and GO rail where Ontario Line runs in parallel to GO tracks between the Ontario Line Don Yard Portal and Gerrard Portal.

Metrolinx welcomes any comments or feedback on the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Please provide these in writing no later than **August 24, 2021**.

Thank-you,

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Crystal Ho

Good afternoon,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Sir/Madam,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

Greetings,

Thank you for your correspondence.

Please note Transport Canada **does not** require receipt of all individual or Class EA related notifications. We are requesting project proponents self-assess if their project:

1. Will interact with a federal property and/or waterway by reviewing the Directory of Federal Real Property, available at www.tbs-sct.gc.ca/dfrp-rbif/; **and**
2. Will require approval and/or authorization under any Acts administered by Transport Canada* available at <http://www.tc.gc.ca/eng/acts-regulations/menu.htm>.

Projects that will occur on federal property prior to exercising a power, performing a function or duty in relation to that project, will be subject to a determination of the likelihood of significant adverse environmental effects, per Section 82 of the *Impact Assessment Act, 2019*.

If the aforementioned does not apply, the Environmental Assessment program should not be included in any further correspondence and future notifications will not receive a response. If there is a role under the program, correspondence should be forwarded *electronically* to: EnviroOnt@tc.gc.ca with a **brief description of Transport Canada's expected role**.

*Below is a summary of the most common Acts that have applied to projects in an Environmental Assessment context:

- **Canadian Navigable Waters Act (CNWA)** – the Act applies primarily to works constructed or placed in, on, over, under, through, or across navigable waters set out under the Act. The Navigation Protection Program administers the CNWA through the review and authorization of works affecting navigable waters. Information about the Program, CNWA and approval process is available at: <http://www.tc.gc.ca/eng/programs-621.html>. Enquiries can be directed to NPPONT-PPNONT@tc.gc.ca or by calling (519) 383-1863.
- **Railway Safety Act (RSA)** – the Act provides the regulatory framework for railway safety, security, and some of the environmental impacts of railway operations in Canada. The Rail Safety Program develops and enforces regulations, rules, standards and procedures governing safe railway operations. Additional information about the Program is available at: <https://www.tc.gc.ca/eng/railsafety/menu.htm>. Enquiries can be directed to RailSafety@tc.gc.ca or by calling (613) 998-2985.

- **Transportation of Dangerous Goods Act (TDGA)** – the transportation of dangerous goods by air, marine, rail and road is regulated under the TDGA. Transport Canada, based on risks, develops safety standards and regulations, provides oversight and gives expert advice on dangerous goods to promote public safety. Additional information about the transportation of dangerous goods is available at: <https://www.tc.gc.ca/eng/tdg/safety-menu.htm>. Enquiries can be directed to TDG-TMDOntario@tc.gc.ca or by calling (416) 973-1868.
- **Aeronautics Act** – Transport Canada has sole jurisdiction over aeronautics, which includes aerodromes and all related buildings or services used for aviation purposes. Aviation safety in Canada is regulated under this Act and the Canadian Aviation Regulations (CARs). Elevated Structures, such as wind turbines and communication towers, would be examples of projects that must be assessed for lighting and marking requirements in accordance with the CARs. Transport Canada also has an interest in projects that have the potential to cause interference between wildlife and aviation activities. One example would be waste facilities, which may attract birds into commercial and recreational flight paths. The *Land Use In The Vicinity of Aerodromes* publication recommends guidelines for and uses in the vicinity of aerodromes, available at: <https://www.tc.gc.ca/eng/civilaviation/publications/tp1247-menu-1418.htm>. Enquires can be directed to tc.aviationservicesont-servicesaviationont.tc@tc.gc.ca or by calling 1 (800) 305-2059 / (416) 952-0230.

Please advise if additional information is needed.

Thank you,

Subject: Ontario Line – Environmental Conditions and Early Works Draft Report Review

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Crystal Ho

Good afternoon Kuru,

There is no need to forward me the additional reports at this time. Given that this work is taking place in the Toronto and Region Conservation Authority watershed, I would recommend that you contact them directly. You could contact Matt Johnston at mjohnston@trca.on.ca.

Thank you and enjoy your day.

Attachments: [REDACTED]

Good morning Meaghan,

Thank-you for your email and for identifying properties owned by the Minister of Government and Consumer Services that are within and adjacent to the Lakeshore East Joint Corridor and East Harbour Station early works study areas. Based on our review, the PINs noted below are currently not anticipated to be required for these two early works projects. Should this change in the future and these properties are required for acquisition, Metrolinx will consult with the owners directly.

Future notices will continue to be sent to the dedicated notice email address and we look forward to continue working with Infrastructure Ontario.

Crystal Ho

Good afternoon,

Thank you for sending us the **Notice of Publication** for the **Ontario Line Project – Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report** in the City of Toronto.

Our initial scan indicates that property owned by the Minister of Government and Consumer Services is within and adjacent to your project's study area. This property is identified by the following Pins:

- 210770097
- 210770105

While this was identified in our scan, it is ultimately the proponent's responsibility to verify if provincial government property is within the study area. Title documents may identify owners of provincial government property as any of the following:

- His Majesty the King

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Sir/Madam,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line - Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report
Date: Tuesday, July 27, 2021 3:07:58 PM

Good afternoon,

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the following Dropbox link for review:

[REDACTED]

The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and GO rail where Ontario Line runs in parallel to GO tracks between the Ontario Line Don Yard Portal and Gerrard Portal.

Metrolinx welcomes any comments or feedback on the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Please provide these in writing no later than **August 24, 2021**.

Thank-you,

Bren Daner Lapuz

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Michael Helfinger,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a large, sweeping flourish at the end.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line - Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report
Date: Tuesday, July 27, 2021 3:09:37 PM

Good afternoon,

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the following Dropbox link for review:

[REDACTED]
[REDACTED]

The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and GO rail where Ontario Line runs in parallel to GO tracks between the Ontario Line Don Yard Portal and Gerrard Portal.

Metrolinx welcomes any comments or feedback on the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Please provide these in writing no later than **August 24, 2021**.

Thank-you,

Crystal Ho

Good afternoon Michael – apologies for the late reply, your email must've been lost in the mix.

Thank you for reviewing the Ontario Line Reports. The Environmental Assessment (EA) Reports for the Ontario Line do not include information on economic impacts or rationale as it is typically not an EA requirement. However, if you are interested in the economic impacts and rationale for the Ontario Line Subway Project, this has been documented in the Ontario Line Initial Business Case. I have provided a link to this report below, for your information.

Ontario Line Initial Business Case (July 2019):

http://www.metrolinx.com/en/regionalplanning/projectevaluation/benefitscases/20190725_Ontario_Line_IBC.PDF

Please do not hesitate to contact me if you have any additional questions.

Regards,

MERLIN YUEN

Subject: RE: Ontario Line – Environmental Conditions and Early Works Draft Report Review

Hi Crystal:

Thank you for sharing the Ontario Line Early Works Report with MEDJCT and drawing attention to the sections dealing with Socio-Economic and Land Use Characteristics.

Upon review, it appears to us that these sections deal with topics that fall under the disciplines of urban planning and environmental management, as opposed to our Ministry's principal interests in job creation/retention, investment attraction and growing the innovation economy.

If there is a report forthcoming that touches on the economic rationale for the project as well as anticipated economic impacts, we would look forward to reviewing and providing comments.

Best regards,

Michael Helfinger

Hi Michael,

I have also circulated the draft Ontario Line Early Works Report via EATS for your review. As noted in the correspondence on EATS, the Ontario Line Early Works Socio-Economic and Land Use Characteristics are documented in Sections 4.5, 5.5, and 6.2. We are looking for the Ministry's comments by end of day July 3, 2020.

Please let me know if you have any questions or if you have any difficulties receiving the file and I can recirculate.

Regards,

Crystal Ho

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Crystal Ho

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Paul Bloye,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line – Environmental Conditions and Early Works Draft Report Review
Date: Tuesday, June 02, 2020 3:35:00 PM
Attachments: 

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Crystal Ho

Junior Project Coordinator, Environmental Programs and Assessment

Good afternoon Rosi,

Thank-you for reviewing the LSE JC EWR and providing your comments. Please see attached for our responses to MHSTCI's comments.

Thanks,

Crystal Ho

Good afternoon Merlin, et al,

We have completed our review of the following reports and have the following observations and comments:

- **Draft Early Works Report – Ontario Line Lakeshore East Joint Corridor Early Works** (dated September 2021 prepared by AECOM Canada Ltd.); and
- **Appendix A4 – Draft Ontario Line Lakeshore East Joint Corridor Early Works - Heritage Detailed Design Report** (dated September 2021 prepared by AECOM Canada Ltd.)

Project Summary:

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

reconfiguration of existing GO tracks to support future Ontario Line

infrastructure;

- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

Appendix A4 – Ontario Line Project: Lakeshore East Joint Corridor Early Works – Heritage Detailed Design Report (AECOM Sept 2021) (HDDR)

The HDDR states that a total of 11 Built Heritage Resources and Cultural Heritage Landscapes (BHR/CHL) have been identified within or adjacent to the Lakeshore East Joint Corridor Study Area, of which 10 were included in the Ontario Line Cultural Heritage Report (Nov 2020) plus an additional property identified in preparation for this HDDR.

1. ES.4 Summary of Community Engagement (p vii)

This section incorrectly states that:

A draft of the HDDR was distributed to agencies including the MHSCTI and the City of Toronto for review in November 2020. This HDDR has been updated based on the input/feedback received from agencies. (p vii)

Please edit Executive Summary to be consistent with section 4.2 (p 29) e.g. this draft HDDR distributed on 23 September, 2021, not Nov 2020.

2. Table ES-1 (p. viii), Table ES-2 (p. xii) and Table 5-1 (p. 32)

Under column “Location/Address and Property Name”, please add the property name where it is a clear identifier:

- 840 Gerrard St. East - Fire Station #324
- 400 Carlaw Ave - Jefferson Glass Co. Factory
- 1 Dickens St. – Woods Manufacturing Company
- 369 Carlaw Ave – Toronto Hydro-Electric Substation No. 8

3. Section 2.2 Early Works Project Footprint and Study Area (p 8)

This section states:

Construction is anticipated to occur primarily within the existing Metrolinx right-of-way. The extent of lands anticipated to be temporarily impacted by construction staging/laydown and access will continue to be refined and reduced to the extent feasible as project planning progresses.

The meaning of “existing Metrolinx right-of way” is unclear in this context and should be clarified. For example, the corridor currently contains two GO tracks. The Early Works including OCS foundations, retaining walls and noise barriers will be constructed to accommodate the anticipated 6-track corridor (4 GO tracks plus 2 OL

tracks). This implies the existing RoW is wide enough to accommodate 6 tracks plus noise walls etc.

NOTE: MHSTCI made the same comment in its review of the Draft Early Works Report June 2020. See comment #3 of our July 3, 2020 comments.

Draft Early Works Report: Ontario Line Lakeshore East Joint Corridor Early Works (AECOM Sept 2021)

4. **Executive Summary:** please review and edit the Executive Summary for consistency with any edits to the body of the report.

5. **Section 2.2.1.1 Provincial Policy Statement 2020 (p14-15)**
The paragraph preceding the bullet points, includes the following “The Provincial Policy Statement is premised upon . . . protection of natural, *cultural and built heritage and archaeology.*”
 - For consistency with the Section 2.6 of the PPS, the language should be edited to read: “cultural heritage and archaeology”
 - Additionally, we suggest adding a bullet to reference Section 2.6

6. **Section 3.2 Early Works Project Footprint and Study Area (p. 29)**
Same as comment #3 above. Clarification needed for what is meant by “Construction is anticipated to occur primarily within the existing Metrolinx right-of-way.”

7. **Section 5.8 Archaeological Resources / Figures 5-19 (p. 126-129)**
The Early Works Report(s) should include maps from the Stage 1 AA (Archaeological Assessment) reports filed with the ministry. Please revise/replace the three maps in Figure 5-19 with the appropriate maps from Stage 1 AA Ontario Line South (PIF P438-0197-2019) and Stage 1AA- Addendum Ontario Line South (PIF P438-0236-2020).

8. **Table 6.7 Potential Impacts Potential Impacts, Mitigation Measures and Monitoring Activities - Built Heritage Resources and Cultural Heritage Landscapes (p. 173)**
Same as comment #2 above. Under column Location/Address and Property Name, please add the property name where it is a clear identifier:
 - 840 Gerrard St. East - Fire Station #324
 - 400 Carlaw Ave - Jefferson Glass Co. Factory
 - 1 Dickens St. – Woods Manufacturing Company
 - 369 Carlaw Ave – Toronto Hydro-Electric Substation No. 8

9. **Section 6.8 Archaeological Resources (page 180)**
This section includes a generic description of the type of further archaeological assessment that may be required, “including standard surface level testing, a combination of mechanical and hand excavation for deeply buried context, and a requirement for archaeological monitoring during construction.”

Please add the following statement under Section 6.8: *Recommendations from the Stage 1AA reports and any subsequent AAs will be followed. Additionally, all AA reports will be submitted and reviewed by MHSTCI and a letter is issued that the report(s) has been entered into the Ontario Public Register of Archaeological Reports, prior to any ground disturbing activities.*

10. **Table 6-8 Potential Impacts, Mitigation Measures and Monitoring Activities – Archaeological Resources (page 181)**

- 1st Bullet – states that areas retaining archaeological potential are shown in Figure 5-19. See Comment #7 above to replace Figure 5-19 with the maps from the Stage 1 AA report.
- Please add the following: *Recommendations from the Stage 1 AA reports and any subsequent AAs will be followed and report will be submitted and reviewed by MHSTCI and a letter is issued that the report(s) has been entered into the Ontario Public Register of Archaeological Reports, prior to any ground disturbing activities.*

Please be aware that Stage 1 AA Ontario Line South (PIF P438-0197-2019) and Stage 1AA- Addendum Ontario Line South (PIF P438-0236-2020) have been entered into the Ontario Public Register of Archaeological Reports. All recommendations from the Stage 1 AA reports any subsequent AAs must be followed. Once AA reports are reviewed, ministry staff provides the consultant archaeologist with a letter that comments on the archaeological assessment report. If the report complies with the Standards and Guidelines for Consultant Archaeologists (2011), the letter informs the licensee that the report has been accepted. The letter is copied to the proponent (e.g. Metrolinx) and the approval authority (e.g. Metrolinx, MECP). Approval authorities often use the letter to address legislative requirements, and more broadly, to address concerns for due diligence. Metrolinx should be in receipt of the ministry's letter prior to any ground disturbing activities.

Thank you for the opportunity to review and provide comments. Let us know if you have any questions or if clarification is required.

Sincerely
Rosi

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Good afternoon Karla,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Good morning Karla,

With regards to the Lakeshore East Joint Corridor early works report circulated last week, we wanted to also confirm that the MHSTCI's comments first circulated on July 3, 2020 on the draft Early Works Report (which had all early works consolidated in a single report) were addressed and applied to the revised Lakeshore East Joint Corridor Early Works Report and Heritage Detailed Design Report. The team looks forward to the MHSTCI's review and comments on this report within the 30-day public review period.

Thanks,

MERLIN YUEN

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Karla Barboza,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment
Metrolinx

Attachments: Attachment 1 - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report
Attachment 2 - Notice of Publication of Draft East Harbour Station Early Works Report

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line - Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report
Date: Tuesday, July 27, 2021 3:02:44 PM

Good afternoon,

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the following Dropbox link for review:

[REDACTED]
[REDACTED]

The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and GO rail where Ontario Line runs in parallel to GO tracks between the Ontario Line Don Yard Portal and Gerrard Portal.

Metrolinx welcomes any comments or feedback on the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Please provide these in writing no later than **August 24, 2021**.

Thank-you,

Bren Daner Lapuz

Hi Karla and Rosi – my apologies for the confusion but for East Harbour Station early works as referred to below, there will not be a Heritage Detailed Design Report because no known, previously identified or potential built heritage resources/cultural heritage landscapes were identified in the East Harbour Station Built Heritage Resources and Cultural Heritage Landscapes Study Area.

We will be sending a separate email out for the Lakeshore East Joint Corridor Early Works Report confirming prior MHSTCI comments have been applied to that respective HDDR.

Regards,

MERLIN YUEN

Good afternoon MHSTCI team,

Ahead of the draft publication of the East Harbour Station Early Works Report, we're confirming that the MHSTCI's comments first circulated on July 3, 2020 on the draft Early Works Report (which had all early works consolidated in a single report) have been addressed in the Draft East Harbour Station Early Works Report. The team looks forward to the MHSTCI's review and comments on this report anticipated to be published and shared with the MHSTCI later this month.

Thanks,

MERLIN YUEN

Subject: RE: OL - Early Works Report and EW Cultural Heritage Report

Good afternoon Merlin, et al,

Please find attached our report-specific comments for:

- Ontario Line Early Works Report (AECOM July 2020);
- Ontario Line Early Works Cultural Heritage Report (AECOM June 2020)

Some of our comments and revisions suggested for these reports (see attached) have been previously discussed or have been included in our comments previously sent for other portions of the Ontario Line reports (see list below). I have, for the most part, opted to repeat them rather than risk omission. MHSTCI's previous written comments that should be reflected in the two Early Works Reports include:

- Ontario Line West-Maps, Resources and Impacts Tables – comments sent June 12, 2020
- Ontario Line -Remaining Sections – comments sent June 22, 2020, and
- Ontario Line South -Maps, Resources and Impacts Tables – comments sent June 26, 2020

As always we are available for clarification or further discussion as needed.

Best regards

Rosi

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Good afternoon Karla and Rosi,

This is a follow-up email to the following correspondence sent just now through EATS:

- Ontario Line Early Works Report;
- Ontario Line Early Works Cultural Heritage Report.

Note for the EW Cultural Heritage report, all of the content/formatting of the impact/mitigation tables, historical write-up are aspects the Ministry has already reviewed through the collaborative development of the existing conditions report between the Ministry and Metrolinx. I believe the only sections the Ministry has not previously review include the community engagement, and summary/next steps sections.

As noted in that correspondence, we are looking for the Ministry's comments by end of day, July 3. Please let me know if you have any questions or issues accessing the files.

Regards,

MERLIN YUEN

Subject: RE: OL - Early Works Report and EW Cultural Heritage Report

Good afternoon Rosi,

Thank you for providing comments to the Ontario Line Early Works Report and Ontario Early Works Cultural Heritage Report. Please see attached our comment responses to the Ministry's two sets of comments.

Note that there have been a number of changes to the Early Works Cultural Heritage Report since our circulation in July and as the Ministry is aware, the report has now been repurposed into a Heritage Detailed Design Report which was again circulated to the Ministry on November 4, 2020. We've applied the Ministry's initial comments from our weekly heritage meeting on November 6 however, will be further discussing and applying the Ministry's comment provided on November 26th during the 30-day public review period.

Please let us know if any additional questions on this set of comments or if we can consider this set closed-out.

Regards,

MERLIN YUEN

				Please clarify whether the Broadview Avenue Extension approved under an earlier TPAP. Also, since the new service road is part of the Early Works, it should be shown on Figure 6-3 and included as part of the study area.	cover.
9			2. Approach and Methodology Page 9	<p>Overall this section should be edited to align with e.g. cut/paste from the Ontario Line report (as edited). The Early Works Cultural Heritage Report was then developed the OL report – with the addition of a further field review on May 22, 2020. The purpose or rationale for conducting an additional field review is not clear. While we are not asking for edits to this report, we would appreciate clarification at our next meeting.</p> <p>For consistency we suggest the Approach and Methodology section be the same e.g. cut/pasted (as edited) and the Ontario Line report. As a general observation the language/text of Approach and Methodology section of June 2020 draft for the Ontario Line has been changed since the previous version (Feb 26, 2020). The revisions/edits should also address MHSTCI comments of June 22, 2020 for the “Remaining Sections” of the Ontario Line. The following comments area specific to the Early Works reports. However, they may also highlight errors and consistencies that now appear in the Ontario Line report: Paragraph 1: edit to align with the Ontario Line report. Paragraph 2: change “As a provincial crown agency” to “As a public body prescribed under Ontario Regulation 157/10, Metrolinx. . . “ Paragraph 3: <ul style="list-style-type: none"> replace “Ontario Line CHR” with “Ontario Line Cultural Heritage Report” </p>	Thank you for the detailed comments; revisions have been made accordingly to the HDDR.

1	MHSTCI - Heritage Planning Unit		Project name Cover page and whole report	Project Name: Ontario Line <u>Subway</u> Project- Early Works Ontario Regulation 341/20 (July 1, 2020) governs the “Ontario Line Project”. Therefore, to be consistent with the regulation, we suggest that the word “subway” be deleted from the title and throughout this and any other reports. The language used in the MOU could be re-instated, “a new rapid transit line. . . Remove the word “subway” throughout.	Project name has been revised.
2	MHSTCI - Heritage Planning Unit		1. Introduction Page 1 Also applies to 2.1 Ontario Line Regulation Page 11	Since the regulation has now been filed the report should be updated <i>Ontario Regulation 341/20</i> under the <i>Environmental Assessment Act – Ontario Line Project</i> .	Language in report will be updated with new regulation name.
3	MHSTCI - Heritage Planning Unit		1.3.4 Lakeshore East Joint Corridor 1.3.4.2 Early Works Footprint Page 6	The report states: “This footprint is <u>generally confined to the existing Lakeshore East rail corridor</u> , as shown in Figure 1-5. ” The corridor is being expanded as a result of this project. Therefore, this statement may need clarification.	Clarification will be provided in the Lakeshore East Joint Corridor Early Works report.

Comment #14 above

Table 6-1

Discipline:

Built Heritage Resources and Cultural Heritage Landscapes

Project Phase:

Detailed Design / Construction

Mitigation Measure (or related action) Future Commitment

- The Early Works Cultural Heritage Report should be submitted to City of Toronto Heritage Preservation Services and MHSTCI for review.
- If Project components or activities associated with Early Works require an expansion of the Study Areas for the four locations assessed in this Cultural Heritage Report, then a qualified heritage consultant should be contacted in order to confirm the impacts of the proposed work on BHR/CHLs and this CHR should be updated.
- Metrolinx and/or Project Co will Prepare a Heritage Detailed Design Report (HDDR) for Early Works, once a preferred alignment (This applies to the overall OL but is it correct for the Early Works?) has been identified and/or detailed design has commenced. The HDDR will document the review of the preferred alignment and/or detailed design as it relates to this

Cultural Heritage Report, confirm impacts and mitigation measures, and identify any changes, based on the proposed/recommended design. During detailed design, impacts on a known or potential BHR or CHL that were not anticipated or described in this **Cultural Heritage Report** may be identified. The HDDR, following approval by Metrolinx, will be provided to the MHSTCI for its records. The HDDR may be subject to amendment or revision as detailed design and implementation proceed.

- All work shall be performed in accordance with Applicable Law, including but not limited to the Ontario Heritage Act, the Metrolinx Interim Cultural Heritage Management Process (2013) and the Ministry of Heritage, Sport, Tourism and Culture Industries (MHSTCI), formerly Ministry of Tourism Culture and Sport (MTCS) guidance on Cultural Heritage Report: Existing Conditions and Preliminary Impact Assessment (2019).
- Follow the process and recommendations outlined in the MHSTCI 2019 guidance on Cultural Heritage Report: Existing Conditions and Preliminary Impact Assessment (2019) and Environmental Project Reports (EPR) under Transit Project Assessment Process (TPAP) for Proponents and their Consultants. It is not clear why this is included as a future commitment Please clarify.
- Follow the recommendations outlined in the heritage reporting completed including Cultural Heritage Report: Existing Conditions and Preliminary Impact Assessment (2019) or the Heritage Impact Assessment (HIA), if any. Have any HIAs been recommended?
- For known and potential properties of Cultural Heritage Value or Interest that will experience direct impacts and where no previous assessment has been completed or a Statement of Cultural Heritage Value has not been approved by the Contracting Authority, undertake a Cultural Heritage Evaluation Report (CHER) as per guidance of the Contracting Authority. The MOU was intended to supersede the typical need and/or requirement for CHERs and HIAs. Therefore, unless there is a property-specific recommendations for a CHER/HIA we suggest deleting this.
- Where no previous assessment has been completed or a Statement of Cultural Heritage Value has not been approved by the Contracting Authority, undertake a CHER as per the See previous comment
- If warranted, complete a HIA in accordance with MHSTCI Information Bulletin No. 3: Heritage Impact Assessments for Provincial Heritage Properties (2017) to identify alternatives and mitigation and monitoring commitments to avoid or lessen impacts on the Cultural Heritage Value and heritage attributes of the PHP, based on the PHP's Statement of Cultural Heritage Value (SCHV). Mitigation measures and alternatives should be consistent with the relevant conservation strategies established and adopted in a SCP. A SCP will be prepared and implemented for PHPs and PHPPS in accordance with the Project Agreement. See Comment above.
- Approval will be obtained from the MHSTCI, for any modifications to Provincially Significant properties prior to construction. It is not clear what this is referring to. Please clarify.
- During design, the recommendations of all HIAs will be followed and adhered to during design and construction, including but not limited to strategies to protect heritage attributes. See comment above. It would be more appropriate to state that "the Mitigation Measures in table XX of the Cultural Heritage Report, will be followed. . ."
- If there is a change in project design that is not captured or documented in a previously completed Metrolinx and/or GO Transit EPRs and/or ESRs post EA/TPAP that causes any additional heritage properties to be impacted by the proposed design/infrastructure, the Metrolinx Heritage Guidelines for Consultants (2015) MHSTCI was not aware of this document Can you clarify?. and all applicable legislation will be followed to carry out additional impact assessment work and heritage studies. Please review this bullet for applicability and revised as necessary.
- Given the importance and location of some Cultural Heritage Resources, consultation with Municipal heritage staff and other jurisdictions will be undertaken as appropriate to determine if proposed infrastructure will be subject to specific policies within heritage districts or conservation areas (including parks). Be specific. Which properties.
- Selection of construction staging and laydown areas will follow the Contracting Authority's selection procedures which include avoiding heritage attributes wherever possible or effectively mitigating impacts where not possible. Staging areas should be part of the identification of impacts.
- If there is a change in project design post TPAP (exempt from TPAP. See O.Reg. 342/20. Please revise) that causes any additional heritage properties to be impacted above and beyond those described in this EPR, additional impact assessment work and heritage studies will be undertaken in accordance with applicable federal/provincial legislation.
- The Constructor to develop, submit to the Contracting Authority for approval, and implement a SCP that addresses built heritage resources and cultural heritage landscapes according to MHSTCI Information Bulletin No. 2: Preparing Strategic Conservation Plans for Provincial Heritage Properties (2017) and as outlined in the Project Agreement.
- For PHPPS, approval by MHSTCI is required. Please expand or explain
- In the case of properties identified as PHPPS and where the proposed project infrastructure will require demolition or removal and/or transfer out of provincial control, the Contracting Authority will need to obtain MHSTCI Minister's consent.
- A Request for Minister's Consent will be prepared which meets MHSTCI requirements and satisfies Contracting Authority's obligations under the Ontario Heritage Act.

Monitoring

- Implement and comply with monitoring requirements and commitments pertaining to **Built Heritage Resources and Cultural Heritage Landscapes** /properties as per previously completed Metrolinx and/or GO Transit EPRs and/or ESRs and Addenda and the recommendations contained in any/all of the following documents: CHARs, CHERs, HIAs and SCPs. **Please be specific?**

Table 6-1

Discipline:

Archaeological Resources

Project Phase:

Detailed Design / Construction

Mitigation Measure (or related action) Future Commitment

- Complete all required AA (Stage 2 and Stage 3 if recommended by the Stage 2 Archaeological Assessment) as early as possible, prior to the completion of detailed design, and well in advance of any ground disturbance;
- Undertake future work in a manner that protects archaeological sites by conserving them in their original location or through archaeological field work, and endeavour to conserve significant archaeological resources in their original location through documentation, protection, and avoidance of impacts.
- Include provisions in contract as recommended by archaeological assessment(s) **who will do this? Metrolinx or another party?**
- The Constructor will develop and implement an Archaeological Risk Management Plan that addresses any recommendations resulting from Archaeological Assessments and documents all protocols for the discovery of human remains and undocumented archaeological resources. The Archaeological Risk Management Plan shall be amended to incorporate any additional actions required resulting from subsequent Archaeological Assessment Reports.
- All work shall be performed in accordance with Applicable Law, including but not limited to the Ontario Heritage Act, the Ministry of Heritage, Sport, Tourism and Culture Industries (MHSTCI), formerly the Ministry of Tourism, Culture and Sport (MTCS) Standards and Guidelines for Consultant Archaeologists (2011), and the MHSTCI document, Engaging Aboriginal Communities in Archaeology: A Draft Bulletin for Consultant Archaeologists in Ontario (2011).
- In the event that archaeological materials are encountered or suspected of being encountered during construction, all work will cease. The location of the findspot should be protected from impact by employing a buffer in accordance with requirements of the MHSTCI. A professionally licensed archaeologist will be consulted to complete the assessment. If materials are confirmed to possess cultural heritage value/interest then they will be reported to the MHSTCI, and further Archaeological Assessment of the materials may be required. If it is determined that there is a potential for Indigenous artifacts, the Contracting Authority should be contacted and Applicable Law will be followed.
- If final limits of the Project footprint are altered and fall outside of the assessed study area, additional Archaeological Assessments will be conducted by a professionally licensed archaeologist prior to **ground** disturbance and prior to construction activities. This will include completing all required Archaeological Assessments resulting from the Stage 1 Archaeological Assessment (Stage 2, Stage 3 and Stage 4, as required) as early as possible, prior to the completion of **detailed** design, and in advance of any ground disturbance.
- For areas determined to have archaeological potential or contain archaeological resources that will be impacted by project activities, additional Archaeological Assessment will be conducted by a professionally licensed archaeologist prior to **ground** disturbance.
- If human remains are encountered or suspected of being encountered during project work, all activities must cease immediately and the local police/coroner as well as the Bereavement Authority of Ontario on behalf of the Ministry of Government and Consumer Services must be contacted. Archaeological investigations of human remains will not proceed until police have confirmed the remains are not subject to forensic investigation. Once human remains have been cleared of police concern, the MHSTCI will also be notified to ensure

that the site is not subject to unlicensed alterations which would be a contravention of the Ontario Heritage Act. If the human remains are determined to be of Indigenous origin, the Contracting Authority should be contacted and all Applicable Law must be adhered to.

- All Archaeological Assessment findings will be shared with Indigenous communities, as per Metrolinx's procedures.
- Work in proximity to known cemeteries requires completion of an Archaeological Assessment prior to any proposed ground disturbance in accordance with the MHSTCI's Standards and Guidelines for Consultant Archaeologists (2011) and the Funeral, Burial, and Cremation Services Act and regulations under that Act. The wording of this should be revised to be consistent with MHSTCI advice see AA reports.

Monitoring

- Performance of the work will occur within land previously subject to an Archaeological Assessment and deemed to be clear of archaeological resources or areas of archaeological potential.
- Any site personnel responsible for carrying out or overseeing land-disturbing activities will be informed of their responsibilities in the event that an archaeological resource is encountered.
- Further Archaeological Assessment may identify the need for monitoring during construction

Subject: RE: OL - Early Works Report and EW Cultural Heritage Report

Good afternoon Merlin, et al,

Please find attached our report-specific comments for:

- Ontario Line Early Works Report (AECOM July 2020);
- Ontario Line Early Works Cultural Heritage Report (AECOM June 2020)

Some of our comments and revisions suggested for these reports (see attached) have been previously discussed or have been included in our comments previously sent for other portions of the Ontario Line reports (see list below). I have, for the most part, opted to repeat them rather than risk omission. MHSTCI's previous written comments that should be reflected in the two Early Works Reports include:

- Ontario Line West-Maps, Resources and Impacts Tables – comments sent June 12, 2020
- Ontario Line -Remaining Sections – comments sent June 22, 2020, and
- Ontario Line South -Maps, Resources and Impacts Tables – comments sent June 26, 2020

As always we are available for clarification or further discussion as needed.

Best regards

Rosi

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Good afternoon Karla and Rosi,

This is a follow-up email to the following correspondence sent just now through EATS:

- Ontario Line Early Works Report;
- Ontario Line Early Works Cultural Heritage Report.

Note for the EW Cultural Heritage report, all of the content/formatting of the impact/mitigation tables, historical write-up are aspects the Ministry has already reviewed through the collaborative development of the existing conditions report between the Ministry and Metrolinx. I believe the only sections the Ministry has not previously review include the community engagement, and summary/next steps sections.

As noted in that correspondence, we are looking for the Ministry's comments by end of day, July 3. Please let me know if you have any questions or issues accessing the files.

Regards,

MERLIN YUEN

Good afternoon Matthew,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Matthew MacLean,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

**Metrolinx
130 Adelaide Street West
Toronto, Ontario

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

**Metrolinx
130 Adelaide Street West
Toronto, Ontario

Good afternoon Michael and Eleni,

This is just a friendly reminder that we are looking for comments be provided for the following draft Ontario Line Early Works and Environmental Conditions Reports by end of day today, July 2nd:

- Natural Environment Environmental Conditions Report;
- Noise and Vibration Environmental Conditions Report;
- Socio-Economic and Land Use Characteristics Environmental Conditions Report;
- Air Quality Early Works Memo;
- Natural Environment Early Works Report;
- Noise and Vibration Early Works Report; and
- Traffic and Transportation Early Works Memo.

We are also looking for comments to be provided for the following draft Ontario Line Early Works Reports by end of day tomorrow, July 3rd:

- Early Works Report; and
- Cultural Heritage Early Works Report.

Feel free to contact me if you have any questions.

Thank-you,

Crystal Ho

Good afternoon Michael and Eleni,

This is just a follow-up email to the draft Stage 1 Archaeology and Cultural Heritage Reports for Ontario Line Environmental Conditions that I circulated just now via EATS for your review. As noted in the correspondence on EATS we are currently looking for the Ministry's comments by July 11th, 2020 for the Cultural Heritage Report, and by July 22nd, 2020 for the Archaeology Report. Please let me know if you have any questions or concerns with the timeline.

Thanks,

Crystal Ho

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Ruth Lindenburger,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

A handwritten signature in black ink, appearing to read 'Maria Zintchenko', with a long horizontal flourish extending to the right.

Attachments: Attachment 1 - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report
Attachment 2 - Notice of Publication of Draft East Harbour Station Early Works Report

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: Ontario Line - Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report
Date: Tuesday, July 27, 2021 3:11:23 PM

Good afternoon,

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the following Dropbox link for review:

[REDACTED]
[REDACTED]

The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and GO rail where Ontario Line runs in parallel to GO tracks between the Ontario Line Don Yard Portal and Gerrard Portal.

Metrolinx welcomes any comments or feedback on the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Please provide these in writing no later than **August 24, 2021**.

Thank-you,

Bren Daner Lapuz

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Crystal Ho

Hello Crystal:

Attached are comments from our Source Protection Branch. We are hopeful that Metrolinx can still address these comments.

Thanks,

Cindy

Subject: RE: Ontario Line - MECP Air comments on LSE and EH EWRs

Hello Crystal:

I have more ministry comments to share from our Toronto District office, as follows:

General

In general, the plan describes how Mx will manage the construction activities, which is consistent with many Mx procedures that MECP has reviewed previously. Separate procedures should be developed for laydown yards, which do not meet the ministry's definition of construction sites.

Noise and vibration

Mx states it will establish and apply "project specific" noise and vibration criteria/limits for their construction activities, which are based on source emissions. Mx further states that mitigation will only be considered if its own limits have been exceeded (Table ES-2). Separate procedures should be developed for laydown yards that apply the ministry's noise and vibration limits, which are receptor-based POI limits.

Mx proposes to limit idling to 5 mins or less to mitigate air pollution (page 205). Mx also proposes a "NO Idling policy" to mitigate noise issues (page 207). The idling policy should be consistent throughout the document, and incorporate the more conservative limit of zero idling.

Permits and Approvals

Mx states that individual permits and approvals are not required for construction activities (page 226). Laydown yards do not meet the ministry's definition of construction sites, therefore ECAs and EASRs may be required, particularly for sites that will operate long term.

Project Footprint and Study Area

Mx states that the project footprint and study area included the anticipated required construction staging and laydown areas and construction access (page 77). Mx should provide the ministry with a list of the anticipated laydown yard locations.

Missing

Mx will be required to follow the new Excess Soil Reg. There is no mention of how they will manage their excess soil in these documents.

Please let me know if Metrolinx would like to arrange a meeting to discuss any of the above comments.

Cindy

Good morning Cindy,

No worries, thanks for clarifying. Can you also confirm whether we should be expecting comments on N&V from the Ministry on the two EWRs?

Thanks,

Crystal Ho

Hello Crystal.

The ministry's new comments are the two bullets below in my email.

Sorry for the confusion.

Cindy

Hi Cindy,

Thank-you for sending the Ministry's air quality comments on the LSE JC and EH EWRs. I took a look at the excel spreadsheets attached in your email below, but did not see any additional/outstanding comments from the Ministry (aside from the ones embedded in the body of the email). Can you please confirm?

Thanks,

Crystal Ho

Hello Crystal,

Please attached and below comments from our air quality analyst for the Lakeshore East Joint Corridor and East Harbour AQ EWRs.

- It is noted in the proponent's responses to comment # 9 in both comment spreadsheets that the background values in Table 3-1 of the revised Air Quality report referenced the 2017 90th percentile values. However, the background concentrations should be determined by calculating the 90th percentile value from a 5-year data set for each averaging period based on the MTO protocol. Please ensure a correct and conservative calculation method is used for the background concentrations in Table 3-1.
- It appears that the second footnote for Table 3-1 in both reports should be corrected to a SO₂ 10min averaging period rather than a 30min averaging period. Please ensure a correct formula is used for the SO₂ background concentration conversion.

Please let me know if you have any questions or concerns. I can arrange a call with the air quality analyst if Metrolinx requires further clarification.

Thanks,

Project Name: Draft LSE JC EWR

Revised By:

Project No:

Date In:

Date Out:

Item No.	Reviewer Name	Description	Page#	Review Comment	Response & Details (Authors -)
1	MECP	S&GW (Oct 8, 2021)		I have reviewed Section 5.2 Soil and Groundwater of AECOM (2021) Ontario Line Lakeshore East Early Works Metrolinx Draft Early Works Report prepared by Sarah Schmied, Jarrid Radoslav and Madeleine Atherton of AECOM Canada Ltd. September 2021.	Thank-you for your review of the Soil and Groundwater section of the Draft Lakeshore East Joint Corridor Early Works Report.
2	MECP	S&GW (Oct 8, 2021)		The proposed construction area straddles an existing rail corridor between Eastern Avenue to the south and Jones Avenue to the North. The rail corridor runs through residential neighbourhoods and industrial areas. Construction will include the reconfiguration of tracks, replacement +/- widening of rail bridges over Queen Street East, Dundas Street East and Logan Avenue, construction of foundations for GO Overhead Catenary System and supporting infrastructure to accommodate a future fourth GO track.	Thank-you for your review of the Draft Lakeshore East Joint Corridor Early Works Report. Metrolinx is advancing work in the Lakeshore East Joint Corridor area to facilitate timely implementation of the Ontario Line Project and provide planning, design and implementation efficiencies for ongoing projects such as GO Expansion.
3	MECP	S&GW (Oct 8, 2021)		Section 5.2 describes the geology and overburden of the site using publicly available materials including the ministry's Water Wells Database. Source Water Protection was also addressed. Site specific data have not been used in the preparation of AECOM's draft report.	Thank-you for your comment. The Early Works Report documents the local soil and groundwater environmental conditions within the Lakeshore East Joint Corridor study area at a high level. Site-specific data will be collected as required during detailed design.
4	MECP	S&GW (Oct 8, 2021)		The report includes Table ES-2 Potential Impacts, Mitigation Measures and Monitoring Activities for the East Harbour Station Early Works which describes potential impacts to soil and groundwater from excavation and dewatering activities. These impacts include subsidence/settlement, excavation of contaminated soils, dewatering of contaminated groundwater, decrease in groundwater discharge to the Don River. AECOM (2021) proposes monitoring and mitigation measures to reduce the impact of these possible impacts and the Ontario Regulations involved.	Noted. Please note that Table ES-2 of the Lakeshore East Joint Corridor Early Works Report documents the potential impacts, mitigation measures and monitoring activities for the Lakeshore East Joint Corridor early works. East Harbour Station early works is documented in the East Harbour Station Early Works Report.
5	MECP	S&GW (Oct 8, 2021)		It is expected that additional detail will become available during geotechnical studies. These studies should include the advancement of bore holes and the installation of monitoring wells to determine groundwater depth, the presence or absence of contaminated soils/groundwater and construction dewatering requirements.	Noted.

6	MECP	S&GW (Oct 8, 2021)		Construction dewatering if over 50,000L/day will require a Permit to Take Water or a Construction Dewatering EASR. These instruments will require a more detailed site characterization. For guidance on these studies the reader is referred to Technical guidance document for hydrogeological studies in support of category 3 applications and Technical guidance document for surface water studies in support of category 3 applications.	Noted. A Permit to Take Water or a Construction Dewatering EASR will be obtained and a more detailed site characterization will be conducted if construction dewatering exceeds 50,000L/day.
7	MECP	S&GW (Oct 8, 2021)		I have no concerns with the draft report however my opinion may change as more site-specific details/studies become available.	Noted.
8	MECP	Surface Water (Oct 19, 2021)		The Report did not identify any waterbody, wetland or other environmental sensitive features within the Lakeshore East Joint Corridor Early Works therefore I have no concerns with surface water or fish and fish habitat. In terms of storm water management, the Project has committed to proper manage storm water and develop Erosion and Sediment Control Plan during the project. Consider the location and urban settings I expect storm water and discharge, if any, will most likely be managed through city sewer system. The Ministry does not have major concerns if they meet Toronto sewer use bylaw. No follow-up is required.	Noted.
9	MECP	AQ (Oct 22, 2021)		It is noted in the proponent's responses to comment # 9 in both comment spreadsheets that the background values in Table 3-1 of the revised Air Quality report referenced the 2017 90th percentile values. However, the background concentrations should be determined by calculating the 90th percentile value from a 5-year data set for each averaging period based on the MTO protocol. Please ensure a correct and conservative calculation method is used for the background concentrations in Table 3-1.	In Table 3-1 of the Air Quality Early Works technical reporting (LSE JC), there is a column entitled "Years." This column indicates the total years used in assessment for the 90th percentile of background data or mean of background data. Five years of data were used wherever data availability was accessible. This is in line with the MTO protocol approach.
10	MECP	AQ (Oct 22, 2021)		It appears that the second footnote for Table 3-1 in both reports should be corrected to a SO2 10min averaging period rather than a 30min averaging period. Please ensure a correct formula is used for the SO2 background concentration conversion.	Sub-note no. 2 of Table 3-1 has been corrected in the LSE JC AQ Reports to a SO2 10 min averaging period. The actual numbers in the table for the 10-min SO2 average were confirmed as accurate.
11	Kevin A Smith	Acrylic Noise Barriers (Oct 25, 2021)	Noise Barrier Investigation, Section 3.4	Provide noise barrier specification sheet confirming that acrylic noise barrier has absorption coefficient of 0.21	0.21 is the absorption for a reflective barrier derived from Table 7 of the RLS-90 standard for traffic noise, corresponding to a reflection loss of 1 dB. This is the standard reflective barrier absorption implemented in both CadnaA and Soundplan modelling software. Regardless of the final barrier finish selected, Metrolinx intends to meet all MOEE/GO and MOEE/TTC protocol requirements as well as reducing 16h and 8h project Leq levels to existing predicted railway levels or below, where feasible, and this will be verified as project planning and design progresses.

12	Kevin A Smith	Road Traffic Noise Model (Oct 25, 2021)	Road Traffic Noise Assessment, Section 3.5	TNM 3.0 is accepted by MECP as the better traffic noise model for predicting road traffic noise at elevated receptors such as several high-rise buildings along the corridor because TNM 3.0 is more modern and accounts for 3D distance attenuation, while ORNAMENT does not.	Acknowledged. ORNAMENT was the method used within this assessment as per the latest MECP NPC-300 guidelines, which recommends using this method for estimating background noise.
13	Email Edits from MECP	General (Oct 25, 2021)		In general, the plan describes how Mx will manage the construction activities, which is consistent with many Mx procedures that MECP has reviewed previously. Separate procedures should be developed for laydown yards, which do not meet the ministry's definition of construction sites.	<p>Construction staging and laydown areas referred to within the EWR are temporary laydown areas for the duration of construction and will not be used by Metrolinx as long-term facilities/laydown yards.</p> <p>Construction staging and laydown areas which are used for the storage of equipment and materials, and sometime site trailers, will have lower impacts than the construction activities assessed. The early works noise and vibration analysis completed assumed that the majority of the construction activities (except for certain activities such as rail works and bridge works) could occur at any of the areas within the early work project footprint. This is a conservative approach as materials storage and staging will have much lower noise and vibration emissions than the assessed construction activities.</p> <p>Construction staging and laydown areas will only be used during the construction period. Once construction has been completed, laydown areas will no longer be used for the project.</p> <p>Operations of any long term facilities will be assessed in the forthcoming Environmental Impact Assessment Report, and would likely require further noise and vibration approvals as part of their site plan approval. The Early Works Report addresses construction impacts of the early works activities described in the report, and not operations.</p>

14	Email Edits from MECP	NV (Oct 25, 2021)		<p>Mx states it will establish and apply "project specific" noise and vibration criteria/limits for their construction activities, which are based on source emissions. Mx further states that mitigation will only be considered if its own limits have been exceeded (Table ES-2). Separate procedures should be developed for laydown yards that apply the ministry's noise and vibration limits, which are receptor-based POI limits.</p>	<p>Construction staging and laydown areas referred to within the EWR are temporary laydown areas for the duration of construction and will not be used by Metrolinx as long-term facilities/laydown yards.</p> <p>Construction staging and laydown areas which are used for the storage of equipment and materials, and sometime site trailers, will have lower impacts than the construction activities assessed. The Early Works Report addresses construction impacts of the early works activities described in the report, and not operations.</p>
15	Email Edits from MECP	NV (Oct 25, 2021)		<p>Mx proposes to limit idling to 5 mins or less to mitigate air pollution (page 205). Mx also proposes a "NO Idling policy" to mitigate noise issues (page 207). The idling policy should be consistent throughout the document, and incorporate the more conservative limit of zero idling.</p>	<p>The idling policy under the air quality section of the report has been revised to 'no idling policy (where possible)' to be consistent with the idling policy under the noise and vibration section of the report.</p>
16	Email Edits from MECP	Permits (Oct 25, 2021)		<p>Mx states that individual permits and approvals are not required for construction activities (page 226). Laydown yards do not meet the ministry's definition of construction sites, therefore ECAs and EASRs may be required, particularly for sites that will operate long term.</p>	<p>Construction staging and laydown areas referred to within the EWR are temporary laydown areas for the duration of construction and will not be used by Metrolinx as long-term facilities/laydown yards.</p> <p>Construction staging and laydown areas which are used for the storage of equipment and materials, and sometime site trailers, will have lower impacts than the construction activities assessed. The early works noise and vibration analysis completed assumed that the majority of the construction activities (except for certain activities such as rail works and bridge works) could occur at any of the areas within the early work project footprint. This is a conservative approach as materials storage and staging will have much lower noise and vibration emissions than the assessed construction activities.</p> <p>Construction staging and laydown areas will only be used during the construction period. Once construction has been completed, laydown areas will no longer be used for the project.</p> <p>Operations of any long term facilities will be assessed in the forthcoming Environmental Impact Assessment Report, and would likely require further noise and vibration approvals as part of their site plan approval. The Early Works Report addresses construction impacts of the early works activities described in the report, and not operations.</p>

17	Email Edits from MECP	Project footprint and study area (Oct 25, 2021)		Mx states that the project footprint and study area included the anticipated required construction staging and laydown areas and construction access (page 77). Mx should provide the ministry with a list of the anticipated laydown yard locations.	Construction staging and laydown areas referred to within the EWR are temporary laydown areas for the duration of construction and will not be used by Metrolinx as long-term facilities/staging yards.
18	Email Edits from MECP	Missing (Oct 25, 2021)		Mx will be required to follow the new Excess Soil Reg. There is no mention of how they will manage their excess soil in these documents.	Commitment to follow O.Reg 406/19 is included in Table 6-2 of the EWR.
19	CSPB Comments - Draft East Harbor and Lakeshore East Joint Corridor Early Works Reports	CTC Source Protection Plan - sent Oct 28 2021		<p>Draft Early Works Report Ontario Line East Harbour Station Early Works The EA project site is located in the Toronto Source Protection Area and is therefore subject to the approved CTC Source Protection Plan.</p> <p>The Ontario Line East Harbour Station Early Works project is a component of the Ontario Line Project. The station is proceeding before the completion of the Ontario Line as it is strategic to the implementation of the project. Station construction will take place adjacent to the Don Valley Parkway and Eastern Avenue (see Appendix A). The project area is in an Intake Protection Zone (IPZ) 3, a highly vulnerable aquifer (HVA) scoring 6 and an events-based area (EBA) for fuel and oil spills and storage and sanitary sewers.</p> <p>Given that the preferred alternative is in a surface water protection zone (IPZ 3) the activities related to the construction and/or maintenance phase of the project could be significant drinking water threat. The intake protection zone has no vulnerability score and is an events-based area (EBA) for fuel and oil spills and storage and sanitary sewers (see Appendix A). This means activities related to moving sewer infrastructure, the storage of fuel and fuel spills could be significant drinking water threats and policies may apply. Other activities may be identified as moderate/low drinking water threats and select policies may still apply.</p> <p>In the Draft Early Works Report, the proponent has discussed source water protection thoroughly as part of section 5.2.3 and table 6.2. The proponent has outlined the vulnerable areas in the study area as well as the SPP policies that relate to the source water protection features. Additionally, they have outlined potential mitigation measures that can be taken to reduce the potential of risk.</p>	Noted.

20	CSPB Comments - Draft East Harbor and Lakeshore East Joint Corridor Early Works Reports	CTC Source Protection Plan - sent Oct 28 2021		<p>The SPP polices related to the project are related to the EBA and HVA. There are 4policies in the CTC Source Protection Plan that the proponent should be aware of and consider before project development, as applicable.</p> <ul style="list-style-type: none"> •LO-SEW-2: Where event-based modelling has shown that a spill from a sanitary trunk sewer break would be a significant drinking water threat •LO-PIPE-1: Where event based modelling has shown that a spill from a petroleum pipeline system reaching a tributary would be a significant drinking water threat, the Ministry of the Environment and Climate Change should work with facility owners and provincial and federal regulators to develop, review and recommend necessary improvements to existing spill prevention, spill management, risk reduction, and contingency plans. •SAL-10: Where the application of road salt would be a moderate or low drinking water threat, the planning approval authority is encouraged to require a salt management plan, which includes a reduction in the future use of salt, as part of a complete application for development. •SAL-12: Where the application of road salt on unassumed roads and private parking lots with greater than 200 square metres is, or would be, a moderate or low drinking water threat <p>The proponent should consult with the local source protection authority if they have not already done so.</p>	<p>Thank you for your review and acknowledgement of the report. A mitigation measure is already included in Table 6-2 of the EWR to conduct a review of SPP policies.</p> <p>Metrolinx has been and will continue to consult with the TRCA, the local source protection authority as project planning progresses.</p>

Item No.	Reviewer Name	Description	Page#	Review Comment	Response & Details (Authors -)	
1	MECP	S&GW (Oct 8, 2021)		I have reviewed Section 5.2 Soil and Groundwater of AECOM (2021) Ontario Line East Harbour Station Metrolinx Draft Early Works Report prepared by Sarah Schmied, Jarrid Radoslav and Madeleine Atherton of AECOM Canada Ltd. September 2021.	Thank-you for your review of the Soil and Groundwater section of the Draft East Harbour Station Early Works Report.	
2	MECP	S&GW (Oct 8, 2021)		The proposed construction area straddles an existing rail corridor between the Don River to the West and Eastern Avenue to the North. The Site will occupy an area which is occupied by a rail corridor, bridges, and parking lots. A building and parking lot occupy the Site north of Eastern Avenue.	Thank-you for your review of the Draft East Harbour Station Early Works Report. Metrlinx is advancing East Harbour Station early works to facilitate timely implementation of the Ontario Line Project and provide planning, design and implementation efficiencies for ongoing projects such as GO Expansion.	
3	MECP	S&GW (Oct 8, 2021)		Section 5.2 describes the geology and overburden of the site using publicly available materials including the ministry's Water Wells Database. Source Water Protection was also addressed. Site specific data have not been used in the preparation of AECOM's draft report.	Thank-you for your comment. The Early Works Report documents the local soil and groundwater environmental conditions within the East Harbour Station study area at a high level. Site-specific data will be collected as required during detailed design.	
4	MECP	S&GW (Oct 8, 2021)		The report includes Table ES-2 Potential Impacts, Mitigation Measures and Monitoring Activities for the East Harbour Station Early Works which describes potential impacts to soil and groundwater from excavation and dewatering activities. These impacts include subsidence/settlement, excavation of contaminated soils, dewatering of contaminated groundwater, decrease in groundwater discharge to the Don River. AECOM (2021) proposes monitoring and mitigation measures to reduce the impact of these possible impacts and the Ontario Regulations involved.	Noted.	
5	MECP	S&GW (Oct 8, 2021)		It is expected that additional detail will become available during geotechnical studies. These studies should include the advancement of bore holes and the installation of monitoring wells to determine groundwater depth, the presence or absence of contaminated soils/groundwater and construction dewatering requirements.	Noted.	

6	MECP	S&GW (Oct 8, 2021)		Construction dewatering if over 50,000L/day will require a Permit to Take Water or a Construction Dewatering EASR. These instruments will require a more detailed site characterization. For guidance on these studies the reader is referred to Technical guidance document for hydrogeological studies in support of category 3 applications and Technical guidance document for surface water studies in support of category 3 applications.	Noted. A Permit to Take Water or a Construction Dewatering EASR will be obtained and a more detailed site characterization will be conducted if construction dewatering exceeds 50,000L/day.
7	MECP	S&GW (Oct 8, 2021)		I have no concerns with the draft report however my opinion may change as more site-specific details/studies become available.	Noted.
8	MECP	Surface Water (Oct 19, 2021)		The East Harbour Station Early Works Project is located 30 metres away from the Lower Don River and no in-water works are proposed. The Report proposed buffers, Erosion and Sediment Control Plan, Spill Prevention and Response Plan and Stormwater Management Plan to be developed to minimize impacts to watercourses. The assessment and commitments appear to be adequate to address surface water concerns. Consider the location and urban settings I expect storm water and discharge, if any, will most likely be managed through city sewer system. The Ministry does not have major concerns if they meet Toronto sewer use bylaw. No follow-up is required.	Noted.
9	MECP	AQ (Oct 22, 2021)		It is noted in the proponent's responses to comment # 9 in both comment spreadsheets that the background values in Table 3-1 of the revised Air Quality report referenced the 2017 90th percentile values. However, the background concentrations should be determined by calculating the 90th percentile value from a 5-year data set for each averaging period based on the MTO protocol. Please ensure a correct and conservative calculation method is used for the background concentrations in Table 3-1.	In Table 3-1 of the Air Quality Early Works technical reporting (EH), there is a column entitled "Years." This column indicates the total years used in assessment for the 90th percentile of background data or mean of background data. Five years of data were used wherever data availability was accessible. This is in line with the MTO protocol approach.
10	MECP	AQ (Oct 22, 2021)		It appears that the second footnote for Table 3-1 in both reports should be corrected to a SO2 10min averaging period rather than a 30min averaging period. Please ensure a correct formula is used for the SO2 background concentration conversion.	Sub-note no. 2 of Table 3-1 has been corrected in the East Harbour Station AQ Reports to a SO2 10-min averaging period. The actual numbers in the table for the 10-min SO2 average were confirmed as accurate.
11	Kevin A Smith	FTA Guide's construction vibration reference levels (Oct 25, 2021)	Table 3-2	Front End Loader assumed reference vibration level is incorrect. In an email to MECP dated 2021-07-15, Dee Phan, Environmental Protection Specialist, Office of Environmental Programs, Federal Transit Administration, dee.phan@dot.gov, stated: "Table 7-4 (from FTA's Transit Noise and Vibration Impact Assessment Manual) is meant to be just a sampling of levels for different types of construction equipment. We suggest using the vibration levels for a large bulldozer listed in Table 7-4 for each of the three equipment (grader, front end loader, and excavator)."	Change has been applied to reference values based on DOT suggestion on equipment assumptions. Assessment was completed based upon worst case vibratory roller with the higher vibration emissions.

12	Kevin A Smith	FTA Guide's construction vibration reference levels (Oct 25, 2021)	Appendix B, Example Calculation Vibration Zone of influence Bylaw 514 and 0.14 mm/sec	Front End Loader assumed reference vibration level is incorrect. In an email to MECP dated 2021-07-15, Dee Phan, Environmental Protection Specialist, Office of Environmental Programs, Federal Transit Administration, dee.phan@dot.gov, stated: "Table 7-4 (from FTA's Transit Noise and Vibration Impact Assessment Manual) is meant to be just a sampling of levels for different types of construction equipment. We suggest using the vibration levels for a large bulldozer listed in Table 7-4 for each of the three equipment (grader, front end loader, and excavator)."	Change has been applied to reference values based on DOT suggestion on equipment assumptions. Assessment was completed based upon worst case vibratory roller with the higher vibration emissions.
13	Email Edits from MECP	General (Oct 25, 2021)		In general, the plan describes how Mx will manage the construction activities, which is consistent with many Mx procedures that MECP has reviewed previously. Separate procedures should be developed for laydown yards, which do not meet the ministry's definition of construction sites.	<p>Construction staging and laydown areas referred to within the EWR are temporary laydown areas for the duration of construction and will not be used by Metrolinx as long-term facilities/laydown yards.</p> <p>Construction staging and laydown areas which are used for the storage of equipment and materials, and sometime site trailers, will have lower impacts than the construction activities assessed. The early works noise and vibration analysis completed assumed that the majority of the construction activities (except for certain activities such as rail works and bridge works) could occur at any of the areas within the early work project footprint. This is a conservative approach as materials storage and staging will have much lower noise and vibration emissions than the assessed construction activities.</p> <p>Construction staging and laydown areas will only be used during the construction period. Once construction has been completed, laydown areas will no longer be used for the project.</p> <p>Operations of any long term facilities will be assessed in the forthcoming Environmental Impact Assessment Report, and would likely require further noise and vibration approvals as part of their site plan approval. The Early Works Report addresses construction impacts of the early works activities described in the report, and not operations.</p>

14	Email Edits from MECP	NV (Oct 25, 2021)		<p>Mx states it will establish and apply “project specific” noise and vibration criteria/limits for their construction activities, which are based on source emissions. Mx further states that mitigation will only be considered if its own limits have been exceeded (Table ES-2). Separate procedures should be developed for laydown yards that apply the ministry’s noise and vibration limits, which are receptor-based POI limits.</p>	<p>Construction staging and laydown areas referred to within the EWR are temporary laydown areas for the duration of construction and will not be used by Metrolinx as long-term facilities/laydown yards.</p> <p>Construction staging and laydown areas which are used for the storage of equipment and materials, and sometime site trailers, will have lower impacts than the construction activities assessed. From: Grace Donnelly Program Service Delivery Intern
Conservation and Source Protection Branch

Re: CSPB Comments -Draft East Harbor and Lakeshore East Joint Corridor Early Works Reports

In response to your request for review of the Draft East Harbor and Lakeshore East Joint Corridor Early Works Reports, Conservation and Source Protection Branch (CSPB) and offers the following comments.

Draft Early Works Report Ontario Line East Harbour Station Early Works
The EA project site is located in the Toronto Source Protection Area and is therefore subject to the approved **CTC Source Protection Plan**.

The Ontario Line East Harbour Station Early Works project is a component of the Ontario Line Project. The station is proceeding before the completion of the Ontario Line as it is strategic to the implementation of the project. Station construction will take place adjacent to the Don Valley Parkway and Eastern Avenue (see Appendix A). The project area is in an Intake Protection Zone (IPZ) 3, a highly vulnerable aquifer (HVA) scoring 6 and an events-based area (EBA) for fuel and oil spills and storage and sanitary sewers.

Given that the preferred alternative is in a surface water protection zone (IPZ 3) **the activities related to the construction and/or maintenance phase of the project could be significant drinking water threat**. The intake protection zone has no vulnerability score and is an events-based area (EBA) for fuel and oil spills and storage and sanitary sewers (see Appendix A). This means activities related to moving sewer infrastructure, the storage of fuel and fuel spills could be significant drinking water threats and policies may apply. Other activities may be identified as moderate/low drinking water threats and select policies may still apply.

In the Draft Early Works Report, the proponent has discussed source water protection thoroughly as part of section 5.2.3 and table 6.2. The proponent has outlined the vulnerable areas in the study area as well as the SPP policies that relate to the source water protection features. Additionally, they have outlined potential mitigation measures that can be taken to reduce the potential of risk.

The SPP policies related to the project are related to the EBA and HVA. There are 4 policies in the **CTC Source Protection Plan** that the proponent should be aware of and consider before project development, as applicable.

- LO-SEW-2: Where event-based modelling has shown that a spill from a sanitary trunk sewer break would be a significant drinking water threat
- LO-PIPE-1: Where event based modelling has shown that a spill from a petroleum pipeline system reaching a tributary would be a significant drinking water threat, the Ministry of the Environment and Climate Change should work with facility owners and provincial and federal regulators to develop, review and recommend necessary improvements to existing spill prevention, spill management, risk reduction, and contingency plans.
- SAL-10: Where the application of road salt would be a moderate or low drinking water threat, the planning approval authority is encouraged to require a salt management plan, which includes a reduction in the future use of salt, as part of a complete application for development.
- SAL-12: Where the application of road salt on unassumed roads and private parking lots with greater than 200 square metres is, or would be, a moderate or low drinking water threat

The proponent should consult with the local source protection authority if they have not already done so.

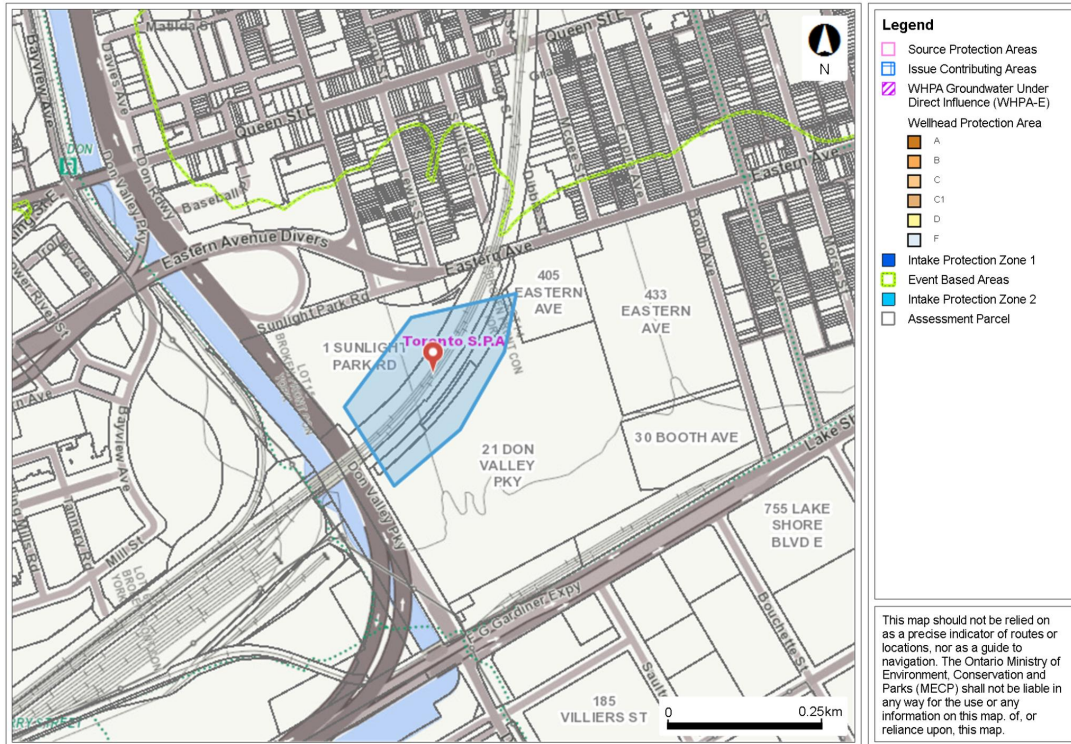

Thank you for considering the Conservation and Source Protection Branch's comments on the Draft East Harbor and Lakeshore East Joint Corridor Early Works Reports. If you have any questions or concerns about the above information, please do not hesitate to contact myself or Jennifer Moulton, Manager, Conservation and Source Protection Branch.

Re: MECP GW Review of Metrolinx Draft Early Works Ontario Line East Harbour
Station report

IDS: N/A

File No: N/A

WMD: 45, 078a

I have reviewed Section 5.2 Soil and Groundwater of AECOM (2021) *Ontario Line East Harbour Station Metrolinx Draft Early Works Report prepared by Sarah Schmied, Jarrid Radoslav and Madeleine Atherton of AECOM Canada Ltd. September 2021.*

The proposed construction area straddles an existing rail corridor between the Don River to the West and Eastern Avenue to the North. The Site will occupy an area which is occupied by a rail corridor, bridges, and parking lots. A building and parking lot occupy the Site north of Eastern Avenue.

Section 5.2 describes the geology and overburden of the site using publicly available materials including the ministry's Water Wells Database. Source Water Protection was also addressed. Site specific data have not been used in the preparation of AECOM's draft report.

The report includes *Table ES-2 Potential Impacts, Mitigation Measures and Monitoring Activities for the East Harbour Station Early Works* which describes potential impacts to soil and groundwater from excavation and dewatering activities. These impacts include subsidence/settlement, excavation of contaminated soils, dewatering of contaminated groundwater, decrease in groundwater discharge to the Don River. AECOM (2021) proposes monitoring and mitigation measures to reduce the impact of these possible impacts and the Ontario Regulations involved.

It is expected that additional detail will become available during geotechnical studies. These studies should include the advancement of bore holes and the installation of monitoring wells to determine groundwater depth, the presence or absence of contaminated soils/groundwater and construction dewatering requirements.

Construction dewatering if over 50,000L/day will require a Permit to Take Water or a Construction Dewatering EASR. These instruments will require a more detailed site characterization. For guidance on these studies the reader is referred to *Technical guidance document for hydrogeological studies in support of category 3 applications*¹ and *Technical guidance document for surface water studies in support of category 3 applications*².

I have no concerns with the draft report however my opinion may change as more site-specific details/studies become available.

STATEMENT of LIMITATIONS

The purpose of the preceding review is to provide advice to the Ministry of the Environment, Conservation and Parks regarding subsurface conditions based on a review of the information provided in the above referenced document. The conclusions, opinions and recommendations of the reviewer are based on information provided by others. The Ministry cannot guarantee that the information that has been provided by others is accurate or complete. A lack of specific comment by the reviewer is not to be construed as endorsing the content or views expressed in the reviewed material.

Good morning Daniel,

Responses to your questions are below in green - please let me know if you have any further questions or need more information.

1. Can you please confirm if it is just noise barriers that extend past Pape Avenue and would you be able to provide a map that shows the street names and colour coding more clearly?

Yes, it's just the noise barriers that extend past Pape Avenue. See pdf map attached. It's a bit more schematic, has street names and lets you zoom in and out. Hope it shows early works components and other elements of the project we included for context (labelled as Future Work) more clearly. This map is also available on the project website where the reports and consultation materials are posted <https://www.metrolinxengage.com/en/content/ontario-line-early-works-lakeshore-east-joint-corridor>

2. Are there any portions of the tracks that are going underground?

Lakeshore East Joint Corridor early works scope excludes any underground tracks construction. With respect to track work, it only includes shifting existing GO tracks 1 through 3, and constructing supporting infrastructure for previously approved GO track 4. Ontario Line tracks, both above- and underground, will be delivered outside of early works (by Ontario Line main contracts).

3. For the construction of noise barriers continuing east of Pape Avenue up to Jones Avenue, I am looking to confirm that this is not retaining wall too?

Confirmed, no retaining wall is planned in this area.

-Maria

Hi Maria,

In addition to my previous email, I do have a few more questions - Are there any

portions of the tracks that are going underground? Also, for the construction of noise barriers continuing east of Pape Avenue up to Jones Avenue, I am looking to confirm that this is not retaining wall too?

Thank you,
Daniel

Subject: Lakeshore East Joint Corridor

Hi Maria,

Upon review of the EWR, can you please confirm if it is just noise barriers that extend past Pave Avenue and would you be able to provide a map that shows the street names and colour coding more clearly?

Thank you,

Daniel Raisman | Project Officer
Environmental Assessment Branch

Good afternoon Cindy,

Wanted to let you know we will need a few extra days beyond November 12 to address multiple sets of comments and prepare and publish Final EH and LSE JC EWRs. We anticipate to be able to publish on Wednesday November 17, or 24 days following the review period end. This means MECP 35-day review period would end on Wednesday December 22.

I realize this is a few days beyond our originally planned date of Friday December 17, and hope December 22 works for the Ministry.

Please let me know if you'd like to connect to discuss further.

Thank you

-Maria

Hi Cindy,

Thank-you for your comments on the Early Works Reports. We will provide a response once we receive the full set of comments from the Ministry.

Based on comments received to date (review period ends October 24), we are confident that we can still publish the Final EWRs on November 12th. However, if there are any changes to the timeline based on the comments we receive from now until the end of the review period, we will provide an update next week.

Crystal Ho

Hello Crystal:

Thank you for the friendly reminder. I am still expecting additional comments from the ministry's air and noise reviewers. In the interim, please find below surface water review comments:

Ontario Line Lakeshore East Joint Early Works
Metrolinx, Draft Early Works Report, Ontario Line Lakeshore East Joint Corridor Early Works, prepared by AECOM Canada Ltd. September 2021

The Report did not identify any waterbody, wetland or other environmental sensitive features within the Lakeshore East Joint Corridor Early Works therefore I have no concerns with surface water or fish and fish habitat. In terms of storm water management, the Project has committed to properly manage storm water and develop Erosion and Sediment Control Plan during the project. Consider the location and urban settings I expect storm water and discharge, if any, will most likely be managed through city sewer system. The Ministry does not have major concerns if they meet Toronto sewer use bylaw. No follow-up is required.

Ontario Line East Harbour Station Early Works
Metrolinx, Draft Early Works Report, Ontario Line East Harbour Station Early Works, prepared by AECOM Canada Ltd. September 2021

The East Harbour Station Early Works Project is located 30 metres away from the Lower Don River and no in-water works are proposed. The Report proposed buffers, Erosion and Sediment Control Plan, Spill Prevention and Response Plan and Stormwater Management Plan to be developed to minimize impacts to watercourses. The assessment and commitments appear to be adequate to address surface water concerns.

Consider the location and urban settings I expect storm water and discharge, if any, will most likely be managed through city sewer system. The Ministry does not have major concerns if they meet Toronto sewer use bylaw. No follow-up is required.

Can you confirm when Metrolinx intends on posting the notice of final publication of the EWRs?

Thanks,

Cindy

Hello Maria and Merlin,

Please find attached comments from our Central Regional Office for the early works reports. **It is**

recommended that Metrolinx include a table in the EIAR that includes all commitments made to address ministry comments since Metrolinx initiated the process. Having all commitments made to address ministry comments or other comments be in one spot will help to facilitate the review of the final report for the Ontario Line process.

Thank you,

Cindy

Hello there,

Today, Metrolinx took another step in the Ontario Line environmental assessment process with the release of the Draft [East Harbour](#) and [Lakeshore East Joint Corridor](#) Early Works reports.

You can access these environmental reports on Metrolinx Engage and **provide your feedback until October 24, 2021**. We are also hosting an additional engagement opportunity for these specific reports on October 5, 2021.

In addition, I want to draw attention to the release of the [Immersive Sound Demo](#) for the Lakeshore East Joint Corridor and a [consultation we are launching](#) on the design elements for the future retaining/noise walls in this area.

We have also been holding open houses for different neighbourhoods across the Ontario Line. Tonight at 6:30pm, we will be focusing on the east segment from East Harbour to Gerrard and [you can sign up here](#).

Feel free to reach out should you have any further questions,

Daryl Gonsalves

Subject: Ontario Line - Notice of Draft Lakeshore East Joint Corridor EWR and East Harbour Station EWR
Date: September 23, 2021
Attachments: [REDACTED]

Good afternoon Lisa,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Lisa Trevisan,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment
Metrolinx

Attachments: Attachment 1 - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report
Attachment 2 - Notice of Publication of Draft East Harbour Station Early Works Report

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Kathleen O'Neill,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Good afternoon Cindy,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Cindy Batista,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

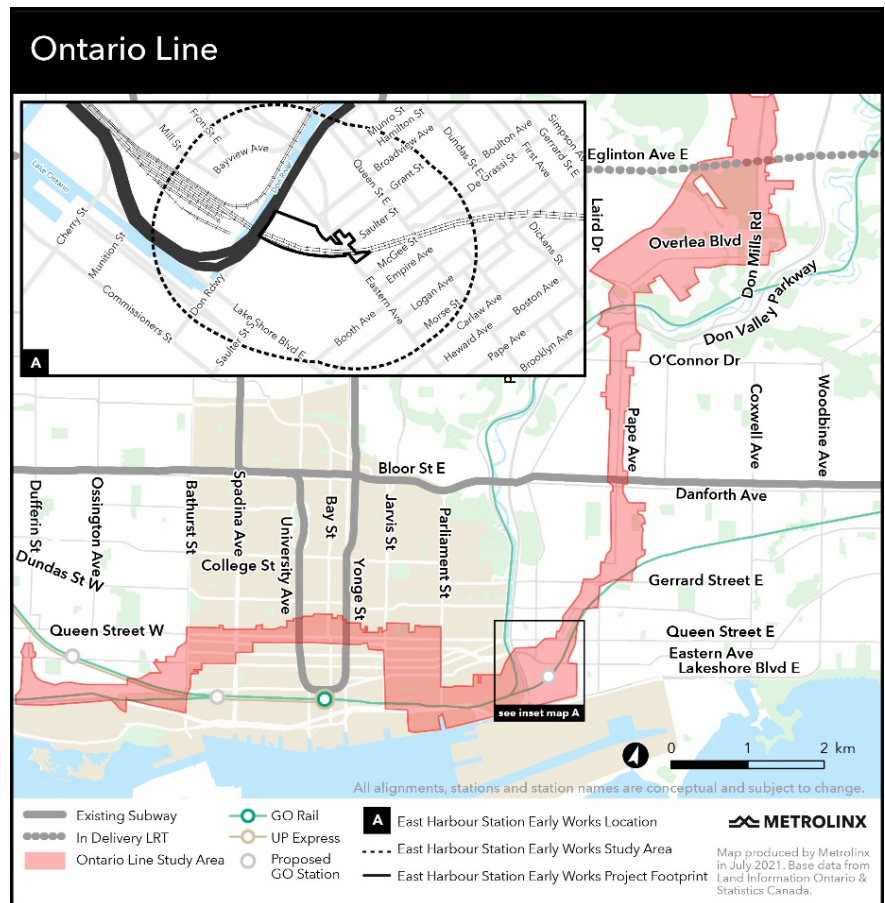

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Good morning Cindy,

Ahead of the scheduled publication of the draft East Harbour Station early works report on September 23, 2021, please see attached comment responses to the Ministry's original set of comments on the consolidated Ontario Line draft early works report, first circulated on July 3, 2020.

Let us know if any additional comments or questions on our responses and we can revise accordingly.

Thanks,

MERLIN YUEN

Review Code:	Document Name:	Ontario Line - EW - AQ Memo - MECP Comment Sheet	Revised By:	Name, Acronym
Location:	Contract Name:		Date In:	
% Completion:	Contract No:		Date Out:	

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Action 1 / 2 / 3* (Authors)	August 2021 EH EWR Revised Response
1	Amanda Graham	Air Quality	Section 1.1	Section 1.1 states that the Air Quality Memorandum (AQM) assesses construction effects and identifies mitigation measures relating to the Early Works. For clarity, the AQM should also state when potential air quality impacts from the operations of the Ontario Line will be assessed. The AQM should also clarify when or if air quality impacts from the operation of the larger aspects of the Early Works will be assessed, such as the underpass for the Broadview Avenue extension and the expansion of the Eastern Avenue rail bridge to accommodate the two Ontario Line tracks.	Section 2 Methodology clarifies that this Air Quality Report assesses the potential construction impacts of early works, and Project operations will be assessed under a separate cover.		Section 2 Methodology clarifies that this Air Quality Report assesses the potential construction impacts of early works, and Project operations will be assessed under a separate cover.
2	Amanda Graham	Air Quality	Section 1.3, Table 1-1	Please clarify if the six new bridges as part of the Lakeshore East Joint Corridor will accommodate vehicle or other rail traffic, or if the new bridges will only be used for the Ontario Line.	In updated revisions of the report, Ontario Line early works have been split into separate reports. Lakeshore East Joint Corridor early works will be assessed under separate cover. Response to this comment will be revisited as part of updates to the Lakeshore East Joint Corridor early works report.		Comment is not applicable to East Harbour Station EWR.
3	Amanda Graham	Air Quality	Tables 2-1 and 2-4	Tables 2-1 and 2-4 do not show the same values for the 1-hour SO2 AAQC. Table 2-1 and the % of Standard Limit calculations in Table 2-4 should be revised to reflect the updated 1-hour and annual SO2 AAQCs. The updated SO2 AAQCs have the same values as the revised SO2 O. Reg. 419/05 SO2 standards which will come into effect in 2023. Note the SO2 1-hour AAQC has been updated from 275 ug/m3 to 100 ug/m3, and the annual SO2 AAQC has been updated from 55 ug/m3 to 10 ug/m3. Further, there is no longer a 24-hour SO2 AAQC. Since the online AAQC list has not yet been updated to reflect these changes, please refer to the decision document for additional information https://prod-environmental-registry.s3.amazonaws.com/2018-03/SO2%20Decision%20Document%20%28March%202018%29_0.pdf	Updates will be incorporated into Tables 2-1 and 2-4 as suggested.		Updated Table 2-1 and Table 3-1 accordingly.
4	Amanda Graham	Air Quality	Section 2.1 and Tables 2-3	Typically, the background concentrations used in EAs are determined by calculating the 90th percentile value from a 5 year data set for each averaging period. However, the description in Section 2.1 suggests that the 1-hour, 8-hour and 24-hour background values were calculated by averaging each year's 90th percentile value of the hourly measurements. Please clarify the approach to determining 1-hour, 8-hour and 24-hour background concentrations shown in Table 2-3 and, if required, address the wording in the first bullet point of Section 2.1.	The approach to calculating the overall 90th percentile for the data set was to calculate the individual year's 90th percentile data, provided in a 1-year format from the NAPS Monitoring online data portal (as shown in Table 2-3), then to average a selection of the most recent and complete five year's 90th percentile data (shown in Table 2-4). The wording in the first bullet point of Section 2.1 will be updated to clarify this approach.		The approach to calculating the overall 90th percentile for the data set was to calculate the individual year's 90th percentile data, provided in a 1-year format from the NAPS Monitoring online data portal (as shown in Table 2-2), then to average a selection of the most recent and complete five year's 90th percentile data. This has been clarified in Section 3.1 of the Air Quality Report.
5	Amanda Graham	Air Quality	Table 2-4	Please clarify how the average of background data values shown in Table 2-4 were calculated as they do not seem to correlate with the 90th percentile values shown in Table 2-3.	Background data values in Table 2-4 were calculated in the same methodology as indicated in the response to comment no. 4. Any typos in averaging between Table 2-3 and 2-4 will be corrected.		This has been clarified in Section 3.1 of the revised Air Quality Report.
6	Amanda Graham	Air Quality	Table 2-4	Table 2-4 should include the 1-hour NO2 and SO2 CAAQS. Since this would be for comparison purposes only, a direct comparison with the 90th percentile background value is acceptable, as opposed to calculating the CAAQS metrics.	Table 2-4 will be updated to include the 1-hour NO2 and SO2 CAAQS limits for comparison. The comment regarding comparison to 90th percentile background data is noted.		This has been clarified in Table 3-1 of the revised Air Quality Report.
7	Amanda Graham	Air Quality	Section 4.1, Section 1.3 of the Air Quality Management Plan (AQMP)	Section 4.1 states that the "Air Monitoring Directive" (2016), published by the Alberta Environment and Parks (AEP), was used as "an additional guideline for best practices." Please clarify what additional best practices from Alberta's Air Monitoring Directive were included in this AQMP that are not found in or differ from the ministry's Operations Manual for Air Quality Monitoring in Ontario (2018).	Noted - The Ontario Manual for Air Quality Monitoring (2018) will be the primary document referred to for guidance. The text will be updated to differentiate items adopted from AMD versus items adopted from the Ontario Manual.		The Alberta air quality monitoring guidance document has been removed. The Ontario Manual for Air Quality Monitoring (2018) is referenced as the document for guidance.

8	Amanda Graham	Air Quality	Table 1 of the AQMP	Please note that the most recent published version of the AAQCs is dated 2016.	Noted - Table 2 will be revised to the correct date.		<p>The AAQC levels listed in Table 2-1 and Table 3-1 of the AQ report (EWR Appendix A3) are current to May 1, 2020 and the reference has been updated accordingly.</p> <p>The exception to this is the use of sulphur dioxide standards from the technical memorandum "Technical Assessment and Standards Development Branch Ministry of the Environment and Climate Change: Ontario Air Standards for Sulphur Dioxide" (2018) as recommended by the MECP commentary on both the Early Works and Existing Conditions reports for Ontario Line. The comparable standards for Sulphur dioxide within the May 2020 AAQC are listed in ppb, rather than ug/m3 with a 20oC temperature used for conversion, rather than 10oC as referenced in the report and requested by MECP during the review period. This is explained in Note #2 below Table 2-1.</p>
9	Amanda Graham	Air Quality	Table 2 of the AQMP	Table 2 indicates that the maximum background values are presented. However, when compared with Table 2-4 of the memorandum, these values seem to be the 2017 90th percentile calculations only. Please clarify.	Noted - Table 3 will be revised to indicate most recent background values, rather than maximum background values.		A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. The values in Table 3-1 of the revised Air Quality report reference the 2017 90th percentile values.
10	Amanda Graham	Air Quality	Table 3 and Table 6 of the AQMP	The PM2.5 24-hour AAQC is 27 ug/m3 rather than 25 ug/m3.	As per comment number 8 under the AAQC Summary Table, 25 ug/m3 was selected as recommended threshold for decision making near individual sources provided on MECP website " https://www.ontario.ca/page/ontarios-ambient-air-quality-criteria-sorted-contaminant-name "		A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Application of threshold "Action Level" triggers for implementation of specific and increasing intensity mitigation activities linked to specific construction activities have been included in the mitigation table within the Air Quality Report and subsequent plans to management air quality will reference the correct PM2.5 AAQC value.
11	Amanda Graham	Air Quality	Section 3.2 of the AQMP	Section 3.2 should clearly state how many meteorological stations will be set up for each of the four Early Works projects.	Noted - Text will be revised to clarify this point. Only one meteorological station is recommended for the area, representing all Early Works projects.		A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Mitigation measures including on-site meteorological monitoring in conjunction with real time particulate monitoring representative of receptor impacts are included in the mitigation table within the Air Quality Report and the consideration for stating how many meteorological stations will be set up in the early works study area will be included in a subsequent plan to manage air quality.
12	Amanda Graham	Air Quality	Section 3.3	It is recommended to monitor baseline conditions for longer than 1 week in order to capture representative concentrations under varying meteorological conditions.	Agreed - We recommended the baseline monitoring should be conducted for at least one week, however consultation with the construction contractor will determine the ability to install and operate monitoring stations in advance of this recommendation for each Early Works Study Area.		Comment noted. A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Significant construction air quality impacts are not anticipated at this time due to the scope and nature of the work. Baseline monitoring duration will be project-specific and will be confirmed as design progresses and more detailed implementation information is available.
13	Amanda Graham	Air Quality	Section 3.3, Figures 7 & 8	It is recommended, where possible, to site monitors both upwind and downwind of construction activities at each of the Early Works sites.	Agreed - Historical meteorological conditions for each Early Works project were investigated in preparation of the AQMP, and suggested monitoring station locations were indicated based on both upwind and downwind impacts surrounding each Early Works project site as well as location of respective critical and sensitive receptors.		A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. The mitigation table of the revised Air Quality Report, includes monitoring activities which note that siting monitors both upwind and downwind of construction activities will be completed, where possible.
14	Amanda Graham	Air Quality	Section 3.3	Please clarify why the Alberta Air Monitoring Directive 2016 was followed for siting criteria of continuous and intermittent samplers as opposed to Section 5 of the ministry's Operations Manual for Air Quality in Ontario (2018).	Noted - The Ontario Manual for Air Quality Monitoring (2018) will be the primary document referred to for guidance. The text will be updated to differentiate items adopted from AMD versus items adopted from the Ontario Manual.		The Alberta air quality monitoring guidance document has been removed. The Ontario Manual for Air Quality Monitoring (2018) is referenced as the document for guidance.

15	Amanda Graham	Air Quality	Section 3.3 AQMP	It is recommended to consider increasing the frequency of 24-hour silica sampling from every 3 months to monthly in order to be conservative and ensure that silica concentrations are being accurately calculated on an hourly basis. In addition, Section 3.3 states that silica sampling shall be performed under normal construction conditions. It is recommended to perform silica sampling when activities that are expected to contribute to particulate and silica emissions are being conducted rather than only being performed under normal construction conditions.	The silica content is expected to vary based on the type of the earthwork activity as well as the meteorological conditions that could drive the fugitive dust emission from the site activities. The regular seasonal sampling was proposed to capture the effect of changes in meteorological conditions including temperature, humidity, etc. In addition to regular sampling, it was identified that additional silica sampling should be performed "upon any major changes in the type of construction activities in the area near all monitoring station locations". AECOM proposes that mandatory monthly sampling would not provide further benefit in addition to the measures already in place within the AQMP.		A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. The plan will be developed to ensure consistent attention to mitigation of dust and particulates, including silica, as outlined in the Table 4-1 of the Air Quality Report.
16	Amanda Graham	Air Quality	Table 4	Table 4 states that several monitoring activities will continue "throughout project duration". Please clarify if this means throughout construction only, or if monitoring will continue through operation of the Ontario Line.	The project duration refers to the duration of the construction activities.		The monitoring activities are specific to the East Harbour Station early works are outlined in this report. Project-wide mitigation and monitoring will be addressed in the Environmental Impact Assessment Report.
17	Amanda Graham	Air Quality	Table 6	It is unclear if there is a complaint response procedure for dust complaints and how this procedure would be integrated into the Immediate Response column of Table 6.	Noted - the AQMP Section 7 will be revised accordingly to clarify.		A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Table 4-1 of the Air Quality Report includes the development of a complaints resolution process as part of the early works.
18	Amanda Graham	Air Quality	Section 6.2.1	The ministry's Operations Manual for Air Quality in Ontario (2018) recommends consulting the Standards Council of Canada (SCC) or the Canadian Association for Laboratory Accreditation (CALA) for a list of accredited Ontario analytical laboratories to perform specific air analyses.	Noted - the AQMP will be revised to include this recommendation.		A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Laboratory work will be carried out by independent subcontracted analytical facilities that have QA/QC procedures including consulting the Standards Council of Canada (SCC) or the Canadian Association for Laboratory Accreditation (CALA) for a list of accredited Ontario analytical laboratories to perform specific air analyses.
19	Amanda Graham	Air Quality	AQMP	The AQMP should include a section that describes what action will be taken if contaminated soil is discovered during construction activities.	AECOM understands the recommendation to include action taken if contaminated soil is discovered during construction activities. These actions would typically be captured in a contaminated soils management plan, or similar document.		A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Table 4-1 of the Air Quality Report includes measures to be taken if contaminated soil is disrupted during construction.

Project Name: Ontario Line Draft Early Works Report (EWR)

Revised By:

Project No:

Date In:

Draft Environmental Reports

Date Out:

Item No.	Reviewer Name	Report Name	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Action 1 / 2 / 3* (Authors)	August 2021 EH EWR Revised Response
1	C. Batista	Draft EWR	Introduction	This section states that the draft EWR has been completed in accordance with Section 8 of the Ontario Line Regulation. Please note that the correct regulation name is Ontario Regulation 341/20, Ontario Line Project. It is understood that at the time this report was being written, the regulation name was not finalized. Please update report to reflect new regulation name, accordingly.	This will be updated in all revised reports to refer to the Ontario Line Regulation as O. Reg. 341/20, Ontario Line Project.		Response provided. No further report revisions required.
2	C. Batista	Draft EWR	Section 1.2	This section states that Metrolinx is proceeding with 4 priority projects and Ontario Line Project, as one of the 4, however, it is understood that the Yonge Subway extension, although identified as a priority project, it is currently not going ahead at this time. Please confirm. Also for some context for the readers, a description of what the priority projects are and why they are considered priority will be helpful for readers to understand.	In updated revisions of the report, this sentence referencing the four priority subway projects has been removed and revised to focus on the Ontario Line.		Response provided. No further report revisions required.
3	C. Batista	Draft EWR	Section 1.2	The Relief Line Project had three proponents, Metrolinx, City of Toronto and TTC. Please make correction.	In updated revisions of the report, this sentence has been removed.		No revisions required. This language is no longer in the reports.
4	C. Batista	Draft EWR	Section 1.2	The 'Project Overview' section should include additional details about the project, such as, how much of the subway line will be underground vs. above ground, number of new bridges and crossings, etc.	Project details such as alignment length, station locations, and number of stations have been included in the Project Overview section however, project details are still being refined and as such, have not been documented in this section.		Response provided, no revisions required.
5	C. Batista	Draft EWR	Section 3	This section, along with describing the early works activities, is also suppose to describe the alternatives that were considered. This section does not describe alternatives that were considered for the project. This is a requirement under section 8(2)(1) of the Ontario Regulation 321/20, Ontario Line Project.	In updated revisions of the report, Section 1.3.3 describes alternatives considered for the project.		Section 1.3.3 discusses alternatives considered.

6	C. Batista	Draft EWR	Section 3	<p>Although this section does provide a description of the early works activities, it is very light in terms of the level of detail one would expect see for early work activities. For example:</p> <ul style="list-style-type: none"> - no specifics regarding the passenger tunnels and the exact location of where they will be constructed; - the report speaks to improvements to portions of the existing GO platforms, but does not describe what these are; - two new bridges will be constructed on each side of the existing rail bridge which crosses the Don River, but it is unclear where these bridges will be built; and, - the proposed East Harbour station that was originally proposed for the Smart Track project will require minor changes to accommodate the Ontario Line project but the minor changes are not described. <p>Figures showing the site plan for early work activities should be included in addition to providing more details about the early work activities/infrastructure. It is not clear to the reader where in the footprint, the early work activities will be constructed.</p>	<p>Early works components placement and detailed description is provided in the revised report. Refer to Figures 3-1 and 3-3.</p> <p>Information regarding East Harbour Station has been revised to be in its own early works report, under separate cover.</p>	<p>Updated East Harbour early works project footprint and study area mapping and an updated project description are included in Section 3 of the EWR.</p>
13	C. Batista	Draft EWR	Section 4.1.1	<p>In this section it states that natural environment conditions were documented based on the review of the following previously completed EPRs within the study area. The one report listed in this section is not an EPR. The 'Natural Environment Screening Memorandum Exhibition GO Station (4Transit, 2020)' appears to be a report that was prepared perhaps for this Project? It is not clear. Will all of the supporting documentation used for the Early Works Report be available online? These reports should be made available, if possible.</p>	<p>The Natural Environment Screening Memorandum Exhibition GO Station (4Transit, 2020) was prepared in support of the Lakeshore West Infrastructure Improvements Project. The error referencing an EPR has been corrected. The original memo was developed in 2018 and posted on the Metrolinx website as part of the Lakeshore West project. The 2020 memo was an addendum to the 2018 and 2019 memo, and is not planned to be provided for public review.</p>	<p>Not applicable to East Harbour Station Early Works.</p>
14	C. Batista	Draft EWR	Section 4.0	<p>This section states that a natural environment early works report was prepared. The ministry does not recall this report being shared with ministry staff for review. Will this report be made available at the same time the draft early works report is made available for public review?</p>	<p>A natural environment report was prepared in support of the Exhibition Station early works for which the natural heritage findings are summarized within the Exhibition Station Early Works Report and will be appended to the main Early Works Report. This report will be made available for review in conjunction with the review of the Draft Early Works Report.</p>	<p>The Natural Environment Report for East Harbour Station early works will be available for review as Appendix B1 to the EWR</p>
15	C. Batista	Draft EWR	Surface Water	<p>Some aspects of the project, such as stations, will require SWM and control works while the tunneled track routes would not. It is assumed that most above grade sections will probably be along existing road easements. Please confirm.</p> <p>It appears that the report provides for high level identifications of what may be needed and this will be confirmed during the detail design stage. Therefore, Metrolinx needs to acknowledge that stations and other infrastructure (this needs to be described) required for the Ontario Line Project will require SWM plan and those will be prepared along with the detailed design for each section of the project.</p>	<p>Additional details have been provided in the revised report that outline surface water conditions within the Exhibition Station early works study area and footprint. Language has also been added to the impact and mitigation table noting that SWM report will be completed prior to construction.</p>	<p>Additional details have been provided in the East Harbour Station Early Works Report that outline surface water conditions within the East Harbour Station early works study area and footprint. Language has also been added to the impact and mitigation table noting that a Stormwater Management Plan will be completed prior to construction.</p>

16	C. Batista	Draft EWR	Hydrogeology	<p>The geological information included in the report above provides a very superficial description of the geology along the proposed alignment of the proposed Ontario Subway Line. It is recommended that the following be addressed:</p> <ol style="list-style-type: none"> 1. A detailed description of the hydrogeology and stratigraphy will be required to satisfy the requirements of the Permit To Take Water (PTTW) or Construction Dewatering EASR. Site specific data may be required. The level of detail required for a PTTW and EASR is much more detailed than the desk top study included in this EA. <p>Possible ground settlement from dewatering will also need to be addressed.</p> <ol style="list-style-type: none"> 2. Knowledge of contaminated sites along the alignment if they occur will enable the preparation of contingency and mitigation measures for excess soil and construction dewatering. To obtain information on locations of contaminated sites along the alignment, the proponent may consider accessing ministry records (possibly through FOI). <p>City of Toronto Archives can also be consulted to locate areas of past industrial activities.</p> <ol style="list-style-type: none"> 3. Discharge from construction dewatering to the natural environment or storm sewers may require an ECA, depending on the quality of the discharge water and treatment needs to meet the Ministry's and/ or City of Toronto's requirements. <p>Characterization of groundwater along the alignment will be required.</p> <ol style="list-style-type: none"> 4. The ministry's new excess soil will need to be incorporated into the project's soil management. <ol style="list-style-type: none"> a. Handling excess soil https://www.ontario.ca/page/handling-excess-soil , b. O. Reg. 406/19 On-Site and Excess Soil Management Regulation https://www.ontario.ca/laws/regulation/r19406 , and c. Management of Excess Soil - A Guide for Best Management Practices https://www.ontario.ca/page/management-excess-soil-guide-best-management-practices . 5. The stratigraphy along the alignment should be described in much greater detail. Locations, depths and thicknesses of aquifers and aquitards should be determined to inform a PTTW but also construction options. It is imperative that pressurized aquifers be identified if present. Consideration should be given to micro-seismic surveys and boreholes to accomplish this. The objective is to minimize "surprises!" 	<p>Additional details have been added to the Exhibition Station Early Works Report to outline hydrogeology and stratigraphy conditions within the study area and project footprint. The revised Table 4-1 also includes potential impacts and mitigation for groundwater quantity/quality, and dewatering. The table also mentions that soil management will be in-line with O. Reg 406/19.</p> <p>It is acknowledged that discharge from construction dewatering into the natural environment or stormsewers may require an ECA.</p> <p>A description and characterization of groundwater has been included in Section 5.2.</p>	<p>Additional details have been added to the East Harbour Station Early Works Report to outline hydrogeology and stratigraphy conditions within the study area and project footprint. Table 6-2 includes potential impacts and mitigation measures for groundwater quantity/quality, and potential dewatering. Requirements of Ontario Regulation 406/19: On-Site and Excess Soil Management will be met.</p> <p>It is acknowledged that discharge of dewatering effluent will be governed by the discharge approval obtained for the Project, which could include one or a combination of a Municipal Discharge Permits, Conservation Authority Approval, and/or Ministry of the Environment, Conservation and Parks Environmental Compliance Approval.</p> <p>A description and characterization of groundwater has been included in Section 5.2.</p>

Subject: [EXTERNAL] RE: Ontario Line - LSE-JC Operational N&V + EWR Comment Response
Date: Tuesday, September 21, 2021 7:53:08 AM
Attachments: [REDACTED]

Good morning Cindy,

Please see attached comment responses to the below set of comments on the OL LSE-JC Operational Noise and Vibration Report circulated on July 19, 2021, and also revised LSE-JC responses to the comments circulated by the Ministry on the initial draft of the Early Works Report on July 3, 2020.

Let us know if any additional comments or questions on our responses and we can revise accordingly.

Thanks,

MERLIN YUEN

Project Name: Ontario Line and OnCorr Lakeshore East Joint Corridor Noise & Vibration Operations

Revised By: MECP

Project No:

Date In:

Date Out:

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Review Comment
1	Kevin A Smith	Typo	Table 3-1 Title: Provided Ontario Line Train Seeds	Table 3-1 Title: Should be: Provided Ontario Line Train Speeds	Comment noted, this revision has been made in the updated report.	
2	Kevin A Smith	Ontario Line sound and vibration limits are absolute	Table 3-2, Ontario Line contribution over 60 dBA daytime, 55 dBA nighttime	Why does "Meets GO/TTC Protocol Criteria [Y/N]" indicate YES, for OL_LSE_POR_POW2, OL_LSE_POR_POW10, OL_LSE_POR_OUT10, OL_LSE_POR_POW11, OL_LSE_POR_POW16, OL_LSE_POR_POW19, when the future Ontario Line contributions are above 60 dBA daytime and above 55 dBA nighttime?	As per the MOEE/GO protocol and MOEE/TTC criteria, noise limits are relative to either the higher of 55 dBA/50 dBA for respective day/night periods, or the predicted existing ambient noise for those time periods. This has been further clarified in Section 3.1.	
3	Kevin A Smith	Soil and subsurface conditions are known to have a strong influence on the levels of ground borne vibration. Among the most important factors are the stiffness and internal damping of the soil and the depth to bedrock	Appendix	Appendix should provide sample calculation of vibration impact from Ontario Line at worst case residential receptor, as per FTA, showing all factors affecting vibration. Has the consultant added a vibration penalty of +10 dB to each dwelling if the depth to bedrock is less than 9.1m?	A 10 dB vibration penalty has not been included within the assessment. The methodology used within this report has been consistent with previous studies of the Lakeshore East rail corridor. It's understood that the majority of the rail is supported on an embankment constructed of fill material. As such, it does not exhibit characteristics of efficient propagation. As well, since the rail is supported on an embankment, this configuration would be expected to result in lower vibration levels relative to a typical at grade configuration. However, the report does recommend that detailed vibration analysis, including vibration propagation testing to consider local ground conditions, be conducted in these areas in the detailed design stage in order to refine mitigation requirements. A sample calculation has been added to Appendix G.	
4	Kevin A Smith	Where are existing switches and crossovers? Where are new proposed switches and crossovers?	Appendix	Appendix should provide figure showing existing and proposed new track switches and crossovers	A figure of modelled crossover locations has been included in Appendix E.

Review Code:	Document Name: Ontario Line - EW - AQ Memo - MECP Comment Sheet	Revised By:	Name, Acronym
Location:	Contract Name:	Date In:	
% Completion:	Contract No:	Date Out:	

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	September 202+F8:G181 LSE JC EWR Revised Response
1	Amanda Graham	Air Quality	Section 1.1	Section 1.1 states that the Air Quality Memorandum (AQM) assesses construction effects and identifies mitigation measures relating to the Early Works. For clarity, the AQM should also state when potential air quality impacts from the operations of the Ontario Line will be assessed. The AQM should also clarify when or if air quality impacts from the operation of the larger aspects of the Early Works will be assessed, such as the underpass for the Broadview Avenue extension and the expansion of the Eastern Avenue rail bridge to accommodate the two Ontario Line tracks.	Section 2 Methodology clarifies that this Air Quality Report assesses the potential construction impacts of early works, and Project operations will be assessed under a separate cover through the Ontario Line Environmental Impact Assessment Report.
2	Amanda Graham	Air Quality	Section 1.3, Table 1-1	Please clarify if the six new bridges as part of the Lakeshore East Joint Corridor will accommodate vehicle or other rail traffic, or if the new bridges will only be used for the Ontario Line.	Lakeshore East Joint Corridor Early Works project description is updated in Section 3.1.
3	Amanda Graham	Air Quality	Tables 2-1 and 2-4	Tables 2-1 and 2-4 do not show the same values for the 1-hour SO2 AAQC. Table 2-1 and the % of Standard Limit calculations in Table 2-4 should be revised to reflect the updated 1-hour and annual SO2 AAQCs. The updated SO2 AAQCs have the same values as the revised SO2 O. Reg. 419/05 SO2 standards which will come into effect in 2023. Note the SO2 1-hour AAQC has been updated from 275 ug/m3 to 100 ug/m3, and the annual SO2 AAQC has been updated from 55 ug/m3 to 10 ug/m3. Further, there is no longer a 24-hour SO2 AAQC. Since the online AAQC list has not yet been updated to reflect these changes, please refer to the decision document for additional information https://prod-environmental-registry.s3.amazonaws.com/2018-03/SO2%20Decision%20Document%20%28March%202018%29_0.pdf	Updated Table 2-1 and Table 3-1 accordingly.
4	Amanda Graham	Air Quality	Section 2.1 and Tables 2-3	Typically, the background concentrations used in EAs are determined by calculating the 90th percentile value from a 5 year data set for each averaging period. However, the description in Section 2.1 suggests that the 1-hour, 8-hour and 24-hour background values were calculated by averaging each year's 90th percentile value of the hourly measurements. Please clarify the approach to determining 1-hour, 8-hour and 24-hour background concentrations shown in Table 2-3 and, if required, address the wording in the first bullet point of Section 2.1.	The approach to calculating the overall 90th percentile for the data set was to calculate the individual year's 90th percentile data, provided in a 1-year format from the NAPS Monitoring online data portal (as shown in Table 2-2), then to average a selection of the most recent and complete five year's 90th percentile data. This has been clarified in Section 3.1.
5	Amanda Graham	Air Quality	Table 2-4	Please clarify how the average of background data values shown in Table 2-4 were calculated as they do not seem to correlate with the 90th percentile values shown in Table 2-3.	Clarified in Section 3.1.
6	Amanda Graham	Air Quality	Table 2-4	Table 2-4 should include the 1-hour NO2 and SO2 CAAQS. Since this would be for comparison purposes only, a direct comparison with the 90th percentile background value is acceptable, as opposed to calculating the CAAQS metrics.	Clarified in Table 3-1.
7	Amanda Graham	Air Quality	Section 4.1, Section 1.3 of the Air Quality Management Plan (AQMP)	Section 4.1 states that the "Air Monitoring Directive" (2016), published by the Alberta Environment and Parks (AEP), was used as "an additional guideline for best practices." Please clarify what additional best practices from Alberta's Air Monitoring Directive were included in this AQMP that are not found in or differ from the ministry's Operations Manual for Air Quality Monitoring in Ontario (2018).	The Alberta air quality monitoring guidance document has been removed. The Ontario Manual for Air Quality Monitoring (2018) is referenced as the document for guidance.

8	Amanda Graham	Air Quality	Table 1 of the AQMP	Please note that the most recent published version of the AAQCs is dated 2016.	<p>The AAQC levels listed in Table 2-1 and Table 3-1 of the AQ report (EWR Appendix A3) are current to May 1, 2020 and the reference has been updated accordingly.</p> <p>The exception to this is the use of sulphur dioxide standards from the technical memorandum "Technical Assessment and Standards Development Branch Ministry of the Environment and Climate Change: Ontario Air Standards for Sulphur Dioxide" (2018) as recommended by the MECP commentary on both the Early Works and Existing Conditions reports for Ontario Line. The comparable standards for Sulphur dioxide within the May 2020 AAQC are listed in ppb, rather than ug/m3 with a 20oC temperature used for conversion, rather than 10oC as referenced in the report and requested by MECP during the review period. This is explained in Note #2 below Table 2-1.</p>
9	Amanda Graham	Air Quality	Table 2 of the AQMP	Table 2 indicates that the maximum background values are presented. However, when compared with Table 2-4 of the memorandum, these values seem to be the 2017 90th percentile calculations only. Please clarify.	A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. The values in Table 3-1 of the revised Air Quality report reference the 2017 90th percentile values.
10	Amanda Graham	Air Quality	Table 3 and Table 6 of the AQMP	The PM2.5 24-hour AAQC is 27 ug/m3 rather than 25 ug/m3.	A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Application of threshold "Action Level" triggers for implementation of specific and increasing intensity mitigation activities linked to specific construction activities have been included in the mitigation table within the Air Quality Report and subsequent plans to management air quality will reference the correct PM2.5 AAQC value.
11	Amanda Graham	Air Quality	Section 3.2 of the AQMP	Section 3.2 should clearly state how many meteorological stations will be set up for each of the four Early Works projects.	A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Mitigation measures including on-site meteorological monitoring in conjunction with real-time particulate monitoring representative of receptor impacts are included in the mitigation table within the Air Quality Report and the consideration for stating how many meteorological stations will be set up in the early works study area will be included in a subsequent plan to manage air quality.
12	Amanda Graham	Air Quality	Section 3.3	It is recommended to monitor baseline conditions for longer than 1 week in order to capture representative concentrations under varying meteorological conditions.	Comment noted. A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Significant construction air quality impacts are not anticipated at this time due to the scope and nature of the work. Baseline monitoring duration will be project-specific and will be confirmed as design progresses and more detailed implementation information is available.
13	Amanda Graham	Air Quality	Section 3.3, Figures 7 & 8	It is recommended, where possible, to site monitors both upwind and downwind of construction activities at each of the Early Works sites.	A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. The mitigation table of the revised Air Quality Report, includes monitoring activities which note that siting monitors both upwind and downwind of construction activities will be completed, where possible.
14	Amanda Graham	Air Quality	Section 3.3	Please clarify why the Alberta Air Monitoring Directive 2016 was followed for siting criteria of continuous and intermittent samplers as opposed to Section 5 of the ministry's Operations Manual for Air Quality in Ontario (2018).	The Alberta air quality monitoring guidance document has been removed. The Ontario Manual for Air Quality Monitoring (2018) is referenced as the document for guidance.

15	Amanda Graham	Air Quality	Section 3.3 AQMP	It is recommended to consider increasing the frequency of 24-hour silica sampling from every 3 months to monthly in order to be conservative and ensure that silica concentrations are being accurately calculated on an hourly basis. In addition, Section 3.3 states that silica sampling shall be performed under normal construction conditions. It is recommended to perform silica sampling when activities that are expected to contribute to particulate and silica emissions are being conducted rather than only being performed under normal construction conditions.	A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. The plan will be developed to ensure consistent attention to mitigation of dust and particulates, including silica, as outlined in the Table 4-1 of the Air Quality Report.
16	Amanda Graham	Air Quality	Table 4	Table 4 states that several monitoring activities will continue "throughout project duration". Please clarify if this means throughout construction only, or if monitoring will continue through operation of the Ontario Line.	The monitoring activities are specific to the LSE JC early works are outlined in this report. Project-wide mitigation and monitoring will be addressed in the Environmental Impact Assessment Report.
17	Amanda Graham	Air Quality	Table 6	It is unclear if there is a complaint response procedure for dust complaints and how this procedure would be integrated into the Immediate Response column of Table 6.	A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Table 4-1 of the Air Quality Report includes the development of a complaints resolution process as part of the early works.
18	Amanda Graham	Air Quality	Section 6.2.1	The ministry's Operations Manual for Air Quality in Ontario (2018) recommends consulting the Standards Council of Canada (SCC) or the Canadian Association for Laboratory Accreditation (CALA) for a list of accredited Ontario analytical laboratories to perform specific air analyses.	A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Laboratory work will be carried out by independent subcontracted analytical facilities that have QA/QC procedures including consulting the Standards Council of Canada (SCC) or the Canadian Association for Laboratory Accreditation (CALA) for a list of accredited Ontario analytical laboratories to perform specific air analyses.
19	Amanda Graham	Air Quality	AQMP	The AQMP should include a section that describes what action will be taken if contaminated soil is discovered during construction activities.	A plan to manage air quality will be completed prior to construction when additional design and implementation details are available. Table 4-1 of the Air Quality Report includes measures to be taken if contaminated soil is disrupted during construction.

Project Name: Ontario Line Draft Early Works Report (EWR)

Project No:

Draft Environmental Reports

Revised By:

Date In:

Date Out:

Item No.	Reviewer Name	Report Name	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	September 2021 LSE JC EWR Revised Response
1	C. Batista	Draft EWR	Introduction	This section states that the draft EWR has been completed in accordance with Section 8 of the Ontario Line Regulation. Please note that the correct regulation name is Ontario Regulation 341/20, Ontario Line Project. It is understood that at the time this report was being written, the regulation name was not finalized. Please update report to reflect new regulation name, accordingly.	Addressed in Section 1.
2	C. Batista	Draft EWR	Section 1.2	This section states that Metrolinx is proceeding with 4 priority projects and Ontario Line Project, as one of the 4, however, it is understood that the Yonge Subway extension, although identified as a priority project, it is currently not going ahead at this time. Please confirm. Also for some context for the readers, a description of what the priority projects are and why they are considered priority will be helpful for readers to understand.	Response provided. No further report revisions required.
3	C. Batista	Draft EWR	Section 1.2	The Relief Line Project had three proponents, Metrolinx, City of Toronto and TTC. Please make correction.	No revisions required. This language is no longer in the revised report.
4	C. Batista	Draft EWR	Section 1.2	The 'Project Overview' section should include additional details about the project, such as, how much of the subway line will be underground vs. above ground, number of new bridges and crossings, etc.	Response provided, no revisions are required to the most recent report.
5	C. Batista	Draft EWR	Section 3	This section, along with describing the early works activities, is also suppose to describe the alternatives that were considered. This section does not describe alternatives that were considered for the project. This is a requirement under section 8(2)(1) of the Ontario Regulation 321/20, Ontario Line Project.	Further language has been added in Section 1.3.3 to document alternatives considered for the LSE-JC segment of the Ontario Line.
6	C. Batista	Draft EWR	Section 3	Although this section does provide a description of the early works activities, it is very light in terms of the level of detail one would expect see for early work activities. For example: - no specifics regarding the passenger tunnels and the exact location of where they will be constructed; - the report speaks to improvements to portions of the existing GO platforms, but does not describe what these are; - two new bridges will be constructed on each side of the existing rail bridge which crosses the Don River, but it is unclear where these bridges will be built; and, - the proposed East Harbour station that was originally proposed for the Smart Track project will require minor changes to accommodate the Ontario Line project but the minor changes are not described. Figures showing the site plan for early work activities should be included in addition to providing more details about the early work activities/infrastructure. It is not clear to the reader where in the footprint, the early work activities will be constructed.	Section 3 of the revised LSE-JC EWR documents the project description including project activities and construction activities. A conceptual design figure has also been included into Section 3.
13	C. Batista	Draft EWR	Section 4.1.1	In this section it states that natural environment conditions were documented based on the review of the following previously completed EPRs within the study area. The one report listed in this section is not an EPR. The 'Natural Environment Screening Memorandum Exhibition GO Station (4Transit, 2020)' appears to be a report that was prepared perhaps for this Project? It is not clear. Will all of the supporting documentation used for the Early Works Report be available online? These reports should be made available, if possible.	Section 2.1.2 of the Natural Environment Report documents previously completed studies within the LSE-JC study area that are referenced in support of the LSE-JC EWR. Similar to the approach taken for the Exhibition EWR, these reports are not planned to be provided for public review as they were completed as part of other projects.

14	C. Batista	Draft EWR	Section 4.0	This section states that a natural environment early works report was prepared. The ministry does not recall this report being shared with ministry staff for review. Will this report be made available at the same time the draft early works report is made available for public review?	The Natural Environment Report for Lakeshore East Joint Corridor will be available for review as Appendix A1 to the EWR
15	C. Batista	Draft EWR	Surface Water	<p>Some aspects of the project, such as stations, will require SWM and control works while the tunneled track routes would not. It is assumed that most above grade sections will probably be along existing road easements. Please confirm.</p> <p>It appears that the report provides for high level identifications of what may be needed and this will be confirmed during the detail design stage. Therefore, Metrolinx needs to acknowledge that stations and other infrastructure (this needs to be described) required for the Ontario Line Project will require SWM plan and those will be prepared along with the detailed design for each section of the project.</p>	Additional details have been provided in the LSE JC EWR that outline surface water conditions within the LSE JC early works study area and footprint. Language has also been added to the impact and mitigation table noting that Stormwater Management Plan will be completed prior to construction.
16	C. Batista	Draft EWR	Hydrogeology	<p>The geological information included in the report above provides a very superficial description of the geology along the proposed alignment of the proposed Ontario Subway Line. It is recommended that the following be addressed:</p> <ol style="list-style-type: none"> 1. A detailed description of the hydrogeology and stratigraphy will be required to satisfy the requirements of the Permit To Take Water (PTTW) or Construction Dewatering EASR. Site specific data may be required. The level of detail required for a PTTW and EASR is much more detailed than the desk top study included in this EA. <p>Possible ground settlement from dewatering will also need to be addressed.</p> <ol style="list-style-type: none"> 2. Knowledge of contaminated sites along the alignment if they occur will enable the preparation of contingency and mitigation measures for excess soil and construction dewatering. To obtain information on locations of contaminated sites along the alignment, the proponent may consider accessing ministry records (possibly through FOI). <p>City of Toronto Archives can also be consulted to locate areas of past industrial activities.</p> <ol style="list-style-type: none"> 3. Discharge from construction dewatering to the natural environment or storm sewers may require an ECA, depending on the quality of the discharge water and treatment needs to meet the Ministry's and/ or City of Toronto's requirements. <p>Characterization of groundwater along the alignment will be required.</p> <ol style="list-style-type: none"> 4. The ministry's new excess soil will need to be incorporated into the project's soil management. <ol style="list-style-type: none"> a. Handling excess soil https://www.ontario.ca/page/handling-excess-soil , b. O. Reg. 406/19 On-Site and Excess Soil Management Regulation https://www.ontario.ca/laws/regulation/r19406 , and c. Management of Excess Soil - A Guide for Best Management Practices https://www.ontario.ca/page/management-excess-soil-guide-best-management-practices . 5. The stratigraphy along the alignment should be described in much greater detail. Locations, depths and thicknesses of aquifers and aquitards should be determined to inform a PTTW but also construction options. It is imperative that pressurized aquifers be identified if present. Consideration should be given to micro-seismic surveys and boreholes to accomplish this. The objective is to minimize "surprises!" 	<p>Additional details have been added to the LSE JC Early Works Report to outline hydrogeology and stratigraphy conditions within the study area and project footprint. Table 6-2 includes potential impacts and mitigation measures for groundwater quantity/quality, and potential dewatering. Requirements of Ontario Regulation 406/19: On-Site and Excess Soil Management will be met.</p> <p>It is acknowledged that discharge of dewatering effluent will be governed by the discharge approval obtained for the Project, which could include one or a combination of a Municipal Discharge Permits, Conservation Authority Approval, and/or Ministry of the Environment, Conservation and Parks Environmental Compliance Approval.</p> <p>A description and characterization of groundwater has been included in Section 5.2.</p>

Date: Tuesday, September 14, 2021 3:10:45 PM

Hi Cindy,

Thank you for the quick response!

These were shared as part of the Early Works Report draft we circulated in Summer 2020, when a single report covering all early works locations – including the Lakeshore East Joint Corridor and East Harbour Station - was planned. As with the Exhibition Station and Lower Don Bridge early works, Lakeshore East Joint Corridor and East Harbour Station are now stand-alone reports. We will be responding to Ministry's comments on the draft Early Works Report before publishing the Draft Lakeshore East Joint Corridor and East Harbour Station EWRs.

Thank you
Maria

Hello Maria,

Thank you for sharing the draft notice of publication for the Lakeshore East Joint Corridor and East Harbour Station EWRs. I have no comments on the notices. I do not recall Metrolinx sharing a draft EWRs? Will they be shared in advance of the postings on September 23rd?

Thank you,

Cindy

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

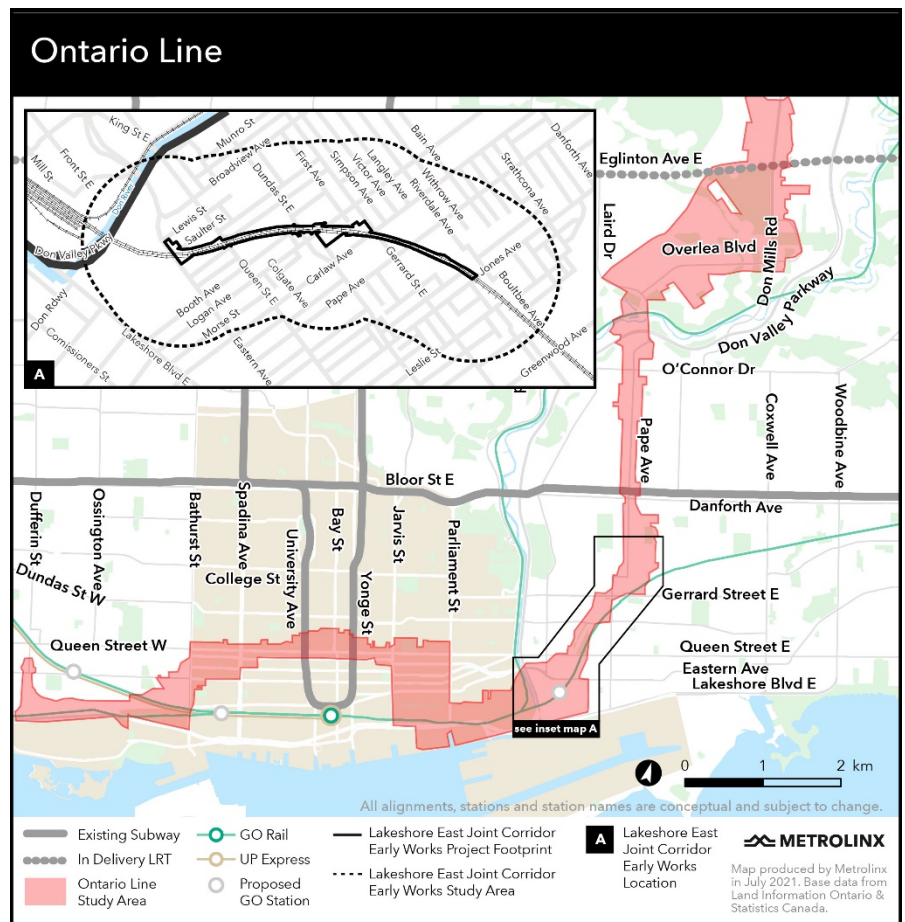

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks, replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue and construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line infrastructure; construction of a fourth GO track and the foundations for GO Overhead Catenary System poles between Eastern Avenue and Carlaw Avenue; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Hello Maria,

I have reached out to noise reviewer and asked him when he thinks he can complete his review. I am not aware of his current workload and work priorities. What would be an ideal review turnaround time by the ministry? You do not state below what Mx timelines are.

I will let you know what he says when I hear back.

Cindy

Subject: Ontario Line - Lakeshore East Joint Corridor operational noise & vibration report draft

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Good afternoon Cindy,

I wanted to let you know we are finalizing the draft Lakeshore East Joint Corridor (where Ontario Line tracks run parallel to GO) operational noise & vibration report and will be ready to send to MECP for review and comment as early as tomorrow, together with the model files.

Metrolinx is looking to install noise walls along the portion of the Joint Corridor between Eastern Avenue and Pape Avenue to keep noise levels as close to existing as feasible, and will be building these noise walls as part of early works planned to start early Summer 2022. To meet our implementation schedule, we are looking to obtain local community input on noise wall design (which is currently in its early stages) in the latter half of July (2021).

We are really hoping to have your input on the draft operational noise & vibration report before this engagement.

Recognizing this is coming in on a short notice, I wanted to see if it would be possible for your technical review team to expedite the review of this report, even if it's by a handful of days.

Would be great if we could connect over Teams or phone – please let me know what time would work best for you.

Thank you

Maria

Subject: RE: Ontario Line Environmental Conditions Report and draft Early Works.

Hello Maria,

Just wanted to follow-up on my email below. Both the ministry's surface water reviewer and District Office have now reviewed Metrolinx' responses. Please see updated comment response tables attached.

Thanks,

Cindy

From: Batista, Cindy (MECP) <Cindy.Batista@ontario.ca>

Subject: Ontario Line Environmental Conditions Report and draft Early Works.

Hello Maria,

Ministry staff have reviewed the comments response tables for the final Environmental Conditions Report (ECR) and draft Exhibition Station Early Works Report (EWR) and I can confirm the following:

- For the final ECR, the ministry has is satisfied with the Metrolinx responses to my comments and source protection. I am still waiting to hear back from the ministry's district office.
- For the draft EWR, we discussed comment #5 regarding alternative considered over the phone (EWR worksheet table) as well as the Metrolinx' responses to the air quality comments (AQ worksheet). As you will see in this worksheet, comments #7 to 19 have the same response.
 - There are no outstanding comments regarding noise and vibration. These comments have been addressed by Metrolinx.
 - I am also waiting to hear back from the reviewer on comment #15 as it relates to surface water.

Please let me know if you have any questions.

Thanks,

Cindy

Item No.	Discipline	Reviewer Name	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status
1	Groundwater	MECP District Office	Section 3	<p>We note that Metrolinx has included section 3.2.2.3 Groundwater Resources - Source Water Protection in the draft ECR. The draft ECR correctly identifies that the project would be occurring within the CTC Source Protection Region (CTC SPR), and falls under the CTC Source Protection Plan (CTC SPP). The draft ECR also discusses the vulnerable areas for the protection of drinking water sources that intersect with the project study area. In tables 3-14, 3-17, and 3-20 lists the applicable CTC Source Protection Plan policies for each of the line segments.</p> <p>We note that Table ES-2 does not address mitigation measures that relate to the protection of drinking water sources nor the implementation of applicable source protection plan policies. Table ES-2 lists several mitigative measures for the protection of the natural environment (e.g. spill prevention and contingency plans for the construction and design phases of the project) that would also protect sources of drinking water. We recommend that where measures could also benefit the protection of drinking water sources, that this be indicated in the existing sections of Table ES-2. With these additions, we are satisfied that the draft ECR addresses the protection of drinking water sources.</p>	<p>The following mitigation measures will be added to Table ES-2 and Table 4-2 of the Final ECR.</p> <ul style="list-style-type: none"> •Storage and Application of Road Salt: It is recommended that a Salt Management Plan that incorporates BMPs be employed on the project where the storage and application of road salt is required. •Handling and Storage of DNAPL: It is recommended that BMPs be employed on the project if the handling and storage of DNAPL is required. •Storage of Organic Solvent: It is recommended that BMPs be employed on the project if the storage of organic solvent is required. •Spill of Stored Fuel within Event Based Area: The policy related to this potential risk is specific to bulk fuel storage locations (i.e. tank farms). As this activity is not consistent with the proposed construction, it is evaluated that the related SPP policies do not apply. Despite this, where the storage and handling of fuel is required for the Ontario Line construction, it is recommended that related BMPs be employed. 		C

Project Name:	Ontario Line Environmental Conditions Report	Revised By:	
Project No:		Date In:	
		Date Out:	

Item No.	Discipline	Reviewer Name	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)
1	Executive Summary	Cindy Batista	ES.5	Section ES. 5 of the draft ECR states that 'future studies to support the Environmental Impact Assessment Report and/or Early Works Report(s) are not anticipated for soil and groundwater, air quality. . . ' However, in section 5.3 it states that 'an air quality impact assessment will be completed as part of the Environmental Impact Assessment Report.' Please clarify. Also, please confirm whether an air quality impact assessment report/s will be submitted to support the Early Works Report(s). In the same section of the draft ECR, it also states that 'future studies/plans to support construction activities are not anticipated for noise and vibration, socio-economic and land use characteristics, built heritage resources and cultural landscape, or archaeological resources.' Can Metrolinx provide an explanation as to why these reports are not anticipated for either the Environmental Impact Assessment Report or in future studies to support construction activities since the regulation anticipates that all environmental impacts will be studied.	This list refers to future studies aside from the Environmental Impact Assessment Report and/or Early Works Report(s). This will be clarified in ES.5 and Section 5 of the Final ECR. Natural environment, air quality, noise and vibration, cultural heritage, and traffic and transportation reports will be submitted to support the Early Works Report(s).	C
2	General	Cindy Batista	Section 1.2	Section 1.2 states that Metrolinx 'is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto Area, one of which is the Ontario Line.' It is suggested that here Metrolinx list what the other three priority projects are in order to provide additional context and information for the reader.	In updated revisions of the report, this sentence referencing the four priority subway projects has been removed and revised to focus on the Ontario Line to enhance clarity.	C
3	General	Cindy Batista	Section 1.3	Section 1.3 states that in 2014, the Relief Line South Project Assessment launched. For clarify, it is recommended that the draft ECR state that a transit project assessment process was completed for the Relief Line South Project; however, the project was not implemented and was replaced by the Ontario Line project, as opposed to saying it was launched. It may be unclear to readers what it means to say that this project was launched.	Section 1.3 of the Final ECR will be updated to clarify the history of the Relief Line South project and its relationship to Ontario Line.	C
4	General	Cindy Batista	Section 1.4	Section 1.4 states that the 'Ontario Line Study Area was established based on the representative alignment presented in the Ontario Initial Business Case.' The draft ECR should clearly describe how and why the boundaries of the overall study area were chosen. Readers should not have to refer to the Ontario Initial Business Case to understand how the study area was established. This document is not listed in the appendix and not sure if this document is available on your website for the public?	The Ontario Line IBC is available on the Metrolinx website. Details regarding the development of the Ontario Line Study Area, including a figure presenting the IBC representative alignment, will be added to Section 1.4 of the Final ECR.	C
5	Consultation	Cindy Batista	Section 7	The Ontario Line Project Regulation states that the consultation record should include a description of what Metrolinx did to respond to concerns expressed by Indigenous communities and interested persons; and, any commitments made by Metrolinx to Indigenous communities and interested persons. Section 7 of the draft ECR does not appear to include a description of what Metrolinx did to respond to any concerns expressed during the consultation process. Please include this description when finalizing the ECR.	This information will be more clearly included in Section 7 of the Final ECR.	C

1	Permits and Approvals	MECP District Office	Section 6	Section 6.2.3.2 indicates that project facilities such as storage facilities will be either registered on EASR or obtain ECA depending on the activity. Could you please clarify if this means that storage and laydown areas are included in the definition of storage facilities?	The EASR/ECA is applicable to permanent facilities that support project operations (i.e., maintenance and storage facility, traction power substations, etc.) and is not applicable for temporary construction storage or laydown areas. This will be clarified in Section 6.2.3.2 of the Final ECR.	MECP's District Office continues to have ongoing internal discussions regarding storage facilities for all transit projects. District Office staff will communicate directly with Metrolinx staff involved for any updates.
2	General	MECP District Office	General	A map of the study area was provided. Are the ancillary facilities inside this study area?	All project components (e.g., alignment, ancillary facilities, etc.) are anticipated to be located within the Ontario Line Study Area presented in the ECR.	C
3	Air Quality	MECP District Office	Table 4.1	Table 4.1 (Air Quality) – The only column for air quality is “construction air quality”. Metrolinx recommends the use of Environment Canada’s BMP to mitigate construction air quality. We suggest that the MECP’s Technical Bulletin “Management Approaches for Industrial Fugitive Dust Sources” should be used to mitigate dust from storage yards and other stationary sources.	These mitigation resources will be added to Table ES-1 and Table 4-1 of the Final ECR. The same update will be made to Appendix B2 (Air Quality Report).	C

Project Name: Ontario Line Draft Early Works Report (EWR)		Revised By:	
Project No:		Date In:	
Draft Environmental Reports		Date Out:	

Item No.	Reviewer Name	Report Name	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Action 1 / 2 / 3* (Authors)	Status O / P / C** (Reviewer)
1	C. Batista	Draft EWR	Introduction	This section states that the draft EWR has been completed in accordance with Section 8 of the Ontario Line Regulation. Please note that the correct regulation name is Ontario Regulation 341/20, Ontario Line Project. It is understood that at the time this report was being written, the regulation name was not finalized. Please update report to reflect new regulation name, accordingly.	This will be updated in all revised reports to refer to the Ontario Line Regulation as O. Reg. 341/20, Ontario Line Project.		C
2	C. Batista	Draft EWR	Section 1.2	This section states that Metrolinx is proceeding with 4 priority projects and Ontario Line Project, as one of the 4, however, it is understood that the Yonge Subway extension, although identified as a priority project, it is currently not going ahead at this time. Please confirm. Also for some context for the readers, a description of what the priority projects are and why they are considered priority will be helpful for readers to understand.	In updated revisions of the report, this sentence referencing the four priority subway projects has been removed and revised to focus on the Ontario Line.		C
3	C. Batista	Draft EWR	Section 1.2	The Relief Line Project had three proponents, Metrolinx, City of Toronto and TTC. Please make correction.	In updated revisions of the report, this sentence has been removed.		C
4	C. Batista	Draft EWR	Section 1.2	The 'Project Overview' section should include additional details about the project, such as, how much of the subway line will be underground vs. above ground, number of new bridges and crossings, etc.	Project details such as alignment length, station locations, and number of stations have been included in the Project Overview section however, project details are still being refined and as such, have not been documented in this section.		C
5	C. Batista	Draft EWR	Section 3	This section, along with describing the early works activities, is also suppose to describe the alternatives that were considered. This section does not describe alternatives that were considered for the project. This is a requirement under section 8(2)(1) of the Ontario Regulation 321/20, Ontario Line Project.	In updated revisions of the report, Section 1.3.3 describes alternatives considered for the project.		Mx to revise response based on MECP & Mx phone discussion.
6	C. Batista	Draft EWR	Section 3	Although this section does provide a description of the early works activities, it is very light in terms of the level of detail one would expect see for early work activities. For example: - no specifics regarding the passenger tunnels and the exact location of where they will be constructed; - the report speaks to improvements to portions of the existing GO platforms, but does not describe what these are; - two new bridges will be constructed on each side of the existing rail bridge which crosses the Don River, but it is unclear where these bridges will be built; and, - the proposed East Harbour station that was originally proposed for the Smart Track project will require minor changes to accommodate the Ontario Line project but the minor changes are not described. Figures showing the site plan for early work activities should be included in addition to providing more details about the early work activities/infrastructure. It is not clear to the reader where in the footprint, the early work activities will be constructed.	Early works components placement and detailed description is provided in the revised report. Refer to Figures 3-1 and 3-3. Information regarding East Harbour Station has been revised to be in its own early works report, under separate cover.		C
13	C. Batista	Draft EWR	Section 4.1.1	In this section it states that natural environment conditions were documented based on the review of the following previously completed EPRs within the study area. The one report listed in this section is not an EPR. The 'Natural Environment Screening Memorandum Exhibition GO Station (4Transit, 2020)' appears to be a report that was prepared perhaps for this Project? It is not clear. Will all of the supporting documentation used for the Early Works Report be available online? These reports should be made available, if possible.	The Natural Environment Screening Memorandum Exhibition GO Station (4Transit, 2020) was prepared in support of the Lakeshore West Infrastructure Improvements Project. The error referencing an EPR has been corrected. The original memo was developed in 2018 and posted on the Metrolinx website as part of the Lakeshore West project. The 2020 memo was an addendum to the 2018 and 2019 memo, and is not planned to be provided for public review.		C
14	C. Batista	Draft EWR	Section 4.0	This section states that a natural environment early works report was prepared. The ministry does not recall this report being shared with ministry staff for review. Will this report be made available at the same time the draft early works report is made available for public review?	A natural environment report was prepared in support of the Exhibition Station early works for which the natural heritage findings are summarized within the Exhibition Station Early Works Report and will be appended to the main Early Works Report. This report will be made available for review in conjunction with the review of the Draft Early Works Report.		C
15	C. Batista	Draft EWR	Surface Water	Some aspects of the project, such as stations, will require SWM and control works while the tunneled track routes would not. It is assumed that most above grade sections will probably be along existing road easements. Please confirm. It appears that the report provides for high level identifications of what may be needed and this will be confirmed during the detail design stage. Therefore, Metrolinx needs to acknowledge that stations and other infrastructure (this needs to be described) required for the Ontario Line Project will require SWM plan and those will be prepared along with the detailed design for each section of the project.	Additional details have been provided in the revised report that outline surface water conditions within the Exhibition Station early works study area and footprint. Language has also been added to the impact and mitigation table noting that SWM report will be completed prior to construction.		C

Item No.	Reviewer Name	Report Name	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Action 1 / 2 / 3* (Authors)	Status O / P / C** (Reviewer)
16	C. Batista	Draft EWR	Hydrogeology	<p>It is recommended that the following be addressed:</p> <p>1. A detailed description of the hydrogeology and stratigraphy will be required to satisfy the requirements of the Permit To Take Water (PTTW) or Construction Dewatering EASR. Site specific data may be required. The level of detail required for a PTTW and EASR is much more detailed than the desk top study included in this EA.</p> <p>Possible ground settlement from dewatering will also need to be addressed.</p> <p>2. Knowledge of contaminated sites along the alignment if they occur will enable the preparation of contingency and mitigation measures for excess soil and construction dewatering. To obtain information on locations of contaminated sites along the alignment, the proponent may consider accessing ministry records (possibly through FOI).</p> <p>City of Toronto Archives can also be consulted to locate areas of past industrial activities.</p> <p>3. Discharge from construction dewatering to the natural environment or storm sewers may require an ECA, depending on the quality of the discharge water and treatment needs to meet the Ministry's and/ or City of Toronto's requirements.</p> <p>Characterization of groundwater along the alignment will be required.</p> <p>4. The ministry's new excess soil will need to be incorporated into the project's soil management.</p> <p>a. Handling excess soil https://www.ontario.ca/page/handling-excess-soil ,</p> <p>b. O. Reg. 406/19 On-Site and Excess Soil Management Regulation https://www.ontario.ca/laws/regulation/r19406 , and</p> <p>c. Management of Excess Soil - A Guide for Best Management Practices https://www.ontario.ca/page/management-excess-soil-guide-best-management-practices .</p> <p>5. The stratigraphy along the alignment should be described in much greater detail. Locations, depths and thicknesses of aquifers and aquitards should be determined to inform a PTTW but also construction options. It is imperative that pressurized aquifers be identified if present. Consideration should be given to micro-seismic surveys and boreholes to accomplish this. The objective is to minimize "surprises!"</p>	<p>Additional details have been added to the Exhibition Station Early Works Report to outline hydrogeology and stratigraphy conditions within the study area and project footprint. The revised Table 4-1 also includes potential impacts and mitigation for groundwater quantity/quality, and dewatering. The table also mentions that soil management will be in-line with O. Reg 406/19.</p> <p>It is acknowledged that discharge from construction dewatering into the natural environment or stormsewers may require an ECA.</p> <p>A description and characterization of groundwater has been included in Section 5.2.</p>		C

1	Miroslav Ubovic	N&V	Section 1.1	The project length of 16-kilometre is inconsistent with Existing Environmental Condition report which states 15.5-kilometre.	This has been updated in the revised report to be consistent with the Existing Conditions Report.	1	C
2	Miroslav Ubovic	N&V	Section 1.4	The Station's Initial Preferred Design (IPD) that was described in Appendix A of the New SmartTrack Stations Environmental Project Report (EPR) Volume V (Metrolinx, 2018) should be included as the appendix to this report for the consistency of the review. Also, any changes in either of reference reports should be appropriately updated.	Project design has progressed since the SmartTrack Stations EPR and the most recent design will be captured within the Exhibition GO Early Works Report. All reference reports will be appropriately referenced in the revised report.	3	C
3	Miroslav Ubovic	N&V	Section 2	Noise and Vibration Environmental Conditions Report (AECOM, 2020) should be included as appendix for consistency of the review. Also, any changes in either of reference reports should be appropriately updated.	The Environmental Conditions Noise and Vibration Report is available on the Project website for review.	1	C
4	Miroslav Ubovic	N&V	Section 2	If vibration activities from construction occur at the same time as vibration from existing rail line, it may be beneficial to determine the base line.	This report takes the conservative approach of disregarding existing vibration levels as the report uses absolute limits, which do not change based on existing vibration levels.	3	C
5	Miroslav Ubovic	N&V	Section 3.1.3	Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment indicates that one-hour equivalent sound level, Leq is used for layovers, stationary sources and construction. Similarly, Lmax and L10 parameters are used for construction phase of the project. MECP noise levels are based on 1-hour LEQ. Further, Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment indicates that construction noise criteria is based on 15h/9h Leq, 15 min Leq, and Lmax. It is recommended that the baseline noise levels determined in the Existing Environmental Condition report are considered.	This report followed applicable criteria from the City of Toronto, the Ministry of the Environment, Conservation and Parks (MECP), and Federal Transit Administration (FTA). For construction noise, the report followed NPC-115 and NPC-118 criteria, and are highlighted in Section 2.	3	C
6	Miroslav Ubovic	N&V	Section 3.23	Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment indicates that vibration level of 0.1 mm/s RMS is applicable for Metrolinx projects.	This report followed applicable criteria from the City of Toronto, and the Ministry of the Environment, Conservation and Parks (MECP). For construction vibration, the report followed NPC-119 and NPC-207 criteria, and are documented in Section 2.	3	C
7	Miroslav Ubovic	N&V	Table 4.3	Noise data acoustical usage factor in percentage was used. The ministry assess the noise impact based on worst-case scenario which may be all equipment (physically possible) operate at full capacity at the same time.	Calculation based upon all equipment operating at their max noise levels would generate an instantaneous peak. This would not be appropriate to assess against the time averaged noise level limits. Equipment is not capable of sustained operation in this manner. Assessment was based upon all equipment operating over the course of the assessment period, corrected for normal operations (adjustment to peak/max level).	3	C
8	Miroslav Ubovic	N&V	Table 4.4	As per comment #5 and Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment uses different sound level criteria.	This report followed applicable criteria from the City of Toronto, the Ministry of the Environment, Conservation and Parks (MECP), and Federal Transit Administration (FTA). For construction noise, the report followed NPC-115 and NPC-118 criteria, and are highlighted in Section 2.	3	C

9	Miroslav Ubovic	N&V	Table 4.5	As per comment #5 and Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment uses different sound level criteria.	This report followed applicable criteria from the City of Toronto, the Ministry of the Environment, Conservation and Parks (MECP), and Federal Transit Administration (FTA). For construction noise, the report followed NPC-115 and NPC-118 criteria, and are highlighted in Section 2.	3	C
10	Miroslav Ubovic	N&V	Table 4.6	As per comment #5 and Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment uses different sound level criteria.	This report followed applicable criteria from the City of Toronto, the Ministry of the Environment, Conservation and Parks (MECP), and Federal Transit Administration (FTA). For construction noise, the report followed NPC-115 and NPC-118 criteria, and are highlighted in Section 2.	3	C
11	Miroslav Ubovic	N&V	Table 4.7	As per comment #5 and Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment uses different sound level criteria.	This report followed applicable criteria from the City of Toronto, the Ministry of the Environment, Conservation and Parks (MECP), and Federal Transit Administration (FTA). For construction noise, the report followed NPC-115 and NPC-118 criteria, and are highlighted in Section 2.	3	C
12	Miroslav Ubovic	N&V	Section 4.6.2	Applicable vibration limits for heritage properties should be included in the report.	This section has been revised to include suggested vibration limit for structures susceptible to vibration damage as per the FTA Guide.	1	C
13	Miroslav Ubovic	N&V	Section 5.2.2	Other applicable vibration limits that may apply should be referenced in the report.	This section has been revised to include other applicable vibration limits.	1	C
14	Miroslav Ubovic	N&V	Section 5.5.2	Applicable vibration limits for heritage properties should be included in the report.	This section has been revised to include suggested vibration limit for structures susceptible to vibration damage as per the FTA Guide.	1	C
15	Miroslav Ubovic	N&V	General	The sample calculations and all modeling files should be included in the submission to the MECP.	Sample calculations will be included in the revised report. Modeling files will be provided to the MECP.	1	C

1	Amanda Graham	Air Quality	Section 1.1	Section 1.1 states that the Air Quality Memorandum (AQM) assesses construction effects and identifies mitigation measures relating to the Early Works. For clarity, the AQM should also state when potential air quality impacts from the operations of the Ontario Line will be assessed. The AQM should also clarify when or if air quality impacts from the operation of the larger aspects of the Early Works will be assessed, such as the underpass for the Broadview Avenue extension and the expansion of the Eastern Avenue rail bridge to accommodate the two Ontario Line tracks.	Section 2 Methodology clarifies that this Air Quality Report assesses the potential construction impacts of early works, and Project operations will be assessed under a separate cover.		C
2	Amanda Graham	Air Quality	Section 1.3, Table 1-1	Please clarify if the six new bridges as part of the Lakeshore East Joint Corridor will accommodate vehicle or other rail traffic, or if the new bridges will only be used for the Ontario Line.	In updated revisions of the report, Ontario Line early works have been split into separate reports. Lakeshore East Joint Corridor early works will be assessed under separate cover. Response to this comment will be revisited as part of updates to the Lakeshore East Joint Corridor early works report.		C
3	Amanda Graham	Air Quality	Tables 2-1 and 2-4	Tables 2-1 and 2-4 do not show the same values for the 1-hour SO2 AAQC. Table 2-1 and the % of Standard Limit calculations in Table 2-4 should be revised to reflect the updated 1-hour and annual SO2 AAQCs. The updated SO2 AAQCs have the same values as the revised SO2 O. Reg. 419/05 SO2 standards which will come into effect in 2023. Note the SO2 1-hour AAQC has been updated from 275 ug/m3 to 100 ug/m3, and the annual SO2 AAQC has been updated from 55 ug/m3 to 10 ug/m3. Further, there is no longer a 24-hour SO2 AAQC. Since the online AAQC list has not yet been updated to reflect these changes, please refer to the decision document for additional information https://prod-environmental-registry.s3.amazonaws.com/2018-03/SO2%20Decision%20Document%20%28March%202018%29_0.pdf	Updates will be incorporated into Tables 2-1 and 2-4 as suggested.		C
4	Amanda Graham	Air Quality	Section 2.1 and Tables 2-3	Typically, the background concentrations used in EAs are determined by calculating the 90th percentile value from a 5 year data set for each averaging period. However, the description in Section 2.1 suggests that the 1-hour, 8-hour and 24-hour background values were calculated by averaging each year's 90th percentile value of the hourly measurements. Please clarify the approach to determining 1-hour, 8-hour and 24-hour background concentrations shown in Table 2-3 and, if required, address the wording in the first bullet point of Section 2.1.	The approach to calculating the overall 90th percentile for the data set was to calculate the individual year's 90th percentile data, provided in a 1-year format from the NAPS Monitoring online data portal (as shown in Table 3-1), then to average a selection of the most recent and complete five year's 90th percentile data (shown in Table 3-2). The wording in Section 3.1 will be updated to clarify this approach.		C
5	Amanda Graham	Air Quality	Table 2-4	Please clarify how the average of background data values shown in Table 2-4 were calculated as they do not seem to correlate with the 90th percentile values shown in Table 2-3.	Background data values in Table 3-2 were calculated in the same methodology as indicated in the response to comment no. 4. Any typos in averaging between Table 3-1 and 3-2 will be corrected.		C
6	Amanda Graham	Air Quality	Table 2-4	Table 2-4 should include the 1-hour NO2 and SO2 CAAQS. Since this would be for comparison purposes only, a direct comparison with the 90th percentile background value is acceptable, as opposed to calculating the CAAQS metrics.	Table 3-2 will be updated to include the 1-hour NO2 and SO2 CAAQS limits for comparison. The comment regarding comparison to 90th percentile background data is noted.		C
7	Amanda Graham	Air Quality	Section 4.1, Section 1.3 of the Air Quality Management Plan (AQMP)	Section 4.1 states that the "Air Monitoring Directive" (2016), published by the Alberta Environment and Parks (AEP), was used as "an additional guideline for best practices." Please clarify what additional best practices from Alberta's Air Monitoring Directive were included in this AQMP that are not found in or differ from the ministry's Operations Manual for Air Quality Monitoring in Ontario (2018).	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		O
8	Amanda Graham	Air Quality	Table 1 of the AQMP	Please note that the most recent published version of the AAQCs is dated 2016.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		O

9	Amanda Graham	Air Quality	Table 2 of the AQMP	Table 2 indicates that the maximum background values are presented. However, when compared with Table 2-4 of the memorandum, these values seem to be the 2017 90th percentile calculations only. Please clarify.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		○
10	Amanda Graham	Air Quality	Table 3 and Table 6 of the AQMP	The PM2.5 24-hour AAQC is 27 ug/m3 rather than 25 ug/m3.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		○
11	Amanda Graham	Air Quality	Section 3.2 of the AQMP	Section 3.2 should clearly state how many meteorological stations will be set up for each of the four Early Works projects.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		○
12	Amanda Graham	Air Quality	Section 3.3	It is recommended to monitor baseline conditions for longer than 1 week in order to capture representative concentrations under varying meteorological conditions.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		○
13	Amanda Graham	Air Quality	Section 3.3, Figures 7 & 8	It is recommended, where possible, to site monitors both upwind and downwind of construction activities at each of the Early Works sites.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		○
14	Amanda Graham	Air Quality	Section 3.3	Please clarify why the Alberta Air Monitoring Directive 2016 was followed for siting criteria of continuous and intermittent samplers as opposed to Section 5 of the ministry's Operations Manual for Air Quality in Ontario (2018).	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		○
15	Amanda Graham	Air Quality	Section 3.3 AQMP	It is recommended to consider increasing the frequency of 24-hour silica sampling from every 3 months to monthly in order to be conservative and ensure that silica concentrations are being accurately calculated on an hourly basis. In addition, Section 3.3 states that silica sampling shall be performed under normal construction conditions. It is recommended to perform silica sampling when activities that are expected to contribute to particulate and silica emissions are being conducted rather than only being performed under normal construction conditions.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		○
16	Amanda Graham	Air Quality	Table 4	Table 4 states that several monitoring activities will continue "throughout project duration". Please clarify if this means throughout construction only, or if monitoring will continue through operation of the Ontario Line.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		○
17	Amanda Graham	Air Quality	Table 6	It is unclear if there is a complaint response procedure for dust complaints and how this procedure would be integrated into the Immediate Response column of Table 6.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		○
18	Amanda Graham	Air Quality	Section 6.2.1	The ministry's Operations Manual for Air Quality in Ontario (2018) recommends consulting the Standards Council of Canada (SCC) or the Canadian Association for Laboratory Accreditation (CALA) for a list of accredited Ontario analytical laboratories to perform specific air analyses.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		○
19	Amanda Graham	Air Quality	AQMP	The AQMP should include a section that describes what action will be taken if contaminated soil is discovered during construction activities.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced. This mitigation measure has been added to Table 4-1 and 4-2 of the Air Quality Report.		○

Subject: RE: Ontario Line EW Reports - AQ/N&V MECP Comments

Good afternoon Cindy,

Please see attached comment responses to the Ministry's comments to the following set of Ontario Line Comments:

- Early Works Report, SWM and Hydrogeology provided on July 15, 2020;
- Early Works Air Quality Report provided on July 3, 2020;
- Early Works Noise and Vibration Report provided on June 25, 2020;

Note that the responses have been compiled into one spreadsheet under separate tabs. Please review and let us know if this set of comments can be considered closed out.

Let me know if any questions.

Have a great weekend,

MERLIN YUEN

Project Coordinator, Environmental Programs and Assessment

% Completion:	Contract No:				Date Out:		
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Action 1 / 2 / 3* (Authors)	Status O / P / C** (Reviewer)
1	Amanda Graham	Air Quality	Section 1.1	Section 1.1 states that the Air Quality Memorandum (AQM) assesses construction effects and identifies mitigation measures relating to the Early Works. For clarity, the AQM should also state when potential air quality impacts from the operations of the Ontario Line will be assessed. The AQM should also clarify when or if air quality impacts from the operation of the larger aspects of the Early Works will be assessed, such as the underpass for the Broadview Avenue extension and the expansion of the Eastern Avenue rail bridge to accommodate the two Ontario Line tracks.	Section 2 Methodology clarifies that this Air Quality Report assesses the potential construction impacts of early works, and Project operations will be assessed under a separate cover.		
2	Amanda Graham	Air Quality	Section 1.3, Table 1-1	Please clarify if the six new bridges as part of the Lakeshore East Joint Corridor will accommodate vehicle or other rail traffic, or if the new bridges will only be used for the Ontario Line.	In updated revisions of the report, Ontario Line early works have been split into separate reports. Lakeshore East Joint Corridor early works will be assessed under separate cover. Response to this comment will be revisited as part of updates to the Lakeshore East Joint Corridor early works report.		
3	Amanda Graham	Air Quality	Tables 2-1 and 2-4	Tables 2-1 and 2-4 do not show the same values for the 1-hour SO2 AAQC. Table 2-1 and the % of Standard Limit calculations in Table 2-4 should be revised to reflect the updated 1-hour and annual SO2 AAQCs. The updated SO2 AAQCs have the same values as the revised SO2 O. Reg. 419/05 SO2 standards which will come into effect in 2023. Note the SO2 1-hour AAQC has been updated from 275 ug/m3 to 100 ug/m3, and the annual SO2 AAQC has been updated from 55 ug/m3 to 10 ug/m3. Further, there is no longer a 24-hour SO2 AAQC. Since the online AAQC list has not yet been updated to reflect these changes, please refer to the decision document for additional information https://prod-environmental-registry.s3.amazonaws.com/2018-03/SO2%20Decision%20Document%20%28March%202018%29_0.pdf	Updates will be incorporated into Tables 2-1 and 2-4 as suggested.		
4	Amanda Graham	Air Quality	Section 2.1 and Tables 2-3	Typically, the background concentrations used in EAs are determined by calculating the 90th percentile value from a 5 year data set for each averaging period. However, the description in Section 2.1 suggests that the 1-hour, 8-hour and 24-hour background values were calculated by averaging each year's 90th percentile value of the hourly measurements. Please clarify the approach to determining 1-hour, 8-hour and 24-hour background concentrations shown in Table 2-3 and, if required, address the wording in the first bullet point of Section 2.1.	The approach to calculating the overall 90th percentile for the data set was to calculate the individual year's 90th percentile data, provided in a 1-year format from the NAPS Monitoring online data portal (as shown in Table 3-1), then to average a selection of the most recent and complete five year's 90th percentile data (shown in Table 3-2). The wording in Section 3.1 will be updated to clarify this approach.		
5	Amanda Graham	Air Quality	Table 2-4	Please clarify how the average of background data values shown in Table 2-4 were calculated as they do not seem to correlate with the 90th percentile values shown in Table 2-3.	Background data values in Table 3-2 were calculated in the same methodology as indicated in the response to comment no. 4. Any typos in averaging between Table 3-1 and 3-2 will be corrected.		
6	Amanda Graham	Air Quality	Table 2-4	Table 2-4 should include the 1-hour NO2 and SO2 CAAQS. Since this would be for comparison purposes only, a direct comparison with the 90th percentile background value is acceptable, as opposed to calculating the CAAQS metrics.	Table 3-2 will be updated to include the 1-hour NO2 and SO2 CAAQS limits for comparison. The comment regarding comparison to 90th percentile background data is noted.		
7	Amanda Graham	Air Quality	Section 4.1, Section 1.3 of the Air Quality Management Plan (AQMP)	Section 4.1 states that the "Air Monitoring Directive" (2016), published by the Alberta Environment and Parks (AEP), was used as "an additional guideline for best practices." Please clarify what additional best practices from Alberta's Air Monitoring Directive were included in this AQMP that are not found in or differ from the ministry's Operations Manual for Air Quality Monitoring in Ontario (2018).	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
8	Amanda Graham	Air Quality	Table 1 of the AQMP	Please note that the most recent published version of the AAQCs is dated 2016.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
9	Amanda Graham	Air Quality	Table 2 of the AQMP	Table 2 indicates that the maximum background values are presented. However, when compared with Table 2-4 of the memorandum, these values seem to be the 2017 90th percentile calculations only. Please clarify.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
10	Amanda Graham	Air Quality	Table 3 and Table 6 of the AQMP	The PM2.5 24-hour AAQC is 27 ug/m3 rather than 25 ug/m3.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
11	Amanda Graham	Air Quality	Section 3.2 of the AQMP	Section 3.2 should clearly state how many meteorological stations will be set up for each of the four Early Works projects.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.

12	Amanda Graham	Air Quality	Section 3.3	It is recommended to monitor baseline conditions for longer than 1 week in order to capture representative concentrations under varying meteorological conditions.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
13	Amanda Graham	Air Quality	Section 3.3, Figures 7 & 8	It is recommended, where possible, to site monitors both upwind and downwind of construction activities at each of the Early Works sites.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
14	Amanda Graham	Air Quality	Section 3.3	Please clarify why the Alberta Air Monitoring Directive 2016 was followed for siting criteria of continuous and intermittent samplers as opposed to Section 5 of the ministry's Operations Manual for Air Quality in Ontario (2018).	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
15	Amanda Graham	Air Quality	Section 3.3 AQMP	It is recommended to consider increasing the frequency of 24-hour silica sampling from every 3 months to monthly in order to be conservative and ensure that silica concentrations are being accurately calculated on an hourly basis. In addition, Section 3.3 states that silica sampling shall be performed under normal construction conditions. It is recommended to perform silica sampling when activities that are expected to contribute to particulate and silica emissions are being conducted rather than only being performed under normal construction conditions.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
16	Amanda Graham	Air Quality	Table 4	Table 4 states that several monitoring activities will continue "throughout project duration". Please clarify if this means throughout construction only, or if monitoring will continue through operation of the Ontario Line.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
17	Amanda Graham	Air Quality	Table 6	It is unclear if there is a complaint response procedure for dust complaints and how this procedure would be integrated into the Immediate Response column of Table 6.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
18	Amanda Graham	Air Quality	Section 6.2.1	The ministry's Operations Manual for Air Quality in Ontario (2018) recommends consulting the Standards Council of Canada (SCC) or the Canadian Association for Laboratory Accreditation (CALA) for a list of accredited Ontario analytical laboratories to perform specific air analyses.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced.		
19	Amanda Graham	Air Quality	AQMP	The AQMP should include a section that describes what action will be taken if contaminated soil is discovered during construction activities.	In updated revisions of the report, the Air Quality Management Plan has been removed from this report and will be completed prior to construction when additional design details are advanced. This mitigation measure has been added to Table 4-1 and 4-2 of the Air Quality Report.

Review Code:	Document Name			Ontario Line - EW - N&V Report - MECP Comment Sheet	Revised By:	Name, Acronym	
Location:	Contract Name:				Date In:		
% Completion:	Contract No:				Date Out:		
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Action 1 / 2 / 3* (Authors)	Status O / P / C** (Reviewer)
1	Miroslav Ubovic	N&V	Section 1.1	The project length of 16-kilometre is inconsistent with Existing Environmental Condition report which states 15.5-kilometre.	This has been updated in the revised report to be consistent with the Existing Conditions Report.	1	
2	Miroslav Ubovic	N&V	Section 1.4	The Station's Initial Preferred Design (IPD) that was described in Appendix A of the New SmartTrack Stations Environmental Project Report (EPR) Volume V (Metrolinx, 2018) should be included as the appendix to this report for the consistency of the review. Also, any changes in either of reference reports should be appropriately updated.	Project design has progressed since the SmartTrack Stations EPR and the most recent design will be captured within the Exhibition GO Early Works Report. All reference reports will be appropriately referenced in the revised report.	3	
3	Miroslav Ubovic	N&V	Section 2	Noise and Vibration Environmental Conditions Report (AECOM, 2020) should be included as appendix for consistency of the review. Also, any changes in either of reference reports should be appropriately updated.	The Environmental Conditions Noise and Vibration Report is available on the Project website for review.	1	
4	Miroslav Ubovic	N&V	Section 2	If vibration activities from construction occur at the same time as vibration from existing rail line, it may be beneficial to determine the base line.	This report takes the conservative approach of disregarding existing vibration levels as the report uses absolute limits, which do not change based on existing vibration levels.	3	
5	Miroslav Ubovic	N&V	Section 3.1.3	Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment indicates that one-hour equivalent sound level, Leq is used for layovers, stationary sources and construction. Similarly, Lmax and L10 parameters are used for construction phase of the project. MECP noise levels are based on 1-hour LEQ. Further, Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment indicates that construction noise criteria is based on 15h/9h Leq, 15 min Leq, and Lmax. It is recommended that the baseline noise levels determined in the Existing Environmental Condition report are considered.	This report followed applicable criteria from the City of Toronto, the Ministry of the Environment, Conservation and Parks (MECP), and Federal Transit Administration (FTA). For construction noise, the report followed NPC-115 and NPC-118 criteria, and are highlighted in Section 2.	3	
6	Miroslav Ubovic	N&V	Section 3.23	Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment indicates that vibration level of 0.1 mm/s RMS is applicable for Metrolinx projects.	This report followed applicable criteria from the City of Toronto, and the Ministry of the Environment, Conservation and Parks (MECP). For construction vibration, the report followed NPC-119 and NPC-207 criteria, and are documented in Section 2.	3	
7	Miroslav Ubovic	N&V	Table 4.3	Noise data acoustical usage factor in percentage was used. The ministry assess the noise impact based on worst-case scenario which may be all equipment (physically possible) operate at full capacity at the same time.	Calculation based upon all equipment operating at their max noise levels would generate an instantaneous peak. This would not be appropriate to assess against the time averaged noise level limits. Equipment is not capable of sustained operation in this manner. Assessment was based upon all equipment operating over the course of the assessment period, corrected for normal operations (adjustment to peak/max level).	3	
8	Miroslav Ubovic	N&V	Table 4.4	As per comment #5 and Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment uses different sound level criteria.	This report followed applicable criteria from the City of Toronto, the Ministry of the Environment, Conservation and Parks (MECP), and Federal Transit Administration (FTA). For construction noise, the report followed NPC-115 and NPC-118 criteria, and are highlighted in Section 2.	3	
9	Miroslav Ubovic	N&V	Table 4.5	As per comment #5 and Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment uses different sound level criteria.	This report followed applicable criteria from the City of Toronto, the Ministry of the Environment, Conservation and Parks (MECP), and Federal Transit Administration (FTA). For construction noise, the report followed NPC-115 and NPC-118 criteria, and are highlighted in Section 2.	3	
10	Miroslav Ubovic	N&V	Table 4.6	As per comment #5 and Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment uses different sound level criteria.	This report followed applicable criteria from the City of Toronto, the Ministry of the Environment, Conservation and Parks (MECP), and Federal Transit Administration (FTA). For construction noise, the report followed NPC-115 and NPC-118 criteria, and are highlighted in Section 2.	3	
11	Miroslav Ubovic	N&V	Table 4.7	As per comment #5 and Metrolinx's Environmental Guide for Noise and Vibration Impact Assessment uses different sound level criteria.	This report followed applicable criteria from the City of Toronto, the Ministry of the Environment, Conservation and Parks (MECP), and Federal Transit Administration (FTA). For construction noise, the report followed NPC-115 and NPC-118 criteria, and are highlighted in Section 2.	3

Project Name: Ontario Line Draft Early Works Report (EWR)				Revised By:			
Project No:				Date In:			
Draft Environmental Reports				Date Out:			
Item No.	Reviewer Name	Report Name	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Action 1 / 2 / 3* (Authors)	Status O / P / C** (Reviewer)
1	C. Batista	Draft EWR	Introduction	This section states that the draft EWR has been completed in accordance with Section 8 of the Ontario Line Regulation. Please note that the correct regulation name is Ontario Regulation 341/20, Ontario Line Project. It is understood that at the time this report was being written, the regulation name was not finalized. Please update report to reflect new regulation name, accordingly.	This will be updated in all revised reports to refer to the Ontario Line Regulation as O. Reg. 341/20, Ontario Line Project.		
2	C. Batista	Draft EWR	Section 1.2	This section states that Metrolinx is proceeding with 4 priority projects and Ontario Line Project, as one of the 4, however, it is understood that the Yonge Subway extension, although identified as a priority project, it is currently not going ahead at this time. Please confirm. Also for some context for the readers, a description of what the priority projects are and why they are considered priority will be helpful for readers to understand.	In updated revisions of the report, this sentence referencing the four priority subway projects has been removed and revised to focus on the Ontario Line.		
3	C. Batista	Draft EWR	Section 1.2	The Relief Line Project had three proponents, Metrolinx, City of Toronto and TTC. Please make correction.	In updated revisions of the report, this sentence has been removed.		
4	C. Batista	Draft EWR	Section 1.2	The 'Project Overview' section should include additional details about the project, such as, how much of the subway line will be underground vs. above ground, number of new bridges and crossings, etc.	Project details such as alignment length, station locations, and number of stations have been included in the Project Overview section however, project details are still being refined and as such, have not been documented in this section.		
5	C. Batista	Draft EWR	Section 3	This section, along with describing the early works activities, is also suppose to describe the alternatives that were considered. This section does not describe alternatives that were considered for the project. This is a requirement under section 8(2)(1) of the Ontario Regulation 321/20, Ontario Line Project.	In updated revisions of the report, Section 1.3.3 describes alternatives considered for the project.		
6	C. Batista	Draft EWR	Section 3	Although this section does provide a description of the early works activities, it is very light in terms of the level of detail one would expect see for early work activities. For example: - no specifics regarding the passenger tunnels and the exact location of where they will be constructed; - the report speaks to improvements to portions of the existing GO platforms, but does not describe what these are; - two new bridges will be constructed on each side of the existing rail bridge which crosses the Don River, but it is unclear where these bridges will be built; and, - the proposed East Harbour station that was originally proposed for the Smart Track project will require minor changes to accommodate the Ontario Line project but the minor changes are not described. Figures showing the site plan for early work activities should be included in addition to providing more details about the early work activities/infrastructure. It is not clear to the reader where in the footprint, the early work activities will be constructed.	Early works components placement and detailed description is provided in the revised report. Refer to Figures 3-1 and 3-3. Information regarding East Harbour Station has been revised to be in its own early works report, under separate cover.		
13	C. Batista	Draft EWR	Section 4.1.1	In this section it states that natural environment conditions were documented based on the review of the following previously completed EPRs within the study area. The one report listed in this section is not an EPR. The 'Natural Environment Screening Memorandum Exhibition GO Station (4Transit, 2020)' appears to be a report that was prepared perhaps for this Project? It is not clear. Will all of the supporting documentation used for the Early Works Report be available online? These reports should be made available, if possible.	The Natural Environment Screening Memorandum Exhibition GO Station (4Transit, 2020) was prepared in support of the Lakeshore West Infrastructure Improvements Project. The error referencing an EPR has been corrected. The original memo was developed in 2018 and posted on the Metrolinx website as part of the Lakeshore West project. The 2020 memo was an addendum to the 2018 and 2019 memo, and is not planned to be provided for public review.		
14	C. Batista	Draft EWR	Section 4.0	This section states that a natural environment early works report was prepared. The ministry does not recall this report being shared with ministry staff for review. Will this report be made available at the same time the draft early works report is made available for public review?	A natural environment report was prepared in support of the Exhibition Station early works for which the natural heritage findings are summarized within the Exhibition Station Early Works Report and will be appended to the main Early Works Report. This report will be made available for review in conjunction with the review of the Draft Early Works Report.		
15	C. Batista	Draft EWR	Surface Water	Some aspects of the project, such as stations, will require SWM and control works while the tunneled track routes would not. It is assumed that most above grade sections will probably be along existing road easements. Please confirm. It appears that the report provides for high level identifications of what may be needed and this will be confirmed during the detail design stage. Therefore, Metrolinx needs to acknowledge that stations and other infrastructure (this needs to be described) required for the Ontario Line Project will require SWM plan and those will be prepared along with the detailed design for each section of the project.	Additional details have been provided in the revised report that outline surface water conditions within the Exhibition Station early works study area and footprint. Language has also been added to the impact and mitigation table noting that SWM report will be completed prior to construction.		
16	C. Batista	Draft EWR	Hydrogeology	The geological information included in the report above provides a very superficial description of the geology along the proposed alignment of the proposed Ontario Subway Line. It is recommended that the following be addressed: 1. A detailed description of the hydrogeology and stratigraphy will be required to satisfy the requirements of the Permit To Take Water (PTTW) or Construction Dewatering EASR. Site specific data may be required. The level of detail required for a PTTW and EASR is much more detailed than the desk top study included in this EA. Possible ground settlement from dewatering will also need to be addressed. 2. Knowledge of contaminated sites along the alignment if they occur will enable the preparation of contingency and mitigation measures for excess soil and construction dewatering. To obtain information on locations of contaminated sites along the alignment, the proponent may consider accessing ministry records (possibly through FOI). City of Toronto Archives can also be consulted to locate areas of past industrial activities. 3. Discharge from construction dewatering to the natural environment or storm sewers may require an ECA, depending on the quality of the discharge water and treatment needs to meet the Ministry's and/ or City of Toronto's requirements. Characterization of groundwater along the alignment will be required. 4. The ministry's new excess soil will need to be incorporated into the project's soil management. a. Handling excess soil https://www.ontario.ca/page/handling-excess-soil , b. O. Reg. 406/19 On-Site and Excess Soil Management Regulation https://www.ontario.ca/laws/regulation/r19406 , and c. Management of Excess Soil - A Guide for Best Management Practices https://www.ontario.ca/page/management-excess-soil-guide-best-management-practices . 5. The stratigraphy along the alignment should be described in much greater detail. Locations, depths and thicknesses of aquifers and aquitards should be determined to inform a PTTW but also construction options. It is imperative that pressurized aquifers be identified if present. Consideration should be given to micro-seismic surveys and boreholes to accomplish this. The objective is to minimize "surprises!"	Additional details have been added to the Exhibition Station Early Works Report to outline hydrogeology and stratigraphy conditions within the study area and project footprint. The revised Table 4-1 also includes potential impacts and mitigation for groundwater quantity/quality, and dewatering. The table also mentions that soil management will be in-line with O. Reg 406/19. It is acknowledged that discharge from construction dewatering into the natural environment or stormsewers may require an ECA. A description and characterization of groundwater has been included in Section 5.2.

Hi Cindy,

Thank you for the Draft EWR Notice comments – we will incorporate into the revised Notice and newspaper ad and share the final versions with you.

Appreciate your take on the Final ECR Notice posting. For consistency with Draft ECR Notice publication and distribution to interested parties, we'll apply the same approach which does include newspaper ads.

To answer your questions regarding the Draft EWR Notice and Final ECR Notice:

- these are the notices that are to be sent directly to communities and persons who participated in the review of the draft documents and anyone who Metrolinx thinks may have an interest? – Correct. Draft EWR Notice will be issued to everyone who was provided the draft of the Draft EWR and distributed to addresses within the EWR study area. Other interested parties will be informed of the Draft EWR Notice as well. Final ECR Notice will be issued to everyone who received the Draft ECR Notice. Both will the Draft EWR Notice and the Final ECR Notice be published on the Project website
- And for the notice of draft EWR, copies will be sent as prescribed in subsection 9(4)? Please confirm. - Confirmed

Thank you
Maria

Subject: RE: MECP comments on draft Environmental Conditions Report

Hello Maria,

Thank you for sharing the draft notices with the ministry. I have reviewed the first two attachments and I have some minor comments/edits for Metrolinx's consideration, which are also relevant in the newspaper posting.

It is my understanding that for the publication of the final ECR, Mx shall ensure that all of the Indigenous communities and persons, identified in clause 5 of the regulation, are given notification of the publication of the final ECR and provided access to a copy of it (Section 7.(2)). I don't believe you have to publish the notice of the final ECR in the newspaper, but publish the final on your website only. Whereas, the notice of EWR, you must publish in a newspaper, in addition to the project webpage. However, if Metrolinx wants to post in the newspaper and wants to post together with the draft EWR, the ministry has no concerns with this approach.

I assume that for the first two attachments, these are the notices that are to be sent directly to communities and persons who participated in the review of the draft documents and anyone who Metrolinx thinks may have an interest? And for the notice of draft EWR, copies will be sent as prescribed in subsection 9(4)? Please confirm.

Please let me know if you have any questions with respect to the above.

Hi Cindy,

Please see the following attached for your review:

- Draft Exhibition Early Works Report (EWR) Notice
- Final Environmental Conditions Report (ECR) Notice
- Combined newspaper ad for the Draft Exhibition EWR Notice and Final ECR Notice

Note that we are making a few tweaks to the map legend in the ad and Draft EWR Notice.

We'd appreciate any comments that you may have by tomorrow afternoon, if at all possible, to accommodate ad placement several days in advance of the publication date. Apologies for the short turn-around time request.

Thank you
Maria

Hi Cindy,

Thanks for joining our excess soil call this morning on very short notice. Our OL EA reporting timelines continue to evolve, and the latest thinking is as follows:

- Notice of Final Environmental Conditions Report and Draft Early Works Report for Exhibition Station – November 30, 2020
- Notice of Draft Early Works Report for Lower Don Bridges – TBC
- Notice of Draft Early Works Report for Lakeshore East Joint Corridor – TBC

We anticipate potentially extending the public review period for the Draft Early Works Report for Exhibition Station beyond 30 days given overlap with end of year holidays, with completion of the Issues Resolution Process by January 25, 2021. We would be seeking a notice from MECP by March 1, 2021.

Hope this all makes sense! Thanks for bearing with us as our plans continue to evolve.

Thanks,
James

Subject: RE: MECP comments on draft Environmental Conditions Report
Importance: High

Hello Maria,

Based on my understanding of your email below, there are 3 early works reports for the following:

1. Exhibition Station – Draft EWR Notice for November 20th
2. Lower Don Bridges – Draft EWR Notice for November 20th
3. Lakeshore East Joint Corridor – Draft EWR Notice for January 5th

On a call with Mirjana regarding the On Corridor projects, I asked her how much time Metrolinx intends on taking for its issues resolution process following the end of the comment period. This information is important so we can provide senior management advance notice of when the Minister's Office can expect to see a decision package for the early works projects project and when he is required to issue a notice.

Also, is Metrolinx still on target for posting its notice for the early works report for this Friday? Please let me know.

Thank you,

Cindy

Hi Cindy,

Apologies for the confusion. To align with early works schedules, we've split what was originally one early works report into individual reports – one per each early works location/package. At this time, we are aiming to publish Draft Exhibition Station early works report and Lower Don Bridges early works report on November 20, and Lakeshore East Joint Corridor early works report on January 5. East Harbour Station is at this time being included in the Environmental Impact Assessment Report.

Thank you

Maria

Good Morning Maria,

Thanks for the update. In your email below, you state that Metrolinx is aiming to post the draft EWR Notices on November 20th. Can you clarify what you mean by 'Notices'? It is my understanding that Metrolinx intends on sharing and posting one draft EWR? Can you kindly confirm.

Please let me know if the dates change.

Thanks,

Cindy

Hi Cindy,

Correct, we are aiming to post the Draft EWR Notices on November 20th, subject to MTO approval. Final ECR Notice is intended to be posted on the same date. Please see draft Final ECR Notice attached for your reference. Draft EWR Notices will be shared for your review and comment early next week.

We are just finalizing the responses to MECP comments on the ECR and will be sharing those early next week.

Thank you
Maria

Good Morning,

I was wondering if Metrolinx has any new updates to share with respect to the Ontario Line project. It is my understanding that Metrolinx intends on posting the notice of draft Early Works Report on November 20th, is this still accurate? Can you also confirm when we can expect to see responses to ministry's comments on the Environmental Conditions Report (ECR) and when Metrolinx intends on posting the notice of the final ECR.

Thank you,

Cindy

MEMORANDUM

TO: Mr. James Francis
Manager, Environmental Programs and Assessment
Metrolinx

FROM: Mrs. Cindy Batista
Special Project Officer
Environmental Assessment Services Section

RE: **Draft Early Works Report for Ontario Line Project**

The Ministry of the Environment, Conservation and Parks (the ministry) has completed its review of Metrolinx's draft Early Works Report (report) for the Ontario Line Project. The review was carried out to determine whether the draft report meets the requirements set forth in Ontario Regulation 341/20, Ontario Line Project.

Below are general comments and specific comments, relating to the identified sections of the draft report, are in the attached table. The ministry's comments are being provided to Metrolinx for consideration when finalizing the Early Works Report.

General Comments

The draft report submitted for ministry review was incomplete. Several sections are missing, such as the executive summary, issue resolution process, and consultation sections, and therefore, the ministry was unable to complete its review at this time. It is the ministry's understanding that another draft report will be submitted for public review at a later time. The ministry will complete its review when the publicly available draft is posted on the Metrolinx's website.

Climate Change

Climate change considerations for the Ontario Line Project appears to be missing in the report, as well as, how Metrolinx will design the early works activities/infrastructure to address extreme weather events. Please clarify and make appropriate changes as part of the final submission.

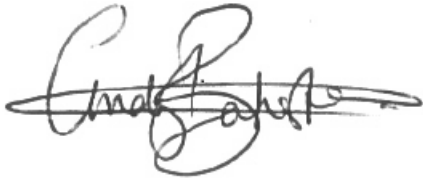

Concluding Remarks

In addition to the comments above, and the attached table, Metrolinx has already received comments from the ministry's Central Region Office Technical Support Section including the Air Quality Analyst, Surface Water Reviewer, and Hydrogeologist, as well as comments from the Approval Services Section's Noise Engineer.

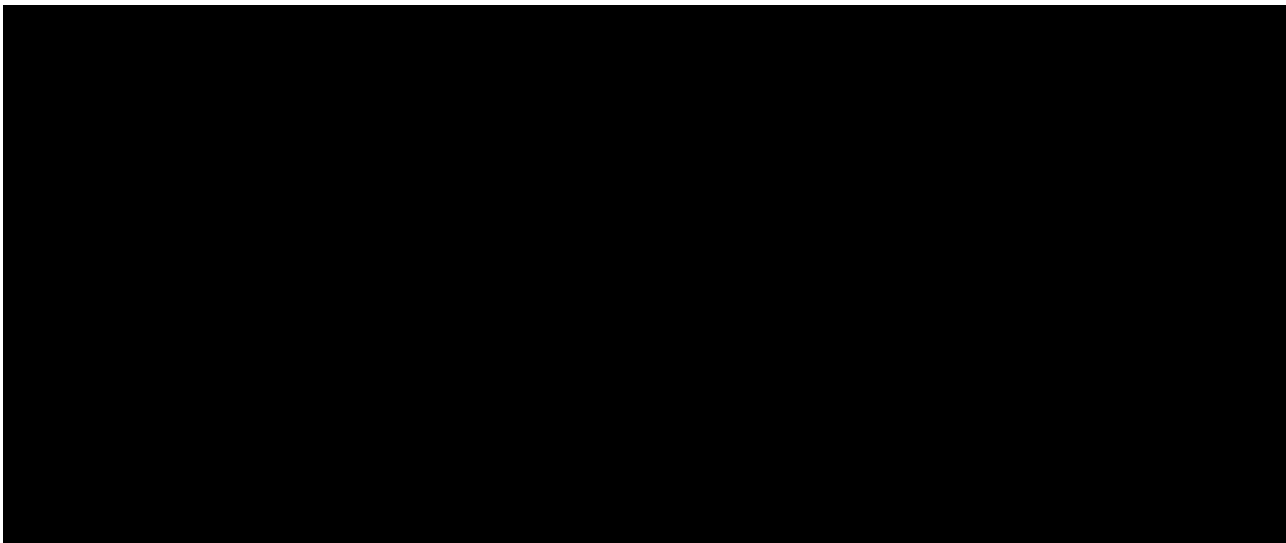

Prior to finalizing the report, it is expected that Metrolinx will address all comments from this ministry and any other agency that commented during the draft review stage.

In closing, please feel free to reach out to me to arrange a meeting with ministry staff to discuss the comments on the draft report and the next steps. Should you have any questions or concerns, or to set up a meeting, please feel free to contact me by e-mail at cindy.batista@ontario.ca.

Yours sincerely,

Cindy Batista
Special Project Officer
Environmental Assessment Branch

Subject: Draft Early Works Report - SWM and Hydrogeology Comments

Hello Merlin,

Please find below the ministry's surface water and hydrogeology comments on the draft Early Works Report Ontario Line Subway Project.

Surface Water:

Some aspects of the project, such as stations, will require SWM and control works while the tunneled track routes would not. It is assumed that most above grade sections will probably be along existing road easements. Please confirm.

It appears that the report provides for high level identifications of what may be needed and this will be confirmed during the detail design stage. Therefore, Metrolinx needs to acknowledge that stations and other infrastructure (this needs to be described) required for the Ontario Line Project will require SWM plan and those will be prepared along with the detailed design for each section of the project.

Hydrogeology:

The geological information included in the report above provides a very superficial description of the geology along the proposed alignment of the proposed Ontario Subway Line.

It is recommended that the following be addressed:

1. A detailed description of the hydrogeology and stratigraphy will be required to satisfy the requirements of the Permit To Take Water (PTTW) or Construction Dewatering EASR. Site specific data may be required. The level of detail required for a PTTW and EASR is much more detailed than the desk top study included in this EA.

Possible ground settlement from dewatering will also need to be addressed.

2. Knowledge of contaminated sites along the alignment if they occur will enable the preparation of contingency and mitigation measures for excess soil and construction dewatering. To obtain information on locations of contaminated sites along the alignment, the proponent may consider accessing ministry records (possibly through FOI).

City of Toronto Archives can also be consulted to locate areas of past industrial activities.

3. Discharge from construction dewatering to the natural environment or storm sewers may require an ECA, depending on the quality of the discharge water and treatment needs to meet the Ministry's and/ or City of Toronto's requirements.

Characterization of groundwater along the alignment will be required.

4. The ministry's new excess soil will need to be incorporated into the project's soil management.
 - a. Handling excess soil <https://www.ontario.ca/page/handling-excess-soil> ,
 - b. O. Reg. 406/19 On-Site and Excess Soil Management Regulation <https://www.ontario.ca/laws/regulation/r19406> , and
 - c. Management of Excess Soil - A Guide for Best Management Practices <https://www.ontario.ca/page/management-excess-soil-guide-best-management-practices> .
5. The stratigraphy along the alignment should be described in much greater detail. Locations, depths and thicknesses of aquifers and aquitards should be determined to inform a PTTW but also construction options. It is imperative that pressurized aquifers be identified if present. Consideration should be given to micro-seismic surveys and boreholes to accomplish this. The objective is to minimize "surprises!"

Please let me know if a call with the reviewers is required to provide further clarification or respond to any questions Metrolinx may have.

Hello Merlin,

Please find attached the ministry’s air comments. I believe I sent you noise and vibration comments last week. I am attaching them now, again.

Please let me know if you want to arrange a call to discuss these comments with ministry staff.

Thanks,

Cindy

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Good afternoon Cindy and Adam (as Cindy is away today) – hope you had a great Canada Day.

I just wanted to check-in with regards to the Ministry's comments on the following reports:

OL Early Works:

- Air Quality Impact Assessment Memo
- Noise and Vibration Impact Assessment Report

As noted previously, we were looking for the Ministry's comments to be provided by July 2. Could you confirm we're still on track to receive today or when we can expect comments by?

Thanks,

MERLIN YUEN

Good afternoon Cindy,

Not a problem – I can definitely understand that there are more than a few files circulated to the Ministry. Please see the below table which outlines reports for each Ontario Line component and when we're looking for the Ministry's comments.

Ontario Line Component and Report	Date Circulated to MECP	Comments Requested By
OL Existing Conditions: <ul style="list-style-type: none">• Noise and Vibration Report	May 28, 2020	June 26, 2020
OL Early Works: <ul style="list-style-type: none">• Air Quality Impact Assessment Memo• Noise and Vibration Impact Assessment Report	June 4, 2020	July 2, 2020
OL Early Works: <ul style="list-style-type: none">• Draft Early Works Report	June 5, 2020	July 3, 2020
OL Existing Conditions: <ul style="list-style-type: none">• Draft Environmental Conditions Report	June 16, 2020	July 10, 2020

Please let me know if you need any additional information or need us to resend any of the files.

Regards,

MERLIN YUEN

Hello Merlin,

Can you please send me a list of all the reports that you have submitted to the ministry for review and when Metrolinx is requesting comments back.

Getting a little confused and I want to make sure that I am on top of it all and when we need to report back to Metrolinx.

Can you kindly send this to me today?

Please and thank you,

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Robert Greene,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

A handwritten signature in black ink, appearing to read "Maria Zintchenko", with a long, sweeping underline.

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Crystal Ho

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Jason White,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Date: Tuesday, July 27, 2021 3:06:34 PM

Good afternoon,

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the following Dropbox link for review:

[REDACTED]
[REDACTED]

The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and GO rail where Ontario Line runs in parallel to GO tracks between the Ontario Line Don Yard Portal and Gerrard Portal.

Metrolinx welcomes any comments or feedback on the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Please provide these in writing no later than **August 24, 2021**.

Thank-you,

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Jennifer Davey,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Crystal Ho

Subject: RE: Ontario Line - Notice of Draft Lakeshore East Joint Corridor EWR
Date: November 15, 2021 2:43:03 PM
Attachments: 

Good afternoon Julia,

Please see attached Metrolinx's responses to the City of Toronto's comments on the draft Lakeshore East Joint Corridor Early Works Report, provided on October 25, 2021. Note that we are anticipating a publication date of November 17, 2021 for the Final Lakeshore East Joint Corridor Early Works Report.

Regards,

MERLIN YUEN

Review Comments Spreadsheet												
Ontario Line - City of Toronto Early Works Report Comments												
Project Name: Ontario Line				Revised By:								
Project No:				Date In:								
				Date Out: January 5, 2021								
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	September 2021 Revised Response LSE-JC	Revised O / P / C / D** (Reviewer)	Revised Follow-up Comments (Reviewer)	Response
1	City Planning	Draft Traffic and Transportation Memo	General	Reconfirm the intended scope of the traffic and transportation memo. The existing conditions transportation memo should describe and document the baseline usage and performance of the transportation network for all modes in the study area; this report is limited to describing the physical conditions of the transportation system. Provide vehicular, transit, pedestrian and cyclist volumes using each transportation link described in the report, particularly at locations that may be disrupted during construction and/or permanently altered as a result of the project. Provide transportation analysis demonstrating the baseline performance of the transportation network. Without this information it is difficult to determine appropriate impacts to users of the transportation network or appropriate mitigation measures, monitoring programs, and future commitments. The transportation memo does not appear to achieve the purpose stated in Section 1.1.	The Early Works Memo focuses on construction impacts at the Early Works project footprints expected to result from the Early Works activities. Metrolinx proceeded with available existing conditions information while considering project schedule, limited raw data received from the City, and COVID-19 restrictions. As project planning progresses, further quantitative assessment will be completed related to the Early Works areas, to be shared with the City	?	O	To City Planning's knowledge, Transportation Services completed the data request submitted by Metrolinx with respect to turning movement counts for vehicular traffic, pedestrian, and cycling volumes for road links and intersections available in the City's database.	Section 2.2 notes that quantitative impact assessment will be completed and shared with the City as detailed design progresses and the construction staging strategies become available.	C		
2	City Planning	Draft Traffic and Transportation Memo	General	Confirm service headways for all transit routes and ensure that they reflect normal planned operating conditions. The peak period service headways stated in the report for transit routes appear to reflect the reduced level of service being provided during the COVID-19 pandemic. This will result in understated impacts to transit riders if not corrected. For example, the 504 King streetcar route normally operates at 2 minute headways in the peak period.	The service headways during the AM and PM peak hours were obtained from the TTC website (For example, for the 504 King Streetcar: http://www.ttc.ca/Routes/504/Eastbound.jsp). These reflect the current service headways which, as mentioned, might be impacted by the COVID-19 pandemic. The current TTC website does not have 'regular' headways, which are not impacted by COVID-19. Metrolinx would appreciate any information the City can provide with regards to this data.	?	O	Service headways found on TTC's website during 2020 should not be relied upon for a planning analysis as they reflect reduced level of service provided during the COVID-19 pandemic. Recommend that Metrolinx request from the TTC the most recent service summary (likely from fall 2019), and the planned service summary for 2021 which reflects post-pandemic operating plan.	The service headways during the AM and PM peak hours were obtained from the TTC website. These reflect the current service headways which, as mentioned, may be impacted by the COVID-19 pandemic. The TTC website does not provide the "normal" planned operating conditions. Dates accessed will be clarified in the report. As additional quantitative traffic analysis is completed for the LSE-JC early works study area, additional considerations will be made to use data that is representative of 'normal' traffic scenarios where possible.	C		
3	City Planning	Draft Traffic and Transportation Memo	General	Correct references to unposted speed limits through the report, which currently indicates in several places that the assumed speed limit of unsigned streets is 50 km/h. Note that the City of Toronto has reduced the general speed limit on many arterial roads to 40 km/h, especially within the old City of Toronto and East York boundaries. Legal speed limits for all streets can be checked online in the Municipal Code here: https://www.toronto.ca/legdocs/municode/toronto-code-950-35.pdf	The legal speed limits were checked online using the same suggested reference (https://www.toronto.ca/legdocs/municode/toronto-code-950-35.pdf) in preparing the memorandum. The unsigned streets namely, Carlaw Avenue and Logan Avenue, are not part of the roadways that had their speed limits reduced from 50 km/h to 40 km/h as part of Vision Zero in 2019. The following source was used in identifying the roads that witnessed a speed limit reduction: https://www.toronto.ca/services-payments/streets-parking-transportation/road-safety/vision-zero/safety-measures-and-mapping/	?	O	Vision Zero speed reductions appear to be referenced in the report in general discussion and where appropriate for specific streets.	N/A; response provided, no further updates.	C		
4	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 9	Roads: Gardiner Expressway is missing from the list of roads in the area, and may be impacted by the project. Include planned but unbuilt roads such as Liberty New Street, as the the impacts and mitigation measures for this will need to be addressed in the report.	Gardiner Expressway is not expected to be impacted by the Exhibition Station early works. Based on information collected from the City's website, Liberty New Street (source: https://www.toronto.ca/community-people/get-involved/public-consultations/infrastructure-projects/libertynewst/) does not have a schedule for construction yet and hence was not included in the list of roads.	?	O	References to missing roads added to Section 3.1.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.	
5	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 9 Figure 3-1, Page 10	Transit: Indicate that 511 Bathurst streetcars are normally routed to serve Exhibition loop. Correct the Harbourfront and King streetcar route numbers indicated in the map legend.	Noted, the 511 Bathurst streetcars will be described in Table 2-1 and presented in Figure 3-1. The route numbers in the map legend will be amended.	?	P	511 Bathurst routing corrected. 509 Harbourfront route number corrected in map. New error: 504B King streetcar route serving Dufferin Street to Dufferin Loop no longer shown on the map and no longer shown in Table 3-1.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.	
6	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 11	Pedestrians: Include a key connection in the pedestrian network, which is the opportunity for pedestrians to cross from Liberty Village to Exhibition Place through the station.	Noted, the pedestrian connection through the station tunnel will be described in the updated memorandum	?	P	References to missing pedestrian link added in Figure 3-1.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.	

7	City Planning	Draft Traffic and Transportation Memo	Figure 3-2, Page 12	Contrary to what is indicated in the memo and shown on the map, on-street bicycle infrastructure does exist on Dufferin Street, Saskatchewan Road, and Princes Boulevard within Exhibition Place.	The memo and specifically Figure 3-3 does not show on-street bicycle facilities on Dufferin Street, Saskatchewan Road, and Princess Boulevard. On-street bike facilities refer to a bike lane or cycle track. However, minor multi-use pathways are presented which do exist at the noted locations.	?	P	Do not understand the comment response; a map of the existing cycling network should show on-street bike lanes.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
8	City Planning	Draft Traffic and Transportation Memo	Section 2.2, Page 14	Transit: Include GO buses that use the Don Valley Parkway.	Noted, the GO buses that use the Don Valley Parkway will be described and presented in Figure 3-4 in the updated memorandum.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The Don Valley Parkway is not located in the Traffic and Transportation Study Area for Lakeshore East Joint Corridor Early Works.	C	
9	City Planning	Draft Traffic and Transportation Memo	Figure 3-5, Page 16 Figure 3-8, Page 22	Include the critical pedestrian/cycling connection connecting Mill Street to the Lower Don Trail through Corktown Common and under the Richmond Hill GO corridor, which is missing from the map.	The noted trail, classified as "recreational trail", is presented in Figure 3-5 as a pedestrian facility. The connection to the Lower Don Trail includes a staircase which is why it's not displayed as a cycling facility.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The noted recreational trail is not located in the Traffic and Transportation Study Area for the Lakeshore East Joint Corridor Early Works.	C	
10	City Planning	Draft Traffic and Transportation Memo	Figure 3-6, Page 19	Correct the route of the 505 Dundas streetcar on the map, which does not operate on Queen Street or Broadview Avenue south of Dundas.	Noted, the 505 Dundas street route will be updated in Figure 3-6 in the updated memorandum	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The 505 Dundas streetcar route does not operate in the Traffic and Transportation Study Area for the Lakeshore East Joint Corridor Early Works.	C	
11	City Planning	Draft Traffic and Transportation Memo	Section 3.1, Page 29	Include potential mitigation measures such as consideration of contractual financial incentives to minimize the duration and extent of disruptions to roads, sidewalks, bike lanes, and property accesses. Such measures could include a lane rental system, or door closure charges.	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible. Ontario Line early works are not intended to be procured under the P3 framework, and therefore, financial incentives to be included into the project agreement/contract are not standard practice.	C	
12	City Planning	Draft Traffic and Transportation Memo	Section 3.2, Page 31	Confirm that potential impacts for the Don Crossing early works will not include closures of the Don Valley Parkway; they are not indicated in the discussion of potential impacts.	Comments regarding the Lower Don Bridges early works will be responded to at a later date as Lower Don Bridges early works scope has not been confirmed.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The Don Valley Parkway is not located in the Traffic and Transportation Study Area for the Lakeshore East Joint Corridor Early Works.	C	
13	City Planning	Draft Natural Environment Report	General	Confirm whether the implementation of all mitigation measures identified in the report will be placed on the successful proponent as a contractual obligation. Confirm who will monitor and ensure that mitigation measures and monitoring protocols will be followed.	Mitigation measures identified through the Early Works Report will be carried through to contractual language to be implemented by the successful proponent. Metrolinx will monitor compliance during the construction stage.	?	C	Closed			
14	City Planning	Draft Natural Environment Report	General	Confirm whether the Don River crossing is anticipated to place any new structures such as piers or columns into the river that may alter flooding in the Don River valley. There does not appear to be any discussion in the report about impacts to flooding.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. However, information regarding hydrology and surface water will be added to the Lower Don Bridges Early Works Report.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Natural Environment Memo, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
15	City Planning	Draft Natural Environment Report	General	Confirm whether the cumulative effects to the natural environment from multiple crossings of the Lower Don River immediately adjacent to each other will be studied (e.g. the existing rail bridge spans, two new Ontario Line bridges, various operational and decommissioned utility bridges), and whether there would be benefits to the natural environment and reduced flood risk from the consideration of an integrated crossing solution. Benefits of an integrated crossing to the natural environment (including flood risks in the Lower Don River valley) should be documented, along with any countervailing reasons if such a solution is not technically preferred.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. Response to this comment will be revisited as the Lower Don Bridges Early Works Report is released.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Natural Environment Memo, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.

16	City Planning	Draft Noise & Vibration Report	General	Confirm that proponents would be contractually obligated to adhere to the noise and vibration limits identified in the report, and that proponents would be required to model the noise and vibration impacts of their proposed solution and construction method for the evaluation of proposals. Confirm what party would be responsible for ensuring and monitoring that mitigation measures are being implemented. Despite the exemption provided to government work in noise by-laws, confirm that limiting the time and duration of construction activities can be considered as an appropriate mitigation measure in the development of a noise and vibration management strategy. Confirm that the cumulative effects of noise and vibration will be taken into account in crafting mitigation measures (e.g. where there are a large number of sensitive noise and vibration receptors such as in the Lakeshore East Joint Corridor).	Note that this report only addresses construction noise and vibration, operational noise and vibration will be addressed under separate cover. The construction contract will have noise and vibration limits as per Metrolinx standards. The proponent will work with Metrolinx to ensure that mitigation measures and committed noise levels are met during construction and operation. Detailed assessment by the proponent of their activities will determine the specific mitigation measures required to meet agreed upon construction noise and vibration limits.	?	D	C - for comment on construction noise and vibration. Provide Metrolinx construction noise and vibration standards for reference. D - comment on operational noise and vibration deferred to Operational N&V report which will be reviewed upon receipt.	Noted.	D	Acknowledge Mx intends to defer documentation of operational noise and vibration to the OL EIAR.
17	City Planning	Draft Noise & Vibration Report	Section 4	Identify the sensitive noise and vibration receptors indicated in the tables by their land use or building use.	Land use associated with each receptor is documented in Tables 5-1 and 5-2	?	C	Table 5-1 updated to include land use. Cannot locate Table 5-2, but we assume there are no sensitive vibration receptors based on the discussion in the text.	Land use associated with each receptor is documented in Table 5-1		
18	City Planning	Draft Noise & Vibration Report	Appendix B	Ensure that the study area has been appropriately defined to capture the extent of potential noise and vibration impacts arising from construction. We are concerned that the study area has been too narrowly delineated with respect to the anticipated extent of the impacts, particularly around the Lakeshore East rail corridor segment where residential homes fronting onto Booth Avenue, in direct line of sight from construction activities, have been excluded from the study area.	Study area was determined based on the representative alignment outlined through the business case. Segments of the study area that have narrow extents represent areas in which there is certainty regarding the alignment whereas areas with a wider extent allow for flexibility in modifications to the alignment. Residential receptors on Booth Avenue are represented conservatively by the assessment of 2 Paisley Ave and 14 Wardell St assessment locations, which are considered the worst-case scenarios for noise and vibration within this segment.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Noise & Vibration Memo, to be reviewed when received.	Study area has been appropriately defined, consisting of the project footprint and a noise and vibration buffer to capture the full extent of noise and vibration impacts arising from construction.	C	
19	City Planning	Draft Air Quality Memo	General	Confirm that proponents would be contractually obligated to adhere to the air quality limits identified in the report, and that proponents would be required to model the air quality impacts of their proposed solution and construction method for the evaluation of proposals. Confirm what party would be responsible for ensuring and monitoring that mitigation measures are being implemented.	Proponents will not be contractually obligated to adhere to the air quality limits identified in the report, as for certain contaminants background air quality levels are already higher than these same limits, making adherence impossible. Proponents will be required to follow mitigation outlined in Table 6-1, under Construction Air Quality which include Environment Canada's Best Practices for the Reduction of Air Emissions from Construction and Demolition Activities (2005), and MECP's Technical Bulletin Management Approaches for Industrial Fugitive Dust Sources.	?	C				
20	City Planning, Transit Implementation	Draft Early Works Report	Page 7, Figure 1-1	Ensure that the study area has been appropriately defined to account for the potential environmental impacts of the project. We are concerned that the study area has been too narrowly delineated with respect to the anticipated extent of the impacts, particularly along the Lakeshore East rail corridor, where some residential homes with direct line of sight to the construction have been excluded from the study area (e.g. homes fronting on Booth Avenue in front of Jimmy Simpson Park).	The study area varies for each discipline. The assessment limits/study area will be clarified in the revised report in Table 4-1.	?	C	Table 4-1 describes study areas for different disciplines.			
21	City Planning, Transit Implementation	Draft Early Works Report	Page 11, Figure 1-2	Confirm the Early Works construction footprint of Exhibition Station. The Early Works footprint shown on this map is not consistent with the extent of early works described at a meeting on June 18, 2020, which included a launch site and emergency exit building in Ordinance Park.	Project footprint for the Exhibition GO early works have been revised since the first draft circulated to the City and footprint shown in the revised reports is most up-to-date.	?	C	Conforms to most recent known project footprint.			
22	City Planning, Transit Implementation	Draft Early Works Report	Page 15, Section 2.2.1.1	Update the discussion on the 2014 Provincial Policy Statement, which is now out of date, to reflect the 2020 version.	This has been updated in the revised report to reference the 2020 PPS.	?	C	Updated as requested.			
23	City Planning, Transit Implementation	Draft Early Works Report	Page 16, Section 2.2.1.2	Correct the discussion on the Growth Plan; it does not describe Downtown Toronto as a priority transit corridor, but rather the GO lines and subway lines within Downtown.	This has been updated in the revised report to describe GO lines and subway lines as priority transit corridors.	?	C	Updated as requested.			
24	City Planning, Transit Implementation	Draft Early Works Report	Page 18, Section 2.2.2.1	Correct references to planning area boundaries in the report. The East Harbour Station is within the boundaries of the Unilever Precinct Secondary Plan, adopted by City Council in 2018. The Lower Don Crossing is partially within the boundaries of the Downtown Plan and the Unilever Precinct Secondary Plan, in addition to the King-Parliament Secondary Plan.	The East Harbour early works have been placed under separate cover in updated revisions of this report and as such, this reference has not been included.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Addressed. LSE JC EWR lists all relevant planning policies and projects in Section 2.	C	

25	City Planning, Transit Implementation	Draft Early Works Report	Page 20, Section 3.2	Confirm whether the Ontario Line portals and any alterations to the Richmond Hill GO line are part of the early works.	Alterations to the Richmond Hill GO line are not anticipated as part of the Lower Don Bridges early works.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Alterations to the Richmond Hill GO line and Ontario Line Portal Structures are not part of the Lakeshore East Joint Corridor Early Works.	C	
26	City Planning, Transit Implementation	Draft Early Works Report	Page 21, Section 3.3.1.3	Ensure all approved plans related to the Eastern Avenue bridge are captured in the discussion. The Eastern Avenue bridge is also subject to the Port Lands and South of Eastern Transportation and Servicing Master Plan EA. The new span must accommodate the widened right-of-way and new cross-section approved by City Council in adopting Phases 1 & 2 of that EA.	East Harbour Station is no longer being captured under this report. This comment will be revisited if future East Harbour studies are required for early works.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
27	City Planning, Transit Implementation	Draft Early Works Report	Page 21, 3.3.1.4	Note in the document that the interim service road will be subject to removal and/or reconfiguration when the lands to the north side of the rail corridor are developed, and access to the station should be integrated with the streets and blocks plan of the development.	East Harbour Station is no longer being captured under this report. This comment will be revisited if future East Harbour studies are required for early works.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
28	City Planning, Transit Implementation	Draft Early Works Report	Page 85, 95	Correct the references to Official Plan land use designations, noting that "Rail Corridor" is not a land use designation in the Official Plan.	This will be updated in the revised report.	?	O	Figure 5-12 still makes reference to Rail Corridors as a land use designation.	Addressed. LSE JC EWR lists all relevant planning policies and projects in Section 2.	C	
29	City Planning, Transit Implementation	Draft Early Works Report	Section 4.5	Ensure consistency in the description of environmental conditions in the report. The descriptions of environment conditions are inconsistent with some describing the area while others are limited to the project footprint. This should extend also to adjacent areas beyond the footprint that may be impacted by the project.	The revised report will include clarification language regarding the environmental conditions study area and the Early Works project footprint/study areas.	?	C	Updated as requested.			
30	City Planning, Transit Implementation	Draft Early Works Report	Page 88, Section 4.5.2.1.3	Include a proper public realm description for the Lower Don Crossing, as there is existing the planned public space intersecting and adjacent to the project footprint, accessible from Corktown Common and the Lower Don Trail. Public realm characteristics by definition cannot be described as being similar to the built form characteristics.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
31	City Planning, Transit Implementation	Draft Early Works Report	4.5.4.1.1	Correct the description for Queen Street East, it is not a gateway into the East York community, but rather into Leslieville and the Beach neighbourhoods of old Toronto.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Addressed in Section 5.6.1.1. of the Early Works Report.	C	
32	City Planning, Transit Implementation	Draft Early Works Report	4.7.2	Note that the Lower Don River archaeology would be contained in the South Archaeological Assessment Phase 1 report, not the North report.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
33	City Planning, Transit Implementation	Draft Early Works Report	4.8.1.2	Add reference to the 29 Dufferin bus which is missing from this analysis. A branch of this route serves Exhibition Place and travels along Manitoba Drive.	This will be updated in the revised report.	?	C	Updated as requested.			
34	City Planning, Transit Implementation	Draft Early Works Report	4.8.1.3	Should the report be expanded to include the Ordnance Park as an early works site, the cycling infrastructure should include the Fort York pedestrian/ cycle bridge and related infrastructure connections. The waterfront Martin Goodman Trail also travels immediately south of Exhibition Place along Lake Shore Boulevard.	Ordnance Park is outside the study area of the Exhibition Station early work and as such, has not been included within the report.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.			
35	City Planning, Transit Implementation	Draft Early Works Report	Page 122, Figure 4-23	Correct the map which is missing the Fort York pedestrian/cycle bridge and associated connections between Wellington Street and Garrison Road as an existing pedestrian route.	The Fort York Pedestrian/Cycling bridge is outside the Exhibition Station early works study area and as such, has not been included.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.			
36	City Planning, Transit Implementation	Draft Early Works Report	Page 123, Figure 4-24	Correct the map which is missing the Fort York pedestrian/cycle bridge and associated connections between Wellington Street and Garrison Road as an existing cycling route. Bike lanes on Princes Boulevard and Saskatchewan Road are missing from the map.	The Fort York Pedestrian/Cycling bridge is outside the Exhibition Station early works study area and as such, has not been included.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.			
37	City Planning, Transit Implementation	Draft Early Works Report	Page 133, Figure 4-29	Correct the map which is missing a critical cycling connection from the intersection of Bayview Avenue and Mill Street, through Corktown Common, under the Richmond Hill GO corridor, connecting to the Lower Don Trail.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.

38	City Planning, Transit Implementation	Draft Early Works Report	Page 163, Table 5-4	Confirm whether the removal of vegetation communities includes vegetation currently along the rail embankment, and whether mitigation will consider replacing this vegetation for ecological and visual reasons.	Vegetation clearing can encompass any and all of the vegetation within the Project Footprint including hedgerows and other vegetation communities along the rail corridor. Metrolinx will compensate for tree removals undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	D	Despite provided comment response, does not apply to Exhibition Station in the main. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Vegetation clearing can encompass any and all of the vegetation within the Project Footprint including hedgerows and other vegetation communities along the rail corridor. Metrolinx will compensate for tree removals undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). The LSE JC EWR reflects the most recent information provided in the LSE JC Natural Environment Report.	C		
39	City Planning, Transit Implementation	Draft Early Works Report	5.4.1	For ease of reference, indicate in each table what the sensitive receptor being measured to is (e.g. what the sensitive use in each building or property is).	The receptors will be identified by land or building use in the revised report.	?	O	Sensitive receptors described for some impacts (e.g. air quality) but not others (e.g. noise and vibration) despite this change having been in accompanying technical memos.	Sensitive receptors for Air Quality are defined in Section 4.4.2 and Section 5.4 of the EWR, and the nearest representative noise sensitive receptors are outlined in Section 5.1 of the Noise and Vibration Report.	C		
40	City Planning, Transit Implementation	Draft Early Works Report	Page 207-211, Table 5-14	Provide an opinion whether the mitigation measures proposed can be expected to bring noise and vibration levels within acceptable limits. Confirm that a method of constructing the project exists that can bring noise and vibration levels within acceptable limits. Confirm number of buildings/homes affected by the "zones of influence" for each early works area (and estimated population or number of workers if available).	Noise and vibration limits will be included as part of contract documents. Metrolinx will work with contractors to ensure that committed mitigation measures are implemented. Mitigation is determined based on worst case receptor locations not on the basis of the number of affected properties, however figures for both noise and vibration will be provided in the updated report from which numbers of buildings may be identified.	?	P	Cannot locate mention in report of including noise and vibration limits in contract documents as a mitigation measure in Section 6.5 or Table 6-5.	The Lakeshore East Joint Corridor Early Works Report includes mitigation within Table 6-1 which states that project-specific construction noise and vibration limits will be established.	O	Clarify why construction noise and vibration limits cannot be identified within the Early Works report so that they form part of the environmental approvals and commitments related to the project. Assume reference is intended to Table 6-5 which covers noise and vibration impacts and mitigation measures, as Table 6-1 contains natural environment impacts and mitigation measures.	As environmental assessment is one of the early steps in project planning, construction noise limits will be developed as project design and planning progress. Commitment to development of project-specific construction noise limits is found in Table ES-2 and Table 6-5 of the Final Early Works Report, along with mitigation measures and monitoring activities.
41	City Planning, Transit Implementation	Draft Early Works Report	Page 213-215, Table 5-15	Include social equity impacts and mitigation measures (i.e. whether certain communities experiencing social inequality are impacted greater). Walkways must be universally accessible AODA-compliant even during construction. For transportation networks, ensure that two parallel collector/arterial routes are not closed at the same time, and transit diversions do not affect two parallel transit routes at the same time.	Mitigation regarding AODA-compliant walkways and parallel transportation connections will be added to the revised report. Review of impacts to human environments from a gender and equity lens are not typically included within provincial environmental assessment processes. Ontario Line impacts are being assessed in accordance with O. Reg. 341/20 under the Environmental Assessment Act. The applicable impact assessment framework does not have a requirement for transit project evaluation through an equity and gender lens.	?	C	Further discussion on social equity impacts for provincial projects are being taken up in alternate venues.				
42	City Planning, Transit Implementation	Draft Early Works Report	Page 216, 5.5.1.1	Include financial incentives in the construction contract to minimize the duration of access being restricted to driveways and building entrances.	Financial incentives are not typically included as mitigation measures in environmental assessment documents, and as such, have not been included. Metrolinx remains committed to reducing impacts to the traffic and transportation network during construction and will ensure appropriate traffic management plans are developed prior to construction to manage impacts.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible. Ontario Line early works are not intended to be procured under the P3 framework, and therefore, financial incentives to be included into the project agreement/contract are not standard practice.	C		
43	City Planning, Transit Implementation	Draft Early Works Report	Page 216-217, 5.5.1.2, Page 231, 5.8.1.1	Include financial incentives in the construction contract to minimize the duration of road/lane closures (e.g. lane rental system with sufficiently high lane occupancy fees).	Financial incentives are not typically included as mitigation measures in environmental assessment documents, and as such, have not been included. Metrolinx remains committed to reducing impacts to the traffic and transportation network during construction and will ensure appropriate traffic management plans are developed prior to construction to manage impacts.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible. Ontario Line early works are not intended to be procured under the P3 framework, and therefore, financial incentives to be included into the project agreement/contract are not standard practice.	C		
44	City Planning, Transit Implementation	Draft Early Works Report	Page 217, 5.5.1.3	Public realm impacts should include construction activity potentially disturbing streetscape materials, furniture, landscaping in the public realm. Requiring restoration to current standards would be an appropriate mitigation measure. Public realm impacts should also include the potential for design incongruity between the architectural styles of the existing underpass and the new Ontario Line bridges, and the impact the greater extent of underpass length has on the pedestrian environment in terms of safety and comfort. Mitigation measures to coordinate and improve design would be an appropriate response.	Public realm impacts such as construction activities potentially disturbing streetscape materials, furniture, and landscaping have been added to the revised report. Public realm impacts suggested such as designing for congruence between architectural styles of existing infrastructure are not typically included as impacts/mitigation however, Metrolinx will work with architectural design specialists to ensure the materials and design of the proposed bridge at the Lower Don Bridges early works complements surrounding infrastructure.	?	D	Public realm impacts should be restored to the current City standard, not to existing conditions.	Language has been included in Table 6-6 of the LSE-JC Early Works Report to note that wherever feasible, lands impacted by construction will be restored to the current City of Toronto standards following construction completion.	C		
45	City Planning, Transit Implementation	Draft Early Works Report	Page 217, 218, 5.5.2	Include the Jimmy Simpson Recreation Centre as a community or recreational amenity that may be impacted. Include the Fontbonne Ministries Mustard Seed operation on Strange Street as potentially impacted.	The Lakeshore East early works have been placed under separate cover in updated revisions of this report however, Jimmy Simpson Recreation Centre and Fontbonne Ministries will be included in report documentation.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Jimmie Simpson Recreation Centre is included as a community resource within the Lakeshore East Joint Corridor Socio-economic and Land Use Characteristics Study Area in Table 5-11.	C		

46	City Planning, Transit Implementation	Draft Early Works Report	OLS-024, Page 221	Note the existing plan to move the Cherry Street interlocking tower as part of the extension of the Cherry streetcar tracks to the south.	This will be reviewed and updated as appropriate.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
47	City Planning, Transit Implementation	Draft Early Works Report	Page 236, 5.8.2.3	Correct the reference to Exhibition Station, as this section deals with the Lower Don crossing.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
48	City Planning, Transit Implementation	Draft Early Works Report	General	Confirm whether potential impacts to flood risks in the Don River Valley were studied, or whether this will be studied under separate cover. See comments under Natural Environment Report for greater detail.	Impacts to flood risks in the Don River Valley were not assessed as part of the Environmental Conditions Reporting. Once a route alignment has been identified, Project-specific impacts including floodplain impacts/flood risks will be assessed in consultation with the TRCA.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	A comprehensive flood modelling exercise is being undertaken in support of the Ontario Line project, and Metrolinx will continue to consult with the City of Toronto, TRCA, and Waterfront Toronto.	D	Despite reponse, not applicable to LSE-JC.
49	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	Section 2 Methodology and Approach, page 10	CHERs should be undertaken for those properties warranting it. The report notes that "it is not necessary to recommend an individual Cultural Heritage Evaluation Report (CHER) be undertaken to re-apply O. Reg. 9/06 to these properties." While a CHER may not be necessary for each property, some properties may warrant a CHER being undertaken, for example properties designated under OHA prior to O. Reg 9/06 taking effect. It should also be acknowledges that CHERs will be provided for properties identified as potential built heritage resources identified during field review.	No CHER will be completed outside of this report/the future Heritage Detailed Design Report (HDDR). The HDDR will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent. Cultural Heritage Reports and Heritage Detailed Design Reports will meet Metrolinx obligations under the Ontario Heritage Act. The Ontario Line Cultural Heritage Report (currently available on our website (https://www.metrolinxengage.com/sites/default/files/rpt_2020-09-03_ol_ec_cultural_heritage_60611173_optimized_locked.pdf)) documents sufficient detail for the purposes of documenting cultural heritage value or interest for any properties identified as retaining potential during field review. The details from the OL CHR have been carried to the Early Works Heritage Detailed Design Report. Note, the original Early Works report reviewed by the City has been refined to an HDDR with project-specific impacts based on concept design, and more detailed mitigation (in place of an HIA).	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.	C	Closed for the purpose of the original comment. New comments based on HDDR have been provided.
50	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts, page 33	Undertake and complete Heritage Impact Assessments prior to detailed design and reviewed by City of Toronto Heritage Planning and subject to staff delegated or Council decision under the Ontario Heritage Act and Municipal Code. The report indicates that the intent of the Cultural Heritage Report impact assessment is to "provide sufficient discussion of potential impacts to inform project planning to avoid, to the greatest extent possible, undertaking additional HIAs of individual properties." Properties that are identified as built heritage resources warrant Heritage Impact Assessments if they are to be altered or demolished as a result of project activities.	Heritage Detailed Design report(s) will be prepared by Metrolinx and/or Project Co(s), once a preferred alignment has been identified and/or detailed design has commenced. The report(s) will document the review of the preferred alignment and/or detailed design as it relates to the Cultural Heritage Report, refine project-specific impacts and mitigation measures, identify any changes, and, where required, describe how any conditions attached to the Minister's Consent will be met, based on the proposed/recommended design. The HDDR will also include any impacts on a known or potential built heritage resource or cultural heritage landscape that were not anticipated or described in the Cultural Heritage Report. In this instance, the Heritage Detailed Design Report will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.	C	Closed for the purpose of the original comment. New comments based on HDDR have been provided.

51	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts, page 34	Clarify the scope of Heritage Detailed Design Reports. With the assertion that only properties meeting 10/06 criteria will be subject to further study through a Heritage Detailed Design Report, clarification is needed on how identified built heritage resources not classified as meeting 10/06 criteria may be further evaluated and how their identified cultural heritage values will be incorporated in the overall evaluation of alternatives and identification of the preferred alignment. Details on how potential project impacts on their cultural heritage value will be mitigated through the detailed design process are also needed. The Impact Tables in this Report should be revised once the preferred alignment has been identified and subject to further consultation with the City of Toronto Heritage Planning.	Heritage Detailed Design report(s) will be prepared by Metrolinx and/or Project Co(s), once a preferred alignment has been identified and/or detailed design has commenced. The report(s) will document the review of the preferred alignment and/or detailed design as it relates to the Cultural Heritage Report, refine project-specific impacts and mitigation measures, identify any changes, and, where required, describe how any conditions attached to the Minister's Consent will be met, based on the proposed/recommended design. The HDDR will also include any impacts on a known or potential built heritage resource or cultural heritage landscape that were not anticipated or described in the Cultural Heritage Report. In this instance, the Heritage Detailed Design Report will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent. Further, the HDDR will document refined project-specific impacts to all heritage properties (not just 10/06) based on the preferred alignment/detailed design. Project-specific impacts will be refined during detailed design, using the Cultural Heritage Report and documented in the HDDR.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	Comment noted. Metrolinx looks forward to continued discussions and feedback from the City and Heritage Preservation Services as the project planning progresses.	C	Closed for the purpose of the original comment. New comments based on HDDR have been provided.
52	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts	Summarize how many built heritage resources are proposed to be impacted and the expected nature of the impacts (type and description of anticipated impact) to understand the overall impacts the alignment will have on built heritage resources, due to the complexity and size of the Impact Tables. It needs to be made clear which and how many built heritage resources are anticipated to be demolished or altered due to the alignment. Similarly, there is a need to summarize how many, and which, identified built heritage resources will not be impacted by the current alignment.	As noted in comment response #1, this report documents all known or potential built heritage resources within the study area and includes a range of preliminary impacts and mitigation measures for each built heritage resource. Once an alignment has been selected and/or detailed design is prepared, project-specific impacts will be documented in the HDDR, specifying the number of cultural heritage resources expected to be demolished or altered.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.	C	Closed for the purpose of the original comment. New comments based on HDDR have been provided.
53	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	For all Impact Tables, the proposed mitigation measure should be revised to include completion of a Cultural Heritage Evaluation Report, Heritage Impact Assessment and associated Strategic Conservation Plan, required when any physical impacts to a cultural heritage resource or its heritage attributes are anticipated. These should be completed prior to Detailed Design and circulated to Heritage Planning for review and comment.	Refer to comment responses #2 and #3. Further, recommendations for SCPs are noted within the report impact tables where an SCP would be warranted.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	Comment noted. Metrolinx looks forward to continued discussions and feedback from the City and Heritage Preservation Services as the project planning progresses.	C	Closed for the purpose of the original comment. New comments based on HDDR have been provided.
54	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	Revise all Impact Tables to clarify when in the process the City of Toronto Heritage Planning unit will be consulted on the proposed mitigation measures if it is not possible to avoid impact to an identified cultural heritage resource and its heritage attributes. Consultation should occur prior to Detailed Design.	Language in report will be revised to more clearly include consultation with the City of Toronto Heritage Planning unit and specify timing for consultation with City.	?	C	Consultation with Heritage Planning is noted where a direct adverse impact has been identified.			
55	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	Revise the alternatives in all Impact Tables to also include consultation with the Toronto Preservation Board and City Council where applicable. Heritage Planning notes that properties not yet owned by Metrolinx are not exempt from Municipal process and legislation under the Ontario Heritage Act and Municipal Code.	Metrolinx as a Crown Agency of the Province of Ontario is exempt from certain municipal processes and requirements. In these instances, Metrolinx will engage with the City to incorporate municipal requirements as a best practice, where practical, and may obtain associated permits and approvals. Consultation with the City of Toronto Heritage Preservation Services has been included in the report for all impacted heritage properties.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	Comment noted. Metrolinx looks forward to continued discussions and feedback from the City and Heritage Preservation Services as the project planning progresses.	C	
56	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	5. Community Engagement	Heritage Planning acknowledges that the Metrolinx data request was not able to be completed prior to the draft of this report due to the on-going COVID-10 global pandemic and lack of remote access to property databases for City staff.	Comment noted.	?	C				

57	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	5. Community Engagement	Identify how and when broader public engagement will occur, given the proposed impacts on a number of identified municipally/locally significant cultural heritage resources, in addition to any as yet unidentified resources. This section should clarify and identify what other non-governmental heritage organizations, HCD advisory committees, and community stakeholders have been included in engagement.	Public engagement is currently underway for the broader Ontario Line Environmental Conditions Report including all properties that are documented in the Draft Early Works HDDR. Further, the Draft HDDR will be released for public review and any comments received during the Draft OLECR and Draft Early Works HDDR will be reviewed. Any updates required in either report will be made and reissued for final OLECR and Early Works HDDR.	?	P	Not fully addressed in the draft HDDR.	The LSE-JC Early Works Report references cultural heritage documentation developed as part of the Ontario Line Environmental Conditions Report, which included consultation with the local community. The Draft LSE-JC Early Works Report will also be made public for review, and any comments on cultural heritage will be included as part of the consultation record.	C		
58	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	6.2 Next Steps, page 49	Provide confirmation as to which properties will be subject to a Heritage Detailed Design Report. These reports are to be shared with MHSTCI for its records. These reports should also be shared with the City of Toronto Heritage Planning unit.	The HDDR will document project-specific impacts and mitigation/next steps for known and potential cultural heritage resources that are proposed to be impacted by the project footprint.	?	C	request list of specific properties?				
59	City Planning	Lower Don Bridges HDDR	General	Heritage Planning staff have reviewed the Lower Don Bridges HDDR and have no concerns with the findings/proposed mitigation measures.	Acknowledged.	?	C					
60	City Planning	Exhibition Early Works HDDR	General	Heritage Planning staff have reviewed the Exhibition Early Works HDDR and, on the understanding that a subsequent report will be prepared for the Exhibition Station South Civils works, have no concerns with the findings/proposed mitigation measures. The report should acknowledge that follow-on works at Exhibition Station will potentially have impacts to the other heritage buildings listed in this report (i.e. buildings identified as having heritage value aside from 1 Atlantic Avenue) rather than saying there is no impact; it is odd to ignore this knowing that the early works are directly linked to future works that are part of the same project which are currently planned to impact these buildings. The City agrees with the detailed documentation and commemorative signage proposed for 1 Atlantic Avenue in the mitigation measures.	Comment noted, in the revised report, it is noted that follow-on works at Exhibition Station may have potential impacts to other heritage buildings listed in this report and will be assessed under separate cover.	?	O	Cannot locate any discussion or mention of potential impacts to heritage resources from follow-on works associated with the early works in Section 5 of the revised report. Recommend including such a statement in the introduction to Section 5.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.	

ADDITIONAL COMMENTS (OCTOBER 2021)

1	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 3.1.2							new	Provide additional description of the retaining walls to be constructed, including the material and landscape treatments and strategies that were discussed in the Lakeshore East Wall Mitigation series of meetings held with the City.	Additional details associated with the retaining walls, including material and landscape treatments, are part of the early works detailed design and are anticipated to continue to evolve as project planning and design, and discussions with the City, progress. City's feedback is being incorporated into project detailed design, and Metrolinx is looking forward to continuing to work with the City to advance this.
2	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 3.1.3							new	Provide additional description of the reconstructed bridges to be built within the Lakeshore East Joint Corridor, including basic information about the distance provided between abutments for each bridge, functional accommodation for streets running under the bridges (proposed cross-section elements, right-of-way width, etc.), the structural design of the bridges, etc.	Additional details of the reconstructed bridges are part of the early works detailed design and are anticipated to continue to evolve as project planning and design, and discussions with the City, progress. City's feedback is being incorporated into project detailed design, and Metrolinx is looking forward to continuing to work with the City to advance this.

3	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 3.1.5							new	Clarify why noise barriers between Pape and Jones Avenues are included within the scope of this Early Works package, and approved under the Ontario Line regulation (instead of the Lakeshore East corridor widening or electrification EAs), as they are unrelated to the delivery of the Ontario Line which veers north from the Lakeshore East GO corridor west of Carlaw Avenue.	This assessment was a joint assessment of both the GO Expansion and Ontario Line within the above ground Ontario Line study area (considered to be approximately from Tannery Road to Pape Avenue. As such, barriers were included where impacts from either source were predicted to impact receptors within this study area.
4	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 3.2 and Figure 3-1							new	Clarify why the Lakeshore East Joint Corridor Early Works footprint overlaps with the East Harbour Early Works footprint north of Eastern Avenue (per the study area boundaries reviewed earlier in the East Harbour Early Works Report.	The following text has been included in the report: Note that such lands adjacent to the Eastern Avenue rail bridge on the north side of Eastern Avenue will be shared with the Ontario Line East Harbour Station early works project to reduce temporary land requirements in support of construction activities.
5	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 5.6.1.1							new	Revise description of built form to add main street retail stores primarily along Queen Street East and Gerrard Street East. The characterization of retail being mainly in single-storey retail plazas with surface parking is inaccurate in this area, applying only to a specific area within the study area (Gerrard-Carlaw).	Description revised in Section 5.6.1.1.
6	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 5.6.1.1.1							new	Revise description of the Downtown Plan as bounded by the Don River to the east (not west), and Bathurst Street to the west (not east). The Downtown Plan is not within the boundaries of the Early Works.	The Downtown Plan overlaps with the Lakeshore East Joint Corridor Study Area west of the Don River between Adelaide Street East and the rail corridor. Description revised in Section 5.6.1.1.
7	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 5.6.1.3							new	Note that neighbourhoods are not typically described in urban planning and design as elements of the public realm, although they do contain public realm elements and characteristics. Also note that arguably the character of Riverside and Leslieville communities could more accurately be described as reminiscent of traditional urban retail main streets rather than small towns.	Description revised in Section 5.6.1.3.1.

8	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7 and 6.7 and Appendix A4							new	Provide additional detail regarding the specific heritage impacts imposed by the proposed design of the project, and the specific mitigation measures and monitoring measures proposed to address the impacts. The "preliminary potential" level of detail and certainty provided in the draft Early Works report is insufficient and inadequate given that Metrolinx is designing the project to 100% design, especially given the change in design of the project from the straddle option to the north side option that occurred since this assessment was completed.	The Lakeshore East Joint Corridor Early Works Report and supporting technical reports including the Heritage Detailed Design Report reflect the early works design concept available at the time of the Early Works Report development, while also reflecting the level of design typical for an environmental assessment. The impacts and mitigation measures documented in the Heritage Detailed Design Report are impacts and mitigation measures that have been refined from the previously circulated and reviewed Ontario Line Existing Conditions Report/Cultural Heritage Report and Preliminary Impact Assessment. The heritage reporting for the Ontario Line has been developed in consultation with the MHSTCI. The resultant level of detail reflected in the impact assessment is consistent with the preceding early works reports and has also been reviewed by the MHSTCI. Metrolinx has also engaged the City throughout project planning and design development to date, is incorporating City's feedback into the design, and will continue to engage the City as design progresses.
9	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7 and 6.7 and Appendix A4							new	The Queen Street bridge appears to be missing from the list of features studied for heritage potential. Given the inclusion of the Carlaw Avenue and Gerrard Street bridges which are of a similar design and age, this appears to be an omission.	A Cultural Heritage Evaluation Report for the Queen Street bridge was completed by AECOM in January 2017 and approved by the Metrolinx Heritage Committee. The bridge was evaluated using Ontario Regulation 9/06 and 10/06 and was determined not to meet these criteria. Therefore as the Queen Street bridge was screened out in the Ontario Line Cultural Heritage Report, it is not included in the HDDR.
10	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7 and 6.7 and Appendix A4							new	Provide in particular more specific details about the direct impacts to the Riverdale Heritage Conservation District. The HCD is considered as one resource being impacted, but the property-specific impacts within the HCD should be understood.	Figures ES-2 and 3-1 in the HDDR illustrate where the boundaries of OLS-017 - the Riverdale HCD overlap with the project footprint. Tables ES-2 and 5-1 provide details of impacts to specific properties within the Riverdale HCD. For example, one non-contributing property will be directly impacted by early works and mitigation measures have prepared based on the policies of the HCD plan. Refer to the permits and approvals section (Section 7) of the HDDR for future commitments noted for consultation with the City.
11	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7 and 6.7 and Appendix A4							new	Confirm Metrolinx's intent with respect to the plans for 400 Carlaw Avenue. This report indicates that there will be no impacts to the property through the Early Works, but a previous report and presentation suggested it would be impacted by the project.	400 Carlaw Avenue is not required for early works and will be assessed in the forthcoming EIAR.
12	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7, 6.7, 7.4 and Appendix A4							new	Clarify the commitments to municipal process and authority related to heritage properties impacted by the project, including with respect to the ownership status of impacted properties (particularly in the Riverdale HCD). Unless they are acquired by the Province, they would be subject to the municipal process framework for alteration and demolition.	Section 7 of the HDDR provides an overview of municipal permit/consultation requirements. Metrolinx will continue to work with the City of Toronto as planning progresses for early works.

13	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7 and 6.7 and Appendix A4							new	Request that Metrolinx convene a meeting with City Heritage Planning staff to discuss heritage impacts and conservation for the Lakeshore East Joint Corridor, prior to the completion of the final Early Works Report. We note that Metrolinx and the Ontario Line Technical Advisor have provided meetings to discuss heritage impacts and conservation for the Ontario Line South portion of the project, but such a meeting has not yet occurred for this segment.	A meeting was held between Metrolinx and the City of Toronto, on November 12, 2021 to discuss cultural heritage impacts and mitigation associated with the Lakeshore East Joint Corridor early works.
14	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 5.9 and Figure 5-20							new	Expand the study area for transportation to include a wider area of analysis. Planning studies will typically define the transportation analysis area much more broadly than the footprint of the project to ensure impacts to major streets around the project and downstream major intersections are captured in the analysis. The narrow definition of the study area does not allow for any assessment of network level transportation impacts at the nearest major intersections along Eastern Avenue and Queen Street, for example. The closure of traffic lanes at the bridge construction sites along these streets, for example, can reasonably be inferred to have impacts at the nearest signalized intersections at the very least, for example. Update the analysis that follows in this section using the broader study area.	Metrolinx is currently completing a quantitative traffic assessment for a broader study area in consultation with City of Toronto Transportation Services.
15	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 6.5, Appendix B3, and Appendix C							new	City Planning is concerned about the land use impacts of noise and vibration resulting from short-term construction as well as long-term operation of new infrastructure. In principle, the long-term operation impacts of infrastructure in particular must be reasonably compatible with the activities normally occurring within permitted land uses for these uses to continue to be viable and sustainable, and provide residents and businesses with reasonable enjoyment of their properties and support a high quality of life. This is of significant interest within the Lakeshore East Joint Corridor due to the significant increase in transit service being proposed in proximity to existing sensitive receptors abutting and adjacent to the corridor. City Planning does not have the technical expertise or capacity to undertake a review of the noise and vibration impacts, mitigation measures and monitoring activities identified in the report, and recommend a peer review of the noise and vibration impacts and mitigation measures to determine their accuracy and appropriateness.	The NV impact assessment was performed following the provincial framework provided in the MOEE/GO and MOEE/TTC protocol for noise and vibration. In the case of noise, even more stringent standards were adopted by attempting to meet existing predicted railway 16h and 8h Leq levels, where feasible. The assessment, including the full noise model has been reviewed by the MECP and comments on the draft report will be included in the final EWR. Station and other component NPC-300 assessments will be assessed in the forthcoming EIAR.
16	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 6.6							new	Clarify the specific impacts the project will impose on the socio-economic environment and strengthen the mitigation measures and monitoring activities identified. Listed impacts are overly general and vague. Mitigation measures identified are minimal and often equivocal, and do not respond to specific conditions that may be present during construction. As the Early Works are being designed to 100% design by Metrolinx it should be possible to identify the impacts to property, adjacent land uses, and the public realm with a great degree of specificity.	The Lakeshore East Joint Corridor Early Works Report reflects the level of preliminary design typical for an environmental assessment and a conservative approach has been taken to determine impacts and develop mitigation measures. Detailed design is advancing concurrent with the EA process and Metrolinx will continue to work with the City of Toronto as design and construction advance.

17	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 6.9							new	Provide details about the specific impacts the project will impose on various aspects of the transportation system. Listed impacts are overly general and vague, and do not appear to be based on any information about required modifications or closures to various components of transportation infrastructure. Mitigation measures are tentative and often equivocal, and do not respond to any specific impacts or concerns created by the project. The assessment of transportation impacts and identification of mitigation measures and monitoring activities should be based on reasonable assumptions about the construction methodology including proposed or permitted closures/modifications to transportation infrastructure related to the early works project.	MX is currently completing a quantitative traffic assessment for a broader study area in consultation with City of Toronto Transportation Services.
18	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5							new	Update the report to describe more fully the early works as it relates to traffic and transportation, alternatives that were considered, assessment and evaluation of impacts, and mitigation measures in accordance with section 8 of O. Reg 341/20. For example, describe which roads will be affected by temporary closures for construction works, what alternatives have been considered, what are the impacts, and what mitigations are proposed. Carry forward any edits made to this appendix in response to these comments to the main report.	The Early Works Reports have been prepared in accordance with, and meets the requirements of Section 8 of Ontario Regulation 341/20. Description of alternatives is documented in Section 1.3.3. Future work being completed includes a quantitative traffic report underway for a broader study area in consultation with the City of Toronto Transportation Services.
19	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 2.1.1							new	Clarify which intersections did not have existing turning movement counts and signal timing plans, and what was done to accurately assess their existing traffic conditions.	The intersections where traffic data was missing are listed in Appendix A of the Existing Conditions Traffic and Transportation Report ("The Ontario Line Final Environmental Conditions Report" (AECOM, 2020) which was published on November 30, 2020). Metrolinx is currently completing a quantitative traffic assessment (in consultation with the City of Toronto Transportation Services) for a broader study area and where all impacted intersections will be assessed in existing conditions and construction staging scenarios.
20	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 2.1.2							new	Consider including the volume of pedestrians, cyclists, and transit when determining their level of service, which is a limitation to Ottawa's Multi-Modal Level of Service tool. If recent volumes are not available, then apply growth rate assumptions to older volume counts, rather than doing new counts now which may not be accurate due to the current pandemic.	The multi-modal level of service tools that are widely used in the Canadian context (e.g., City of Ottawa's MMLOS Guidelines (2015), York Region's MMLOS Evaluation Approach (2016), and Halifax's MMLOS Framework (2019)) do not consider pedestrian, cyclist, or transit volumes when determining their level of service. The parameters used in the assessment of each mode (e.g., number of uncontrolled conflicts, crossing width, average delays, etc.) are considered more important than actual volumes in assessing the specific mode's/facility's level of comfort, safety, and convenience.
21	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 3.1.1							new	Include more signalized intersections for traffic operations analysis. The transportation study area seems to be defined very narrowly and some roads like Queen Street and Eastern Avenue have not been analysed at all despite the fact they will be impacted by the project. There are other signalized intersections in the vicinity including at Eastern/Broadview, Queen/Logan, Dundas/Boulton, Queen/Broadview, and Eastern/Logan. All roads within the study area that will be impacted by construction along the rail corridor should be considered.	Intersections along Queen Street and Eastern Avenue were not assessed as traffic data was missing at the noted intersections as listed in Appendix A of the Existing Conditions Traffic and Transportation Report ("The Ontario Line Final Environmental Conditions Report" (AECOM, 2020) which was published on November 30, 2020). Metrolinx is currently completing a quantitative traffic assessment for a broader study area in consultation with City of Toronto Transportation Services.

22	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 3.1.2.2							new	Clarify which arterial roads are experienced by pedestrians to have long average delays/waiting times. Note that this section includes street names that are outside the Lakeshore East Joint Corridor Study Area in the second paragraph of this section, which is assumed to be an error.	Noted, the reference to the arterial roads in Section 3.1.2.2 was updated to reflect the actual roads within the Lakeshore East Joint Corridor Study Area where pedestrians experience long average delays/waiting times.
23	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 3.1.2.2 & 3.1.3.2							new	Determine the existing level of service for pedestrians and cyclists on Queen Street and Eastern Avenue, in addition to what is noted in Tables 3-3 and 3-5. Consider any other arterial, collector, or local roads as well, especially if there are any sidewalks near the rail corridor which will be affected and/or if detour will be required. All segments within the study area that will be impacted by construction along the rail corridor should be considered.	Noted, the existing pedestrian and cyclists level of service on Queen Street and Eastern Avenue were added to Table 3-3 and 3-5. Only arterial and collector roads were considered in the analysis as at the EA stage, detailed information on the impacted active transportation facilities is not available. Metrolinx is currently completing a quantitative traffic assessment for a broader study area in consultation with City of Toronto Transportation Services.
24	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 3.2.1							new	Add the existing TTC route #325 (Don Mills Blue Night bus route) to Table 3-6 and Figure 3-6.	Noted, TTC route #325 was added to Table 3-6 and Figure 3-6.
25	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 3.2.2							new	Determine the existing level of service for transit on Queen Street, in addition to what is noted in Table 3-8. All segments within the study area that will be impacted by construction along the rail corridor should be considered.	Noted, the existing transit level of service on Queen Street and Eastern Avenue were added to Table 3-8.
26	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - Table 4-1							new	Confirm that any changes to signal timing will be considered from the pedestrian and cycling perspective (as it could have negative impacts for pedestrians in terms of longer wait/crossing times) in addition to the traffic movement perspective.	As noted under the mitigation measures column of Table 4-1, Metrolinx will coordinate with the City of Toronto to ensure any modifications to pedestrian crossing distances at signalized intersections are reflected in revised pedestrian clearance timings.

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)
1	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	General	This report does not include any detailed or quantitative analysis considering the impacts of the LSE EW traffic impacts. MX to provide a quantitative and detailed traffic impact analysis considering all modes of transportation.	Metrolinx is currently completing a quantitative traffic assessment for a broader study area in consultation with City of Toronto Transportation Services.	
2	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	General	MX to provide all related Traffic and Transit Management Plans and Traffic Control Plans to show how the traffic impacts will be managed and mitigated during the construction period.	Metrolinx will be circulating Transit and Traffic Management Plans and Traffic Control Plans for the City's review as they become available.	
3	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	General	The report should use Synchro 11 for the intersection capacity analysis and provide reference to the City's most updated guidelines (link below): https://www.toronto.ca/wp-content/uploads/2021/01/964c-TSSignal-OptimizationSynchro-11-Guidelines.pdf	Synchro 9 was used this report to stay consistent with the Existing Conditions Traffic and Transportation Report ("The Ontario Line Final Environmental Conditions Report" (AECOM, 2020) which was published on November 30, 2020). At the time of preparation of the Existing Conditions report, the noted Synchro 11 guidelines were not published.	
4	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	Table ES-1, Page 13	Construction vehicles routes need to be determined and related analysis needs to be conducted to evaluate the impacts on regular traffic. Safety issues need to be considered as well.	Construction haul routes are being considered as part of the Transit and Transportation Management Plan. Congestion hotspots and truck restrictions will be considered when identifying these haul routes.	
5	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	Table ES-1, Page 13	A communication plan to be provided to make sure people are aware of the construction and its effects and also know how to use detours in case of road closures.	Metrolinx will develop a communication plan during detailed design which will be implemented in advance of construction.	

6	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_lsejc_draft_60611173_optimiz	Figure 1-2 , Page 25	The study area needs to be specifically determined including all affected intersections. This should be including all signalized and also un-signalized intersections.	At the EA stage, detailed construction staging schemes that describe the potential modifications to the existing transportation network were not available. Hence, identifying all affected intersections was not feasible. Metrolinx is currently completing a quantitative traffic assessment for a broader study area in consultation with City of Toronto Transportation Services.
7	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_lsejc_draft_60611173_optimiz	Table 3-1, Page 41	Is there any un-signalized intersection in the study area?	Yes, there are unsignalized intersections in the study area. Those intersections were not assessed in this report since turning movement counts were missing as listed in Appendix A of the Existing Conditions Traffic and Transportation Report ("The Ontario Line Final Environmental Conditions Report" (AECOM, 2020) which was published on November 30, 2020).
8	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_lsejc_draft_60611173_optimiz	Table 3-3, Page 45	The results show that the pedestrian LOS is not at a good and acceptable level for the existing condition. Any kind of sidewalk closure may have a great impact on the pedestrian LOS in this area. Please confirm if there is any sidewalk closure during the EW construction period.	Sidewalks or temporary walkways will be maintained/provided wherever possible. A small number of full weekend closures may be required on Dundas, Logan, and Queen for safety reasons during construction, to be confirmed through the quantitative multi-modal transportation impact assessment currently being developed by Metrolinx. Metrolinx will co-ordinate with other ongoing projects when scheduling the early works activities to maintain the mobility of road users, and to identify mitigation measures that optimize traffic flow during construction. Notices of any closures will be issued in advance of the closures.
9	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 5.9.1.2- Intersections Operations, Page 127	Please provide additional traffic analysis for the adjacent un-signalized intersections within the study boundary. The analysis should include the multimodal transportation aspects.	The Transit and Traffic Transportation Master Plan is considering an expanded study area roughly bounded by Danforth Avenue, River Street, Lake Shore Boulevard East, and Jones Avenue. Impacts of construction on non-vehicular modes of travel will be assessed. Metrolinx will be circulating Transit and Traffic Management Plans and Traffic Control Plans for the City's review as they become available.

10	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 5.9.2- Pedestrian Network and Operations, Page 129	<p>Please identify and label the pedestrian foot-overbridge over the GO Rail corridor in the pedestrian network (red-marked in the Figure 5-21 below) .</p> 	Noted, the pedestrian bridge over the GO Rail corridor will be shown and labelled in Figure 5-21.	
11	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 5.9.2- Pedestrian Network and Operations, Page 132	<p>Some of the streets/sidewalks were not analyzed (red-maked in the Figure 5-22). Is there any reason they are excluded to this LOS analysis?</p> 	The existing pedestrian level of service findings on Queen Street and Eastern Avenue were added. Only arterial and collector roads were considered in the analysis as at the EA stage, detailed information on the impacted active transportation facilities was not available. Metrolinx is currently completing a quantitative traffic assessment for a broader study area in consultation with City of Toronto Transportation Services.	
12	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 5.9.3- Cycling Network and Operations, Page 134	Similar to the pedestrian network operation analysis comments, some of the streets were not analyzed for the bike operation (Figure 5-24). Is there any rationale they are excluded to this LOS analysis?	The existing cyclists level of service findings on Queen Street and Eastern Avenue were added. Only arterial and collector roads were considered in the analysis as at the EA stage, detailed information on the impacted active transportation facilities was not available. Metrolinx is currently completing a quantitative traffic assessment for a broader study area in consultation with City of Toronto Transportation Services.	
13	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 5.9.4- Transit Network and Operations, Page 143	Similar to the pedestrian network operation analysis comments, some of the streets were not analyzed for the transit operation (Figure 5-26). Is there any rationale they are excluded to this LOS analysis?	The existing transit level of service on Queen Street and Eastern Avenue were added.	

14	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 6.9- Traffic and Transportation, Page 174	<p><i>"Potential overlapping construction timelines with other planned projects (e.g. capital projects and local developments) nearby may result impacts to the transportation network and its road users."</i></p> <p>Have all City capital projects and third party construction that overlap with the Lakeshore East Joint Corridor Early Works timelines been identified? Metrolinx has access to the City's INVlewT.O. Infrastructure Viewer and should be able to identify all major infrastructure projects within the area / adjacent road network. All conflicts and impacts should be identified in the Early Work Report and mitigation measures presented.</p>	<p>The Early Works Reports have been prepared in accordance with, and meets the requirements of Section 8 of Ontario Regulation 341/20.</p> <p>This will be addressed through the detailed design of early works, including a quantitative traffic impacts analysis underway for a broader study area in consultation with the City of Toronto Transportation Services.</p>	
15	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 6.9- Traffic and Transportation, Page 174	<p><i>"Implement flagging where construction vehicles are present to ensure construction vehicles operators are aware of pedestrian and vehicular traffic within the construction area."</i></p> <p>Please include traffic control persons (TCP) where it is required (i.e. major intersections, construction area access, etc.) to provide safety for the pedestrian and during the construction period. This should be included in the construction management plan/traffic management plan report and confirmed by Transportation Services and Work Zone coordinators.</p>	<p>Table 6-9 mentions that flagging will be implemented where construction vehicles are present to ensure construction vehicles operators are aware of pedestrian and vehicular traffic within the construction area</p>	
16	Utility Review, Permits & Enforcement - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Utility Design	<p>All proposed utilities (dry) should be designed (i.e. proposed alignments, vertical and horizontal clearances etc.) and constructed in-accordance with the "MCR" (Municipal Consent Requirements), for more information about MCR please check the following link:</p> <p>https://www.toronto.ca/services-payments/building-construction/infrastructure-city-construction/construction-standards-permits/standards-for-designing-and-constructing-city-infrastructure/</p>	<p>Comment noted</p>	

17	Utility Review, Permits & Enforcement - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_Isejc_2021-10-01_ol_draft_60611173_optimized_locked	Sign Offs	<p><u>Utilities Sign-Off</u> Sign-offs are required from all members of Toronto Public Utilities Coordination Committee (TPUCC) as noted in Appendix B of the MCR or any other affected party from this work, prior to submission of right of way permit application . Please refer to the following link for further information:</p> <p>https://www.toronto.ca/services-payments/building-construction/infrastructure-city-construction/construction-standards-permits/standards-for-designing-and-constructing-city-infrastructure/?accordion=utility-cut-permit-applications-and-municipal-consent-requirements-mcr</p>	Comment noted.	
18	Utility Review, Permits & Enforcement - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_Isejc_2021-10-01_ol_draft_60611173_optimized_locked	R.O.W. Permits	<p><u>Permits</u> Prior to commencement of any construction work within the Municipal Right of Way, the applicant must obtained a permit / approval from the Right of Way Management, Transportation Services, City of Toronto. The utility company can contact to Right of Way Management, Utility Cut Permit's office at utilrev@toronto.ca and or check the following link for further information;</p> <p>https://www.toronto.ca/services-payments/building-construction/infrastructure-city-construction/construction-standards-permits/standards-for-designing-and-constructing-city-infrastructure/</p>	Comment noted.

ADDITIONAL COMMENTS (OCTOBER 2021)

Lakeshore East Joint Corridor Early Works Report

1	BSE	<p>Lakeshore East Joint Corridor Early Works Report - Conceptual Design & Appendix C - Draft noise and Vibration Operations Report - Lake shore East Joint Corridor</p>	<p>(main report) Figure ES-1, Page v, vi, Section 3.1.5, Pg 28 & (Noise and Vibration Report) Appendix D - Noise and Vibration Mitigation Figures</p>	<p>Noise barriers are identified on the figures along between Eastern Avenue and Gerrard Street East, including the bridge crossings at Queen St. E., Dundas Street, and Logan Avenue. Please confirm if noise barriers will be required on these bridge structures, as the preliminary structure design drawings dated July 7th, 2021 do not show noise barrier on these three structures?</p>	<p>Detailed design of bridges and noise walls is still ongoing and presence/absence/height of noise walls on bridges will be confirmed as part of the forthcoming design submission to the City. The bridges in the Lakeshore East Joint Corridor segment requiring replacement (Queen St, Dundas St and Logan Ave) will be redesigned and reconstructed to accommodate an additional GO track and, in some cases, improved road clearances. The bridges will be re-designed according to the latest GO protocol. This requires ballast mats to be applied to all overpass structures, reducing vibration transmitted to the bridge and in turn, its ability to radiate noise.</p> <p>Noise barriers will be installed on both sides of the rail corridor in the Lakeshore East Joint Corridor segment, between approximately Eastern Avenue and beyond Pape Avenue. Our current noise model accounts for the reflected noise off these barriers and the presence of gaps and height variations as barriers approach bridges. The noise barriers will be designed to limit the passing of noise through gaps, allowing for continuous sound proofing.</p>	
---	-----	---	---	---	---	--

2	BSE	Lakeshore East Joint Corridor Early Works Report - Soil and Groundwater	Table ES-2, Page xx	Monitoring Activities column, last row first bullet point - "If required, develop and conduct settlement monitoring program...", please confirm if there will be a monitoring program for all major infrastructure / bridges within zone of influence, as per City's vibration by-law/ Transportation Specification GN117SS. Please include the monitoring requirement in the construction contract document.	The following revision has been made in Table ES-2 and Table 6-2: If required, develop and conduct a settlement monitoring program that includes all infrastructure and structures within the dewatering zone of influence, to identify construction effects, adverse trends and the need for additional mitigation measures;
3	BSE	Lakeshore East Joint Corridor Early Works Report	Section 3.1.3.1 and 3.1.3.2, Pg 27 & 28	Will Structural Design Report for each bridge structure be available?	A Bridge Design Criteria Memo will be included as part of the next design submission to be provided to the City.
4	BSE	Lakeshore East Joint Corridor Early Works Report	Section 3.3, Table 3-1, Site Servicing / Removals / Demolition, Page 30	Include the demolition of the existing bridges for bridge replacement	Demolition of structures, including bridges, is captured under 'Demolition of buildings and structures' in Table 3-1.
5	BSE	Lakeshore East Joint Corridor Early Works Report - Noise and Vibration	Section 6.5, Table 6-5, Construction Vibration, Pg.167	last row: for the existing railway bridges (Dundas Street, Logan Avenue and Queen Street) which will be removed in stages, will the existing remaining /new bridge section be monitored for vibration under all staged construction? The GIMP monitoring reports for the bridge structures are to be submitted to City's BSE for filing purposes.	The existing bridges being modified as part of this project are within the assessed project footprint. Any structures within the project footprints are the responsibility of Metrolinx and/or its contractors to protect (as applicable, note that other structures are being removed) during construction, which may include vibration monitoring.

6	BSE	Lakeshore East Joint Corridor Early Works Report - Heritage	Section 6.7, Table 6-7, OLS-014 Carlaw Avenue Subway and Gerrard St. East Subway, Pg. 173	<p>2nd last row: noise barriers are identified at the locations of the existing Carlaw Avenue Subway and Gerrard St. East Subway (refer to figure ES-1 as well as on the draft noise and vibration operations report). Please confirm if these existing bridge structures will be modified to include new noise barriers.</p> <p>With the track realignment and future additional GO track 4, has the existing bridge be assessed and evaluated to take the subject loads?</p>	<p>Design of bridges and noise walls is still ongoing and presence/absence/height of noise walls on bridges will be confirmed as part of the forthcoming design submission to the City. Noise barriers will be installed on both sides of the rail corridor in the Lakeshore East Joint Corridor segment, between approximately Eastern Avenue and beyond Pape Avenue. Our current noise model accounts for the reflected noise off these barriers and the presence of gaps and height variations as barriers approach bridges. The noise barriers will be designed to limit the passing of noise through gaps, allowing for continuous sound proofing.</p> <p>The existing bridge at Gerrard Street East and Carlaw Avenue has been assessed from a structural perspective to take subject loads.</p>	
East Harbour Station Early Works Report						
7	BSE	East Harbour Station Early Works Report	Figure ES-1, Page iv & Section 3.1.1, Pg. 26	<p>As shown on Figure ES-1, GO tracks realignment will be required on the existing GO railway bridge over Don River/DVP, which could require modification/repair of good state/widening of this existing bridge. Have the bridge be structurally assessed and evaluated to take the subject loads?</p> <p>Will there be any modification/repair of good state/widening work of the railway bridge included in the scope of Early Works? The bridge is partially included under the Lower Don Bridge and Don Yard Early Works project footprint and partially included under the East Harbour Station Early Works footprint. Please confirm the construction of track realignment and associated bridge work will be under which Early Works.</p>	<p>Potential modifications to the GO railway bridge across the Don River and Don Valley Parkway are outside of the scope of the Lakeshore East Joint Corridor early works report, however are included in the Lower Don Bridge and Don Yard early works report.</p> <p>Requirements for modifications to the DVP bridge superstructure are currently being assessed. Further discussions with the CoT (TEO) relating to structural assessment of the bridge are being advanced.</p>	

8	BSE	East Harbour Station Early Works Report	Section 3.1.2, Pg 26	<p>1) Please confirm if the station platform and bridge structure for OL trains will be built under the East Harbour Early works and the OL tracks will be built separately as part of the main OL contract?</p> <p>2) Will there be retaining wall between the Lower Don River OL bridge and the East Harbour Transit Hub OL Station/platform? If yes, will it be included as part of the OL Lower Don River Early Works, East Harbour Early Works or other OL contracts?</p>	<p>1. Station platforms and bridge replacement at Eastern Avenue will be constructed as part of the East Harbour Station early works, however, Ontario Line tracks will be constructed as part of the Ontario Line main contracts, separate from East Harbour Station construction.</p> <p>2. Details regarding retaining walls and grading at this location are still in development and will be confirmed with the City in forthcoming discussions.</p>	
9	BSE	East Harbour Station Early Works Report	Table ES-2, Construction Vibration, last row, Pg. xviii & Section 3.1.4, Pg 27	Will the existing Eastern railway bridge be replaced or expanded in stages, will the existing remaining /new bridge section be monitored for vibration under all staged construction?	The existing bridges being modified as part of this project are within the assessed project footprint, including the Eastern Avenue bridge. Any structures within the project footprint are the responsibility of Metrolinx and/or its contractors to protect (as applicable, note that other structures are being removed) during construction, which may include vibration monitoring.	
10	BSE	East Harbour Station Early Works Report	Section 3.3, Table 3-1, Construction of Buildings and Structures, Page 30	Include the staged demolition of the existing Eastern Ave Bridge for bridge replacement	Demolition of structures is captured under 'Demolition of buildings and structures' in Table 3-1.

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	September 2021 Revised Response LSE-JC	Status O / P / C / D** (Reviewer)
1	Toronto Fire Services	Draft Traffic Memo	Design Brief, Section 3 (pages 35-52)	The Design Brief document refers to mitigation measures for traffic/auto and makes reference to developing a Traffic Management Plan, to address issues related to travel and impacts of potential road restrictions/closures in and around each early works site. The description of potential impacts should be expanded to refer specifically to ensuring emergency access is maintained at all times. Responding emergency vehicles are unique users of the roadway and can have different needs/requirements than most other users and should be addressed separately.	Noted. Potential impacts to emergency vehicles will be reviewed and noted in the revised memorandum, and potential mitigation measures will be suggested at a high level, if/where required. The future Traffic Management Plan will address the specific needs of emergency services, including accessibility, once construction staging and road closures are confirmed.	?	D	Table 4-1 notes that Traffic Control Management Plan(s) will address specific emergency services requirements in consultation with the City of Toronto.	Language is included in Table 6-9 of the EWR.	C
2	Toronto Fire Services	Draft EPR	Section 5.5	General: Traffic Control and Management Plan(s) are to be sent to Toronto Fire Services prior to any road closures to ensure that TFS personnel can review the affected area(s) and adjust their responses (as applicable).	Noted. The Traffic Management Plan(s) will be circulated to the City including TFS during construction planning.	?	D		Comment noted. Mitigation measures to consult with the City of Toronto on the transit and traffic management plans to address specific emergency services requirements is included in Table 6-9 of the LSE-JC EWR.	C
3	Toronto Fire Services	Draft EPR	General	Utility relocations: Identify any fire hydrants that will be affected over the course of construction and confirm the remedial measures that will be put in place to ensure that hydrant coverage is maintained.	This will be confirmed as design progresses.	?	D		Metrolinx will be providing design submissions to the City for review and these plans will highlight any hydrant relocations if required.	C

1	LAU	Draft Traffic Memo	General	Any impacts to City parkland/natural areas as a result of this project requires complete coordination with Parks Capital's Construction schedule as outlined in PFR approved Capital Budget. Schedule and duration of impacted park lands to be provided.	Comment noted, the Exhibition Station early works Project Footprint does not currently include any City parkland or natural areas. However, should project footprint change in the future and impacts to parkland and natural areas are identified, Metrolinx will continue to engage the City of Toronto.	?	C	We note Mx response and will continue to comment as the project progresses.	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the Lakeshore East Joint Corridor Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress.	PF&R have reviewed Section 6.6 and are not satisfied with the information provided in Table 6-6. In other EWR reports, all parks within the footprint are described, including which parks will be impacted and the areas that are required for each park for temporary/permanent. When can the City expect this information? PF&R would like to note that within the project footprint McCleary Playground is noted in Parks Capital's Construction schedule for playground enhancement in 2029.	O	The following are the anticipated areas (ha) of overlap of the Lakeshore East Joint Corridor footprint with City Parks: - McCleary Playground 0.007305 ha (7%) - Jimmie Simposon Park 0.003529 (0.13%) - Gerrard - Carlaw Parkette 0.223895 (100%) - Gerrard - Carlaw Traffic Island 0.070391 (24%) - Bruce Mackey Park 0.039065 (8%) However, please note that these values have been derived based on the project footprint as presented in the early works report. As noted in the report, the extent of impacted areas will continue to be refined and reduced to the extent feasible as project design progresses. Discussions with the City on the design of retaining walls and adjacent landscaping treatments/restoration of impacted areas are ongoing. Following construction, each of the four parks adjacent to the project footprint will be larger. In total, there will be approximately 2,600 square meters of added greenspace to the local parks. Comment noted regarding McCleary Playground being scheduled for playground enhancement in 2029, Metrolinx will continue coordination with the City on construction timing.	
2	Urban Forestry	Draft NER	Parks - Moss Park	All mitigation measures will be explored to minimize the project impacts to this site.	Metrolinx is committed to minimizing impacts to parkland wherever possible and will explore all options to minimize project impacts to Moss Park. As project planning and design progresses, any impacts identified to Moss Park will be documented within the Environmental Impact Assessment Report and appropriate mitigation will be prescribed.	?	C	Closed					
3	RNFP	Draft NER	draft EPR - general	Submit a Natural Heritage Impact Study	Natural heritage impacts will be documented as part of the Environmental Impact Assessment Report, under separate cover.	?	C	Closed					
4	RNFP	Draft NER	Natural Environment Early Works - 4.2	Metrolinx must apply for and obtain a permit from RNFP for any trees/vegetation/soil impacts regulated under Bylaw 658 on city and private lands.	Metrolinx will continue to engage with the City of Toronto as project planning and design progress, including with regard to tree injury/removal permits as required.	?	C	Closed					
5	Urban Forestry	Draft NER	Natural Environment Early Works - Section 6 - permit requirements - table 6-1	Under Municipal, add Bylaw 813, 658 and 608 in table 6-1. Revise and add text sections accordingly in section 6.	As noted in Table 6-1 the activities at the Exhibition Station early works study area are not within the City of Toronto NHS or RNFP policy areas. Compensation for tree removal on private/city lands will follow the Metrolinx Vegetation Guideline (2020), which notes that compensation for trees on private/city lands will follow all applicable bylaws and regulations.	?	C	Closed					

6	LAU	Draft N&V Report	General	How does the rail corridor expansion in the Lakeshore East Joint Corridor works footprint affect impacted park lands/natural areas for grading, retaining walls, noise barriers, etc in the interim and permanently?	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. Response to this comment will be revisited as the Lower Don Bridges Early Works Report is released.	?	O	The Lakeshore East Joint Corridor works is more than just the Lower Don Bridges. PFR is requesting for more detailed information on the scope of impacts to affect parkland for the full scope from Gerrard to Lower Don Bridges both interim and permanent in order for Parks to undertake a comprehensive assessment	The conceptual design figure appended to the draft LSE-JC Early Works Report shows impacted parkland and natural areas within the LSE-JC project footprint. Lakeshore East Joint Corridor early works will mostly occur within the existing rail corridor and will avoid impacts to parklands where feasible. Metrolinx has and will continue engaging with the City as project planning and design progress.	PFR&R have reviewed Section 6.6 and are not satisfied with the information provided in Table 6-6. In other EWR reports, all parks within the footprint are described, including which parks will be impacted and the areas that are required for each park for temporary/permanent. When can the City expect this information? Ongoing coordination with the City of Toronto will be required to protect for reinstatement/interim of City-owned parkland to current City standards and/or negotiated improvements with the City.	O	The following are the anticipated areas (ha) of overlap of the Lakeshore East Joint Corridor footprint with City Parks: - McCleary Playground 0.007305 ha (7%) - Jimmie Simpson Park 0.003529 (0.13%) - Gerrard - Carlaw Parkette 0.223895 (100%) - Gerrard - Carlaw Traffic Island 0.070391 (24%) - Bruce Mackey Park 0.039065 (8%) However, please note that these values have been derived based on the project footprint as presented in the early works report. As noted in the report, the extent of impacted areas will continue to be refined and reduced to the extent feasible as project design progresses. Discussions with the City on the design of retaining walls and adjacent landscaping treatments/restoration of impacted areas are ongoing. Following construction, each of the four parks adjacent to the project footprint will be larger. In total, there will be approximately 2,600 square meters of added greenspace to the local parks.
7	LAU	Draft N&V Report	4.6 Impact Assessment LEJC	Jimmie Simpson Recreation Centre shall be reviewed for noise and vibration and added to Table4-7 and Figure1-04 to be representative of the worst case locations along the Early Works project footprint as works are proposed in very close proximity to the Recreation Centre.	Typically recreation centres are not considered noise or vibration sensitive receptors, however the building will be considered in assessment of construction vibration impacts.	?	O	Upon review of the revised report, City may provide additional comments. Due to the proposed scope of works directly adjacent to Jimmie Simpson RC, PFR considers this as a sensitive vibration receptor.	Given Jimmie Simpson Recreation Centre's immediate proximity to the project alignment, it will be considered as a vibration sensitive receptor as part of the Lakeshore East Joint Corridor operations vibration impact assessment.	PFR&R have reviewed Table 6-5 and acknowledge that Jimmie Simpson RC will be considered as a vibration sensitive receptor. For the purposes of this comment log, this comment can be closed.	C	
8	Urban Forestry	Draft EWR	general	The Lower Don River Crossing works overlaps with the USRC Wilson yard/HONI relocation works. Are we to assume that the trees and vegetation will be non-existent like the Lakeshore East shared corridor for the purposes of tree inventory and arborist report?	The Lower Don Bridges early works will build on existing environmental work completed for the Wilson Yard/HONI relocation works. Metrolinx will be removing vegetation within its right-of-way in accordance with the Metrolinx Vegetation Guideline (2020).	?	C	Closed				
9	Urban Forestry	Draft EWR	Draft early works report, 5.9 - Utilities	Confirm tree and vegetation impacts during detailed design. A permit application for injury or removal may be required if regulated under a municipal bylaw	Tree and vegetation impacts will be confirmed during the detailed design phase. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	C	Closed				
10	Urban Forestry	Draft EWR	Draft Early Works Report, 6.1.3 - Municipal permits	Permits are required for trees and vegetation that are regulated under Bylaw 813, 658 and 608. Compensation shall be in accordance with applicable bylaw. The Arborist Report and supporting documentation will be reviewed and revised when submitted.	An Arborist Report will be prepared in accordance with Table 6-1 and 6-2. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	C	Closed				
11	Urban Forestry	Draft EWR	Draft Early Works Report, 6.1.3 - Municipal permits	Delete timeline information for permit application processing as it is conditional on satisfactory and approved documentation. These revisions may take several weeks before an application will be reviewed.	This will be removed in the revised report.	?	C	Closed				
12	RNFP	Draft EWR	Draft Early Works Report, 6.1.4	Submit Voluntary Process Review Letter	Metrolinx will continue to engage TRCA through the VPR process.	?	P	Once TRCA's VPR letter has been given to Metrolinx, please submit to the city for review	Comment noted. Metrolinx is continuing to work with TRCA where the project intersects with TRCA regulated lands.	Once TRCA's VPR letter has been given to Metrolinx, please submit to the city for review	P	Comment noted.
13	RNFP	Draft EWR	Draft Early Works Report, table 6-1	Submit Erosion & Sediment Control Plan	An Erosion and Sediment Control Plan will be prepared in accordance with Table 6-2. This will be circulated to the City prior to construction.	?	C	Closed				
14	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Submit an Arborist Report with updated tree inventory. Tree inventory shall also confirm the presence of butternut inspected in 2017 in the East Harbour Stn	An Arborist Report will be prepared in accordance with Table 6-1 and 6-2. This will be circulated to the City once available. The butternut in question at East Harbour Station was determined to be misidentified, and is a black walnut.	?	C	Closed				

15	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Submit Spill Prevention & Response Plan	A Spill Prevention and Response Plan will be prepared in accordance with Table 6-2 and 6-3. This will be circulated to the City prior to construction.	?	C	Closed				
16	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Metrolinx' Vegetation Guideline is currently under review by staff in Parks, Recreation and Forestry. Compensation will be to the approval and satisfaction of PFR and in accordance to the applicable bylaw. Any revisions to the document will apply to the current project	Noted.	?	C	Closed				
17	LAU	Draft EWR	General	Any impacts to City parkland as a result of this project requires complete coordination with Parks Capital's Construction schedule as outlined in PFR approved Capital budget. Schedule and duration of impacted park lands to be provided.	Noted. Impacts to parkland are not anticipated as part of the Exhibition Station Early Works.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. PFR is requesting a full summary (table format) of each segment and the park impacts both temporary and permanent	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the LSE-JC Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress.	PF&R have reviewed Section 6.6 and are not satisfied with the information provided in Table 6-6. In other EWR reports, all parks within the footprint are described, including which parks will be impacted and the areas that are required for each park for temporary/permanent. When can the City expect this information? PF&R would like to note that within the project footprint McCleary Playground is noted in Parks Capital's Construction schedule for playground enhancement in 2029.	O	This is the same comment as Comment #1. Refer to response above.
18	LAU	Draft EWR	3. Description of the Early Works	We are not in support of loss of park lands. What alternatives has Mx compiled? What lands does Mx have for a potential land swap?	Noted. Impacts to parkland are not anticipated as part of the Exhibition Station Early Works.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. In order to advance this discussion, Mx to provide a full summary of anticipated parkland impacts. Will methods for parkland compensation be discussed in the Early Works report?	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the LSE-JC Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress. Lakeshore East Joint Corridor early works will mostly occur within the existing rail corridor and will avoid impacts to parkland where possible.	PF&R have reviewed Section 6.6 and are not satisfied with the information provided in Table 6-6. In other EWR reports, all parks within the footprint are described, including which parks will be impacted and the areas that are required for each park for temporary/permanent. When can the City expect this information? We note Mx response as ongoing and we acknowledge that additional discussions between Mx and Cot about an agreement dealing with compensation remain pending. This comment will remain open.	O	Comment noted. In regards to park within the footprint, please see response to comment 1 above.
19	LAU	Draft EWR	4.5 Socio-Economic and Land Use Characteristics	Lower Don River Crossing - there are recreational uses and park and open spaces in this footprint... Corktown Common Park, MUPs along the Lower Don River Trail, the Martin Goodman Trail, Lakeshore and Cherry St (see 4.8.2.3)	In updated revisions of the report, Lower Don early works has been split into a separate report however, the revised Lower Don Bridges early works report will include parks within the latest Lower Don Bridges study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Not applicable to LSE-JC	This comment can be closed	C	
20	LAU	Draft EWR		Lower Don River Crossing - there are community groups and resources in this footprint	In updated revisions of the report, Lower Don early works has been split into a separate report however, the revised report will include community amenities within the latest Lower Don River Crossing study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Not applicable to LSE-JC	This comment can be closed	C	
21	LAU	Draft EWR		Lakeshore East Joint Corridor - there are recreational uses and parks and open spaces in this footprint... Jimmie Simpson RC and Park, Bruce Mackey Park, McCleary Park, Sautler St Parkette, Gerrard-Carlaw Parkette	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include recreational uses and parks within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Recreational uses, parks and open spaces within the Lakeshore East Joint Corridor Socio-Economic and Land Use Characteristics Study Area are outlined in Table 5-10 of the Early Works Report.	PF&R have reviewed Table 5-10 and acknowledge that parks have been added to the EWR report. For the purposes of this comment log, this comment can be closed.	C	
22	LAU	Draft EWR		Lakeshore East Joint Corridor - there are community groups and resources in this footprint	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include community groups and resources within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Community groups and resources within the Lakeshore East Joint Corridor Socio-Economic and Land Use Characteristics Study Area are outlined in Table 5-11 of the Early Works Report.	PF&R have reviewed Table 5-11 and acknowledge that community groups have been added to the EWR report. For the purposes of this comment log, this comment can be closed.	C	
23	LAU	Draft EWR		Lakeshore East Joint Corridor - all parks in and adjacent to this footprint to be labelled on Figure4-21	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include recreational uses and parks within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	All community amenities within the Lakeshore East Joint Socio-Economic and Land Use Characteristics Study Area are included in Figure 5-16 of the Early Works Report.	It appears that the latest Mx response does not match PF&R's original comment however it has been addressed in Table 5-10. For the purposes of this comment log, this comment can be closed.	C	

24	LAU	Draft EWR	4.6/5.6 Built Heritage Resources and Cultural Heritage Landscapes	Has a Cultural Heritage Assessment been completed for park lands that are proposed to be impacted? There is mention of Cultural Heritage Landscapes however where is the mapping - specifically does any park lands fall into CHL?	All lands within the Ontario Line Study Area, and subsequent Early Works footprint have been screened for known, previously assessed and potential BHR/CHLs. For the Ontario Line Project, any properties, including parks, were screened for BHRs and CHLs. Moss Park was included in the OL CHR and Bruce Mackey Park noted because of its heritage plaques and it contributes to the De Grassi Streetscape. Parks that are not known, previously identified or potential CHLs are included in the Natural Environment Report.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.	OLS-126 Degrassi St from Queen St E to Wardell St includes a historical plaque near the bridge within Bruce Mackey Park. Mitigation measure are noted in Table 6-7. For the purposes of this comment log, this comment can be closed.	C	
25	LAU	Draft EWR	Pg 115-116/227-229	DeGrassi Street has been noted as potential BHR/CHL and within EW-001 Bruce Mackey Park has been noted as having potential heritage attributes. Should 12 DeGrassi Street be proposed for demolition Mx shall acquire these lands to land swap with the City in exchange for impacts to Bruce Mackey Park and nearby park lands. Also, what is the impact to Bruce Mackey Park (and all other parks) to avoid vibration damage to buildings along EW-001 and elsewhere? Vibrating mitigating measures shall be implemented on the building or elsewhere and not on park lands.	The Lakeshore East Joint Corridor early works have been placed under separate cover in updated revisions of this report.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered. PFR to review environmental assessment report when available for further comment	The impacts to De Grassi Street from Queen Street to Wardell Street include encroachment into the streetscape causing physical impact to the streetscape, while avoiding physical impact to buildings and/or the heritage attributes. The plaques are heritage attributes of the public realm of the De Grassi Street streetscape. Metrolinx is committed to consulting with City of Toronto's Heritage Planning as planning progresses for any physical impacts to the streetscape and its heritage attributes (i.e. historical plaques). Steps will be applied during construction for the plaques to remain in-situ if possible.	OLS-126 Degrassi St from Queen St E to Wardell St includes a historical plaque near the bridge within Bruce Mackey Park. Mitigation measure are noted in Table 6-7. For the purposes of this comment log, this comment can be closed.	C	
26	LAU	Draft EWR	5.4 Noise and Vibration pg 201-202	Future Work shall include noise and vibration impact study to existing Jimmie Simpson Recreation Centre as works are proposed in very close proximity to the Recreation Centre.	Typically recreation centres are not considered noise or vibration sensitive developments, however the building will be considered in assessment of construction vibration impacts.	?	O	Upon review of the revised report, City may provide additional comments. Due to the proposed scope of works directly adjacent to Jimmie Simpson RC, PFR considers this as a sensitive vibration receptor.	Given Jimmie Simpson Recreation Centre's immediate proximity to the project alignment, it will be considered as a vibration sensitive receptor as part of the Lakeshore East Joint Corridor operations vibration impact assessment.	PF&R have reviewed Table 6-5 and acknowledge that Jimmie Simpson RC will be considered as a vibration sensitive receptor. For the purposes of this comment log, this comment can be closed.	C	
27	LAU	Draft EWR	5.4 and 5.5	How does the rail corridor expansion in the Lakeshore East Joint Corridor works footprint affect impacted park lands/natural areas for grading, retaining walls, noise barriers, etc in the interim and permanently?	Any potential impacts of Lakeshore East Joint Corridor Early Works will be presented under separate cover.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the LSE-JC Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress.	Along the LSE JC EW project footprint, the City may want Mx to undertake site preparation, site grading and earthworks on City parkland in order to improve the condition at the property line and/or negotiated improvements with the City. PF&R agrees that these construction activities may be expanded, further refined, or found to be unnecessary as the project progresses through detailed design and construction. Ongoing coordination with the City of Toronto will be required to improve the condition at the property line and/or negotiated improvements with the City. This comment will remain pending	P	Comment noted. Metrolinx will continue to engage with the City as project planning and design progress.
28	LAU	Draft CHR	General	Has a Cultural Heritage Assessment been completed for park lands that are proposed to be impacted?	All lands within the Ontario Line Study Area and subsequent Early Works footprint have been screened for known, previously assessed and potential BHR/CHLs. At this stage, impact scenarios have been outlined with recommended mitigation measures. Once an alignment is selected / detailed design is underway, a project-specific impact assessment will be undertaken and documented in a Heritage Detailed Design Report. This will include park lands that retain heritage value.	?	C	Closed				
29	LAU	Draft CHR	Pg 25	There is mention of Cultural Heritage Landscapes however where is the mapping - specifically does any park lands fall into CHL?	For the Ontario Line Project, any properties, including parks, were screened for BHRs and CHLs. Moss Park was included in the OL CHR and Bruce Mackay noted because of its heritage plaques and it contributes to the De Grassi Streetscape. Further detail on parks within the study area (from an ecological perspective) are documented in the Natural Environment Report.	?	P	We note Bruce Mackey was mentioned in the report however Moss Pass appeared to be overlooked. Provide section of the report speaking to Moss Park and supplementary mapping.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.	OLS-126 Degrassi St from Queen St E to Wardell St includes a historical plaque near the bridge within Bruce Mackey Park. Mitigation measure are noted in Table 6-7. For the purposes of this comment log, this comment can be closed.	C	
30	LAU	Draft CHR	Figure 6-4	All existing park lands within and adjacent to the Lakeshore East Joint Corridor Study Area to be noted in Figure6-4	As per comment response #2, parks within and adjacent to the Early Works footprints that retain heritage value (CHLs) are documented in this Cultural Heritage Report. Parks that are not CHLs are documented in the Natural Environment Report.	?	C	Closed				
31	LAU	Draft CHR	Pg 30, 43-45	DeGrassi Street has been noted as potential BHR/CHL and within EW-001 Bruce Mackey Park has been noted as having potential heritage attributes. Should 12 DeGrassi Street be proposed for demolition Mx shall acquire these lands to land swap with the City in exchange for impacts to Bruce Mackey Park and nearby park lands. Also, what is the impact to Bruce Mackey Park (and all other parks) to avoid vibration damage to buildings along EW-001 and elsewhere? Vibrating mitigating measures shall be implemented on the building or elsewhere and not on park lands.	The Lakeshore East Joint Corridor early works have been placed under separate cover in updated revisions of this report. This comment will be taken into account as environmental assessment reporting advances along the Lakeshore East joint corridor.	?	O	PFR to review environmental assessment report when available for further comment	The impacts to De Grassi Street from Queen Street to Wardell Street include encroachment into the streetscape causing physical impact to the streetscape, while avoiding physical impact to buildings and/or the heritage attributes. The plaques are heritage attributes of the public realm of the De Grassi Street streetscape. Metrolinx is committed to consulting with City of Toronto's Heritage Planning as planning progresses for any physical impacts to the streetscape and its heritage attributes (i.e. historical plaques). Steps will be applied during construction for the plaques to remain in-situ if feasible.	OLS-126 Degrassi St from Queen St E to Wardell St includes a historical plaque near the bridge within Bruce Mackey Park. Mitigation measure are noted in Table 6-7. For the purposes of this comment log, this comment can be closed.	C	

33	UF	Joint Corridor - draft heritage detailed design report- Appendix A4	Table ES-2, OLS-017							Confirm if any trees and/or vegetation shall require to be removed. An arborist report, tree inventory and permit application shall be submitted for review. Please note that the arborist report and tree inventory shall require to be reviewed and approved prior to processing the permit application. Standard review for the work submittals is 20 business days and standard review time for the permit application is an additional 40 business days.	new	Metrolinx is completing an arborist report including tree inventory for the Lakeshore East Joint Corridor early works and will circulate to the City in the coming weeks. Tree removal compensation will be provided in accordance with the Metrolinx Vegetation Guideline (2020).
34	UF	Natural environment report - Arborist report & tree inventory	general							Confirm when PFR can expect to review the arborist report and tree inventory for the joint corridor. Please note that the work submittals shall require to be reviewed and approved prior to a tree permit application submission. It is highly advised to submit the reports for review in advance of scheduled tree and vegetation removal to address items of concern and to avoid possible construction delays.	new	Metrolinx is completing an arborist report including tree inventory for the Lakeshore East Joint Corridor early works and will circulate to the City when available in the coming weeks.
35	UF	Natural environment report	Table ES-1, Vegetation Communities - City & Private tree removal							4th bullet. Compensation will be according to municipal bylaws, not Mx vegetation guideline. Revise and correct.	new	MX developed the Metrolinx Vegetation Guideline (2020) in consultation with municipalities including the City of Toronto. The Metrolinx Vegetation Guideline (2020) is followed for compensation on all Metrolinx projects. Per the guideline, Metrolinx will be following City by-laws for trees removed on private and City-owned lands in the City of Toronto.
36	UF	Natural environment report	Table ES-1, Vegetation Communities - Soil or water contamination as a result of spills from equipment use							It is understood that there are no water features identified within the Lakeshore East Joint Corridor Study Area. However, please add language that any refuelling shall be completed at least 30m from a watercourse as a mitigation measure.	new	The Lakeshore East Joint Corridor Project Footprint edge closest to the Lower Don River is nearly 400 m away from the river and therefore this mitigation measure does not apply.
37	UF	Natural environment report	Table 5-1, Vegetation Communities - City & Private tree removal							4th bullet. Compensation will be according to municipal bylaws, not Mx vegetation guideline. Revise and correct.	new	Same comment as Comment #35. See response above.
38	UF	Natural environment report	Section 6, tree inventory							As the tree inventory is a required work submittal to be reviewed, should read "A tree inventory shall be completed...". Revise and correct.	new	Natural Environment Report text revised to: Text within this section has been revised to include "a tree inventory shall be completed during detailed design for all City- or private-owned trees within 6 metres of the LSE JC Project Footprint". An arborist report and tree inventory is being completed for the Lakeshore East Joint Corridor early works and will be circulated to the City in the coming weeks.
39	LAU - Transit Unit	Potential Impacts, Mitigation Measures and Monitoring Activities	ES.5 pg xxv Table 6-5 p.159							Table ES-2 Noise and Vibration, Construction Vibration: Clarification required for Mitigation Measures 'structure in 80 McGee St (park)'. Mx has not engaged the City for access to the building. Further discussion required.	new	A review of the vibration assessment will take place as planning progresses and, if this location is still subject to potential vibration impacts, Metrolinx will be engaging with the City for permission-to-enter requirements to this property as pre-construction surveys are complete.
40	LAU - Transit Unit	Potential Impacts, Mitigation Measures and Monitoring Activities	ES.5 pg xxvi Table 6-6 p.162							Table ES-2 Socio-Economic and Land Use Characteristics, Property, Property Acquisition - permanent and temporary. Add: Temporary Property Acquisition - construction: Provide alternative interim location and retrofit and/or undertake park enhancements for the loss of the amenity to the satisfaction of the City of Toronto. Add: Permanent Property Acquisition - Operation: Provide compensation for the permanent loss of park and open space via comparable land swap or park improvements to the satisfaction of the City of Toronto.	new	Metrolinx is reviewing options to compensate for the loss of amenity at various park locations along the Lakeshore East Joint Corridor and will continue to engage the City on these discussions. Following construction, each of the four parks adjacent to the project footprint will be larger. In total, there will be approximately 2,600 square meters of added greenspace to the local parks.
41	LAU - Transit Unit	Potential Impacts, Mitigation Measures and Monitoring Activities	ES.5 pg xxvii Table 6-6 p.162							Table ES-2 Socio-Economic and Land Use Characteristics, All land uses and adjacent lands: Add: Reduce potential impacts and maintain access to recreational uses, parks and open spaces by restricting construction staging limits and duration of staging relating to the respective works.	new	Project Footprint included in the Early Works Report includes areas within parks and open spaces that are anticipated to be impacted. Access to parks will be maintained during construction, and construction activities currently planned are not anticipated to impact park access.

42	LAU - Transit Unit	Potential Impacts, Mitigation Measures and Monitoring Activities	ES.5 pg xxvii Table 6-6 p.162							<p>Table ES-2 Socio-Economic and Land Use Characteristics, Public Realm:</p> <p>Mitigation Measures Add: Alterations to key features such as sidewalks, trails, parks, and street trees should be reduced as much as is feasible and restored following construction to current City standards to the satisfaction of the City of Toronto. Add: Continue to engage with the City of Toronto to confirm mitigation measures. Add: Retaining walls, tunnel walls, noise walls, and abutments that are public facing or accessible to the walking-public will have plain surface finishes acceptable by the local road authority and will require anti-graffiti coating treatment (if artwork will be installed by the municipality, anti-graffiti coating shall be applied after artwork installation). On all other wall treatment cases, a patterned concrete finish acceptable by the local road authority and anti-graffiti coating will be applied unless otherwise enhanced (i.e. LSE EW where the walls may be vegetated, public art, playground etc.)</p> <p>Monitoring Add: Metrolinx to monitor graffiti vandalism and comply to Toronto Municipal Code Chapter 485. Graffiti must be removed within 72 hours. Hate or gang-related graffiti must be removed within 24 hours.</p>	new	<p>Language within this section has been revised to state that Metrolinx will be consulting with the City regarding restoration of public realm areas impacted by early works activities, and consulting with the City and Business Improvement Areas, as necessary, regarding restoration of assets owned by the City of Toronto and local Business Improvement Areas.</p> <p>Metrolinx is taking lessons learned from previous noise barrier installations and has developed numerous strategies to deter and remove graffiti from our infrastructure. We will use a mix of graffiti deterrence strategies for noise barriers and retaining walls through Riverside and Leslieville, which could include things like graffiti-resistant coatings, landscaping on or adjacent to vulnerable surfaces, murals, increased lighting, and so on.</p> <p>Graffiti occurring on the Ontario Line system will be removed within as early as 24 hours of being reported. Graffiti that contains obscene material or hate messaging will be removed within 24 hours after the policing authority has conducted a crime scene investigation.</p>
43	LAU - Transit Unit	Planning Context	2.2.2.1 City of Toronto Official Plan p.19							2.2.2.1 City of Toronto Official Plan to include Policy 4.3.8 regarding compensation for disposal of parkland and open space.	new	Comment noted, Policy 4.3.8 will be included into the documentation regarding the City of Toronto Official Plan.
44	LAU - Transit Unit	Planning Context	2.2 Planning Context - Parkland Strategy							Add Parkland Strategy including paragraph describing it under 2.2.2 Municipal	new	Parkland Strategy has been added to Section 2.2.2.3.
45	LAU - Transit Unit	3.2 EW Project Footprint and Study Area	3.2 EW Project Footprint and Study Area							Edit to add: The extent of lands anticipated to be temporarily impacted by construction staging/laydown and access will continue to be refined and reduced to the extent feasible as project planning progresses. Ongoing coordination with the City of Toronto will be required to protect for reinstatement/interim of City-owned parkland to current City standards and/or negotiated improvements with the City.	new	Additional language has been added into Table 6-6 with regards to consultation with the City on restoration plans for the impacted areas within public realm during detailed design.
46	LAU - Transit Unit	3.2 Construction Activities	Table 3-1 Anticipated Construction Activities for the OL LSE JC EW							<p>Along the LSE JC EW project footprint, the City may want Mx to undertake site preparation, site grading and earthworks on City parkland in order to improve the condition at the property line and/or negotiated improvements with the City. PF&R agrees that these construction activities may be expanded, further refined, or found to be unnecessary as the project progresses through detailed design and construction.</p> <p>Ongoing coordination with the City of Toronto will be required to improve the condition at the property line and/or negotiated improvements with the City.</p>	new	Comment noted, discussions between Metrolinx and the City are ongoing with regards to conditions at property line and will be continued as project planning progresses.
47	LAU - Transit Unit	5.6 Socio-Economic and Land Use Characteristics	5.6.2.1.2 Recreational Uses, Parks and Open Spaces and Table 5-10 p.103							<p>This section states recreational uses however does not indicate City owned recreational centres (Jimmie Simpson Recreation Centre and Matty Eckler Community Recreation Centre). PF&R requests that City-owned be added here and not in 5.6.2.1.3 Community Groups and Resources.</p> <p>Add general note that there are properties that have been acquired by the City of Toronto for parkland that have not yet been named but targeted for Park Development.</p>	new	<p>Jimmie Simpson Recreation Centre and Matty Eckler Community Recreation Centre moved to Table 5-10. Edit has been adjusted on Figure 5-16.</p> <p>Note about properties for park development added to Section 5.6.2.1.2.</p>
48	LAU - Transit Unit	5.6 Socio-Economic and Land Use Characteristics	5.6.2.2 Planned Services and Facilities							<p>Add verbiage regarding Capital Projects or improvements directly impacted by the OL project, including: McCleary Playground, Jimmie Simpson Park, Gerrard-Carlaw Parkette, Bruce Mackey Park, Saulter Street Parkette.</p> <p>Note: this list does not include the ongoing park development works that are associated with Development Applications and Parkland Acquisitions.</p>	new	This section documents existing conditions for socioeconomic and land-use characteristics, compiled based on publically-available data. Metrolinx recognizes the City has scheduled capital projects or improvements to parkland adjacent to the project footprint and is committed to ongoing consultation with the City as design progresses. Specific impacts to parklands are still being refined as part of the ongoing design development and as such, are not shown within the Lakeshore East Joint Corridor early works report.
49	LAU - Transit Unit	5.6 Socio-Economic and Land Use Characteristics	5.6.4 Future Development							This section should acknowledge the Future Parks and Open Space as part of all active TOC submissions currently under review.	new	This section documents existing conditions and therefore, future developments are not being referenced. Note that the development applications available in the City of Toronto development applications database at the time of report preparation are outlined in Table 5-13.

50	LAU - Transit Unit	Temporary Land Requirements	General							Are drawings available that outline which properties will be needed as temporary land requirements? What are the types of work planned for these lands and what is the intention to do with these lands after construction ie: 356 Eastern Ave and 240-242 First Avenue? PF&R is seeking this information to verify there are no impacts to existing parks and to better understand potential opportunities for parkland in this area.	new	All lands anticipated to be impacted as a result of early works are included within the Project Footprint (Figure 3-1 and Figure 3-2). Property acquisitions and other property-specific matters are being facilitated outside of the environmental assessment process, and as such have not been included into the early works report. Metrolinx will continue to engage the City with respect to property-specific matters as part of the ongoing discussions.
51	LAU - Transit Unit	OL Lower Don Bridge	General							A portion of the Ontario Line Lower Don Bridge is considered within the LSE JC study area. Which scope of work will the construction of this bridge be delivered under - East Harbour?	new	The Lower Don Bridge and Don Yard early works study area does not overlap with the Lakeshore East Joint Corridor study area. Lower Don Bridge is a stand-alone early works project, separate from both East Harbour Station and Lakeshore East Joint Corridor early works.
52	LAU - Transit Unit	Socio-Economic and Land Use Characteristics	General							This section should include reference to the Mx commitments to design and construct an MUT bridge over the Don River connecting East Harbour TOC and Corktown Common/Lower Don Trail.	new	The multi-use trail bridge is located adjacent to the East Harbour Station and is referenced in the East Harbour Station early works report, Section 3.1.3.
53	LAU - Transit Unit	MUT Connection	General							While it is acknowledged there are no cycling facilities within the project footprint, Early Works should acknowledge, anticipate and plan for a future MUP connection and bridge north of the OL tracks connecting Corktown Common and the Lower Don Trail to the west over the Don River to the East Harbour Station lands as it is in the LSE JC study area. Confirm which contract the planned design and delivery of the MUT bridge and connection falls under.	new	The multi-use trail bridge is planned to be located adjacent to the East Harbour Station and is referenced in the East Harbour Station early works report, Section 3.1.3. This bridge will be assessed as part of the forthcoming Environmental Impact Assessment Report.

1	Transportation Expansion Office in consultation with LeighFisher	AQ Monitoring	Draft EWR, Sec 4.3, page 71	The report states that all contaminants of concern are monitored at the selected NAPS stations. Since PM10 is not monitored, how is this discrepancy addressed?	PM10 was not included in NAPS Station measurements, and therefore was estimated using PM2.5 measurements, assuming a ratio of 1 ug/m3 PM10 per 0.54 ug/m3 of PM2.5 as per Lall et al. "Estimation of historical annual PM2.5 exposures for health effects assessment", Atmospheric Environment 38 (2004).	?	O	This methodology applies to estimation of PM2.5 from PM10 particles, not vice versa. What is the basis for assuming this ratio and is there comparable monitoring data nearby that supports this assumption? The approach undertaken is not standard practice.	As noted previously, there is no comparable hourly sampled data for the coarse fraction of fine particulates (PM10) which is directly comparable to the fine particulate hourly sampling data (PM2.5). The ratio from Lall et al. was referenced to provide an estimate based on scientific research for the coarse particulate fraction based on hourly monitored data of PM2.5. This ratio and methodology has been accepted by the MECP for similar projects submitted for EA approval in the past.	C	If this methodology is accepted by the MECP, then we can close this comment.	Confirmed. Comment Closed	No edit
2	Transportation Expansion Office in consultation with LeighFisher	AQ Guidelines	Draft EWR, Sec 4.3, Table 4-14, p.72-73	Please explain why the AAQC PM2.5 standard not included?	The AAQC standard for PM2.5 (30 ug/m3 for a 24-hour averaging period) is less stringent than the CAAQS standard for the same averaging period (27 ug/m3) and was therefore excluded from Table 4-14.	?	C						
3	Transportation Expansion Office in consultation with LeighFisher	Air Quality Impacts	Draft EWR, Sec 5.3.1, p. 188	The impacts discussion is qualitative and high-level. The report should at a minimum discuss construction emissions estimates based upon construction equipment likely to be used, general timeline, and standard construction equipment emissions factors compared to baseline concentrations to indicate potential exceedances and areas for mitigation.	Details regarding construction duration and timeline are not available at this time and as such, construction emission estimates have not been included. The Air Quality Memo is based on the most up-to-date plans for design available at the time. Construction equipment and duration will be confirmed in future construction management plans.	?	C	It is noted assumptions have been made in this Early Works report. If these assumptions are exceeded, Metrolinx and ProjectCo are responsible for determining the additional mitigation measures required.					
4	Transportation Expansion Office in consultation with LeighFisher	Noise Impacts - Lower Don River Crossing	Draft EWR, 5.4.1.2.1, Noise, p.200	Report notes, "for the future 191 Mill Street location, noise levels are predicted to be near the daytime noise level limit for the corridor works, nearest to 191 Mill Street." They also exceed the night time criteria which is not mentioned. Please add this to the impact discussion.	This will be addressed in the revised report.	?	P	Pending review of the updated report.	Not applicable to LSE-JC.	C	Closed for the purpose of this LSE-JC log.		
5	Transportation Expansion Office in consultation with LeighFisher	Noise Impacts - Lakeshore East Joint Corridor	Draft EWR, 5.4.1.4.1, Noise, p.202	Report notes, "the results in the above table indicate that predicted noise levels along the project footprint could be above the daytime noise level limit." The report should also indicate the potential for nighttime exceedances as nighttime nuisance can generally result in health effects and should be mitigated.	This will be addressed in the revised report.	?	P	Pending review of the updated report.	Language following Table 5-1 of the Noise and Vibration Report (formerly Table 4-7) acknowledges the exceedance and further recommendations are provided to reduce impacts in Section 6.	C			
6	Transportation Expansion Office in consultation with LeighFisher	Vibration Impacts	Draft EWR, 5.1.4.1.2, Vibration, p.202	Report states: "As the project footprints are not finalized; the number of locations predicted to have vibration levels in excess of the City of Toronto prohibited limit, and the screening limit may change. Also, the number of structures within the project footprint may change. As a result, a full list of locations along the project footprint that require monitoring or subsequent review is too preliminary at this stage. Mapping provided in Appendix B4 can be used to further develop the design plans to decrease the vibration impacts of the Early Works construction." Confirm if the mapping provided in Appendix B4 could be used to indicate sensitive areas which require further assessment should the area be selected as part of the project footprint. Consistent with best practices, this report should give an indication of areas that will likely be impacted if in the vicinity of any project works.	Confirmed, mapping in Appendix B4 will be updated with the approved project footprint. See appendix B4	?	O	Similar to the Follow-Up Comment to Item No. 25 in the TEO tab, please clarify where the updated vibration assessment mapping is provided. The Draft Early Works Report - Ontario Line Exhibition Station Early Works report does not have an Appendix B4. Appendix A3 - Exhibition Station Early Works - Draft Noise and Vibration Early Works Report does not appear to include vibration assessment mapping.	Response provided. Figure 5-2 of the Noise and Vibration Report displays project footprint and vibration screening.	C			

7	Transportation Expansion Office in consultation with LeighFisher	Construction Vibration Mitigation, General	Draft EWR, 5.4.2.1, General Mitigation, p. 204	<p>Given that vibration impacts are predicted, best practice construction vibration mitigation measures recommended by the FTA should be included in the report, such as:</p> <ul style="list-style-type: none"> *routing heavily-loaded trucks and equipment away from residential streets and vibration-sensitive sites; *managing the sequence of construction phases such as demolition, earth-moving, and ground-impacting operations so as not to occur in the same time period and avoiding night-time activity; *employing alternative construction methods. <p>Relevant locations where this would apply would be refined during the design phase.</p>	Acknowledged, the suggested text has been incorporated with other best practice measures where appropriate.	?	P	<p>Pending review of the reports prepared for the remaining three Early Works sites.</p> <p>It is noted the suggested text, as appropriate, was added to Section 6.1 (Mitigation Measures - General Recommendations) of Appendix A3 - Exhibition Station Early Works - Draft Noise and Vibration Early Works Report. However, these measures remain absent from the main Exhibition Station Early Works report. Please include these General Recommendations in the main Exhibition Station Early Works report for consistency, or, indicate further measures are outlined in Appendix A3.</p>	Response provided. Section 6 and Table 6-1 of the Noise and Vibration Report identify the noted mitigation measures in addition to other mitigation measures.	C			
8	Transportation Expansion Office in consultation with LeighFisher	Methodology	Draft AQ Memo, Fig 1-1 to 1-4	Please explain how the Air Quality Study Area was established.	A 500-metre buffer was added to the identified project footprint of each Early Works scope item. The distance of the 500 metre buffer was based on guidance provided in the Ministry of Transportation, Environmental Guide for Assessing and Mitigating the Air Quality Impact and Greenhouse Gases of Provincial Transportation Projects (Ministry of Transportation, 2020) which states that for major roads, a distance of 500 m is expected to capture the maximum pollutant concentrations.	?	C						
9	Transportation Expansion Office in consultation with LeighFisher	AQ Guidelines	Draft AQ Memo, Table 2-1	Why is the AAQC PM2.5 standard not included?	The AAQC PM2.5 standard (30 ug/m3 for a 24-hour averaging period) is less stringent than it's CAAQS counterpart 27 ug/m3 for a 24-hour averaging period, after 2020.	?	C						
10	Transportation Expansion Office in consultation with LeighFisher	Background Traffic Data	Draft AQ Memo, Table 2-5	Why isn't the Gardiner Expressway or Liberty Street West 2019 AADT bus data available/included?	Table 3-3 updated with Liberty Street West 2019 AADT data. Not available for Gardiner Expressway.	?	C	It is recommended that the report state that the AADT is not available for the Gardiner Expressway, for clarity.					
11	Transportation Expansion Office in consultation with LeighFisher	Methodology	Draft AQ Memo, Sec 3, Table 3-7	Please define a Sensitive and a Critical receptor and distinguish between the two. Also, please clarify the definition of potential impacts.	Sensitive receptors include all residential and residential combination zoning (e.g. commercial residential, etc.). Critical receptors include land use where it is reasonably expected that high-risk populations spend extended periods of time in these locations (i.e. schools, day cares, hospitals, nursing or long-term care homes, etc.). The potential impacts are treated the same between the two types of receptors, however critical receptors are marked with high priority for maintaining air quality levels.	?	C						
12	Transportation Expansion Office in consultation with LeighFisher	Construction timeline	Draft AQ Memo, Sec 3	Please clarify whether construction of the four EW locations will overlap (even if just a portion). If any overlap, a combined phase impact assessment should be conducted in addition to the location-specific assessment. This is particularly important for receptors that fall within multiple Study Areas.	In updated revisions of the report, all early works have been split into separate reports. Note that the only overlap in study area is Lakeshore East (overlapping with GO Expansion), for which a joint noise and vibration assessment will be undertaken for GO Expansion and Ontario Line operations.	?	C	Clarification noted. Note, joint noise and vibration assessment to be provided to the CoT for review and comment, once available.					
13	Transportation Expansion Office in consultation with LeighFisher	Air Quality Management Plan	Draft AQ Memo, Attachment 1, Table 2	Please include other contaminants of concern as included in Table 2-4 of the main memo. In particular benzene and B(a)P when they exceed AAQC standards.	Including additional contaminants from the MTO Guidance does not have direct bearing on the contents of the AQMP. If required, the AQEW Memorandum can be referenced for a full background summary.	?	P	Given that benzene and B(a)P exceed AAQC requirements under background conditions (as per the Early Works Air Quality Memorandum and the Exhibition Station Early Works - Draft Air Quality Early Works Report), this information should be included in the AQMP for consistency. At a minimum, a reference to the Memorandum should be included, as noted in Column F.	The AQMP attachment has been removed. Benzene and B(a)P are discussed in the Air Quality Report.	D		Mitigation plan has been deferred to AQ Management Plan, to be developed prior to construction.	
14	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.1	Are the mitigation measures included here required? If so, mitigation language should be revised to state "shall" to ensure compliance. Dust suppression techniques should also be included.	These are recommended mitigation activities which should be employed in the event of a monitored exceedance of the specified decision making thresholds in Table 4. If these thresholds are breached during continuous real-time monitoring, then any combination of the proposed mitigation measures will be required to be employed, as specified by the designated air quality specialist.	?	O	The mitigation measures provided appear comprehensive, however, please confirm mitigation measures stated as a "should" are enforceable as requirements, and are not to be taken simply as recommendations for ProjectCo to consider.	The AQMP attachment has been removed. Note that the comment has been addressed in Table 4-1 of the Air Quality Report.	D		Mitigation plan has been deferred to AQ Management Plan, to be developed prior to construction.	

15	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.2	Please specify maximum drop height and total height of stockpiles.	The drop height restriction is described on section 3.1.3. However, there is no recommended threshold for the maximum drop height and total stockpiles height from the air emission perspective. So, as described these should be minimized as possible.	?	C						
16	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.3	Idling restrictions should also be required consistent with best practice.	Table 4-1 and Table 4-2 of the Air Quality Report note that idling restrictions will be applied during construction.	?	C						
17	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Sec 3.2	Please clarify if the recommendation is to set up one met station at each EW location (i.e. four total) or one single station for the whole project.	Meteorological monitoring will not be required as part of the mitigation as air quality impacts from construction are not anticipated to affect local meteorological conditions.	?	C						
18	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Sec 3.3	Since no AQ monitoring location is planned immediately around the East Harbour Station location, is there the potential that construction at this location takes place earlier than the neighboring locations and as such construction dust monitoring will not be in place in time?	Comments regarding the East Harbour early works will be responded to at a later date as all early works have been split into separate reports. East Harbour works will be documented under separate cover.	?	P	Pending review of East Harbour Early Works report, once available.	Not applicable to LSE-JC.	C	Closed for the purpose of this LSE-JC log.		
19	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Table 4	If the construction program is 12 months or less, silica analysis should be considered once a month, consistent with best practice, instead of once every 3 months as mentioned.	Comment noted.	?	C						
20	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Table 6	Remedial actions should also be categorized by action levels. If action level 4 is reached, it suggests that whatever remedial actions already undertaken at previous action levels were not effective, and so additional remedial actions will be required.	Table 4-1 and Table 4-2 of the Air Quality Report note that Action Levels will be applied during construction.	?	C						
21	Transportation Expansion Office in consultation with LeighFisher	Air Quality Management Plan	Draft AQ Memo, Attachment 1, Table 6	Please confirm if this management plan will be implemented by the EPC Contractor and all roles and responsibilities mentioned are within the EPR Contractor's organization. If so, please clarify cross-organization responsibilities and reporting lines.	These details will be confirmed as Project planning and design progress.	?	C						
22	Transportation Expansion Office in consultation with LeighFisher	Introductory text	Draft N&V Report, Section 1, Introduction	It is noted this report only assesses construction noise and vibration effect for the early works. Confirm how operational impacts of early works will be assessed.	This report only addresses construction noise and vibration, operational noise and vibration are addressed under separate cover.	?	P	Please clarify the title of the report that will address the operational noise and vibration impacts. Comment pending review of the appropriate report, once available.	Construction or other project components and project operations will be assessed and documented in the forthcoming Environmental Impact Assessment Report. However, please note that noise and vibration impacts associated with the joint corridor Ontario Line and GO track operations will be assessed under the Ontario Line Lakeshore East Joint Corridor Noise and Vibration Operations Report. This report will be provided in the Lakeshore East Joint Corridor Early Works Report. This report outlines details of noise and vibration mitigation measures investigation, as the Lakeshore East Joint Corridor early works will include implementation of noise barriers and vibration mitigation technologies for the GO tracks.	D	Acknowledge Mx intends to defer documentation of operational noise and vibration to the OL EIAR.		
23	Transportation Expansion Office in consultation with LeighFisher	Construction noise methodology	Draft N&V Report, 4.2 Methodology, p. 14	Clarification on methodology used for noise modelling required. Per FTA manual, detailed construction noise analysis should, "Compare the combined Leq equipment (1hr) and the combined Ldn equipment 30-day for all equipment for each phase of construction determined. Then, identify locations where the level exceeds the criteria." Confirm if the above methodology was employed.	This method was not used as details regarding construction methodology have not yet been established. Construction noise levels (modelled from a list of construction equipment) were reviewed at the worst case representative receptor locations surrounding the construction sites using the Leq8hr criteria that has been used on previous Metrolinx projects. Note that a screening map will be added to the reporting.	?	C						

24	Transportation Expansion Office in consultation with LeighFisher	Lakeshore East Joint Corridor Noise	Draft N&V Report, 4.6.1, and Table 4-7	<p>Table 4-7 appears to indicate night time noise level criteria will be exceeded along the project footprint.</p> <p>Please revise below statement from the report to reflect nighttime noise level limit exceedance, in addition to daytime noise level limit exceedance.</p> <p><i>"The results in the above table [Table 4-7] indicate that predicted noise levels along the project footprint could be above the daytime noise level limit"</i></p>	In updated revisions to the report, Lakeshore East early works have been removed from this report and will be published under separate cover however, this change will be addressed within the Lakeshore East Early Works Report.	?	P	Pending review of the Lakeshore East Early Works report, once available.	Language following Table 5-1 of the Noise and Vibration Report (formerly Table 4-7) acknowledges the exceedance and further recommendations are provided to reduce impacts in Section 6.	D	Acknowledge Mx intends to defer documentation of operational noise and vibration to the OL EIAR.		
25	Transportation Expansion Office in consultation with LeighFisher	Vibration Impacts	Draft N&V Report, 4.6.2, Vibration Impacts	<p>Report states:</p> <p><i>"As the project footprints are not finalized; the number of locations predicted to have vibration levels in excess of the City of Toronto prohibited limit, and the screening limit may change. Also, the number of structures within the project footprint may change. As a result, a full list of locations along the project footprint that require monitoring or subsequent review is too preliminary at this stage. Mapping provided in Appendix B4 can be used to further develop the design plans to decrease the vibration impacts of the Early Works construction."</i></p> <p>Confirm if the mapping provided in Appendix B4 could be used to indicate sensitive areas which require further assessment should the area be selected as part of the project footprint.</p> <p>Consistent with best practices, this report should give an indication of areas that will likely be impacted if in the vicinity of any project works.</p>	Mapping has been updated including the project footprint. In updated revisions of the report, mapping has been moved to the main body of report as Figure 5-3 and 5-6.	?	O	<p>Please clarify where updated mapping can be found. Figure 5-3 and Figure 5-6 in the Draft Early Works Report - Ontario Line Exhibition Station Early Works report display the surficial geology and the bed rock geology within the Exhibition Station soil and groundwater study area, respectively.</p> <p>Note: the reference in Column E should be to Appendix D of the previously reviewed report titled <i>Appendix B4 - Noise and Vibration Early Works Report</i> (dated June 2020). The Exhibition Station Vibration Assessment Map previously provided in this referenced Appendix (Appendix D) is absent from the updated Exhibition Station Early Works report and the associated Noise and Vibration appendix.</p>	Response provided. Figure 5-2 of the Noise and Vibration Report displays project footprint and vibration screening.	C			
26	Transportation Expansion Office in consultation with LeighFisher	General Construction Vibration Mitigation Measures	Draft N&V Report, 5.1.2, Construction Vibration	<p>Given that vibration impacts are predicted, best practice construction vibration mitigation measures recommended by the FTA should be included in the report, such as:</p> <ul style="list-style-type: none"> *routing heavily-loaded trucks and equipment away from residential streets and vibration-sensitive sites; *managing the sequence of construction phases such as demolition, earth-moving, and ground-impacting operations so as not to occur in the same time period and avoiding night-time activity; *employing alternative construction methods. <p>Relevant location for the application of these measures can be refined during the design phase.</p>	Acknowledged, the suggested text has been incorporated with other best practice measures where appropriate.	?	P	Noted that suggested text, as appropriate, added to Exhibition Station Early Works report. Pending review of the reports prepared for the remaining three Early Works sites.	Response provided. Section 6 and Table 6-1 of the Noise and Vibration Report identify the noted mitigation measures in addition to other mitigation measures.	C			
ADDITIONAL COMMENTS (DECEMBER 2020)													
27	Transportation Expansion Office	General	General	<p>Please note the Status (Column H) and the Follow Up Comments (Column) provided in this log are based solely on the review of the Exhibition Station Early Works Report and are subject to change upon receipt and review of the Early Works reports for the remaining three sites (Lower Don River Crossing, East Harbour Station, and Lakeshore East Joint Corridor).</p>	Comment noted. Early Works Reports for the remaining early works segments are being developed and will be provided to the City in the coming months.				Comment noted.	C

Good afternoon Julia,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works

Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Project Coordinator, Environmental Programs and Assessment

Date In:
Date Out: January 5, 2021

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	September 2021 Revised Response LSE-JC	Follow-up Comments LSE-JC (City)	Status O / P / C / D** (Reviewer)
1	LAU	Draft Traffic Memo	General	Any impacts to City parkland/natural areas as a result of this project requires complete coordination with Parks Capital's Construction schedule as outlined in PFR approved Capital budget. Schedule and duration of impacted park lands to be provided.	Comment noted, the Exhibition Station early works Project Footprint does not currently include any City parkland or natural areas. However, should project footprint change in the future and impacts to parkland and natural areas are identified, Metrolinx will continue to engage the City of Toronto.	?	C	We note Mx response and will continue to comment as the project progresses.	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the Lakeshore East Joint Corridor Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress.	PF&R have reviewed Section 6.6 and are not satisfied with the information provided in Table 6-6. In other EWR reports, all parks within the footprint are described, including which parks will be impacted and the areas that are required for each park for temporary/permanent. When can the City expect this information? PF&R would like to note that within the project footprint McCleary Playground is noted in Parks Capital's Construction schedule for playground enhancement in 2029.	O
2	Urban Forestry	Draft NER	Parks - Moss Park	All mitigation measures will be explored to minimize the project impacts to this site.	Metrolinx is committed to minimizing impacts to parkland wherever possible and will explore all options to minimize project impacts to Moss Park. As project planning and design progresses, any impacts identified to Moss Park will be documented within the Environmental Impact Assessment Report and appropriate mitigation will be prescribed.	?	C	Closed			
3	RNFP	Draft NER	draft EPR - general	Submit a Natural Heritage Impact Study	Natural heritage impacts will be documented as part of the Environmental Impact Assessment Report, under separate cover.	?	C	Closed			
4	RNFP	Draft NER	Natural Environment Early Works - 4.2	Metrolinx must apply for and obtain a permit from RNFP for any trees/vegetation/soil impacts regulated under Bylaw 658 on city and private lands.	Metrolinx will continue to engage with the City of Toronto as project planning and design progress, including with regard to tree injury/removal permits as required.	?	C	Closed			
5	Urban Forestry	Draft NER	Natural Environment Early Works - Section 6 - permit requirements - table 6-1	Under Municipal, add Bylaw 813, 658 and 608 in table 6-1. Revise and add text sections accordingly in section 6.	As noted in Table 6-1 the activities at the Exhibition Station early works study area are not within the City of Toronto NHS or RNFP policy areas. Compensation for tree removal on private/city lands will follow the Metrolinx Vegetation Guideline (2020), which notes that compensation for trees on private/city lands will follow all applicable bylaws and regulations.	?	C	Closed			
6	LAU	Draft N&V Report	General	How does the rail corridor expansion in the Lakeshore East Joint Corridor works footprint affect impacted park lands/natural areas for grading, retaining walls, noise barriers, etc in the interim and permanently?	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. Response to this comment will be revisited as the Lower Don Bridges Early Works Report is released.	?	O	The Lakeshore East Joint Corridor works is more than just the Lower Don Bridges. PFR is requesting for more detailed information on the scope of impacts to affect parkland for the full scope from Gerrard to Lower Don Bridges both interim and permanent in order for Parks to undertake a comprehensive assessment	The conceptual design figure appended to the draft LSE-JC Early Works Report shows impacted parkland and natural areas within the LSE-JC project footprint. Lakeshore East Joint Corridor early works will mostly occur within the existing rail corridor and will avoid impacts to parklands where feasible. Metrolinx has and will continue engaging with the City as project planning and design progress.	PF&R have reviewed Section 6.6 and are not satisfied with the information provided in Table 6-6. In other EWR reports, all parks within the footprint are described, including which parks will be impacted and the areas that are required for each park for temporary/permanent. When can the City expect this information? Ongoing coordination with the City of Toronto will be required to protect for reinstatement/interim of City-owned parkland to current City standards and/or negotiated improvements with the City.	O
7	LAU	Draft N&V Report	4.6 Impact Assessment LEJC	Jimmie Simpson Recreation Centre shall be reviewed for noise and vibration and added to Table4-7 and Figure1-04 to be representative of the worst case locations along the Early Works project footprint as works are proposed in very close proximity to the Recreation Centre.	Typically recreation centres are not considered noise or vibration sensitive receptors, however the building will be considered in assessment of construction vibration impacts.	?	O	Upon review of the revised report, City may provide additional comments. Due to the proposed scope of works directly adjacent to Jimmie Simpson RC, PFR considers this as a sensitive vibration receptor.	Given Jimmie Simpson Recreation Centre's immediate proximity to the project alignment, it will be considered as a vibration sensitive receptor as part of the Lakeshore East Joint Corridor operations vibration impact assessment.	PF&R have reviewed Table 6-5 and acknowledge that Jimmie Simpson RC will be considered as a vibration sensitive receptor. For the purposes of this comment log, this comment can be closed.	C
8	Urban Forestry	Draft EWR	general	The Lower Don River Crossing works overlaps with the USRC Wilson yard/HONI relocation works. Are we to assume that the trees and vegetation will be non-existent like the Lakeshore East shared corridor for the purposes of tree inventory and arborist report?	The Lower Don Bridges early works will build on existing environmental work completed for the Wilson Yard/HONI relocation works. Metrolinx will be removing vegetation within its right-of-way in accordance with the Metrolinx Vegetation Guideline (2020).	?	C	Closed			
9	Urban Forestry	Draft EWR	Draft early works report, 5.9 - Utilities	Confirm tree and vegetation impacts during detailed design. A permit application for injury or removal may be required if regulated under a municipal bylaw	Tree and vegetation impacts will be confirmed during the detailed design phase. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	C	Closed			

10	Urban Forestry	Draft EWR	Draft Early Works Report, 6.1.3 - Municipal permits	Permits are required for trees and vegetation that are regulated under Bylaw 813, 658 and 608. Compensation shall be in accordance with applicable bylaw. The Arborist Report and supporting documentation will be reviewed and revised when submitted.	An Arborist Report will be prepared in accordance with Table 6-1 and 6-2. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	C	Closed			
11	Urban Forestry	Draft EWR	Draft Early Works Report, 6.1.3 - Municipal permits	Delete timeline information for permit application processing as it is conditional on satisfactory and approved documentation. These revisions may take several weeks before an application will be reviewed.	This will be removed in the revised report.	?	C	Closed			
12	RNFP	Draft EWR	Draft Early Works Report, 6.1.4	Submit Voluntary Process Review Letter	Metrolinx will continue to engage TRCA through the VPR process.	?	P	Once TRCA's VPR letter has been given to Metrolinx, please submit to the city for review	Comment noted. Metrolinx is continuing to work with TRCA where the project intersects with TRCA regulated lands.	Once TRCA's VPR letter has been given to Metrolinx, please submit to the city for review	P
13	RNFP	Draft EWR	Draft Early Works Report, table 6-1	Submit Erosion & Sediment Control Plan	An Erosion and Sediment Control Plan will be prepared in accordance with Table 6-2. This will be circulated to the City prior to construction.	?	C	Closed			
14	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Submit an Arborist Report with updated tree inventory. Tree inventory shall also confirm the presence of butternut inspected in 2017 in the East Harbour Stn	An Arborist Report will be prepared in accordance with Table 6-1 and 6-2. This will be circulated to the City once available. The butternut in question at East Harbour Station was determined to be misidentified, and is a black walnut.	?	C	Closed			
15	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Submit Spill Prevention & Response Plan	A Spill Prevention and Response Plan will be prepared in accordance with Table 6-2 and 6-3. This will be circulated to the City prior to construction.	?	C	Closed			
16	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Metrolinx' Vegetation Guideline is currently under review by staff in Parks, Recreation and Forestry. Compensation will be to the approval and satisfaction of PFR and in accordance to the applicable bylaw. Any revisions to the document will apply to the current project	Noted.	?	C	Closed			
17	LAU	Draft EWR	General	Any impacts to City parkland as a result of this project requires complete coordination with Parks Capital's Construction schedule as outlined in PFR approved Capital budget. Schedule and duration of impacted park lands to be provided.	Noted. Impacts to parkland are not anticipated as part of the Exhibition Station Early Works.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. PFR is requesting a full summary (table format) of each segment and the park impacts both temporary and permanent	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the LSE-JC Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress.	PF&R have reviewed Section 6.6 and are not satisfied with the information provided in Table 6-6. In other EWR reports, all parks within the footprint are described, including which parks will be impacted and the areas that are required for each park for temporary/permanent. When can the City expect this information? PF&R would like to note that within the project footprint McCleary Playground is noted in Parks Capital's Construction schedule for playground enhancement in 2029.	O
18	LAU	Draft EWR	3. Description of the Early Works	We are not in support of loss of park lands. What alternatives has Mx compiled? What lands does Mx have for a potential land swap?	Noted. Impacts to parkland are not anticipated as part of the Exhibition Station Early Works.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. In order to advance this discussion, Mx to provide a full summary of anticipated parkland impacts. Will methods for parkland compensation be discussed in the Early Works report?	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the LSE-JC Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress. Lakeshore East Joint Corridor early works will mostly occur within the existing rail corridor and will avoid impacts to parkland where possible.	PF&R have reviewed Section 6.6 and are not satisfied with the information provided in Table 6-6. In other EWR reports, all parks within the footprint are described, including which parks will be impacted and the areas that are required for each park for temporary/permanent. When can the City expect this information? We note Mx response as ongoing and we acknowledge that additional discussions between Mx and Cot about an agreement dealing with compensation remain pending. This comment will remain open.	O
19	LAU	Draft EWR	4.5 Socio-Economic and Land Use Characteristics	Lower Don River Crossing - there are recreational uses and park and open spaces in this footprint...Corktown Common Park, MUPs along the Lower Don River Trail, the Martin Goodman Trail, Lakeshore and Cherry St (see 4.8.2.3)	In updated revisions of the report, Lower Don early works has been split into a separate report however, the revised Lower Don Bridges early works report will include parks within the latest Lower Don Bridges study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Not applicable to LSE-JC	This comment can be closed	C
20	LAU	Draft EWR		Lower Don River Crossing - there are community groups and resources in this footprint	In updated revisions of the report, Lower Don early works has been split into a separate report however, the revised report will include community amenities within the latest Lower Don River Crossing study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Not applicable to LSE-JC	This comment can be closed	C
21	LAU	Draft EWR		Lakeshore East Joint Corridor - there are recreational uses and parks and open spaces in this footprint...Jimmie Simpson RC and Park, Bruce Mackey Park, McCleary Park, Saulter St Parkette, Gerrard-Carlaw Parkette	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include recreational uses and parks within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Recreational uses, parks and open spaces within the Lakeshore East Joint Corridor Socio-Economic and Land Use Characteristics Study Area are outlined in Table 5-10 of the Early Works Report.	PF&R have reviewed Table 5-10 and acknowledge that parks have been added to the EWR report. For the purposes of this comment log, this comment can be closed.	C

22	LAU	Draft EWR		Lakeshore East Joint Corridor - there are community groups and resources in this footprint	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include community groups and resources within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Community groups and resources within the Lakeshore East Joint Corridor Socio-Economic and Land Use Characteristics Study Area are outlined in Table 5-11 of the Early Works Report.	PF&R have reviewed Table 5-11 and acknowledge that community groups have been added to the EWR report. For the purposes of this comment log, this comment can be closed.	C
23	LAU	Draft EWR		Lakeshore East Joint Corridor - all parks in and adjacent to this footprint to be labelled on Figure4-21	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include recreational uses and parks within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	All community amenities within the Lakeshore East Joint Socio-Economic and Land Use Characteristics Study Area are included in Figure 5-16 of the Early Works Report.	It appears that the latest Mx response does not match PF&R's original comment however it has been addressed in Table 5-10. For the purposes of this comment log, this comment can be closed.	C
24	LAU	Draft EWR	4.6/5.6 Built Heritage Resources and Cultural Heritage Landscapes	Has a Cultural Heritage Assessment been completed for park lands that are proposed to be impacted? There is mention of Cultural Heritage Landscapes however where is the mapping - specifically does any park lands fall into CHL?	All lands within the Ontario Line Study Area, and subsequent Early Works footprint have been screened for known, previously assessed and potential BHR/CHLs. For the Ontario Line Project, any properties, including parks, were screened for BHRs and CHLs- Moss Park was included in the OL CHR and Bruce Mackey Park noted because of its heritage plaques and it contributes to the De Grassi Streetscape. Parks that are not known, previously identified or potential CHLs are included in the Natural Environment Report.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.	OLS-126 Degrassi St from Queen St E to Wardell St includes a historical plaque near the bridge within Bruce Mackey Park. Mitigation measure are noted in Table 6-7. For the purposes of this comment log, this comment can be closed.	C
25	LAU	Draft EWR	Pg 115-116/227-229	DeGrassi Street has been noted as potential BHR/CHL and within EW-001 Bruce Mackey Park has been noted as having potential heritage attributes. Should 12 DeGrassi Street be proposed for demolition Mx shall acquire these lands to land swap with the City in exchange for impacts to Bruce Mackey Park and nearby park lands. Also, what is the impact to Bruce Mackey Park (and all other parks) to avoid vibration damage to buildings along EW-001 and elsewhere? Vibrating mitigating measures shall be implemented on the building or elsewhere and not on park lands.	The Lakeshore East Joint Corridor early works have been placed under separate cover in updated revisions of this report.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered. PFR to review environmental assessment report when available for further comment	The impacts to De Grassi Street from Queen Street to Wardell Street include encroachment into the streetscape causing physical impact to the streetscape, while avoiding physical impact to building and/or the heritage attributes. The plaques are heritage attributes of the public realm of the De Grassi Street streetscape. Metrolinx is committed to consulting with City of Toronto's Heritage Planning as planning progresses for any physical impacts to the streetscape and its heritage attributes (i.e. historical plaques). Steps will be applied during construction for the plaques to remain in-situ if possible.	OLS-126 Degrassi St from Queen St E to Wardell St includes a historical plaque near the bridge within Bruce Mackey Park. Mitigation measure are noted in Table 6-7. For the purposes of this comment log, this comment can be closed.	C
26	LAU	Draft EWR	5.4 Noise and Vibration pg 201-202	Future Work shall include noise and vibration impact study to existing Jimmie Simpson Recreation Centre as works are proposed in very close proximity to the Recreation Centre.	Typically recreation centres are not considered noise or vibration sensitive developments, however the building will be considered in assessment of construction vibration impacts.	?	O	Upon review of the revised report, City may provide additional comments. Due to the proposed scope of works directly adjacent to Jimmie Simpson RC, PFR considers this as a sensitive vibration receptor.	Given Jimmie Simpson Recreation Centre's immediate proximity to the project alignment, it will be considered as a vibration sensitive receptor as part of the Lakeshore East Joint Corridor operations vibration impact assessment.	PF&R have reviewed Table 6-5 and acknowledge that Jimmie Simpson RC will be considered as a vibration sensitive receptor. For the purposes of this comment log, this comment can be closed.	C
27	LAU	Draft EWR	5.4 and 5.5	How does the rail corridor expansion in the Lakeshore East Joint Corridor works footprint affect impacted park lands/natural areas for grading, retaining walls, noise barriers, etc in the interim and permanently?	Any potential impacts of Lakeshore East Joint Corridor Early Works will be presented under separate cover.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the LSE-JC Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress.	Along the LSE JC EW project footprint, the City may want Mx to undertake site preparation, site grading and earthworks on City parkland in order to improve the condition at the property line and/or negotiated improvements with the City. PF&R agrees that these construction activities may be expanded, further refined, or found to be unnecessary as the project progresses through detailed design and construction. Ongoing coordination with the City of Toronto will be required to improve the condition at the property line and/or negotiated improvements with the City. This comment will remain pending	P
28	LAU	Draft CHR	General	Has a Cultural Heritage Assessment been completed for park lands that are proposed to be impacted?	All lands within the Ontario Line Study Area and subsequent Early Works footprint have been screened for known, previously assessed and potential BHR/CHLs. At this stage, impact scenarios have been outlined with recommended mitigation measures. Once an alignment is selected / detailed design is underway, a project-specific impact assessment will be undertaken and documented in a Heritage Detailed Design Report. This will include park lands that retain heritage value.	?	C	Closed			
29	LAU	Draft CHR	Pg 25	There is mention of Cultural Heritage Landscapes however where is the mapping - specifically does any park lands fall into CHL?	For the Ontario Line Project, any properties, including parks, were screened for BHRs and CHLs- Moss Park was included in the OL CHR and Bruce Mackay noted because of its heritage plaques and it contributes to the De Grassi Streetscape. Further detail on parks within the study area (from an ecological perspective) are documented in the Natural Environment Report.	?	P	We note Bruce Mackey was mentioned in the report however Moss Pass appeared to be overlooked. Provide section of the report speaking to Moss Park and supplementary mapping.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.	OLS-126 Degrassi St from Queen St E to Wardell St includes a historical plaque near the bridge within Bruce Mackey Park. Mitigation measure are noted in Table 6-7. For the purposes of this comment log, this comment can be closed.	C
30	LAU	Draft CHR	Figure 6-4	All existing park lands within and adjacent to the Lakeshore East Joint Corridor Study Area to be noted in Figure6-4	As per comment response #2, parks within and adjacent to the Early Works footprints that retain heritage value (CHLs) are documented in this Cultural Heritage Report. Parks that are not CHLs are documented in the Natural Environment Report.	?	C	Closed			

31	LAU	Draft CHR	Pg 30, 43-45	DeGrassi Street has been noted as potential BHR/CHL and within EW-001 Bruce Mackey Park has been noted as having potential heritage attributes. Should 12 DeGrassi Street be proposed for demolition Mx shall acquire these lands to land swap with the City in exchange for impacts to Bruce Mackey Park and nearby park lands. Also, what is the impact to Bruce Mackey Park (and all other parks) to avoid vibration damage to buildings along EW-001 and elsewhere? Vibrating mitigating measures shall be implemented on the building or elsewhere and not on park lands.	The Lakeshore East Joint Corridor early works have been placed under separate cover in updated revisions of this report. This comment will be taken into account as environmental assessment reporting advances along the Lakeshore East joint corridor.	?	O	PFR to review environmental assessment report when available for further comment	The impacts to De Grassi Street from Queen Street to Wardell Street include encroachment into the streetscape causing physical impact to the streetscape, while avoiding physical impact to building and/or the heritage attributes. The plaques are heritage attributes of the public realm of the De Grassi Street streetscape. Metrolinx is committed to consulting with City of Toronto's Heritage Planning as planning progresses for any physical impacts to the streetscape and its heritage attributes (i.e. historical plaques). Steps will be applied during construction for the plaques to remain in-situ if feasible.	OLS-126 Degrassi St from Queen St E to Wardell St includes a historical plaque near the bridge within Bruce Mackey Park. Mitigation measures are noted in Table 6-7. For the purposes of this comment log, this comment can be closed.	C	
ADDITIONAL COMMENTS (OCTOBER 18 2021) Lakeshore East Joint Corridor EW												
33	UF	Joint Corridor - draft heritage detailed design report- Appendix A4	Table ES-2, OLS-017								Confirm if any trees and/or vegetation shall require to be removed. An arborist report, tree inventory and permit application shall be submitted for review. Please note that the arborist report and tree inventory shall require to be reviewed and approved prior to processing the permit application. Standard review for the work submittals is 20 business days and standard review time for the permit application is an additional 40 business days.	new
34	UF	Natural environment report - Arborist report & tree inventory	general								Confirm when PFR can expect to review the arborist report and tree inventory for the joint corridor. Please note that the work submittals shall require to be reviewed and approved prior to a tree permit application submission. It is highly advised to submit the reports for review in advance of scheduled tree and vegetation removal to address items of concern and to avoid possible construction delays.	new
35	UF	Natural environment report	Table ES-1, Vegetation Communities - City & Private tree removal								4th bullet. Compensation will be according to municipal bylaws, not Mx vegetation guideline. Revise and correct.	new
36	UF	Natural environment report	Table ES-1, Vegetation Communities - Soil or water contamination as a result of spills from equipment use								It is understood that there are no water features identified within the Lakeshore East Joint Corridor Study Area. However, please add language that any refuelling shall be completed at least 30m from a watercourse as a mitigation measure.	new
37	UF	Natural environment report	Table 5-1, Vegetation Communities City & Private tree removal								4th bullet. Compensation will be according to municipal bylaws, not Mx vegetation guideline. Revise and correct.	new
38	UF	Natural environment report	Section 6, tree inventory								As the tree inventory is a required work submittal to be reviewed, should read "A tree inventory shall be completed...". Revise and correct.	new
39	LAU - Transit Unit	Potential Impacts, Mitigation Measures and Monitoring Activities	ES.5 pg xxv Table 6-5 p.159								Table ES-2 Noise and Vibration, Construction Vibration: Clarification required for Mitigation Measures 'structure in 80 McGee St (park)'. Mx has not engaged the City for access to the building. Further discussion required.	new
40	LAU - Transit Unit	Potential Impacts, Mitigation Measures and Monitoring Activities	ES.5 pg xxvi Table 6-6 p.162								Table ES-2 Socio-Economic and Land Use Characteristics, Property, Property Acquisition - permanent and temporary. Add: Temporary Property Acquisition - construction: Provide alternative interim location and retrofit and/or undertake park enhancements for the loss of the amenity to the satisfaction of the City of Toronto. Add: Permanent Property Acquisition - Operation: Provide compensation for the permanent loss of park and open space via comparable land swap or park improvements to the satisfaction of the City of Toronto.	new
41	LAU - Transit Unit	Potential Impacts, Mitigation Measures and Monitoring Activities	ES.5 pg xxvii Table 6-6 p.162								Table ES-2 Socio-Economic and Land Use Characteristics, All land uses and adjacent lands: Add: Reduce potential impacts and maintain access to recreational uses, parks and open spaces by restricting construction staging limits and duration of staging relating to the respective works.	new

42	LAU - Transit Unit	Potential Impacts, Mitigation Measures and Monitoring Activities	ES.5 pg xxvii Table 6-6 p.162							Table ES-2 Socio-Economic and Land Use Characteristics, Public Realm: Mitigation Measures Add: Alterations to key features such as sidewalks, trails, parks, and street trees should be reduced as much as is feasible and restored following construction to current City standards to the satisfaction of the City of Toronto. Add: Continue to engage with the City of Toronto to confirm mitigation measures. Add: Retaining walls, tunnel walls, noise walls, and abutments that are public facing or accessible to the walking-public will have plain surface finishes acceptable by the local road authority and will require anti-graffiti coating treatment (if artwork will be installed by the municipality, anti-graffiti coating shall be applied after artwork installation). On all other wall treatment cases, a patterned concrete finish acceptable by the local road authority and anti-graffiti coating will be applied unless otherwise enhanced (i.e. LSE EW where the walls may be vegetated, public art, playground etc.) Monitoring Add: Metrolinx to monitor graffiti vandalism and comply to Toronto Municipal Code Chapter 485. Graffiti must be removed within 72 hours. Hate or gang-related graffiti must be removed within 24 hours.	new
43	LAU - Transit Unit	Planning Context	2.2.2.1 City of Toronto Official Plan p.19							2.2.2.1 City of Toronto Official Plan to include Policy 4.3.8 regarding compensation for disposal of parkland and open space.	new
44	LAU - Transit Unit	Planning Context	2.2 Planning Context - Parkland Strategy							Add Parkland Strategy including paragraph describing it under 2.2.2 Municipal	new
45	LAU - Transit Unit	3.2 EW Project Footprint and Study Area	3.2 EW Project Footprint and Study Area							Edit to add: The extent of lands anticipated to be temporarily impacted by construction staging/laydown and access will continue to be refined and reduced to the extent feasible as project planning progresses. Ongoing coordination with the City of Toronto will be required to protect for reinstatement/interim of City-owned parkland to current City standards and/or negotiated improvements with the City.	new
46	LAU - Transit Unit	3.2 Construction Activities	Table 3-1 Anticipated Construction Activities for the OL LSE JC EW							Along the LSE JC EW project footprint, the City may want Mx to undertake site preparation, site grading and earthworks on City parkland in order to improve the condition at the property line and/or negotiated improvements with the City. PF&R agrees that these construction activities may be expanded, further refined, or found to be unnecessary as the project progresses through detailed design and construction. Ongoing coordination with the City of Toronto will be required to improve the condition at the property line and/or negotiated improvements with the City.	new
47	LAU - Transit Unit	5.6 Socio-Economic and Land Use Characteristics	5.6.2.1.2 Recreational Uses, Parks and Open Space and tAble 5-10 p.103							This section states recreational uses however does not indicate City owned recreational centres (Jimmie Simpson Recreation Centre and Matty Eckler Community Recreation Centre). PF&R requests that City-owned be added here and not in 5.6.2.1.3 Community Groups and Resources. Add general note that there are properties that have been acquired by the City of Toronto for parkland that have not yet been named but targeted for Park Development.	new
48	LAU - Transit Unit	5.6 Socio-Economic and Land Use Characteristics	5.6.2.2 Planned Services and Facilities							Add verbiage regarding Capital Projects or improvements directly impacted by the OL project, including: McCleary Playground, Jimmie Simpson Park, Gerrard-Carlaw Parkette, Bruce Mackey Park, Saulter Street Parkette. Note: this list does not include the ongoing park development works that are associated with Development Applications and Parkland Acquisitions.	new

49	LAU - Transit Unit	5.6 Socio-Economic and Land Use Characteristics	5.6.4 Future Development							This section should acknowledge the Future Parks and Open Space as part of all active TOC submissions currently under review.	new
50	LAU - Transit Unit	Temporary Land Requirements	General							Are drawings available that outline which properties will be needed as temporary land requirements? What are the types of work planned for these lands and what is the intention to do with these lands after construction ie: 356 Eastern Ave and 240-242 First Avenue? PF&R is seeking this information to verify there are no impacts to existing parks and to better understand potential opportunities for parkland in this area.	new
51	LAU - Transit Unit	OL Lower Don Bridge	General							A portion of the Ontario Line Lower Don Bridge is considered within the LSE JC study area. Which scope of work will the construction of this bridge be delivered under - East Harbour?	new
52	LAU - Transit Unit	Socio-Economic and Land Use Characteristics	General							This section should include reference to the Mx commitments to design and construct an MUT bridge over the Don River connecting East Harbour TOC and Corktown Common/Lower Don Trail.	new
53	LAU - Transit Unit	MUT Connection	General							While it is acknowledged there are no cycling facilities within the project footprint, Early Works should acknowledge, anticipate and plan for a future MUP connection and bridge north of the OL tracks connecting Corktown Common and the Lower Don Trail to the west over the Don River to the East Harbour Station lands as it is in the LSE JC study area. Confirm which contract the planned design and delivery of the MUT bridge and connection falls under.	new

Ontario Line - City of Toronto Early Works Report Comments				Project Name: Ontario Line	Revised By:						
				Project No:	Date In:						
				Date Out: January 5, 2021							
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	September 2021 Revised Response LSE-JC	Revised O / P / C / D** (Reviewer)	Revised Follow-up Comments (Reviewer)
1	Transportation Expansion Office in consultation with LeighFisher	AQ Monitoring	Draft EWR, Sec 4.3, page 71	The report states that all contaminants of concern are monitored at the selected NAPS stations. Since PM10 is not monitored, how is this discrepancy addressed?	PM10 was not included in NAPS Station measurements, and therefore was estimated using PM2.5 measurements, assuming a ratio of 1 ug/m3 PM10 per 0.54 ug/m3 of PM2.5 as per Lall et al. "Estimation of historical annual PM2.5 exposures for health effects assessment", Atmospheric Environment 38 (2004).	?	O	This methodology applies to estimation of PM2.5 from PM10 particles, not vice versa. What is the basis for assuming this ratio and is there comparable monitoring data nearby that supports this assumption? The approach undertaken is not standard practice.	As noted previously, there is no comparable hourly sampled data for the coarse fraction of fine particulates (PM10) which is directly comparable to the fine particulate hourly sampling data (PM2.5). The ratio from Lall et al. was referenced to provide an estimate based on scientific research for the coarse particulate fraction based on hourly monitored data of PM2.5. This ratio and methodology has been accepted by the MECP for similar projects submitted for EA approval in the past.	C	If this methodology is accepted by the MECP, then we can close this comment.
2	Transportation Expansion Office in consultation with LeighFisher	AQ Guidelines	Draft EWR, Sec 4.3, Table 4-14, p.72-73	Please explain why the AAQC PM2.5 standard not included?	The AAQC standard for PM2.5 (30 ug/m3 for a 24-hour averaging period) is less stringent than the CAAQS standard for the same averaging period (27 ug/m3) and was therefore excluded from Table 4-14.	?	C				
3	Transportation Expansion Office in consultation with LeighFisher	Air Quality Impacts	Draft EWR, Sec 5.3.1, p. 188	The impacts discussion is qualitative and high-level. The report should at a minimum discuss construction emissions estimates based upon construction equipment likely to be used, general timeline, and standard construction equipment emissions factors compared to baseline concentrations to indicate potential exceedances and areas for mitigation.	Details regarding construction duration and timeline are not available at this time and as such, construction emission estimates have not been included. The Air Quality Memo is based on the most up-to-date plans for design available at the time. Construction equipment and duration will be confirmed in future construction management plans.	?	C	It is noted assumptions have been made in this Early Works report. If these assumptions are exceeded, Metrolix and ProjectCo are responsible for determining the additional mitigation measures required.			
4	Transportation Expansion Office in consultation with LeighFisher	Noise Impacts - Lower Don River Crossing	Draft EWR, 5.4.1.2.1, Noise, p.200	Report notes, "for the future 191 Mill Street location, noise levels are predicted to be near the daytime noise level limit for the corridor works, nearest to 191 Mill Street." They also exceed the night time criteria which is not mentioned. Please add this to the impact discussion.	This will be addressed in the revised report.	?	P	Pending review of the updated report.	Not applicable to LSE-JC.	C	Closed for the purpose of this LSE-JC log.
5	Transportation Expansion Office in consultation with LeighFisher	Noise Impacts -Lakeshore East Joint Corridor	Draft EWR, 5.4.1.4.1, Noise, p.202	Report notes, "the results in the above table indicate that predicted noise levels along the project footprint could be above the daytime noise level limit." The report should also indicate the potential for nighttime exceedances as nighttime nuisance can generally result in health effects and should be mitigated.	This will be addressed in the revised report.	?	P	Pending review of the updated report.	Language following Table 5-1 of the Noise and Vibration Report (formerly Table 4-7) acknowledges the exceedance and further recommendations are provided to reduce impacts in Section 6.	C	
6	Transportation Expansion Office in consultation with LeighFisher	Vibration Impacts	Draft EWR, 5.1.4.1.2, Vibration, p.202	Report states: "As the project footprints are not finalized; the number of locations predicted to have vibration levels in excess of the City of Toronto prohibited limit, and the screening limit may change. Also, the number of structures within the project footprint may change. As a result, a full list of locations along the project footprint that require monitoring or subsequent review is too preliminary at this stage. Mapping provided in Appendix B4 can be used to further develop the design plans to decrease the vibration impacts of the Early Works construction." Confirm if the mapping provided in Appendix B4 could be used to indicate sensitive areas which require further assessment should the area be selected as part of the project footprint. Consistent with best practices, this report should give an indication of areas that will likely be impacted if in the vicinity of any project works.	Confirmed, mapping in Appendix B4 will be updated with the approved project footprint. See appendix B4	?	O	Similar to the Follow-Up Comment to Item No. 25 in the TEO tab, please clarify where the updated vibration assessment mapping is provided. The Draft Early Works Report - Ontario Line Exhibition Station Early Works report does not have an Appendix B4. Appendix A3 - Exhibition Station Early Works - Draft Noise and Vibration Early Works Report does not appear to include vibration assessment mapping.	Response provided. Figure 5-2 of the Noise and Vibration Report displays project footprint and vibration screening.	C	
7	Transportation Expansion Office in consultation with LeighFisher	Construction Vibration Mitigation, General	Draft EWR, 5.4.2.1, General Mitigation, p. 204	Given that vibration impacts are predicted, best practice construction vibration mitigation measures recommended by the FTA should be included in the report, such as: *routing heavily-loaded trucks and equipment away from residential streets and vibration-sensitive sites; *managing the sequence of construction phases such as demolition, earth-moving, and ground-impacting operations so as not to occur in the same time period and avoiding night-time activity; *employing alternative construction methods. Relevant locations where this would apply would be refined during the design phase.	Acknowledged, the suggested text has been incorporated with other best practice measures where appropriate.	?	P	Pending review of the reports prepared for the remaining three Early Works sites. It is noted the suggested text, as appropriate, was added to Section 6.1(Mitigation Measures - General Recommendations) of Appendix A3 - Exhibition Station Early Works - Draft Noise and Vibration Early Works Report. However, these measures remain absent from the main Exhibition Station Early Works report. Please include these General Recommendations in the main Exhibition Station Early Works report for consistency, or, indicate further measures are outlined in Appendix A3.	Response provided. Section 6 and Table 6-1 of the Noise and Vibration Report identify the noted mitigation measures in addition to other mitigation measures.	C	

8	Transportation Expansion Office in consultation with LeighFisher	Methodology	Draft AQ Memo, Fig 1-1 to 1-4	Please explain how the Air Quality Study Area was established.	A 500-metre buffer was added to the identified project footprint of each Early Works scope item. The distance of the 500 metre buffer was based on guidance provided in the Ministry of Transportation, Environmental Guide for Assessing and Mitigating the Air Quality Impact and Greenhouse Gases of Provincial Transportation Projects (Ministry of Transportation, 2020) which states that for major roads, a distance of 500 m is expected to capture the maximum pollutant concentrations.	?	C				
9	Transportation Expansion Office in consultation with LeighFisher	AQ Guidelines	Draft AQ Memo, Table 2-1	Why is the AAQC PM2.5 standard not included?	The AAQC PM2.5 standard (30 ug/m3 for a 24-hour averaging period) is less stringent than it's CAAQS counterpart 27 ug/m3 for a 24-hour averaging period, after 2020.	?	C				
10	Transportation Expansion Office in consultation with LeighFisher	Background Traffic Data	Draft AQ Memo, Table 2-5	Why isn't the Gardiner Expressway or Liberty Street West 2019 AADT bus data available/included?	Table 3-3 updated with Liberty Street West 2019 AADT data. Not available for Gardiner Expressway.	?	C	It is recommended that the report state that the AADT is not available for the Gardiner Expressway, for clarity.			
11	Transportation Expansion Office in consultation with LeighFisher	Methodology	Draft AQ Memo, Sec 3, Table 3-7	Please define a Sensitive and a Critical receptor and distinguish between the two. Also, please clarify the definition of potential impacts.	Sensitive receptors include all residential and residential combination zoning (e.g. commercial residential, etc.). Critical receptors include land use where it is reasonably expected that high-risk populations spend extended periods of time in these locations (i.e. schools, day cares, hospitals, nursing or long-term care homes, etc.). The potential impacts are treated the same between the two types of receptors, however critical receptors are marked with high priority for maintaining air quality levels.	?	C				
12	Transportation Expansion Office in consultation with LeighFisher	Construction timeline	Draft AQ Memo, Sec 3	Please clarify whether construction of the four EW locations will overlap (even if just a portion). If any overlap, a combined phase impact assessment should be conducted in addition to the location-specific assessment. This is particularly important for receptors that fall within multiple Study Areas.	In updated revisions of the report, all early works have been split into separate reports. Note that the only overlap in study area is Lakeshore East (overlapping with GO Expansion), for which a joint noise and vibration assessment will be undertaken for GO Expansion and Ontario Line operations.	?	C	Clarification noted. Note, joint noise and vibration assessment to be provided to the CoT for review and comment, once available.			
13	Transportation Expansion Office in consultation with LeighFisher	Air Quality Management Plan	Draft AQ Memo, Attachment 1, Table 2	Please include other contaminants of concern as included in Table 2-4 of the main memo. In particular benzene and B(a)P when they exceed AAQC standards.	Including additional contaminants from the MTO Guidance does not have direct bearing on the contents of the AQMP. If required, the AQEW Memorandum can be referenced for a full background summary.	?	P	Given that benzene and B(a)P exceed AAQC requirements under background conditions (as per the Early Works Air Quality Memorandum and the Exhibition Station Early Works - Draft Air Quality Early Works Report), this information should be included in the AQMP for consistency. At a minimum, a reference to the Memorandum should be included, as noted in Column F.	The AQMP attachment has been removed. Benzene and B(a)P are discussed in the Air Quality Report.	D	Mitigation plan has been deferred to AQ Management Plan, to be developed prior to construction.
14	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.1	Are the mitigation measures included here required? If so, mitigation language should be revised to state "shall" to ensure compliance. Dust suppression techniques should also be included.	These are recommended mitigation activities which should be employed in the event of a monitored exceedance of the specified decision making thresholds in Table 4. If these thresholds are breached during continuous real-time monitoring, then any combination of the proposed mitigation measures will be required to be employed, as specified by the designated air quality specialist.	?	O	The mitigation measures provided appear comprehensive, however, please confirm mitigation measures stated as a "should" are enforceable as requirements, and are not to be taken simply as recommendations for ProjectCo to consider.	The AQMP attachment has been removed. Note that the comment has been addressed in Table 4-1 of the Air Quality Report.	D	Mitigation plan has been deferred to AQ Management Plan, to be developed prior to construction.
15	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.2	Please specify maximum drop height and total height of stockpiles.	The drop height restriction is described on section 3.1.3. However, there is no recommended threshold for the maximum drop height and total stockpiles height from the air emission perspective. So, as described these should be minimized as possible.	?	C				
16	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.3	Idling restrictions should also be required consistent with best practice.	Table 4-1 and Table 4-2 of the Air Quality Report note that idling restrictions will be applied during construction.	?	C				
17	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Sec 3.2	Please clarify if the recommendation is to set up one met station at each EW location (i.e. four total) or one single station for the whole project.	Meteorological monitoring will not be required as part of the mitigation as air quality impacts from construction are not anticipated to affect local meteorological conditions.	?	C				
18	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Sec 3.3	Since no AQ monitoring location is planned immediately around the East Harbour Station location, is there the potential that construction at this location takes place earlier than the neighboring locations and as such construction dust monitoring will not be in place in time?	Comments regarding the East Harbour early works will be responded to at a later date as all early works have been split into separate reports. East Harbour works will be documented under separate cover.	?	P	Pending review of East Harbour Early Works report, once available.	Not applicable to LSE-JC.	C	Closed for the purpose of this LSE-JC log.
19	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Table 4	If the construction program is 12 months or less, silica analysis should be considered once a month, consistent with best practice, instead of once every 3 months as mentioned.	Comment noted.	?	C				
20	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Table 6	Remedial actions should also be categorized by action levels. If action level 4 is reached, it suggests that whatever remedial actions already undertaken at previous action levels were not effective, and so additional remedial actions will be required.	Table 4-1 and Table 4-2 of the Air Quality Report note that Action Levels will be applied during construction.	?	C				
21	Transportation Expansion Office in consultation with LeighFisher	Air Quality Management Plan	Draft AQ Memo, Attachment 1, Table 6	Please confirm if this management plan will be implemented by the EPC Contractor and all roles and responsibilities mentioned are within the EPR Contractor's organization. If so, please clarify cross-organization responsibilities and reporting lines.	These details will be confirmed as Project planning and design progress.	?	C				

22	Transportation Expansion Office in consultation with LeighFisher	Introductory text	Draft N&V Report, Section 1, Introduction	It is noted this report only assesses construction noise and vibration effect for the early works. Confirm how operational impacts of early works will be assessed.	This report only addresses construction noise and vibration, operational noise and vibration are addressed under separate cover.	?	P	Please clarify the title of the report that will address the operational noise and vibration impacts. Comment pending review of the appropriate report, once available.	Construction or other project components and project operations will be assessed and documented in the forthcoming Environmental Impact Assessment Report. However, please note that noise and vibration impacts associated with the joint corridor Ontario Line and GO track operations will be assessed under the Ontario Line Lakeshore East Joint Corridor Noise and Vibration Operations Report. This report will be provided in the Lakeshore East Joint Corridor Early Works Report. This report outlines details of noise and vibration mitigation measures investigation, as the Lakeshore East Joint Corridor early works will include implementation of noise barriers and vibration mitigation technologies for the GO tracks.	D	Acknowledge Mx intends to defer documentation of operational noise and vibration to the OL EIAR.
23	Transportation Expansion Office in consultation with LeighFisher	Construction noise methodology	Draft N&V Report, 4.2 Methodology, p. 14	Clarification on methodology used for noise modelling required. Per FTA manual, detailed construction noise analysis should, "Compare the combined Leq equipment (1hr) and the combined Ldn equipment 30-day for all equipment for each phase of construction determined. Then, identify locations where the level exceeds the criteria." Confirm if the above methodology was employed.	This method was not used as details regarding construction methodology have not yet been established. Construction noise levels (modelled from a list of construction equipment) were reviewed at the worst case representative receptor locations surrounding the construction sites using the Leq8hr criteria that has been used on previous Metrolinx projects. Note that a screening map will be added to the reporting.	?	C				
24	Transportation Expansion Office in consultation with LeighFisher	Lakeshore East Joint Corridor Noise	Draft N&V Report, 4.6.1, and Table 4-7	Table 4-7 appears to indicate night time noise level criteria will be exceeded along the project footprint. Please revise below statement from the report to reflect nighttime noise level limit exceedance, in addition to daytime noise level limit exceedance. "The results in the above table [Table 4-7] indicate that predicted noise levels along the project footprint could be above the daytime noise level limit"	In updated revisions to the report, Lakeshore East early works have been removed from this report and will be published under separate cover however, this change will be addressed within the Lakeshore East Early Works Report.	?	P	Pending review of the Lakeshore East Early Works report, once available.	Language following Table 5-1 of the Noise and Vibration Report (formerly Table 4-7) acknowledges the exceedance and further recommendations are provided to reduce impacts in Section 6.	D	Acknowledge Mx intends to defer documentation of operational noise and vibration to the OL EIAR.
25	Transportation Expansion Office in consultation with LeighFisher	Vibration Impacts	Draft N&V Report, 4.6.2, Vibration Impacts	Report states: "As the project footprints are not finalized; the number of locations predicted to have vibration levels in excess of the City of Toronto prohibited limit, and the screening limit may change. Also, the number of structures within the project footprint may change. As a result, a full list of locations along the project footprint that require monitoring or subsequent review is too preliminary at this stage. Mapping provided in Appendix B4 can be used to further develop the design plans to decrease the vibration impacts of the Early Works construction." Confirm if the mapping provided in Appendix B4 could be used to indicate sensitive areas which require further assessment should the area be selected as part of the project footprint. Consistent with best practices, this report should give an indication of areas that will likely be impacted if in the vicinity of any project works.	Mapping has been updated including the project footprint. In updated revisions of the report, mapping has been moved to the main body of report as Figure 5-3 and 5-6.	?	O	Please clarify where updated mapping can be found. Figure 5-3 and Figure 5-6 in the Draft Early Works Report - Ontario Line Exhibition Station Early Works report display the surficial geology and the bed rock geology within the Exhibition Station soil and groundwater study area, respectively. Note: the reference in Column E should be to Appendix D of the previously reviewed report titled Appendix B4 - Noise and Vibration Early Works Report (dated June 2020). The Exhibition Station Vibration Assessment Map previously provided in this referenced Appendix (Appendix D) is absent from the updated Exhibition Station Early Works report and the associated Noise and Vibration appendix.	Response provided. Figure 5-2 of the Noise and Vibration Report displays project footprint and vibration screening.	C	
26	Transportation Expansion Office in consultation with LeighFisher	General Construction Vibration Mitigation Measures	Draft N&V Report, 5.1.2, Construction Vibration	Given that vibration impacts are predicted, best practice construction vibration mitigation measures recommended by the FTA should be included in the report, such as: "routing heavily-loaded trucks and equipment away from residential streets and vibration-sensitive sites; "managing the sequence of construction phases such as demolition, earth-moving, and ground-impacting operations so as not to occur in the same time period and avoiding night-time activity; "employing alternative construction methods. Relevant location for the application of these measures can be refined during the design phase.	Acknowledged, the suggested text has been incorporated with other best practice measures where appropriate.	?	P	Noted that suggested text, as appropriate, added to Exhibition Station Early Works report. Pending review of the reports prepared for the remaining three Early Works sites.	Response provided. Section 6 and Table 6-1 of the Noise and Vibration Report identify the noted mitigation measures in addition to other mitigation measures.	C	
ADDITIONAL COMMENTS (DECEMBER 2020)											
27	Transportation Expansion Office	General	General	Please note the Status (Column H) and the Follow Up Comments (Column) provided in this log are based solely on the review of the Exhibition Station Early Works Report and are subject to change upon receipt and review of the Early Works reports for the remaining three sites (Lower Don River Crossing, East Harbour Station, and Lakeshore East Joint Corridor).	Comment noted. Early Works Reports for the remaining early works segments are being developed and will be provided to the City in the coming months.				Comment noted.	C	

Review Comments Spreadsheet				* Actions: 1 = Will comply 2 = Discuss, clarification required 3 = Not applicable because	** Status: O = Open, not resolved P = Pending incorporation in design C = Closed, implementation complete or D = Deferred to future phase						
Ontario Line - City of Toronto Early Works Report Comments				Project Name: Ontario Line	Revised By:						
				Project No:	Date In:						
					Date Out: January 5, 2021						
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	September 2021 Revised Response LSE-JC	Revised O / P / C / D** (Reviewer)	Revised Follow-up Comments (Reviewer)
1	City Planning	Draft Traffic and Transportation Memo	General	Reconfirm the intended scope of the traffic and transportation memo. The existing conditions transportation memo should describe and document the baseline usage and performance of the transportation network for all modes in the study area; this report is limited to describing the physical conditions of the transportation system. Provide vehicular, transit, pedestrian and cyclist volumes using each transportation link described in the report, particularly at locations that may be disrupted during construction and/or permanently altered as a result of the project. Provide transportation analysis demonstrating the baseline performance of the transportation network. Without this information it is difficult to determine appropriate impacts to users of the transportation network or appropriate mitigation measures, monitoring programs, and future commitments. The transportation memo does not appear to achieve the purpose stated in Section 1.1.	The Early Works Memo focuses on construction impacts at the Early Works project footprints expected to result from the Early Works activities. Metrolix proceeded with available existing conditions information while considering project schedule, limited raw data received from the City, and COVID-19 restrictions. As project planning progresses, further quantitative assessment will be completed related to the Early Works areas, to be shared with the City	?	O	To City Planning's knowledge, Transportation Services completed the data request submitted by Metrolix with respect to turning movement counts for vehicular traffic, pedestrian, and cycling volumes for road links and intersections available in the City's database.	Section 2.2 notes that quantitative impact assessment will be completed and shared with the City as detailed design progresses and the construction staging strategies become available.	C	
2	City Planning	Draft Traffic and Transportation Memo	General	Confirm service headways for all transit routes and ensure that they reflect normal planned operating conditions. The peak period service headways stated in the report for transit routes appear to reflect the reduced level of service being provided during the COVID-19 pandemic. This will result in understated impacts to transit riders if not corrected. For example, the 504 King streetcar route normally operates at 2 minute headways in the peak period.	The service headways during the AM and PM peak hours were obtained from the TTC website (For example, for the 504 King Streetcar: http://www.ttc.ca/Routes/504/Eastbound.jsp). These reflect the current service headways which, as mentioned, might be impacted by the COVID-19 pandemic. The current TTC website does not have 'regular' headways, which are not impacted by COVID-19, Metrolix would appreciate any information the City can provide with regards to this data.	?	O	Service headways found on TTC's website during 2020 should not be relied upon for a planning analysis as they reflect reduced level of service provided during the COVID-19 pandemic. Recommend that Metrolix request from the TTC the most recent service summary (likely from fall 2019), and the planned service summary for 2021 which reflects post-pandemic operating plan.	The service headways during the AM and PM peak hours were obtained from the TTC website. These reflect the current service headways which, as mentioned, may be impacted by the COVID-19 pandemic. The TTC website does not provide the "normal" planned operating conditions. Dates accessed will be clarified in the report. As additional quantitative traffic analysis is completed for the LSE-JC early works study area, additional considerations will be made to use data that is representative of 'normal' traffic scenarios where possible.	C	
3	City Planning	Draft Traffic and Transportation Memo	General	Correct references to unposted speed limits through the report, which currently indicates in several places that the assumed speed limit of unsigned streets is 50 km/h. Note that the City of Toronto has reduced the general speed limit on many arterial roads to 40 km/h, especially within the old City of Toronto and East York boundaries. Legal speed limits for all streets can be checked online in the Municipal Code here: https://www.toronto.ca/legdocs/municode/toronto-code-950-35.pdf	The legal speed limits were checked online using the same suggested reference (https://www.toronto.ca/legdocs/municode/toronto-code-950-35.pdf) in preparing the memorandum. The unsigned streets namely, Carlaw Avenue and Logan Avenue, are not part of the roadways that had their speed limits reduced from 50 km/h to 40 km/h as part of Vision Zero in 2019. The following source was used in identifying the roads that witnessed a speed limit reduction: https://www.toronto.ca/services-payments/streets-parking-transportation/road-safety/vision-zero/safety-measures-and-mapping/	?	O	Vision Zero speed reductions appear to be referenced in the report in general discussion and where appropriate for specific streets.	N/A; response provided, no further updates.	C	
4	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 9	Roads: Gardiner Expressway is missing from the list of roads in the area, and may be impacted by the project. Include planned but unbuilt roads such as Liberty New Street, as the the impacts and mitigation measures for this will need to be addressed in the report.	Gardiner Expressway is not expected to be impacted by the Exhibition Station early works. Based on information collected from the City's website, Liberty New Street (source: https://www.toronto.ca/community-people/get-involved/public-consultations/infrastructure-projects/libertynewst/) does not have a schedule for construction yet and hence was not included in the list of roads.	?	O	References to missing roads added to Section 3.1.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
5	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 9 Figure 3-1, Page 10	Transit: Indicate that 511 Bathurst streetcars are normally routed to serve Exhibition loop. Correct the Harbourfront and King streetcar route numbers indicated in the map legend.	Noted, the 511 Bathurst streetcars will be described in Table 2-1 and presented in Figure 3-1. The route numbers in the map legend will be amended.	?	P	511 Bathurst routing corrected. 509 Harbourfront route number corrected in map. New error: 504B King streetcar route serving Dufferin Street to Dufferin Loop no longer shown on the map and no longer shown in Table 3-1.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
6	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 11	Pedestrians: Include a key connection in the pedestrian network, which is the opportunity for pedestrians to cross from Liberty Village to Exhibition Place through the station.	Noted, the pedestrian connection through the station tunnel will be described in the updated memorandum	?	P	References to missing pedestrian link added in Figure 3-1.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
7	City Planning	Draft Traffic and Transportation Memo	Figure 3-2, Page 12	Contrary to what is indicated in the memo and shown on the map, on-street bicycle infrastructure does exist on Dufferin Street, Saskatchewan Road, and Princes Boulevard within Exhibition Place.	The memo and specifically Figure 3-3 does not show on-street bicycle facilities on Dufferin Street, Saskatchewan Road, and Princess Boulevard. On-street bike facilities refer to a bike lane or cycle track. However, minor multi-use pathways are presented which do exist at the noted locations.	?	P	Do not understand the comment response; a map of the existing cycling network should show on-street bike lanes.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
8	City Planning	Draft Traffic and Transportation Memo	Section 2.2, Page 14	Transit: Include GO buses that use the Don Valley Parkway.	Noted, the GO buses that use the Don Valley Parkway will be described and presented in Figure 3-4 in the updated memorandum.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The Don Valley Parkway is not located in the Traffic and Transportation Study Area for Lakeshore East Joint Corridor Early Works.	C	
9	City Planning	Draft Traffic and Transportation Memo	Figure 3-5, Page 16 Figure 3-8, Page 22	Include the critical pedestrian/cycling connection connecting Mill Street to the Lower Don Trail through Corktown Common and under the Richmond Hill GO corridor, which is missing from the map.	The noted trail, classified as "recreational trail", is presented in Figure 3-5 as a pedestrian facility. The connection to the Lower Don Trail includes a staircase which is why it's not displayed as a cycling facility.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The noted recreational trail is not located in the Traffic and Transportation Study Area for the Lakeshore East Joint Corridor Early Works.	C	
10	City Planning	Draft Traffic and Transportation Memo	Figure 3-6, Page 19	Correct the route of the 505 Dundas streetcar on the map, which does not operate on Queen Street or Broadview Avenue south of Dundas.	Noted, the 505 Dundas street route will be updated in Figure 3-6 in the updated memorandum	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The 505 Dundas streetcar route does not operate in the Traffic and Transportation Study Area for the Lakeshore East Joint Corridor Early Works.	C	

11	City Planning	Draft Traffic and Transportation Memo	Section 3.1, Page 29	Include potential mitigation measures such as consideration of contractual financial incentives to minimize the duration and extent of disruptions to roads, sidewalks, bike lanes, and property accesses. Such measures could include a lane rental system, or door closure charges.	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible. Ontario Line early works are not intended to be procured under the P3 framework, and therefore, financial incentives to be included into the project agreement/contract are not standard practice.	C	
12	City Planning	Draft Traffic and Transportation Memo	Section 3.2, Page 31	Confirm that potential impacts for the Don Crossing early works will not include closures of the Don Valley Parkway; they are not indicated in the discussion of potential impacts.	Comments regarding the Lower Don Bridges early works will be responded to at a later date as Lower Don Bridges early works scope has not been confirmed.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The Don Valley Parkway is not located in the Traffic and Transportation Study Area for the Lakeshore East Joint Corridor Early Works.	C	
13	City Planning	Draft Natural Environment Report	General	Confirm whether the implementation of all mitigation measures identified in the report will be placed on the successful proponent as a contractual obligation. Confirm who will monitor and ensure that mitigation measures and monitoring protocols will be followed.	Mitigation measures identified through the Early Works Report will be carried through to contractual language to be implemented by the successful proponent. Metrolinx will monitor compliance during the construction stage.	?	C	Closed			
14	City Planning	Draft Natural Environment Report	General	Confirm whether the Don River crossing is anticipated to place any new structures such as piers or columns into the river that may alter flooding in the Don River valley. There does not appear to be any discussion in the report about impacts to flooding.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. However, information regarding hydrology and surface water will be added to the Lower Don Bridges Early Works Report.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Natural Environment Memo, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
15	City Planning	Draft Natural Environment Report	General	Confirm whether the cumulative effects to the natural environment from multiple crossings of the Lower Don River immediately adjacent to each other will be studied (e.g. the existing rail bridge spans, two new Ontario Line bridges, various operational and decommissioned utility bridges), and whether there would be benefits to the natural environment and reduced flood risk from the consideration of an integrated crossing solution. Benefits of an integrated crossing to the natural environment (including flood risks in the Lower Don River valley) should be documented, along with any countervailing reasons if such a solution is not technically preferred.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. Response to this comment will be revisited as the Lower Don Bridges Early Works Report is released.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Natural Environment Memo, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
16	City Planning	Draft Noise & Vibration Report	General	Confirm that proponents would be contractually obligated to adhere to the noise and vibration limits identified in the report, and that proponents would be required to model the noise and vibration impacts of their proposed solution and construction method for the evaluation of proposals. Confirm what party would be responsible for ensuring and monitoring that mitigation measures are being implemented. Despite the exemption provided to government work in noise by-laws, confirm that limiting the time and duration of construction activities can be considered as an appropriate mitigation measure in the development of a noise and vibration management strategy. Confirm that the cumulative effects of noise and vibration will be taken into account in crafting mitigation measures (e.g. where there are a large number of sensitive noise and vibration receptors such as in the Lakeshore East Joint Corridor).	Note that this report only addresses construction noise and vibration, operational noise and vibration will be addressed under separate cover. The construction contract will have noise and vibration limits as per Metrolinx standards. The proponent will work with Metrolinx to ensure that mitigation measures and committed noise levels are met during construction and operation. Detailed assessment by the proponent of their activities will determine the specific mitigation measures required to meet agreed upon construction noise and vibration limits.	?	D	C - for comment on construction noise and vibration. Provide Metrolinx construction noise and vibration standards for reference. D - comment on operational noise and vibration deferred to Operational N&V report which will be reviewed upon receipt.	Noted.	D	Acknowledge Mx intends to defer documentation of operational noise and vibration to the OL EIAR.
17	City Planning	Draft Noise & Vibration Report	Section 4	Identify the sensitive noise and vibration receptors indicated in the tables by their land use or building use.	Land use associated with each receptor is documented in Tables 5-1 and 5-2	?	C	Table 5-1 updated to include land use. Cannot locate Table 5-2, but we assume there are no sensitive vibration receptors based on the discussion in the text.	Land use associated with each receptor is documented in Table 5-1		
18	City Planning	Draft Noise & Vibration Report	Appendix B	Ensure that the study area has been appropriately defined to capture the extent of potential noise and vibration impacts arising from construction. We are concerned that the study area has been too narrowly delineated with respect to the anticipated extent of the impacts, particularly around the Lakeshore East rail corridor segment where residential homes fronting onto Booth Avenue, in direct line of sight from construction activities, have been excluded from the study area.	Study area was determined based on the representative alignment outlined through the business case. Segments of the study area that have narrow extents represent areas in which there is certainty regarding the alignment whereas areas with a wider extent allow for flexibility in modifications to the alignment. Residential receptors on Booth Avenue are represented conservatively by the assessment of 2 Paisley Ave and 14 Wardell St assessment locations, which are considered the worst-case scenarios for noise and vibration within this segment.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Noise & Vibration Memo, to be reviewed when received.	Study area has been appropriately defined, consisting of the project footprint and a noise and vibration buffer to capture the full extent of noise and vibration impacts arising from construction.	C	
19	City Planning	Draft Air Quality Memo	General	Confirm that proponents would be contractually obligated to adhere to the air quality limits identified in the report, and that proponents would be required to model the air quality impacts of their proposed solution and construction method for the evaluation of proposals. Confirm what party would be responsible for ensuring and monitoring that mitigation measures are being implemented.	Proponents will not be contractually obligated to adhere to the air quality limits identified in the report, as for certain contaminants background air quality levels are already higher than these same limits, making adherence impossible. Proponents will be required to follow mitigation outlined in Table 6-1, under Construction Air Quality which include Environment Canada's Best Practices for the Reduction of Air Emissions from Construction and Demolition Activities (2005), and MECP's Technical Bulletin Management Approaches for Industrial Fugitive Dust Sources.	?	C				
20	City Planning, Transit Implementation	Draft Early Works Report	Page 7, Figure 1-1	Ensure that the study area has been appropriately defined to account for the potential environmental impacts of the project. We are concerned that the study area has been too narrowly delineated with respect to the anticipated extent of the impacts, particularly along the Lakeshore East rail corridor, where some residential homes with direct line of sight to the construction have been excluded from the study area (e.g. homes fronting on Booth Avenue in front of Jimmy Simpson Park).	The study area varies for each discipline. The assessment limits/study area will be clarified in the revised report in Table 4-1.	?	C	Table 4-1 describes study areas for different disciplines.			
21	City Planning, Transit Implementation	Draft Early Works Report	Page 11, Figure 1-2	Confirm the Early Works construction footprint of Exhibition Station. The Early Works footprint shown on this map is not consistent with the extent of early works described at a meeting on June 18, 2020, which included a launch site and emergency exit building in Ordnance Park.	Project footprint for the Exhibition GO early works have been revised since the first draft circulated to the City and footprint shown in the revised reports is most up-to-date.	?	C	Conforms to most recent known project footprint.			
22	City Planning, Transit Implementation	Draft Early Works Report	Page 15, Section 2.2.1.1	Update the discussion on the 2014 Provincial Policy Statement, which is now out of date, to reflect the 2020 version.	This has been updated in the revised report to reference the 2020 PPS.	?	C	Updated as requested.			

23	City Planning, Transit Implementation	Draft Early Works Report	Page 16, Section 2.2.1.2	Correct the discussion on the Growth Plan; it does not describe Downtown Toronto as a priority transit corridor, but rather the GO lines and subway lines within Downtown.	This has been updated in the revised report to describe GO lines and subway lines as priority transit corridors.	?	C	Updated as requested.			
24	City Planning, Transit Implementation	Draft Early Works Report	Page 18, Section 2.2.2.1	Correct references to planning area boundaries in the report. The East Harbour Station is within the boundaries of the Unilever Precinct Secondary Plan, adopted by City Council in 2018. The Lower Don Crossing is partially within the boundaries of the Downtown Plan and the Unilever Precinct Secondary Plan, in addition to the King-Parliament Secondary Plan.	The East Harbour early works have been placed under separate cover in updated revisions of this report and as such, this reference has not been included.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Addressed. LSE JC EWR lists all relevant planning policies and projects in Section 2.	C	
25	City Planning, Transit Implementation	Draft Early Works Report	Page 20, Section 3.2	Confirm whether the Ontario Line portals and any alterations to the Richmond Hill GO line are part of the early works.	Alterations to the Richmond Hill GO line are not anticipated as part of the Lower Don Bridges early works.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Alterations to the Richmond Hill GO line and Ontario Line Portal Structures are not part of the Lakeshore East Joint Corridor Early Works.	C	
26	City Planning, Transit Implementation	Draft Early Works Report	Page 21, Section 3.3.1.3	Ensure all approved plans related to the Eastern Avenue bridge are captured in the discussion. The Eastern Avenue bridge is also subject to the Port Lands and South of Eastern Transportation and Servicing Master Plan EA. The new span must accommodate the widened right-of-way and new cross-section approved by City Council in adopting Phases 1 & 2 of that EA.	East Harbour Station is no longer being captured under this report. This comment will be revisited if future East Harbour studies are required for early works.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
27	City Planning, Transit Implementation	Draft Early Works Report	Page 21, 3.3.1.4	Note in the document that the interim service road will be subject to removal and/or reconfiguration when the lands to the north side of the rail corridor are developed, and access to the station should be integrated with the streets and blocks plan of the development.	East Harbour Station is no longer being captured under this report. This comment will be revisited if future East Harbour studies are required for early works.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
28	City Planning, Transit Implementation	Draft Early Works Report	Page 85, 95	Correct the references to Official Plan land use designations, noting that "Rail Corridor" is not a land use designation in the Official Plan.	This will be updated in the revised report.	?	O	Figure 5-12 still makes reference to Rail Corridors as a land use designation.	Addressed. LSE JC EWR lists all relevant planning policies and projects in Section 2.	C	
29	City Planning, Transit Implementation	Draft Early Works Report	Section 4.5	Ensure consistency in the description of environmental conditions in the report. The descriptions of environment conditions are inconsistent with some describing the area while others are limited to the project footprint. This should extend also to adjacent areas beyond the footprint that may be impacted by the project.	The revised report will include clarification language regarding the environmental conditions study area and the Early Works project footprint/study areas.	?	C	Updated as requested.			
30	City Planning, Transit Implementation	Draft Early Works Report	Page 88, Section 4.5.2.1.3	Include a proper public realm description for the Lower Don Crossing, as there is existing the planned public space intersecting and adjacent to the project footprint, accessible from Corktown Common and the Lower Don Trail. Public realm characteristics by definition cannot be described as being similar to the built form characteristics.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
31	City Planning, Transit Implementation	Draft Early Works Report	4.5.4.1.1	Correct the description for Queen Street East; it is not a gateway into the East York community, but rather into Leslieville and the Beach neighbourhoods of old Toronto.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Addressed in Section 5.6.1.1. of the Early Works Report.	C	
32	City Planning, Transit Implementation	Draft Early Works Report	4.7.2	Note that the Lower Don River archaeology would be contained in the South Archaeological Assessment Phase 1 report, not the North report.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
33	City Planning, Transit Implementation	Draft Early Works Report	4.8.1.2	Add reference to the 29 Dufferin bus which is missing from this analysis. A branch of this route serves Exhibition Place and travels along Manitoba Drive.	This will be updated in the revised report.	?	C	Updated as requested.			
34	City Planning, Transit Implementation	Draft Early Works Report	4.8.1.3	Should the report be expanded to include the Ordnance Park as an early works site, the cycling infrastructure should include the Fort York pedestrian/ cycle bridge and related infrastructure connections. The waterfront Martin Goodman Trail also travels immediately south of Exhibition Place along Lake Shore Boulevard.	Ordnance Park is outside the study area of the Exhibition Station early work and as such, has not been included within the report.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.			
35	City Planning, Transit Implementation	Draft Early Works Report	Page 122, Figure 4-23	Correct the map which is missing the Fort York pedestrian/cycle bridge and associated connections between Wellington Street and Garrison Road as an existing pedestrian route.	The Fort York Pedestrian/Cycling bridge is outside the Exhibition Station early works study area and as such, has not been included.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.			
36	City Planning, Transit Implementation	Draft Early Works Report	Page 123, Figure 4-24	Correct the map which is missing the Fort York pedestrian/cycle bridge and associated connections between Wellington Street and Garrison Road as an existing cycling route. Bike lanes on Princes Boulevard and Saskatchewan Road are missing from the map.	The Fort York Pedestrian/Cycling bridge is outside the Exhibition Station early works study area and as such, has not been included.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.			
37	City Planning, Transit Implementation	Draft Early Works Report	Page 133, Figure 4-29	Correct the map which is missing a critical cycling connection from the intersection of Bayview Avenue and Mill Street, through Corktown Common, under the Richmond Hill GO corridor, connecting to the Lower Don Trail.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
38	City Planning, Transit Implementation	Draft Early Works Report	Page 163, Table 5-4	Confirm whether the removal of vegetation communities includes vegetation currently along the rail embankment, and whether mitigation will consider replacing this vegetation for ecological and visual reasons.	Vegetation clearing can encompass any and all of the vegetation within the Project Footprint including hedgerows and other vegetation communities along the rail corridor. Metrolinx will compensate for tree removals undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	D	Despite provided comment response, does not apply to Exhibition Station in the main. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Vegetation clearing can encompass any and all of the vegetation within the Project Footprint including hedgerows and other vegetation communities along the rail corridor. Metrolinx will compensate for tree removals undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). The LSE JC EWR reflects the most recent information provided in the LSE JC Natural Environment Report.	C	
39	City Planning, Transit Implementation	Draft Early Works Report	5.4.1	For ease of reference, indicate in each table what the sensitive receptor being measured to is (e.g. what the sensitive use in each building or property is).	The receptors will be identified by land or building use in the revised report.	?	O	Sensitive receptors described for some impacts (e.g. air quality) but not others (e.g. noise and vibration) despite this change having been in accompanying technical memos.	Sensitive receptors for Air Quality are defined in Section 4.4.2 and Section 5.4 of the EWR, and the nearest representative noise sensitive receptors are outlined in Section 5.1 of the Noise and Vibration Report.	C	

40	City Planning, Transit Implementation	Draft Early Works Report	Page 207-211, Table 5-14	Provide an opinion whether the mitigation measures proposed can be expected to bring noise and vibration levels within acceptable limits. Confirm that a method of constructing the project exists that can bring noise and vibration levels within acceptable limits. Confirm number of buildings/homes affected by the "zones of influence" for each early works area (and estimated population or number of workers if available).	Noise and vibration limits will be included as part of contract documents. Metrolinx will work with contractors to ensure that committed mitigation measures are implemented. Mitigation is determined based on worst case receptor locations not on the basis of the number of affected properties, however figures for both noise and vibration will be provided in the updated report from which numbers of buildings may be identified.	?	P	Cannot locate mention in report of including noise and vibration limits in contract documents as a mitigation measure in Section 6.5 or Table 6-5.	The Lakeshore East Joint Corridor Early Works Report includes mitigation within Table 6-1 which states that project-specific construction noise and vibration limits will be established.	O	Clarify why construction noise and vibration limits cannot be identified within the Early Works report so that they form part of the environmental approvals and commitments related to the project. Assume reference is intended to Table 6-5 which covers noise and vibration impacts and mitigation measures, as Table 6-1 contains natural environment impacts and mitigation measures.
41	City Planning, Transit Implementation	Draft Early Works Report	Page 213-215, Table 5-15	Include social equity impacts and mitigation measures (i.e. whether certain communities experiencing social inequality are impacted greater). Walkways must be universally accessible AODA-compliant even during construction. For transportation networks, ensure that two parallel collector/arterial routes are not closed at the same time, and transit diversions do not affect two parallel transit routes at the same time.	Mitigation regarding AODA-compliant walkways and parallel transportation connections will be added to the revised report. Review of impacts to human environments from a gender and equity lens are not typically included within provincial environmental assessment processes. Ontario Line impacts are being assessed in accordance with O. Reg. 341/20 under the Environmental Assessment Act. The applicable impact assessment framework does not have a requirement for transit project evaluation through an equity and gender lens.	?	C	Further discussion on social equity impacts for provincial projects are being taken up in alternate venues.			
42	City Planning, Transit Implementation	Draft Early Works Report	Page 216, 5.5.1.1	Include financial incentives in the construction contract to minimize the duration of access being restricted to driveways and building entrances.	Financial incentives are not typically included as mitigation measures in environmental assessment documents, and as such, have not been included. Metrolinx remains committed to reducing impacts to the traffic and transportation network during construction and will ensure appropriate traffic management plans are developed prior to construction to manage impacts.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible. Ontario Line early works are not intended to be procured under the P3 framework, and therefore, financial incentives to be included into the project agreement/contract are not standard practice.	C	
43	City Planning, Transit Implementation	Draft Early Works Report	Page 216-217, 5.5.1.2, Page 231, 5.8.1.1	Include financial incentives in the construction contract to minimize the duration of road/lane closures (e.g. lane rental system with sufficiently high lane occupancy fees).	Financial incentives are not typically included as mitigation measures in environmental assessment documents, and as such, have not been included. Metrolinx remains committed to reducing impacts to the traffic and transportation network during construction and will ensure appropriate traffic management plans are developed prior to construction to manage impacts.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible. Ontario Line early works are not intended to be procured under the P3 framework, and therefore, financial incentives to be included into the project agreement/contract are not standard practice.	C	
44	City Planning, Transit Implementation	Draft Early Works Report	Page 217, 5.5.1.3	Public realm impacts should include construction activity potentially disturbing streetscaping materials, furniture, landscaping in the public realm. Requiring restoration to current standards would be an appropriate mitigation measure. Public realm impacts should also include the potential for design incongruity between the architectural styles of the existing underpass and the new Ontario Line bridges, and the impact the greater extent of underpass length has on the pedestrian environment in terms of safety and comfort. Mitigation measures to coordinate and improve design would be an appropriate response.	Public realm impacts such as construction activities potentially disturbing streetscape materials, furniture, and landscaping have been added to the revised report. Public realm impacts suggested such as designing for congruence between architectural styles of existing infrastructure are not typically included as impacts/mitigation however, Metrolinx will work with architectural design specialists to ensure the materials and design of the proposed bridge at the Lower Don Bridges early works complements surrounding infrastructure.	?	D	Public realm impacts should be restored to the current City standard, not to existing conditions.	Language has been included in Table 6-6 of the LSE-JC Early Works Report to note that wherever feasible, lands impacted by construction will be restored to the current City of Toronto standards following construction completion.	C	
45	City Planning, Transit Implementation	Draft Early Works Report	Page 217, 218, 5.5.2	Include the Jimmy Simpson Recreation Centre as a community or recreational amenity that may be impacted. Include the Fontbonne Ministries Mustard Seed operation on Strange Street as potentially impacted.	The Lakeshore East early works have been placed under separate cover in updated revisions of this report however, Jimmy Simpson Recreation Centre and Fontbonne Ministries will be included in report documentation.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Jimmie Simpson Recreation Centre is included as a community resource within the Lakeshore East Joint Corridor Socio-economic and Land Use Characteristics Study Area in Table 5-11.	C	
46	City Planning, Transit Implementation	Draft Early Works Report	OLS-024, Page 221	Note the existing plan to move the Cherry Street interlocking tower as part of the extension of the Cherry streetcar tracks to the south.	This will be reviewed and updated as appropriate.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
47	City Planning, Transit Implementation	Draft Early Works Report	Page 236, 5.8.2.3	Correct the reference to Exhibition Station, as this section deals with the Lower Don crossing.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
48	City Planning, Transit Implementation	Draft Early Works Report	General	Confirm whether potential impacts to flood risks in the Don River Valley were studied, or whether this will be studied under separate cover. See comments under Natural Environment Report for greater detail.	Impacts to flood risks in the Don River Valley were not assessed as part of the Environmental Conditions Reporting. Once a route alignment has been identified, Project-specific impacts including floodplain impacts/flood risks will be assessed in consultation with the TRCA.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	A comprehensive flood modelling exercise is being undertaken in support of the Ontario Line project, and Metrolinx will continue to consult with the City of Toronto, TRCA, and Waterfront Toronto.	D	Despite reponse, not applicable to LSE-JC.

49	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	Section 2 Methodology and Approach, page 10	CHERS should be undertaken for those properties warranting it. The report notes that "it is not necessary to recommend an individual Cultural Heritage Evaluation Report (CHER) be undertaken to re-apply O. Reg. 9/06 to these properties." While a CHER may not be necessary for each property, some properties may warrant a CHER being undertaken, for example properties designated under OHA prior to O. Reg 9/06 taking effect. It should also be acknowledges that CHERs will be provided for properties identified as potential built heritage resources identified during field review.	No CHER will be completed outside of this report/the future Heritage Detailed Design Report (HDDR). The HDDR will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent. Cultural Heritage Reports and Heritage Detailed Design Reports will meet Metrolinx obligations under the Ontario Heritage Act. The Ontario Line Cultural Heritage Report (currently available on our website (https://www.metrolinxengage.com/sites/default/files/rpt_2020-09-03_ol_ec_cultural_heritage_60611173_optimized_locked.pdf)) documents sufficient detail for the purposes of documenting cultural heritage value or interest for any properties identified as retaining potential during field review. The details from the OL CHR have been carried to the Early Works Heritage Detailed Design Report. Note, the original Early Works report reviewed by the City has been refined to an HDDR with project-specific impacts based on concept design, and more detailed mitigation (in place of an HIA).	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.	C	Closed for the purpose of the original comment. New comments based on HDDR have been provided.
50	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts, page 33	Undertake and complete Heritage Impact Assessments prior to detailed design and reviewed by City of Toronto Heritage Planning and subject to staff delegated or Council decision under the Ontario Heritage Act and Municipal Code. The report indicates that the intent of the Cultural Heritage Report impact assessment is to "provide sufficient discussion of potential impacts to inform project planning to avoid, to the greatest extent possible, undertaking additional HIAs of individual properties." Properties that are identified as built heritage resources warrant Heritage Impact Assessments if they are to altered or demolished as a result of project activities.	Heritage Detailed Design report(s) will be prepared by Metrolinx and/or Project Co(s), once a preferred alignment has been identified and/or detailed design has commenced. The report(s) will document the review of the preferred alignment and/or detailed design as it relates to the Cultural Heritage Report, refine project-specific impacts and mitigation measures, identify any changes, and, where required, describe how any conditions attached to the Minister's Consent will be met, based on the proposed/recommended design. The HDDR will also include any impacts on a known or potential built heritage resource or cultural heritage landscape that were not anticipated or described in the Cultural Heritage Report. In this instance, the Heritage Detailed Design Report will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.	C	Closed for the purpose of the original comment. New comments based on HDDR have been provided.
51	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts, page 34	Clarify the scope of Heritage Detailed Design Reports. With the assertion that only properties meeting 10/06 criteria will be subject to further study through a Heritage Detailed Design Report, clarification is needed on how identified built heritage resources not classified as meeting 10/06 criteria may be further evaluated and how their identified cultural heritage values will be incorporated in the overall evaluation of alternatives and identification of the preferred alignment. Details on how potential project impacts on their cultural heritage value will be mitigated through the detailed design process are also needed. The Impact Tables in this Report should be revised once the preferred alignment has been identified and subject to further consultation with the City of Toronto Heritage Planning.	Heritage Detailed Design report(s) will be prepared by Metrolinx and/or Project Co(s), once a preferred alignment has been identified and/or detailed design has commenced. The report(s) will document the review of the preferred alignment and/or detailed design as it relates to the Cultural Heritage Report, refine project-specific impacts and mitigation measures, identify any changes, and, where required, describe how any conditions attached to the Minister's Consent will be met, based on the proposed/recommended design. The HDDR will also include any impacts on a known or potential built heritage resource or cultural heritage landscape that were not anticipated or described in the Cultural Heritage Report. In this instance, the Heritage Detailed Design Report will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent. Further, the HDDR will document refined project-specific impacts to all heritage properties (not just 10/06) based on the preferred alignment/detailed design. Project-specific impacts will be refined during detailed design, using the Cultural Heritage Report and documented in the HDDR.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	Comment noted. Metrolinx looks forward to continued discussions and feedback from the City and Heritage Preservation Services as the project planning progresses.	C	Closed for the purpose of the original comment. New comments based on HDDR have been provided.
52	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts	Summarize how many built heritage resources are proposed to be impacted and the expected nature of the impacts (type and description of anticipated impact) to understand the overall impacts the alignment will have on built heritage resources, due to the complexity and size of the Impact Tables. It needs to be made clear which and how many built heritage resources are anticipated to be demolished or altered due to the alignment. Similarly, there is a need to summarize how many, and which, identified built heritage resources will not be impacted by the current alignment.	As noted in comment response #1, this report documents all known or potential built heritage resources within the study area and includes a range of preliminary impacts and mitigation measures for each built heritage resource. Once an alignment has been selected and/or detailed design is prepared, project-specific impacts will be documented in the HDDR, specifying the number of cultural heritage resources expected to be demolished or altered.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.	C	Closed for the purpose of the original comment. New comments based on HDDR have been provided.
53	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	For all Impact Tables, the proposed mitigation measure should be revised to include completion of a Cultural Heritage Evaluation Report, Heritage Impact Assessment and associated Strategic Conservation Plan, required when any physical impacts to a cultural heritage resource or its heritage attributes are anticipated. These should be completed prior to Detailed Design and circulated to Heritage Planning for review and comment.	Refer to comment responses #2 and #3. Further, recommendations for SCPs are noted within the report impact tables where an SCP would be warranted.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	Comment noted. Metrolinx looks forward to continued discussions and feedback from the City and Heritage Preservation Services as the project planning progresses.	C	Closed for the purpose of the original comment. New comments based on HDDR have been provided.
54	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	Revise all Impacts Tables to clarify when in the process the City of Toronto Heritage Planning unit will be consulted on the proposed mitigation measures if it is not possible to avoid impact to an identified cultural heritage resource and its heritage attributes. Consultation should occur prior to Detailed Design.	Language in report will be revised to more clearly include consultation with the City of Toronto Heritage Planning unit and specify timing for consultation with City.	?	C	Consultation with Heritage Planning is noted where a direct adverse impact has been identified.			
55	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	Revise the alternatives in all Impact Tables to also include consultation with the Toronto Preservation Board and City Council where applicable. Heritage Planning notes that properties not yet owned by Metrolinx are not exempt from Municipal process and legislation under the Ontario Heritage Act and Municipal Code.	Metrolinx as a Crown Agency of the Province of Ontario is exempt from certain municipal processes and requirements. In these instances, Metrolinx will engage with the City to incorporate municipal requirements as a best practice, where practical, and may obtain associated permits and approvals. Consultation with the City of Toronto Heritage Preservation Services has been included in the report for all impacted heritage properties.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	Comment noted. Metrolinx looks forward to continued discussions and feedback from the City and Heritage Preservation Services as the project planning progresses.	C	
56	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	5. Community Engagement	Heritage Planning acknowledges that the Metrolinx data request was not able to completed prior to the draft of this report due to the on-going COVID-10 global pandemic and lack of remote access to property databases for City staff.	Comment noted.	?	C				

57	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	5. Community Engagement	Identify how and when broader public engagement will occur, given the proposed impacts on a number of identified municipally/locally significant cultural heritage resources, in addition to any as yet unidentified resources. This section should clarify and identify what other non-governmental heritage organizations, HCD advisory committees, and community stakeholders have been included in engagement.	Public engagement is currently underway for the broader Ontario Line Environmental Conditions Report including all properties that are documented in the Draft Early Works HDDR. Further, the Draft HDDR will be released for public review and any comments received during the Draft OL ECR and Draft Early Works HDDR will be reviewed. Any updates required in either report will be made and reissued for final OL ECR and Early Works HDDR.	?	P	Not fully addressed in the draft HDDR.	The LSE-JC Early Works Report references cultural heritage documentation developed as part of the Ontario Line Environmental Conditions Report, which included consultation with the local community. The Draft LSE-JC Early Works Report will also be made public for review, and any comments on cultural heritage will be included as part of the consultation record.	C	
58	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	6.2 Next Steps, page 49	Provide confirmation as to which properties will be subject to a Heritage Detailed Design Report. These reports are to be shared with MHSTCI for its records. These reports should also be shared with the City of Toronto Heritage Planning unit.	The HDDR will document project-specific impacts and mitigation/next steps for known and potential cultural heritage resources that are proposed to be impacted by the project footprint.	?	C	request list of specific properties?			
59	City Planning	Lower Don Bridges HDDR	General	Heritage Planning staff have reviewed the Lower Don Bridges HDDR and have no concerns with the findings/proposed mitigation measures.	Acknowledged.	?	C				
60	City Planning	Exhibition Early Works HDDR	General	Heritage Planning staff have reviewed the Exhibition Early Works HDDR and, on the understanding that a subsequent report will be prepared for the Exhibition Station South Civils works, have no concerns with the findings/proposed mitigation measures. The report should acknowledge that follow-on works at Exhibition Station will potentially have impacts to the other heritage buildings listed in this report (i.e. buildings identified as having heritage value aside from 1 Atlantic Avenue) rather than saying there is no impact; it is odd to ignore this knowing that the early works are directly linked to future works that are part of the same project which are currently planned to impact these buildings. The City agrees with the detailed documentation and commemorative signage proposed for 1 Atlantic Avenue in the mitigation measures.	Comment noted, in the revised report, it is noted that follow-on works at Exhibition Station may have potential impacts to other heritage buildings listed in this report and will be assessed under separate cover.	?	O	Cannot locate any discussion or mention of potential impacts to heritage resources from follow-on works associated with the early works in Section 5 of the revised report. Recommend including such a statement in the introduction to Section 5.	Not applicable to LSE-JC	C	Closed for the purpose of this LSE-JC log.
ADDITIONAL COMMENTS (OCTOBER 2021)											
1	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 3.1.2							new	Provide additional description of the retaining walls to be constructed, including the material and landscape treatments and strategies that were discussed in the Lakeshore East Wall Mitigation series of meetings held with the City.
2	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 3.1.3							new	Provide additional description of the reconstructed bridges to be built within the Lakeshore East Joint Corridor, including basic information about the distance provided between abutments for each bridge, functional accommodation for streets running under the bridges (proposed cross-section elements, right-of-way width, etc.), the structural design of the bridges, etc.
3	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 3.1.5							new	Clarify why noise barriers between Pape and Jones Avenues are included within the scope of this Early Works package, and approved under the Ontario Line regulation (instead of the Lakeshore East corridor widening or electrification EAs), as they are unrelated to the delivery of the Ontario Line which veers north from the Lakeshore East GO corridor west of Carlaw Avenue.
4	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 3.2 and Figure 3-1							new	Clarify why the Lakeshore East Joint Corridor Early Works footprint overlaps with the East Harbour Early Works footprint north of Eastern Avenue (per the study area boundaries reviewed earlier in the East Harbour Early Works Report).
5	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 5.6.1.1							new	Revise description of built form to add main street retail stores primarily along Queen Street East and Gerrard Street East. The characterization of retail being mainly in single-storey retail plazas with surface parking is inaccurate in this area, applying only to a specific area within the study area (Gerrard-Carlaw).

6	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 5.6.1.1.1							new	Revise description of the Downtown Plan as bounded by the Don River to the east (not west), and Bathurst Street to the west (not east). The Downtown Plan is not within the boundaries of the Early Works.
7	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 5.6.1.3							new	Note that neighbourhoods are not typically described in urban planning and design as elements of the public realm, although they do contain public realm elements and characteristics. Also note that arguably the character of Riverside and Leslieville communities could more accurately be described as reminiscent of traditional urban retail main streets rather than small towns.
8	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7 and 6.7 and Appendix A4							new	Provide additional detail regarding the specific heritage impacts imposed by the proposed design of the project, and the specific mitigation measures and monitoring measures proposed to address the impacts. The "preliminary potential" level of detail and certainty provided in the draft Early Works report is insufficient and inadequate given that Metrolinx is designing the project to 100% design, especially given the change in design of the project from the straddle option to the north side option that occurred since this assessment was completed.
9	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7 and 6.7 and Appendix A4							new	The Queen Street bridge appears to be missing from the list of features studied for heritage potential. Given the inclusion of the Carlaw Avenue and Gerrard Street bridges which are of a similar design and age, this appears to be an omission.
10	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7 and 6.7 and Appendix A4							new	Provide in particular more specific details about the direct impacts to the Riverdale Heritage Conservation District. The HCD is considered as one resource being impacted, but the property-specific impacts within the HCD should be understood.
11	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7 and 6.7 and Appendix A4							new	Confirm Metrolinx's intent with respect to the plans for 400 Carlaw Avenue. This report indicates that there will be no impacts to the property through the Early Works, but a previous report and presentation suggested it would be impacted by the project.
12	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7, 6.7, 7.4 and Appendix A4							new	Clarify the commitments to municipal process and authority related to heritage properties impacted by the project, including with respect to the ownership status of impacted properties (particularly in the Riverdale HCD). Unless they are acquired by the Province, they would be subject to the municipal process framework for alteration and demolition.
13	City Planning	Draft Lakeshore East Joint Corridor Early Works Report, and Heritage Detailed Design Report	Section 5.7 and 6.7 and Appendix A4							new	Request that Metrolinx convene a meeting with City Heritage Planning staff to discuss heritage impacts and conservation for the Lakeshore East Joint Corridor, prior to the completion of the final Early Works Report. We note that Metrolinx and the Ontario Line Technical Advisor have provided meetings to discuss heritage impacts and conservation for the Ontario Line South portion of the project, but such a meeting has not yet occurred for this segment.

14	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 5.9 and Figure 5-20							new	Expand the study area for transportation to include a wider area of analysis. Planning studies will typically define the transportation analysis area much more broadly than the footprint of the project to ensure impacts to major streets around the project and downstream major intersections are captured in the analysis. The narrow definition of the study area does not allow for any assessment of network level transportation impacts at the nearest major intersections along Eastern Avenue and Queen Street, for example. The closure of traffic lanes at the bridge construction sites along these streets, for example, can reasonable be inferred to have impacts at the nearest signalized intersections at the very least, for example. Update the analysis that follows in this section using the broader study area.
15	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 6.5, Appendix B3, and Appendix C							new	City Planning is concerned about the land use impacts of noise and vibration resulting from short-term construction as well as long-term operation of new infrastructure. In principle, the long-term operation impacts of infrastructure in particular must be reasonably compatible with the activities normally occurring within permitted land uses for these uses to continue to be viable and sustainable, and provide residents and businesses with reasonable enjoyment of their properties and support a high quality of life. This is of significant interest within the Lakeshore East Joint Corridor due to the significant increase in transit service being proposed in proximity to existing sensitive receptors abutting and adjacent to the corridor. City Planning does not have the technical expertise or capacity to undertake a review of the noise and vibration impacts, mitigation measures and monitoring activities identified in the report, and recommend a peer review of the noise and vibration impacts and mitigation measures to determine their accuracy and appropriateness.
16	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 6.6							new	Clarify the specific impacts the project will impose on the socio-economic environment and strengthen the mitigation measures and monitoring activities identified. Listed impacts are overly general and vague. Mitigation measures identified are minimal and often equivocal, and do not respond to specific conditions that may be present during construction. As the Early Works are being designed to 100% design by Metrolinx it should be possible to identify the impacts to property, adjacent land uses, and the public realm with a great degree of specificity.

17	City Planning	Draft Lakeshore East Joint Corridor Early Works Report	Section 6.9							new	Provide details about the specific impacts the project will impose on various aspects of the transportation system. Listed impacts are overly general and vague, and do not appear to be based on any information about required modifications or closures to various components of transportation infrastructure. Mitigation measures are tentative and often equivocal, and do not respond to any specific impacts or concerns created by the project. The assessment of transportation impacts and identification of mitigation measures and monitoring activities should be based on reasonable assumptions about the construction methodology including proposed or permitted closures/modifications to transportation infrastructure related to the early works project.
18	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5							new	Update the report to describe more fully the early works as it relates to traffic and transportation, alternatives that were considered, assessment and evaluation of impacts, and mitigation measures in accordance with section 8 of O. Reg 341/20. For example, describe which roads will be affected by temporary closures for construction works, what alternatives have been considered, what are the impacts, and what mitigations are proposed. Carry forward any edits made to this appendix in response to these comments to the main report.
19	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 2.1.1							new	Clarify which intersections did not have existing turning movement counts and signal timing plans, and what was done to accurately assess their existing traffic conditions.
20	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 2.1.2							new	Consider including the volume of pedestrians, cyclists, and transit when determining their level of service, which is a limitation to Ottawa's Multi-Modal Level of Service tool. If recent volumes are not available, then apply growth rate assumptions to older volume counts, rather than doing new counts now which may not be accurate due to the current pandemic.
21	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 3.1.1							new	Include more signalized intersections for traffic operations analysis. The transportation study area seems to be defined very narrowly and some roads like Queen Street and Eastern Avenue have not been analysed at all despite the fact they will be impacted by the project. There are other signalized intersections in the vicinity including at Eastern/Broadview, Queen/Logan, Dundas/Boulton, Queen/Broadview, and Eastern/Logan. All roads within the study area that will be impacted by construction along the rail corridor should be considered.

22	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 3.1.2.2							new	Clarify which arterial roads are experienced by pedestrians to have long average delays/waiting times. Note that this section includes street names that are outside the Lakeshore East Joint Corridor Study Area in the second paragraph of this section, which is assumed to be an error.
23	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 3.1.2.2 & 3.1.3.2							new	Determine the existing level of service for pedestrians and cyclists on Queen Street and Eastern Avenue, in addition to what is noted in Tables 3-3 and 3-5. Consider any other arterial, collector, or local roads as well, especially if there are any sidewalks near the rail corridor which will be affected and/or if detour will be required. All segments within the study area that will be impacted by construction along the rail corridor should be considered.
24	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 3.2.1							new	Add the existing TTC route #325 (Don Mills Blue Night bus route) to Table 3-6 and Figure 3-6.
25	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - 3.2.2							new	Determine the existing level of service for transit on Queen Street, in addition to what is noted in Table 3-8. All segments within the study area that will be impacted by construction along the rail corridor should be considered.
26	City Planning	Draft Lakeshore East Joint Corridor Early Works Report - Draft Traffic and Transportation Early Works Report	Appendix A5 - Table 4-1							new	Confirm that any changes to signal timing will be considered from the pedestrian and cycling perspective (as it could have negative impacts for pedestrians in terms of longer wait/crossing times) in addition to the traffic movement perspective.

1	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	General	This report does not include any detailed or quantitative analysis considering the impacts of the LSE EW traffic impacts. MX to provide a quantitative and detailed traffic impact analysis considering all modes of transportation.		
2	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	General	MX to provide all related Traffic and Transit Management Plans and Traffic Control Plans to show how the traffic impacts will be managed and mitigated during the construction period.		
3	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	General	The report should use Synchro 11 for the intersection capacity analysis and provide reference to the City's most updated guidelines (link below): https://www.toronto.ca/wp-content/uploads/2021/01/964c-TSSignal-OptimizationSynchro-11-Guidelines.pdf		
4	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	Table ES-1, Page 13	Construction vehicles routes need to be determined and related analysis needs to be conducted to evaluate the impacts on regular traffic. Safety issues need to be considered as well.		
5	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	Table ES-1, Page 13	A communication plan to be provided to make sure people are aware of the construction and its effects and also know how to use detours in case of road closures.		
6	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_Isejc_draft_60611173_optimiz	Figure 1-2 , Page 25	The study area needs to be specifically determined including all affected intersections. This should be including all signalized and also un-signalized intersections.		

7	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_lsejc_draft_60611173_optimiz	Table 3-1, Page 41	Is there any un-signalized intersection in the study area?		
8	Transit Infrastructure Projects - Transportation Services	Appendix B5 a5_traffic_2021-09-30_ol_lsejc_draft_60611173_optimiz	Table 3-3, Page 45	The results show that the pedestrian LOS is not at a good and acceptable level for the existing condition. Any kind of sidewalk closure may have a great impact on the pedestrian LOS in this area. Please confirm if there is any sidewalk closure during the EW construction period.		
9	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 5.9.1.2- Intersections Operations, Page 127	Please provide additional traffic analysis for the adjacent un-signalized intersections within the study boundary. The analysis should include the multimodal transportation aspects.		
10	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 5.9.2- Pedestrian Network and Operations, Page 129	Please identify and label the pedestrian foot-overbridge over the GO Rail corridor in the pedestrian network (red-marked in the Figure 5-21 below) . 		
11	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 5.9.2- Pedestrian Network and Operations, Page 132	Some of the streets/sidewalks were not analyzed (red-maked in the Figure 5-22). Is there any reason they are excluded to this LOS ana 		
12	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_lsejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 5.9.3- Cycling Network and Operations, Page 134	Similar to the pedestrian network operation analysis comments, some of the streets were not analyzed for the bike operation (Figure 5-24). Is there any rationale they are excluded to this LOS analysis?		

13	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_Isejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 5.9.4- Transit Network and Operations, Page 143	Similar to the pedestrian network operation analysis comments, some of the streets were not analyzed for the transit operation (Figure 5-26). Is there any rationale they are excluded to this LOS analysis?		
14	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_Isejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 6.9- Traffic and Transportation, Page 174	<i>"Potential overlapping construction timelines with other planned projects (e.g. capital projects and local developments) nearby may result impacts to the transportation network and its road users."</i> Have all City capital projects and third party construction that overlap with the Lakeshore East Joint Corridor Early Works timelines been identified? Metrolinx has access to the City's INVlewT.O. Infrastructure Viewer and should be able to identify all major infrastructure projects within the area / adjacent road network. All conflicts and impacts should be identified in the Early Work Report and mitigation measures presented.		
15	Transit Infrastructure Projects - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_Isejc_2021-10-01_ol_draft_60611173_optimized_locked	Section 6.9- Traffic and Transportation, Page 174	<i>"Implement flagging where construction vehicles are present to ensure construction vehicles operators are aware of pedestrian and vehicular traffic within the construction area."</i> Please include traffic control persons (TCP) where it is required (i.e. major intersections, construction area access, etc.) to provide safety for the pedestrian and during the construction period. This should be included in the construction management plan/traffic management plan report and confirmed by Transportation Services and Work Zone coordinators.		
16	Utility Review, Permits & Enforcement - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_Isejc_2021-10-01_ol_draft_60611173_optimized_locked	Utility Design	All proposed utilities (dry) should be designed (i.e. proposed alignments, vertical and horizontal clearances etc.) and constructed in-accordance with the "MCR" (Municipal Consent Requirements), for more information about MCR please check the following link: https://www.toronto.ca/services-payments/building-construction/infrastructure-city-construction/construction-standards-permits/standards-for-designing-and-constructing-city-infrastructure/		

17	Utility Review, Permits & Enforcement - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_Isejc_2021-10-01_ol_draft_60611173_optimized_locked	Sign Offs	<p><u>Utilities Sign-Off</u> Sign-offs are required from all members of Toronto Public Utilities Coordination Committee (TPUCC) as noted in Appendix B of the MCR or any other affected party from this work, prior to submission of right of way permit application . Please refer to the following link for further information:</p> <p>https://www.toronto.ca/services-payments/building-construction/infrastructure-city-construction/construction-standards-permits/standards-for-designing-and-constructing-city-infrastructure/?accordion=utility-cut-permit-applications-and-municipal-consent-requirements-mcr</p>		
18	Utility Review, Permits & Enforcement - Transportation Services	Lakeshore East Joint Corridor Early Works Report EW_Isejc_2021-10-01_ol_draft_60611173_optimized_locked	R.O.W. Permits	<p><u>Permits</u> Prior to commencement of any construction work within the Municipal Right of Way, the applicant must obtained a permit / approval from the Right of Way Management, Transportation Services, City of Toronto. The utility company can contact to Right of Way Management, Utility Cut Permit's office at utilrev@toronto.ca and or check the following link for further information;</p> <p>https://www.toronto.ca/services-payments/building-construction/infrastructure-city-construction/construction-standards-permits/standards-for-designing-and-constructing-city-infrastructure/</p>

ADDITIONAL COMMENTS (OCTOBER 2021)

Lakeshore East Joint Corridor Early Works Report

1	BSE	Lakeshore East Joint Corridor Early Works Report - Conceptual Design & Appendix C - Draft noise and Vibration Operations Report - Lake shore East Joint Corridor	(main report) Figure ES-1, Page v, vi, Section 3.1.5, Pg 28 & (Noise and Vibration Report) Appendix D - Noise and Vibration Mitigation Figures	Noise barriers are identified on the figures along between Eastern Avenue and Gerrard Street East, including the bridge crossings at Queen St. E., Dundas Street, and Logan Avenue. Please confirm if noise barriers will be required on these bridge structures, as the preliminary structure design drawings dated July 7th, 2021 do not show noise barrier on these three structures?	
2	BSE	Lakeshore East Joint Corridor Early Works Report - Soil and Groundwater	Table ES-2, Page xx	Monitoring Activities column, last row first bullet point - "If required, develop and conduct settlement monitoring program...", please confirm if there will be a monitoring program for all major infrastructure / bridges within zone of influence, as per City's vibration by-law/ Transportation Specification GN117SS. Please include the monitoring requirement in the construction contract document.	
3	BSE	Lakeshore East Joint Corridor Early Works Report	Section 3.1.3.1 and 3.1.3.2, Pg 27 & 28	Will Structural Design Report for each bridge structure be available?	

4	BSE	Lakeshore East Joint Corridor Early Works Report	Section 3.3, Table 3-1, Site Servicing / Removals / Demolition, Page 30	Include the demolition of the existing bridges for bridge replacement	
5	BSE	Lakeshore East Joint Corridor Early Works Report - Noise and Vibration	Section 6.5, Table 6-5, Construction Vibration, Pg.167	<p>last row: for the existing railway bridges (Dundas Street, Logan Avenue and Queen Street) which will be removed in stages, will the existing remaining /new bridge section be monitored for vibration under all staged construction?</p> <p>The GIMP monitoring reports for the bridge structures are to be submitted to City's BSE for filing purposes.</p>	
6	BSE	Lakeshore East Joint Corridor Early Works Report - Heritage	Section 6.7, Table 6-7, OLS-014 Carlaw Avenue Subway and Gerrard St. East Subway, Pg. 173	<p>2nd last row: noise barriers are identified at the locations of the existing Carlaw Avenue Subway and Gerrard St. East Subway (refer to figure ES-1 as well as on the draft noise and vibration operations report). Please confirm if these existing bridge structures will be modified to include new noise barriers.</p> <p>With the track realignment and future additional GO track 4, has the existing bridge be assessed and evaluated to take the subject loads?</p>	

East Harbour Station Early Works Report

7	BSE	East Harbour Station Early Works Report	Figure ES-1, Page iv & Section 3.1.1, Pg. 26	<p>As shown on Figure ES-1, GO tracks realignment will be required on the existing GO railway bridge over Don River/DVP, which could require modification/repair of good state/widening of this existing bridge. Have the bridge be structurally assessed and evaluated to take the subject loads?</p> <p>Will there be any modification/repair of good state/widening work of the railway bridge included in the scope of Early Works? The bridge is partially included under the Lower Don Bridge and Don Yard Early Works project footprint and partially included under the East Harbour Station Early Works footprint. Please confirm the construction of track realignment and associated bridge work will be under which Early Works.</p>	
---	-----	---	--	--	--

8	BSE	East Harbour Station Early Works Report	Section 3.1.2, Pg 26	<p>1) Please confirm if the station platform and bridge structure for OL trains will be built under the East Harbour Early works and the OL tracks will be built separately as part of the main OL contract?</p> <p>2) Will there be retaining wall between the Lower Don River OL bridge and the East Harbour Transit Hub OL Station/platform? If yes, will it be included as part of the OL Lower Don River Early Works, East Harbour Early Works or other OL contracts?</p>	
9	BSE	East Harbour Station Early Works Report	Table ES-2, Construction Vibration, last row, Pg. xviii & Section 3.1.4, Pg 27	Will the existing Eastern railway bridge be replaced or expanded in stages, will the existing remaining /new bridge section be monitored for vibration under all staged construction?	
10	BSE	East Harbour Station Early Works Report	Section 3.3, Table 3-1, Construction of Buildings and Structures, Page 30	Include the staged demolition of the existing Eastern Ave Bridge for bridge replacement

Date Out: January 5, 2021

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	September 2021 Revised Response LSE-JC	Status O / P / C / D** (Reviewer)
1	Toronto Fire Services	Draft Traffic Memo	Design Brief, Section 3 (pages 35-52)	The Design Brief document refers to mitigation measures for traffic/auto and makes reference to developing a Traffic Management Plan, to address issues related to travel and impacts of potential road restrictions/closures in and around each early works site. The description of potential impacts should be expanded to refer specifically to ensuring emergency access is maintained at all times. Responding emergency vehicles are unique users of the roadway and can have different needs/requirements than most other users and should be addressed separately.	Noted. Potential impacts to emergency vehicles will be reviewed and noted in the revised memorandum, and potential mitigation measures will be suggested at a high level, if/where required. The future Traffic Management Plan will address the specific needs of emergency services, including accessibility, once construction staging and road closures are confirmed.	?	D	Table 4-1 notes that Traffic Control Management Plan(s) will address specific emergency services requirements in consultation with the City of Toronto.	Language is included in Table 6-9 of the EWR.	C
2	Toronto Fire Services	Draft EPR	Section 5.5	General: Traffic Control and Management Plan(s) are to be sent to Toronto Fire Services prior to any road closures to ensure that TFS personnel can review the affected area(s) and adjust their responses (as applicable).	Noted. The Traffic Management Plan(s) will be circulated to the City including TFS during construction planning.	?	D		Comment noted. Mitigation measures to consult with the City of Toronto on the transit and traffic management plans to address specific emergency services requirements is included in Table 6-9 of the LSE-JC EWR.	C
3	Toronto Fire Services	Draft EPR	General	Utility relocations: Identify any fire hydrants that will be affected over the course of construction and confirm the remedial measures that will be put in place to ensure that hydrant coverage is maintained.	This will be confirmed as design progresses.	?	D		Metrolinx will be providing design submissions to the City for review and these plans will highlight any hydrant relocations if required.	C

Hi Julia,

The Ontario Line regulation ([link](#)) does not specify the review period for the EWRs. Although the 31-day review period for the LSE JC and EH Station EWRs closes on Sunday October 24, we are happy to receive the City's comment on Monday October 25.

Thank-you,

Crystal Ho

Good afternoon Julia,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Julia Murnaghan,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment

Attachment 2 - Notice of Publication of Draft East Harbour Station Early Works Report

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Notice of Publication of Draft East Harbour Station Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

East Harbour Station Early Works

East Harbour Station early works are planned where the Ontario Line will run alongside GO train operations. Completing early works before major construction contracts begin will help streamline the delivery of the Ontario Line and GO Expansion projects and ensure they both stay on schedule. East Harbour Station early works will include reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks; building station facilities such as platforms and entrances; replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

The environmental impacts of East Harbour Station early works are being assessed in accordance with Ontario Regulation 341/20:

Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft East Harbour Station Early Works Report that is now available for review.

The Draft East Harbour Station Early Works Report documents the assessment of East Harbour Station early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft East Harbour Station Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft East Harbour Station Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft East Harbour Station Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final East Harbour Station Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of the Final East Harbour Station Early Works Report.

To obtain a copy of the Draft East Harbour Station Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Subject: [EXTERNAL] RE: OL - Draft LSE-JC EWR Comment Responses
Date: Tuesday, September 21, 2021 8:32:05 AM
Attachments: [REDACTED]

Good morning Julia,

Ahead of the scheduled publication of the draft Lakeshore East Joint Corridor Early Works Report on September 23, 2021, please see attached comment responses to the City's original set of comments on the consolidated Ontario Line draft early works report, first circulated on July 3, 2020.

Let us know if any additional comments or questions on our responses and we can revise accordingly.

Thanks,

MERLIN YUEN

Project Name: Ontario Line				Revised By:					
Project No:				Date In:					
				Date Out: January 5, 2021					
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	September 2021 Revised Response LSE-JC
1	Transportation Expansion Office in consultation with LeighFisher	AQ Monitoring	Draft EWR, Sec 4.3, page 71	The report states that all contaminants of concern are monitored at the selected NAPS stations. Since PM10 is not monitored, how is this discrepancy addressed?	PM10 was not included in NAPS Station measurements, and therefore was estimated using PM2.5 measurements, assuming a ratio of 1 ug/m3 PM10 per 0.54 ug/m3 of PM2.5 as per Lall et. al, "Estimation of historical annual PM2.5 exposures for health effects assessment", Atmospheric Environment 38 (2004).	?	O	This methodology applies to estimation of PM2.5 from PM10 particles, not vice versa. What is the basis for assuming this ratio and is there comparable monitoring data nearby that supports this assumption? The approach undertaken is not standard practice.	As noted previously, there is no comparable hourly sampled data for the course fraction of fine particulates (PM10) which is directly comparable to the fine particulate hourly sampling data (PM2.5). The ratio from Lall et al. was referenced to provide an estimate based on scientific research for the course particulate fraction based on hourly monitored data of PM2.5. This ratio and methodology has been accepted by the MECP for similar projects submitted for EA approval in the past.
2	Transportation Expansion Office in consultation with LeighFisher	AQ Guidelines	Draft EWR, Sec 4.3, Table 4-14, p.72-73	Please explain why the AAQC PM2.5 standard not included?	The AAQC standard for PM2.5 (30 ug/m3 for a 24-hour averaging period) is less stringent than the CAAQS standard for the same averaging period (27 ug/m3) and was therefore excluded from Table 4-14.	?	C		
3	Transportation Expansion Office in consultation with LeighFisher	Air Quality Impacts	Draft EWR, Sec 5.3.1, p. 188	The impacts discussion is qualitative and high-level. The report should at a minimum discuss construction emissions estimates based upon construction equipment likely to be used, general timeline, and standard construction equipment emissions factors compared to baseline concentrations to indicate potential exceedances and areas for mitigation.	Details regarding construction duration and timeline are not available at this time and as such, construction emission estimates have not been included. The Air Quality Memo is based on the most up-to-date plans for design available at the time. Construction equipment and duration will be confirmed in future construction management plans.	?	C	It is noted assumptions have been made in this Early Works report. If these assumptions are exceeded, Metrolinx and ProjectCo are responsible for determining the additional mitigation measures required.	
4	Transportation Expansion Office in consultation with LeighFisher	Noise Impacts - Lower Don River Crossing	Draft EWR, 5.4.1.2.1, Noise, p.200	Report notes, "for the future 191 Mill Street location, noise levels are predicted to be near the daytime noise level limit for the corridor works, nearest to 191 Mill Street." They also exceed the night time criteria which is not mentioned. Please add this to the impact discussion.	This will be addressed in the revised report.	?	P	Pending review of the updated report.	Not applicable to LSE-JC.
5	Transportation Expansion Office in consultation with LeighFisher	Noise Impacts - Lakeshore East Joint Corridor	Draft EWR, 5.4.1.4.1, Noise, p.202	Report notes, "the results in the above table indicate that predicted noise levels along the project footprint could be above the daytime noise level limit." The report should also indicate the potential for nighttime exceedances as nighttime nuisance can generally result in health effects and should be mitigated.	This will be addressed in the revised report.	?	P	Pending review of the updated report.	Language following Table 5-1 of the Noise and Vibration Report (formerly Table 4-7) acknowledges the exceedance and further recommendations are provided to reduce impacts in Section 6.
6	Transportation Expansion Office in consultation with LeighFisher	Vibration Impacts	Draft EWR, 5.1.4.1.2, Vibration, p.202	Report states: "As the project footprints are not finalized; the number of locations predicted to have vibration levels in excess of the City of Toronto prohibited limit, and the screening limit may change. Also, the number of structures within the project footprint may change. As a result, a full list of locations along the project footprint that require monitoring or subsequent review is too preliminary at this stage. Mapping provided in Appendix B4 can be used to further develop the design plans to decrease the vibration impacts of the Early Works construction." Confirm if the mapping provided in Appendix B4 could be used to indicate sensitive areas which require further assessment should the area be selected as part of the project footprint. Consistent with best practices, this report should give an indication of areas that will likely be impacted if in the vicinity of any project works.	Confirmed, mapping in Appendix B4 will be updated with the approved project footprint. See appendix B4	?	O	Similar to the Follow-Up Comment to Item No. 25 in the TEO tab, please clarify where the updated vibration assessment mapping is provided. The Draft Early Works Report - Ontario Line Exhibition Station Early Works report does not have an Appendix B4. Appendix A3 - Exhibition Station Early Works - Draft Noise and Vibration Early Works Report does not appear to include vibration assessment mapping.	Response provided. Figure 5-2 of the Noise and Vibration Report displays project footprint and vibration screening.

7	Transportation Expansion Office in consultation with LeighFisher	Construction Vibration Mitigation, General	Draft EWR, 5.4.2.1, General Mitigation, p. 204	<p>Given that vibration impacts are predicted, best practice construction vibration mitigation measures recommended by the FTA should be included in the report, such as:</p> <p>*routing heavily-loaded trucks and equipment away from residential streets and vibration-sensitive sites;</p> <p>*managing the sequence of construction phases such as demolition, earth-moving, and ground-impacting operations so as not to occur in the same time period and avoiding night-time activity;</p> <p>*employing alternative construction methods.</p> <p>Relevant locations where this would apply would be refined during the design phase.</p>	Acknowledged, the suggested text has been incorporated with other best practice measures where appropriate.	?	P	<p>Pending review of the reports prepared for the remaining three Early Works sites.</p> <p>It is noted the suggested text, as appropriate, was added to Section 6.1(Mitigation Measures - General Recommendations) of Appendix A3 - Exhibition Station Early Works - Draft Noise and Vibration Early Works Report. However, these measures remain absent from the main Exhibition Station Early Works report. Please include these General Recommendations in the main Exhibition Station Early Works report for consistency, or, indicate further measures are outlined in Appendix A3.</p>	Response provided. Section 6 and Table 6-1 of the Noise and Vibration Report identify the noted mitigation measures in addition to other mitigation measures.
8	Transportation Expansion Office in consultation with LeighFisher	Methodology	Draft AQ Memo, Fig 1-1 to 1-4	Please explain how the Air Quality Study Area was established.	A 500-metre buffer was added to the identified project footprint of each Early Works scope item. The distance of the 500 metre buffer was based on guidance provided in the Ministry of Transportation, Environmental Guide for Assessing and Mitigating the Air Quality Impact and Greenhouse Gases of Provincial Transportation Projects (Ministry of Transportation, 2020) which states that for major roads, a distance of 500 m is expected to capture the maximum pollutant concentrations.	?	C		
9	Transportation Expansion Office in consultation with LeighFisher	AQ Guidelines	Draft AQ Memo, Table 2-1	Why is the AAQC PM2.5 standard not included?	The AAQC PM2.5 standard (30 ug/m3 for a 24-hour averaging period) is less stringent than it's CAAQS counterpart 27 ug/m3 for a 24-hour averaging period, after 2020.	?	C		
10	Transportation Expansion Office in consultation with LeighFisher	Background Traffic Data	Draft AQ Memo, Table 2-5	Why isn't the Gardiner Expressway or Liberty Street West 2019 AADT bus data available/included?	Table 3-3 updated with Liberty Street West 2019 AADT data. Not available for Gardiner Expressway.	?	C	It is recommended that the report state that the AADT is not available for the Gardiner Expressway, for clarity.	
11	Transportation Expansion Office in consultation with LeighFisher	Methodology	Draft AQ Memo, Sec 3, Table 3-7	Please define a Sensitive and a Critical receptor and distinguish between the two. Also, please clarify the definition of potential impacts.	Sensitive receptors include all residential and residential combination zoning (e.g. commercial residential, etc.). Critical receptors include land use where it is reasonably expected that high-risk populations spend extended periods of time in these locations (i.e. schools, day cares, hospitals, nursing or long-term care homes, etc.). The potential impacts are treated the same between the two types of receptors, however critical receptors are marked with high priority for maintaining air quality levels.	?	C		
12	Transportation Expansion Office in consultation with LeighFisher	Construction timeline	Draft AQ Memo, Sec 3	Please clarify whether construction of the four EW locations will overlap (even if just a portion). If any overlap, a combined phase impact assessment should be conducted in addition to the location-specific assessment. This is particularly important for receptors that fall within multiple Study Areas.	In updated revisions of the report, all early works have been split into separate reports. Note that the only overlap in study area is Lakeshore East (overlapping with GO Expansion), for which a joint noise and vibration assessment will be undertaken for GO Expansion and Ontario Line operations.	?	C	Clarification noted. Note, joint noise and vibration assessment to be provided to the CoT for review and comment, once available.	
13	Transportation Expansion Office in consultation with LeighFisher	Air Quality Management Plan	Draft AQ Memo, Attachment 1, Table 2	Please include other contaminants of concern as included in Table 2-4 of the main memo. In particular benzene and B(a)P when they exceed AAQC standards.	Including additional contaminants from the MTO Guidance does not have direct bearing on the contents of the AQMP. If required, the AQEW Memorandum can be referenced for a full background summary.	?	P	Given that benzene and B(a)P exceed AAQC requirements under background conditions (as per the Early Works Air Quality Memorandum and the Exhibition Station Early Works - Draft Air Quality Early Works Report), this information should be included in the AQMP for consistency. At a minimum, a reference to the Memorandum should be included, as noted in Column F.	The AQMP attachment has been removed. Benzene and B(a)P are discussed in the Air Quality Report.
14	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.1	Are the mitigation measures included here required? If so, mitigation language should be revised to state "shall" to ensure compliance. Dust suppression techniques should also be included.	These are recommended mitigation activities which should be employed in the event of a monitored exceedance of the specified decision making thresholds in Table 4. If these thresholds are breached during continuous real-time monitoring, then any combination of the proposed mitigation measures will be required to be employed, as specified by the designated air quality specialist.	?	O	The mitigation measures provided appear comprehensive, however, please confirm mitigation measures stated as a "should" are enforceable as requirements, and are not to be taken simply as recommendations for ProjectCo to consider.	The AQMP attachment has been removed. Note that the comment has been addressed in Table 4-1 of the Air Quality Report.
15	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.2	Please specify maximum drop height and total height of stockpiles.	The drop height restriction is described on section 3.1.3. However, there is no recommended threshold for the maximum drop height and total stockpiles height from the air emission perspective. So, as described these should be minimized as possible.	?	C		

16	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.3	Idling restrictions should also be required consistent with best practice.	Table 4-1 and Table 4-2 of the Air Quality Report note that idling restrictions will be applied during construction.	?	C		
17	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Sec 3.2	Please clarify if the recommendation is to set up one met station at each EW location (i.e. four total) or one single station for the whole project.	Meteorological monitoring will not be required as part of the mitigation as air quality impacts from construction are not anticipated to affect local meteorological conditions.	?	C		
18	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Sec 3.3	Since no AQ monitoring location is planned immediately around the East Harbour Station location, is there the potential that construction at this location takes place earlier than the neighboring locations and as such construction dust monitoring will not be in place in time?	Comments regarding the East Harbour early works will be responded to at a later date as all early works have been split into separate reports. East Harbour works will be documented under separate cover.	?	P	Pending review of East Harbour Early Works report, once available.	Not applicable to LSE-JC.
19	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Table 4	If the construction program is 12 months or less, silica analysis should be considered once a month, consistent with best practice, instead of once every 3 months as mentioned.	Comment noted.	?	C		
20	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Table 6	Remedial actions should also be categorized by action levels. If action level 4 is reached, it suggests that whatever remedial actions already undertaken at previous action levels were not effective, and so additional remedial actions will be required.	Table 4-1 and Table 4-2 of the Air Quality Report note that Action Levels will be applied during construction.	?	C		
21	Transportation Expansion Office in consultation with LeighFisher	Air Quality Management Plan	Draft AQ Memo, Attachment 1, Table 6	Please confirm if this management plan will be implemented by the EPC Contractor and all roles and responsibilities mentioned are within the EPC Contractor's organization. If so, please clarify cross-organization responsibilities and reporting lines.	These details will be confirmed as Project planning and design progress.	?	C		
22	Transportation Expansion Office in consultation with LeighFisher	Introductory text	Draft N&V Report, Section 1, Introduction	It is noted this report only assesses construction noise and vibration effect for the early works. Confirm how operational impacts of early works will be assessed.	This report only addresses construction noise and vibration, operational noise and vibration are addressed under separate cover.	?	P	Please clarify the title of the report that will address the operational noise and vibration impacts. Comment pending review of the appropriate report, once available.	Construction or other project components and project operations will be assessed and documented in the forthcoming Environmental Impact Assessment Report. However, please note that noise and vibration impacts associated with the joint corridor Ontario Line and GO track operations will be assessed under the Ontario Line Lakeshore East Joint Corridor Noise and Vibration Operations Report. This report will be provided in the Lakeshore East Joint Corridor Early Works Report. This report outlines details of noise and vibration mitigation measures investigation, as the Lakeshore East Joint Corridor early works will include implementation of noise barriers and vibration mitigation technologies for the GO tracks.
23	Transportation Expansion Office in consultation with LeighFisher	Construction noise methodology	Draft N&V Report, 4.2 Methodology, p. 14	Clarification on methodology used for noise modelling required. Per FTA manual, detailed construction noise analysis should, "Compare the combined Leq equipment (1hr) and the combined Ldn equipment 30-day for all equipment for each phase of construction determined. Then, identify locations where the level exceeds the criteria." Confirm if the above methodology was employed.	This method was not used as details regarding construction methodology have not yet been established. Construction noise levels (modelled from a list of construction equipment) were reviewed at the worst case representative receptor locations surrounding the construction sites using the Leq8hr criteria that has been used on previous Metrolinx projects. Note that a screening map will be added to the reporting.	?	C		
24	Transportation Expansion Office in consultation with LeighFisher	Lakeshore East Joint Corridor Noise	Draft N&V Report, 4.6.1, and Table 4-7	Table 4-7 appears to indicate night time noise level criteria will be exceeded along the project footprint. Please revise below statement from the report to reflect nighttime noise level limit exceedance, in addition to daytime noise level limit exceedance. <i>"The results in the above table [Table 4-7] indicate that predicted noise levels along the project footprint could be above the daytime noise level limit"</i>	In updated revisions to the report, Lakeshore East early works have been removed from this report and will be published under separate cover however, this change will be addressed within the Lakeshore East Early Works Report.	?	P	Pending review of the Lakeshore East Early Works report, once available.	Language following Table 5-1 of the Noise and Vibration Report (formerly Table 4-7) acknowledges the exceedance and further recommendations are provided to reduce impacts in Section 6.

25	Transportation Expansion Office in consultation with LeighFisher	Vibration Impacts	Draft N&V Report, 4.6.2, Vibration Impacts	<p>Report states:</p> <p><i>"As the project footprints are not finalized; the number of locations predicted to have vibration levels in excess of the City of Toronto prohibited limit, and the screening limit may change. Also, the number of structures within the project footprint may change. As a result, a full list of locations along the project footprint that require monitoring or subsequent review is too preliminary at this stage. Mapping provided in Appendix B4 can be used to further develop the design plans to decrease the vibration impacts of the Early Works construction."</i></p> <p>Confirm if the mapping provided in Appendix B4 could be used to indicate sensitive areas which require further assessment should the area be selected as part of the project footprint.</p> <p>Consistent with best practices, this report should give an indication of areas that will likely be impacted if in the vicinity of any project works.</p>	Mapping has been updated including the project footprint. In updated revisions of the report, mapping has been moved to the main body of report as Figure 5-3 and 5-6.	?	O	<p>Please clarify where updated mapping can be found. Figure 5-3 and Figure 5-6 in the Draft Early Works Report - Ontario Line Exhibition Station Early Works report display the surficial geology and the bed rock geology within the Exhibition Station soil and groundwater study area, respectively.</p> <p>Note: the reference in Column E should be to Appendix D of the previously reviewed report titled <i>Appendix B4 - Noise and Vibration Early Works Report</i> (dated June 2020). The Exhibition Station Vibration Assessment Map previously provided in this referenced Appendix (Appendix D) is absent from the updated Exhibition Station Early Works report and the associated Noise and Vibration appendix.</p>	Response provided. Figure 5-2 of the Noise and Vibration Report displays project footprint and vibration screening.
26	Transportation Expansion Office in consultation with LeighFisher	General Construction Vibration Mitigation Measures	Draft N&V Report, 5.1.2, Construction Vibration	<p>Given that vibration impacts are predicted, best practice construction vibration mitigation measures recommended by the FTA should be included in the report, such as:</p> <p>*routing heavily-loaded trucks and equipment away from residential streets and vibration-sensitive sites;</p> <p>*managing the sequence of construction phases such as demolition, earth-moving, and ground-impacting operations so as not to occur in the same time period and avoiding night-time activity;</p> <p>*employing alternative construction methods.</p> <p>Relevant location for the application of these measures can be refined during the design phase.</p>	Acknowledged, the suggested text has been incorporated with other best practice measures where appropriate.	?	P	<p>Noted that suggested text, as appropriate, added to Exhibition Station Early Works report. Pending review of the reports prepared for the remaining three Early Works sites.</p>	Response provided. Section 6 and Table 6-1 of the Noise and Vibration Report identify the noted mitigation measures in addition to other mitigation measures.
ADDITIONAL COMMENTS (DECEMBER 2020)									
27	Transportation Expansion Office	General	General	<p>Please note the Status (Column H) and the Follow Up Comments (Column) provided in this log are based solely on the review of the Exhibition Station Early Works Report and are subject to change upon receipt and review of the Early Works reports for the remaining three sites (Lower Don River Crossing, East Harbour Station, and Lakeshore East Joint Corridor).</p>	Comment noted. Early Works Reports for the remaining early works segments are being developed and will be provided to the City in the coming months.				Comment noted.

1	City Planning	Draft Traffic and Transportation Memo	General	Reconfirm the intended scope of the traffic and transportation memo. The existing conditions transportation memo should describe and document the baseline usage and performance of the transportation network for all modes in the study area; this report is limited to describing the physical conditions of the transportation system. Provide vehicular, transit, pedestrian and cyclist volumes using each transportation link described in the report, particularly at locations that may be disrupted during construction and/or permanently altered as a result of the project. Provide transportation analysis demonstrating the baseline performance of the transportation network. Without this information it is difficult to determine appropriate impacts to users of the transportation network or appropriate mitigation measures, monitoring programs, and future commitments. The transportation memo does not appear to achieve the purpose stated in Section 1.1.	The Early Works Memo focuses on construction impacts at the Early Works project footprints expected to result from the Early Works activities. Metrolinx proceeded with available existing conditions information while considering project schedule, limited raw data received from the City, and COVID-19 restrictions. As project planning progresses, further quantitative assessment will be completed related to the Early Works areas, to be shared with the City	?	O	To City Planning's knowledge, Transportation Services completed the data request submitted by Metrolinx with respect to turning movement counts for vehicular traffic, pedestrian, and cycling volumes for road links and intersections available in the City's database.	Section 2.2 notes that quantitative impact assessment will be completed and shared with the City as detailed design progresses and the construction staging strategies become available.
2	City Planning	Draft Traffic and Transportation Memo	General	Confirm service headways for all transit routes and ensure that they reflect normal planned operating conditions. The peak period service headways stated in the report for transit routes appear to reflect the reduced level of service being provided during the COVID-19 pandemic. This will result in understated impacts to transit riders if not corrected. For example, the 504 King streetcar route normally operates at 2 minute headways in the peak period.	The service headways during the AM and PM peak hours were obtained from the TTC website (For example, for the 504 King Streetcar: http://www.ttc.ca/Routes/504/Eastbound.jsp). These reflect the current service headways which, as mentioned, might be impacted by the COVID-19 pandemic. The current TTC website does not have 'regular' headways, which are not impacted by COVID-19, Metrolinx would appreciate any information the City can provide with regards to this data.	?	O	Service headways found on TTC's website during 2020 should not be relied upon for a planning analysis as they reflect reduced level of service provided during the COVID-19 pandemic. Recommend that Metrolinx request from the TTC the most recent service summary (likely from fall 2019), and the planned service summary for 2021 which reflects post-pandemic operating plan.	The service headways during the AM and PM peak hours were obtained from the TTC website. These reflect the current service headways which, as mentioned, may be impacted by the COVID-19 pandemic. The TTC website does not provide the "normal" planned operating conditions. Dates accessed will be clarified in the report. As additional quantitative traffic analysis is completed for the LSE-JC early works study area, additional considerations will be made to use data that is representative of 'normal' traffic scenarios where possible.
3	City Planning	Draft Traffic and Transportation Memo	General	Correct references to unposted speed limits through the report, which currently indicates in several places that the assumed speed limit of unsigned streets is 50 km/h. Note that the City of Toronto has reduced the general speed limit on many arterial roads to 40 km/h, especially within the old City of Toronto and East York boundaries. Legal speed limits for all streets can be checked online in the Municipal Code here: https://www.toronto.ca/legdocs/municode/toronto-code-950-35.pdf	The legal speed limits were checked online using the same suggested reference (https://www.toronto.ca/legdocs/municode/toronto-code-950-35.pdf) in preparing the memorandum. The unsigned streets namely, Carlaw Avenue and Logan Avenue, are not part of the roadways that had their speed limits reduced from 50 km/h to 40 km/h as part of Vision Zero in 2019. The following source was used in identifying the roads that witnessed a speed limit reduction: https://www.toronto.ca/services-payments/streets-parking-transportation/road-safety/vision-zero/safety-measures-and-mapping/	?	O	Vision Zero speed reductions appear to be referenced in the report in general discussion and where appropriate for specific streets.	N/A; response provided, no further updates.
4	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 9	Roads: Gardiner Expressway is missing from the list of roads in the area, and may be impacted by the project. Include planned but unbuilt roads such as Liberty New Street, as the the impacts and mitigation measures for this will need to be addressed in the report.	Gardiner Expressway is not expected to be impacted by the Exhibition Station early works. Based on information collected from the City's website, Liberty New Street (source: https://www.toronto.ca/community-people/get-involved/public-consultations/infrastructure-projects/libertynewst/) does not have a schedule for construction yet and hence was not included in the list of roads.	?	O	References to missing roads added to Section 3.1.	Not applicable to LSE-JC

5	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 9 Figure 3-1, Page 10	Transit: Indicate that 511 Bathurst streetcars are normally routed to serve Exhibition loop. Correct the Harbourfront and King streetcar route numbers indicated in the map legend.	Noted, the 511 Bathurst streetcars will be described in Table 2-1 and presented in Figure 3-1. The route numbers in the map legend will be amended.	?	P	511 Bathurst routing corrected. 509 Harbourfront route number corrected in map. New error: 504B King streetcar route serving Dufferin Street to Dufferin Loop no longer shown on the map and no longer shown in Table 3-1.	Not applicable to LSE-JC
6	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 11	Pedestrians: Include a key connection in the pedestrian network, which is the opportunity for pedestrians to cross from Liberty Village to Exhibition Place through the station.	Noted, the pedestrian connection through the station tunnel will be described in the updated memorandum	?	P	References to missing pedestrian link added in Figure 3-1.	Not applicable to LSE-JC
7	City Planning	Draft Traffic and Transportation Memo	Figure 3-2, Page 12	Contrary to what is indicated in the memo and shown on the map, on-street bicycle infrastructure does exist on Dufferin Street, Saskatchewan Road, and Princes Boulevard within Exhibition Place.	The memo and specifically Figure 3-3 does not show on-street bicycle facilities on Dufferin Street, Saskatchewan Road, and Princess Boulevard. On-street bike facilities refer to a bike lane or cycle track. However, minor multi-use pathways are presented which do exist at the noted locations.	?	P	Do not understand the comment response; a map of the existing cycling network should show on-street bike lanes.	Not applicable to LSE-JC
8	City Planning	Draft Traffic and Transportation Memo	Section 2.2, Page 14	Transit: Include GO buses that use the Don Valley Parkway.	Noted, the GO buses that use the Don Valley Parkway will be described and presented in Figure 3-4 in the updated memorandum.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The Don Valley Parkway is not located in the Traffic and Transportation Study Area for Lakeshore East Joint Corridor Early Works.
9	City Planning	Draft Traffic and Transportation Memo	Figure 3-5, Page 16 Figure 3-8, Page 22	Include the critical pedestrian/cycling connection connecting Mill Street to the Lower Don Trail through Corktown Common and under the Richmond Hill GO corridor, which is missing from the map.	The noted trail, classified as "recreational trail", is presented in Figure 3-5 as a pedestrian facility. The connection to the Lower Don Trail includes a staircase which is why it's not displayed as a cycling facility.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The noted recreational trail is not located in the Traffic and Transportation Study Area for the Lakeshore East Joint Corridor Early Works.
10	City Planning	Draft Traffic and Transportation Memo	Figure 3-6, Page 19	Correct the route of the 505 Dundas streetcar on the map, which does not operate on Queen Street or Broadview Avenue south of Dundas.	Noted, the 505 Dundas street route will be updated in Figure 3-6 in the updated memorandum	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The 505 Dundas streetcar route does not operate in the Traffic and Transportation Study Area for the Lakeshore East Joint Corridor Early Works.
11	City Planning	Draft Traffic and Transportation Memo	Section 3.1, Page 29	Include potential mitigation measures such as consideration of contractual financial incentives to minimize the duration and extent of disruptions to roads, sidewalks, bike lanes, and property accesses. Such measures could include a lane rental system, or door closure charges.	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible. Ontario Line early works are not intended to be procured under the P3 framework, and therefore, financial incentives to be included into the project agreement/contract are not standard practice.
12	City Planning	Draft Traffic and Transportation Memo	Section 3.2, Page 31	Confirm that potential impacts for the Don Crossing early works will not include closures of the Don Valley Parkway; they are not indicated in the discussion of potential impacts.	Comments regarding the Lower Don Bridges early works will be responded to at a later date as Lower Don Bridges early works scope has not been confirmed.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	The Don Valley Parkway is not located in the Traffic and Transportation Study Area for the Lakeshore East Joint Corridor Early Works.
13	City Planning	Draft Natural Environment Report	General	Confirm whether the implementation of all mitigation measures identified in the report will be placed on the successful proponent as a contractual obligation. Confirm who will monitor and ensure that mitigation measures and monitoring protocols will be followed.	Mitigation measures identified through the Early Works Report will be carried through to contractual language to be implemented by the successful proponent. Metrolinx will monitor compliance during the construction stage.	?	C	Closed	
14	City Planning	Draft Natural Environment Report	General	Confirm whether the Don River crossing is anticipated to place any new structures such as piers or columns into the river that may alter flooding in the Don River valley. There does not appear to be any discussion in the report about impacts to flooding.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. However, information regarding hydrology and surface water will be added to the Lower Don Bridges Early Works Report.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Natural Environment Memo, to be reviewed when received.	Not applicable to LSE-JC

15	City Planning	Draft Natural Environment Report	General	Confirm whether the cumulative effects to the natural environment from multiple crossings of the Lower Don River immediately adjacent to each other will be studied (e.g. the existing rail bridge spans, two new Ontario Line bridges, various operational and decommissioned utility bridges), and whether there would be benefits to the natural environment and reduced flood risk from the consideration of an integrated crossing solution. Benefits of an integrated crossing to the natural environment (including flood risks in the Lower Don River valley) should be documented, along with any countervailing reasons if such a solution is not technically preferred.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. Response to this comment will be revisited as the Lower Don Bridges Early Works Report is released.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Natural Environment Memo, to be reviewed when received.	Not applicable to LSE-JC
16	City Planning	Draft Noise & Vibration Report	General	Confirm that proponents would be contractually obligated to adhere to the noise and vibration limits identified in the report, and that proponents would be required to model the noise and vibration impacts of their proposed solution and construction method for the evaluation of proposals. Confirm what party would be responsible for ensuring and monitoring that mitigation measures are being implemented. Despite the exemption provided to government work in noise by-laws, confirm that limiting the time and duration of construction activities can be considered as an appropriate mitigation measure in the development of a noise and vibration management strategy. Confirm that the cumulative effects of noise and vibration will be taken into account in crafting mitigation measures (e.g. where there are a large number of sensitive noise and vibration receptors such as in the Lakeshore East Joint Corridor).	Note that this report only addresses construction noise and vibration, operational noise and vibration will be addressed under separate cover. The construction contract will have noise and vibration limits as per Metrolinx standards. The proponent will work with Metrolinx to ensure that mitigation measures and committed noise levels are met during construction and operation. Detailed assessment by the proponent of their activities will determine the specific mitigation measures required to meet agreed upon construction noise and vibration limits.	?	D	C - for comment on construction noise and vibration. Provide Metrolinx construction noise and vibration standards for reference. D - comment on operational noise and vibration deferred to Operational N&V report which will be reviewed upon receipt.	Noted.
17	City Planning	Draft Noise & Vibration Report	Section 4	Identify the sensitive noise and vibration receptors indicated in the tables by their land use or building use.	Land use associated with each receptor is documented in Tables 5-1 and 5-2	?	C	Table 5-1 updated to include land use. Cannot locate Table 5-2, but we assume there are no sensitive vibration receptors based on the discussion in the text.	Land use associated with each receptor is documented in Table 5-1
18	City Planning	Draft Noise & Vibration Report	Appendix B	Ensure that the study area has been appropriately defined to capture the extent of potential noise and vibration impacts arising from construction. We are concerned that the study area has been too narrowly delineated with respect to the anticipated extent of the impacts, particularly around the Lakeshore East rail corridor segment where residential homes fronting onto Booth Avenue, in direct line of sight from construction activities, have been excluded from the study area.	Study area was determined based on the representative alignment outlined through the business case. Segments of the study area that have narrow extents represent areas in which there is certainty regarding the alignment whereas areas with a wider extent allow for flexibility in modifications to the alignment. Residential receptors on Booth Avenue are represented conservatively by the assessment of 2 Paisley Ave and 14 Wardell St assessment locations, which are considered the worst-case scenarios for noise and vibration within this segment.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Noise & Vibration Memo, to be reviewed when received.	Study area has been appropriately defined, consisting of the project footprint and a noise and vibration buffer to capture the full extent of noise and vibration impacts arising from construction.
19	City Planning	Draft Air Quality Memo	General	Confirm that proponents would be contractually obligated to adhere to the air quality limits identified in the report, and that proponents would be required to model the air quality impacts of their proposed solution and construction method for the evaluation of proposals. Confirm what party would be responsible for ensuring and monitoring that mitigation measures are being implemented.	Proponents will not be contractually obligated to adhere to the air quality limits identified in the report, as for certain contaminants background air quality levels are already higher than these same limits, making adherence impossible. Proponents will be required to follow mitigation outlined in Table 6-1, under Construction Air Quality which include Environment Canada's Best Practices for the Reduction of Air Emissions from Construction and Demolition Activities (2005), and MECP's Technical Bulletin Management Approaches for Industrial Fugitive Dust Sources.	?	C		
20	City Planning, Transit Implementation	Draft Early Works Report	Page 7, Figure 1-1	Ensure that the study area has been appropriately defined to account for the potential environmental impacts of the project. We are concerned that the study area has been too narrowly delineated with respect to the anticipated extent of the impacts, particularly along the Lakeshore East rail corridor, where some residential homes with direct line of sight to the construction have been excluded from the study area (e.g. homes fronting on Booth Avenue in front of Jimmy Simpson Park).	The study area varies for each discipline. The assessment limits/study area will be clarified in the revised report in Table 4-1.	?	C	Table 4-1 describes study areas for different disciplines.	

21	City Planning, Transit Implementation	Draft Early Works Report	Page 11, Figure 1-2	Confirm the Early Works construction footprint of Exhibition Station. The Early Works footprint shown on this map is not consistent with the extent of early works described at a meeting on June 18, 2020, which included a launch site and emergency exit building in Ordnance Park.	Project footprint for the Exhibition GO early works have been revised since the first draft circulated to the City and footprint shown in the revised reports is most up-to-date.	?	C	Conforms to most recent known project footprint.	
22	City Planning, Transit Implementation	Draft Early Works Report	Page 15, Section 2.2.1.1	Update the discussion on the 2014 Provincial Policy Statement, which is now out of date, to reflect the 2020 version.	This has been updated in the revised report to reference the 2020 PPS.	?	C	Updated as requested.	
23	City Planning, Transit Implementation	Draft Early Works Report	Page 16, Section 2.2.1.2	Correct the discussion on the Growth Plan; it does not describe Downtown Toronto as a priority transit corridor, but rather the GO lines and subway lines within Downtown.	This has been updated in the revised report to describe GO lines and subway lines as priority transit corridors.	?	C	Updated as requested.	
24	City Planning, Transit Implementation	Draft Early Works Report	Page 18, Section 2.2.2.1	Correct references to planning area boundaries in the report. The East Harbour Station is within the boundaries of the Unilever Precinct Secondary Plan, adopted by City Council in 2018. The Lower Don Crossing is partially within the boundaries of the Downtown Plan and the Unilever Precinct Secondary Plan, in addition to the King-Parliament Secondary Plan.	The East Harbour early works have been placed under separate cover in updated revisions of this report and as such, this reference has not been included.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Addressed. LSE JC EWR lists all relevant planning policies and projects in Section 2.
25	City Planning, Transit Implementation	Draft Early Works Report	Page 20, Section 3.2	Confirm whether the Ontario Line portals and any alterations to the Richmond Hill GO line are part of the early works.	Alterations to the Richmond Hill GO line are not anticipated as part of the Lower Don Bridges early works.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Alterations to the Richmond Hill GO line and Ontario Line Portal Structures are not part of the Lakeshore East Joint Corridor Early Works.
26	City Planning, Transit Implementation	Draft Early Works Report	Page 21, Section 3.3.1.3	Ensure all approved plans related to the Eastern Avenue bridge are captured in the discussion. The Eastern Avenue bridge is also subject to the Port Lands and South of Eastern Transportation and Servicing Master Plan EA. The new span must accommodate the widened right-of-way and new cross-section approved by City Council in adopting Phases 1 & 2 of that EA.	East Harbour Station is no longer being captured under this report. This comment will be revisited if future East Harbour studies are required for early works.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC
27	City Planning, Transit Implementation	Draft Early Works Report	Page 21, 3.3.1.4	Note in the document that the interim service road will be subject to removal and/or reconfiguration when the lands to the north side of the rail corridor are developed, and access to the station should be integrated with the streets and blocks plan of the development.	East Harbour Station is no longer being captured under this report. This comment will be revisited if future East Harbour studies are required for early works.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC
28	City Planning, Transit Implementation	Draft Early Works Report	Page 85, 95	Correct the references to Official Plan land use designations, noting that "Rail Corridor" is not a land use designation in the Official Plan.	This will be updated in the revised report.	?	O	Figure 5-12 still makes reference to Rail Corridors as a land use designation.	Addressed. LSE JC EWR lists all relevant planning policies and projects in Section 2.
29	City Planning, Transit Implementation	Draft Early Works Report	Section 4.5	Ensure consistency in the description of environmental conditions in the report. The descriptions of environment conditions are inconsistent with some describing the area while others are limited to the project footprint. This should extend also to adjacent areas beyond the footprint that may be impacted by the project.	The revised report will include clarification language regarding the environmental conditions study area and the Early Works project footprint/study areas.	?	C	Updated as requested.	
30	City Planning, Transit Implementation	Draft Early Works Report	Page 88, Section 4.5.2.1.3	Include a proper public realm description for the Lower Don Crossing, as there is existing the planned public space intersecting and adjacent to the project footprint, accessible from Corktown Common and the Lower Don Trail. Public realm characteristics by definition cannot be described as being similar to the built form characteristics.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC
31	City Planning, Transit Implementation	Draft Early Works Report	4.5.4.1.1	Correct the description for Queen Street East; it is not a gateway into the East York community, but rather into Leslieville and the Beach neighbourhoods of old Toronto.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Addressed in Section 5.6.1.1. of the Early Works Report.
32	City Planning, Transit Implementation	Draft Early Works Report	4.7.2	Note that the Lower Don River archaeology would be contained in the South Archaeological Assessment Phase 1 report, not the North report.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC
33	City Planning, Transit Implementation	Draft Early Works Report	4.8.1.2	Add reference to the 29 Dufferin bus which is missing from this analysis. A branch of this route serves Exhibition Place and travels along Manitoba Drive.	This will be updated in the revised report.	?	C	Updated as requested.	

34	City Planning, Transit Implementation	Draft Early Works Report	4.8.1.3	Should the report be expanded to include the Ordnance Park as an early works site, the cycling infrastructure should include the Fort York pedestrian/ cycle bridge and related infrastructure connections. The waterfront Martin Goodman Trail also travels immediately south of Exhibition Place along Lake Shore Boulevard.	Ordnance Park is outside the study area of the Exhibition Station early work and as such, has not been included within the report.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.	
35	City Planning, Transit Implementation	Draft Early Works Report	Page 122, Figure 4-23	Correct the map which is missing the Fort York pedestrian/cycle bridge and associated connections between Wellington Street and Garrison Road as an existing pedestrian route.	The Fort York Pedestrian/Cycling bridge is outside the Exhibition Station early works study area and as such, has not been included.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.	
36	City Planning, Transit Implementation	Draft Early Works Report	Page 123, Figure 4-24	Correct the map which is missing the Fort York pedestrian/cycle bridge and associated connections between Wellington Street and Garrison Road as an existing cycling route. Bike lanes on Princes Boulevard and Saskatchewan Road are missing from the map.	The Fort York Pedestrian/Cycling bridge is outside the Exhibition Station early works study area and as such, has not been included.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.	
37	City Planning, Transit Implementation	Draft Early Works Report	Page 133, Figure 4-29	Correct the map which is missing a critical cycling connection from the intersection of Bayview Avenue and Mill Street, through Corktown Common, under the Richmond Hill GO corridor, connecting to the Lower Don Trail.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC
38	City Planning, Transit Implementation	Draft Early Works Report	Page 163, Table 5-4	Confirm whether the removal of vegetation communities includes vegetation currently along the rail embankment, and whether mitigation will consider replacing this vegetation for ecological and visual reasons.	Vegetation clearing can encompass any and all of the vegetation within the Project Footprint including hedgerows and other vegetation communities along the rail corridor. Metrolinx will compensate for tree removals undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	D	Despite provided comment response, does not apply to Exhibition Station in the main. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Vegetation clearing can encompass any and all of the vegetation within the Project Footprint including hedgerows and other vegetation communities along the rail corridor. Metrolinx will compensate for tree removals undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020). The LSE JC EWR reflects the most recent information provided in the LSE JC Natural Environment Report.
39	City Planning, Transit Implementation	Draft Early Works Report	5.4.1	For ease of reference, indicate in each table what the sensitive receptor being measured to is (e.g. what the sensitive use in each building or property is).	The receptors will be identified by land or building use in the revised report.	?	O	Sensitive receptors described for some impacts (e.g. air quality) but not others (e.g. noise and vibration) despite this change having been in accompanying technical memos.	Sensitive receptors for Air Quality are defined in Section 4.4.2 and Section 5.4 of the EWR, and the nearest representative noise sensitive receptors are outlined in Section 5.1 of the Noise and Vibration Report.
40	City Planning, Transit Implementation	Draft Early Works Report	Page 207-211, Table 5-14	Provide an opinion whether the mitigation measures proposed can be expected to bring noise and vibration levels within acceptable limits. Confirm that a method of constructing the project exists that can bring noise and vibration levels within acceptable limits. Confirm number of buildings/homes affected by the "zones of influence" for each early works area (and estimated population or number of workers if available).	Noise and vibration limits will be included as part of contract documents. Metrolinx will work with contractors to ensure that committed mitigation measures are implemented. Mitigation is determined based on worst case receptor locations not on the basis of the number of affected properties, however figures for both noise and vibration will be provided in the updated report from which numbers of buildings may be identified.	?	P	Cannot locate mention in report of including noise and vibration limits in contract documents as a mitigation measure in Section 6.5 or Table 6-5.	The Lakeshore East Joint Corridor Early Works Report includes mitigation within Table 6-1 which states that project-specific construction noise and vibration limits will be established.
41	City Planning, Transit Implementation	Draft Early Works Report	Page 213-215, Table 5-15	Include social equity impacts and mitigation measures (i.e. whether certain communities experiencing social inequality are impacted greater). Walkways must be universally accessible AODA-compliant even during construction. For transportation networks, ensure that two parallel collector/arterial routes are not closed at the same time, and transit diversions do not affect two parallel transit routes at the same time.	Mitigation regarding AODA-compliant walkways and parallel transportation connections will be added to the revised report. Review of impacts to human environments from a gender and equity lens are not typically included within provincial environmental assessment processes. Ontario Line impacts are being assessed in accordance with O. Reg. 341/20 under the Environmental Assessment Act. The applicable impact assessment framework does not have a requirement for transit project evaluation through an equity and gender lens.	?	C	Further discussion on social equity impacts for provincial projects are being taken up in alternate venues.	
42	City Planning, Transit Implementation	Draft Early Works Report	Page 216, 5.5.1.1	Include financial incentives in the construction contract to minimize the duration of access being restricted to driveways and building entrances.	Financial incentives are not typically included as mitigation measures in environmental assessment documents, and as such, have not been included. Metrolinx remains committed to reducing impacts to the traffic and transportation network during construction and will ensure appropriate traffic management plans are developed prior to construction to manage impacts.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible. Ontario Line early works are not intended to be procured under the P3 framework, and therefore, financial incentives to be included into the project agreement/contract are not standard practice.

43	City Planning, Transit Implementation	Draft Early Works Report	Page 216-217, 5.5.1.2, Page 231, 5.8.1.1	Include financial incentives in the construction contract to minimize the duration of road/lane closures (e.g. lane rental system with sufficiently high lane occupancy fees).	Financial incentives are not typically included as mitigation measures in environmental assessment documents, and as such, have not been included. Metrolinx remains committed to reducing impacts to the traffic and transportation network during construction and will ensure appropriate traffic management plans are developed prior to construction to manage impacts.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible. Ontario Line early works are not intended to be procured under the P3 framework, and therefore, financial incentives to be included into the project agreement/contract are not standard practice.
44	City Planning, Transit Implementation	Draft Early Works Report	Page 217, 5.5.1.3	Public realm impacts should include construction activity potentially disturbing streetscaping materials, furniture, landscaping in the public realm. Requiring restoration to current standards would be an appropriate mitigation measure. Public realm impacts should also include the potential for design incongruity between the architectural styles of the existing underpass and the new Ontario Line bridges, and the impact the greater extent of underpass length has on the pedestrian environment in terms of safety and comfort. Mitigation measures to coordinate and improve design would be an appropriate response.	Public realm impacts such as construction activities potentially disturbing streetscape materials, furniture, and landscaping have been added to the revised report. Public realm impacts suggested such as designing for congruence between architectural styles of existing infrastructure are not typically included as impacts/mitigation however, Metrolinx will work with architectural design specialists to ensure the materials and design of the proposed bridge at the Lower Don Bridges early works complements surrounding infrastructure.	?	D	Public realm impacts should be restored to the current City standard, not to existing conditions.	Language has been included in Table 6-6 of the LSE-JC Early Works Report to note that wherever feasible, lands impacted by construction will be restored to the current City of Toronto standards following construction completion.
45	City Planning, Transit Implementation	Draft Early Works Report	Page 217, 218, 5.5.2	Include the Jimmy Simpson Recreation Centre as a community or recreational amenity that may be impacted. Include the Fontbonne Ministries Mustard Seed operation on Strange Street as potentially impacted.	The Lakeshore East early works have been placed under separate cover in updated revisions of this report however, Jimmy Simpson Recreation Centre and Fontbonne Ministries will be included in report documentation.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Jimmie Simpson Recreation Centre is included as a community resource within the Lakeshore East Joint Corridor Socio-economic and Land Use Characteristics Study Area in Table 5-11.
46	City Planning, Transit Implementation	Draft Early Works Report	OLS-024, Page 221	Note the existing plan to move the Cherry Street interlocking tower as part of the extension of the Cherry streetcar tracks to the south.	This will be reviewed and updated as appropriate.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC
47	City Planning, Transit Implementation	Draft Early Works Report	Page 236, 5.8.2.3	Correct the reference to Exhibition Station, as this section deals with the Lower Don crossing.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	Not applicable to LSE-JC
48	City Planning, Transit Implementation	Draft Early Works Report	General	Confirm whether potential impacts to flood risks in the Don River Valley were studied, or whether this will be studied under separate cover. See comments under Natural Environment Report for greater detail.	Impacts to flood risks in the Don River Valley were not assessed as part of the Environmental Conditions Reporting. Once a route alignment has been identified, Project-specific impacts including floodplain impacts/flood risks will be assessed in consultation with the TRCA.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	A comprehensive flood modelling exercise is being undertaken in support of the Ontario Line project, and Metrolinx will continue to consult with the City of Toronto, TRCA, and Waterfront Toronto.
49	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	Section 2 Methodology and Approach, page 10	CHERs should be undertaken for those properties warranting it. The report notes that "it is not necessary to recommend an individual Cultural Heritage Evaluation Report (CHER) be undertaken to re-apply O. Reg. 9/06 to these properties." While a CHER may not be necessary for each property, some properties may warrant a CHER being undertaken, for example properties designated under OHA prior to O. Reg 9/06 taking effect. It should also be acknowledges that CHERs will be provided for properties identified as potential built heritage resources identified during field review.	No CHER will be completed outside of this report/the future Heritage Detailed Design Report (HDDR). The HDDR will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent. Cultural Heritage Reports and Heritage Detailed Design Reports will meet Metrolinx obligations under the Ontario Heritage Act. The Ontario Line Cultural Heritage Report (currently available on our website (https://www.metrolinxengage.com/sites/default/files/rpt_2020-09-03_ol_ec_cultural_heritage_60611173_optimized_locked.pdf)) documents sufficient detail for the purposes of documenting cultural heritage value or interest for any properties identified as retaining potential during field review. The details from the OL CHR have been carried to the Early Works Heritage Detailed Design Report. Note, the original Early Works report reviewed by the City has been refined to an HDDR with project-specific impacts based on concept design, and more detailed mitigation (in place of an HIA).	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.

50	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts, page 33	Undertake and complete Heritage Impact Assessments prior to detailed design and reviewed by City of Toronto Heritage Planning and subject to staff delegated or Council decision under the Ontario Heritage Act and Municipal Code. The report indicates that the intent of the Cultural Heritage Report impact assessment is to "provide sufficient discussion of potential impacts to inform project planning to avoid, to the greatest extent possible, undertaking additional HIAs of individual properties." Properties that are identified as built heritage resources warrant Heritage Impact Assessments if they are to be altered or demolished as a result of project activities.	Heritage Detailed Design report(s) will be prepared by Metrolinx and/or Project Co(s), once a preferred alignment has been identified and/or detailed design has commenced. The report(s) will document the review of the preferred alignment and/or detailed design as it relates to the Cultural Heritage Report, refine project-specific impacts and mitigation measures, identify any changes, and, where required, describe how any conditions attached to the Minister's Consent will be met, based on the proposed/recommended design. The HDDR will also include any impacts on a known or potential built heritage resource or cultural heritage landscape that were not anticipated or described in the Cultural Heritage Report. In this instance, the Heritage Detailed Design Report will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.
51	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts, page 34	Clarify the scope of Heritage Detailed Design Reports. With the assertion that only properties meeting 10/06 criteria will be subject to further study through a Heritage Detailed Design Report, clarification is needed on how identified built heritage resources not classified as meeting 10/06 criteria may be further evaluated and how their identified cultural heritage values will be incorporated in the overall evaluation of alternatives and identification of the preferred alignment. Details on how potential project impacts on their cultural heritage value will be mitigated through the detailed design process are also needed. The Impact Tables in this Report should be revised once the preferred alignment has been identified and subject to further consultation with the City of Toronto Heritage Planning.	Heritage Detailed Design report(s) will be prepared by Metrolinx and/or Project Co(s), once a preferred alignment has been identified and/or detailed design has commenced. The report(s) will document the review of the preferred alignment and/or detailed design as it relates to the Cultural Heritage Report, refine project-specific impacts and mitigation measures, identify any changes, and, where required, describe how any conditions attached to the Minister's Consent will be met, based on the proposed/recommended design. The HDDR will also include any impacts on a known or potential built heritage resource or cultural heritage landscape that were not anticipated or described in the Cultural Heritage Report. In this instance, the Heritage Detailed Design Report will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent. Further, the HDDR will document refined project-specific impacts to all heritage properties (not just 10/06) based on the preferred alignment/detailed design. Project-specific impacts will be refined during detailed design, using the Cultural Heritage Report and documented in the HDDR.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	Comment noted. Metrolinx looks forward to continued discussions and feedback from the City and Heritage Preservation Services as the project planning progresses.
52	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts	Summarize how many built heritage resources are proposed to be impacted and the expected nature of the impacts (type and description of anticipated impact) to understand the overall impacts the alignment will have on built heritage resources, due to the complexity and size of the Impact Tables. It needs to be made clear which and how many built heritage resources are anticipated to be demolished or altered due to the alignment. Similarly, there is a need to summarize how many, and which, identified built heritage resources will not be impacted by the current alignment.	As noted in comment response #1, this report documents all known or potential built heritage resources within the study area and includes a range of preliminary impacts and mitigation measures for each built heritage resource. Once an alignment has been selected and/or detailed design is prepared, project-specific impacts will be documented in the HDDR, specifying the number of cultural heritage resources expected to be demolished or altered.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.
53	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	For all Impact Tables, the proposed mitigation measure should be revised to include completion of a Cultural Heritage Evaluation Report, Heritage Impact Assessment and associated Strategic Conservation Plan, required when any physical impacts to a cultural heritage resource or its heritage attributes are anticipated. These should be completed prior to Detailed Design and circulated to Heritage Planning for review and comment.	Refer to comment responses #2 and #3. Further, recommendations for SCPs are noted within the report impact tables where an SCP would be warranted.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	Comment noted. Metrolinx looks forward to continued discussions and feedback from the City and Heritage Preservation Services as the project planning progresses.
54	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	Revise all Impacts Tables to clarify when in the process the City of Toronto Heritage Planning unit will be consulted on the proposed mitigation measures if it is not possible to avoid impact to an identified cultural heritage resource and its heritage attributes. Consultation should occur prior to Detailed Design.	Language in report will be revised to more clearly include consultation with the City of Toronto Heritage Planning unit and specify timing for consultation with City.	?	C	Consultation with Heritage Planning is noted where a direct adverse impact has been identified.	

55	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	Revise the alternatives in all Impact Tables to also include consultation with the Toronto Preservation Board and City Council where applicable. Heritage Planning notes that properties not yet owned by Metrolinx are not exempt from Municipal process and legislation under the Ontario Heritage Act and Municipal Code.	Metrolinx as a Crown Agency of the Province of Ontario is exempt from certain municipal processes and requirements. In these instances, Metrolinx will engage with the City to incorporate municipal requirements as a best practice, where practical, and may obtain associated permits and approvals. Consultation with the City of Toronto Heritage Preservation Services has been included in the report for all impacted heritage properties.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	Comment noted. Metrolinx looks forward to continued discussions and feedback from the City and Heritage Preservation Services as the project planning progresses.
56	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	5. Community Engagement	Heritage Planning acknowledges that the Metrolinx data request was not able to be completed prior to the draft of this report due to the on-going COVID-10 global pandemic and lack of remote access to property databases for City staff.	Comment noted.	?	C		
57	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	5. Community Engagement	Identify how and when broader public engagement will occur, given the proposed impacts on a number of identified municipally/locally significant cultural heritage resources, in addition to any as yet unidentified resources. This section should clarify and identify what other non-governmental heritage organizations, HCD advisory committees, and community stakeholders have been included in engagement.	Public engagement is currently underway for the broader Ontario Line Environmental Conditions Report including all properties that are documented in the Draft Early Works HDDR. Further, the Draft HDDR will be released for public review and any comments received during the Draft OL ECR and Draft Early Works HDDR will be reviewed. Any updates required in either report will be made and reissued for final OL ECR and Early Works HDDR.	?	P	Not fully addressed in the draft HDDR.	The LSE-JC Early Works Report references cultural heritage documentation developed as part of the Ontario Line Environmental Conditions Report, which included consultation with the local community. The Draft LSE-JC Early Works Report will also be made public for review, and any comments on cultural heritage will be included as part of the consultation record.
58	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	6.2 Next Steps, page 49	Provide confirmation as to which properties will be subject to a Heritage Detailed Design Report. These reports are to be shared with MHSTCI for its records. These reports should also be shared with the City of Toronto Heritage Planning unit.	The HDDR will document project-specific impacts and mitigation/next steps for known and potential cultural heritage resources that are proposed to be impacted by the project footprint.	?	C	request list of specific properties?	
59	City Planning	Lower Don Bridges HDDR	General	Heritage Planning staff have reviewed the Lower Don Bridges HDDR and have no concerns with the findings/proposed mitigation measures.	Acknowledged.	?	C		
60	City Planning	Exhibition Early Works HDDR	General	Heritage Planning staff have reviewed the Exhibition Early Works HDDR and, on the understanding that a subsequent report will be prepared for the Exhibition Station South Civils works, have no concerns with the findings/proposed mitigation measures. The report should acknowledge that follow-on works at Exhibition Station will potentially have impacts to the other heritage buildings listed in this report (i.e. buildings identified as having heritage value aside from 1 Atlantic Avenue) rather than saying there is no impact; it is odd to ignore this knowing that the early works are directly linked to future works that are part of the same project which are currently planned to impact these buildings. The City agrees with the detailed documentation and commemorative signage proposed for 1 Atlantic Avenue in the mitigation measures.	Comment noted, in the revised report, it is noted that follow-on works at Exhibition Station may have potential impacts to other heritage buildings listed in this report and will be assessed under separate cover.	?	O	Cannot locate any discussion or mention of potential impacts to heritage resources from follow-on works associated with the early works in Section 5 of the revised report. Recommend including such a statement in the introduction to Section 5.	Not applicable to LSE-JC
ADDITIONAL COMMENTS (DECEMBER 2020)									
1	City Planning	Draft Exhibition Station Early Works Report	Table 3-1	Confirm whether the demolition plan for 1 Atlantic Avenue includes the chimneys and accessory buildings associated with the main building. The text in Table 6-7 appears to leave open the possibility but is not definitive.	The chimney and accessory buildings at 1 Atlantic Avenue will not be affected by the Exhibition Station early works.				Not applicable to LSE-JC
2	City Planning	Draft Exhibition Station Early Works Report	Section 2.2.3.2	Recommend describing the conceptual alignment for the Waterfront LRT in the Exhibition Station area and its relationship to the Early Works program.	The Waterfront LRT project will be added to Section 2.2.3.2 in the Final EWR.				Not applicable to LSE-JC
3	City Planning	Draft Exhibition Station Early Works Report	Table 6-6	Public realm impacts - Lands impacted by construction should be restored to the current City standard following construction completion, not to the existing condition. This has been the standard agreement on previous Metrolinx projects (e.g. Eglinton Crosstown LRT).	Comment noted. In the Final EWR, language will be added to clarify that lands impacted by construction will be restored to current City standards following construction.				Not applicable to LSE-JC

4	City Planning	Draft Exhibition Station Early Works Report	Table 6-9	Active transportation - Confirm whether pedestrian impacts are still anticipated to the existing tunnel for transit passengers or through users, and if so what mitigation measures are in place to maintain accessible pedestrian routes to and through the station during construction.	No impacts to pedestrian access via the existing tunnel are anticipated. This will be clarified in the Final EWR.				Not applicable to LSE-JC

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	September 2021 Revised Response LSE-JC
1	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Temporary Pedestrian Bridge, Pg. 18	"Temporary Pedestrian Bridge will not be fully accessible" Please elaborate this text. Discuss why this will not be fully accessible. What are the restrictions?	Not applicable to LSE-JC
2	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.1, Road, Pg.27	"Atlantic Avenue is a north-south collector road with a two-lane cross-section." Edit to: Atlantic Road is a north-south collector road, between King Street and Liberty Street and has a regulatory 50 km/h speed limit.	Not applicable to LSE-JC
3	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.1, Road, Pg.27	"Between the south end of Atlantic Avenue and Liberty Street, Atlantic Avenue has a posted speed of 30 km/h and on-street parking is prohibited on the west side of the street." Edit to: "Between the south end of Atlantic Avenue and Liberty Street, Atlantic Avenue is a local road and has a posted speed of 30 km/h. On-street parking is prohibited on the west side of the street."	Not applicable to LSE-JC
4	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.1, Road, Pg.27	"Jefferson Avenue is a north-south collector road with a two-lane cross-section." Edit to:"Jefferson Avenue is a north-south local road with a two-lane cross-section."	Not applicable to LSE-JC
5	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.1, Road, Pg.27	"Manitoba Drive is an east-west collector road" - Manitoba Drive is a Park road. Please update this	Not applicable to LSE-JC
6	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.1, Road, Pg.27	Please discuss traffic bylaw "Parking Machine" on Atlantic Avenue and Jefferson Avenue"	Not applicable to LSE-JC

7	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Table 3-1, Existing Transit Routes within the Exhibition Station Study Area, Pg.31	- Please include OFF peak service if any. - For AM/PM/OFF peak period, indicate what specific hour periods it refers to.	Not applicable to LSE-JC
8	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.2 Active Transportation, Pg.28	" <i>painted crosswalks are provided across all legs of the signalized intersections located within the Exhibition Station Study Area</i> " - Please indicate what signalized intersections are located within the Exhibition Station Study Area. - Include those intersections in figure 3-1.	Not applicable to LSE-JC
9	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 4, Potential Impacts, Mitigation Measures and Monitoring Activities, Pg.35	Please confirm and coordinate if there will be any other construction projects in the vicinity of Ontario Line Exhibition Station work. Are all other planned projects nearby with construction timelines that potentially overlap with the Exhibition Station early works considered in this traffic assessment report? Please clarify.	Not applicable to LSE-JC
10	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 4, Potential Impacts, Mitigation Measures and Monitoring Activities, Pg.35	Please discuss affect on existing parking lots on both sides of Atlantic Ave. - By removing the parking lots, the City loses revenue and Metrolinx contractor will have to compensate for that all accesses to be maintained.	Not applicable to LSE-JC
11	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 4, Potential Impacts, Mitigation Measures and Monitoring Activities, Pg.35	Please discuss if there will any affect on Manitoba Dr and Nova Scotia Ave during construction.	Not applicable to LSE-JC
12	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Table 4-1, Pg.36	Please move this table at the end of the section 4.	Not applicable to LSE-JC

Ontario Line - City of Toronto Early Works Report Comments				Project Name: Ontario Line	Revised By:					
				Project No:	Date In:					
				Date Out: January 5, 2021						
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	September 2021 Revised Response LSE-JC	
1	LAU	Draft Traffic Memo	General	Any impacts to City parkland/natural areas as a result of this project requires complete coordination with Parks Capital's Construction schedule as outlined in PFR approved Capital budget. Schedule and duration of impacted park lands to be provided.	Comment noted, the Exhibition Station early works Project Footprint does not currently include any City parkland or natural areas. However, should project footprint change in the future and impacts to parkland and natural areas are identified, Metrolinx will continue to engage the City of Toronto.	?	C	We note Mx response and will continue to comment as the project progresses.	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the Lakeshore East Joint Corridor Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress.	
2	Urban Forestry	Draft NER	Parks - Moss Park	All mitigation measures will be explored to minimize the project impacts to this site.	Metrolinx is committed to minimizing impacts to parkland wherever possible and will explore all options to minimize project impacts to Moss Park. As project planning and design progresses, any impacts identified to Moss Park will be documented within the Environmental Impact Assessment Report and appropriate mitigation will be prescribed.	?	C	Closed		
3	RNFP	Draft NER	draft EPR - general	Submit a Natural Heritage Impact Study	Natural heritage impacts will be documented as part of the Environmental Impact Assessment Report, under separate cover.	?	C	Closed		
4	RNFP	Draft NER	Natural Environment Early Works - 4.2	Metrolinx must apply for and obtain a permit from RNFP for any trees/vegetation/soil impacts regulated under Bylaw 658 on city and private lands.	Metrolinx will continue to engage with the City of Toronto as project planning and design progress, including with regard to tree injury/removal permits as required.	?	C	Closed		
5	Urban Forestry	Draft NER	Natural Environment Early Works - Section 6 - permit requirements - table 6-1	Under Municipal, add Bylaw 813, 658 and 608 in table 6-1. Revise and add text sections accordingly in section 6.	As noted in Table 6-1 the activities at the Exhibition Station early works study area are not within the City of Toronto NHS or RNFP policy areas. Compensation for tree removal on private/city lands will follow the Metrolinx Vegetation Guideline (2020), which notes that compensation for trees on private/city lands will follow all applicable bylaws and regulations.	?	C	Closed		
6	LAU	Draft N&V Report	General	How does the rail corridor expansion in the Lakeshore East Joint Corridor works footprint affect impacted park lands/natural areas for grading, retaining walls, noise barriers, etc in the interim and permanently?	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. Response to this comment will be revisited as the Lower Don Bridges Early Works Report is released.	?	O	The Lakeshore East Joint Corridor works is more than just the Lower Don Bridges. PFR is requesting for more detailed information on the scope of impacts to affect parkland for the full scope from Gerrard to Lower Don Bridges both interim and permanent in order for Parks to undertake a comprehensive assessment	The conceptual design figure appended to the draft LSE-JC Early Works Report shows impacted parkland and natural areas within the LSE-JC project footprint. Lakeshore East Joint Corridor early works will mostly occur within the existing rail corridor and will avoid impacts to parklands where feasible. Metrolinx has and will continue engaging with the City as project planning and design progress.	
7	LAU	Draft N&V Report	4.6 Impact Assessment LEJC	Jimmie Simpson Recreation Centre shall be reviewed for noise and vibration and added to Table4-7 and Figure1-04 to be representative of the worst case locations along the Early Works project footprint as works are proposed in very close proximity to the Recreation Centre.	Typically recreation centres are not considered noise or vibration sensitive receptors, however the building will be considered in assessment of construction vibration impacts.	?	O	Upon review of the revised report, City may provide additional comments. Due to the proposed scope of works directly adjacent to Jimmie Simpson RC, PFR considers this as a sensitive vibration receptor.	Given Jimmie Simpson Recreation Centre's immediate proximity to the project alignment, it will be considered as a vibration sensitive receptor as part of the Lakeshore East Joint Corridor operations vibration impact assessment.	
8	Urban Forestry	Draft EWR	general	The Lower Don River Crossing works overlaps with the USRC Wilson yard/HONI relocation works. Are we to assume that the trees and vegetation will be non-existent like the Lakeshore East shared corridor for the purposes of tree inventory and arborist report?	The Lower Don Bridges early works will build on existing environmental work completed for the Wilson Yard/HONI relocation works. Metrolinx will be removing vegetation within its right-of-way in accordance with the Metrolinx Vegetation Guideline (2020).	?	C	Closed		

9	Urban Forestry	Draft EWR	Draft early works report, 5.9 - Utilities	Confirm tree and vegetation impacts during detailed design. A permit application for injury or removal may be required if regulated under a municipal bylaw	Tree and vegetation impacts will be confirmed during the detailed design phase. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	C	Closed	
10	Urban Forestry	Draft EWR	Draft Early Works Report, 6.1.3 - Municipal permits	Permits are required for trees and vegetation that are regulated under Bylaw 813, 658 and 608. Compensation shall be in accordance with applicable bylaw. The Arborist Report and supporting documentation will be reviewed and revised when submitted.	An Arborist Report will be prepared in accordance with Table 6-1 and 6-2. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	C	Closed	
11	Urban Forestry	Draft EWR	Draft Early Works Report, 6.1.3 - Municipal permits	Delete timeline information for permit application processing as it is conditional on satisfactory and approved documentation. These revisions may take several weeks before an application will be reviewed.	This will be removed in the revised report.	?	C	Closed	
12	RNFP	Draft EWR	Draft Early Works Report, 6.1.4	Submit Voluntary Process Review Letter	Metrolinx will continue to engage TRCA through the VPR process.	?	P	Once TRCA's VPR letter has been given to Metrolinx, please submit to the city for review	Comment noted. Metrolinx is continuing to work with TRCA where the project intersects with TRCA regulated lands.
13	RNFP	Draft EWR	Draft Early Works Report, table 6-1	Submit Erosion & Sediment Control Plan	An Erosion and Sediment Control Plan will be prepared in accordance with Table 6-2. This will be circulated to the City prior to construction.	?	C	Closed	
14	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Submit an Arborist Report with updated tree inventory. Tree inventory shall also confirm the presence of butternut inspected in 2017 in the East Harbour Stn	An Arborist Report will be prepared in accordance with Table 6-1 and 6-2. This will be circulated to the City once available. The butternut in question at East Harbour Station was determined to be misidentified, and is a black walnut.	?	C	Closed	
15	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Submit Spill Prevention & Response Plan	A Spill Prevention and Response Plan will be prepared in accordance with Table 6-2 and 6-3. This will be circulated to the City prior to construction.	?	C	Closed	
16	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Metrolinx' Vegetation Guideline is currently under review by staff in Parks, Recreation and Forestry. Compensation will be to the approval and satisfaction of PFR and in accordance to the applicable bylaw. Any revisions to the document will apply to the current project	Noted.	?	C	Closed	
17	LAU	Draft EWR	General	Any impacts to City parkland as a result of this project requires complete coordination with Parks Capital's Construction schedule as outlined in PFR approved Capital budget. Schedule and duration of impacted park lands to be provided.	Noted. Impacts to parkland are not anticipated as part of the Exhibition Station Early Works.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. PFR is requesting a full summary (table format) of each segment and the park impacts both temporary and permanent progress.	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the LSE-JC Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress.
18	LAU	Draft EWR	3. Description of the Early Works	We are not in support of loss of park lands. What alternatives has Mx compiled? What lands does Mx have for a potential land swap?	Noted. Impacts to parkland are not anticipated as part of the Exhibition Station Early Works.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. In order to advance this discussion, Mx to provide a full summary of anticipated parkland impacts. Will methods for parkland compensation be discussed in the Early Works report?	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the LSE-JC Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress. Lakeshore East Joint Corridor early works will mostly occur within the existing rail corridor and will avoid impacts to parkland where possible.
19	LAU	Draft EWR	4.5 Socio-Economic and Land Use Characteristics	Lower Don River Crossing - there are recreational uses and park and open spaces in this footprint...Corktown Common Park, MUPs along the Lower Don River Trail, the Martin Goodman Trail, Lakeshore and Cherry St (see 4.8.2.3)	In updated revisions of the report, Lower Don early works has been split into a separate report however, the revised Lower Don Bridges early works report will include parks within the latest Lower Don Bridges study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Not applicable to LSE-JC
20	LAU	Draft EWR		Lower Don River Crossing - there are community groups and resources in this footprint	In updated revisions of the report, Lower Don early works has been split into a separate report however, the revised report will include community amenities within the latest Lower Don River Crossing study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Not applicable to LSE-JC

21	LAU	Draft EWR		Lakeshore East Joint Corridor - there are recreational uses and parks and open spaces in this footprint...Jimmie Simpson RC and Park, Bruce Mackey Park, McCleary Park, Saulter St Parkette, Gerrard-Carlaw Parkette	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include recreational uses and parks within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Recreational uses, parks and open spaces within the Lakeshore East Joint Corridor Socio-Economic and Land Use Characteristics Study Area are outlined in Table 5-10 of the Early Works Report.
22	LAU	Draft EWR		Lakeshore East Joint Corridor - there are community groups and resources in this footprint	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include community groups and resources within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Community groups and resources within the Lakeshore East Joint Corridor Socio-Economic and Land Use Characteristics Study Area are outlined in Table 5-11 of the Early Works Report.
23	LAU	Draft EWR		Lakeshore East Joint Corridor - all parks in and adjacent to this footprint to be labelled on Figure4-21	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include recreational uses and parks within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	All community amenities within the Lakeshore East Joint Socio-Economic and Land Use Characteristics Study Area are included in Figure 5-16 of the Early Works Report.
24	LAU	Draft EWR	4.6/5.6 Built Heritage Resources and Cultural Heritage Landscapes	Has a Cultural Heritage Assessment been completed for park lands that are proposed to be impacted? There is mention of Cultural Heritage Landscapes however where is the mapping - specifically does any park lands fall into CHL?	All lands within the Ontario Line Study Area, and subsequent Early Works footprint have been screened for known, previously assessed and potential BHR/CHLs. For the Ontario Line Project, any properties, including parks, were screened for BHRs and CHLs- Moss Park was included in the OL CHR and Bruce Mackey Park noted because of its heritage plaques and it contributes to the De Grassi Streetscape. Parks that are not known, previously identified or potential CHLs are included in the Natural Environment Report.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.
25	LAU	Draft EWR	Pg 115-116/227-229	DeGrassi Street has been noted as potential BHR/CHL and within EW-001 Bruce Mackey Park has been noted as having potential heritage attributes. Should 12 DeGrassi Street be proposed for demolition Mx shall acquire these lands to land swap with the City in exchange for impacts to Bruce Mackey Park and nearby park lands. Also, what is the impact to Bruce Mackey Park (and all other parks) to avoid vibration damage to buildings along EW-001 and elsewhere? Vibrating mitigating measures shall be implemented on the building or elsewhere and not on park lands.	The Lakeshore East Joint Corridor early works have been placed under separate cover in updated revisions of this report.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered. PFR to review environmental assessment report when available for further comment	The impacts to De Grassi Street from Queen Street to Wardell Street include encroachment into the streetscape causing physical impact to the streetscape, while avoiding physical impact to building and/or the heritage attributes. The plaques are heritage attributes of the public realm of the De Grassi Street streetscape. Metrolinx is committed to consulting with City of Toronto's Heritage Planning as planning progresses for any physical impacts to the streetscape and its heritage attributes (i.e. historical plaques). Steps will be applied during construction for the plaques to remain in-situ if possible.
26	LAU	Draft EWR	5.4 Noise and Vibration pg 201-202	Future Work shall include noise and vibration impact study to existing Jimmie Simpson Recreation Centre as works are proposed in very close proximity to the Recreation Centre.	Typically recreation centres are not considered noise or vibration sensitive developments, however the building will be considered in assessment of construction vibration impacts.	?	O	Upon review of the revised report, City may provide additional comments. Due to the proposed scope of works directly adjacent to Jimmie Simpson RC, PFR considers this as a sensitive vibration receptor.	Given Jimmie Simpson Recreation Centre's immediate proximity to the project alignment, it will be considered as a vibration sensitive receptor as part of the Lakeshore East Joint Corridor operations vibration impact assessment.
27	LAU	Draft EWR	5.4 and 5.5	How does the rail corridor expansion in the Lakeshore East Joint Corridor works footprint affect impacted park lands/natural areas for grading, retaining walls, noise barriers, etc in the interim and permanently?	Any potential impacts of Lakeshore East Joint Corridor Early Works will be presented under separate cover.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	Potential impacts to the natural environment are documented in Section 6.1 and potential impacts to the public realm are documented in Section 6.6 of the LSE-JC Early Works Report. Metrolinx will continue to engage with the City as project planning and design progress.
28	LAU	Draft CHR	General	Has a Cultural Heritage Assessment been completed for park lands that are proposed to be impacted?	All lands within the Ontario Line Study Area and subsequent Early Works footprint have been screened for known, previously assessed and potential BHR/CHLs. At this stage, impact scenarios have been outlined with recommended mitigation measures. Once an alignment is selected / detailed design is underway, a project-specific impact assessment will be undertaken and documented in a Heritage Detailed Design Report. This will include park lands that retain heritage value.	?	C	Closed	

29	LAU	Draft CHR	Pg 25	There is mention of Cultural Heritage Landscapes however where is the mapping - specifically does any park lands fall into CHL?	For the Ontario Line Project, any properties, including parks, were screened for BHRs and CHLs- Moss Park was included in the OL CHR and Bruce Mackay noted because of its heritage plaques and it contributes to the De Grassi Streetscape. Further detail on parks within the study area (from an ecological perspective) are documented in the Natural Environment Report.	?	P	We note Bruce Mackey was mentioned in the report however Moss Pass appeared to be overlooked. Provide section of the report speaking to Moss Park and supplementary mapping.	The Lakeshore East Joint Corridor Heritage Detailed Design Report (HDDR) screened and evaluated both built heritage resources and cultural heritage landscapes within the Project study area. Findings can be found in Table 6-7 of the early works report and details are found in the HDDR.
30	LAU	Draft CHR	Figure 6-4	All existing park lands within and adjacent to the Lakeshore East Joint Corridor Study Area to be noted in Figure6-4	As per comment response #2, parks within and adjacent to the Early Works footprints that retain heritage value (CHLs) are documented in this Cultural Heritage Report. Parks that are not CHLs are documented in the Natural Environment Report.	?	C	Closed	
31	LAU	Draft CHR	Pg 30, 43-45	DeGrassi Street has been noted as potential BHR/CHL and within EW-001 Bruce Mackey Park has been noted as having potential heritage attributes. Should 12 DeGrassi Street be proposed for demolition Mx shall acquire these lands to land swap with the City in exchange for impacts to Bruce Mackey Park and nearby park lands. Also, what is the impact to Bruce Mackey Park (and all other parks) to avoid vibration damage to buildings along EW-001 and elsewhere? Vibrating mitigating measures shall be implemented on the building or elsewhere and not on park lands.	The Lakeshore East Joint Corridor early works have been placed under separate cover in updated revisions of this report. This comment will be taken into account as environmental assessment reporting advances along the Lakeshore East joint corridor.	?	O	PFR to review environmental assessment report when available for further comment	The impacts to De Grassi Street from Queen Street to Wardell Street include encroachment into the streetscape causing physical impact to the streetscape, while avoiding physical impact to building and/or the heritage attributes. The plaques are heritage attributes of the public realm of the De Grassi Street streetscape. Metrolinx is committed to consulting with City of Toronto's Heritage Planning as planning progresses for any physical impacts to the streetscape and its heritage attributes (i.e. historical plaques). Steps will be applied during construction for the plaques to remain in-situ if feasible.
ADDITIONAL COMMENTS (DECEMBER 2020)									
32	LAU	Draft EWR	Draft Exhibition Station Early Works Report	Parks has reviewed the Draft Exhibition Station Early Works Report and there does not appear to be any impacts to existing parkland within the Exhibition Station Early Works Project Footprint.	Comment noted.				Not applicable to LSE-JC

1	Toronto Fire Services	Draft Traffic Memo	Design Brief, Section 3 (pages 35-52)	The Design Brief document refers to mitigation measures for traffic/auto and makes reference to developing a Traffic Management Plan, to address issues related to travel and impacts of potential road restrictions/closures in and around each early works site. The description of potential impacts should be expanded to refer specifically to ensuring emergency access is maintained at all times. Responding emergency vehicles are unique users of the roadway and can have different needs/requirements than most other users and should be addressed separately.	Noted. Potential impacts to emergency vehicles will be reviewed and noted in the revised memorandum, and potential mitigation measures will be suggested at a high level, if/where required. The future Traffic Management Plan will address the specific needs of emergency services, including accessibility, once construction staging and road closures are confirmed.	?	D	Table 4-1 notes that Traffic Control Management Plan(s) will address specific emergency services requirements in consultation with the City of Toronto.	Language is included in Table 6-9 of the EWR.	
2	Toronto Fire Services	Draft EPR	Section 5.5	General: Traffic Control and Management Plan(s) are to be sent to Toronto Fire Services prior to any road closures to ensure that TFS personnel can review the affected area(s) and adjust their responses (as applicable).	Noted. The Traffic Management Plan(s) will be circulated to the City including TFS during construction planning.	?	D		Comment noted. Mitigation measures to consult with the City of Toronto on the transit and traffic management plans to address specific emergency services requirements is included in Table 6-9 of the LSE-JC EWR.	
3	Toronto Fire Services	Draft EPR	General	Utility relocations: Identify any fire hydrants that will be affected over the course of construction and confirm the remedial measures that will be put in place to ensure that hydrant coverage is maintained.	This will be confirmed as design progresses.	?	D		Metrolinx will be providing design submissions to the City for review and these plans will highlight any hydrant relocations if required.

Subject: RE: Ontario Line - Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report
Date: Wednesday, August 25, 2021 12:32:08 PM

Good afternoon,

Just wanted to follow up on the City's review of the Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Let me know if we should be expecting to receive any comments from the City on this report.

Thank-you,

Crystal Ho

Subject: Ontario Line - Draft Lakeshore East Joint Corridor Noise and Vibration Operations Report

Good afternoon,

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the following Dropbox link for review:

[REDACTED]

The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and GO rail where Ontario Line runs in parallel to GO tracks between the Ontario Line Don Yard Portal and Gerrard Portal.

Metrolinx welcomes any comments or feedback on the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Please provide these in writing no later than **August 24, 2021**.

Thank-you,

Bren Daner Lapuz

Subject: RE: OL - EWR and Discipline Reports - Comment Responses

Good morning Julia – thank you for passing these along. I can confirm receipt and our team will be drafting responses to the City's follow-up comments.

Following the original circulation of the early works report which covered all four early works locations (Exhibition, Lower Don Bridges, East Harbour, and Lakeshore East Joint Corridor), all packages were split into separate reports which will be circulated to the City when ready.

Regards,

MERLIN YUEN
T: 416.202.7353 C: 647.241.0823

Subject: RE: OL - EWR and Discipline Reports - Comment Responses

Merlin,

Attached please find our City follow-up comments regarding the OL Early Works and Technical Reports. For your reference, line items have been flagged as follows:

- C – Closed
- P – Pending incorporation (within the EWR process)
- D – Deferred (understood to be included in future phase, eg detailed design)
- O – Unresolved/Open (with "Follow-up Comments" in the next column)

Also please note that the Exhibition Station EWR (posted Nov 30, 2020 for 30-day review) covers only one of the four components that were included in the original draft report, and we hope to provide further feedback on other reports (Lower Don River Crossing, East Harbour and Lakeshore East Joint Corridor) as they become available.

Please feel free to contact me if there are any items you would like to discuss further.

Regards,

Julia Murnaghan
Senior Project Manager, Transit Expansion Office

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)
1	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Temporary Pedestrian Bridge, Pg. 18	<i>"Temporary Pedestrian Bridge will not be fully accessible"</i> Please elaborate this text. Discuss why this will not be fully accessible. What are the restrictions?		
2	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.1, Road, Pg.27	<i>"Atlantic Avenue is a north-south collector road with a two-lane cross-section."</i> Edit to: Atlantic Road is a north-south collector road, between King Street and Liberty Street and has a regulatory 50 km/h speed limit.		
3	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.1, Road, Pg.27	<i>"Between the south end of Atlantic Avenue and Liberty Street, Atlantic Avenue has a posted speed of 30 km/h and on-street parking is prohibited on the west side of the street."</i> Edit to: "Between the south end of Atlantic Avenue and Liberty Street, Atlantic Avenue is a local road and has a posted speed of 30 km/h. On-street parking is prohibited on the west side of the street."		
4	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.1, Road, Pg.27	<i>"Jefferson Avenue is a north-south collector road with a two-lane cross-section."</i> Edit to:"Jefferson Avenue is a north-south local road with a two-lane cross-section."		
5	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.1, Road, Pg.27	<i>"Manitoba Drive is an east-west collector road"</i> - Manitoba Drive is a Park road. Please update this		
6	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.1, Road, Pg.27	Please discuss traffic bylaw "Parking Machine" on Atlantic Avenue and Jefferson Avenue"		
7	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Table 3-1,Existing Transit Routes within the Exhibition Station Study Area, Pg.31	- Please include OFF peak service if any. - For AM/PM/OFF peak period, indicate what specific hour periods it refers to.		
8	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 3.1.2 Active Transportation, Pg.28	<i>"painted crosswalks are provided across all legs of the signalized intersections located within the Exhibition Station Study Area"</i> - Please indicate what signalized intersections are located within the Exhibition Station Study Area. - Include those intersections in figure 3-1.		
9	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 4, Potential Impacts, Mitigation Measures and Monitoring Activities, Pg.35	Please confirm and coordinate if there will be any other construction projects in the vicinity of Ontario Line Exhibition Station work. Are all other planned projects nearby with construction timelines that potentially overlap with the Exhibition Station early works considered in this traffic assessment report? Please clarify.		
10	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 4, Potential Impacts, Mitigation Measures and Monitoring Activities, Pg.35	Please discuss affect on existing parking lots on both sides of Atlantic Ave. - By removing the parking lots, the City loses revenue and Metrolinx contractor will have to compensate for that all accesses to be maintained.		

11	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 4, Potential Impacts, Mitigation Measures and Monitoring Activities, Pg.35	Please discuss if there will any affect on Manitoba Dr and Nova Scotia Ave during construction.		
12	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Table 4-1, Pg.36	Please move this table at the end of the section 4.		
13	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Table 4-1, Pg.36	<i>"Traffic Control Management Plan(s)"</i> Edit to: "Transit and Traffic Management Plans (TTMP)" - Please conduct package wide search and replace.		
14	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Table 4-1, Pg.36	Please include in the mitigation measure(s) for Transportation Network - Road. "A detailed traffic analysis will be conducted to consider the vehicular traffic congestion around the Station."		
15	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Table 4-1, Pg.36	Please include following in mitigation measures for Transportation Network - Road. "Traffic signal timing optimization may be assessed/implemented to increase capacity of affected intersections and to aid in the movement of traffic. Traffic signal timing adjustments would require coordination between Metrolinx and the relevant municipality, and will be undertaken if required, to determine appropriate changes to traffic signal timings."		
16	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Table 4-1, Pg.36	- Please include potential affect on Atlantic Ave on-street parking and paid parking (parking machines). - Please indicate in mitigation measures if this requires removal/relocation of on-street paid parking. - Please be advised that Council approval will be required for changes to bylaw, and - TPA will also need to be consulted.		
17	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 4, Potential Impacts, Mitigation Measures and Monitoring Activities, Pg.37	<i>"Exhibition Station early works may result in the removal/relocation of the existing bicycle parking racks and the Bike Share Toronto station on Atlantic Avenue"</i> - For future Bike Share Toronto Stations, locations should be identified and protected on the north and south station areas. The NACTO Bike Share Station Siting Guide can be consulted for location and design considerations. NACTO Bike Share Station Siting Guide https://nacto.org/wp-content/uploads/2016/04/NACTO-Bike-Share-Siting-Guide_FINAL.pdf		
18	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 4- Potential Impacts, Mitigation Measures and Monitoring Activities, Page 36	The mitigation measures which are identified in tables 4-1 are typical measures that are mostly used in transit projects. There is no specific measure defined especially for the Exhibition Station study area. Please clarify.		
19	Transit Infrastructure Projects - Transportation Services	Exhibition Station Early Work- Traffic and Transportation Report- Appendix A5-ol_ex_ewr_a5_traffic_draft	Section 4- Potential Impacts, Mitigation Measures and Monitoring Activities, Page 36	Please clarify how the proposed mitigation measures could be practical considering the limitations of the capacity of the roads and policies of the City.

Ontario Line - City of Toronto Early Works Report Comments				1 = Will comply	O = Open, not resolved				
				2 = Discuss, clarification required	P = Pending incorporation in design	, or D = Deferred to future phase			
				3 = Not applicable because	C = Closed, implementation complete				
Project Name: Ontario Line				Revised By:					
Project No:				Date In:					
				Date Out: January 5, 2021					
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	Response & Details (Authors -)
1	Transportation Expansion Office in consultation with LeighFisher	AQ Monitoring	Draft EWR, Sec 4.3, page 71	The report states that all contaminants of concern are monitored at the selected NAPS stations. Since PM10 is not monitored, how is this discrepancy addressed?	PM10 was not included in NAPS Station measurements, and therefore was estimated using PM2.5 measurements, assuming a ratio of 1 ug/m3 PM10 per 0.54 ug/m3 of PM2.5 as per Lal et. al, "Estimation of historical annual PM2.5 exposures for health effects assessment", Atmospheric Environment 38 (2004).	?	O	This methodology applies to estimation of PM2.5 from PM10 particles, not vice versa. What is the basis for assuming this ratio and is there comparable monitoring data nearby that supports this assumption? The approach undertaken is not standard practice.	
2	Transportation Expansion Office in consultation with LeighFisher	AQ Guidelines	Draft EWR, Sec 4.3, Table 4-14, p.72-73	Please explain why the AAQC PM2.5 standard not included?	The AAQC standard for PM2.5 (30 ug/m3 for a 24-hour averaging period) is less stringent than the CAAQS standard for the same averaging period (27 ug/m3) and was therefore excluded from Table 4-14.	?	C		
3	Transportation Expansion Office in consultation with LeighFisher	Air Quality Impacts	Draft EWR, Sec 5.3.1, p. 188	The impacts discussion is qualitative and high-level. The report should at a minimum discuss construction emissions estimates based upon construction equipment likely to be used, general timeline, and standard construction equipment emissions factors compared to baseline concentrations to indicate potential exceedances and areas for mitigation.	Details regarding construction duration and timeline are not available at this time and as such, construction emission estimates have not been included. The Air Quality Memo is based on the most up-to-date plans for design available at the time. Construction equipment and duration will be confirmed in future construction management plans.	?	C	It is noted assumptions have been made in this Early Works report. If these assumptions are exceeded, Metrolinx and ProjectCo are responsible for determining the additional mitigation measures required.	
4	Transportation Expansion Office in consultation with LeighFisher	Noise Impacts - Lower Don River Crossing	Draft EWR, 5.4.1.2.1, Noise, p.200	Report notes, "for the future 191 Mill Street location, noise levels are predicted to be near the daytime noise level limit for the corridor works, nearest to 191 Mill Street." They also exceed the night time criteria which is not mentioned. Please add this to the impact discussion.	This will be addressed in the revised report.	?	P	Pending review of the updated report.	
5	Transportation Expansion Office in consultation with LeighFisher	Noise Impacts - Lakeshore East Joint Corridor	Draft EWR, 5.4.1.4.1, Noise, p.202	Report notes, "the results in the above table indicate that predicted noise levels along the project footprint could be above the daytime noise level limit." The report should also indicate the potential for nighttime exceedances as nighttime nuisance can generally result in health effects and should be mitigated.	This will be addressed in the revised report.	?	P	Pending review of the updated report.	
6	Transportation Expansion Office in consultation with LeighFisher	Vibration Impacts	Draft EWR, 5.1.4.1.2, Vibration, p.202	Report states: "As the project footprints are not finalized; the number of locations predicted to have vibration levels in excess of the City of Toronto prohibited limit, and the screening limit may change. Also, the number of structures within the project footprint may change. As a result, a full list of locations along the project footprint that require monitoring or subsequent review is too preliminary at this stage. Mapping provided in Appendix B4 can be used to further develop the design plans to decrease the vibration impacts of the Early Works construction." Confirm if the mapping provided in Appendix B4 could be used to indicate sensitive areas which require further assessment should the area be selected as part of the project footprint. Consistent with best practices, this report should give an indication of areas that will likely be impacted if in the vicinity of any project works.	Confirmed, mapping in Appendix B4 will be updated with the approved project footprint. See appendix B4	?	O	Similar to the Follow-Up Comment to Item No. 25 in the TEO tab, please clarify where the updated vibration assessment mapping is provided. The Draft Early Works Report - Ontario Line Exhibition Station Early Works report does not have an Appendix B4. Appendix A3 - Exhibition Station Early Works - Draft Noise and Vibration Early Works Report does not appear to include vibration assessment mapping.	

7	Transportation Expansion Office in consultation with LeighFisher	Construction Vibration Mitigation, General	Draft EWR, 5.4.2.1, General Mitigation, p. 204	<p>Given that vibration impacts are predicted, best practice construction vibration mitigation measures recommended by the FTA should be included in the report, such as:</p> <p>*routing heavily-loaded trucks and equipment away from residential streets and vibration-sensitive sites;</p> <p>*managing the sequence of construction phases such as demolition, earth-moving, and ground-impacting operations so as not to occur in the same time period and avoiding night-time activity;</p> <p>*employing alternative construction methods.</p> <p>Relevant locations where this would apply would be refined during the design phase.</p>	Acknowledged, the suggested text has been incorporated with other best practice measures where appropriate.	?	P	<p>Pending review of the reports prepared for the remaining three Early Works sites.</p> <p>It is noted the suggested text, as appropriate, was added to Section 6.1(Mitigation Measures - General Recommendations) of Appendix A3 - Exhibition Station Early Works - Draft Noise and Vibration Early Works Report. However, these measures remain absent from the main Exhibition Station Early Works report. Please include these General Recommendations in the main Exhibition Station Early Works report for consistency, or, indicate further measures are outlined in Appendix A3.</p>
8	Transportation Expansion Office in consultation with LeighFisher	Methodology	Draft AQ Memo, Fig 1-1 to 1-4	Please explain how the Air Quality Study Area was established.	A 500-metre buffer was added to the identified project footprint of each Early Works scope item. The distance of the 500 metre buffer was based on guidance provided in the Ministry of Transportation, Environmental Guide for Assessing and Mitigating the Air Quality Impact and Greenhouse Gases of Provincial Transportation Projects (Ministry of Transportation, 2020) which states that for major roads, a distance of 500 m is expected to capture the maximum pollutant concentrations.	?	C	
9	Transportation Expansion Office in consultation with LeighFisher	AQ Guidelines	Draft AQ Memo, Table 2-1	Why is the AAQC PM2.5 standard not included?	The AAQC PM2.5 standard (30 ug/m3 for a 24-hour averaging period) is less stringent than it's CAAQS counterpart 27 ug/m3 for a 24-hour averaging period, after 2020.	?	C	
10	Transportation Expansion Office in consultation with LeighFisher	Background Traffic Data	Draft AQ Memo, Table 2-5	Why isn't the Gardiner Expressway or Liberty Street West 2019 AADT bus data available/included?	Table 3-3 updated with Liberty Street West 2019 AADT data. Not available for Gardiner Expressway.	?	C	It is recommended that the report state that the AADT is not available for the Gardiner Expressway, for clarity.
11	Transportation Expansion Office in consultation with LeighFisher	Methodology	Draft AQ Memo, Sec 3, Table 3-7	Please define a Sensitive and a Critical receptor and distinguish between the two. Also, please clarify the definition of potential impacts.	Sensitive receptors include all residential and residential combination zoning (e.g. commercial residential, etc.). Critical receptors include land use where it is reasonably expected that high-risk populations spend extended periods of time in these locations (i.e. schools, day cares, hospitals, nursing or long-term care homes, etc.). The potential impacts are treated the same between the two types of receptors, however critical receptors are marked with high priority for maintaining air quality levels.	?	C	
12	Transportation Expansion Office in consultation with LeighFisher	Construction timeline	Draft AQ Memo, Sec 3	Please clarify whether construction of the four EW locations will overlap (even if just a portion). If any overlap, a combined phase impact assessment should be conducted in addition to the location specific assessment. This is particularly important for receptors that fall within multiple Study Areas.	In updated revisions of the report, all early works have been split into separate reports. Note that the only overlap in study area is Lakeshore East (overlapping with GO Expansion), for which a joint noise and vibration assessment will be undertaken for GO Expansion and Ontario Line operations.	?	C	Clarification noted. Note, joint noise and vibration assessment to be provided to the CoT for review and comment, once available.
13	Transportation Expansion Office in consultation with LeighFisher	Air Quality Management Plan	Draft AQ Memo, Attachment 1, Table 2	Please include other contaminants of concern as included in Table 2-4 of the main memo. In particular benzene and B(a)P when they exceed AAQC standards.	Including additional contaminants from the MTO Guidance does not have direct bearing on the contents of the AQMP. If required, the AQEW Memorandum can be referenced for a full background summary.	?	P	Given that benzene and B(a)P exceed AAQC requirements under background conditions (as per the Early Works Air Quality Memorandum and the Exhibition Station Early Works - Draft Air Quality Early Works Report), this information should be included in the AQMP for consistency. At a minimum, a reference to the Memorandum should be included, as noted in Column F.
14	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.1	Are the mitigation measures included here required? If so, mitigation language should be revised to state "shall" to ensure compliance. Dust suppression techniques should also be included.	These are recommended mitigation activities which should be employed in the event of a monitored exceedance of the specified decision making thresholds in Table 4. If these thresholds are breached during continuous real-time monitoring, then any combination of the proposed mitigation measures will be required to be employed, as specified by the designated air quality specialist.	?	O	The mitigation measures provided appear comprehensive, however, please confirm mitigation measures stated as a "should" are enforceable as requirements, and are not to be taken simply as recommendations for ProjectCo to consider.
15	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.2	Please specify maximum drop height and total height of stockpiles.	The drop height restriction is described on section 3.1.3. However, there is no recommended threshold for the maximum drop height and total stockpiles height from the air emission perspective. So, as described these should be minimized as possible.	?	C	

16	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Sec 2.1.3	Idling restrictions should also be required consistent with best practice.	Table 4-1 and Table 4-2 of the Air Quality Report note that idling restrictions will be applied during construction.	?	C	
17	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Sec 3.2	Please clarify if the recommendation is to set up one met station at each EW location (i.e. four total) or one single station for the whole project.	Meteorological monitoring will not be required as part of the mitigation as air quality impacts from construction are not anticipated to affect local meteorological conditions.	?	C	
18	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Sec 3.3	Since no AQ monitoring location is planned immediately around the East Harbour Station location, is there the potential that construction at this location takes place earlier than the neighboring locations and as such construction dust monitoring will not be in place in time?	Comments regarding the East Harbour early works will be responded to at a later date as all early works have been split into separate reports. East Harbour works will be documented under separate cover.	?	P	Pending review of East Harbour Early Works report, once available.
19	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Draft AQ Memo, Attachment 1, Table 4	If the construction program is 12 months or less, silica analysis should be considered once a month, consistent with best practice, instead of once every 3 months as mentioned.	Comment noted.	?	C	
20	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Draft AQ Memo, Attachment 1, Table 6	Remedial actions should also be categorized by action levels. If action level 4 is reached, it suggests that whatever remedial actions already undertaken at previous action levels were not effective, and so additional remedial actions will be required.	Table 4-1 and Table 4-2 of the Air Quality Report note that Action Levels will be applied during construction.	?	C	
21	Transportation Expansion Office in consultation with LeighFisher	Air Quality Management Plan	Draft AQ Memo, Attachment 1, Table 6	Please confirm if this management plan will be implemented by the EPC Contractor and all roles and responsibilities mentioned are within the EPR Contractor's organization. If so, please clarify cross-organization responsibilities and reporting lines.	These details will be confirmed as Project planning and design progress.	?	C	
22	Transportation Expansion Office in consultation with LeighFisher	Introductory text	Draft N&V Report, Section 1, Introduction	It is noted this report only assesses construction noise and vibration effect for the early works. Confirm how operational impacts of early works will be assessed.	This report only addresses construction noise and vibration, operational noise and vibration are addressed under separate cover.	?	P	Please clarify the title of the report that will address the operational noise and vibration impacts. Comment pending review of the appropriate report, once available.
23	Transportation Expansion Office in consultation with LeighFisher	Construction noise methodology	Draft N&V Report, 4.2 Methodology, p. 14	Clarification on methodology used for noise modelling required. Per FTA manual, detailed construction noise analysis should, "Compare the combined Leq equipment (1hr) and the combined Ldn equipment 30-day for all equipment for each phase of construction determined. Then, identify locations where the level exceeds the criteria." Confirm if the above methodology was employed.	This method was not used as details regarding construction methodology have not yet been established. Construction noise levels (modelled from a list of construction equipment) were reviewed at the worst case representative receptor locations surrounding the construction sites using the Leq8hr criteria that has been used on previous Metrolinx projects. Note that a screening map will be added to the reporting.	?	C	
24	Transportation Expansion Office in consultation with LeighFisher	Lakeshore East Joint Corridor Noise	Draft N&V Report, 4.6.1, and Table 4-7	Table 4-7 appears to indicate night time noise level criteria will be exceeded along the project footprint. Please revise below statement from the report to reflect nighttime noise level limit exceedance, in addition to daytime noise level limit exceedance. "The results in the above table [Table 4-7] indicate that predicted noise levels along the project footprint could be above the daytime noise level limit"	In updated revisions to the report, Lakeshore East early works have been removed from this report and will be published under separate cover however, this change will be addressed within the Lakeshore East Early Works Report.	?	P	Pending review of the Lakeshore East Early Works report, once available.

25	Transportation Expansion Office in consultation with LeighFisher	Vibration Impacts	Draft N&V Report, 4.6.2, Vibration Impacts	<p>Report states:</p> <p><i>"As the project footprints are not finalized; the number of locations predicted to have vibration levels in excess of the City of Toronto prohibited limit, and the screening limit may change. Also, the number of structures within the project footprint may change. As a result, a full list of locations along the project footprint that require monitoring or subsequent review is too preliminary at this stage. Mapping provided in Appendix B4 can be used to further develop the design plans to decrease the vibration impacts of the Early Works construction."</i></p> <p>Confirm if the mapping provided in Appendix B4 could be used to indicate sensitive areas which require further assessment should the area be selected as part of the project footprint.</p> <p>Consistent with best practices, this report should give an indication of areas that will likely be impacted if in the vicinity of any project works.</p>	Mapping has been updated including the project footprint. In updated revisions of the report, mapping has been moved to the main body of report as Figure 5-3 and 5-6.	?	O	<p>Please clarify where updated mapping can be found. Figure 5-3 and Figure 5-6 in the Draft Early Works Report - Ontario Line Exhibition Station Early Works report display the surficial geology and the bed rock geology within the Exhibition Station soil and groundwater study area, respectively.</p> <p>Note: the reference in Column E should be to Appendix D of the previously reviewed report titled <i>Appendix B4 - Noise and Vibration Early Works Report</i> (dated June 2020). The Exhibition Station Vibration Assessment Map previously provided in this referenced Appendix (Appendix D) is absent from the updated Exhibition Station Early Works report and the associated Noise and Vibration appendix.</p>	
26	Transportation Expansion Office in consultation with LeighFisher	General Construction Vibration Mitigation Measures	Draft N&V Report, 5.1.2, Construction Vibration	<p>Given that vibration impacts are predicted, best practice construction vibration mitigation measures recommended by the FTA should be included in the report, such as:</p> <p>*routing heavily-loaded trucks and equipment away from residential streets and vibration-sensitive sites;</p> <p>*managing the sequence of construction phases such as demolition, earth-moving, and ground-impacting operations so as not to occur in the same time period and avoiding night-time activity;</p> <p>*employing alternative construction methods.</p> <p>Relevant location for the application of these measures can be refined during the design phase.</p>	Acknowledged, the suggested text has been incorporated with other best practice measures where appropriate.	?	P	Noted that suggested text, as appropriate, added to Exhibition Station Early Works report. Pending review of the reports prepared for the remaining three Early Works sites.	
ADDITIONAL COMMENTS (DECEMBER 2020)									
27	Transportation Expansion Office	General	General	<p>Please note the Status (Column H) and the Follow Up Comments (Column) provided in this log are based solely on the review of the Exhibition Station Early Works Report and are subject to change upon receipt and review of the Early Works reports for the remaining three sites (Lower Don River Crossing, East Harbour Station, and Lakeshore East Joint Corridor).</p>

1	LAU	Draft Traffic Memo	General	Any impacts to City parkland/natural areas as a result of this project requires complete coordination with Parks Capital's Construction schedule as outlined in PFR approved Capital budget. Schedule and duration of impacted park lands to be provided.	Comment noted, the Exhibition Station early works Project Footprint does not currently include any City parkland or natural areas. However, should project footprint change in the future and impacts to parkland and natural areas are identified, Metrolinx will continue to engage the City of Toronto.	?	C	We note Mx response and will continue to comment as the project progresses.		
2	Urban Forestry	Draft NER	Parks - Moss Park	All mitigation measures will be explored to minimize the project impacts to this site.	Metrolinx is committed to minimizing impacts to parkland wherever possible and will explore all options to minimize project impacts to Moss Park. As project planning and design progresses, any impacts identified to Moss Park will be documented within the Environmental Impact Assessment Report and appropriate mitigation will be prescribed.	?	C	Closed		
3	RNFP	Draft NER	draft EPR - general	Submit a Natural Heritage Impact Study	Natural heritage impacts will be documented as part of the Environmental Impact Assessment Report, under separate cover.	?	C	Closed		
4	RNFP	Draft NER	Natural Environment Early Works - 4.2	Metrolinx must apply for and obtain a permit from RNFP for any trees/vegetation/local impacts regulated under Bylaw 658 on city and private lands.	Metrolinx will continue to engage with the City of Toronto as project planning and design progress, including with regard to tree injury/removal permits as required.	?	C	Closed		
5	Urban Forestry	Draft NER	Natural Environment Early Works - Section 6 - permit requirements - table 6-1	Under Municipal, add Bylaw 813, 658 and 608 in table 6-1. Revise and add text sections accordingly in section 6.	As noted in Table 6-1 the activities at the Exhibition Station early works study area are not within the City of Toronto NHS or RNFP policy areas. Compensation for tree removal on private/city lands will follow the Metrolinx Vegetation Guideline (2020), which notes that compensation for trees on private/city lands will follow all applicable bylaws and regulations.	?	C	Closed		
6	LAU	Draft N&V Report	General	How does the rail corridor expansion in the Lakeshore East Joint Corridor works footprint affect impacted park lands/natural areas for grading, retaining walls, noise barriers, etc in the interim and permanently?	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. Response to this comment will be revisited as the Lower Don Bridges Early Works Report is released.	?	O	The Lakeshore East Joint Corridor works is more than just the Lower Don Bridges. PFR is requesting for more detailed information on the scope of impacts to affect parkland for the full scope from Gerrard to Lower Don Bridges both interim and permanent in order for Parks to undertake a comprehensive assessment		
7	LAU	Draft N&V Report	4.6 Impact Assessment LEJC	Jimmie Simpson Recreation Centre shall be reviewed for noise and vibration and added to Table4-7 and Figure1-04 to be representative of the worst case locations along the Early Works project footprint as works are proposed in very close proximity to the Recreation Centre.	Typically recreation centres are not considered noise or vibration sensitive receptors, however the building will be considered in assessment of construction vibration impacts.	?	O	Upon review of the revised report, City may provide additional comments. Due to the proposed scope of works directly adjacent to Jimmie Simpson RC, PFR considers this as a sensitive vibration receptor.		
8	Urban Forestry	Draft EWR	general	The Lower Don River Crossing works overlaps with the USRC Wilson yard/HONI relocation works. Are we to assume that the trees and vegetation will be non-existent like the Lakeshore East shared corridor for the purposes of tree inventory and arborist report?	The Lower Don Bridges early works will build on existing environmental work completed for the Wilson Yard/HONI relocation works. Metrolinx will be removing vegetation within its right-of-way in accordance with the Metrolinx Vegetation Guideline (2020).	?	C			
9	Urban Forestry	Draft EWR	Draft early works report, 5.9 - Utilities	Confirm tree and vegetation impacts during detailed design. A permit application for injury or removal may be required if regulated under a municipal bylaw	Tree and vegetation impacts will be confirmed during the detailed design phase. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	C			
10	Urban Forestry	Draft EWR	Draft Early Works Report, 6.1.3 - Municipal permits	Permits are required for trees and vegetation that are regulated under Bylaw 813, 658 and 608. Compensation shall be in accordance with applicable bylaw. The Arborist Report and supporting documentation will be reviewed and revised when submitted.	An Arborist Report will be prepared in accordance with Table 6-1 and 6-2. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).	?	C			
11	Urban Forestry	Draft EWR	Draft Early Works Report, 6.1.3 - Municipal permits	Delete timeline information for permit application processing as it is conditional on satisfactory and approved documentation. These revisions may take several weeks before an application will be reviewed.	This will be removed in the revised report.	?	C			
12	RNFP	Draft EWR	Draft Early Works Report, 6.1.4	Submit Voluntary Process Review Letter	Metrolinx will continue to engage TRCA through the VPR process.	?	P	Once TRCA's VPR letter has been given to Metrolinx, please submit to the city for review		
13	RNFP	Draft EWR	Draft Early Works Report, table 6-1	Submit Erosion & Sediment Control Plan	An Erosion and Sediment Control Plan will be prepared in accordance with Table 6-2. This will be circulated to the City prior to construction.	?	C			
14	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Submit an Arborist Report with updated tree inventory. Tree inventory shall also confirm the presence of butternut inspected in 2017 in the East Harbour Stn	An Arborist Report will be prepared in accordance with Table 6-1 and 6-2. This will be circulated to the City once available. The butternut in question at East Harbour Station was determined to be misidentified, and is a black walnut.	?	C			
15	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Submit Spill Prevention & Response Plan	A Spill Prevention and Response Plan will be prepared in accordance with Table 6-2 and 6-3. This will be circulated to the City prior to construction.	?	C			
16	Urban Forestry	Draft EWR	Draft Early Works Report, table 6-1	Metrolinx' Vegetation Guideline is currently under review by staff in Parks, Recreation and Forestry. Compensation will be to the approval and satisfaction of PFR and in accordance to the applicable bylaw. Any revisions to the document will apply to the current project	Noted.	?	C			

17	LAU	Draft EWR	General	Any impacts to City parkland as a result of this project requires complete coordination with Parks Capital's Construction schedule as outlined in PFR approved Capital budget. Schedule and duration of impacted park lands to be provided.	Noted. Impacts to parkland are not anticipated as part of the Exhibition Station Early Works.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. PFR is requesting a full summary (table format) of each segment and the park impacts both temporary and permanent	
18	LAU	Draft EWR	3. Description of the Early Works	We are not in support of loss of park lands. What alternatives has Mx completed? What lands does Mx have for a potential land swap?	Noted. Impacts to parkland are not anticipated as part of the Exhibition Station Early Works.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. In order to advance this discussion, Mx to provide a full summary of anticipated parkland impacts. Will methods for parkland compensation be discussed in the Early Works report?	
19	LAU	Draft EWR	4.5 Socio-Economic and Land Use Characteristics	Lower Don River Crossing - there are recreational uses and park and open spaces in this footprint... Corktown Common Park, MUPs along the Lower Don River Trail, the Martin Goodman Trail, Lakeshore and Cherry St (see 4.8.2.3)	In updated revisions of the report, Lower Don early works has been split into a separate report however, the revised Lower Don Bridges early works report will include parks within the latest Lower Don Bridges study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	
20	LAU	Draft EWR		Lower Don River Crossing - there are community groups and resources in this footprint	In updated revisions of the report, Lower Don early works has been split into a separate report however, the revised report will include community amenities within the latest Lower Don River Crossing study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	
21	LAU	Draft EWR		Lakeshore East Joint Corridor - there are recreational uses and parks and open spaces in this footprint... Jimmie Simpson RC and Park, Bruce Mackey Park, McCleary Park, Saultier St Parkette, Gerrard-Carlaw Parkette	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include recreational uses and parks within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	
22	LAU	Draft EWR		Lakeshore East Joint Corridor - there are community groups and resources in this footprint	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include community groups and resources within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	
23	LAU	Draft EWR		Lakeshore East Joint Corridor - all parks in and adjacent to this footprint to be labelled on Figure4-21	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include recreational uses and parks within the Lakeshore East Joint Corridor study area.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	
24	LAU	Draft EWR	4.6/5.6 Built Heritage Resources and Cultural Heritage Landscapes	Has a Cultural Heritage Assessment been completed for park lands that are proposed to be impacted? There is mention of Cultural Heritage Landscapes however where is the mapping - specifically does any park lands fall into CHL?	All lands within the Ontario Line Study Area, and subsequent Early Works footprint have been screened for known, previously assessed and potential BHR/CHLs. For the Ontario Line Project, any properties, including parks, were screened for BHRs and CHLs- Moss Park was included in the OL CHR and Bruce Mackey Park noted because of its heritage plaques and it contributes to the De Grassi Streetscape. Parks that are not known, previously identified or potential CHLs are included in the Natural Environment Report.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	
25	LAU	Draft EWR	Pg 115-116/227-229	DeGrassi Street has been noted as potential BHR/CHL and within EW-001 Bruce Mackey Park has been noted as having potential heritage attributes. Should 12 DeGrassi Street be proposed for demolition Mx shall acquire these lands to land swap with the City in exchange for impacts to Bruce Mackey Park and nearby park lands. Also, what is the impact to Bruce Mackey Park (and all other parks) to avoid vibration damage to buildings along EW-001 and elsewhere? Vibrating mitigating measures shall be implemented on the building or elsewhere and not on park lands.	The Lakeshore East Joint Corridor early works have been placed under separate cover in updated revisions of this report.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered. PFR to review environmental assessment report when available for further comment	
26	LAU	Draft EWR	5.4 Noise and Vibration pg 201-202	Future Work shall include noise and vibration impact study to existing Jimmie Simpson Recreation Centre as works are proposed in very close proximity to the Recreation Centre.	Typically recreation centres are not considered noise or vibration sensitive developments, however the building will be considered in assessment of construction vibration impacts.	?	O	Upon review of the revised report, City may provide additional comments. Due to the proposed scope of works directly adjacent to Jimmie Simpson RC, PFR considers this as a sensitive vibration receptor.	
27	LAU	Draft EWR	5.4 and 5.5	How does the rail corridor expansion in the Lakeshore East Joint Corridor works footprint affect impacted park lands/natural areas for grading, retaining walls, noise barriers, etc in the interim and permanently?	Any potential impacts of Lakeshore East Joint Corridor Early Works will be presented under separate cover.	?	O	We acknowledge no proposed park impacts for Exhibition Station EW, however the original report included all Early Works. City comment has not been answered.	
28	LAU	Draft CHR	General	Has a Cultural Heritage Assessment been completed for park lands that are proposed to be impacted?	All lands within the Ontario Line Study Area and subsequent Early Works footprint have been screened for known, previously assessed and potential BHR/CHLs. At this stage, impact scenarios have been outlined with recommended mitigation measures. Once an alignment is selected / detailed design is underway, a project-specific impact assessment will be undertaken and documented in a Heritage Detailed Design Report. This will include park lands that retain heritage value.	?	C		
29	LAU	Draft CHR	Pg 25	There is mention of Cultural Heritage Landscapes however where is the mapping - specifically does any park lands fall into CHL?	For the Ontario Line Project, any properties, including parks, were screened for BHRs and CHLs- Moss Park was included in the OL CHR and Bruce Mackey noted because of its heritage plaques and it contributes to the De Grassi Streetscape. Further detail on parks within the study area (from an ecological perspective) are documented in the Natural Environment Report.	?	P	We note Bruce Mackey was mentioned in the report however Moss Pass appeared to be overlooked. Provide section of the report speaking to Moss Park and supplementary mapping.	
30	LAU	Draft CHR	Figure 6-4	All existing park lands within and adjacent to the Lakeshore East Joint Corridor Study Area to be noted in Figure6-4	As per comment response #2, parks within and adjacent to the Early Works footprints that retain heritage value (CHLs) are documented in this Cultural Heritage Report. Parks that are not CHLs are documented in the Natural Environment Report.	?	C		
31	LAU	Draft CHR	Pg 30, 43-45	DeGrassi Street has been noted as potential BHR/CHL and within EW-001 Bruce Mackey Park has been noted as having potential heritage attributes. Should 12 DeGrassi Street be proposed for demolition Mx shall acquire these lands to land swap with the City in exchange for impacts to Bruce Mackey Park and nearby park lands. Also, what is the impact to Bruce Mackey Park (and all other parks) to avoid vibration damage to buildings along EW-001 and elsewhere? Vibrating mitigating measures shall be implemented on the building or elsewhere and not on park lands.	The Lakeshore East Joint Corridor early works have been placed under separate cover in updated revisions of this report. This comment will be taken into account as environmental assessment reporting advances along the Lakeshore East joint corridor.	?	O	PFR to review environmental assessment report when available for further comment	
ADDITIONAL COMMENTS (DECEMBER 2020)									
32	LAU	Draft EWR	Draft Exhibition Station Early Works Report	Parks has reviewed the Draft Exhibition Station Early Works Report and there does not appear to be any impacts to existing parkland within the Exhibition Station Early Works Project Footprint.

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	Response & Details (Authors -)
1	City Planning	Draft Traffic and Transportation Memo	General	Reconfirm the intended scope of the traffic and transportation memo. The existing conditions transportation memo should describe and document the baseline usage and performance of the transportation network for all modes in the study area; this report is limited to describing the physical conditions of the transportation system. Provide vehicular, transit, pedestrian and cyclist volumes using each transportation link described in the report, particularly at locations that may be disrupted during construction and/or permanently altered as a result of the project. Provide transportation analysis demonstrating the baseline performance of the transportation network. Without this information it is difficult to determine appropriate impacts to users of the transportation network or appropriate mitigation measures, monitoring programs, and future commitments. The transportation memo does not appear to achieve the purpose stated in Section 1.1.	The Early Works Memo focuses on construction impacts at the Early Works project footprints expected to result from the Early Works activities. Metrolinx proceeded with available existing conditions information while considering project schedule, limited raw data received from the City, and COVID-19 restrictions. As project transportation progresses, further quantitative assessment will be completed related to the Early Works areas, to be shared with the City	?	O	To City Planning's knowledge, Transportation Services completed the data request submitted by Metrolinx with respect to turning movement counts for vehicular traffic, pedestrian, and cycling volumes for road links and intersections available in the City's database.	
2	City Planning	Draft Traffic and Transportation Memo	General	Confirm service headways for all transit routes and ensure that they reflect normal planned operating conditions. The peak period service headways stated in the report for transit routes appear to reflect the reduced level of service being provided during the COVID-19 pandemic. This will result in understated impacts to transit riders if not corrected. For example, the 504 King streetcar route normally operates at 2 minute headways in the peak period.	The service headways during the AM and PM peak hours were obtained from the TTC website (For example, for the 504 King Streetcar: http://www.ttc.ca/Routes/504/Eastbound.jsp). These reflect the current service headways which, as mentioned, might be impacted by the COVID-19 pandemic. The current TTC website does not have 'regular' headways, which are not impacted by COVID-19. Metrolinx would appreciate any information the City can provide with regards to this data.	?	O	Service headways found on TTC's website during 2020 should not be relied upon for a planning analysis as they reflect reduced level of service provided during the COVID-19 pandemic. Recommend that Metrolinx request from the TTC the most recent service summary (likely from fall 2019), and the planned service summary for 2021 which reflects post-pandemic operating plan.	
3	City Planning	Draft Traffic and Transportation Memo	General	Correct references to unposted speed limits through the report, which currently indicates in several places that the assumed speed limit of unsigned streets is 50 km/h. Note that the City of Toronto has reduced the general speed limit on many arterial roads to 40 km/h, especially within the old City of Toronto and East York boundaries. Legal speed limits for all streets can be checked online in the Municipal Code here: https://www.toronto.ca/legdocs/municode/toronto-code-950-35.pdf	The legal speed limits were checked online using the same suggested reference (https://www.toronto.ca/legdocs/municode/toronto-code-950-35.pdf) in preparing the memorandum. The unsigned streets namely, Carlaw Avenue and Logan Avenue, are not part of the roadways that had their speed limits reduced from 50 km/h to 40 km/h as part of Vision Zero in 2019. The following source was used in identifying the roads that witnessed a speed limit reduction: https://www.toronto.ca/services-payments/streets-parking-transportation/road-safety/vision-zero/safety-measures-and-mapping/	?	O	Vision Zero speed reductions appear to be referenced in the report in general discussion and where appropriate for specific streets.	
4	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 9	Roads: Gardiner Expressway is missing from the list of roads in the area, and may be impacted by the project. Include planned but unbuilt roads such as Liberty New Street, as the impacts and mitigation measures for this will need to be addressed in the report.	Gardiner Expressway is not expected to be impacted by the Exhibition Station early works. Based on information collected from the City's website, Liberty New Street (source: https://www.toronto.ca/community-people/get-involved/public-consultations/infrastructure-projects/libertynewst/) does not have a schedule for construction yet and hence was not included in the list of roads.	?	O	References to missing roads added to Section 3.1.	
5	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 9 Figure 3-1, Page 10	Transit: Indicate that 511 Bathurst streetcars are normally routed to serve Exhibition loop. Correct the Harbourfront and King streetcar route numbers indicated in the map legend.	Noted, the 511 Bathurst streetcars will be described in Table 2-1 and presented in Figure 3-1. The route numbers in the map legend will be amended.	?	P	511 Bathurst routing corrected. 509 Harbourfront route number corrected in map. New error: 504B King streetcar route serving Dufferin Street to Dufferin Loop no longer shown on the map and no longer shown in Table 3-1.	
6	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 11	Pedestrians: Include a key connection in the pedestrian network, which is the opportunity for pedestrians to cross from Liberty Village to Exhibition Place through the station.	Noted, the pedestrian connection through the station tunnel will be described in the updated memorandum	?	P	References to missing pedestrian link added in Figure 3-1.	
7	City Planning	Draft Traffic and Transportation Memo	Figure 3-2, Page 12	Contrary to what is indicated in the memo and shown on the map, on-street bicycle infrastructure does exist on Dufferin Street, Saskatchewan Road, and Princes Boulevard within Exhibition Place.	The memo and specifically Figure 3-3 does not show on-street bicycle facilities on Dufferin Street, Saskatchewan Road, and Princess Boulevard. On-street bike facilities refer to a bike lane or cycle track. However, minor multi-use pathways are presented which do exist at the noted locations.	?	P	Do not understand the comment response; a map of the existing cycling network should show on-street bike lanes.	
8	City Planning	Draft Traffic and Transportation Memo	Section 2.2, Page 14	Transit: Include GO buses that use the Don Valley Parkway.	Noted, the GO buses that use the Don Valley Parkway will be described and presented in Figure 3-4 in the updated memorandum.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	
9	City Planning	Draft Traffic and Transportation Memo	Figure 3-5, Page 16 Figure 3-8, Page 22	Include the critical pedestrian/cycling connection connecting Mill Street to the Lower Don Trail through Corktown Common and under the Richmond Hill GO corridor, which is missing from the map.	The noted trail, classified as "recreational trail", is presented in Figure 3-5 as a pedestrian facility. The connection to the Lower Don Trail includes a staircase which is why it's not displayed as a cycling facility.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	
10	City Planning	Draft Traffic and Transportation Memo	Figure 3-6, Page 19	Correct the route of the 505 Dundas streetcar on the map, which does not operate on Queen Street or Broadview Avenue south of Dundas.	Noted, the 505 Dundas street route will be updated in Figure 3-6 in the updated memorandum	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	
11	City Planning	Draft Traffic and Transportation Memo	Section 3.1, Page 29	Include potential mitigation measures such as consideration of contractual financial incentives to minimize the duration and extent of disruptions to roads, sidewalks, bike lanes, and property accesses. Such measures could include a lane rental system, or door closure charges.	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	
12	City Planning	Draft Traffic and Transportation Memo	Section 3.2, Page 31	Confirm that potential impacts for the Don Crossing early works will not include closures of the Don Valley Parkway; they are not indicated in the discussion of potential impacts.	Comments regarding the Lower Don Bridges early works will be responded to at a later date as Lower Don Bridges early works scope has not been confirmed.	?	P	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Traffic and Transportation Memo, to be reviewed when received.	

13	City Planning	Draft Natural Environment Report	General	Confirm whether the implementation of all mitigation measures identified in the report will be placed on the successful proponent as a contractual obligation. Confirm who will monitor and ensure that mitigation measures and monitoring protocols will be followed.	Mitigation measures identified through the Early Works Report will be carried through to contractual language to be implemented by the successful proponent. Metrolinx will monitor compliance during the construction stage.	?	C		
14	City Planning	Draft Natural Environment Report	General	Confirm whether the Don River crossing is anticipated to place any new structures such as piers or columns into the river that may alter flooding in the Don River valley. There does not appear to be any discussion in the report about impacts to flooding.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. However, information regarding hydrology and surface water will be added to the Lower Don Bridges Early Works Report.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Natural Environment Memo, to be reviewed when received.	
15	City Planning	Draft Natural Environment Report	General	Confirm whether the cumulative effects to the natural environment from multiple crossings of the Lower Don River immediately adjacent to each other will be studied (e.g. the existing rail bridge spans, two new Ontario Line bridges, various operational and decommissioned utility bridges), and whether there would be benefits to the natural environment and reduced flood risk from the consideration of an integrated crossing solution. Benefits of an integrated crossing to the natural environment (including flood risks in the Lower Don River valley) should be documented, along with any countervailing reasons if such a solution is not technically preferred.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. Response to this comment will be revisited as the Lower Don Bridges Early Works Report is released.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Natural Environment Memo, to be reviewed when received.	
16	City Planning	Draft Noise & Vibration Report	General	Confirm that proponents would be contractually obligated to adhere to the noise and vibration limits identified in the report, and that proponents would be required to model the noise and vibration impacts of their proposed solution and construction method for the evaluation of proposals. Confirm what party would be responsible for ensuring and monitoring that mitigation measures are being implemented. Despite the exemption provided to government work in noise by-laws, confirm that limiting the time and duration of construction activities can be considered as an appropriate mitigation measure in the development of a noise and vibration management strategy. Confirm that the cumulative effects of noise and vibration will be taken into account in crafting mitigation measures (e.g. where there are a large number of sensitive noise and vibration receptors such as in the Lakeshore East Joint Corridor).	Note that this report only addresses construction noise and vibration, operational noise and vibration will be addressed under separate cover. The construction contract will have noise and vibration limits as per Metrolinx standards. The proponent will work with Metrolinx to ensure that mitigation measures and committed noise levels are met during construction and operation. Detailed assessment by the proponent of their activities will determine the specific mitigation measures required to meet agreed upon construction noise and vibration limits.	?	D	C - for comment on construction noise and vibration. Provide Metrolinx construction noise and vibration standards for reference. D - comment on operational noise and vibration deferred to Operational N&V report which will be reviewed upon receipt.	
17	City Planning	Draft Noise & Vibration Report	Section 4	Identify the sensitive noise and vibration receptors indicated in the tables by their land use or building use.	Land use associated with each receptor is documented in Tables 5-1 and 5-2	?	C	Table 5-1 updated to include land use. Cannot locate Table 5-2, but we assume there are no sensitive vibration receptors based on the discussion in the text.	
18	City Planning	Draft Noise & Vibration Report	Appendix B	Ensure that the study area has been appropriately defined to capture the extent of potential noise and vibration impacts arising from construction. We are concerned that the study area has been too narrowly delineated with respect to the anticipated extent of the impacts, particularly around the Lakeshore East rail corridor segment where residential homes fronting onto Booth Avenue, in direct line of sight from construction activities, have been excluded from the study area.	Study area was determined based on the representative alignment outlined through the business case. Segments of the study area that have narrow extents represent areas in which there is certainty regarding the alignment whereas areas with a wider extent allow for flexibility in modifications to the alignment. Residential receptors on Booth Avenue are represented conservatively by the assessment of 2 Paisley Ave and 14 Wardell St assessment locations, which are considered the worst-case scenarios for noise and vibration within this segment.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Noise & Vibration Memo, to be reviewed when received.	
19	City Planning	Draft Air Quality Memo	General	Confirm that proponents would be contractually obligated to adhere to the air quality limits identified in the report, and that proponents would be required to model the air quality impacts of their proposed solution and construction method for the evaluation of proposals. Confirm what party would be responsible for ensuring and monitoring that mitigation measures are being implemented.	Proponents will not be contractually obligated to adhere to the air quality limits identified in the report, as for certain contaminants background air quality levels are already higher than these same limits, making adherence impossible. Proponents will be required to follow mitigation outlined in Table 6-1, under Construction Air Quality which include Environment Canada's Best Practices for the Reduction of Air Emissions from Construction and Demolition Activities (2005), and MECP's Technical Bulletin Management Approaches for Industrial Fugitive Dust Sources.	?	C		
20	City Planning, Transit Implementation	Draft Early Works Report	Page 7, Figure 1-1	Ensure that the study area has been appropriately defined to account for the potential environmental impacts of the project. We are concerned that the study area has been too narrowly delineated with respect to the anticipated extent of the impacts, particularly along the Lakeshore East rail corridor, where some residential homes with direct line of sight to the construction have been excluded from the study area (e.g. homes fronting on Booth Avenue in front of Jimmy Simpson Park).	The study area varies for each discipline. The assessment limits/study area will be clarified in the revised report in Table 4-1.	?	C	Table 4-1 describes study areas for different disciplines.	
21	City Planning, Transit Implementation	Draft Early Works Report	Page 11, Figure 1-2	Confirm the Early Works construction footprint of Exhibition Station. The Early Works footprint shown on this map is not consistent with the extent of early works described at a meeting on June 18, 2020, which included a launch site and emergency exit building in Ordinance Park.	Project footprint for the Exhibition GO early works have been revised since the first draft circulated to the City and footprint shown in the revised reports is most up-to-date.	?	C	Conforms to most recent known project footprint.	
22	City Planning, Transit Implementation	Draft Early Works Report	Page 15, Section 2.2.1.1	Update the discussion on the 2014 Provincial Policy Statement, which is now out of date, to reflect the 2020 version.	This has been updated in the revised report to reference the 2020 PPS.	?	C	Updated as requested.	
23	City Planning, Transit Implementation	Draft Early Works Report	Page 16, Section 2.2.1.2	Correct the discussion on the Growth Plan; it does not describe Downtown Toronto as a priority transit corridor, but rather the GO lines and subway lines within Downtown.	This has been updated in the revised report to describe GO lines and subway lines as priority transit corridors.	?	C	Updated as requested.	
24	City Planning, Transit Implementation	Draft Early Works Report	Page 18, Section 2.2.2.1	Correct references to planning area boundaries in the report. The East Harbour Station is within the boundaries of the Unilever Precinct Secondary Plan, adopted by City Council in 2018. The Lower Don Crossing is partially within the boundaries of the Downtown Plan and the Unilever Precinct Secondary Plan, in addition to the King-Parliament Secondary Plan.	The East Harbour early works have been placed under separate cover in updated revisions of this report and as such, this reference has not been included.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	
25	City Planning, Transit Implementation	Draft Early Works Report	Page 20, Section 3.2	Confirm whether the Ontario Line portals and any alterations to the Richmond Hill GO line are part of the early works.	Alterations to the Richmond Hill GO line are not anticipated as part of the Lower Don Bridges early works.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	

26	City Planning, Transit Implementation	Draft Early Works Report	Page 21, Section 3.3.1.3	Ensure all approved plans related to the Eastern Avenue bridge are captured in the discussion. The Eastern Avenue bridge is also subject to the Port Lands and South of Eastern Transportation and Servicing Master Plan EA. The new span must accommodate the widened right-of-way and new cross-section approved by City Council in adopting Phases 1 & 2 of that EA.	East Harbour Station is no longer being captured under this report. This comment will be revisited if future East Harbour studies are required for early works.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.
27	City Planning, Transit Implementation	Draft Early Works Report	Page 21, 3.3.1.4	Note in the document that the interim service road will be subject to removal and/or reconfiguration when the lands to the north side of the rail corridor are developed, and access to the station should be integrated with the streets and blocks plan of the development.	East Harbour Station is no longer being captured under this report. This comment will be revisited if future East Harbour studies are required for early works.	?	D	Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.
28	City Planning, Transit Implementation	Draft Early Works Report	Page 85, 95	Correct the references to Official Plan land use designations, noting that "Rail Corridor" is not a land use designation in the Official Plan.	This will be updated in the revised report.	?	O	Figure 5-12 still makes reference to Rail Corridors as a land use designation.
29	City Planning, Transit Implementation	Draft Early Works Report	Section 4.5	Ensure consistency in the description of environmental conditions in the report. The descriptions of environment conditions are inconsistent with some describing the area while others are limited to the project footprint. This should extend also to adjacent areas beyond the footprint that may be impacted by the project.	The revised report will include clarification language regarding the environmental conditions study area and the Early Works project footprint/study areas.	?	C	Updated as requested.
30	City Planning, Transit Implementation	Draft Early Works Report	Page 88, Section 4.5.2.1.3	Include a proper public realm description for the Lower Don Crossing, as there is existing planned public space intersecting and adjacent to the project footprint, accessible from Corktown Common and the Lower Don Trail. Public realm characteristics by definition cannot be described as being similar to the built form characteristics.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.
31	City Planning, Transit Implementation	Draft Early Works Report	4.5.4.1.1	Correct the description for Queen Street East; it is not a gateway into the East York community, but rather into Leslieville and the Beach neighbourhoods of old Toronto.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.
32	City Planning, Transit Implementation	Draft Early Works Report	4.7.2	Note that the Lower Don River archaeology would be contained in the South Archaeological Assessment Phase 1 report, not the North report.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.
33	City Planning, Transit Implementation	Draft Early Works Report	4.8.1.2	Add reference to the 29 Dufferin bus which is missing from this analysis. A branch of this route serves Exhibition Place and travels along Manitoba Drive.	This will be updated in the revised report.	?	C	Updated as requested.
34	City Planning, Transit Implementation	Draft Early Works Report	4.8.1.3	Should the report be expanded to include the Ordnance Park as an early works site, the cycling infrastructure should include the Fort York pedestrian/cycle bridge and related infrastructure connections. The waterfront Martin Goodman Trail also travels immediately south of Exhibition Place along Lake Shore Boulevard.	Ordnance Park is outside the study area of the Exhibition Station early work and as such, has not been included within the report.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.
35	City Planning, Transit Implementation	Draft Early Works Report	Page 122, Figure 4-23	Correct the map which is missing the Fort York pedestrian/cycle bridge and associated connections between Wellington Street and Garrison Road as an existing pedestrian route.	The Fort York Pedestrian/Cycling bridge is outside the Exhibition Station early works study area and as such, has not been included.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.
36	City Planning, Transit Implementation	Draft Early Works Report	Page 123, Figure 4-24	Correct the map which is missing the Fort York pedestrian/cycle bridge and associated connections between Wellington Street and Garrison Road as an existing cycling route. Bike lanes on Princes Boulevard and Saskatchewan Road are missing from the map.	The Fort York Pedestrian/Cycling bridge is outside the Exhibition Station early works study area and as such, has not been included.	?	C	City Planning agrees that early works scope has changed since draft report was reviewed.
37	City Planning, Transit Implementation	Draft Early Works Report	Page 133, Figure 4-29	Correct the map which is missing a critical cycling connection from the intersection of Bayview Avenue and Mill Street, through Corktown Common, under the Richmond Hill GO corridor, connecting to the Lower Don Trail.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.
38	City Planning, Transit Implementation	Draft Early Works Report	Page 163, Table 5-4	Confirm whether the removal of vegetation communities includes vegetation currently along the rail embankment, and whether mitigation will consider replacing this vegetation for ecological and visual reasons.	Vegetation clearing can encompass any and all of the vegetation within the Project Footprint including hedgerows and other vegetation communities along the rail corridor. Metroinx will compensate for tree removals undertaken in accordance with provisions outlined in the Metroinx Vegetation Guideline (2020).	?	D	Despite provided comment response, does not apply to Exhibition Station in the main. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.
39	City Planning, Transit Implementation	Draft Early Works Report	5.4.1	For ease of reference, indicate in each table what the sensitive receptor being measured to is (e.g. what the sensitive use in each building or property is).	The receptors will be identified by land or building use in the revised report.	?	O	Sensitive receptors described for some impacts (e.g. air quality) but not others (e.g. noise and vibration) despite this change having been in accompanying technical memos.
40	City Planning, Transit Implementation	Draft Early Works Report	Page 207-211, Table 5-14	Provide an opinion whether the mitigation measures proposed can be expected to bring noise and vibration levels within acceptable limits. Confirm that a method of constructing the project exists that can bring noise and vibration levels within acceptable limits. Confirm number of buildings/homes affected by the "zones of influence" for each early works area (and estimated population or number of workers if available).	Noise and vibration limits will be included as part of contract documents. Metroinx will work with contractors to ensure that committed mitigation measures are implemented. Mitigation is determined based on worst case receptor locations not on the basis of the number of affected properties, however figures for both noise and vibration will be provided in the updated report from which numbers of buildings may be identified.	?	P	Cannot locate mention in report of including noise and vibration limits in contract documents as a mitigation measure in Section 6.5 or Table 6-5.
41	City Planning, Transit Implementation	Draft Early Works Report	Page 213-215, Table 5-15	Include social equity impacts and mitigation measures (i.e. whether certain communities experiencing social inequality are impacted greater). Walkways must be universally accessible AODA-compliant even during construction. For transportation networks, ensure that two parallel collector/arterial routes are not closed at the same time, and transit diversions do not affect two parallel transit routes at the same time.	Mitigation regarding AODA-compliant walkways and parallel transportation connections will be added to the revised report. Review of impacts to human environments from a gender and equity lens are not typically included within provincial environmental assessment processes. Ontario Line impacts are being assessed in accordance with O. Reg. 341/20 under the Environmental Assessment Act. The applicable impact assessment framework does not have a requirement for transit project evaluation through an equity and gender lens.	?	C	Further discussion on social equity impacts for provincial projects are being taken up in alternate venues.
42	City Planning, Transit Implementation	Draft Early Works Report	Page 216, 5.5.1.1	Include financial incentives in the construction contract to minimize the duration of access being restricted to driveways and building entrances.	Financial incentives are not typically included as mitigation measures in environmental assessment documents, and as such, have not been included. Metroinx remains committed to reducing impacts to the traffic and transportation network during construction and will ensure appropriate traffic management plans are developed prior to construction to manage impacts.	?	O	Note that such incentives have been applied on previous Metroinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).

43	City Planning, Transit Implementation	Draft Early Works Report	Page 216-217, 5.5.1.2, Page 231, 5.8.1.1	Include financial incentives in the construction contract to minimize the duration of road/closure (e.g. lane rental system with sufficiently high lane occupancy fees).	Financial incentives are not typically included as mitigation measures in environmental assessment documents, and as such, have not been included. Metrolinx remains committed to reducing impacts to the traffic and transportation network during construction and will ensure appropriate traffic management plans are developed prior to construction to manage impacts.	?	O	Note that such incentives have been applied on previous Metrolinx projects such as the ECLRT, and there should be no reason similar incentives cannot be applied with the Ontario Line (with lessons learned about issues related previous applications).	
44	City Planning, Transit Implementation	Draft Early Works Report	Page 217, 5.5.1.3	Public realm impacts should include construction activity potentially disturbing streetscape materials, furniture, landscaping in the public realm. Requiring restoration to current standards would be an appropriate mitigation measure. Public realm impacts should also include the potential for design incongruity between the architectural styles of the existing underpass and the new Ontario Line bridges, and the impact the greater extent of underpass length has on the pedestrian environment in terms of safety and comfort. Mitigation measures to coordinate and improve design would be an appropriate response.	Public realm impacts such as construction activities potentially disturbing streetscape materials, furniture, and landscaping have been added to the revised report. Public realm impacts suggested such as designing for congruence between architectural styles of existing infrastructure are not typically included as impacts/mitigation however, Metrolinx will work with architectural design specialists to ensure the materials and design of the proposed bridge at the Lower Don Bridges early works complements surrounding infrastructure.	?	D	Public realm impacts should be restored to the current City standard, not to existing conditions.	
45	City Planning, Transit Implementation	Draft Early Works Report	Page 217, 218, 5.5.2	Include the Jimmy Simpson Recreation Centre as a community or recreational amenity that may be impacted. Include the Fortborne Ministries Mustard Seed operation on Strange Street as potentially impacted.	The Lakeshore East early works have been placed under separate cover in updated revisions of this report however, Jimmy Simpson Recreation Centre and Fortborne Ministries will be included in report documentation.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	
46	City Planning, Transit Implementation	Draft Early Works Report	OLS-024, Page 221	Note the existing plan to move the Cherry Street interlocking tower as part of the extension of the Cherry streetcar tracks to the south.	This will be reviewed and updated as appropriate.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	
47	City Planning, Transit Implementation	Draft Early Works Report	Page 236, 5.8.2.3	Correct the reference to Exhibition Station, as this section deals with the Lower Don crossing.	This will be updated in the revised report.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	
48	City Planning, Transit Implementation	Draft Early Works Report	General	Confirm whether potential impacts to flood risks in the Don River Valley were studied, or whether this will be studied under separate cover. See comments under Natural Environment Report for greater detail.	Impacts to flood risks in the Don River Valley were not assessed as part of the Environmental Conditions Reporting. Once a route alignment has been identified, Project-specific impacts including floodplain impacts/flood risks will be assessed in consultation with the TRCA.	?	D	Despite provided comment response, does not apply to Exhibition Station. Assumed to be addressed in Lakeshore East Joint Corridor Early Works Report, to be reviewed when received.	
49	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	Section 2 Methodology and Approach, page 10	CHERs should be undertaken for those properties warranting it. The report notes that "it is not necessary to recommend an individual Cultural Heritage Evaluation Report (CHER) be undertaken to re-apply O. Reg. 9/06 to these properties." While a CHER may not be necessary for each property, some properties may warrant a CHER being undertaken, for example properties designated under OHA prior to O. Reg 9/06 taking effect. It should also be acknowledges that CHERs will be provided for properties identified as potential built heritage resources identified during field review.	The Ontario Line Cultural Heritage Report (currently available on our website (https://www.metrolinxengage.com/sites/default/files/pt_2020-09-03_of_ec_cultural_heritage_60611173_optimized_locked.pdf)) documents sufficient detail for the purposes of documenting cultural heritage value or interest for any properties identified as retaining potential during field review. The details from the OL CHR have been carried to the Early Works Heritage Detailed Design Report. Note: the original Early Works report reviewed by the City has been refined to an HDDR with project-specific impacts based on concept design, and more detailed mitigation (in place of an HIA).	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	
50	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts, page 33	Undertake and complete Heritage Impact Assessments prior to detailed design and reviewed by City of Toronto Heritage Planning and subject to staff delegated or Council decision under the Ontario Heritage Act and Municipal Code. The report indicates that the intent of the Cultural Heritage Report impact assessment is to "provide sufficient discussion of potential impacts to inform project planning to avoid, to the greatest extent possible, undertaking additional HIAs of individual properties." Properties that are identified as built heritage resources warrant Heritage Impact Assessments if they are to be altered or demolished as a result of project activities.	Heritage Detailed Design report(s) will be prepared by Metrolinx and/or Project Co(s), once a preferred alignment has been identified and/or detailed design has commenced. The report(s) will document the review of the preferred alignment and/or detailed design as it relates to the Cultural Heritage Report, refine project-specific impacts and mitigation measures, identify any changes, and, where required, describe how any conditions attached to the Minister's Consent will be met, based on the proposed/recommended design. The HDDR will also include any impacts on a known or potential built heritage resource or cultural heritage landscape that were not anticipated or described in the Cultural Heritage Report. In this instance, the Heritage Detailed Design Report will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	
51	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts, page 34	Clarify the scope of Heritage Detailed Design Reports. With the assertion that only properties meeting 10/06 criteria will be subject to further study through a Heritage Detailed Design Report, clarification is needed on how identified built heritage resources not classified as meeting 10/06 criteria may be further evaluated and how their identified cultural heritage values will be incorporated in the overall evaluation of alternatives and identification of the preferred alignment. Details on how potential project impacts on their cultural heritage value will be mitigated through the detailed design process are also needed. The Impact Tables in this Report should be revised once the preferred alignment has been identified and subject to further consultation with the City of Toronto Heritage Planning.	Heritage Detailed Design report(s) will be prepared by Metrolinx and/or Project Co(s), once a preferred alignment has been identified and/or detailed design has commenced. The report(s) will document the review of the preferred alignment and/or detailed design as it relates to the Cultural Heritage Report, refine project-specific impacts and mitigation measures, identify any changes, and, where required, describe how any conditions attached to the Minister's Consent will be met, based on the proposed/recommended design. The HDDR will also include any impacts on a known or potential built heritage resource or cultural heritage landscape that were not anticipated or described in the Cultural Heritage Report. In this instance, the Heritage Detailed Design Report will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent. Further, the HDDR will document refined project-specific impacts to all heritage properties (not just 10/06) based on the preferred alignment/detailed design. Project-specific impacts will be refined during detailed design, using the Cultural Heritage Report and documented in the HDDR.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	

52	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts	Summarize how many built heritage resources are proposed to be impacted and the expected nature of the impacts (type and description of anticipated impact) to understand the overall impacts the alignment will have on built heritage resources, due to the complexity and size of the Impact Tables. It needs to be made clear which and how many built heritage resources are anticipated to be demolished or altered due to the alignment. Similarly, there is a need to summarize how many, and which, identified built heritage resources will not be impacted by the current alignment.	As noted in comment response #1, this report documents all known or potential built heritage resources within the study area and includes a range of preliminary impacts and mitigation measures for each built heritage resource. Once an alignment has been selected and/or detailed design is prepared, project-specific impacts will be documented in the HDDR, specifying the number of cultural heritage resources expected to be demolished or altered.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	
53	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	For all Impact Tables, the proposed mitigation measure should be revised to include completion of a Cultural Heritage Evaluation Report, Heritage Impact Assessment and associated Strategic Conservation Plan, required when any physical impacts to a cultural heritage resource or its heritage attributes are anticipated. These should be completed prior to Detailed Design and circulated to Heritage Planning for review and comment.	Refer to comment responses #2 and #3. Further, recommendations for SCPs are noted within the report impact tables where an SCP would be warranted.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	
54	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	Revise all Impacts Tables to clarify when in the process the City of Toronto Heritage Planning unit will be consulted on the proposed mitigation measures if it is not possible to avoid impact to an identified cultural heritage resource and its heritage attributes. Consultation should occur prior to Detailed Design.	Language in report will be revised to more clearly include consultation with the City of Toronto Heritage Planning unit and specify timing for consultation with City.	?	C	Consultation with Heritage Planning is noted where a direct adverse impact has been identified.	
55	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	Revise the alternatives in all Impact Tables to also include consultation with the Toronto Preservation Board and City Council where applicable. Heritage Planning notes that properties not yet owned by Metrolinx are not exempt from Municipal process and legislation under the Ontario Heritage Act and Municipal Code.	Metrolinx as a Crown Agency of the Province of Ontario is exempt from certain municipal processes and requirements. In these instances, Metrolinx will engage with the City to incorporate municipal requirements as a best practice, where practical, and may obtain associated permits and approvals. Consultation with the City of Toronto Heritage Preservation Services has been included in the report for all impacted heritage properties.	?	O	Further discussion required with Heritage Planning before closing this comment. To be provided.	
56	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	5. Community Engagement	Heritage Planning acknowledges that the Metrolinx data request was not able to be completed prior to the draft of this report due to the on-going COVID-10 global pandemic and lack of remote access to property databases for City staff.	Comment noted.	?	C		
57	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	5. Community Engagement	Identify how and when broader public engagement will occur, given the proposed impacts on a number of identified municipally/locally significant cultural heritage resources, in addition to any as yet unidentified resources. This section should clarify and identify what other non-governmental heritage organizations, HCD advisory committees, and community stakeholders have been included in engagement.	Public engagement is currently underway for the broader Ontario Line Environmental Conditions Report including all properties that are documented in the Draft Early Works HDDR. Further, the Draft HDDR will be released for public review and any comments received during the Draft OL ECR and Draft Early Works HDDR will be reviewed. Any updates required in either report will be made and reissued for final OL ECR and Early Works HDDR.	?	P	Not fully addressed in the draft HDDR.	
58	Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	6.2 Next Steps, page 49	Provide confirmation as to which properties will be subject to a Heritage Detailed Design Report. These reports are to be shared with MHSTCI for its records. These reports should also be shared with the City of Toronto Heritage Planning unit.	The HDDR will document project-specific impacts and mitigation/next steps for known and potential cultural heritage resources that are proposed to be impacted by the project footprint.	?	C	request list of specific properties?	
59	City Planning	Lower Don Bridges HDDR	General	Heritage Planning staff have reviewed the Lower Don Bridges HDDR and have no concerns with the findings/proposed mitigation measures.	Acknowledged.	?	C		
60	City Planning	Exhibition Early Works HDDR	General	Heritage Planning staff have reviewed the Exhibition Early Works HDDR and, on the understanding that a subsequent report will be prepared for the Exhibition Station South Civils works, have no concerns with the findings/proposed mitigation measures. The report should acknowledge that follow-on works at Exhibition Station will potentially have impacts to the other heritage buildings listed in this report (i.e. buildings identified as having heritage value aside from 1 Atlantic Avenue) rather than saying there is no impact; it is odd to ignore this knowing that the early works are directly linked to future works that are part of the same project which are currently planned to impact these buildings. The City agrees with the detailed documentation and commemorative signage proposed for 1 Atlantic Avenue in the mitigation measures.	Comment noted, in the revised report, it is noted that follow-on works at Exhibition Station may have potential impacts to other heritage buildings listed in this report and will be assessed under separate cover.	?	O	Cannot locate any discussion or mention of potential impacts to heritage resources from follow-on works associated with the early works in Section 5 of the revised report. Recommend including such a statement in the introduction to Section 5.	
ADDITIONAL COMMENTS (DECEMBER 2020)									
1	City Planning	Draft Exhibition Station Early Works Report	Table 3-1	Confirm whether the demolition plan for 1 Atlantic Avenue includes the chimneys and accessory buildings associated with the main building. The text in Table 6-7 appears to leave open the possibility but is not definitive.					
2	City Planning	Draft Exhibition Station Early Works Report	Section 2.2.3.2	Recommend describing the conceptual alignment for the Waterfront LRT in the Exhibition Station area and its relationship to the Early Works program.					
3	City Planning	Draft Exhibition Station Early Works Report	Table 6-6	Public realm impacts - Lands impacted by construction should be restored to the current City standard following construction completion, not to the existing condition. This has been the standard agreement on previous Metrolinx projects (e.g. Eglinton Crosstown LRT).					
4	City Planning	Draft Exhibition Station Early Works Report	Table 6-9	Active transportation - Confirm whether pedestrian impacts are still anticipated to the existing tunnel for transit passengers or through users, and if so what mitigation measures are in place to maintain accessible pedestrian routes to and through the station during construction.

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	Actions 1 / 2 / 3 (Authors -)	Status O / P / C / D** (Reviewer)	Follow-up Comments (Reviewer)	Response & Details (Authors -)
1	Toronto Fire Services	Draft Traffic Memo	Design Brief, Section 3 (pages 35-52)	The Design Brief document refers to mitigation measures for traffic/auto and makes reference to developing a Traffic Management Plan, to address issues related to travel and impacts of potential road restrictions/closures in and around each early works site. The description of potential impacts should be expanded to refer specifically to ensuring emergency access is maintained at all times. Responding emergency vehicles are unique users of the roadway and can have different needs/requirements than most other users and should be addressed separately.	Noted. Potential impacts to emergency vehicles will be reviewed and noted in the revised memorandum, and potential mitigation measures will be suggested at a high level, if/where required. The future Traffic Management Plan will address the specific needs of emergency services, including accessibility, once construction staging and road closures are confirmed.	?	D		
2	Toronto Fire Services	Draft EPR	Section 5.5	General: Traffic Control and Management Plan(s) are to be sent to Toronto Fire Services prior to any road closures to ensure that TFS personnel can review the affected area(s) and adjust their responses (as applicable).	Noted. The Traffic Management Plan(s) will be circulated to the City including TFS during construction planning.	?	D		
3	Toronto Fire Services	Draft EPR	General	Utility relocations: Identify any fire hydrants that will be affected over the course of construction and confirm the remedial measures that will be put in place to ensure that hydrant coverage is maintained.	This will be confirmed as design progresses.	?	D

Subject: RE: OL - EWR and Discipline Reports - Comment Responses

Good evening Julia,

Please see attached comment responses for the following set of comments:

- City of Toronto comments on Air Quality, Noise and Vibration, Traffic, and Natural Environment from City Planning, Toronto Fire Services, Parks Forestry and Recreation, Transit Expansion Office, Toronto Public Health, dated July 3 and July 14, 2020 (two circulations);
- City of Toronto comments on the Draft Early Works Cultural Heritage Report, Draft Early Works Report, from City Planning, Parks Forestry and Recreation, Transit Expansion Office, and Toronto Fire Service, dated July 7, 2020;
- City of Toronto comments on Early Works Traffic, dated July 17, 2020;
- City of Toronto comments on the Draft Heritage Detailed Design Report, dated November 17, 2020.

Note that we have combined all comment sheets into one spreadsheet with separate tab per report/City department. Please review and let us know if any questions on our responses, or if there are any additional comments. All additional comments provided by the City will be addressed through the 30-day public review period.

Have a great weekend,

MERLIN YUEN

Ontario Line - City of Toronto Early Works Report Comments			1 = Will comply		O = Open, not resolved
			2 = Discuss, clarification required		P = Pending incorporation in design
			3 = Not applicable because		C = Closed, implementation complete
			Project Name:	Ontario Line	Revised By:
			Project No:		Date In:
			Draft Traffic Memo (Early Works)		Date Out:
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)
1	City Planning	Draft Traffic and Transportation Memo	General	Reconfirm the intended scope of the traffic and transportation memo. The existing conditions transportation memo should describe and document the baseline usage and performance of the transportation network for all modes in the study area; this report is limited to describing the physical conditions of the transportation system. Provide vehicular, transit, pedestrian and cyclist volumes using each transportation link described in the report, particularly at locations that may be disrupted during construction and/or permanently altered as a result of the project. Provide transportation analysis demonstrating the baseline performance of the transportation network. Without this information it is difficult to determine appropriate impacts to users of the transportation network or appropriate mitigation measures, monitoring programs, and future commitments. The transportation memo does not appear to achieve the purpose stated in Section 1.1.	The Early Works Memo focuses on construction impacts at the Early Works project footprints expected to result from the Early Works activities. Metrolinx proceeded with available existing conditions information while considering project schedule, limited raw data received from the City, and COVID-19 restrictions. As project planning progresses, further quantitative assessment will be completed related to the Early Works areas, to be shared with the City
2	City Planning	Draft Traffic and Transportation Memo	General	Confirm service headways for all transit routes and ensure that they reflect normal planned operating conditions. The peak period service headways stated in the report for transit routes appear to reflect the reduced level of service being provided during the COVID-19 pandemic. This will result in understated impacts to transit riders if not corrected. For example, the 504 King streetcar route normally operates at 2 minute headways in the peak period.	The service headways during the AM and PM peak hours were obtained from the TTC website (For example, for the 504 King Streetcar: http://www.ttc.ca/Routes/504/Eastbound.jsp). These reflect the current service headways which, as mentioned, might be impacted by the COVID-19 pandemic. The current TTC website does not have 'regular' headways, which are not impacted by COVID-19, Metrolinx would appreciate any information the City can provide with regards to this data.
3	City Planning	Draft Traffic and Transportation Memo	General	Correct references to unposted speed limits through the report, which currently indicates in several places that the assumed speed limit of unsigned streets is 50 km/h. Note that the City of Toronto has reduced the general speed limit on many arterial roads to 40 km/h, especially within the old City of Toronto and East York boundaries. Legal speed limits for all streets can be checked online in the Municipal Code here: https://www.toronto.ca/legdocs/municode/toronto-code-950-35.pdf	The legal speed limits were checked online using the same suggested reference (https://www.toronto.ca/legdocs/municode/toronto-code-950-35.pdf) in preparing the memorandum. The unsigned streets namely, Carlaw Avenue and Logan Avenue, are not part of the roadways that had their speed limits reduced from 50 km/h to 40 km/h as part of Vision Zero in 2019. The following source was used in identifying the roads that witnessed a speed limit reduction: https://www.toronto.ca/services-payments/streets-parking-transportation/road-safety/vision-zero/safety-measures-and-mapping/

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)
4	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 9	Roads: Gardiner Expressway is missing from the list of roads in the area, and may be impacted by the project. Include planned but unbuilt roads such as Liberty New Street, as the the impacts and mitigation measures for this will need to be addressed in the report.	Gardiner Expressway is not expected to be impacted by the Exhibition Station early works. Based on information collected from the City's website, Liberty New Street (source: https://www.toronto.ca/community-people/get-involved/public-consultations/infrastructure-projects/libertynewst/) does not have a schedule for construction yet and hence was not included in the list of roads.
5	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 9 Figure 3-1, Page 10	Transit: Indicate that 511 Bathurst streetcars are normally routed to serve Exhibition loop. Correct the Harbourfront and King streetcar route numbers indicated in the map legend.	Noted, the 511 Bathurst streetcars will be described in Table 2-1 and presented in Figure 3-1. The route numbers in the map legend will be amended.
6	City Planning	Draft Traffic and Transportation Memo	Section 2.1, Page 11	Pedestrians: Include a key connection in the pedestrian network, which is the opportunity for pedestrians to cross from Liberty Village to Exhibition Place through the station.	Noted, the pedestrian connection through the station tunnel will be described in the updated memorandum
7	City Planning	Draft Traffic and Transportation Memo	Figure 3-2, Page 12	Contrary to what is indicated in the memo and shown on the map, on-street bicycle infrastructure does exist on Dufferin Street, Saskatchewan Road, and Princes Boulevard within Exhibition Place.	The memo and specifically Figure 3-3 does not show on-street bicycle facilities on Dufferin Street, Saskatchewan Road, and Princess Boulevard. On-street bike facilities refer to a bike lane or cycle track. However, minor multi-use pathways are presented which do exist at the noted locations.
8	City Planning	Draft Traffic and Transportation Memo	Section 2.2, Page 14	Transit: Include GO buses that use the Don Valley Parkway.	Noted, the GO buses that use the Don Valley Parkway will be described and presented in Figure 3-4 in the updated memorandum.
9	City Planning	Draft Traffic and Transportation Memo	Figure 3-5, Page 16 Figure 3-8, Page 22	Include the critical pedestrian/cycling connection connecting Mill Street to the Lower Don Trail through Corktown Common and under the Richmond Hill GO corridor, which is missing from the map.	The noted trail, classified as "recreational trail", is presented in Figure 3-5 as a pedestrian facility. The connection to the Lower Don Trail includes a staircase which is why it's not displayed as a cycling facility.

10	City Planning	Draft Traffic and Transportation Memo	Figure 3-6, Page 19	Correct the route of the 505 Dundas streetcar on the map, which does not operate on Queen Street or Broadview Avenue south of Dundas.	Noted, the 505 Dundas street route will be updated in Figure 3-6 in the updated memorandum
11	City Planning	Draft Traffic and Transportation Memo	Section 3.1, Page 29	Include potential mitigation measures such as consideration of contractual financial incentives to minimize the duration and extent of disruptions to roads, sidewalks, bike lanes, and property accesses. Such measures could include a lane rental system, or door closure charges.	Contractual financial incentives for contractors are not typical mitigation measure proposed within the environmental assessment process. Metrolinx is committed to maintaining traffic flow for all road users where possible and will apply a construction traffic management plan, among other mitigation measures, to ensure disruptions to traffic are minimized to the extent possible.
12	City Planning	Draft Traffic and Transportation Memo	Section 3.2, Page 31	Confirm that potential impacts for the Don Crossing early works will not include closures of the Don Valley Parkway; they are not indicated in the discussion of potential impacts.	Comments regarding the Lower Don Bridges early works will be responded to at a later date as Lower Don Bridges early works scope has not been confirmed.

1	Toronto Fire Services	Traffic Mitigation Measures	Design Brief, Section 3 (pages 35-52)	<p>The Design Brief document refers to mitigation measures for traffic/auto and makes reference to developing a Traffic Management Plan, to address issues related to travel and impacts of potential road restrictions/closures in and around each early works site. The description of potential impacts should be expanded to refer specifically to ensuring emergency access is maintained at all times. Responding emergency vehicles are unique users of the roadway and can have different needs/requirements than most other users and should be addressed separately.</p>	<p>Noted. Potential impacts to emergency vehicles will be reviewed and noted in the revised memorandum, and potential mitigation measures will be suggested at a high level, if/where required. The future Traffic Management Plan will address the specific needs of emergency services, including accessibility, once construction staging and road closures are confirmed.</p>

1	LAU		General	Any impacts to City parkland/natural areas as a result of this project requires complete coordination with Parks Capital's Construction schedule as outlined in PFR approved Capital budget. Schedule and duration of impacted park lands to be provided.	Comment noted, the Exhibition Station early works Project Footprint does not currently include any City parkland or natural areas. However, should project footprint change in the future and impacts to parkland and natural areas are identified, Metrolinx will continue to engage the City of Toronto.

Item No.	Discipline	Reviewer Name	Part, Chapter, Sec, Subsect, page, DWG#	Review Comment	Response & Details (Authors -)
1	ENG-STR	aiuhas-1	Early Works at Exhibition St.	It is not clear in the document whether early works at Exhibition station will affect TTC's Exhibition loop station or will not. Paragraph 1.3.1 and corresponding figure 1-2 shows the footprint of work not affecting the TTC Exhibition loop, however, in section 5.8.1 there is mention of the TTC service being disrupted, station relocated. Please describe the planned impact on TTC services in this area.	This has been clarified in Section 4.1.1. It is not anticipated that the construction activities will impact Exhibition Loop or any transit operations in the Exhibition Station Study.
2	ENG-STR	aiuhas-2	Traffic Memo	Streetcar stop at Exhibition Loop is end of the line stop and loop of streetcar tracks. Stop cannot just be simply relocated as noted in the documents. Please clarify what is the impact on the streetcar track loop essential to the functioning of the streetcar service.	This has been clarified in Section 4.1.1. It is not anticipated that the construction activities will impact Exhibition Loop or any transit operations in the Exhibition Station Study.
3	S&CE-STR & SRVC PLN	mhagg-1	Draft Traffic Memo - Transit Stop Accessibility	In addition to meeting AODA requirements for temporary pedestrian facilities, ensure that any temporary or relocated TTC transit stops meet TTC accessibility standards in terms of hard surfaced wheelchair accessible stop pads that are connected with an accessible route to sidewalks and/or curb ramps, minimum size for the stop pads, curb/sidewalk height, and maximum slopes.	Comment noted. Any temporary pedestrian facilities including temporary or relocated TTC transit stops will be designed to meet TTC accessibility standards. Language has been added to Section 4 as a potential impact to the active transportation/transit network.
4	S&CE-STR & SRVC PLN	tpitman-1	Early Works Report Table 4-34 and Table 4-35	The 504 King Streetcar operates to Dundas West Station (not Dundas Station).	This will be updated in the revised report.
5	S&CE-STR & SRVC PLN	tpitman-2	Early Works Report Table 4-34	The 511 Bathurst route should be included because service to Exhibition should resume when the Bathurst Bridge construction finishes, which is scheduled for December 2020.	511 Bathurst has been added to Table 3-1 and Figure 3-3.
6	S&CE-STR & SRVC PLN	tpitman-3	Early Works Report 5.8.2.1	This section is about the Lower Don, but the mitigation section is referring to Exhibition Station.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report.
7	S&CE-STR & SRVC PLN	tpitman-4	Early Works Report 5.8.2.2	The transit impacts section only refers to streetcar stops not being in the footprint. If the previous section on auto traffic mentioning impacts at Cherry St and Lakeshore, impacts on the 72B and possibly the seasonal 121D bus routes should be considered and possible mitigation mentioned.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report.

Project No:					Date In:
Draft Natural Environment Report (Early Works)				Date Out:	
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)
1	City Planning	Draft Natural Environment Report	General	Confirm whether the implementation of all mitigation measures identified in the report will be placed on the successful proponent as a contractual obligation. Confirm who will monitor and ensure that mitigation measures and monitoring protocols will be followed.	Mitigation measures identified through the Early Works Report will be carried through to contractual language to be implemented by the successful proponent. Metrolinx will monitor compliance during the construction stage.
2	City Planning	Draft Natural Environment Report	General	Confirm whether the Don River crossing is anticipated to place any new structures such as piers or columns into the river that may alter flooding in the Don River valley. There does not appear to be any discussion in the report about impacts to flooding.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. However, information regarding hydrology and surface water will be added to the Lower Don Bridges Early Works Report.
3	City Planning	Draft Natural Environment Report	General	Confirm whether the cumulative effects to the natural environment from multiple crossings of the Lower Don River immediately adjacent to each other will be studied (e.g. the existing rail bridge spans, two new Ontario Line bridges, various operational and decommissioned utility bridges), and whether there would be benefits to the natural environment and reduced flood risk from the consideration of an integrated crossing solution. Benefits of an integrated crossing to the natural environment (including flood risks in the Lower Don River valley) should be documented, along with any countervailing reasons if such a solution is not technically preferred.	The Lower Don Bridges early works have been placed under separate cover in updated revisions of this report. Response to this comment will be revisited as the Lower Don Bridges Early Works Report is released.

1	Urban Forestry		Parks - Moss Park	All mitigation measures will be explored to minimize the project impacts to this site.	Metrolinx is committed to minimizing impacts to parkland wherever possible and will explore all options to minimize project impacts to Moss Park. As project planning and design progresses, any impacts identified to Moss Park will be documented within the Environmental Impact Assessment Report and appropriate mitigation will be prescribed.
2	RNFP		draft EPR - general	Submit a Natural Heritage Impact Study	Natural heritage impacts will be documented as part of the Environmental Impact Assessment Report, under separate cover.
3	RNFP		Natural Environment Early Works - 4.2	Metrolinx must apply for and obtain a permit from RNFP for any trees/vegetation/soil impacts regulated under Bylaw 658 on city and private lands.	Metrolinx will continue to engage with the City of Toronto as project planning and design progress, including with regard to tree injury/removal permits as required.
4	Urban Forestry		Natural Environment Early Works - Section 6 - permit requirements - table 6-1	Under Municipal, add Bylaw 813, 658 and 608 in table 6-1. Revise and add text sections accordingly in section 6.	As noted in Table 6-1 the activities at the Exhibition Station early works study area are not within the City of Toronto NHS or RNFP policy areas. Compensation for tree removal on private/city lands will follow the Metrolinx Vegetation Guideline (2020), which notes that compensation for trees on private/city lands will follow all applicable bylaws and regulations.

Draft Noise & Vibration Report (Early Works)				Date Out:	
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)
1	City Planning	Draft Noise & Vibration Report	General	Confirm that proponents would be contractually obligated to adhere to the noise and vibration limits identified in the report, and that proponents would be required to model the noise and vibration impacts of their proposed solution and construction method for the evaluation of proposals. Confirm what party would be responsible for ensuring and monitoring that mitigation measures are being implemented. Despite the exemption provided to government work in noise by-laws, confirm that limiting the time and duration of construction activities can be considered as an appropriate mitigation measure in the development of a noise and vibration management strategy. Confirm that the cumulative effects of noise and vibration will be taken into account in crafting mitigation measures (e.g. where there are a large number of sensitive noise and vibration receptors such as in the Lakeshore East Joint Corridor).	Note that this report only addresses construction noise and vibration, operational noise and vibration will be addressed under separate cover. The construction contract will have noise and vibration limits as per Metrolinx standards. The proponent will work with Metrolinx to ensure that mitigation measures and committed noise levels are met during construction and operation. Detailed assessment by the proponent of their activities will determine the specific mitigation measures required to meet agreed upon construction noise and vibration limits.
2	City Planning	Draft Noise & Vibration Report	Section 4	Identify the sensitive noise and vibration receptors indicated in the tables by their land use or building use.	Land use associated with each receptor is documented in Tables 5-1 and 5-2
3	City Planning	Draft Noise & Vibration Report	Appendix B	Ensure that the study area has been appropriately defined to capture the extent of potential noise and vibration impacts arising from construction. We are concerned that the study area has been too narrowly delineated with respect to the anticipated extent of the impacts, particularly around the Lakeshore East rail corridor segment where residential homes fronting onto Booth Avenue, in direct line of sight from construction activities, have been excluded from the study area.	Study area was determined based on the representative alignment outlined through the business case. Segments of the study area that have narrow extents represent areas in which there is certainty regarding the alignment whereas areas with a wider extent allow for flexibility in modifications to the alignment. Residential receptors on Booth Avenue are represented conservatively by the assessment of 2 Paisley Ave and 14 Wardell St assessment locations, which are considered the worst-case scenarios for noise and vibration within this segment.

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)
1	Transportation Expansion Office in consultation with LeighFisher	Introductory text	Section 1, Introduction	It is noted this report only assesses construction noise and vibration effect for the early works. Confirm how operational impacts of early works will be assessed.	This report only addresses construction noise and vibration, operational noise and vibration are addressed under separate cover.
2	Transportation Expansion Office in consultation with LeighFisher	Construction noise methodology	4.2 Methodology, p. 14	<p>Clarification on methodology used for noise modelling required.</p> <p>Per FTA manual, detailed construction noise analysis should, "Compare the combined Leq equipment (1hr) and the combined Ldn equipment 30-day for all equipment for each phase of construction determined. Then, identify locations where the level exceeds the criteria."</p> <p>Confirm if the above methodology was employed.</p>	<p>This method was not used as details regarding construction methodology have not yet been established. Construction noise levels (modelled from a list of construction equipment) were reviewed at the worst case representative receptor locations surrounding the construction sites using the Leq8hr criteria that has been used on previous Metrolinx projects.</p> <p>Note that a screening map will be added to the reporting.</p>
3	Transportation Expansion Office in consultation with LeighFisher	Lakeshore East Joint Corridor Noise	4.6.1, and Table 4-7	<p>Table 4-7 appears to indicate night time noise level criteria will be exceeded along the project footprint.</p> <p>Please revise below statement from the report to reflect nighttime noise level limit exceedance, in addition to daytime noise level limit exceedance.</p> <p><i>"The results in the above table [Table 4-7] indicate that predicted noise levels along the project footprint could be above the daytime noise level limit"</i></p>	In updated revisions to the report, Lakeshore East early works have been removed from this report and will be published under separate cover however, this change will be addressed within the Lakeshore East Early Works Report.

4	Transportation Expansion Office in consultation with LeighFisher	Vibration Impacts	4.6.2, Vibration Impacts	<p>Report states:</p> <p><i>"As the project footprints are not finalized; the number of locations predicted to have vibration levels in excess of the City of Toronto prohibited limit, and the screening limit may change. Also, the number of structures within the project footprint may change. As a result, a full list of locations along the project footprint that require monitoring or subsequent review is too preliminary at this stage. Mapping provided in Appendix B4 can be used to further develop the design plans to decrease the vibration impacts of the Early Works construction."</i></p> <p>Confirm if the mapping provided in Appendix B4 could be used to indicate sensitive areas which require further assessment should the area be selected as part of the project footprint.</p> <p>Consistent with best practices, this report should give an indication of areas that will likely be impacted if in the vicinity of any project works.</p>	Mapping has been updated including the project footprint. In updated revisions of the report, mapping has been moved to the main body of report as Figure 5-3 and 5-6.
5	Transportation Expansion Office in consultation with LeighFisher	General Construction Vibration Mitigation Measures	5.1.2, Construction Vibration	<p>Given that vibration impacts are predicted, best practice construction vibration mitigation measures recommended by the FTA should be included in the report, such as:</p> <ul style="list-style-type: none"> *routing heavily-loaded trucks and equipment away from residential streets and vibration-sensitive sites; *managing the sequence of construction phases such as demolition, earth-moving, and ground-impacting operations so as not to occur in the same time period and avoiding night-time activity; *employing alternative construction methods. <p>Relevant location for the application of these measures can be refined during the design phase.</p>	Acknowledged, the suggested text has been incorporated with other best practice measures where appropriate.

1	Toronto Public Health		4.2.1, pg. 14	the report indicates that the timing of construction has not been finalized and there is potential for nighttime work, as such, activities that can generate noise in excess of established limits should be scheduled for day time when possible	Metrolinx is committed to reducing noise and vibration impacts within communities. Activities that generate noise in excess of criteria limits will be scheduled for daytime work where possible, as noted in Table 6-1.
2	Toronto Public Health		5.1, pg. 19	the report indicates the potential for noise and vibration exceedences at several locations within the project area. It further notes that mitigation measures will be further refined as the project proceeds. At locations where the exceedences might occur near sensitive receptors, consideration should be given to noise monitoring at receptors points, development of noise complaints response protocols, and the development of communication strategy with the adjacent community. All mitigation measures should be considered to ensure noise and vibration impacts are minimized to below the acceptable exposure limits	As per Metrolinx standard contracts, the constructor will monitor noise where the Construction Noise Management Plan indicates that noise exposure limits may be exceeded. Section 6 includes mitigation and monitoring recommendations and requirements and in particular: monitoring at locations where there are persistent complaints, continuous noise monitoring where noise limits are predicted to be exceeded and development of a communications protocol which includes the timely resolution of complaints.

1	Transportation Expansion Office in consultation with LeighFisher	Methodology	Fig 1-1 to 1-4	Please explain how the Air Quality Study Area was established.	A 500-metre buffer was added to the identified project footprint of each Early Works scope item. The distance of the 500 metre buffer was based on guidance provided in the Ministry of Transportation, Environmental Guide for Assessing and Mitigating the Air Quality Impact and Greenhouse Gases of Provincial Transportation Projects (Ministry of Transportation, 2020) which states that for major roads, a distance of 500 m is expected to capture the maximum pollutant concentrations.
2	Transportation Expansion Office in consultation with LeighFisher	AQ Guidelines	Table 2-1	Why is the AAQC PM2.5 standard not included?	The AAQC PM2.5 standard (30 ug/m3 for a 24-hour averaging period) is less stringent than it's CAAQS counterpart 27 ug/m3 for a 24-hour averaging period, after 2020.
3	Transportation Expansion Office in consultation with LeighFisher	Background Traffic Data	Table 2-5	Why isn't the Gardiner Expressway or Liberty Street West 2019 AADT bus data available/included?	Table 3-3 updated with Liberty Street West 2019 AADT data. Not available for Gardiner Expressway.
4	Transportation Expansion Office in consultation with LeighFisher	Methodology	Sec 3, Table 3-7	Please define a Sensitive and a Critical receptor and distinguish between the two. Also, please clarify the definition of potential impacts.	Sensitive receptors include all residential and residential combination zoning (e.g. commercial residential, etc.). Critical receptors include land use where it is reasonably expected that high-risk populations spend extended periods of time in these locations (i.e. schools, day cares, hospitals, nursing or long-term care homes, etc.). The potential impacts are treated the same between the two types of receptors, however critical receptors are marked with high priority for maintaining air quality levels.
5	Transportation Expansion Office in consultation with LeighFisher	Construction timeline	Sec 3	Please clarify whether construction of the four EW locations will overlap (even if just a portion). If any overlap, a combined phase impact assessment should be conducted in addition to the location-specific assessment. This is particularly important for receptors that fall within multiple Study Areas.	In updated revisions of the report, all early works have been split into separate reports. Note that the only overlap in study area is Lakeshore East (overlapping with GO Expansion), for which a joint noise and vibration assessment will be undertaken for GO Expansion and Ontario Line operations.
6	Transportation Expansion Office in consultation with LeighFisher	Air Quality Management Plan	Attachment 1, Table 2	Please include other contaminants of concern as included in Table 2-4 of the main memo. In particular benzene and B(a)P when they exceed AAQC standards.	Including additional contaminants from the MTO Guidance does not have direct bearing on the contents of the AQMP. If required, the AQEW Memorandum can be referenced for a full background summary.

7	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Attachment 1, Sec 2.1.1	Are the mitigation measures included here required? If so, mitigation language should be revised to state "shall" to ensure compliance. Dust suppression techniques should also be included.	These are recommended mitigation activities which should be employed in the event of a monitored exceedance of the specified decision making thresholds in Table 4. If these thresholds are breached during continuous real-time monitoring, then any combination of the proposed mitigation measures will be required to be employed, as specified by the designated air quality specialist.	
9	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Attachment 1, Sec 2.1.2	Please specify maximum drop height and total height of stockpiles.	The drop height restriction is described on section 3.1.3. However, there is no recommended threshold for the maximum drop height and total stockpiles height from the air emission perspective. So, as described these should be minimized as possible.	
10	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Attachment 1, Sec 2.1.3	Idling restrictions should also be required consistent with best practice.	Table 4-1 and Table 4-2 of the Air Quality Report note that idling restrictions will be applied during construction.	
11	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Attachment 1, Sec 3.2	Please clarify if the recommendation is to set up one met station at each EW location (i.e. four total) or one single station for the whole project.	Meterological monitoring will not be required as part of the mitigation as air quality impacts from construction are not anticipated to affect local meterological conditions.	
12	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Attachment 1, Sec 3.3	Since no AQ monitoring location is planned immediately around the East Harbour Station location, is there the potential that construction at this location takes place earlier than the neighboring locations and as such construction dust monitoring will not be in place in time?	Comments regarding the East Harbour early works will be responded to at a later date as all early works have been split into separate reports. East Harbour works will be documented under separate cover.	
13	Transportation Expansion Office in consultation with LeighFisher	Construction monitoring	Attachment 1, Table 4	If the construction program is 12 months or less, silica analysis should be considered once a month, consistent with best practice, instead of once every 3 months as mentioned.	Comment noted.	
14	Transportation Expansion Office in consultation with LeighFisher	Mitigation Measures	Attachment 1, Table 6	Remedial actions should also be categorized by action levels. If action level 4 is reached, it suggests that whatever remedial actions already undertaken at previous action levels were not effective, and so additional remedial actions will be required.	Table 4-1 and Table 4-2 of the Air Quality Report note that Action Levels will be applied during construction.

1	Toronto Public Health		Table 2.4	comparison of background AQ data to applicable standards and guidelines indicates that air quality in the project area is already impacted. Specifically, there are exceedances of standards for NO2, benzene, and B(a)P. As such, all efforts must be made to minimize additional AQ impacts in the area near sensitive receptors	Comment noted.	
2	Toronto Public Health		AQMP, Table 1	Table 1, Applicable Regulations and Guidelines should include the CCME CAAQS	Reference to the CAAQS in Section 2.2.1 has been added.	
3	Toronto Public Health		AQMP, Table 2	Table 2 should include all contaminants of concern that are recommended in the MTO Guideline	All contaminants of concern are listed in Section 2.1.2 of the Air Quality Report.	
4	Toronto Public Health		AQMP, sec. 3 AQ monitoring plan	For the AQ monitoring consider developing decision-making thresholds with shorter averaging periods that would allow site managers to monitor site conditions and respond to potential issues in real time. In addition, consider monitoring for NO2. NO2 emissions are often associated with the use of combustion equipment and they can already exceed health-based thresholds in the study area. Complaint response protocols should be developed to respond to any potential issues that might come up.	The monitoring is suggested to be based on the rolling average of collected data with the logging interval of 15-min or shorter. Therefore, the values will be updated at least every 15 min and in case of the an elevated concentrations a notification will be issued within a short period to the lead environmental superintendent. Although vehicle exhausts from construction activities are sources of NO2 emission, previous experience indicates that following the proposed mitigation measures, their contributions to the overall NO2 concentrations in the area would be minimal. Considering the available monitoring technologies, there is no accurate portable monitoring system that could measure NO2 concentrations to the level that is suitable for identifying the elevated concentrations due to construction vehicles considering the existing background.

1	City Planning, Transit Implementation	Draft Early Works Report	Page 7, Figure 1-1	Ensure that the study area has been appropriately defined to account for the potential environmental impacts of the project. We are concerned that the study area has been too narrowly delineated with respect to the anticipated extent of the impacts, particularly along the Lakeshore East rail corridor, where some residential homes with direct line of sight to the construction have been excluded from the study area (e.g. homes fronting on Booth Avenue in front of Jimmy Simpson Park).	The study area varies for each discipline. The assessment limits/study area will be clarified in the revised report in Table 4-1.
2	City Planning, Transit Implementation	Draft Early Works Report	Page 11, Figure 1-2	Confirm the Early Works construction footprint of Exhibition Station. The Early Works footprint shown on this map is not consistent with the extent of early works described at a meeting on June 18, 2020, which included a launch site and emergency exit building in Ordnance Park.	Project footprint for the Exhibition GO early works have been revised since the first draft circulated to the City and footprint shown in the revised reports is most up-to-date.
3	City Planning, Transit Implementation	Draft Early Works Report	Page 15, Section 2.2.1.1	Update the discussion on the 2014 Provincial Policy Statement, which is now out of date, to reflect the 2020 version.	This has been updated in the revised report to reference the 2020 PPS.
4	City Planning, Transit Implementation	Draft Early Works Report	Page 16, Section 2.2.1.2	Correct the discussion on the Growth Plan; it does not describe Downtown Toronto as a priority transit corridor, but rather the GO lines and subway lines within Downtown.	This has been updated in the revised report to describe GO lines and subway lines as priority transit corridors.
5	City Planning, Transit Implementation	Draft Early Works Report	Page 18, Section 2.2.2.1	Correct references to planning area boundaries in the report. The East Harbour Station is within the boundaries of the Unilever Precinct Secondary Plan, adopted by City Council in 2018. The Lower Don Crossing is partially within the boundaries of the Downtown Plan and the Unilever Precinct Secondary Plan, in addition to the King-Parliament Secondary Plan.	The East Harbour early works have been placed under separate cover in updated revisions of this report and as such, this reference has not been included.
6	City Planning, Transit Implementation	Draft Early Works Report	Page 20, Section 3.2	Confirm whether the Ontario Line portals and any alterations to the Richmond Hill GO line are part of the early works.	Alterations to the Richmond Hill GO line are not anticipated as part of the Lower Don Bridges early works.
7	City Planning, Transit Implementation	Draft Early Works Report	Page 21, Section 3.3.1.3	Ensure all approved plans related to the Eastern Avenue bridge are captured in the discussion. The Eastern Avenue bridge is also subject to the Port Lands and South of Eastern Transportation and Servicing Master Plan EA. The new span must accommodate the widened right-of-way and new cross-section approved by City Council in adopting Phases 1 & 2 of that EA.	East Harbour Station is no longer being captured under this report. This comment will be revisited if future East Harbour studies are required for early works.
8	City Planning, Transit Implementation	Draft Early Works Report	Page 21, 3.3.1.4	Note in the document that the interim service road will be subject to removal and/or reconfiguration when the lands to the north side of the rail corridor are developed, and access to the station should be integrated with the streets and blocks plan of the development.	East Harbour Station is no longer being captured under this report. This comment will be revisited if future East Harbour studies are required for early works.
9	City Planning, Transit Implementation	Draft Early Works Report	Page 85, 95	Correct the references to Official Plan land use designations, noting that "Rail Corridor" is not a land use designation in the Official Plan.	This will be updated in the revised report.
10	City Planning, Transit Implementation	Draft Early Works Report	Section 4.5	Ensure consistency in the description of environmental conditions in the report. The descriptions of environment conditions are inconsistent with some describing the area while others are limited to the project footprint. This should extend also to adjacent areas beyond the footprint that may be impacted by the project.	The revised report will include clarification language regarding the environmental conditions study area and the Early Works project footprint/study areas.

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)
11	City Planning, Transit Implementation	Draft Early Works Report	Page 88, Section 4.5.2.1.3	Include a proper public realm description for the Lower Don Crossing, as there is existing the planned public space intersecting and adjacent to the project footprint, accessible from Corktown Common and the Lower Don Trail. Public realm characteristics by definition cannot be described as being similar to the built form characteristics.	This will be updated in the revised report.
12	City Planning, Transit Implementation	Draft Early Works Report	4.5.4.1.1	Correct the description for Queen Street East; it is not a gateway into the East York community, but rather into Leslieville and the Beach neighbourhoods of old Toronto.	This will be updated in the revised report.
13	City Planning, Transit Implementation	Draft Early Works Report	4.7.2	Note that the Lower Don River archaeology would be contained in the South Archaeological Assessment Phase 1 report, not the North report.	This will be updated in the revised report.
14	City Planning, Transit Implementation	Draft Early Works Report	4.8.1.2	Add reference to the 29 Dufferin bus which is missing from this analysis. A branch of this route serves Exhibition Place and travels along Manitoba Drive.	This will be updated in the revised report.
15	City Planning, Transit Implementation	Draft Early Works Report	4.8.1.3	Should the report be expanded to include the Ordnance Park as an early works site, the cycling infrastructure should include the Fort York pedestrian/ cycle bridge and related infrastructure connections. The waterfront Martin Goodman Trail also travels immediately south of Exhibition Place along Lake Shore Boulevard.	Ordnance Park is outside the study area of the Exhibition Station early work and as such, has not been included within the report.
16	City Planning, Transit Implementation	Draft Early Works Report	Page 122, Figure 4-23	Correct the map which is missing the Fort York pedestrian/cycle bridge and associated connections between Wellington Street and Garrison Road as an existing pedestrian route.	The Fort York Pedestrian/Cycling bridge is outside the Exhibition Station early works study area and as such, has not been included.
17	City Planning, Transit Implementation	Draft Early Works Report	Page 123, Figure 4-24	Correct the map which is missing the Fort York pedestrian/cycle bridge and associated connections between Wellington Street and Garrison Road as an existing cycling route. Bike lanes on Princes Boulevard and Saskatchewan Road are missing from the map.	The Fort York Pedestrian/Cycling bridge is outside the Exhibition Station early works study area and as such, has not been included.
18	City Planning, Transit Implementation	Draft Early Works Report	Page 133, Figure 4-29	Correct the map which is missing a critical cycling connection from the intersection of Bayview Avenue and Mill Street, through Corktown Common, under the Richmond Hill GO corridor, connecting to the Lower Don Trail.	This will be updated in the revised report.
19	City Planning, Transit Implementation	Draft Early Works Report	Page 163, Table 5-4	Confirm whether the removal of vegetation communities includes vegetation currently along the rail embankment, and whether mitigation will consider replacing this vegetation for ecological and visual reasons.	Vegetation clearing can encompass any and all of the vegetation within the Project Footprint including hedgerows and other vegetation communities along the rail corridor. Metrolinx will compensate for tree removals undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).
20	City Planning, Transit Implementation	Draft Early Works Report	5.4.1	For ease of reference, indicate in each table what the sensitive receptor being measured to is (e.g. what the sensitive use in each building or property is).	The receptors will be identified by land or building use in the revised report.

			Draft Early Works Report		Date Out:
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)
21	City Planning, Transit Implementation	Draft Early Works Report	Page 207-211, Table 5-14	Provide an opinion whether the mitigation measures proposed can be expected to bring noise and vibration levels within acceptable limits. Confirm that a method of constructing the project exists that can bring noise and vibration levels within acceptable limits. Confirm number of buildings/homes affected by the "zones of influence" for each early works area (and estimated population or number of workers if available).	Noise and vibration limits will be included as part of contract documents. Metrolinx will work with contractors to ensure that committed mitigation measures are implemented. Mitigation is determined based on worst case receptor locations not on the basis of the number of affected properties, however figures for both noise and vibration will be provided in the updated report from which numbers of buildings may be identified.
22	City Planning, Transit Implementation	Draft Early Works Report	Page 213-215, Table 5-15	Include social equity impacts and mitigation measures (i.e. whether certain communities experiencing social inequality are impacted greater). Walkways must be universally accessible AODA-compliant even during construction. For transportation networks, ensure that two parallel collector/arterial routes are not closed at the same time, and transit diversions do not affect two parallel transit routes at the same time.	Mitigation regarding AODA-compliant walkways and parallel transportation connections will be added to the revised report. Review of impacts to human environments from a gender and equity lens are not typically included within provincial environmental assessment processes. Ontario Line impacts are being assessed in accordance with O. Reg. 341/20 under the Environmental Assessment Act. The applicable impact assessment framework does not have a requirement for transit project evaluation through an equity and gender lens.
23	City Planning, Transit Implementation	Draft Early Works Report	Page 216, 5.5.1.1	Include financial incentives in the construction contract to minimize the duration of access being restricted to driveways and building entrances.	Financial incentives are not typically included as mitigation measures in environmental assessment documents, and as such, have not been included. Metrolinx remains committed to reducing impacts to the traffic and transportation network during construction and will ensure appropriate traffic management plans are developed prior to construction to manage impacts.
24	City Planning, Transit Implementation	Draft Early Works Report	Page 216-217, 5.5.1.2, Page 231, 5.8.1.1	Include financial incentives in the construction contract to minimize the duration of road/lane closures (e.g. lane rental system with sufficiently high lane occupancy fees).	Financial incentives are not typically included as mitigation measures in environmental assessment documents, and as such, have not been included. Metrolinx remains committed to reducing impacts to the traffic and transportation network during construction and will ensure appropriate traffic management plans are developed prior to construction to manage impacts.
25	City Planning, Transit Implementation	Draft Early Works Report	Page 217, 5.5.1.3	Public realm impacts should include construction activity potentially disturbing streetscaping materials, furniture, landscaping in the public realm. Requiring restoration to current standards would be an appropriate mitigation measure. Public realm impacts should also include the potential for design incongruity between the architectural styles of the existing underpass and the new Ontario Line bridges, and the impact the greater extent of underpass length has on the pedestrian environment in terms of safety and comfort. Mitigation measures to coordinate and improve design would be an appropriate response.	Public realm impacts such as construction activities potentially disturbing streetscape materials, furniture, and landscaping have been added to the revised report. Public realm impacts suggested such as designing for congruence between architectural styles of existing infrastructure are not typically included as impacts/mitigation however, Metrolinx will work with architectural design specialists to ensure the materials and design of the proposed bridge at the Lower Don Bridges early works complements surrounding infrastructure.
26	City Planning, Transit Implementation	Draft Early Works Report	Page 217, 218, 5.5.2	Include the Jimmy Simpson Recreation Centre as a community or recreational amenity that may be impacted. Include the Fontbonne Ministries Mustard Seed operation on Strange Street as potentially impacted.	The Lakeshore East early works have been placed under separate cover in updated revisions of this report however, Jimmy Simpson Recreation Centre and Fontbonne Ministries will be included in report documentation.
27	City Planning, Transit Implementation	Draft Early Works Report	OLS-024, Page 221	Note the existing plan to move the Cherry Street interlocking tower as part of the extension of the Cherry streetcar tracks to the south.	This will be reviewed and updated as appropriate.
28	City Planning, Transit Implementation	Draft Early Works Report	Page 236, 5.8.2.3	Correct the reference to Exhibition Station, as this section deals with the Lower Don crossing.	This will be updated in the revised report.

1	Urban Forestry		general	The Lower Don River Crossing works overlaps with the USRC Wilson yard/HONI relocation works. Are we to assume that the trees and vegetation will be non-existent like the Lakeshore East shared corridor for the purposes of tree inventory and arborist report?	The Lower Don Bridges early works will build on existing environmental work completed for the Wilson Yard/HONI relocation works. Metrolinx will be removing vegetation within its right-of-way in accordance with the Metrolinx Vegetation Guideline (2020).
2	Urban Forestry		Draft early works report, 5.9 - Utilities	Confirm tree and vegetation impacts during detailed design. A permit application for injury or removal may be required if regulated under a municipal bylaw	Tree and vegetation impacts will be confirmed during the detailed design phase. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).
3	Urban Forestry		Draft Early Works Report, 6.1.3 - Municipal permits	Permits are required for trees and vegetation that are regulated under Bylaw 813, 658 and 608. Compensation shall be in accordance with applicable bylaw. The Arborist Report and supporting documentation will be reviewed and revised when submitted.	An Arborist Report will be prepared in accordance with Table 6-1 and 6-2. Compensation for tree removals will be undertaken in accordance with provisions outlined in the Metrolinx Vegetation Guideline (2020).
4	Urban Forestry		Draft Early Works Report, 6.1.3 - Municipal permits	Delete timeline information for permit application processing as it is conditional on satisfactory and approved documentation. These revisions may take several weeks before an application will be reviewed.	This will be removed in the revised report.
5	RNFP		Draft Early Works Report, 6.1.4	Submit Voluntary Process Review Letter	Metrolinx will continue to engage TRCA through the VPR process.
6	RNFP		Draft Early Works Report, table 6-1	Submit Erosion & Sediment Control Plan	An Erosion and Sediment Control Plan will be prepared in accordance with Table 6-2. This will be circulated to the City prior to construction.
7	Urban Forestry		Draft Early Works Report, table 6-1	Submit an Arborist Report with updated tree inventory. Tree inventory shall also confirm the presence of butternut inspected in 2017 in the East Harbour Stn	An Arborist Report will be prepared in accordance with Table 6-1 and 6-2. This will be circulated to the City once available. The butternut in question at East Harbour Station was determined to be misidentified, and is a black walnut.
8	Urban Forestry		Draft Early Works Report, table 6-1	Submit Spill Prevention & Response Plan	A Spill Prevention and Response Plan will be prepared in accordance with Table 6-2 and 6-3. This will be circulated to the City prior to construction.
9	Urban Forestry		Draft Early Works Report, table 6-1	Metrolinx' Vegetation Guideline is currently under review by staff in Parks, Recreation and Forestry. Compensation will be to the approval and satisfaction of PFR and in accordance to the applicable bylaw. Any revisions to the document will apply to the current project	Noted.
10	LAU		General	Any impacts to City parkland as a result of this project requires complete coordination with Parks Capital's Construction schedule as outlined in PFR approved Capital budget. Schedule and duration of impacted park lands to be provided.	Noted. Impacts to parkland are not anticipated as part of the Exhibition Station Early Works.
11	LAU		3. Description of the Early Works	We are not in support of loss of park lands. What alternatives has Mx compiled? What lands does Mx have for a potential land swap?	Noted. Impacts to parkland are not anticipated as part of the Exhibition Station Early Works.
12	LAU		4.5 Socio-Economic and Land Use Characteristics	Lower Don River Crossing - there are recreational uses and park and open spaces in this footprint...Corktown Common Park, MUPs along the Lower Don River Trail, the Martin Goodman Trail, Lakeshore and Cherry St (see 4.8.2.3)	In updated revisions of the report, Lower Don early works has been split into a separate report however, the revised Lower Don Bridges early works report will include parks within the latest Lower Don Bridges study area.

Project No:					Date In:	
Draft Early Works Report					Date Out:	
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	
13	LAU			Lower Don River Crossing - there are community groups and resources in this footprint	In updated revisions of the report, Lower Don early works has been split into a separate report however, the revised report will include community amenities within the latest Lower Don River Crossing study area.	
14	LAU			Lakeshore East Joint Corridor - there are recreational uses and parks and open spaces in this footprint...Jimmie Simpson RC and Park, Bruce Mackey Park, McCleary Park, Saulter St Parkette, Gerrard-Carlaw Parkette	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include recreational uses and parks within the Lakeshore East Joint Corridor study area.	
15	LAU			Lakeshore East Joint Corridor - there are community groups and resources in this footprint	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include community groups and resources within the Lakeshore East Joint Corridor study area.	
16	LAU			Lakeshore East Joint Corridor - all parks in and adjacent to this footprint to be labelled on Figure4-21	In updated revisions of the report, Lakeshore East Joint Corridor Early Works have been split into a separate report however, the Lakeshore East early works report will include recreational uses and parks within the Lakeshore East Joint Corridor study area.	
17	LAU		4.6/5.6 Built Heritage Resources and Cultural Heritage Landscapes	Has a Cultural Heritage Assessment been completed for park lands that are proposed to be impacted? There is mention of Cultural Heritage Landscapes however where is the mapping - specifically does any park lands fall into CHL?	All lands within the Ontario Line Study Area, and subsequent Early Works footprint have been screened for known, previously assessed and potential BHR/CHLs. For the Ontario Line Project, any properties, including parks, were screened for BHRs and CHLs- Moss Park was included in the OL CHR and Bruce Mackey Park noted because of its heritage plaques and it contributes to the De Grassi Streetscape. Parks that are not known, previously identified or potential CHLs are included in the Natural Environment Report.	
18	LAU		Pg 115-116/227-229	DeGrassi Street has been noted as potential BHR/CHL and within EW-001 Bruce Mackey Park has been noted as having potential heritage attributes. Should 12 DeGrassi Street be proposed for demolition Mx shall acquire these lands to land swap with the City in exchange for impacts to Bruce Mackey Park and nearby park lands. Also, what is the impact to Bruce Mackey Park (and all other parks) to avoid vibration damage to buildings along EW-001 and elsewhere? Vibrating mitigating measures shall be implemented on the building or elsewhere and not on park lands.	The Lakeshore East Joint Corridor early works have been placed under separate cover in updated revisions of this report.

19	LAU		5.4 Noise and Vibration pg 201-202	Future Work shall include noise and vibration impact study to existing Jimmie Simpson Recreation Centre as works are proposed in very close proximity to the Recreation Centre.	Typically recreation centres are not considered noise or vibration sensitive developments, however the building will be considered in assessment of construction vibration impacts.		
20	LAU		5.4 and 5.5	How does the rail corridor expansion in the Lakeshore East Joint Corridor works footprint affect impacted park lands/natural areas for grading, retaining walls, noise barriers, etc in the interim and permanently?	Any potential impacts of Lakeshore East Joint Corridor Early Works will be presented under separate cover.

Project Name:		Ontario Line		Revised By:	
Project No:		Draft Early Works Report		Date In:	
				Date Out:	
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)
1	Transportation Expansion Office in consultation with LeighFisher	AQ Monitoring	Sec 4.3, page 71	The report states that all contaminants of concern are monitored at the selected NAPS stations. Since PM10 is not monitored, how is this discrepancy addressed?	PM10 was not included in NAPS Station measurements, and therefore was estimated using PM2.5 measurements, assuming a ratio of 1 µg/m3 PM10 per 0.54 µg/m3 of PM2.5 as per Lall et. al, "Estimation of historical annual PM2.5 exposures for health effects assessment", Atmospheric Environment 38 (2004).
2	Transportation Expansion Office in consultation with LeighFisher	AQ Guidelines	Sec 4.3, Table 4-14, p.72-73	Please explain why the AAQC PM2.5 standard not included?	The AAQC standard for PM2.5 (30 ug/m3 for a 24-hour averaging period) is less stringent than the CAAQS standard for the same averaging period (27 ug/m3) and was therefore excluded from Table 4-14.
3	Transportation Expansion Office in consultation with LeighFisher	Air Quality Impacts	Sec 5.3.1, p. 188	The impacts discussion is qualitative and high-level. The report should at a minimum discuss construction emissions estimates based upon construction equipment likely to be used, general timeline, and standard construction equipment emissions factors compared to baseline concentrations to indicate potential exceedances and areas for mitigation.	Details regarding construction duration and timeline are not available at this time and as such, construction emission estimates have not been included. The Air Quality Memo is based on the most up-to-date plans for design available at the time. Construction equipment and duration will be confirmed in future construction management plans.
4	Transportation Expansion Office in consultation with LeighFisher	Noise Impacts - Lower Don River Crossing	5.4.1.2.1, Noise, p.200	Report notes, "for the future 191 Mill Street location, noise levels are predicted to be near the daytime noise level limit for the corridor works, nearest to 191 Mill Street." They also exceed the night time criteria which is not mentioned. Please add this to the impact discussion.	This will be addressed in the revised report.
5	Transportation Expansion Office in consultation with LeighFisher	Noise Impacts - Lakeshore East Joint Corridor	5.4.1.4.1, Noise, p.202	Report notes, "the results in the above table indicate that predicted noise levels along the project footprint could be above the daytime noise level limit." The report should also indicate the potential for nighttime exceedances as nighttime nuisance can generally result in health effects and should be mitigated.	This will be addressed in the revised report.

Draft Cultural Heritage Report (Early Works)						
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	
1	Erin Smith - City of Toronto Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	Section 2 Methodology and Approach, page 10	CHERs should be undertaken for those properties warranting it. The report notes that "it is not necessary to recommend an individual Cultural Heritage Evaluation Report (CHER) be undertaken to re-apply O. Reg. 9/06 to these properties." While a CHER may not be necessary for each property, some properties may warrant a CHER being undertaken, for example properties designated under OHA prior to O. Reg 9/06 taking effect. It should also be acknowledges that CHERs will be provided for properties identified as potential built heritage resources identified during field review.	No CHER will be completed outside of this report/the future Heritage Detailed Design Report (HDDR). The HDDR will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent. Cultural Heritage Reports and Heritage Detailed Design Reports will meet Metrolinx obligations under the Ontario Heritage Act. The Ontario Line Cultural Heritage Report (currently available on our website (https://www.metrolinxengage.com/sites/default/files/rpt_2020-09-03_ol_ec_cultural_heritage_60611173_optimized_locked.pdf)) documents sufficient detail for the purposes of documenting cultural heritage value or interest for any properties identified as retaining potential during field review. The details from the OL CHR have been carried to the Early Works Heritage Detailed Design Report. Note, the original Early Works report reviewed by the City has been refined to an HDDR with project-specific impacts based on concept design, and more detailed mitigation (in place of an HIA).	
2	Erin Smith - City of Toronto Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts, page 33	Undertake and complete Heritage Impact Assessments prior to detailed design and reviewed by City of Toronto Heritage Planning and subject to staff delegated or Council decision under the Ontario Heritage Act and Municipal Code. The report indicates that the intent of the Cultural Heritage Report impact assessment is to "provide sufficient discussion of potential impacts to inform project planning to avoid, to the greatest extent possible, undertaking additional HIAs of individual properties." Properties that are identified as built heritage resources warrant Heritage Impact Assessments if they are to be altered or demolished as a result of project activities.	Heritage Detailed Design report(s) will be prepared by Metrolinx and/or Project Co(s), once a preferred alignment has been identified and/or detailed design has commenced. The report(s) will document the review of the preferred alignment and/or detailed design as it relates to the Cultural Heritage Report, refine project-specific impacts and mitigation measures, identify any changes, and, where required, describe how any conditions attached to the Minister's Consent will be met, based on the proposed/recommended design. The HDDR will also include any impacts on a known or potential built heritage resource or cultural heritage landscape that were not anticipated or described in the Cultural Heritage Report. In this instance, the Heritage Detailed Design Report will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent.	
3	Erin Smith - City of Toronto Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts, page 34	Clarify the scope of Heritage Detailed Design Reports. With the assertion that only properties meeting 10/06 criteria will be subject to further study through a Heritage Detailed Design Report, clarification is needed on how identified built heritage resources not classified as meeting 10/06 criteria may be further evaluated and how their identified cultural heritage values will be incorporated in the overall evaluation of alternatives and identification of the preferred alignment. Details on how potential project impacts on their cultural heritage value will be mitigated through the detailed design process are also needed. The Impact Tables in this Report should be revised once the preferred alignment has been identified and subject to further consultation with the City of Toronto Heritage Planning.	Heritage Detailed Design report(s) will be prepared by Metrolinx and/or Project Co(s), once a preferred alignment has been identified and/or detailed design has commenced. The report(s) will document the review of the preferred alignment and/or detailed design as it relates to the Cultural Heritage Report, refine project-specific impacts and mitigation measures, identify any changes, and, where required, describe how any conditions attached to the Minister's Consent will be met, based on the proposed/recommended design. The HDDR will also include any impacts on a known or potential built heritage resource or cultural heritage landscape that were not anticipated or described in the Cultural Heritage Report. In this instance, the Heritage Detailed Design Report will include a statement of cultural heritage value to support heritage impact assessment and to inform fulfillment of any conditions attached to Minister's Consent. Further, the HDDR will document refined project-specific impacts to all heritage properties (not just 10/06) based on the preferred alignment/detailed design. Project-specific impacts will be refined during detailed design, using the Cultural Heritage Report and documented in the HDDR.

Draft Cultural Heritage Report (Early Works)			Date Out:			
Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	Response & Details (Authors -)	
4	Erin Smith - City of Toronto Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts	Summarize how many built heritage resources are proposed to be impacted and the expected nature of the impacts (type and description of anticipated impact) to understand the overall impacts the alignment will have on built heritage resources, due to the complexity and size of the Impact Tables. It needs to be made clear which and how many built heritage resources are anticipated to be demolished or altered due to the alignment. Similarly, there is a need to summarize how many, and which, identified built heritage resources will not be impacted by the current alignment.	As noted in comment response #1, this report documents all known or potential built heritage resources within the study area and includes a range of preliminary impacts and mitigation measures for each built heritage resource. Once an alignment has been selected and/or detailed design is prepared, project-specific impacts will be documented in the HDDR, specifying the number of cultural heritage resources expected to be demolished or altered.	
5	Erin Smith - City of Toronto Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	For all Impact Tables, the proposed mitigation measure should be revised to include completion of a Cultural Heritage Evaluation Report, Heritage Impact Assessment and associated Strategic Conservation Plan, required when any physical impacts to a cultural heritage resource or its heritage attributes are anticipated. These should be completed prior to Detailed Design and circulated to Heritage Planning for review and comment.	Refer to comment responses #2 and #3. Further, recommendations for SCPs are noted within the report impact tables where an SCP would be warranted.	
6	Erin Smith - City of Toronto Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	Revise all Impacts Tables to clarify when in the process the City of Toronto Heritage Planning unit will be consulted on the proposed mitigation measures if it is not possible to avoid impact to an identified cultural heritage resource and its heritage attributes. Consultation should occur prior to Detailed Design.	Language in report will be revised to more clearly include consultation with the City of Toronto Heritage Planning unit and specify timing for consultation with City.	
7	Erin Smith - City of Toronto Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	4.2 Potential Impacts Table 4	Revise the alternatives in all Impact Tables to also include consultation with the Toronto Preservation Board and City Council where applicable. Heritage Planning notes that properties not yet owned by Metrolinx are not exempt from Municipal process and legislation under the Ontario Heritage Act and Municipal Code.	Metrolinx as a Crown Agency of the Province of Ontario is exempt from certain municipal processes and requirements. In these instances, Metrolinx will engage with the City to incorporate municipal requirements as a best practice, where practical, and may obtain associated permits and approvals. Consultation with the City of Toronto Heritage Preservation Services has been included in the report for all impacted heritage properties.	
8	Erin Smith - City of Toronto Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	5. Community Engagement	Heritage Planning acknowledges that the Metrolinx data request was not able to be completed prior to the draft of this report due to the on-going COVID-10 global pandemic and lack of remote access to property databases for City staff.	Comment noted.	
9	Erin Smith - City of Toronto Heritage Planning	Early Works Cultural Heritage Report: Existing Conditions and Preliminary Impacts Assessment	5. Community Engagement	Identify how and when broader public engagement will occur, given the proposed impacts on a number of identified municipally/locally significant cultural heritage resources, in addition to any as yet unidentified resources. This section should clarify and identify what other non-governmental heritage organizations, HCD advisory committees, and community stakeholders have been included in engagement.	Public engagement is currently underway for the broader Ontario Line Environmental Conditions Report including all properties that are documented in the Draft Early Works HDDR. Further, the Draft HDDR will be released for public review and any comments received during the Draft OL ECR and Draft Early Works HDDR will be reviewed. Any updates required in either report will be made and reissued for final OL ECR and Early Works HDDR.

1	LAU		General	Has a Cultural Heritage Assessment been completed for park lands that are proposed to be impacted?	All lands within the Ontario Line Study Area and subsequent Early Works footprint have been screened for known, previously assessed and potential BHR/CHLs. At this stage, impact scenarios have been outlined with recommended mitigation measures. Once an alignment is selected / detailed design is underway, a project-specific impact assessment will be undertaken and documented in a Heritage Detailed Design Report. This will include park lands that retain heritage value.
2	LAU		Pg 25	There is mention of Cultural Heritage Landscapes however where is the mapping - specifically does any park lands fall into CHL?	For the Ontario Line Project, any properties, including parks, were screened for BHRs and CHLs- Moss Park was included in the OL CHR and Bruce Mackay noted because of its heritage plaques and it contributes to the De Grassi Streetscape. Further detail on parks within the study area (from an ecological perspective) are documented in the Natural Environment Report.
3	LAU		Figure 6-4	All existing park lands within and adjacent to the Lakeshore East Joint Corridor Study Area to be noted in Figure6-4	As per comment response #2, parks within and adjacent to the Early Works footprints that retain heritage value (CHLs) are documented in this Cultural Heritage Report. Parks that are not CHLs are documented in the Natural Environment Report.
4	LAU		Pg 30, 43-45	DeGrassi Street has been noted as potential BHR/CHL and within EW-001 Bruce Mackey Park has been noted as having potential heritage attributes. Should 12 DeGrassi Street be proposed for demolition Mx shall acquire these lands to land swap with the City in exchange for impacts to Bruce Mackey Park and nearby park lands. Also, what is the impact to Bruce Mackey Park (and all other parks) to avoid vibration damage to buildings along EW-001 and elsewhere? Vibrating mitigating measures shall be implemented on the building or elsewhere and not on park lands.	The Lakeshore East Joint Corridor early works have been placed under separate cover in updated revisions of this report. This comment will be taken into account as environmental assessment reporting advances along the Lakeshore East joint corridor.

Merlin,

Could you please include Richard Borbridge, TEO Subways Program Director, in all correspondence regarding Ontario Line? Thank you!

Further discussion regarding the feasible timeline for the review of these documents will be required, and we will get back to you shortly with our eta for City comments.

Regards,

Julia Murnaghan

Subject: Ontario Line - Exhibition/Lower Don Bridges HDDR

Good morning Wole,

Please see attached the Heritage Detailed Design Reports (HDDR^s) for the Ontario Line Exhibition Station and Lower Don Bridges early works - in advance of the Draft Early Works Report publication,

currently being targeted for November 20. Note that the HDDRs are an extension of the Existing Conditions Cultural Heritage Report and Preliminary Impact Assessment previously circulated to the City, whereby areas for early works have been identified with property-specific impacts assessed as part of the impact assessment with further mitigation prescribed.

At this time we're looking for any comments you're able to provide by Tuesday, November 10. Otherwise, we look forward to your comments by November 17. We apologize for the late notice - project footprints were in flux and we did not want to circulate a document that would not be reflective of Draft Early Works Report content. A comment tracking sheet has also been provided for your convenience in review.

-

Key findings of both reports include:

- Exhibition Station: the building at 1 Atlantic is anticipated to be demolished to accommodate Exhibition Station early works;
- Lower Don Bridges: potential requirement to temporarily relocate abutment stones from the original 1856 Lower Don Bridge that currently provide seating in public space near the Lower Don Trail

If the City is amicable, our team would also be open to a joint workshoping session to go over any comments the City may have to the HDDRs.

Please let me know if any questions.

Regards,

MERLIN YUEN

Good Afternoon Julia,

Thank you for following up - we are now able to provide you the following reports in the download link available below:

- Draft Early Works Air Quality Memo
- Draft Early Works Noise & Vibration Report
- Draft Early Works Traffic Memo
- Draft Early Works Natural Environment Report, and;
- Stage 1 Archaeological Assessments (by segment) – submitted to the MHSTCI on May 29, 2020.

Download here: 

The Draft Early Works Cultural Heritage Report and the Draft Early Works Main Report will be made available to you tomorrow. The City will still have 20 business days to review.

Please let me know if you have any questions or concerns. Thank you!

Subject: RE: OL - Draft Reports for CoT Review - 29May20

Laura,

Following our EA discussions last Friday, we have received the three OL Existing

Conditions draft reports for Natural Environment, Noise & Vibration, Socio-Economic and Land Characterization. These reports have been circulated to the appropriate Divisions for review and, following the specified 20 day review period, we are expecting to provide City comments to Mx by June 26.

Could you please confirm when we are expecting to receive the next group of draft reports, including Stage 1 Archaeology Baseline Condition Report and the various Early Works Reports? And please verify that the 20 day review period will begin once the reports have been received by the City.

Please feel free to contact me if you have any questions or concerns.

Regards,

Julia Murnaghan

Subject: Ontario Line - Notice of Draft Lakeshore East Joint Corridor EWR and East Harbour Station EWR
Date: September 23, 2021
Attachments: [REDACTED]

Good afternoon Tomasz,

The Notice of Draft Lakeshore East Joint Corridor Early Works Report (LSE-JC EWR) and Notice of Draft East Harbour Station Early Works Report (EH EWR) for the Ontario Line Project has been published on September 23, 2021. The LSE-JC EWR and EH EWR are available on the project website at www.metrolinx.com/ontarioline. The public review period begins September 23, 2021 and will continue until October 24, 2021. Attached for your reference is the Notice of Draft Lakeshore East Joint Corridor Early Works Report and Notice of Draft East Harbour Station Early Works Report, as well as a cover letter. Please do not hesitate to contact us if you have any questions. We look forward to your review and comments.

Regards,

MERLIN YUEN

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Tomasz Oltarzewski,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

If you have any questions or concerns, please do not hesitate to contact the Project Team at ontarioline@metrolinx.com.

Sincerely,

Maria Zintchenko, Environmental Project Manager
Environmental Programs & Assessment

Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report Ontario Line Project

The Project

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Lakeshore East Joint Corridor Early Works

Lakeshore East Joint Corridor early works are planned along the Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue. Advancing early works in this area will facilitate the timely implementation of the Ontario Line and provide planning, design and implementation efficiencies for GO Expansion. Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor, including: reconfiguration of existing GO tracks to support future Ontario Line infrastructure; replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue; construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks; construction of the foundations for GO Overhead Catenary System poles and supporting infrastructure to accommodate future fourth GO track; construction of retaining walls; and construction of noise barriers, including east of Pape Avenue.

Environmental impacts of Lakeshore East Joint Corridor early works are being assessed in accordance with Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20), under the *Environmental Assessment Act*. In accordance with Section 8 of O. Reg. 341/20, Metrolinx has prepared the Draft Lakeshore East Joint Corridor Early Works Report that is now available for review.

The Draft Lakeshore East Joint Corridor Early Works Report documents the assessment of Lakeshore East Joint Corridor early works. The report outlines the purpose of early works, a description of local environmental conditions, potential impacts, proposed mitigation measures and a consultation record.

The Draft Early Works Report Review and Consultation Process

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor Early Works Report will be available for review on the project webpage (www.metrolinx.com/ontarioline).

You can view and comment on the report from **September 23 to October 24, 2021** via the online form provided.

Those who wish to provide comments on the Draft Lakeshore East Joint Corridor Early Works Report must do so by **October 24, 2021** and submit them using the webpage form or address them to the following email: ontarioline@metrolinx.com.

Section 10 of O. Reg. 341/20 requires Metrolinx to establish an issues resolution process to attempt to resolve any concerns raised by the public or Indigenous Nations during the review period. At the end of the review period, Metrolinx will update the Draft Lakeshore East Joint Corridor Early Works Report by adding a description of the issues resolution process, what Metrolinx did to address any concerns, and if the early works implementation timeline will be impacted as a result of addressing concerns. Metrolinx will then publish the Final Lakeshore East Joint Corridor Early Works Report on the project webpage: www.metrolinx.com/ontarioline and issue a Notice of Publication of Final Lakeshore East Joint Corridor Early Works Report.

To obtain a copy of the Draft Lakeshore East Joint Corridor Early Works Report, please contact the project email listed above.

Franca Di Giovanni (T: 416-202-5100, E: ontarioline@metrolinx.com) may be contacted on behalf of Metrolinx.

Good afternoon,

Metrolinx is sharing the draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report, via the following Dropbox link for review:

[REDACTED]
[REDACTED]

The draft of the Lakeshore East Joint Corridor Noise and Vibration Operations Report has been completed in accordance with Section 15 of O. Reg. 341/20. The report documents the assessment of noise and vibration associated with the operation of the Ontario Line and GO rail where Ontario Line runs in parallel to GO tracks between the Ontario Line Don Yard Portal and Gerrard Portal.

Metrolinx welcomes any comments or feedback on the draft Lakeshore East Joint Corridor Noise and Vibration Operations Report. Please provide these in writing no later than **August 24, 2021**.

Thank-you,

Crystal Ho

Good Afternoon,

Metrolinx, an agency of the Province of Ontario, is proceeding with the planning and development of four priority transit projects under the Transit Plan for the Greater Toronto and Hamilton Area (GTHA), one of which is the new Ontario Line Subway, extending from Exhibition/Ontario Place to the Ontario Science Centre in the City of Toronto.

As a member of the Environmental Assessment Government Review Team, please let us know if you would be interested in receiving specific draft environmental reports mentioned in the attached cover letter, such that you have sufficient time to review.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Kuru Satkunanathan

Subject: Ontario Line Project - Notice of Publication of Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Dear Anita Cook,

The Ontario Line will bring 15.6 kilometres of new subway service to Toronto, making it faster and easier for people to get where they need to be each day. The line will stretch across the city, from the Ontario Science Centre in the northeast to Exhibition/Ontario Place in the southwest. The Ontario Line will have 15 new stations, including six interchange stations, connections to three GO train lines, two existing subway lines, the new Eglinton Crosstown LRT, and streetcar lines at 10 stations. The project will feature a combination of tunneled, surface and elevated segments, and will be completely separated from traffic to provide fast and reliable service.

Draft Lakeshore East Joint Corridor Early Works Report and Draft East Harbour Station Early Works Report

Ontario Line early works are components of the Ontario Line Project that are proposed to proceed before the completion of the Ontario Line environmental impact assessment report process. Early works are defined in the Ontario Regulation 341/20: Ontario Line Project (O. Reg. 341/20) as follows:

“any components of the Ontario Line Project that Metrolinx proposes to proceed with before the completion of the Ontario Line assessment process, such as station construction, rail corridor expansion, utility relocation or bridge replacement or expansion.”

Metrolinx finalized the Exhibition Station Early Works Report (EWR), Corktown Station EWR and Lower Don Bridge and Don Yard EWR in February, July and August 2021, respectively. Metrolinx is now proceeding with EWRs for the early works at Lakeshore East Joint Corridor and East Harbour Station.

Lakeshore East Joint Corridor early works will include modifications to the existing Lakeshore East rail corridor between approximately Eastern Avenue and Pape Avenue, including:

- reconfiguration of existing GO tracks to support future Ontario Line infrastructure;
- replacement of the existing rail bridges at Queen Street East, Dundas Street East and Logan Avenue;
- construction of two new bridges at Dundas Street East and Logan Avenue to support future Ontario Line tracks;
- construction of the foundations for GO Overhead Catenary System (OCS) poles and supporting infrastructure to accommodate future fourth GO track; and
- construction of retaining walls; and
- construction of noise barriers, including east of Pape Avenue.

East Harbour Station early works will include:

- reconfiguring the existing Lakeshore East GO tracks to accommodate station facilities and future Ontario Line tracks;
- building station facilities such as platforms and entrances;
- replacing and expanding the existing Eastern Avenue rail bridge to accommodate four Lakeshore East GO tracks and two Ontario Line tracks; and

- completing site preparation activities such as grading, demolishing existing structures where required, and relocating or protecting utilities.

Environmental impacts of the Lakeshore East Joint Corridor and East Harbour Station early works are being assessed in accordance with O. Reg. 341/20, under the Environmental Assessment Act. Metrolinx has now incorporated comments and feedback from the initial round of engagement with Indigenous Nations and agencies on the initial draft of the EWR shared in Summer 2020 into the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR.

In accordance with Section 8 of O. Reg. 341/20, the Draft EWRs document the assessment of Lakeshore East Joint Corridor and East Harbour Station early works. The reports outline the purpose of early works, a description of local environmental conditions, potential impacts and proposed mitigation measures and a consultation record.

Effective **September 23, 2021**, the Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR will be available for review on the Project webpage (www.metrolinx.com/ontarioline). Those who wish to provide comments on the Draft EWRs must do so by **October 24, 2021**.

Please find attached the **Notice of Publication of Draft Lakeshore East Joint Corridor EWR and Draft East Harbour Station EWR** which provide further information, including a description of the process for submitting comments.

Good afternoon Anita,

In preparation for the publication of the Ontario Line Draft Lakeshore East Joint Corridor Early Works Report, we are recirculating comment responses to agencies who provided comments on the draft Early Works Report (shared in June 2020). The responses attached address comments specific to the Lakeshore East Joint Corridor early works. Let me know if you have any questions or further comments.

Thanks,

MERLIN YUEN

Noise and Vibration Early Works Report

Date Out:

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	September 2021 LSE JC EWR Revised Response/Confirmation
1	TDSB		N&V EW Report	Health concerns due to noise, vibration issues to the schools during the tunnelling phase of the project and during the construction of the transit stations.	Tunnelling is not part of the Lakeshore East Joint Corridor early works activities. The potential noise and vibration impacts associated with tunneling will be addressed in the forthcoming Environmental Impact Assessment Report, which will be provided for review under separate cover.
2	TDSB		N&V EW Report	Inability to play during outdoor periods due to high level of noise.	Blake Junior Public School can be represented by representative worst case receivers 165 Galt Ave, 2 Egan Ave, and 369 Pape Ave as the others are closer to the rail corridor and therefore the school should have lower noise impacts than those representative receptors. The report does indicate that the analysis used representative worst case receivers.
3	TDSB		N&V EW Report	Impact on required student concentration eg. Exam time	Blake Junior Public School can be represented by representative worst case receivers 165 Galt Ave, 2 Egan Ave, and 369 Pape Ave as the others are closer to the rail corridor and therefore the school should have lower noise impacts than those representative receptors. The report does indicate that the analysis used representative worst case receivers.

Natural Environmental EC and EW Report

Date Out:

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	September 2021 LSE JC EWR Revised Response/Confirmation
1	TDSB		Natural Environmental EC and EW Report	Potential for significant environmental damages to the Don Valley Corridor and City parks/ravines in the Thorncliffe Park area. Two TDSB schools, Valley Park Middle School (130 Overlea Boulevard) and Marc Garneau Collegiate Institute (135 Overlea Boulevard) will be directly impacted with changes to these sensitive land areas. (These areas also provide for educational opportunities for students.)	The Lakeshore East Joint Corridor early works project footprint is not within the Thorncliffe Park area and no TDSB schools are located within the Lakeshore East Joint Corridor early works project footprint. There are no impacts associated with natural environment that are anticipated to any TDSB schools as a result of Lakeshore East Joint Corridor early works.
2	TDSB		Natural Environmental EC and EW Report	Potential drainage and water flow that may impact outdoor school sports fields and arenas.	The Lakeshore East Joint Corridor early works project footprint is not within the Thorncliffe Park area and no TDSB schools are located within the Lakeshore East Joint Corridor early works project footprint. There are no impacts associated with natural environment that are anticipated to any TDSB schools as a result of Lakeshore East Joint Corridor early works.
3	TDSB		Natural Environmental EC and EW Report	Dependent upon works, potential drainage or water flow, sewers, etc. at various sites.	The Lakeshore East Joint Corridor early works project footprint is not within the Thorncliffe Park area and no TDSB schools are located within the Lakeshore East Joint Corridor early works project footprint. There are no impacts associated with natural environment that are anticipated to any TDSB schools as a result of Lakeshore East Joint Corridor early works.

Traffic and Transportation Early Works Report

Date Out:

Item No.	Reviewer Name	Description	Part, Chapter, Sec, Subsec, page, DWG#	Review Comment	September 2021 LSE JC EWR Revised Response/Confirmation
1	TDSB		Traffic EW Report	Increased traffic congestion around some of the schools, especially at major intersections, will impact ability to commute and increase travel time delays for the student community and TDSB employees.	Comment noted, a Transit and Traffic Management Plan will be developed prior to construction to ensure potential impacts to all road users are reduced or avoided. Please see Table 4-1 within the Traffic and Transportation Report for more information on proposed mitigation.
