Construction Notice

Utility Duct Bank Installation - Southbound Bike Lane Closure and West Sidewalk Closure at Lower Sherbourne Street

September 16 into October 2024

What is happening?

Beginning as early as September 16th, and proceeding into October 2024, there will be increased construction activity at street level on Lower Sherbourne Street north of the rail corridor to Lake Shore Blvd E, as work crews will be completing hydro duct bank installation work.

To facilitate this needed work, excavation north of the rail corridor will be taking place to complete utility duct bank installation work, impacting the west sidewalk and southbound bike lane on Lower Sherbourne Streets. Signage will be posted along Lower Sherbourne Street directing cyclists to merge within this work area. This schedule is subject to change due to the complexities and sequence of tasks related to this work.

Updated August 28, 2024

METROLINX

What does this mean for you?

The following includes a sequence of activities that will impact the area:

- Southbound bike lane and west sidewalk closures
- Working hours: 7:00a.m. – 5:00p.m, Monday – Friday
- Dust, noise, presence of construction vehicles and machinery

We appreciate your ongoing patience and understanding of this necessary work. Dates subject to change.

Long-Term Benefits

The East Track Enhancements are being completed as part of the Union Station Enhancement Project and larger GO Expansion Program.

We're removing and relocating infrastructure on the south side of the Union Station Rail Corridor east of Union Station and widening the rail bridges that pass over Lower Jarvis and Lower Sherbourne Streets. The East Track Enhancements will pave the way for two additional sections of track to be installed along the southside of the Union Station Rail Corridor, to the east of Union Station which will increase capacity and allow for future electrification as part of the larger GO Expansion Program.

After the completion of the East Track Enhancements, Metrolinx will lay tracks, modernize the signaling system and electrify core segments of the GO rail network.
