

Investigative work on McCowan Road

Schedule: September 23 - 25

Note: all schedules are approximate and subject to change

Timing: Weekdays from 7:00 a.m. - 7:00 p.m.

What is Happening

- To ensure safe construction of the Scarborough Subway Extension, there will be Subsurface Utility Engineering (SUE) investigative work on McCowan Road, south of Meldazy Drive.
- The purpose of this work is to confirm utility locations and verify field conditions, such as utility depth.

What to Expect

- Utility engineering investigative work involves the use of a core drill and a hydrovac truck to expose the locations of existing utilities in the area.
- Work areas will be clearly marked or fenced off as required to ensure public safety. The work zone and traffic staging or pedestrian routing will be dismantled at the end of every work period.
- The work at each location will last approximately one to three hours.
- Temporary short term lane closures will be needed while the work is underway. Flaggers will be on site to assist with pedestrian and traffic movements, as required.
- Residents near the site may hear noise caused by these activities. We are monitoring noise and vibration levels and will take steps to mitigate when necessary.
- Work may be delayed due to weather conditions or unforeseen circumstances.

About the Project

- A nearly eight-kilometre subway extension will extend the TTC's Line 2 further into Scarborough.
- Three new stops will have connections to up to six other transit options including TTC buses, GO train, GO buses, the Eglinton Crosstown LRT, Durham Region Transit, and the proposed Sheppard Extension.
- The extension will accommodate up to 105,000 daily boardings and put 34,000 more jobs within walking distance to rapid transit.
