

Site preparation and access road construction at Millwood and Overlea

Scheduled Start Date: July 27, 2026

Scheduled End Date: January 31, 2028

Working Hours: Weekdays from 7 a.m. to 7 p.m.

Map for Site preparation and access road construction at Millwood Road and Overlea Boulevard

What Is Happening?

- In late July 2026, Metrolinx contractors will begin site preparation including building a temporary access worksite at Millwood Road and Overlea Boulevard for the construction of guideway foundations and substructure in this area.
- An access gate will be installed along the west side of Millwood Road, north of Overlea Boulevard to manage construction vehicle entry and secure the work site.
- To safely complete this work, there will be a partial southbound bike lane closure on Millwood Road before Overlea Boulevard, with traffic barrels in place to separate the work area from vehicular traffic.

What to Expect?

- Construction of the access worksite is expected to take approximately four weeks and construction activities will occur within the site until late 2028.
- Excavation and grading of the site to provide stable ground for construction equipment.
- Compaction to achieve required surface strength, stability, and erosion control.
- Temporary fencing will be installed along the perimeter of the construction zone.
- Gates will be installed to manage unauthorized vehicles and equipment access to the work site.
- Short-term traffic and cycling interruptions can be expected during trucks and equipment movements into and from the site.
- Construction vehicles and equipment will enter and exit the site from Millwood Road through the new access gates.
- Work may be delayed, rescheduled, or extended due to weather conditions or unforeseen circumstances.
- Access roads will be removed once construction activities are complete, and the area will be restored with topsoil and seed/sod.
- Work may be delayed, rescheduled, or extended due to weather conditions or unforeseen circumstances.

Noise & Vibration

- Residences and businesses in the area may experience noise and vibration caused by construction equipment related to the works. Efforts will be made to minimize noise associated with construction where possible.

About the Project

- 15.6 -kilometre subway line that will make it faster and easier to travel within Toronto and beyond.
- 15 stops and over 40 connections to other transit, including GO train, subway, LRT, streetcar, and bus lines.
- Less than 30 minutes from one end of the line to the other. 28,000 fewer car trips each day.
