## Queen-Spadina Construction Update

**Ontario Line subway construction crews are working to build a new subway station at Queen-Spadina. At both the Queen-Spadina north and south construction sites, excavation of the station cavern continues.**

Crews will connect the newly completed station shaft to the future station platform area and excavate in a westward direction away from at the east side of the intersection of Queen Street West and Spadina Avenue.

This cavern also creates space for the tunnel boring machines as they excavate the Ontario Line subway tunnels through downtown Toronto.

## What to expect

**Diagram of the Queen-Spadina cavern location.**

- Cavern excavation is an essential step in creating a new space for the station subway platform.
- Rock spoils will continue to be raised out of the shaft and transported away using dump trucks, following specified haul routes. Traffic control persons will guide vehicles, pedestrians and cyclists as needed, as vehicles enter and exit the sites.
- Due to the nature of the work, crews at the north site continue to work on a 24-hour rotation to excavate the station cavern. This methodology keeps crews safe and ensures excavation support. Specialized equipment known as roadheader, rock bolters and shotcrete machines are in use to perform excavation activities. Noise and vibration from the equipment will be monitored as the machine moves away from the site.
- To reduce impacts to residents and businesses in the area, mitigations are in place including air quality, noise and vibration monitoring, street cleaning, site hoarding, additional paved areas, sprinkler systems and mud mats for dust suppression.

## About the Ontario Line

- 15.6-kilometre subway line that will make it faster and easier to travel within Toronto and beyond.
- 15 stops and more than 40 connections to other transit, including GO train, subway, LRT, streetcar, and bus lines.
- Less than 30 minutes from one end of the line to the other.
- 28,000 fewer car trips each day.
