Asset Hierarchy Mnemonics

Context and Considerations

- All levels of the Functional Asset Hierarchy have a corresponding code that represents the hierarchy of the asset
- Load sheets before being loaded into HxGN EAM will require the codes to be unique and differ by a sequence number (number of occurrences)

Asset Classification Data Standards

Context and Considerations

- All assets within Metrolinx EAM will be associated with a class
- All new assets will either:
 - (a) Be associated with the existing class and category list four
 - (b) Modifications and/or additions to the existing class and ca
- The table highlights the existing class list with the associated cod
- Load sheets will require the class and category ID to be popu

Custom Field (CF) Overview

Context and Considerations

- All assets within Metrolinx EAM will be associated with a class and category
- Dependant on the asset class selected, class-specific attributes become avail
- If additional attributes are required outside of the descriptive and class-speci
- Where there exists no custom fields within the class, no action is required
- All class-specific attributed are considered Mandatory

Parts (related to Assets)

- Context and Considerations**
- Metrolinx defines a Part (or "Item") to be a component, assembly or material that does not meet the criteria
 - Parts functionality that is expected to be deployed to Metrolinx Asset Information Systems in 2020. Until deployment related to this functionality should be considered high level.

Asset ID	Asset Class	OEM	OEM Part No.	Part Description	Part UOM

a for being an asset, but is required to maintain assets

Work Order Types and Classes Descriptions

Context and Considerations

- To ensure data integrity, selected fields are predefined values to assign WO Classes
- Work orders are used to repair broken equipment, modify equipment, and decommission inspections
- If an asset requires values outside of the list defined below, Metrolinx will need to be engaged

WO Type	Class	WO Class Description
COR	COR-REPL	Corrective Maintenance - Replace
COR	COR-TRSH	Corrective Maintenance - Troubleshoot
EM	EM-SAFE	Emergency - Make Safe

Work Order Closing Codes and Descriptions

Context and Considerations

- Every work order reports on the Problem, Failure, Action, and Measure
- Every Asset Class can be assigned a set of FCAP codes that are used to track the work order
- If an asset requires values outside of the list defined below, Measure the asset and create a new code

Asset Class Code + Description
CULVERTS - Culverts
FENCE - Fence
FROGS - Frogs
GATES - Gates
INLET - Inlet
RAIL - Railway Rail

RCI - TRACK PROJECT Master Asset List (MAL)

Contract No./ Project No.

Project Name

Project Representative

Asset Class Representatives

Substantial/Estimated Completion Date

BACKGROUND:

In line with the Asset Management Policy and Asset Information Handover Procedure, the MAL is a tool to capture the data of new assets, impacts to existing assets or assets that have been decommissioned/withdrawn as part of the project as well as related File Geodatabase information.

INSTRUCTIONS

CPG PROJECT DELIVERY TEAM:

**provide the predefined Asset IDs if tagging/barcoding will be carried out*

**carry out data quality assurance checks*

PROJECT DELIVERY TEAM (PDT):

** provide the MAL template to the contractor*

**once the contractor completes the MAL validate the entries*

**send the MAL to the Tracks Asset Management Team for validation*

CONTRACTOR:

**complete all tabs in this MAL template workbook*

**if warranty is being provided commence with the Warranty work sheet*

**for help in completing the worksheets contact your PDT*

**once completed provide the MAL workbook to your PDT for validation*

**follow Metrolinx and Business Unit process/standards*
